4 ECKD 32-BYTE SSB

4.1 Basic Sense Bytes

The following describes details of 32 ECKD basic sense bytes 0 to 6 and 22 to 31.

	ECKD 32-Byte Sense Data							
	0	1	2	3	4	5	6	7
0	Command rejection	Intervention required	Not used	Device check	Data check	Not used		Incomplete domain
1	Permanent error	Invalid track format	Not used	Operator message	Not used	File protection	Write inhibit	Imprecise ending
2	Storage control type							
3	Remaining count; or, command overrun reached threshold *							
4	Device address							
5	Device type							
6	Unit indication 0: SSB2 1: SSB5	SSB4 valid	SSB29-31 valid	Not used	Format			
7 to 21	Bytes 7 to 21: Depend on the exception class and format. (For details, see Section 4.3.)							
22	Exception class							
23	Exception code; or, CHL#, LPN, and LCP# beyond the threshold †							
24	Logging message control							
25	Program action code							
26	Dual frame	EDCC Mode	Duplex pair	Subvolume error	Nonsynchro-nous operation	Serial channel	Report output	Permanent path error
27	32-byte SSB (0)	Not used			DKU86I TRK compatible mode	Not used	Path number	
28	Message code; or, number of read or searched bytes ††							
29	Cylinder address; or, number of read or searched bytes ††							
30								
31	Head address; or, number of read or searched bytes ††							

: Varies by the exception class and format.

* "Remaining count" is for exception class 0 and format 4; otherwise, "Command overrun threshold reached" applies.

† "CHL#, LPN, and LCP# beyond the threshold" is for exception class 6; otherwise, "Exception code" applies.

†† "Number of read or searched bytes" is for exception class 6.

Otherwise:

Byte 28 = "Message code"
Byte 29-30 = "Cylinder address"
Byte 31 = "Head address"

Copyright ©1997, Hitachi, Ltd.

Common Sense Bytes (ECKD 32-Byte SSB)

ECKD 32-Byte SSB (1/3)

Byte	Bit	Name	Description
0	0	Command rejection	A chain ended without receiving the expected number of data transfer commands in the LR/LRE domain. If no other error is detected, “incomplete domain” (byte 0, bit 7) is also set to 1.
	1	Intervention required	1. The drive is not physically connected. 2. The drive power is off. 3. The ENABLE/DISABLE switch is set to DISABLE.
	2	Not used	
	3	Device check	DKC or drive hardware is abnormal.
	4	Data check	Indicates that a data error has been detected in the information from the drive. This bit is set to 1 when the data error is uncorrectable or error correction is prohibited by the mask byte.
	5	Not used	
	6	Not used	
	7	Incomplete domain	Indicates that as many data transfer commands as defined in the LOCATE RECORD count parameter have not been received.
1	0	Permanent error	Indicates that an error occurred and recovery failed.
	1	Invalid track format	1. The record size parameter is inconsistent with the record to be updated. 2. Nonstandard R0 was detected during branching in Fast Write/Dual Copy operation.
	2	Not used	X‘06’
	3	Operator message	Not used for other than DKC SIM. For DKC SIM, indicates that messages are output to the operator
	4	Not used	
	5	File protection	An attempt was made to move to a track not defined in DEFINE EXTENT during execution of the LOCATE RECORD command (updating write in asynchronous mode).
	6	Write inhibit	A write command has been received that uses a resource write-prohibited by the DIAGNOSTIC CONTROL command. “Device check” (byte 0, bit 3) is also set to 1.
	7	Imprecise ending	Indicates that CCW has ended abnormally in the LR/LRE domain and the error is for a previously completed command (whose end status report is already finished).
2	Storage control type/environmental data present		1. For excluding DKC SIM and Cache SIM, this byte indicate DKC type (x‘06’). 2. For DKC SIM and Cache SIM, this byte indicate environmental data present (x‘10’).
3	Remaining count; or, command overrun threshold reached		When the command overrun threshold is reached in exception class 6: X‘01’ — Exception class 0 In exception class 0 and format 4: “Remaining count” (number of records/tracks remaining in the LR/LRE domain being handled)
4	Device address		1. When the exception class is 4, 6, B, C, D, or E: Bit 0-1: Storage path number Bit 2: Controller number Bit 3-7: Device number 2. When the exception class is 1, 2, 3, or F: Always ‘00’

Copyright ©1997, Hitachi, Ltd.

ECKD 32-Byte SSB (2/3)

Byte	Bit	Name	Description			
5	Device type code		1. For exception class 4, 6, B, C, D and E, this byte indicates device type (x‘24’). 2. For exception class 1, 2, 3 and F, always x‘00’.			
6	Content and format		Indicates whether the other bytes of SSB are valid or invalid and their formats			
	0	Unit indication	0: SSB2 (storage control type) is valid 1: SSB5 (device type) is valid			
	1	Device address valid	0: SSB4 is invalid 1: SSB4 is valid			
	2	CYL, HD address valid	0: SSB29-31 invalid 1: SSB29-31 valid			
	3	Not used				
	4-7	Format	When x‘F’, this SSB is SIM.			
22	0-3	Exception class	0: File protection, invalid track format, status exception, command sequence exception 4: Data check, retry prohibition, PCI, subretry success 6: Subsystem data B: Failure between DKC and DASD CTL (reserved) C: Controller failure (reserved) D: Failure between controller and device E: Device failure			
	4-7		For details, see Section 4.3.			
23	Exception code; or, CHL#, LPN, and LCP# beyond the threshold					
24	(Logging message control)					
	0-2	Not used				
	3	Logging mode	Forced log mode			
	4-5	Logging action	00: Not logged 01: Unconditionally logged 10: Logged only once 11: Logged only for frequent occurrence on the path			
	6-7	Operator message control	00: Message not output 01: Message output unconditionally 10: Message output only once 11: Message output only once only for frequent occurrence on the path			
25	Program action code		Bit 0 = 0		Bit 0 = 1	
			Bit 1-7	Single program action code	Bit 1	0 SSBs 26 and 27 have no meaning. 1 Executes error recovery specific to DC.
					2	0 Does not execute ERP based on SSB28. 1 Executes ERP based on SSB28.
					3	Another path retry request
					4-5	Not used
					6-7	00 Does not retry 01 Retry twice 10 Retry ten times 11 Retry 255 times

ECKD 32-Byte SSB (3/3)

Byte	Bit	Name	Description	
26 *	0	Dual frame	0: Single-frame configuration 1: Dual-frame configuration	
	1	EDCC mode	0: DCC mode 1: EDCC mode	
	2	Duplex pair	0: Simplex 1: Duplex pair	
	3	Subvolume error	0: Not a subvolume error 1: Subvolume error	
	4	Nonsynchronous operation	0: Synchronous operation 1: Asynchronous operation	
	5	Serial channel	0: Parallel channel 1: Serial channel	
	6	Report output	0: Excluding environmental data present and SIM 1: Environmental data present and SIM	
	7	Permanent path error	0: Permanent error for all paths 1: Permanent error for this path	
27 *	0	32-byte SSB	ECKD 32-byte SSB = 0	
	1-3	Not used		
	4	DKU86I TRK compatible mode	0: Not in DKU86I track compatible mode 1: In DKU86I track compatible mode or changing to DKU86I track compatible mode	
	5	Not used		
	6-7	Path number	Indicates the SSB creation path number.	
28	Message code		Instructs the message status of the EREP log and operator console.	“Number of read or searched bytes” for exception class 6
29	Cylinder address		Indicates the cylinder address with an error.	
30				
31	Head address		Indicates the head address with an error.	

* Configuration information

4.2 Exception Classes and Formats

Exception class	Format	Description
0	0-1	Reserved
	2	Reserved
	3	Machine condition exception
	4	Command sequence exception
	5-F	Reserved
4	0	Reserved
	1	Data exception (PCI, permanent)*
	2	Reserved
	3-E	Reserved
	F	SIM
6	0	Reserved
	1	Subsystem information*
	2-F	Reserved
B	0	Reserved
	1	Shared Memory Failure
	2-7	Reserved
	8	LCP/MCP Failure
	9	Host Adapter CHK2
	A	Disk Adapter CHK2
	B	DRR CHK2
	C	Reserved
	D	Power Failure
	E	Processor Failure
	F	Logical inconsistency
D	0	Drive report error*
	1	SPC report error*
	2-E	Reserved
	F	SIM
E	0	Drive failure, LDEV blockade/Pin volume detected/Write inhibited, LDEV not ready*
	1-E	Reserved
	F	SIM

* For DKU87I (IBM 3390 emulation mode) only.

4.3 Details of Sense Bytes

Exception 0, Format 3 (Machine condition exception)

	0	1	2	3	4	5	6	7
6	Unit indication	Byte 4 valid	Bytes 29 to 31 valid	Not used	Format (x‘3’)			
7	LR/LRE command operation byte							
8	Extension operation byte (byte 17) for LR/LRE command							
9	byte 2 for LR/LRE command							
10	Reserved							
11	Search parameter of LR command (CCHHR) or Record ID of re-execution command (R)							
12								
13								
14								
15								
16	Sector number to re-execute the LR							
17	TLF for LR/LRE command							
18								
19	Operation byte = 0x3F :LR/LRE External operation byte Others :Reserved							
20	SSID							
21								
22	Exception code							
23	x‘08C1’							

Exception 0, Format 4 (Command sequence exception)

	0	1	2	3	4	5	6	7
6	Unit indication	Byte 4 valid	Bytes 29 to 31 valid	Not used	Format (x‘4’)			
7	LR/LRE command operation byte							
8	Extension operation byte (byte 17) for LR/LRE command							
9	Head address of extent (DX command parameter)							
10								
11								
12								
13	Path group ID (bytes 1 to 7 of the ID transferred by the newest SET PATH GROUP ID command)							
14								
15								
16								
17								
18								
19								
20	SSID of self subsystem							
21								
22	Exception code							
23	x‘0212’: incomplete domain

Exception 4, Format 1 (data exception, PCI, permanent)

	0	1	2	3	4	5	6	7
6	Unit indication	Byte 4 valid	Bytes 29 to 31 valid	Not used	Format (x‘1’)			
7	Sector number*							
8	Cylinder address*							
9								
10	Head address*							
11								
12	Record number*							
13	Error displacement							
14								
15	Drive serial number (X‘0C69’ + DKU sequence number)							
16								
17								
18								
19								
20	SSID of self subsystem							
21								
22	Exception class (x‘4’)				Message†			
23	Correction flag††							

* Not determined for occurrence in HA or R0.

† Contents of message
- x‘0’: Data check in HA field
- x‘1’: Data check in C field
- x‘2’: Data check in K field
- x‘3’: Data check in D field
- x‘4’: Missing sink byte in HA field
- x‘5’: Missing sink byte in C field (PA error)
- x‘6’: Missing sink byte in K field
- x‘7’: Missing sink byte in D field
- x‘8’: Not used
- x‘9’: Missing AM during retry
- x‘A’ to x‘F’ : Not used

†† Contents of correction flag
- Bits 0 and 1: CORRECTION BIT
  - 00: Correctable (Recovered)
  - 11: Uncorrectable
- Bit 2: Offset active
- Bits 3 to 7: Not used

Interruption status codes

1. Interruption related to SCSI reset

Interruption code	Cause of interruption	Conditions for interruption
01h	RESET-CONDITION DETECTED	Reset status has been detected on the SCSI bus.

2. Interruption related to transfer

Interruption code	Cause of interruption	Conditions for interruption
24h	SCSI parity error	A parity error has been detected in the input/output data of the SCSI interface in the current phase.
22h	MPU parity error	A parity error has been detected in the output data of the MPU interface during program transfer (data phase).
21h	DMA parity error	A parity error has been detected in the input/output data of the DMA interface during DMA transfer (data phase).
26h	SCSI parity error & MPU parity error	A parity error has been detected in the input/output data of the MPU and SCSI interfaces during program transfer (data phase).
25h	SCSI parity error & DMA parity	A parity error has been detected in the input/output data of the DMA and SCSI interfaces during DMA transfer (data phase).
29h	Offset error	More REQ/ACK signals have been received in synchronous transfer than the offset value that is set
2Ah	Short transfer period error	SPC could not be tracked during synchronous transfer because the cycle of the received REQ/ACK signal was short.
2Bh	Offset error & Short transfer period error	An offset error and short transfer period error have been detected during synchronous transfer.
2Ch	REQ/ACK timeout	The time that is set for REQ/ACK TIMEOUT has been exceeded.
31h	Disconnected in transfer progress	Bus free status has been detected during phase execution (transfer operation).
32h	Phase error in transfer progress	A phase error has occurred during phase execution (transfer operation).

Copyright ©1997, Hitachi, Ltd.

3. Interruption related to phase transition

Interruption code	Cause of interruption	Conditions for interruption
54h	Initial phase error*	Inconsistency occurred when the phase of the received C. COMMAND received the first REQ signal.
55h	Initial phase error & MSG received†	An initial phase error occurred and one message was received for the target MSG-IN request.
56h	Initial phase error & STATUS received†	An initial phase error occurred and one STATUS was received for the target STATUS receive request.
42h	Command stop (ATN condition detected)††	During execution of the data phase that failed in phase transition due to the generation of the ATN condition of the initiator, the transfer is stopped at the transfer block boundary and this interruption is reported. (At this time, the data register is empty.)
43h	Command stop (ATN condition detected & MSG received)†	One message was received after responding to the MSG-OUT request of the initiator that failed in phase transition due to the generation of the ATN condition of the initiator. During execution of the data phase, one message is received after responding at the transfer block boundary. (At this time, the data register is empty.)

* If a phase error has occurred and the DATAIN phase has been requested, the operation is as follows:

1) When the target with a nexus is in the asynchronous transfer mode
   One-byte data is received.
2) When the target with a nexus is in the synchronous transfer mode
   The number of bytes for the received REQ signal are received (ACK signal is not asserted).

† Occurs only when the AUTO receive mode is set.

†† Occurs only when the AUTO receive mode is not set.

Copyright ©1997, Hitachi, Ltd.

4. Interruption related to report

Interruption code	Cause of interruption	Conditions for interruption
60h	Command complete	Received command has ended normally.
64h	Command Reject	1) A command has been received during automatic operation of this SPC (AUTO selection/reselection response). 2) Another command has been received during execution of a command. 3) The message length is 33 or more bytes when the SEND MSG command for EXTEND-MSG has been received.
65h	Command Invalid	1) A command of the target has been received during operation as an initiator. 2) A command of the initiator has been received during operation as a target. 3) A sequential command is present in the user program memory. 4) The received command code is not defined. 5) A command that requires the setting of the data block register/data byte register (MC byte counter) has been received, but the register value is “0”. 6) Transfer is impossible because the CDB length of group 6/7 is set to “0”. 7) The CDB of group 3/4 or a transfer command has been received.
66h	REG parity error detected	A parity error has been detected in the register set by the host MPU.
67h	COMMAND PAUSE	1) The COMMAND PAUSE command was received and processing ended.
68h	Self-diagnostic result “GOOD”	Self-diagnostics are performed, and the result is “normal.”
69h	Self-diagnostic result “NO GOOD”	Self-diagnostics are performed, and the result is “abnormal.”
70h	Disconnected	Bus free status has been detected while making a nexus as an initiator.
71h	REQ Asserted	Next phase execution is requested from the target. This interruption occurs only when no command is received in the nexus.
61h	Command complete (ATN condition detected)	The command ends normally and the ATN condition generated by the initiator is detected only when an ATN signal is asserted when an ACK signal is asserted for the last phase of the executed command.
62h	Command complete (ATN condition detected & MSG received)	A command has ended normally and one message has been received after responding to the ATN condition generated by the initiator. An ATN signal is detected only when an ATN signal is asserted when an ACK signal is asserted for the last phase of the executed command.

Copyright ©1997, Hitachi, Ltd.

5. Interruption related to selection/reselection

Interruption code	Cause of interruption	Conditions for interruption
82h	Sel/Reselection timeout	The time that is set for selection/reselection timeout has been exceeded.
90h	Reselected	The target has been reset as the initiator.
80h	Selected	The initiator has been selected as the target.
81h	Selected with ATN	The initiator has been selected as the target, and the ATN condition generated by the initiator has been detected.

5. Interruption related to response operation for auto selection/reselection

Interruption code	Cause of interruption	Conditions for interruption
B0h	AUTO mode phase error	The reselection phase changed to a phase other than the MSG-IN phase.
B1h	MSG received	After the reselection phase, one message was received.
A0h	AUTO mode phase error	No ATN signal was asserted in the selection phase. This interruption occurs only when the MSG-OUT phase is set after the selection phase.
A1h	MSG received	After the selection phase, a message other than Identify-MSG was received.
A2h	Illegal Identify MSG received	Identify-MSG was received after the selection phase, but bits 5, 4, and 3 are set to ë1í.
A3h	MSG received with Identify MSG	After the selection phase, Identify-MSG was received, followed by another message.
A4h	unknown CDB received	After the selection phase, an attempt to receive one command was made, but only one byte was received because the CD8 length of group 6 or 7 was unobtainable. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A5h	unknown CDB received with Identify MSG	After the selection phase, an attempt was made to receive a command following Identify-MSG, but only one byte was received because the CD8 length of group 6 or 7 was unobtainable.
A6h	CMD received **	After the selection phase, one command was received. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A7h	CMD received with Identify MSG	After the selection phase, Identify-MSG was received, followed by a command.
A8h	CMD received & MSG received	After the selection phase, one command was received. Then one message was received for the attention status. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A9h	CMD received with Identify MSG received	After the selection phase, Identify-MSG was received, followed by a command. Then one message was received for the attention status.

Command step

No.	Command name	Function	STEP	Description
1	RESELECTION & 1-MSG	1) Performs reselection. 2) Changes to the MSG-IN phase. 3) Issues a message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
2	RESELECTION & N-Byte-MSG	1) Performs reselection. 2) Changes to the MSG-IN phase. 3) Issues a message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
3	RESELECTION & TERMINATE	1) Performs reselection. 2) Performs the Terminate sequence.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the STATUS phase STATUS phase running
			X‘04’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘05’	Message issuance complete Disconnect Command complete
4	RESELECTION & LINK TERMINATE	1) Performs reselection. 2) Performs the LINK-Terminate sequence.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘01’	Nexus established Transition to the STATUS phase STATUS phase running
			X‘03’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete

Copyright ©1997, Hitachi, Ltd.

No.	Command name	Function	STEP	Description
5	TERMINATE	1) Changes to the STATUS phase. 2) Issues one-byte status. 3) Changes to the MSG-IN phase. 4) Issues a one-byte message. 5) Disconnect	X‘00’	Command received
			X‘01’	During transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘03’	Message issuance complete Disconnect Command complete
6	LINK TERMINATE	1) Changes to the STATUS phase. 2) Issues one-byte status. 3) Changes to the MSG-IN phase. 4) Issues a one-byte message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	Transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘03’	Message issuance complete Command complete
7	DISCONNECT SEQUENCE	1) Changes to the MSG-IN phase. 2) Issues a two-byte message. 3) Disconnect	X‘00’	Command received BUS FREE phase awaited
			X‘01’	Transition to the MSG-IN phase MSG-IN phase running
			X‘02’	Two-byte message issuance complete Disconnect Command complete
8	SEND N-Byte-MSG	1) Changes to the MSG-IN phase 2) Issues N-byte messages (two or more messages)	X‘00’	Command received
			X‘03’	Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
9	RECEIVE N-Byte-CMD	1) Changes to the CMD phase. 2) Receives an N-byte CDB (undefined CDB).	X‘00’	Command received
			X‘04’	Transition to the CMD phase CMD phase running
			X‘05’	All CDB bytes received completely Command complete
10	RECEIVE N-Byte-MSG	1) Transition to the MSG-OUT phase 2) Receives an N-byte CDB (33 bytes or more messages).	X‘00’	Command received
			X‘02’	Transition to the MSG-OUT phase MSG-OUT phase running
			X‘03’	All message bytes received completely Command complete
11	RESELECTION	Performs reselection.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Command complete
12	SET REQ	Asserts REQ.	X‘00’	Command received
			X‘01’	C. Command Complete
13	RESET REQ	Negates REQ.	X‘00’	Command received
			X‘01’	C. Command Complete

Copyright ©1997, Hitachi, Ltd.

No.	Command name	Function	STEP	Description
14	Disconnect	Releases a BSY signal.	X‘00’	Command received
			X‘01’	C. Command Complete
15	SEND DATA from MPU	1) Changes to the DATA-IN. phase. 2) Issues data in the program transfer mode	X‘00’	Command received
			X‘01’	Transition to the DATA-IN phase DATA-IN phase running
			X‘02’	All data bytes received completely Command complete
16	SEND DATA from DMA	1) Changes to the DATA-IN. phase. 2) Issues data in the program transfer mode	X‘00’	Command received
			X‘01’	Transition to the DATA-IN phase DATA-IN phase running
			X‘02’	All data bytes received completely Command complete
17	RECEIVE DATA from MPU	1) Changes to the DATA-OUT phase. 2) Receives data in the program transfer mode.	X‘00’	Command received
			X‘01’	Transition to the DATA-OUT phase. DATA-OUT phase running
			X‘02’	All data bytes received completely Command complete
18	RECEIVE DATA from DMA	1) Changes to the DATA-OUT phase. 2) Receives data in the program transfer mode.	X‘00’	Command received
			X‘01’	Transition to the DATA-OUT phase. DATA-OUT phase running
			X‘02’	All data bytes received completely Command complete
19	SEND 1-MSG	1) Changes to the MSG-IN phase. 2) Issues a message.	X‘00’	Command received
			X‘01’	Transition to the MSG-IN phase MSG-IN phase running
			X‘02’	All message bytes issued completely Command complete
20	RECEIVE MSG	1) Changes to the MSG-OUT phase. 2) Issues a message.	X‘00’	Command received
			X‘01’	Transition to the MSG-OUT phase MSG-OUT phase running
			X‘02’	All message bytes received completely Command complete
21	SEND STATUS	1) Changes to the STATUS phase. 2) Issues one-byte status.	X‘00’	Command received
			X‘01’	Transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Command complete
22	RECEIVE CMD	1) Changes to the CMD phase. 2) Receives CDB.	X‘00’	Command received
			X‘01’	Transition to the CMD phase CMD phase running
			X‘02’	All CDB bytes received completely Command complete

SCSI sense key

Sense key	Definition
0_H	NO SENSE: Indicates that the key information reported from the specified logical unit is not for specific use. This indicates that the command has ended normally.
1_H	RECOVERED ERROR: Indicates that the last command has ended normally after recovery operation by the controller. Details can be determined by checking the additional sense byte and information byte.
2_H	NOT READY: Indicates that the addressed logical unit cannot be accessed. Recovery from this status may require operator's intervention.
3_H	MEDIUM ERROR: Indicates that the command has ended in the irrecoverable error status due to damage to the medium or an error in recorded data.
4_H	HARDWARE ERROR: Indicates that the controller has detected an irrecoverable hardware error (e.g., controller failure, device failure, parity error, etc.) during execution of a command or self-diagnostics.
5_H	ILLEGAL REQUEST: Indicates that illegal data has been detected in the CDB or the additional parameter given as data for some commands (FORMAT UNIT, MODE SELECT, etc.). The controller terminates the command without changing the medium if an invalid parameter has been detected in the CDB. If an invalid parameter has been detected in the additional parameter given as data, the medium may already have been changed.
6_H	UNIT ATTENTION: Indicates that the unit attention status has occurred because the MODE SELECT parameter has been changed or the controller has been reset.
7_H	DATA PROTECT: Indicates that a write command has been received when write to media is prohibited. Write operation is not performed.
8_H	BLANK CHECK. (Not used)
9_H	Vendor Unique. (Not used)
A_H	COPY ABORTED. (Not used)
B_H	ABORTED COMMAND: Indicates that the controller has aborted the command. The host can retry the command for recovery.
C_H	EQUAL. (Not used)
D_H	VOLUME OVERFLOW. (Not used)
E_H	MISCOMPARE: Data comparison failed during byte comparison and verification. Or, data in the WRITE BUFFER command from the same host was changed before execution of the READ BUFFER command.
F_H	Reserved

Additional sense code + Additional sense code Qualifier

Sense key	Code*	Error name	Description
0	00 00	No Additional Sense Information	No valid additional sense information.
4	01 00	No Index/Sector Signal	• Index signal cannot be detected. • Sector signal cannot be detected.
1/4	02 00	No Seek Complete	The Seek operation of the drive cannot be performed properly.
1/4	03 00	Write Fault	Drive Write Fault has been detected.
1/4	03 80	Write at inhibit condition	The Write is attempted under the write inhibit condition.
2	04 00	Drive Not Ready	• Drive Ready signal cannot be detected. • The drive cannot be accessed.
2	04 01	Drive is in Progress of Becoming Ready	The drive is not ready and will soon get ready.
2	04 02	Drive Not Ready, Initializing Command Required	The drive is not ready. Issue the START UNIT command to get it ready.
2	04 04	Drive Not Ready, Format in Progress	The drive is not ready. (Format in progress)
2	04 80	Drop Ready	Drive got not Ready because motor has stopped incorrectly.
2	05 00	Drive Not Selected	Drive cannot be selected.
1/4	06 00	No Track Zero Found	Positioning to track zero is impossible.
4	08 00	Logical Unit Communication Failure	A drive interface error has occurred. (MESDI I/F Error)
4	08 01	Logical Unit Communication Time Out	A drive interface time-out error has occurred. (MESDI I/F Time Out)
4	08 02	Logical Unit Communication Parity Error	A drive interface parity error has occurred. (MESDI I/F Parity Error)
1/4	09 00	Track Following Error	Track positioning failed.
1/4	09 80	Track Positioning Error	The track is out of position between ATN OFF and MESDI command (seek) issued.
1/4	09 81	ESDI Invalid Command	An invalid ESDI command has occurred.
1	0C 01	Write Error Recovered with Auto Reallocation	Write Error Recovered with Auto Reallocation.
3	0C 02	Write Error Auto Reallocation Failed	Automatic reallocation was attempted for an ID error detected during a write, but it failed.
1	0C 81	Auto REA Exhausted with Write Auto REA	Auto reassignment resulted in failure because of over- threshold.
1/3	10 00	ID CRC Error	A CRC or ECC error has occurred in the ID field.
3	11 00	Unrecovered Read Error	An error has occurred in the DATA field (retry not applied).

* The higher-order byte of the code indicates an additional sense code (byte 8), and the lower-order byte an additional sense code qualifier (byte 9).

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
3	11 01	Read Retries Exhausted	A retry was attempted for a DATA field read error, but recovery was impossible (error correction not applied).
3	11 02	Error Too Long to Correct	ECC correction of the DATA field read error is impossible.
3	11 04	Unrecovered Read Error-Auto Reallocation Failed	Auto reallocation was attempted to a correctable error but failed.
3	11 82	Error Too Long to Multi-Symbol Soft Correction	Can not correct a Read error in DATA field with Multi-Symbol Soft Correction.
1/3	12 00	No Address Mark Found in ID Field	No address mark cannot be detected in the ID field.
1/3	13 00	No Address Mark Found in Data Field	No address mark cannot be detected in the DATA field.
1/3	13 80	Sprit Data AM Not Found	AM in Sprit Data is not found.
1	13 E1	VFO Data AM Recovered (Read Gate Delay:4, PLL:8)	Data AM Error is recovered with Read Gate Delay:4 byte, PLL:6 byte.
1	13 E2	VFO Data AM Recovered (Read Gate Delay:0, PLL:6)	Data AM Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	13 E3	VFO Data AM Recovered (Read Gate Delay:8, PLL:6)	Data AM Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1	13 E4	Split Data AM Recovered (Read Gate Delay:4, PLL:8)	Split Data AM Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1	13 E5	Split Data AM Recovered (Read Gate Delay:0, PLL:6)	Split Data AM Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	13 E6	Split Data AM Recovered (Read Gate Delay:8, PLL:6)	Split Data AM Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1/3	14 01	No Record Found	A block with a consistent ID field cannot be detected.
3	14 03	Write Fault (Require Reassign)	Write Fault of Drive is detected. (Require Reassign)
1/3	14 80	Flag Error	The flag in the ID field is inconsistent.
1/3	14 81	Drive Fault with ATN OFF	A drive fault was detected when ESDI ATN is off.
1/3	14 82	Mismatch Sector ID	The sector address in the ID field is inconsistent.
1/3	14 83	Drive Error with no Factor	A drive error was detected, but all error cause were off.
3	14 84	ID Check Code Error at ID ON the Fly	Check Code error is detected in ID On the Fly.
3	14 91	Uncorrectable Data Error using previous sector ID	A data error was recovered by a previous sector ID retry, but the data is uncorrectable error by ECC.
3	14 93	Data AM not found using previous Sector ID	A previous sector ID retry was attempted, but the data AM of the data cannot be detected.
3	14 94	Sprit Data AM Not Found using Previous Sector ID	A previous sector ID retry was attempted, but the Sprit data AM of the data cannot be detected.
1	14 98	ECC Correctable Error using previous Sector ID	A data error was recovered using previous sector ID retry, but the data is recovered data by ECC.

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
3	14 A0	Reassign Fault because of Reserve Sector No REC	A reassign command failed. (The reserved sector is No REC.)
3	14 A1	Previous Sector Error with Previous Sector ID retry	A previous sector ID retry was attempted, but an error occurred in previous ID.
3	14 B1	Error too much to recover using previous ID	A previous sector ID retry cannot execute. (Number of error ID ≥ 2)
1/3	14 C0	ID On the Fly Correction Error	ID error is detected with ID On the Fly correction and CCH not coincident.
1/3	14 E1	VFO ID Error Recovered (Read Gate Delay:4, PLL:8)	VFO ID Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1/3	14 E2	VFO ID Error Recovered (Read Gate Delay:0, PLL:6)	VFO ID Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1/3	14 E3	VFO ID Error Recovered (Read Gate Delay:8, PLL:6)	VFO ID Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
3	15 00	Seek Positioning Error	The target address cannot be sought.
1/3	15 01	Mechanical Positioning Error	A seek error has occurred.
1/3	15 02	Positioning Error Detected by Read of Medium	A seek ended normally but the address was not the target address.
1/3	15 B0	Drive Check Code Error	The drive found a check code error (Read).
1/3	15 DA	SCTSTUS Register Error	An error has occurred in SCTSTUS register.
3	15 DB	SCTSTUS Register Error (Index Pulse Error)	An index pulse error has occurred in SCTSTUS register.
1/3	17 XX	Recovered Data with Retries	Retry Succeeded in error recovery. XX depends on retry method.
1	17 00	Recovered Data with No Error Correction Applied	Indicates that a retry has succeeded in error recovery with no Error Correction Applied. (Retries: max. 3 times)
1	17 01	Recovered Data with Retries	A retry has succeeded in error recovery with change of data strobe offset, slice level, etc.
1	17 02	Recovered Data with Positive Head Offset	A retry with a positive head offset has succeeded in error recovery.
1	17 03	Recovered Data with Negative Head Offset	A retry with a negative head offset has succeeded in error recovery.
1	17 05	Recovered Data Using Previous Sector ID	A data recovery has been executed by a previous ID retry.
1	17 06	Recovered Data without ECC-Data Auto Reallocation	Recovered with Auto Reallocation, without Error Correction Applied.
1	17 85	Recovered Data with Physical SCT Pulse Read	Error is recovered with Physical Sector pulse read.
1	17 86	Auto REA Exhausted without ECC Correction	Auto Reallocation (with no Error Correction Applied) Exhausted.
1/3	17 D6	Drive Overrun Occurred Recovered:RTRY Recovered	Drive Overrun occurred by hardware failure. Recovered by retry.

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
1	17 E1	Data Error Recovered by VFO (Read Gate Delay:4, PLL:8)	Data Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1	17 E2	Data Error Recovered by VFO (Read Gate Delay:0, PLL:6)	Data Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	17 E3	Data Error Recovered by VFO (Read Gate Delay:8, PLL:6)	Data Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1	18 00	Recovered Data with Error Correction Applied	Error recovery has been accomplished with ECC correction (no retry).
1	18 01	Recovered Data with ECC and Retries Applied	Indicates that a retry has succeeded in error recovery with ECC correction.
1	18 02	Recovered Data with ECC and/or Retries Data Auto Reallocated	Recovered Data with ECC and/or Retries Data Auto Reallocated.
1	18 80	Recovered Data without Retries or Multi-Symbol Soft Correction	Recovered Data without Retries or Multi-Symbol Soft Correction.
1	18 81	Recovered Data with Retries and Multi-Symbol Soft Correction	Recovered Data with Retries and Multi-Symbol Soft Correction.
1	18 82	Auto REA Exhausted with ECC Correction	After recovering data with ECC correction, Auto reassignment resulted in failure because of over-threshold.
1/3	19 02	Defect List Error in Primary List	An error has occurred during Primary (P) list access.
1/3	19 03 04 05 06	Defect List Error in Grown List	An error has occurred during Grown (G) list access.
5	1A 00	Parameter List Length Error	Parameter list length is invalid.
1/3	1C 01	Primary Defect List Not Found	Positioning to the Primary (P) list failed.
1/3	1C 02	Grown Defect List Not Found	Positioning to the Grown (G) list failed.
E	1D 00	Miscompare During Verify Operation	Indicates that a data compare error has occurred during Verify operation.
5	20 00	Invalid Command Operation Code	The operation code is invalid.
5	21 00	Logical Block Address out of Volume Range	A logical address (LBA) beyond the capacity of the medium has been pointed out.
5	21 44	Logical Block Address out of Zone Range	Illegal access is made over a zone in LBA Mapping.
5	24 00	Illegal Field in CDB	An error is in the CDB command.

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
5	24 81	Odd Byte Data Out Request in Wide Transfer	Odd Byte Data Out is requested in Wide Transfer.
5	24 82	Odd Byte Data Out Request	Odd bytes data out requirement has occurred.
5	25 00	Invalid LUN	The LUN indicated in the CDB command or IDENTIFY message is not supported.
5	26 00	Invalid Field in Parameter List	An error is in the parameter list.
5	26 01	Parameter Not Supported	An unsupported parameter has been received.
5	26 02	Parameter Value Invalid	A parameter value is invalid.
5	26 03	Threshold Parameters Not Supported	Received threshold parameters that not supported.
5	26 80	Microprogram Download Error	Illegal Product type name is detected in the download file.
7	27 00	Write Protected	The drive is write-protected.
6	29 00	Power On, Reset or Bus Device Reset or Reboot Occurred	• A Power On Reset has occurred. • A Bus Device Reset has occurred. • A SCSI Bus Reset has occurred. • Reboot has occurred.
6	2A 00	Parameter Changed	• Mode/Log parameters changed. • Parameters were changed by MODE SELECT command. • Set Mode/Log parameters because drive condition changed from not ready to ready.
6	2A 01	Mode Parameters Changed	• Mode/Log parameters changed. • Key = 2 : Format Mode Parameters Changed (Page 3, 4).
6	2A 02	Log Parameters Changed	Log Parameters Changed.
6	2F 00	Command Cleared by Another Initiator	Command Cleared by Another Initiator.

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
2/3	31 00	Medium Format Corrupted	The medium is not correctly formatted. It must be reformatted by the FORMAT command.
3	31 01	Format Command Failed	The FORMAT command has ended abnormally.
1	31 F0	ETF Cylinder Read Error	ETF Cylinder Read Error has occurred in Initial Formatting, and treats as it has no P-list.
1	31 F1	ETF Cylinder ESDI Defect List Check Error	ETF Cylinder ESDI Defect List Check Error has occurred in Initial Formatting, and treats as it has no P-list.
1	31 F2	M-List Write Error	M-List Write Error has occurred in Initial Formatting.
1/4	32 00 32 8X	No Defect Spare Location Available	Reallocation is impossible because of alternate area shortage.
1/3	32 01	Defect List Update Failure	Updating the Grown (G) list failed.
1	37 00	Rounded Parameter	The parameter value has been rounded because it cannot be handled as it is
1	3D 00	Invalid Bits in Identify Message	Invalid bits have been detected in the Identify message.
2	3E 00	Logical Unit Has Not Self-Configured Yet.	The self-configuration of the drive has not been determined yet. Initial Formatting has not completed.
2	3E 01	Program Load Error	Program Load Error.
2	3E 02	Program Load Error at CSN	Program Load Error at CSN.
4	3E 03	Can’t found Program with Program Loader	A program (loaded by program loader) cannot be found.
4	3E 04	Check SUM Error with Program Loader	A SUM check error detected during a program loading.
4	3E 05	Can’t found end Mark with Program Loader	An end mark of partitioned file cannot be found when a program load. (Does not occur.)
6	3F 00	Target Operating Conditions Have Changed	Target Operating Conditions Have Changed.
6	3F 01	Microcode Has been Changed	A microcode has been changed by downloading microcode.
6	3F 03	Inquiry Data Has Changed	Inquiry data has changed. (by switching ROM-RAM)

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
4	40 00	RAM Failure	RAM failure detected.
4	42 00	Power On or Self test Failure	Indicates that an error has occurred during Power On Diagnostic. _ MPU error _ TIMER error _ ROM error _ Disk controller error _ Initial Formatting Failure _ RAM diagnostic error _ Buffer error
4	42 80	Hard Register Error in Send Diag Self Test	Hardware Register diag error is detected in Send Diag Self Test.
B	43 00	Message Error	The message is rejected and operation cannot continue.
4	44 00	Internal Target Error	A hardware/firmware error has been detected in the controller during execution of a command.
B	44 00	Write ABORT with Array Mode	Received ABORT message in writing with Array Mode.
4	44 80	Pin occurred with Forced Write After	A PIN occurred at forcible write after. (only in case 8MB cache)
4	44 90	Management Data Read Error	A read process for management data in a management area was failed.
4	44 91	Multi Track R/W Error	A read/write process for multi track in a management area was failed.
4	44 97	Master Data Read Error	A read process for the master data in a management area was failed.
4	44 98	Can’t Multi Track Write Remain Trackless	A write process for a management area was failed because remain track is one.
4	44 99	Multi Track Write Error	All write operations for a management area were failed.
4	44 9E	Master Data Write Error	A write process for master data of management area was failed.
4	44 9F	Time Out in CTL Area Access	Time Out Error is detected when Control Area is accessed.
4	44 A0	REA Sector not found	The sector for reassignment cannot be found.
4	44 A1	Reassign Data Restore Fail	Reassign Data Restore Failed.
4	44 A2	Reassign Sector ID Not Found (ID Misscompare)	Sector ID to be reassigned can not be found.
4	44 A3	No Defect Spare Location Available at Skip REA.	No Spare Sector is available for Skip Reassign.
4	44 A4	ID String Check Error	Reassign failed due to ID String check error.
4	44 A5	Reassign Data Save Error	Reassign Data Save Error.
4	44 A6	Reassign ID Write Error	Source sector ID for Reassign can not be updated.
4	44 A9 AD	BASM acceding order error	BASM acceding order error has occurred during reassignment.

Copyright ©1997,1998, Hitachi, Ltd.

Sense key	Code	Error name	Description
4	44 AB AC	G List irregular Order	G List acceding order error has occurred.
4	44 AE	BATM irregular Order	BATM acceding order error has occurred.
4	44 B0	HDC FIFO Error (Check Code Error etc.)	HDC FIFO Error is detected.
4	44 B1	SCSI FIFO Error (Check Code Error etc.)	SCSI FIFO Error is detected.
4	44 C0	HDC DMAC Error	HDC DMAC Error is detected.
4	44 C1	SCSI DMAC Error	SCSI DMAC Error is detected.
4	44 D0	HDC Sequencer Setting Mismatch	HDC Sequencer setting values have compare check error.
4	44 D1	HDC DMA Next Condition Full	Can not set DMA due to Next being full after Current is finished.
4	44 D2	Offline ECC Correction Time Out	Time out is detected after initiating HDC for Offline one burst error correction.
4	44 D3	HDC Time Out	Time out is detected after initiating HDC for R/W.
4	44 D4	HDC Illegal Stop	HDC Stopped illegally.
4	44 D5	STRD Register Error	Error is detected in STRD Register.
4	44 D6	EERD Register Error	Error is detected in EERD Register.
4	44 D7	ESDIERR Register Error	Error is detected in ESDIERR Register.
4	44 D8	ECSTR Register Error	Error is detected in ECSTR Register.
4	44 D9	SST Register Error	Error is detected in SST Register.
4	44 DA	SCTSTUS Register Error	An error has occurred in SCTSTUS register.
4	44 DF	Error Factor Analysis Error	Error factor can not be identified.
4	44 F0	Spare Head Select Error	Wrong Jumper setting for Spare Head is made.
4	44 F1	Invalid Logical Cylinder Count	Number of Logical Cylinders returned from Drive ROM is out of Extent.
4	44 FF	Multi Track R/W Parameter Error	An internal parameter is detected in multi track R/W operation.
B	45 00	Select/Reselect Failed	_ Reselection Time Over has been detected. _ Invalid Select On has been detected.
B	47 00	SCSI Parity Error	A SCSI bus parity error has occurred.
B	48 00	Initiator Detected Error Message Received	The INITIATOR DETECTED ERROR message has been received from the initiator.
B	49 00	Invalid Message Error	An invalid message has been received.
B	4A 00	Command Phase Error	An error occurred in the COMMAND phase.
B	4B 00	Data Phase Error	An error occurred in the DATA phase.
4	4C 00	Logical Unit Failed Self-Configured	Microcode or parameter loading failed at the startup of the controller.
4	4C 80	RAM Configuration Load Error	A loading process for configuration information for RAM initialization was failed.
4	4C 90	Program Change Error	Incompatible micro code exchange was attempt.
4	4E 00	Overlapped Commands Attempted	(Does not occur.)

Sense key	Code	Error name	Description
1	5B 00	Log Exception	Log Exception detected.
6	5B 01	Threshold Condition Met	Threshold Condition Met.
1	5B 02	Log Counter at Maximum	Log Counter has reached at Maximum.
1	5B 03	Log List Codes Exhausted	Log List Codes Exhausted.
4/6	5C 00	RPL Status Change	RPL Status has changed.
6	5C 01	Spindles Synchronized	Spindles Synchronized.
1/4/6	5C 02	Spindles Not Synchronized	Spindles Not Synchronized.
1	80 00	Read with Pin Hit	Read with Pin Hit. (only in case 8MB cache)
4	81 00	LA Check Error	LA Error is detected within Drive.
4	94 00	Auto-Reallocation Fail at No REC Sector	Auto reassignment failed on No REC sector.
1	AE 00	Spare Sector less then Threshold	There are few spare sector for alternate sector.
3	C2 00	Reassign required 11, 13, 14 Error Occurred with ORM	Reassign required error (code = 11,13,14) occurred in ORM. (Only in ORM Logging)
3	C4 00	Reassign required 11, 13, 14, 18 Error Occurred with ORM	Reassign required error (code = 11,13,14,18) occurred in ORM. (Only in ORM Logging)
3	E0 00	Read Error with 10 Retry SHR LOG Only	Read Error with 10 Retry (without Uncorrectable Error, without Error in Correction Applied and without AM Not Found). (SHR LOG Only)
3/4	E1 00	Uncorrectable Error with 10 Retry SHR LOG Only	Uncorrectable Error with 10 Retry. (SHR LOG Only)
3	E2 00	Uncorrectable Error with 10 Retry SHR LOG Only	Uncorrectable Error with 10 Retry. (SHR LOG Only)
3/4	E3 00	AM Not Found Error with 10 Retry SHR LOG Only	AM Not Found Error with 10 Retry, and Auto Reallocation Applied. Key = 4 : Auto Reallocation Failed. (SHR LOG Only)
3	E4 00	Correctable Error Sector No Same with 10 Retry SHR LOG Only	Correctable Error Sector No Same with 10 Retry. (SHR LOG Only)
4	E5 00	10 Retry Error Sector Auto Reallocation Failed SHR LOG Only	10 Retry Error Sector, and Auto Reallocation Failed. (SHR LOG Only)
3	E6 00	Another Sector Error with 10 Retry SHR LOG Only	Another Sector Error with 10 Retry. (SHR LOG Only)

1 Introduction

The internal SSB (SSB Log) information is presented as either 24-byte compatibi-lity SSB format or ECKD 32-byte SSB format. The 24-byte SSB is used for DKC and the 32-byte SSB is used for DKU.

The internal SSB is devided the following sections:

- Internal SSB common information
  This information is used for SSB management, and same for all formats.

- External SSB information presented to host.
  This is 32 bytes sense information presented to host as SSB.

- Format-dependent information
  This is auxiliary information for error analysis.

See Fig.1-1 and Fig.1-2.

Note : The byte offset in SSB logs is described by hexadecimal number.
This section is correspondind to SSB log on SVP.
If you want to know about SSB which was reported to host, you should see SSB section.

2 Classification of Internal SSB

The internal SSB is classfied as the following figure, and Fig.2-1 for detail.

Module ID (3/3)

Module ID	Module Name		Remarks
D0	Multiplatform Comand Control	Command Main	
D1		Transfer Process/SSB Function	
D2		Read/Write Command	
D3		Read/Write Common Process	
D4		Control/Diagnostic Command	
D8	Multiplatform SCP Control	SCP Control 1	
D9		SCP Control 2	
DA		SCP Control 3	
DC	Multiplatform Kernel	Command Queuing Procedure	
DD		CHS Scan	
DE		CHS Initiator	
DF		CHS Terminator	
E0	RCP initialize / Reset / Sequence control		
E1	RCP idle scan / Starting process		
E2	RCP link level process		
E3	RCP device level process		
E4	RCP error process / Received frame check / physical service		
E5	Communication between RCP and CHP / Path control / Clock timer control / Frame transmission and reception		
E6	RCP sequence process / Device level process

SSB Key Code (1/2)

Code	Basic SSB	Meanning	Remarks
00	000000	Dummy SSB	
01	800000	Command reject (A program error or invalid link between BAD and ALT)	
02	400000	Intervention required (An addressed device is offline or not connect)	
03	200000	Bus out check (Channel bus out parity error)	
04	100000	Equipment check (Equipment check in subsystem)	
05	080000	Data check (Uncorrectable:retry failed or retry inhibited)	
06	040000	Overrun (command retry failed when service overrun occured)	
07	004000	Invalid track format (Track capacity over or track format error)	
08	002000	End of cylinder (A multi track operation outside LOCATE domain)	
09	000800	No record found	
0A	000400	File protected (A seek or multi track operation violates the file mask or extent)	
0B	100200	Equipment check and write inhibited (A write command on the write inhibited path by a DIAG CTL command)	
0C	080040	Data check and correctable (The retry succeeded for data check in PCI fetch mode)	
0D	000020	First log mode error	Not used
0E	800400	Command rejected and file protected (A multi track operation outside primary track)	
0F	800200	Command reject and write inhibited	Not used
10	108000	Equipment check and permanent error) (A retry failed for the equipment check)	
11	088000	Data check and permanent error) (A retry failed for the data check)	
12	009010	SIM (DKC SIM or Cache SIM)	
13	000000	Reserved	
14	000104	Imprecise ending (This error is for a previousry completed CCW)	
15	800104	Command reject and imprecise ending	
16	400104	Intervention required and imprecise ending	
17	200104	Bus out check and imprecise ending	
18	100104	Equipment check and imprecise ending	
19	080104	Data check and imprecise ending	
1A	040104	Overrun and imprecise ending	
1B	004104	Invalid track format and imprecise ending	
1C	002104	End of cylinder and imprecise ending	
1D	000904	No record found and imprecise ending	
1E	000504	File protected and imprecise ending	
1F	100304	Equipment check and write inhibited and imprecise ending

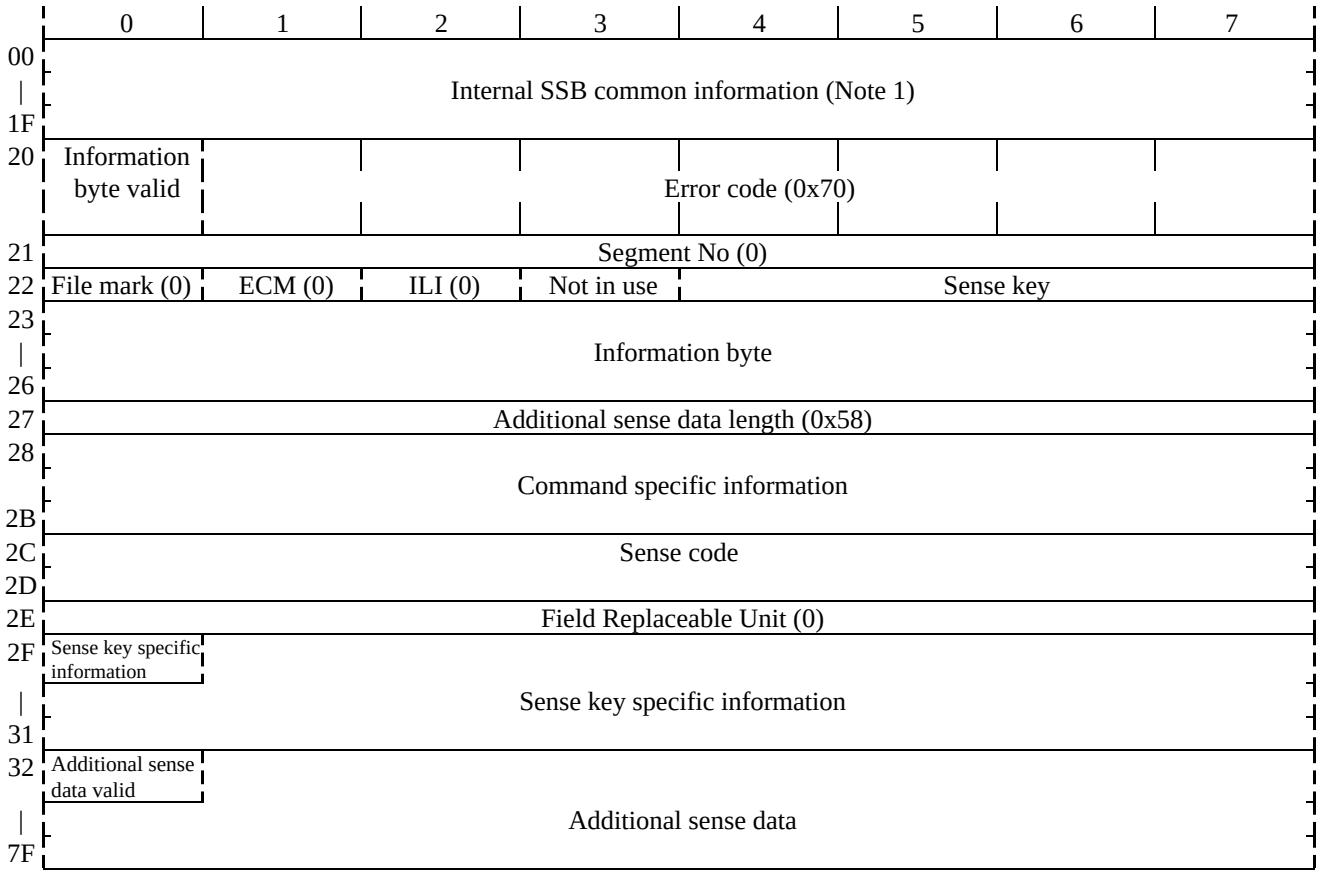
4.3 SCSI host report format SSB



(Note 1) 0xCX (X=sense key) is set to byte 7 (log type low-order byte). SSB on SVP is indicated as F/M=CX.

Copyright ©1997, Hitachi, Ltd.

Details of SCSI host report format SSB information

Byte	Bit	Description	Setting	Remarks
20	0	Information byte valid/invalid 0:Invalid 1:Valid	CHS command control	
	1 ~ 7	Error code (0x7): Indicates an I/O process error.		
21		Segment No. (0)		
22	0	File mark (0)		
	1	ECM (0)		
	2	ILI (0)		
	3	Not in use		
	4 ~ 7	Sense key: For more details, see “sense keys list”.		
23 ~ 26		Information bytes: LBA related to sense key if information byte is valid.		
27		Additional sense data length (0x58): Indicates sense data length after byte 8 or latter.		
28 ~ 2B		Command specific information		
2C ~ 2D		Sense codes: For more details, see “sense codes list”.		
2E		Field Replaceable Unit (0)		
2F ~ 31	0	Sense key specific information valid/invalid 0:Invalid 1:Valid		
	1 ~ 17	Sense key specific information		
32 ~ 7E	0	Additional sense data valid/invalid 0:Invalid 1:Valid	Error detection source	
	1 ~ END	Additional sense data

Table 6.9 Sense Codes List

Sense key	Code		Error name	Desciption/meaning
0/5	00	00	NO ADDITIONAL SENSE INFORMATION	•Valid ADDITIONAL SENSE information is not found.
	00	06	I/O PROCESS TERMINATED	(doesn't occur)
4	01	00	NO INDEX/SECTOR SIGNAL	•INDEX signal connot be detected. •SECTOR signal cannot be detected.
14	02	00	NO SEEK COMPLETE	•Drive SEEK operation cannot be performed normally.
4	03	00	PERIPHERAL DEVICE WRITE FAULT	•Drive WRITE FAULT was detected.
2	04	00	LOGICAL UNIT NOT READY, CAUSE NOT REPORTABLE	•Dreve READY signal cannot be detected. •Drive ACCESSES
2	04	01	LOGICAL UNIT IS IN PROCESS OF BECOMING READY	•Drive is not ready now but will be ready soon.
2	04	02	LOGICAL UNIT NOT READY, INITIALIZING COMMAND REQUIRED	•Drive is not ready now. Spin-up is not started.
2	04	03	LOGICAL UNIT NOT READY, MANUAL INTERVENTION REQUIRED	(doesn't occur)
2	04	04	LOGICAL UNIT NOT READY, FORMAT IN PROGRESS	•Logical unit is not ready now (during execution of format command.)
2	04	80	LOGICAL UNIT NOT READY, PARITY RECOVERY IN PROCESS	(doesn't occur)
2	04	81	LOGICAL NIT NOT READY, DATA RECONSTRUCTION IN PROCESS	(doesn't occur) Logical unit is not ready now. Data is in reconstruction process.
2	04	82	LOGICAL UNIT NOT READY, SERIAL PORT COMMUNICATION IN PROCESS	(doesn't occur)
2	04	83	LOGICAL UNIT NOT READY	(doesn't occur)
2	04	84	POWER OFF IN PROCESS	•Planned shutdown is in process.
2	05	00	LOGICAL UNIT DOSE NOT RESPOND SELECTION	•No response is sent from drive interface.
1/4	06	00	NO REFERENCE POSITION FOUND	•Positioning to TRACK ZERO is impossible.
4	07	00	MULTIPLE PERIPHERAL DEVICES SELECTED	•Multiple drives are selected simultaneously.
4	08	00	LOGICAL UNIT COMMUNICATION FAILURE	•A logical unit drive interface error occurred.
4	08	01	LOGICAL UNIT COMMUNICATION TIME OUT	•A logical unit drive interface timeout error occurred.
1/4	08	02	LOGICAL UNIT COMMUNICATION PARITY ERROR	•A logical unit drive interface parity error occurred.
1/4	09	00	TRACK FOLLOWING ERROR	•Track positioning is out range.
-	0A	00	ERROR LOG OVERFLOW	(doesn't occur)
-	0B	00	(RESERVED)	(doesn't occur)
1	0C	01	WRITE ERROR RECOVERED WITH AUTO REALLOCATION	(doesn't occur)

Copyright ©1997, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
3	0C 02	WRITE ERROR AUTO REALLOCATION FAILED	•Auto reallocation was attempted to a write error but failed.
-	0D ~ 0F	(RESERVED)	(doesn't occur)
3	10 00	ID CRC OR ECC ERROR	•A CRC error occurred in ID field.
3	11 00	UNRECOVERED READ ERROR	•An error occurred in DATA field. (retry not applied)
3	11 01	READ RETRIES EXHAUSTED	•Read error retries were attempted in DATA field but error recovery did not result. (error correction not applied)
3	11 02	ERROR TOO LONG TO CORRECT	•A read error in DATA field cannot be ECC-corrected.
3	11 03	MULTIPLE READ ERROR	(doesn't occur)
3	11 04	UNRECOVERED READ ERROR. AUTO REALLOCATION FAILED	•Auto reallocation was attempted to a correctable error but failed.
3	11 0A	MISCORRECTED ERROR	(doesn't occur)
3	11 0B	UNRECOVERED READ ERROR RECOMMEND REASSIGNMENT	(doesn't occur)
3	11 0C	UNRECOVERED READ ERROR. RECOMMEND REWRITE THE DATA	(doesn't occur)
3	12 00	ADDRESS MARK NOT FOUND FOR ID FIELD	•ADDRESS MARK in ID field cannot be detected.
1/3	13 00	ADDRESS MARK NOT FOUND FOR DATA FIELD	•ADDRESS MARK in DATA field cannot be detected.
1/3	14 00	RECORDED ENTITY NOT FOUND	(doesn't occur)
1/3	14 01	RECORD NOT FOUND	•Block with matching ID field cannot be detected.
3	15 00	RANDOM POSITIONING ERROR	(doesn't occur)
1/3	15 01	POSITIONING ERROR DETECTED BY READ OF MEDIUM	•Seek operation error occurred.
1/3	15 02	MECHANICAL POSITIONING ERROR	•Seek operation was terminated normally but the address was a target one.
1/3	16 00	DATA SYNCHRONIZATION MARK ERROR	(doesn't occur)
1	17 00	RECOVERED DATA WITH NO ERROR CORRECTION APPLIED	•Retry succeeded in error recovery.
1	17 01	RECOVERED DATA WITH RETRIES	•Retry succeeded in error recovery. (without head offset)
1	17 02	RECOVERED DATA WITH POSITIVE HEAD OFFSET	•Retry with head offset (positive direction) succeeded in error recovery.
1	17 03	RECOVERED DATA WITH NEGATIVE HEAD OFFFSET	•Retry with head offset (negative direction) succeeded in error recovery
1	17 05	RECOVERED DATA USING PREVIOUS SECTOR ID	(doesn't occur)
1	17 06	RECOVERED DATA WITHOUT ECC. DATA AUTO REALLOCATED	(doesn't occur)

Copyright ©1997, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
1	17 07	RECOVERED DATA WITHOUT ECC. (doesn't occur)	(doesn't occur)
1	18 00	RECOVERED DATA WITH ERROR CORRECTION APPLIED	•ECC succeeded in error recovery. (without retry)
1	18 01	RECOVERED DATA WITH ERROR CORRECTION AND RETRIES APPLIED	•Retrying and ECC succeeded in error recovery.
1	18 02	RECOVERED DATA-DATA AUTO-REALLOCATED	•Data was recovered by auto reallocation.
1	18 05	RECOVERED DATA-RECOMMEND REASSIGNMENT	(doesn't occur)
1/3	19 00	DEFECT LIST ERROR	(doesn't occur)
1/3	19 01	DEFECT LIST NOT AVAILABLE	(doesn't occur)
1/3	19 02	DEFECT LIST ERROR IN PRIMARY LIST	•An error occurred during access to PRIMARY (P) list.
1/3	19 03	DEFECT LIST ERROR IN GROWN LIST	•An error occurred during access to GROWN (G) list.
5	1A 00	PARAMETER LIST LENGTH ERROR	•Parameter list length is invalid.
4	1B 00	SYNCHRONOUS DATA TRANSFER ERROR	•A synchronous transfer error occurred during data transfer.
3	1C 00	DEFECT LIST NOT FOUND	(doesn't occur)
3	1C 01	PRIMARY DEFECT LIST NOT FOUND	•Positioning to PRIMARY (P) list failed.
3	1C 02	GROWN DEFECT LIST NOT FOUND	•Positioning to GROWN (G) list failed.
E	1D 00	MISCOMPARE DURING VERIFY OPERATION	•A data compare error occurred during WRITE/READ BUFFER verification.
1	1E 00	RECOVERED ID WITH ECC CORRECTION	(doesn't occur)
-	1F	(RESERVED)	(doesn't occur)
5	20 00	INVALID COMMAND OPERATION CODE	•OPERATION CODE is invalid.
5	21 00	LOGICAL BLOCK ADDRESS OUT OF RANGE	•An attempt was made to gain access over the logical block address reported by READ CAPACITY. (PMI bit=0)
5	22 00	ILLEGAL FUNCTION	•SCSI initiator issued write command to HMDE read only LDEV.
-	23 00	(RESERVED)	(doesn't occur)
5	24 00	INVALID FIELD IN CDB	•Invalid field is contained in CDB
5	25 00	LOGICAL UNIT NOT SUPPORTED	•LUM indicated by CDB or IDENTIFY message is not supported.
5	25 80	LOGICAL UNIT ALLOCATE ERROR	•Logical unit allocation failed.
5	25 81	RAID GROUP NOT DEFINE	•RG (RAID GROUP) is not defined.
5	26 00	INVALID FIELD IN PARAMETER LIST	•Invalid field is contained in parameter list.
5	26 01	PARAMETER NOT SUPPORTED	•Unsupported parameter was received.
5	26 02	PARAMETER VALUE INVALID	•Parameter value is invalid.
5	26 03	THRESHOLD PARAMETERS NOT SUPPORTED	(doesn't occur)
7	27 00	WRITE PROTECTED	(doesn't occur)

Copyright ©1997, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
-	28 00	NOT READY TO READY TRANSITION	(doesn't occur)
6	29 00	POWER ON RESET, RESET OR BUS DEVICE RESET OCCURRED	•POWER ON RESET occurred. •BUS DEVICE RESET occurred. •SCSI BUS RESET occurred.
6	2A 00	PARAMETERS CHANGED	•MODE SELECT parameter changed. ex.) Parameter was changed by MODE SELECT command.
6	2A 01	MODE PARAMETERS CHANGED	(doesn't occur)
6	2A 02	LOG PARAMETERS CHANGED	(doesn't occur)
5	2B 00	COPY CANNOT EXECUTE SINCE HOST CANNOT DISCONNECT	(doesn't occur)
5	2C 00	COMMAND SEQUENCE ERROR	(doesn't occur)
-	2D ~ 2E	(RESERVED)	(doesn't occur)
6	2F 00	COMMANDS CLEARED BY ANOTHER INITIATOR	•Commands were cleared because of CLEAR QUEUE message from another initiator or occurrence of CA state with another initiator.
3	30 00	INCOMPATIBLE MEDIUM INSTALLED	(doesn't occur)
3	30 01	CANNOT READ MEDIUM. UNKNOWN FORMAT	(doesn't occur)
3	30 02	CANNOT READ MEDIUM. INCOMPATIBLE FORMAT	(doesn't occur)
3	30 03	CLEANING CARTRIDGE INSTALLED	(doesn't occur)
3	31 00	MEDIUM FORMAT CORRUPTED	•Medium is not formatted corrected. Medium must be reformatted by FORMAT UNIT command.
3	31 01	FORMAT COMMAND FAILED	•FORMAT command was terminated abnormally. Medium must be reformatted by FORMAT UNIT command.
3	31 80	DATA FORMAT CORRUPTED	•Array data format is not established.
3	31 81	FORMAT COMMAND NOT EXECUTE	•FORMAT command cannot be executed because of imperfect disk configuration. (data drive or parity drive detached)
1/4	32 00	NO DEFECT SPARE LOCATION AVAILABLE	•Reallocation is impossible because alternate area is not large enough.
1/3	32 01	DEFECT LIST UPDATE FAILURE	•GROWN (G) list update failed.
-	33 ~ 36	(RESERVED)	(doesn't occur)
1	37 00	FOUNDED PARAMETER	(doesn't occur)
-	38	(RESERVED)	(doesn't occur)
5	39 00	SAVING PARAMETERS NOT SUPPORTED	(doesn't occur)
-	3A 00	MEDIUM NOT PRESENT	(doesn't occur)
-	3B ~ 3C	(RESERVED)	(doesn't occur)
B	3D 00	INVALID BITS IN IDENTIFY MESSAGE	•An invalid bit was detected in IDENTIFY message.

Copyright ©1997, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
2	3E 00	LOGICAL UNIT HAS NOT SELF-CONFIGURED YET	•Drive self-configuration is not established yet.
6	3F 00	TERGET OPERATING CONDITIONS HAVE CHANGED	(doesn't occur)
6	3F 01	MICROCODE HAS BEEN CHANGED	•Microprogram was downloaded.
6	3F 02	CHANGED OPERATING DEFINITION	(doesn't occur)
6	3F 03	INQUIRY DATA HAS CHANGED	(doesn't occur)
4	40 00	RAM FAILURE	(doesn't occur)
4	41 00	DATA PATH FAILURE	(doesn't occur)
4	42 00	POWER-ON OR SELF-TEST FAILURE	(doesn't occur)
B	43 00	MESSAGE ERROR	•The message is rejected and operation cannot be continued or a message phase error occurred.
4	44 00	INTERNAL TARGET FAILURE	•A HARDWARE/FIRMWARE error was detected in controller during command execution.
4	44 A0	NO REASSIGN SECTOR	•Sector to be reassigned cannot be detected.
B	45 00	SELECT OR RESELECT FAILURE	•SELECT/RESELECT TIMEOVER was detected. •An invalid SELECTION was detected.
-	46 00	UNSUCCESSFUL SOFT RESET	(doesn't occur)
B	47 00	SCSI PARITY ERROR	•SCSI bus parity error occurred.
B	48 00	INITIATOR DETECTED ERROR MESSAGE RECEIVED	•An INITIATOR DETECTED ERROR message was received from INITIATOR.
B	49 00	INVALID MESSAGE ERROR	•An invalid message was received.
B	4A 00	COMMAND PHASE ERROR	•A command phase error occurred.
B	4B 00	DATA PHASE ERROR	•A data phase error occurred.
4	4C 00	LOGICAL UNIT FAILED SELF-CONFIGURATION	•Microcode or parameter loading failed at the startup of controller.
4	4C 80	LOGICAL UNIT FAILED SELF-CONFIGURATIN, UNSUPPORTED DRIVE	(doesn't occur)
-	4D	(RESERVED)	(doesn't occur)
-	4E 00	OVERLAPPED COMMANDS ATTEMPTED	(doesn't occur)
-	4F ~ 52	(RESERVED)	(doesn't occur)
-	53 00	MEDIA LOAD OR EJECT FAILED	(doesn't occur)
-	53 02	MEDIUM REMOVAL PREVENTED	(doesn't occur)
-	54 ~ 59	(RESERVED)	(doesn't occur)
-	5A 00	OPERATOR REQUEST OR STATE CHANGE INPUT	(doesn't occur)
-	5A 01	OPERATOR MEDIUM REMOVAL REQUEST	(doesn't occur)
-	5A 02	OPERATOR SELECTED WRITE PROTECT	(doesn't occur)
-	5A 03	OPERATOR SELECTED WRITE PERMIT	(doesn't occur)
1	5B 00	LOG EXCEPTION	•A drive log exception was detected.
6	5B 01	THRESHOLD CONDITION MET	(doesn't occur)
1	5B 02	LOG COUNTER AT MAXIMUM	•Log counter in drive reached the maximum.
1	5B 03	LOG LIST CODES EXHAUSTED	•Log list codes in drive were exhausted.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
4/6	5C 00	RPL STATUS CHANGE	(doesn't occur)
6	5C 01	SPINDLES SYNCHRONIZED	(doesn't occur)
1/6	5C 02	SPINDLES NOT SYNCHRONIZED	(doesn't occur)
-	5D ~ 7F	(RESERVED)	(doesn't occur)
5	80 00	MAIN-FLAME RESERVE	•Logical unit was reserved by Main-flame-Host.
9	80 00	MICRO PROGRAM DETECTED ERROR	•Microprogram detected an error.
1	80 01	RECOVERED DATA WITH RECOVERED PARITY DISK ERROR	(doesn't occur) •Microprogram detected an error.
1	80 02	DATA WRITE IN DRIVE REGRESSION	(doesn't occur)
9	81 00	MICRO PROGRAM DETECTED ERROR	•Microprogram detected an error.
1	81 01	RECOVERED DATA WITH PARITY DISK AND SUTO-REALLOCATED	(doesn't occur) •Using parity disk data succeeded in recovery. (medium repaired)
9	82 00	MICRO PROGRAM DETECTED ERROR	•Microprogram detected an error.
6	82 01	DRIVE RECOVER ERROR FOR UNCORRECTABLE DATA ERROR	•Disk recovery by drive recovery was terminated but uncorrectable data occurred.
6	82 02	DRIVE RECOVER COMPLETE (EXIST UNCORRECTABLE DATA ERROR)	•Disk recovery by drive recovery was terminated but configuration status was not set to recovery complete state because of uncorrectable data error.
6	82 03	DRIVE RECOVER ERROR FOR DISK MEDIA ERROR (FROM)	(doesn't occur)
6	82 04	DRIVE RECOVER ERROR FOR DISK MEDIA ERROR (TO)	(doesn't occur)
6	82 05	DRIVE RECOVER ERROR FOR DISK HARD ERROR (FROM)	(doesn't occur)
6	82 06	DRIVE RECOVER ERROR FOR DISK HARD ERROR (TO)	(doesn't occur)
6	82 08	DRIVE RECOVER FORCE STOP	(doesn't occur)
6	82 0A	DRIVE RECOVER COMPLETES WITH UNRECOVERED DATA	(doesn't occur)
6	82 0B	DRIVE RECOVER ERROR FOR DATA REGRESSION (FROM)	(doesn't occur)
6	82 0C	DRIVE RECOVER ERROR FOR DATA REGRESSION (TO)	(doesn't occur)
6	82 0D	DRIVE RECOVER ERROR FOR CACHE HARD ERROR	(doesn't occur)
6	82 0E	STRUCTURE INFORMATION CHANGE	(doesn't occur)
6	82 0F	DRIVE RECOVER ERROR FOR SPARE DISK USED	(doesn't occur)
6	82 10	DRIVE RECOVER FORCIBLY TERMINATE	•Drive recovery was forcibly terminated according to an operator's instruction.

Sense Codes List (Cont'd)

Sense key	Code	Error name	Desciption/meaning
6	82 11	DRIVE RECOVER FORCIBLY TERMINSTE (MEDIA ERR DETECT:FROM)	•Drive recovery was forcibly terminated because a medium error was detected from source disk during the recover.
6	82 12	DRIVE RECOVER FORCIBLY TERMINATE (MEDIA ERR DETECT:TO)	•Drive recovery was forcibly terminated because a medium error was detected from source disk during the recover.
6	82 13	DRIVE RECOVER FORCIBLY TARMINATE (HARD ERR DETECT:FROM)	•Drive recovery was forcibly terminated because a hardware error was detected from source disk during the recover.
6	82 14	DRIVE RECOVER FORCIBLY TERMINATE (HARD ERR DETEC:TO)	•Drive recovery was forcibly terminated because a hardware error was detected from source disk during the recover.
6	82 15	DRIVE RECOVER FORCIBLY TERMINATE (DISK BLOCKED:FROM)	•Drive recovery was forcibly terminated because source disk was blocked during the recover.
6	82 16	DRIVE RECOVER FORCIBLY TERMINATE (DISK BLOCKED:TO)	•Drive recovery was forcibly terminated because source disk was blocked during the recover.
6	82 17	DRIVE RECOVER FORCIBLY TERMINATE (CACHE HARD ERR DETECT)	•Drive recovery was forcibly terminated because a hardware error was detected in inter-cache control during the recovery.
6	82 18	DRIVE RECOVER FORCIBLY TERMINATE (CONFIGURATION CHANGE)	•Drive recovery was forcibly terminated because configuration information was changed in status.
6	82 19	DRIVE RECOVER FAIL (WRITE AFTER DATA REMAIN)	•System cannot be started because write after data remains on spare disk.
6	82 1A	TIME OUT DETECTED IN CONTROLLER	•Drive recovery was forcibly terminated because a timeout occurred during internal processing.
9	83 00	MICRO PROGRAM DETECTED ERROR	•Microprogram detected an error.
3	88 00	READ ATENPTED TO NOT INITIALIZED AREA IN REGRESSION MODE	(doesn't occur)
3	89 00	WRITE UNABLE IN PARITY INCONSISTENT AREA IN REGRESSION MODE	(doesn't occur)
4	8A 01	PARITY ERROR DETECTED DURING MEDIUM PARITY CERTIFICATION	•A parity error was detected during medium parity check.
4	8A 02	CHECK CODE ERROR DETECTED DURING MEDIUM LA CERTIFICATION	•A check code error was detected during medium LA check
1	8A 03	DIRTY DATA EXIST DURING MEDIUM PARITY CERTIFICATION	•Remaining intermediate or dirty pin data was detected during parity check.
1	8A 04	DIRTY DATA EXIST DURING MEDIUM LA CERTIFICATION	•Remaining intermediate or physical dirty pin data was detected during medium LA check.
4	8B 01	COMMAND ATTEMPTED TO BLOCKED LOGICAL UNIT	•An inoperable command was issued to blocked logical unit.
5	8C 01	PARITY CHECK REQUESTED DURING REGRESSION MODE	A prity check was requested during regression mode.

Copyright ©1997, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code		Error name	Desciption/meaning
5	8D	01	DETACH IS REJECTED BECAUSE THE LOGICAL UNIT WILL BE BLOCKD	(doesn't occur)
3	8E	01	READ ATTEMPTED TO WRITE-UNCOMPLETED BLOCK	•A READ or VERIFY attempt was made to WRITE-incomplete block.
1	8F	00	SYSTEM AREA WRITE ERROR	(doesn't occur)
4	8F	01	SYSTEM AREA WRITE ERROR OCCURED AT ONE OF SYSTEM DRIVE	(doesn't occur)
4	90	00	UNRECOVERED DATA ERROR WITH PARITY DISK DATA	•An error occurred during data recovery by parity disk data.
4	90	01	UNRECOVERED DATA ERROR WITH PARITY DISK DATA IN REGRESSION MODE	•An unrecoverable data error occurred during regression.
4	91	00	AUTO-REALLOCATION NOT COMPLETE FOR UNCORRECTABLE ERROR	•Data could not be rebuilt because an unrecoverable error was detected during auto reallocation.
4	91	01	AUTO-REALLOCATION NOT COMPLETE FOR UNCORRECTABLE ERROR	•Alternate block could be reallocated during auto reallocation.
9	92	00	UNRECOVERED ERROR IN REGRESSION MODE	(doesn't occur)
3	93	00	PARITY ADJUSTMENT ERROR ON CACHE MEMORY	•A parity mismatch occurred in cache memory.
5	94	01	LOGICAL UNIT NOT OHWNER	•Logical unit was not ohwner.
1	98	00	DRIVE DETACHED AND LOST IN PARITY INCONSISTENT AREA	(doesn't occur)
4	99	00	DATA WRITE ERROR ON SYNCHRONIZE CACHE	•Data in synchronize cache memory cannot be written to drive.
4	A0	00	CACHE MEMORY HARDWARE ERROR	•A hardware error occurred in cache circuit.
4	A1	00	NO INDEX/SECTOR SIGNAL IN WRITE AFTER	(doesn't occur)
4	A2	00	NO SEEK CONPLETE IN WRITE AFTER	(doesn't occur)
4	A3	00	WRITE FAULT IN WRITE AFTER	(doesn't occur)
4	A4	00	DRIVE NOT READY IN WRITE AFTER	(doesn't occur)
4	A6	00	NO TRACK ZERO FOUND IN WRITE AFTER	(doesn't occur)
4	A8	00	LOGICAL UNIT COMMUNICATION ERROR IN WRITE AFTER	(doesn't occur)
4	A8	01	LOGICAL UNIT COMMUNICATION TIME OUT IN WRITE AFTER	(doesn't occur)
4	A8	02	LOGICAL UNIT COMMUNICATION PARITY ERROR IN WRITE AFTER	(doesn't occur)
3	A8	03	LOGICAL UNIT NOT READY, CAUSE NOT REPORTABLE	•Drive READY signal cannot be detected. •Drive ACCESSES
4	A9	00	TRACK FOLLOWING ERROR IN WRITE AFTER	(doesn't occur)
4	AC	02	WRITE ERROR AUTO REALLOCATION FAILED IN WRITE AFTER	(doesn't occur)

Copyright ©1997,1998, Hitachi, Ltd.

Sense Codes List (Cont'd)

Sense key	Code		Error name	Desciption/meaning
4	AE	00	PIN DATA MORE THAN THRESHOLD	(doesn't occur)
4	AF	00	WRITE ERROR AUTO REALLOCATION FAILED BY NO DEFECT SPARE IN WRITE AFTER	(doesn't occur)
4	B0	00	INTERNAL TARGET ERROR IN WRITE AFTER	(doesn't occur)
4	B2	00	NO ADDRESS MARK FOUND IN ID FIELD AT WRITE AFTER	(doesn't occur)
4	B3	00	NO ADDRESS MARK FOUND IN DATA FIELD AT WRITE AFTER	(doesn't occur)
4	B4	00	NO RECORD FOUND IN WRITE AFTER	(doesn't occur)
4	B5	02	POSITIONING ERROR DETECTED BY READ OF MEDIUM IN WRITE AFTER	(doesn't occur)
1	BF	01	DISK DIRECT WRITE BY BATTERY ALARM	(doesn't occur)
1	BF	02	DISK DIRECT WRITE BY PIN DATA OVER	(doesn't occur)
1	BF	03	WRITE THROUGH FOR DMA ERROR	(doesn't occur)
1	BF	04	WRITE THROUGH FOR PIN DATA	(doesn't occur)
B	C0	00	TIME OUT DETECTED IN CONTROLLER	•A timeout occurred during internal processing.
B	C0	01	TIME OUT DETECTED IN HOST DATA TRANSFER	•A timeout occurred during data transfer to host.
B	C1	00	CACHE MEMORY UNASSIGNED FOR FORMAT	•Cache memory required for formatting cannot be reserved.
B	C2	00	SYSTEM DRIVE CHANGED	•System current drive was changed.
B	C3	00	GENERATED OF SIM NOTIFICATION	•SVP reported some SIM
B	C4	00	REMOTE COPY FAILURE	•Remote copy to an R-VOL has ended abnormally.
5	DA	00	DRIVE RECOVERY REQUEST IS REJECTED, SINCE ANOTHER DRIVE RECOVERY IN PROCESS	•A new data recovery request cannot be accepted because another drive recovery is in process.
6	DB	00	ONLINE RECOVERY COMMAND ABORTED	(doesn't occur)
6	E0	00	BATTERY ALARM	•The battery is running out.
6	E2	00	FAN ALARM	•One of the fans stopped.
4	E4	00	NVS INTERNAL TABLE OVERFLOW, WRITE INCOMPLETE MANAGEMENT AREA	•A system area overflow occurred. (PIN data control area)
6	E5	00	POWER SUPPLY FAILURE	•One of power supply units failed.
6	E5	01	DC VOLTAGE DECREASED	•DC voltage dropped.
4	E8	00	SYSTEM FLOPPY DISK ERROR	(doesn't occur)
4	E9	00	BACK UP FLOPPY DISK ERROR	(doesn't occur)
1	EA	00	CONTROL INFORMATION WRITE ERROR ON A DISK	(doesn't occur)
4	EA	01	PROGRAM SIZE OUT OF RANGE	•Program size received in WRITE BUFFER is larger than system program area.

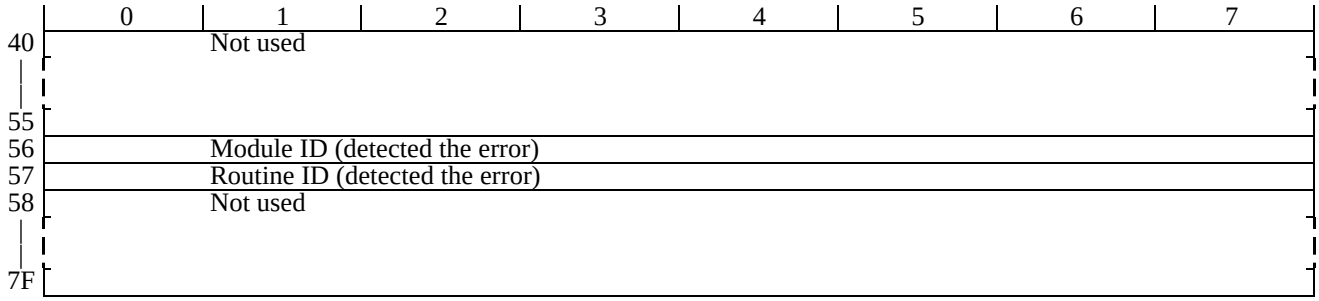
Byte27 = 0X (X ≠ 8/A:System/Program Check) (2/3)



(Note 1)

F/M = 0F:Byte08 Reason code

Code	Reason
00	No message
01	Trying to make cache available and cache status is pending.
02	Not used
03	Trying to make cache force unavailable and cache status is not pending with destage complete.
04	Trying to activate CFW and CFW status is pending.
05	Trying to activate caching (device) and cache status is pending.
06	Trying to destage (track) and NVS is failed.
07	Trying to make NVS unavailable and NVS is initializing.
08	Trying to deactivete caching , DFW or DISCARD (device) , and DFW status is failed.
09	Trying to force deactivate DFW (device) and status is not as follows. • EDFW status is pending or failed. • ENVS is failed and the data exists in NVS, but not in cache.
0A	Trying to make NVS available and DFW status (device) is pending or failed.
0B	Trying to make NVS available and NVS status is pending.
0C	When NVS is failed, trying to stop caching or DFW (device) and the data exists in NVS, but not in cache.
0D	Command requires NVS and NVS is unavailable.
0E	Command requires cache and cache is unavailable.
0F	Not used
10 ~ 28	Not used
29	PFS command (Set Special Interrupt Condition) is issued on an interface on which path group is not established.
2A	Trying to make path group include parallel channel and serial channel.
2B	Message buffer is full.
2C ~ 34	Not used
35	A Set Guaranteed Path subcommand is issued on a fenced path.
36 ~ 3E	Not used
3F	A Make NVS Avail for Subsystem subcommand is issued, but NVS is disable. (‘Disable NVS Capability’ is set to disable in VPD.)
40	Not used
41	A normal command is issued to a device reserved by maintenance.
42 ~ 7F	Not used
80	A special command is issued on an interface that was disabled by the PFS command with Set Special Intercept Condition order.
81	An attention report on an interface that was disabled by the PFS command with Set Special Intercept Condition order.
82 ~ FF	Not used

Byte27 = 0X (X ≠ 8/A:System/Program Check) (3/3)

(Note 2) (1) Issued command information when F/M=02

B\b	0	1	2	3	4	5	6	7
29	SCH ID	SCH KEY	Locate, LC EXT	SK, SK CYL	RD IPL	RECAL	SUSP MPR	RD C
2A	DIAG CTL	DIAG CTL (LOC DOM)	DEF EXT	SET FM	SET SUB MODE	SP C	WR CKD	WR R0
2B	SET INTF ID	DIAG CTL (PRE REM)	0	Other command	RD C chainning	All byte match	LC domain	Erase execute
2C	Pseud through	0	0	Allow WR KD	Allow WR D	Allow WR CKD	Allow WR R0	Allow WR HA

(2) Short byte flag when F/M=03
x‘0040 0000’

(3) Mask information when F/M=05

Byte 29: Mask for write control
- x‘00’: Allow all write operation except WR HA, WR R0.
- x‘40’: Inhibit all write operation.
- x‘80’: Allow update write operation.
- x‘C0’: Allow all write operation.

Byte 2A: Mask for seek control
- x‘00’: Allow all seek commands and RECAL.
- x‘08’: Allow SK CYL and SK HD only.
- x‘10’: Allow SK HD only.
- x‘18’: Inhibit all seek command and multi operation.

Byte 2B: Mask for access
- x‘00’: Allow normal access.
- x‘02’: Allow device support.
- x‘04’: Allow diagnostic access.
- x‘06’: Allow device support inhibit data check correction and retry.

Byte 2C: Not used

(4) Record address when other F/M
Byte 29 and 2A : Clinder address
Byte 2B : Head address
Byte 2C : Record number

(Note 3) Bit 4-7 of byte 32: Type of byte 33
- x‘08’: Byte 33 is cylinder address (high).
- x‘09’: Byte 33 is cylinder address (low).
- x‘0A’: Byte 33 is head address (high).
- x‘0B’: Byte 33 is head address (low).
- x‘0C’: Byte 33 is record number.

Byte 33: One byte of CCHHR.

(2) Byte29 Bit4-7 = '1' or '7'

	0	1	2	3	4	5	6	7
28		Subcode (Note 1)						
29		DSCA::FMD			FA			
	Segment mode	Not used	Not used	Not used	Free area format No.			
2A		HMIC::RCVINT						
	Monitor bit for interrupt signal by SYSRST	Monitor bit for interrupt signal by SELRST	Monitor bit for interrupt signal by CHK1A	Monitor bit for interrupt signal by CHK1B	Monitor bit for interrupt signal by SMP	Monitor bit for interrupt signal by LAN/SI0	Monitor bit for interrupt signal by CHA/DRR	Monitor bit for interrupt signal by ADP/SCA0
2B		HMIC::RCVINT						
	Not used	Monitor bit for interrupt signal by CHK3	Not used	Monitor bit for interruption signal by SCA1 to SCA5				
2C		DSCA::INT						
	Data transfer end in SCA	SPC interrupt request	SCA error occurred	BSA0 error occurred	BSA1 error occurred	Not used	0	Not used
2D		DSCA::SCK2						
	BSA data bus parity error	SPC data bus parity error	SCA data bus parity error	LA error or LRC error	SCA hardware error	SBUS I/F error	Error in micro setting	Not used
2E		DSCA::CXM						
	0	Not used	Bus mode	Not used	Not used	Transfer mode	Not used	Not used
2F		DSCA::DKUCHK2						
	Error detected by SCSI buffer	DKU I/F addr or data parity error detected by SCA	Not used	Not used	Not used	Not used	Not used	Not used
30		DSCA::XFC2						
	Force stop DMA in xfer mode 1	Force stop DMA in xfer mode 2	Force stop DMA in xfer mode 3	Force stop DMA in xfer mode 4	Force stop DMA in xfer mode 5	Force stop DMA in xfer mode 6	Not used	Stop DMA in packet boundary
31		DSCA::XFC2						
	Start DMA in xfer mode 1	Start DMA in xfer mode 2	Start DMA in xfer mode 3	Start DMA in xfer mode 4	Start DMA in xfer mode 5	Start DMA in xfer mode 6	Not used	Not used

(Note 1) Meaning of subcode
bit0-2: Type of error ('000' ...data transfer, '001' ...LED BUS, '111' ...micro-program)
bit3: Access mode ('0' ...Cache write, '1' ...Cache read)
bit4-6: Code designating the part to be replaced
bit7: SCA number

(Note 4) Error status 1

Code	Meaning
0101	LCDG3' activation faild.
010F	LCP terminated after LCDG3' activation.
0118	No notification after LCDG3' communication.
011F	LCP CHK1 occured after LCDG3' activation.
0120	No REQM after LCDG3' completion.
0122	No notification after LCDG3' set CALM.
0123	No notification after LCDG3' set DGIN.
0125	LCP# ≠ Board#
0301	CRC check start error after loading.
030F	LCP terminated after CRC check completion.
0318	No notification for communicatin after CRC check completion.
031F	CHK1 occured in CRC check.
0320	No REQM after CRC check completion.
0322	No notification after CRC check and CALM completion.
0323	No notification after CRC check and DGIN completion.
0325	LCP# ≠ Board#
032F	No CRC check status ID.
0340	CRC check error in LCDG3 loading/Main loaking.
0380	No start address for CRC check routine.
0385	An error occured in configuration/version information transfer for Main loading.
0401	LCDG3 activation for internal diagnosis failed.
040F	LCP terminated after LCDG3' activation.
0418	No notification after communication for internal diagnosis.
041F	LCP CHK1 occured after internal diagnosis activation.
0420	No REQM after internal diagnosis completion.
0422	No notification after internal diagnosis and CALM.
0423	No notification after internal diagnosis and DGIN.
0425	LCP# ≠ Board#
042F	No status ID for internal diagnosis effect.
043F	No parameter ID for internal diagnosis activation.
044F	No activation address ID for internal diagnosis.
04F0	Controller in configutation is inconsistent with rea1 machine.
04F1	Controller in configutation is inconsistent with rea1 machine.
0501	LCDG3 activation for communication diagnosis failed.
050F	LCP terminated after LCDG3' activation.
0518	No notification after communication for communication diagnosis.
051F	LCP CHK1 occured after communication diagnosis activation.
0520	No REQM after communication diagnosis completion.
0522	No notification after communication diagnosis and CALM.
0523	No notification after communication diagnosis and DGIN.
0525	LCP# ≠ Board#
052F	No effect status ID for communication diagnosis.
053F	No activation parameter ID for communication diagnosis.
054F	No activation address ID for communication diagnosis.
1000-FFFF	An error address of memory clear test (when error code = x'10')
1000-FFFF	LCDG3 error code for internal/communication diagnosis (when error code ≥ x'30')
XXXX	MP error code for LCDG3 communication diagnosis (when error code = x'18')

Note 1

The pare of system error code x‘AE5A’ (Drive not Ready) and x‘A772’ are reported even when one of the following processes has completed successfully. These indicate the PDEV spin down executed correctly and do not mean the error condition. Please ignore them.

- PDEV replace
- DKU Inline execution at Installation or at PDEV expansion.

Note 2

System error code x‘AE5B’ (Unit Attention) is reported even after one of the following processes has completed successfully. It indicates the PDEV was reset correctly and does not mean the error condition. Please ignore it.

- DKA replace
- DKA expansion
- PDEV expansion
- DKA micro-program exchange
- PDEV micro-program exchange

(Note 1) Hardware level

Bit0 : Hardware level flag

For bit0=0

Bit 1	: Not used
Bit 2 ~ 3	: SP number
Bit 4 ~ 5	: CHLs per Cluster
	00 : 4
	01 : 8
	10 : Not used
	11 : Not used
Bit 6	: NVS
	0 : Without NVS
	1 : With NVS
Bit 7	: Not used
Bit 8 ~ 10	: Cache size
	000 : Non cache
	001 : 256MB
	010 : 512MB
	011 : 768MB
	100 : 1024MP
	101 : 1280MP
	110 : 1536MP
	111 : Over 1536MB
Bit11 ~ 13	: Cluster hardware level
Bit14 ~ 15	: Cache/NVS hardware level

For bit0=1

Bit 1	: Not used
Bit 2 ~ 3	: SP number
Bit 4 ~ 5	: CHLs per Cluster
	0000 : Parallel=4, Serial=0
	0001 : Parallel=8, Serial=0
	0010 : Parallel=4, Serial=2
	0100 : Parallel=4, Serial=4
	0110 : Parallel=0, Serial=2
	1000 : Parallel=0, Serial=4
	1010 : Parallel=0, Serial=8
	1100 : Parallel=0, Serial=8
Bit 8	: DUAL FRAME
	0 : DUAL FRAME
	1 : MODULAR POWER
Bit 9 ~ 11	: Cache size
	000 : Non cache
	001 : 256MB
	010 : 512MB
	011 : 768MB
	100 : 1024MB
	101 : 1280MB
	110 : 1536MB
	111 : Over 1536MB
Bit12 ~ 13	: Cluster hardware level
Bit14 ~ 15	: Cache/NVS hardware level

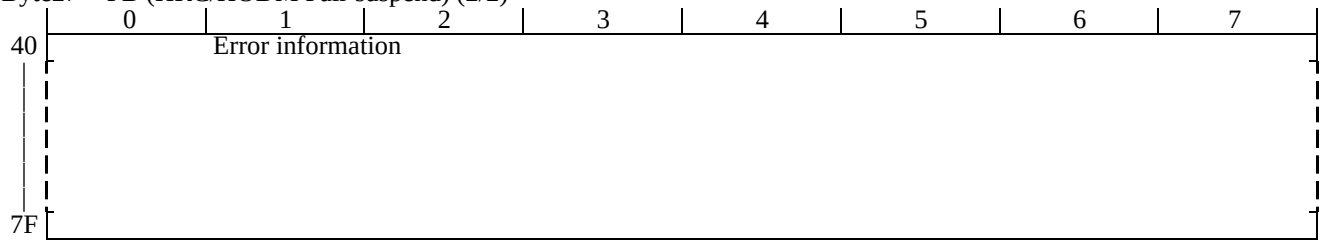
Byte27 = FB (HRC/HODM Pair suspend) (2/2)



(Note) Reason code

X‘14’-X‘2F’ : Reserved
X‘30’ : Pair suspended. MCU device write error.
X‘31’ : Pair suspended. RCU subsystem error/or MCU subsystem error.
X‘32’ : Pair suspended. RCU device communication error.
X‘33’ : Pair suspended (Critical device status). All write command is rejected until pair re-established.
X‘34’ : Pair suspended. RCU device is not ready (intervention required).

Interruption status codes

1. Interruption related to SCSI reset

Interruption code	Cause of interruption	Conditions for interruption
01h	RESET-CONDITION DETECTED	Reset status has been detected on the SCSI bus.

2. Interruption related to transfer

Interruption code	Cause of interruption	Conditions for interruption
24h	SCSI parity error	A parity error has been detected in the input/output data of the SCSI interface in the current phase.
22h	MPU parity error	A parity error has been detected in the output data of the MPU interface during program transfer (data phase).
21h	DMA parity error	A parity error has been detected in the input/output data of the DMA interface during DMA transfer (data phase).
26h	SCSI parity error & MPU parity error	A parity error has been detected in the input/output data of the MPU and SCSI interfaces during program transfer (data phase).
25h	SCSI parity error & DMA parity	A parity error has been detected in the input/output data of the DMA and SCSI interfaces during DMA transfer (data phase).
29h	Offset error	More REQ/ACK signals have been received in synchronous transfer than the offset value that is set
2Ah	Short transfer period error	SPC could not be tracked during synchronous transfer because the cycle of the received REQ/ACK signal was short.
2Bh	Offset error & Short transfer period error	An offset error and short transfer period error have been detected during synchronous transfer.
2Ch	REQ/ACK timeout	The time that is set for REQ/ACK TIMEOUT has been exceeded.
31h	Disconnected in transfer progress	Bus free status has been detected during phase execution (transfer operation).
32h	Phase error in transfer progress	A phase error has occurred during phase execution (transfer operation).

Copyright ©1997, Hitachi, Ltd.

3. Interruption related to phase transition

Interruption code	Cause of interruption	Conditions for interruption
54h	Initial phase error*	Inconsistency occurred when the phase of the received C. COMMAND received the first REQ signal.
55h	Initial phase error & MSG received†	An initial phase error occurred and one message was received for the target MSG-IN request.
56h	Initial phase error & STATUS received†	An initial phase error occurred and one STATUS was received for the target STATUS receive request.
42h	Command stop (ATN condition detected)††	During execution of the data phase that failed in phase transition due to the generation of the ATN condition of the initiator, the transfer is stopped at the transfer block boundary and this interruption is reported. (At this time, the data register is empty.)
43h	Command stop (ATN condition detected & MSG received)†	One message was received after responding to the MSG-OUT request of the initiator that failed in phase transition due to the generation of the ATN condition of the initiator. During execution of the data phase, one message is received after responding at the transfer block boundary. (At this time, the data register is empty.)

* If a phase error has occurred and the DATAIN phase has been requested, the operation is as follows:

1) When the target with a nexus is in the asynchronous transfer mode

   One-byte data is received.

2) When the target with a nexus is in the synchronous transfer mode

   The number of bytes for the received REQ signal are received (ACK signal is not asserted).

† Occurs only when the AUTO receive mode is set.

†† Occurs only when the AUTO receive mode is not set.

Copyright ©1997, Hitachi, Ltd.

4. Interruption related to report

Interruption code	Cause of interruption	Conditions for interruption
60h	Command complete	Received command has ended normally.
64h	Command Reject	1) A command has been received during automatic operation of this SPC (AUTO selection/reselection response). 2) Another command has been received during execution of a command. 3) The message length is 33 or more bytes when the SEND MSG command for EXTEND-MSG has been received.
65h	Command Invalid	1) A command of the target has been received during operation as an initiator. 2) A command of the initiator has been received during operation as a target. 3) A sequential command is present in the user program memory. 4) The received command code is not defined. 5) A command that requires the setting of the data block register/data byte register (MC byte counter) has been received, but the register value is “0”. 6) Transfer is impossible because the CDB length of group 6/7 is set to “0”. 7) The CDB of group 3/4 or a transfer command has been received.
66h	REG parity error detected	A parity error has been detected in the register set by the host MPU.
67h	COMMAND PAUSE	1) The COMMAND PAUSE command was received and processing ended.
68h	Self-diagnostic result “GOOD”	Self-diagnostics are performed, and the result is “normal.”
69h	Self-diagnostic result “NO GOOD”	Self-diagnostics are performed, and the result is “abnormal.”
70h	Disconnected	Bus free status has been detected while making a nexus as an initiator.
71h	REQ Asserted	Next phase execution is requested from the target. This interruption occurs only when no command is received in the nexus.
61h	Command complete (ATN condition detected)	The command ends normally and the ATN condition generated by the initiator is detected only when an ATN signal is asserted when an ACK signal is asserted for the last phase of the executed command.
62h	Command complete (ATN condition detected & MSG received)	A command has ended normally and one message has been received after responding to the ATN condition generated by the initiator. An ATN signal is detected only when an ATN signal is asserted when an ACK signal is asserted for the last phase of the executed command.

Copyright ©1997, Hitachi, Ltd.

5. Interruption related to selection/reselection

Interruption code	Cause of interruption	Conditions for interruption
82h	Sel/Reselection timeout	The time that is set for selection/reselection timeout has been exceeded.
90h	Reselected	The target has been reset as the initiator.
80h	Selected	The initiator has been selected as the target.
81h	Selected with ATN	The initiator has been selected as the target, and the ATN condition generated by the initiator has been detected.

5. Interruption related to response operation for auto selection/reselection

Interruption code	Cause of interruption	Conditions for interruption
B0h	AUTO mode phase error	The reselection phase changed to a phase other than the MSG-IN phase.
B1h	MSG received	After the reselection phase, one message was received.
A0h	AUTO mode phase error	No ATN signal was asserted in the selection phase. This interruption occurs only when the MSG-OUT phase is set after the selection phase.
A1h	MSG received	After the selection phase, a message other than Identify-MSG was received.
A2h	Illegal Identify MSG received	Identify-MSG was received after the selection phase, but bits 5, 4, and 3 are set to ë1í.
A3h	MSG received with Identify MSG	After the selection phase, Identify-MSG was received, followed by another message.
A4h	unknown CDB received	After the selection phase, an attempt to receive one command was made, but only one byte was received because the CD8 length of group 6 or 7 was unobtainable. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A5h	unknown CDB received with Identify MSG	After the selection phase, an attempt was made to receive a command following Identify-MSG, but only one byte was received because the CD8 length of group 6 or 7 was unobtainable.
A6h	CMD received **	After the selection phase, one command was received. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A7h	CMD received with Identify MSG	After the selection phase, Identify-MSG was received, followed by a command.
A8h	CMD received & MSG received	After the selection phase, one command was received. Then one message was received for the attention status. This interruption occurs only when the MSG or CMD phase is set after the selection phase.
A9h	CMD received with Identify MSG received	After the selection phase, Identify-MSG was received, followed by a command. Then one message was received for the attention status.

Command step

No.	Command name	Function	STEP	Description
1	RESELECTION & 1-MSG	1) Performs reselection. 2) Changes to the MSG-IN phase. 3) Issues a message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
2	RESELECTION & N-Byte-MSG	1) Performs reselection. 2) Changes to the MSG-IN phase. 3) Issues a message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
3	RESELECTION & TERMINATE	1) Performs reselection. 2) Performs the Terminate sequence.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Transition to the STATUS phase STATUS phase running
			X‘04’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘05’	Message issuance complete Disconnect Command complete
4	RESELECTION & LINK TERMINATE	1) Performs reselection. 2) Performs the LINK-Terminate sequence.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘01’	Nexus established Transition to the STATUS phase STATUS phase running
			X‘03’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete

Copyright ©1997, Hitachi, Ltd.

No.	Command name	Function	STEP	Description
5	TERMINATE	1) Changes to the STATUS phase. 2) Issues one-byte status. 3) Changes to the MSG-IN phase. 4) Issues a one-byte message. 5) Disconnect	X‘00’	Command received
			X‘01’	During transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘03’	Message issuance complete Disconnect Command complete
6	LINK TERMINATE	1) Changes to the STATUS phase. 2) Issues one-byte status. 3) Changes to the MSG-IN phase. 4) Issues a one-byte message.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	Transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Transition to the MSG-IN phase MSG-IN phase running
			X‘03’	Message issuance complete Command complete
7	DISCONNECT SEQUENCE	1) Changes to the MSG-IN phase. 2) Issues a two-byte message. 3) Disconnect	X‘00’	Command received BUS FREE phase awaited
			X‘01’	Transition to the MSG-IN phase MSG-IN phase running
			X‘02’	Two-byte message issuance complete Disconnect Command complete
8	SEND N-Byte-MSG	1) Changes to the MSG-IN phase 2) Issues N-byte messages (two or more messages)	X‘00’	Command received
			X‘03’	Transition to the MSG-IN phase MSG-IN phase running
			X‘04’	All MSG bytes being issued Command complete
9	RECEIVE N-Byte-CMD	1) Changes to the CMD phase. 2) Receives an N-byte CDB (undefined CDB).	X‘00’	Command received
			X‘04’	Transition to the CMD phase CMD phase running
			X‘05’	All CDB bytes received completely Command complete
10	RECEIVE N-Byte-MSG	1) Transition to the MSG-OUT phase 2) Receives an N-byte CDB (33 bytes or more messages).	X‘00’	Command received
			X‘02’	Transition to the MSG-OUT phase MSG-OUT phase running
			X‘03’	All message bytes received completely Command complete
11	RESELECTION	Performs reselection.	X‘00’	Command received BUS FREE phase awaited
			X‘01’	BUS FREE phase detected During arbitration
			X‘02’	Bus use right acquired During reselection
			X‘03’	Nexus established Command complete
12	SET REQ	Asserts REQ.	X‘00’	Command received
			X‘01’	C. Command Complete
13	RESET REQ	Negates REQ.	X‘00’	Command received
			X‘01’	C. Command Complete

Copyright ©1997, Hitachi, Ltd.

No.	Command name	Function	STEP	Description
14	Disconnect	Releases a BSY signal.	X‘00’	Command received
			X‘01’	C. Command Complete
15	SEND DATA from MPU	1) Changes to the DATA-IN. phase. 2) Issues data in the program transfer mode	X‘00’	Command received
			X‘01’	Transition to the DATA-IN phase DATA-IN phase running
			X‘02’	All data bytes received completely Command complete
16	SEND DATA from DMA	1) Changes to the DATA-IN. phase. 2) Issues data in the program transfer mode	X‘00’	Command received
			X‘01’	Transition to the DATA-IN phase DATA-IN phase running
			X‘02’	All data bytes received completely Command complete
17	RECEIVE DATA from MPU	1) Changes to the DATA-OUT phase. 2) Receives data in the program transfer mode.	X‘00’	Command received
			X‘01’	Transition to the DATA-OUT phase. DATA-OUT phase running
			X‘02’	All data bytes received completely Command complete
18	RECEIVE DATA from DMA	1) Changes to the DATA-OUT phase. 2) Receives data in the program transfer mode.	X‘00’	Command received
			X‘01’	Transition to the DATA-OUT phase. DATA-OUT phase running
			X‘02’	All data bytes received completely Command complete
19	SEND 1-MSG	1) Changes to the MSG-IN phase 2) Issues a message.	X‘00’	Command received
			X‘01’	Transition to the MSG-IN phase MSG-IN phase running
			X‘02’	All message bytes issued completely Command complete
20	RECEIVE MSG	1) Changes to the MSG-OUT phase. 2) Issues a message.	X‘00’	Command received
			X‘01’	Transition to the MSG-OUT phase MSG-OUT phase running
			X‘02’	All message bytes received completely Command complete
21	SEND STATUS	1) Changes to the STATUS phase. 2) Issues one-byte status.	X‘00’	Command received
			X‘01’	Transition to the STATUS phase STATUS phase running
			X‘02’	STATUS issuance complete Command complete
22	RECEIVE CMD	1) Changes to the CMD phase. 2) Receives CDB.	X‘00’	Command received
			X‘01’	Transition to the CMD phase CMD phase running
			X‘02’	All CDB bytes received completely Command complete

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (1/9)

Sense key	Code*	Error name	Description
0	00 00	No Additional Sense Information	No valid additional sense information.
4	01 00	No Index/Sector Signal	• Index signal cannot be detected. • Sector signal cannot be detected.
1/4	02 00	No Seek Complete	The Seek operation of the drive cannot be performed properly.
1/4	03 00	Write Fault	Drive Write Fault has been detected.
1/4	03 80	Write at inhibit condition	The Write is attempted under the write inhibit condition.
2	04 00	Drive Not Ready	• Drive Ready signal cannot be detected. • The drive cannot be accessed.
2	04 01	Drive is in Progress of Becoming Ready	The drive is not ready and will soon get ready.
2	04 02	Drive Not Ready, Initializing Command Required	The drive is not ready. Issue the START UNIT command to get it ready.
2	04 04	Drive Not Ready, Format in Progress	The drive is not ready. (Format in progress)
2	04 80	Drop Ready	Drive got not Ready because motor has stopped incorrectly.
2	05 00	Drive Not Selected	Drive cannot be selected.
1/4	06 00	No Track Zero Found	Positioning to track zero is impossible.
4	08 00	Logical Unit Communication Failure	A drive interface error has occurred. (MESDI I/F Error)
4	08 01	Logical Unit Communication Time Out	A drive interface time-out error has occurred. (MESDI I/F Time Out)
4	08 02	Logical Unit Communication Parity Error	A drive interface parity error has occurred. (MESDI I/F Parity Error)
1/4	09 00	Track Following Error	Track positioning failed.
1/4	09 80	Track Positioning Error	The track is out of position between ATN OFF and MESDI command (seek) issued.
1/4	09 81	ESDI Invalid Command	An invalid ESDI command has occurred.
1	0C 01	Write Error Recovered with Auto Reallocation	Write Error Recovered with Auto Reallocation.
3	0C 02	Write Error Auto Reallocation Failed	Automatic reallocation was attempted for an ID error detected during a write, but it failed.
1	0C 81	Auto REA Exhausted with Write Auto REA	Auto reassignment resulted in failure because of over-threshold.
1/3	10 00	ID CRC Error	A CRC or ECC error has occurred in the ID field.
3	11 00	Unrecovered Read Error	An error has occurred in the DATA field (retry not applied).

* The higher-order byte of the code indicates an additional sense code (byte 8), and the lower-order byte an additional sense code qualifier (byte 9).

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (2/9)

Sense key	Code	Error name	Description
3	11 01	Read Retries Exhausted	A retry was attempted for a DATA field read error, but recovery was impossible (error correction not applied).
3	11 02	Error Too Long to Correct	ECC correction of the DATA field read error is impossible.
3	11 04	Unrecovered Read Error-Auto Reallocation Failed	Auto reallocation was attempted to a correctable error but failed.
3	11 82	Error Too Long to Multi-Symbol Soft Correction	Can not correct a Read error in DATA field with Multi-Symbol Soft Correction.
1/3	12 00	No Address Mark Found in ID Field	No address mark cannot be detected in the ID field.
1/3	13 00	No Address Mark Found in Data Field	No address mark cannot be detected in the DATA field.
1/3	13 80	Sprit Data AM Not Found	AM in Sprit Data is not found.
1	13 E1	VFO Data AM Recovered (Read Gate Delay:4, PLL:8)	Data AM Error is recovered with Read Gate Delay:4 byte, PLL:6 byte.
1	13 E2	VFO Data AM Recovered (Read Gate Delay:0, PLL:6)	Data AM Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	13 E3	VFO Data AM Recovered (Read Gate Delay:8, PLL:6)	Data AM Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1	13 E4	Split Data AM Recovered (Read Gate Delay:4, PLL:8)	Split Data AM Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1	13 E5	Split Data AM Recovered (Read Gate Delay:0, PLL:6)	Split Data AM Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	13 E6	Split Data AM Recovered (Read Gate Delay:8, PLL:6)	Split Data AM Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1/3	14 01	No Record Found	A block with a consistent ID field cannot be detected.
3	14 03	Write Fault (Require Reassign)	Write Fault of Drive is detected. (Require Reassign)
1/3	14 80	Flag Error	The flag in the ID field is inconsistent.
1/3	14 81	Drive Fault with ATN OFF	A drive fault was detected when ESDI ATN is off.
1/3	14 82	Mismatch Sector ID	The sector address in the ID field is inconsistent.
1/3	14 83	Drive Error with no Factor	A drive error was detected, but all error cause were off.
3	14 84	ID Check Code Error at ID ON the Fly	Check Code error is detected in ID On the Fly.
3	14 91	Uncorrectable Data Error using previous sector ID	A data error was recovered by a previous sector ID retry, but the data is uncorrectable error by ECC.
3	14 93	Data AM not found using previous Sector ID	A previous sector ID retry was attempted, but the data AM of the data cannot be detected.
3	14 94	Sprit Data AM Not Found using Previous Sector ID	A previous sector ID retry was attempted, but the Sprit data AM of the data cannot be detected.
1	14 98	ECC Correctable Error using previous Sector ID	A data error was recovered using previous sector ID retry, but the data is recovered data by ECC.

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (3/9)

Sense key	Code	Error name	Description
3	14 A0	Reassign Fault because of Reserve Sector No REC	A reassign command failed. (The reserved sector is No REC.)
3	14 A1	Previous Sector Error with Previous Sector ID retry	A previous sector ID retry was attempted, but an error occurred in previous ID.
3	14 B1	Error too much to recover using previous ID	A previous sector ID retry cannot execute. (Number of error ID ≥ 2)
1/3	14 C0	ID On the Fly Correction Error	ID error is detected with ID On the Fly correction and CCH not coincident.
1/3	14 E1	VFO ID Error Recovered (Read Gate Delay:4, PLL:8)	VFO ID Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1/3	14 E2	VFO ID Error Recovered (Read Gate Delay:0, PLL:6)	VFO ID Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1/3	14 E3	VFO ID Error Recovered (Read Gate Delay:8, PLL:6)	VFO ID Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
3	15 00	Seek Positioning Error	The target address cannot be sought.
1/3	15 01	Mechanical Positioning Error	A seek error has occurred.
1/3	15 02	Positioning Error Detected by Read of Medium	A seek ended normally but the address was not the target address.
1/3	15 B0	Drive Check Code Error	The drive found a check code error (Read).
1/3	15 DA	SCTSTUS Register Error	An error has occurred in SCTSTUS register.
3	15 DB	SCTSTUS Register Error (Index Pulse Error)	An index pulse error has occurred in SCTSTUS register.
1/3	17 XX	Recovered Data with Retries	Retry Succeeded in error recovery. XX depends on retry method.
1	17 00	Recovered Data with No Error Correction Applied	Indicates that a retry has succeeded in error recovery with no Error Correction Applied. (Retries: max. 3 times)
1	17 01	Recovered Data with Retries	A retry has succeeded in error recovery with change of data strobe offset, slice level, etc.
1	17 02	Recovered Data with Positive Head Offset	A retry with a positive head offset has succeeded in error recovery.
1	17 03	Recovered Data with Negative Head Offset	A retry with a negative head offset has succeeded in error recovery.
1	17 05	Recovered Data Using Previous Sector ID	A data recovery has been executed by a previous ID retry.
1	17 06	Recovered Data without ECC-Data Auto Reallocation	Recovered with Auto Reallocation, without Error Correction Applied.
1	17 85	Recovered Data with Physical SCT Pulse Read	Error is recovered with Physical Sector pulse read.
1	17 86	Auto REA Exhausted without ECC Correction	Auto Reallocation (with no Error Correction Applied) Exhausted.
1/3	17 D6	Drive Overrun Occurred Recovered:RTRY Recovered	Drive Overrun occurred by hardware failure. Recovered by retry.

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (4/9)

Sense key	Code	Error name	Description
1	17 E1	Data Error Recovered by VFO (Read Gate Delay:4, PLL:8)	Data Error is recovered with Read Gate Delay:4 byte, PLL:8 byte.
1	17 E2	Data Error Recovered by VFO (Read Gate Delay:0, PLL:6)	Data Error is recovered with Read Gate Delay:0 byte, PLL:6 byte.
1	17 E3	Data Error Recovered by VFO (Read Gate Delay:8, PLL:6)	Data Error is recovered with Read Gate Delay:8 byte, PLL:6 byte.
1	18 00	Recovered Data with Error Correction Applied	Error recovery has been accomplished with ECC correction (no retry).
1	18 01	Recovered Data with ECC and Retries Applied	Indicates that a retry has succeeded in error recovery with ECC correction.
1	18 02	Recovered Data with ECC and/or Retries Data Auto Reallocated	Recovered Data with ECC and/or Retries Data Auto Reallocated.
1	18 80	Recovered Data without Retries or Multi-Symbol Soft Correction	Recovered Data without Retries or Multi-Symbol Soft Correction.
1	18 81	Recovered Data with Retries and Multi-Symbol Soft Correction	Recovered Data with Retries and Multi-Symbol Soft Correction.
1	18 82	Auto REA Exhausted with ECC Correction	After recovering data with ECC correction, Auto reassignment resulted in failure because of over-threshold.
1/3	19 02	Defect List Error in Primary List	An error has occurred during Primary (P) list access.
1/3	19 03 04 05 06	Defect List Error in Grown List	An error has occurred during Grown (G) list access.
5	1A 00	Parameter List Length Error	Parameter list length is invalid.
1/3	1C 01	Primary Defect List Not Found	Positioning to the Primary (P) list failed.
1/3	1C 02	Grown Defect List Not Found	Positioning to the Grown (G) list failed.
E	1D 00	Miscompare During Verify Operation	Indicates that a data compare error has occurred during Verify operation.
5	20 00	Invalid Command Operation Code	The operation code is invalid.
5	21 00	Logical Block Address out of Volume Range	A logical address (LBA) beyond the capacity of the medium has been pointed out.
5	21 44	Logical Block Address out of Zone Range	Illegal access is made over a zone in LBA Mapping.
5	24 00	Illegal Field in CDB	An error is in the CDB command.

Copyright ©1998, Hitachi, Ltd.

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (5/9)

Sense key	Code	Error name	Description
5	24 81	Odd Byte Data Out Request in Wide Transfer	Odd Byte Data Out is requested in Wide Transfer.
5	24 82	Odd Byte Data Out Request	Odd bytes data out requirement has occurred.
5	25 00	Invalid LUN	The LUN indicated in the CDB command or IDENTIFY message is not supported.
5	26 00	Invalid Field in Parameter List	An error is in the parameter list.
5	26 01	Parameter Not Supported	An unsupported parameter has been received.
5	26 02	Parameter Value Invalid	A parameter value is invalid.
5	26 03	Threshold Parameters Not Supported	Received threshold parameters that not supported.
5	26 80	Microprogram Download Error	Illegal Product type name is detected in the download file.
7	27 00	Write Protected	The drive is write-protected.
6	29 00	Power On, Reset or Bus Device Reset or Reboot Occurred	• A Power On Reset has occurred. • A Bus Device Reset has occurred. • A SCSI Bus Reset has occurred. • Reboot has occurred.
6	2A 00	Parameter Changed	• Mode/Log parameters changed. • Parameters were changed by MODE SELECT command. • Set Mode/Log parameters because drive condition changed from not ready to ready.
6	2A 01	Mode Parameters Changed	• Mode/Log parameters changed. • Key = 2 : Format Mode Parameters Changed (Page 3, 4).
6	2A 02	Log Parameters Changed	Log Parameters Changed.
6	2F 00	Command Cleared by Another Initiator	Command Cleared by Another Initiator.

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (6/9)

Sense key	Code	Error name	Description
2/3	31 00	Medium Format Corrupted	The medium is not correctly formatted. It must be reformatted by the FORMAT command.
3	31 01	Format Command Failed	The FORMAT command has ended abnormally.
1	31 F0	ETF Cylinder Read Error	ETF Cylinder Read Error has occurred in Initial Formatting, and treats as it has no P-list.
1	31 F1	ETF Cylinder ESDI Defect List Check Error	ETF Cylinder ESDI Defect List Check Error has occurred in Initial Formatting, and treats as it has no P-list.
1	31 F2	M-List Write Error	M-List Write Error has occurred in Initial Formatting.
1/4	32 00 32 8X	No Defect Spare Location Available	Reallocation is impossible because of alternate area shortage.
1/3	32 01	Defect List Update Failure	Updating the Grown (G) list failed.
1	37 00	Rounded Parameter	The parameter value has been rounded because it cannot be handled as it is
1	3D 00	Invalid Bits in Identify Message	Invalid bits have been detected in the Identify message.
2	3E 00	Logical Unit Has Not Self-Configured Yet.	The self-configuration of the drive has not been determined yet. Initial Formatting has not completed.
2	3E 01	Program Load Error	Program Load Error.
2	3E 02	Program Load Error at CSN	Program Load Error at CSN.
4	3E 03	Can’t found Program with Program Loader	A program (loaded by program loader) cannot be found.
4	3E 04	Check SUM Error with Program Loader	A SUM check error detected during a program loading.
4	3E 05	Can’t found end Mark with Program Loader	An end mark of partitioned file cannot be found when a program load. (Does not occur.)
6	3F 00	Target Operating Conditions Have Changed	Target Operating Conditions Have Changed.
6	3F 01	Microcode Has been Changed	A microcode has been changed by downloading microcode.
6	3F 03	Inquiry Data Has Changed	Inquiry data has changed. (by switching ROM-RAM)

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (7/9)

Sense key	Code	Error name	Description
4	40 00	RAM Failure	RAM failure detected.
4	42 00	Power On or Self test Failure	Indicates that an error has occurred during Power On Diagnostic. _ MPU error _ TIMER error _ ROM error _ Disk controller error _ Initial Formatting Failure _ RAM diagnostic error _ Buffer error
4	42 80	Hard Register Error in Send Diag Self Test	Hardware Register diag error is detected in Send Diag Self Test.
B	43 00	Message Error	The message is rejected and operation cannot continue.
4	44 00	Internal Target Error	A hardware/firmware error has been detected in the controller during execution of a command.
B	44 00	Write ABORT with Array Mode	Received ABORT message in writing with Array Mode.
4	44 80	Pin occurred with Forced Write After	A PIN occurred at forcible write after. (only in case 8MB cache)
4	44 90	Management Data Read Error	A read process for management data in a management area was failed.
4	44 91	Multi Track R/W Error	A read/write process for multi track in a management area was failed.
4	44 97	Master Data Read Error	A read process for the master data in a management area was failed.
4	44 98	Can't Multi Track Write Remain Trackless	A write process for a management area was failed because remain track is one.
4	44 99	Multi Track Write Error	All write operations for a management area were failed.
4	44 9E	Master Data Write Error	A write process for master data of management area was failed.
4	44 9F	Time Out in CTL Area Access	Time Out Error is detected when Control Area is accessed.
4	44 A0	REA Sector not found	The sector for reassignment cannot be found.
4	44 A1	Reassign Data Restore Fail	Reassign Data Restore Failed.
4	44 A2	Reassign Sector ID Not Found (ID Misscompare)	Sector ID to be reassigned can not be found.
4	44 A3	No Defect Spare Location Available at Skip REA.	No Spare Sector is available for Skip Reassign.
4	44 A4	ID String Check Error	Reassign failed due to ID String check error.
4	44 A5	Reassign Data Save Error	Reassign Data Save Error.
4	44 A6	Reassign ID Write Error	Source sector ID for Reassign can not be updated.
4	44 A9 AD	BASM acceding order error	BASM acceding order error has occurred during reassignment.

Copyright ©1998, Hitachi, Ltd.

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (8/9)

Sense key	Code	Error name	Description
4	44 AB AC	G List irregular Order	G List acceding order error has occurred.
4	44 AE	BATM irregular Order	BATM acceding order error has occurred.
4	44 B0	HDC FIFO Error (Check Code Error etc.)	HDC FIFO Error is detected.
4	44 B1	SCSI FIFO Error (Check Code Error etc.)	SCSI FIFO Error is detected.
4	44 C0	HDC DMAC Error	HDC DMAC Error is detected.
4	44 C1	SCSI DMAC Error	SCSI DMAC Error is detected.
4	44 D0	HDC Sequencer Setting Mismatch	HDC Sequencer setting values have compare check error.
4	44 D1	HDC DMA Next Condition Full	Can not set DMA due to Next being full after Current is finished.
4	44 D2	Offline ECC Correction Time Out	Time out is detected after initiating HDC for Offline one burst error correction.
4	44 D3	HDC Time Out	Time out is detected after initiating HDC for R/W.
4	44 D4	HDC Illegal Stop	HDC Stopped illegally.
4	44 D5	STRD Register Error	Error is detected in STRD Register.
4	44 D6	EERD Register Error	Error is detected in EERD Register.
4	44 D7	ESDIERR Register Error	Error is detected in ESDIERR Register.
4	44 D8	ECSTR Register Error	Error is detected in ECSTR Register.
4	44 D9	SST Register Error	Error is detected in SST Register.
4	44 DA	SCTSTUS Register Error	An error has occurred in SCTSTUS register.
4	44 DF	Error Factor Analysis Error	Error factor can not be identified.
4	44 F0	Spare Head Select Error	Wrong Jumper setting for Spare Head is made.
4	44 F1	Invalid Logical Cylinder Count	Number of Logical Cylinders returned from Drive ROM is out of Extent.
4	44 FF	Multi Track R/W Parameter Error	An internal parameter is detected in multi track R/W operation.
B	45 00	Select/Reselect Failed	_ Reselection Time Over has been detected. _ Invalid Select On has been detected.
B	47 00	SCSI Parity Error	A SCSI bus parity error has occurred.
B	48 00	Initiator Detected Error Message Received	The INITIATOR DETECTED ERROR message has been received from the initiator.
B	49 00	Invalid Message Error	An invalid message has been received.
B	4A 00	Command Phase Error	An error occurred in the COMMAND phase.
B	4B 00	Data Phase Error	An error occurred in the DATA phase.
4	4C 00	Logical Unit Failed Self-Configured	Microcode or parameter loading failed at the startup of the controller.
4	4C 80	RAM Configuration Load Error	A loading process for configuration information for RAM initialization was failed.
4	4C 90	Program Change Error	Incompatible micro code exchange was attempt.
4	4E 00	Overlapped Commands Attempted	(Does not occur.)

Byte36 : bit0-3 = E & Byte2C : bit0-7 ≠ 5X/6X (Drive Error)

(Note 2) Additionel sense code + AdAdditional sense code qualifier (9/9)

Sense key	Code	Error name	Description
1	5B 00	Log Exception	Log Exception detected.
6	5B 01	Threshold Condition Met	Threshold Condition Met.
1	5B 02	Log Counter at Maximum	Log Counter has reached at Maximum.
1	5B 03	Log List Codes Exhausted	Log List Codes Exhausted.
4/6	5C 00	RPL Status Change	RPL Status has changed.
6	5C 01	Spindles Synchronized	Spindles Synchronized.
1/4/6	5C 02	Spindles Not Synchronized	Spindles Not Synchronized.
1	80 00	Read with Pin Hit	Read with Pin Hit. (only in case 8MB cache)
4	81 00	LA Check Error	LA Error is detected within Drive.
4	94 00	Auto-Reallocation Fail at No REC Sector	Auto reassignment failed on No REC sector.
1	AE 00	Spare Sector less then Threshold	There are few spare sector for alternate sector.
3	C2 00	Reassign required 11, 13, 14 Error Occurred with ORM	Reassign required error (code = 11,13,14) occurred in ORM. (Only in ORM Logging)
3	C4 00	Reassign required 11, 13, 14, 18 Error Occurred with ORM	Reassign required error (code = 11,13,14,18) occurred in ORM. (Only in ORM Logging)
3	E0 00	Read Error with 10 Retry SHR LOG Only	Read Error with 10 Retry (without Uncorrectable Error, without Error in Correction Applied and without AM Not Found). (SHR LOG Only)
3/4	E1 00	Uncorrectable Error with 10 Retry SHR LOG Only	Uncorrectable Error with 10 Retry. (SHR LOG Only)
3	E2 00	Uncorrectable Error with 10 Retry SHR LOG Only	Uncorrectable Error with 10 Retry. (SHR LOG Only)
3/4	E3 00	AM Not Found Error with 10 Retry SHR LOG Only	AM Not Found Error with 10 Retry, and Auto Reallocation Applied. Key = 4 : Auto Reallocation Failed. (SHR LOG Only)
3	E4 00	Correctable Error Sector No Same with 10 Retry SHR LOG Only	Correctable Error Sector No Same with 10 Retry. (SHR LOG Only)
4	E5 00	10 Retry Error Sector Auto Reallocation Failed SHR LOG Only	10 Retry Error Sector, and Auto Reallocation Failed. (SHR LOG Only)
3	E6 00	Another Sector Error with 10 Retry SHR LOG Only	Another Sector Error with 10 Retry. (SHR LOG Only)

① When bit 0 is 0.

Bit 1 : Not used
Bit 2-3 : SP number
Bit 4-5 : CHLs PER CLUSTER
- 00 : 4
- 01 : 8
- 10 : Not used
- 10 : Not used
- 11 : Not used

Bit 6 :NVS
- 0 : Without NVS
- 1 : With NVS

Bit 8-10 : Cache size
- 000 : Non cache
- 001 : 256MB
- 010 : 512MB
- 011 : 768MP
- 100 : 1024MB
- 101 : 1280MB
- 110 : 1536MB
- 111 : Over 1536MB

Bit 11-13 : Cluster hardware level (‘000’)
Bit 14-15 : Cache/NVS hardware level (‘000’)

② When bit 0 is 1,

Bit 1 : Not used
Bit 2-3 : SP number
Bit 4-5 : CHLs per cluster
- 0000 : Parallel=4, serial=0
- 0001 : Parallel=8, serial=0
- 0010 : Parallel=4, serial=2
- 0100 : Parallel=4, serial=4
- 0110 : Parallel=0, serial=2
- 1000 : Parallel=0, serial=4
- 1010 : Parallel=0, serial=8
- 1100 : Parallel=0, serial=6

Bit 8 : Dual frame
- 0 : Dual frame
- 1 : Single frame

Bir 9-11 : Cache size
- 000 : Non cache
- 001 : 256MB
- 010 : 512MB
- 011 : 768MB
- 100 : 1024MB
- 101 : 1280MB
- 110 : 1536MB
- 111 : Over 1536MB

Bit 12-13 : Cluster hardware level (‘00’)
Bit 14-15 : Cache/NVS hardware level (‘00’)

(Note 12) Isolation code

Byte 2D ≠ x’ 00’ : Byte 36 and 37 are a sympton code.
Byte 2D = x’ 00’ : Byte 36 and 37 are a sympton code.
This byte is byte 2 of the isorarion code.

(Note 13) SSB ID

0 : SVP
1 : SP

(Note 14) SVP ID

0 : SVP1
1 : SVP2

(Note 15) Log and message control

bit 0-2 : Not used
bit 3 : Log mode (0)
bit 4-5 : Logging action
- 00 :Don’t log
- 01 : Unconditional log
- 10 : Log only once
- 11 : Log only if persistent

bit 6-7 : Operator message
- 00 : No message
- 01 : Unconditional message
- 10 : Send only once
- 11 : Send only if persistent

SIM Reference Codes Detected by the Processor (1/6)

Error		REF CODE			SIM	Level of error	Host report	Remarks
		36	37	2D	3C			
CHA Processor error	CHT PCB exchange impossible (4GL ↔ 4GS)	39	9F	X0	F1	Moderate	No	X: CHA PCB# (*1)

[Note] REF CODE = 3998

CHF PCB is 'PERFORMANCE FIBRE'. SIM message says 'cannot analyzed', because the version of the installed micro-program does not support 'PERFORMANCE FIBRE'.

You must replace this PCB by no 'PERFORMANCE FIBRE' CHF PCB.

REF CODE = 3999

After this, if you replace 'PERFORMANCE FIBRE' CHF PCB by no 'PERFORMANCE FIBRE' CHF PCB, you must follow 'Installation and De-Installation' procedure. Do not follow 'Replace'procedure.

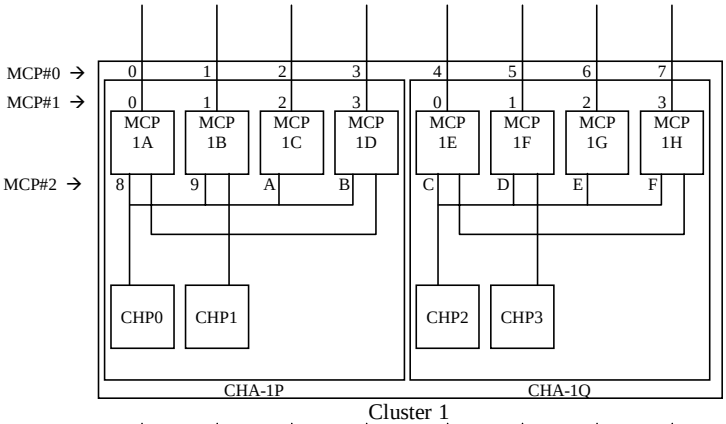
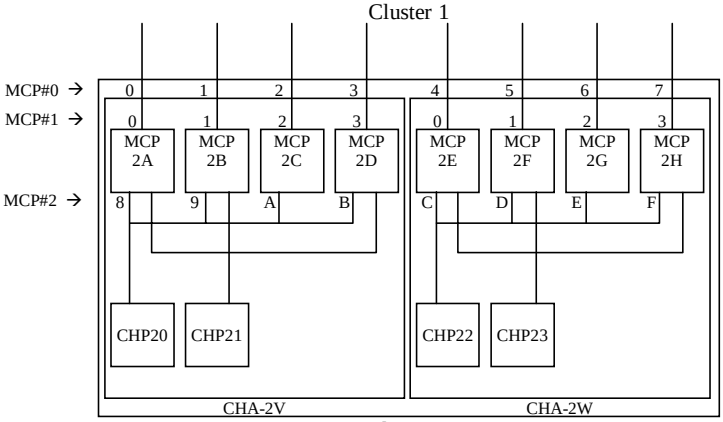
MCP #0: x‘0’ to x‘7’ indicates the MCP number.
MCP #1: x‘0’ to x‘3’ indicates the MCP number.
MCP #2: x‘8’ to x‘F’ indicates the MCP number.

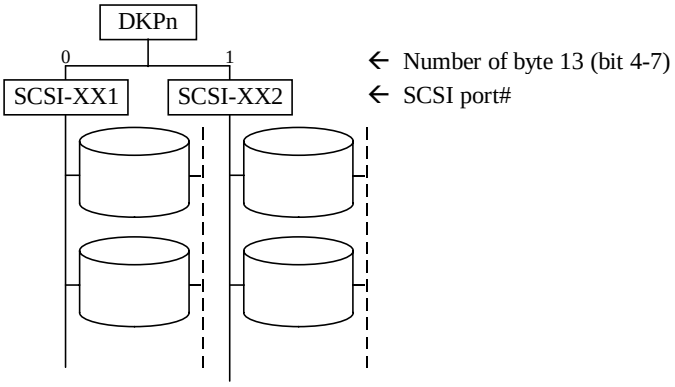


Cluster 1



Cluster 2

(*4) Port #: x‘0’ to x‘3’ indicates the SCSI port number. See the figure below.



(*5) The package that is not defined in the configuration information exists.
If it is prepared for new installation, it is necessary to do the new installation procedure.
Otherwise it should be pulled out by executing P/S off.

(*7) Isolate the error according to the procedure shown in TRBL05-170.

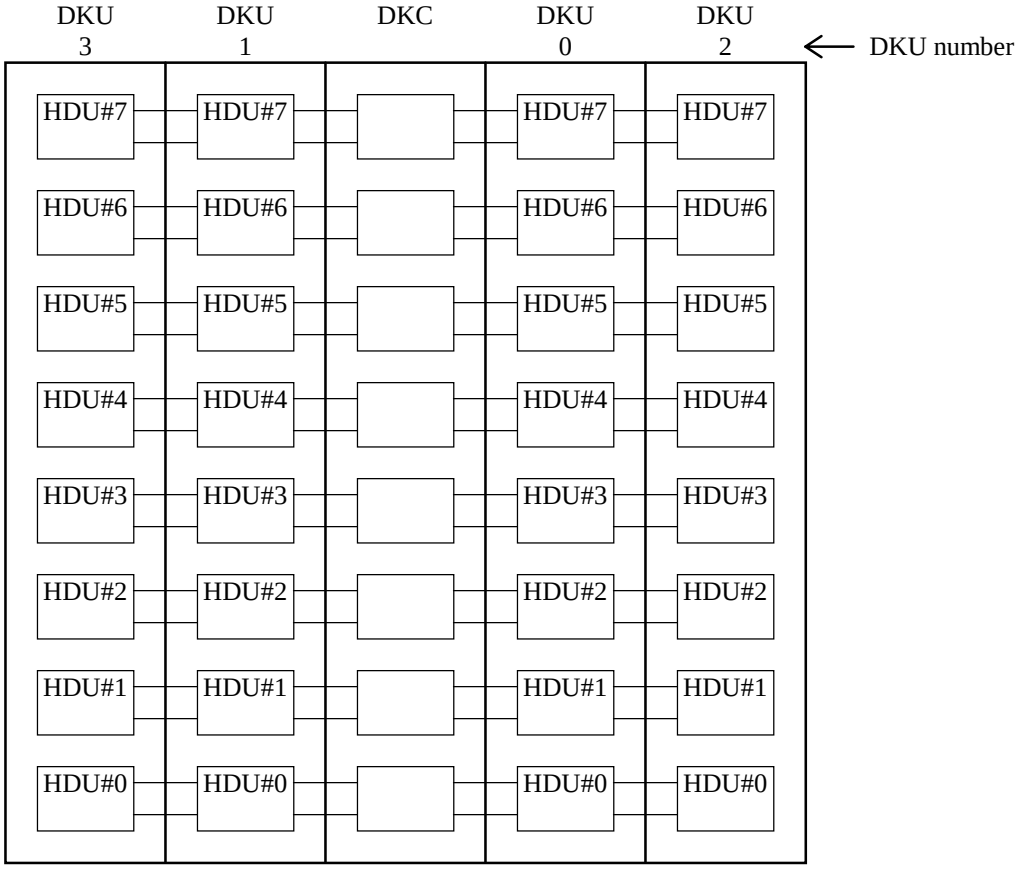
(*8) Recover the error according to the procedure shown in TRBL05-260.

(*10) Perform error isolation according to the procedure given in the two separate pages attached to TRBL05-280.

(*11) If memory module group (CMxx) is designated by FPC, that module may be isolated from associated SSBs. Isolate the memory module according to the procedure given in the page attached to TRBL05-290.

Copyright ©1997,1998, Hitachi, Ltd.

(*12) DKU#: x‘0’ to x‘3’ indicates DKU number. See the figure below.
HDU#: x‘0’ to x‘7’ indicates HDU number. See the figure below.



(*13) reason code
x‘0’ : Pinned data exist
x‘1’ : The shutdown of the power supply was occurred
x‘2’ : Invalid Version/Revision exists

(*15) Recover LDEVs according to the procedure shown in TRBL05-330.

Copyright ©1997,1998, Hitachi, Ltd.

(*16) Change pair status number
x'0': From simplex to duplex pending
x'1': From simplex to duplex
x'2': From pending duplex to duplex
x'3': From pending duplex to suspend
x'4': From duplex to suspend
x'5': From duplex to simplex
x'6': From pending duplex to simplex
x'7': From suspend to simplex
x'8': From suspend to duplex pending

(*17) You can suppress reporting the HRC/HODM Service SIM to the HOST by RCU Option operation (PPRC support by HOST and Service SIM of HRC/HODM).

- Service level SIM -

PPRC support by HOST	Service SIM or HRC/HODM	level of error	HRC	HODM
Yes	Report	DKC_SIM	Host Report	Host Report
		DEV_SIM	Not Host Report	Host Report
	Not Report	DKC_SIM	Not Host Report	Not Host Report
		DEV_SIM	Not Host Report	Not Host Report
No	Report	DKC_SIM	Host Report	Host Report
		DEV_SIM	Host Report	Host Report
	Not Report	DKC_SIM	Not Host Report	Not Host Report
		DEV_SIM	Not Host Report	Not Host Report

- Moderate or Serious level SIM -

PPRC support by HOST	level of error	HRC	HODM
Yes	DKC_SIM	Host Report	Host Report
	DEV_SIM	Not Host Report	Host Report
No	DKC_SIM	Host Report	Host Report
	DEV_SIM	Host Report	Host Report

(*18) SIMs which REF.CODE are D4DX, D4EX are reported in case of HODM.
In case of HRC, SIMs reported from RCU are reported to the host by MCU.

Severity Level	RC of reported SIM for HRC	RC of reported SIM for HODM
Acute or Serious	No modification	D4EX
Moderate	No modification	D4DX
Service (Not HRC SIM)	No modification	Not reported
Service (HRC SIM)	Not reported	Not reported

(*19) This temporary blocking is to recover the logical table on SM and be automatically recovered.

(*20) In case of the replacement of the cache memory PCB on the side having blocked SM (see REP01-140 work ID = RCA1), insert the removed cache memory PCB again.

(*21) Isolate the error according to the procedure shown in TRBL05-20.

(*22) The LDEV is blocked because of an error (inconsistency between data on the A and B sides) of configuration information stored in the SM. Recover the error following the instruction of the Technical Support Center.

(*23) X represents the X in a program version "?X-??-??/??".

Copyright ©1997,1998, Hitachi, Ltd.

(*24) Cache SIMM sizes of sides A and B are different because the replacement of the cache memory has been performed on one side only. Perform the replacement left referring to the description in the remark column.

(*25) Type of the lost information is reported according to the bit position. (There may be the case that two or more bits are set.)

(*26) Change pair status number
x'0': Accepted Suspend Pair operation
x'1': Accepted Delete Pair operation (The R-VOL is in suspended status)
x'2': Accepted Delete Pair operation (The R-VOL is in duplex status)
x'3': Accepted Delete Pair operation (The R-VOL is in pending duplex status)
x'4': Completed Suspend Pair operation
x'5': Completed Delete Pair operation

(*27) In the case that the error is detected in the area of ROM, the level of error is "Moderate" in other case "Service".
