*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of FMD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of FMD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of FMD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of SSD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of FMD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value and is nearly equal to 1 RAID group capacity.

*1: The number of HDD options is only the number of data disks, and the number of spare disks is not included.

*2: OPEN-V is volume based on CVS. A customer can set up the volume capacity of OPEN-V freely from 48.1MB among almost 1 RAID group capacity. This volume capacity is the default value.
