

## Section 2 - Dial Plan Part 3

[ine.com](https://ine.com)

# Task 2.6

- Inbound calling needs to be provisioned. Ensure the following requirements are met:
  - Configure CUBE at HQ to route inbound PSTN calls to HQ and SB UCM's. The CUBE should send these calls to HQ-SME for further processing.
  - The PSTN sends 10-digit called numbers on inbound calls.
  - The PSTN sends 10-digit calling numbers on calls originated from U.S PSTN Line and +e.164 calling numbers for calls of international origin.
  - The CUBE must translate both calling and called number to +e.164 format before passing them to the SME.
  - The SME should then forward these calls to the appropriate destinations in HQ and SB.
- Dialing Instructions:
  - To Call HQ site from PSTN, dial 14082022XXX
  - To Call SB site from PSTN, dial 19723033XXX
