

MIB Dependencies and Requirements

To load MIB file	Required MIB files
Fabric Element RFC2837.mib	SNMP-FRAMEWORK-MIB (RFC 2571)
Switch v5.0.mib	Brocade v5.0 MIB
Fabric Alliance v3.0.mib	None

Notes :

1) The Fabric Alliance v3.0 MIB obsoletes the use of the connUnitPortStatFabricTable used in the Fabric Alliance v2.2 MIB. It now uses the connUnitPortStatTable for port statistics. The Fabric Alliance v3.0 MIB and the Fabric Alliance v2.2 MIB can not be loaded concurrently on the same SNMP Management station.

2) The Fabric Element RFC2837 MIB and the Fabric Element Experimental MIB can be loaded concurrently on the same SNMP Management station. The Fabric Element Experimental MIB was listed in the experimental OID section. The Fabric Element RFC2837 MIB has subsequently been ratified by the standards bodies.

3) The SNMP-FRAMEWORK-MIB RFC2571 must be loaded before loading the Fabric Element RFC2837 MIB or the ENTITY RFC2737 MIB
