Maintenance Manual

REV.7

All Rights Reserved, Copyright ©1997,2000, Hitachi, Ltd.

Preface

This manual describes the maintenance of DKC310I Disk Control Unit and DKU305I Disk Drive Unit, including installation and replacement.
Before starting maintenance, read the manual carefully to be familiar with operating procedures and instructions.
Particularly, be familiar with the Safety Section and obey its instructions.
Keep the manual on hand for your convenience.

The manual is copyrighted by Hitachi, Ltd. No part of the manual may be copied or reproduced in any form or by any means without the prior permission of the publisher.

All information contained herein is subject to change without notice.

FCC STATEMENT Federal Communications Commission (FCC) Statement

WARNING : This equipment generates , uses , and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual , may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Part 15 of FCC Rules , which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

"EINE LEICHT ZUGÄNGLICHE TRENN-VORRICHTUNG,MIT EINER KONTAKT-ÖFFNUNGSWEITE VON MINDESTENS 3mm IST IN DER UNMITTELBAREN NÄHE DER VERBRAUCHERANLAGE ANZUORDEN (4-POLIGE ABSCHALTUNG)."

Maschinen lärm informations verordnung 3. GSGV, 18.01.1991: Der ”höchste” Schalldruckpegel beträt 70 db(A) oder weniger gemäß ISO 7779.

CLASS 1 LASER PRODUCT

Warning
This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Safety Summary

1 ⚠ General Safety Guidelines

Read the following safety guidelines carefully and follow them when you conduct maintenance of the machine.

1.1 Before starting maintenance

- Maintenance of the machine must be done only by trained and qualified field engineers.
- Read and follow the safety guidelines and procedures in this manual and the related manuals.
- In this manual and on the machine, hazard warnings are provided to aid you in preventing or reducing the risk of death, personal injury, or product damage.
  Understand and follow these hazard warnings fully.
- The hazard warnings which appear on the warning labels on the machine or in the manual have one of the following alert headings consisting of an alert symbol and a signal word, DANGER, WARNING, or CAUTION.

⚠ DANGER:	indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.
⚠ WARNING:	indicates a potentially hazardous situation which, if not avoided, can result in death or serious injury.
⚠ CAUTION:	indicates a hazardous situation which, if not avoided, will or can result in minor or moderate injury, or serious damage of product.
	The alert symbol shown left precedes every signal word for hazard warnings, and appears in safety related descriptions in the manual.

The signal ward 'NOTICE' is used to present warnings which are not directly related to personal injury hazards.

- When warning labels become dirty or start peeling off, replace them.
- If any physical accident such as abnormal noise, smell, smoke or falling down occurs on the Disk Subsystem while running, immediately power off the Disk Subsystem by pulling one of the UNIT EMERGENCY POWER OFF switch on the Disk Subsystem.
- Keep in mind that the hazard warnings in this manual or on the machine cannot cover every possible case, as it is impossible to predict and evaluate all circumstances before hand.
  Be alert and use your common sense.

Copyright ©1997, Hitachi, Ltd.

⚠ SAFETY SUMMARY (Continued)

1.2 UNIT EMERGENCY POWER OFF switch

A UNIT EMERGENCY POWER OFF switch is provided on the operator panel on the front side of the DKC for an emergency powering off. When any abnormality such as an abnormal sound or smell or emitting smoke is perceived, power off the disk subsystem by operating the switch following the procedure below. The procedure for operating the switch is as follows.

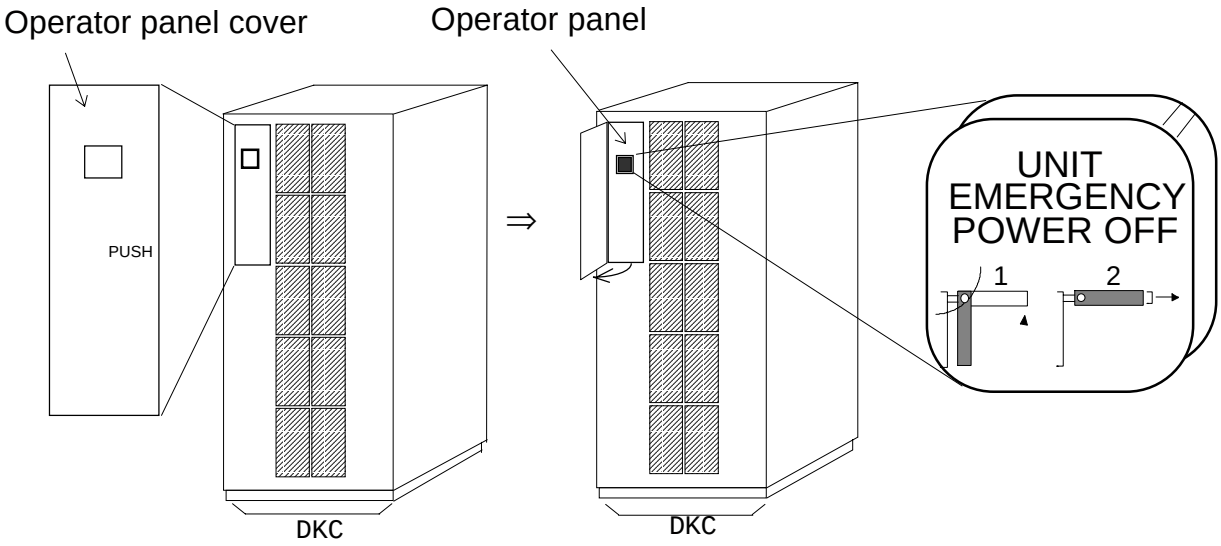

Figure 2.2 Operation of UNIT EMERGENCY POWER OFF switch

- Push the operator panel cover at the portion where a sign "PUSH" is marked, open the operator panel cover, then operate the EMERGENCY POWER OFF switch.
- In using a UNIT EMERGENCY POWER OFF switch, first pull it up and then pull it toward you as illustrated.
- Pulling a UNIT EMERGENCY POWER OFF switch on the Disk Controller instantly shuts down, neglecting the systems power off sequence. Jobs in process are aborted and their integrity after recovery is not guaranteed. Therefore, this method should be used only in an emergency and not in usual maintenance.
- UNIT EMERGENCY POWER OFF switch on the Disk Controller only provide partial power off capability, and AC input power present at primary circuit yet. Therefore, do not use the switches on these units unless powering off of the own unit is obviously enough and safe as an emergency measure.
- When pulled, a UNIT EMERGENCY POWER OFF switch locks itself to prevent further powering on and requires a trained and qualified field engineer for recovery.

⚠ SAFETY SUMMARY (Continued)

1.3 During work

- For each procedure, follow the given sequence of steps.
- Use the spare parts, consumable and materials for maintenance which are specified in the manual; otherwise, personal injury or damage of the machine, as well as deterioration of the product's quality, may result.
- Use the special tools and instruments specified for the work in the manual or commercially available tools and instruments which fit the purpose.
- Use measurement instruments and powered tools which are properly calibrated or periodically inspected.
- Keep the maintenance area neat and tidy.
- Always put away parts, materials or tools when not in use.
- Wear an eye protector where liquid may splash or anything may fly about.
- When lifting anything heavy, hold it close to yourself and keep your back erect, to prevent injury to your back or spine.
  When lifting anything, for the weight of which CAUTION is indicated, use a proper lifting tool or have somebody help you.
- Keep a soldering iron and its stand away from you to prevent accidental contact and burns.
- When using sharp objects or cutting tools, make sure that no part of your body lies in the path of the blade bit, or point.
- Before finishing you work, make sure that all parts removed during maintenance have been installed back in their original positions in the machine.
  Make sure that no tool or foreign material is left in the machine.

Copyright ©1998, Hitachi, Ltd.

⚠ SAFETY SUMMARY (Continued)

1.4 Prevention of electric shocks

- Before starting work, make sure that, unless otherwise specifically instructed, there is no potential electric hazard in the maintenance area such as insufficient grounding or a wet floor.
- Before starting work, note where the emergency power-off switches are located and make sure you know how to operate them.
- Unless otherwise specifically instructed, cut off all power sources to the machine before stating maintenance. Just switching off the machine power supplies is usually not enough.
  When power is fed from a wall or floor outlet, unplug the power supply cord, or turn off the switch on the power distribution panel or board.
  Attach a notice on the panel or board prohibiting the use of the switch.
  If the machine power has been already turned off, make sure yourself that these conditions are satisfied.
- Do not touch any uninsulated conductor or surface, where so instructed, which remains charged for a limited time after the external power supply to the machine is disconnected.
- When working on a machine which has a grounding terminal, make sure that the terminal is properly connected to the facility's ground.
- When working close to a hazardously energized part, do not work alone; work with another person who can immediately turn off the power in an emergency.
- Do not wear any metallic item such as a wrist watch with a metallic surface, or metallic accessories.
  If you wear eyeglasses with a metallic frame, take care not to let the frame touch an uninsulated surface.
- Make sure that your hands and arms are dry.
- Unless otherwise specifically instructed, use only one hand when it is necessary to work near an exposed live electric circuit.
  This prevents the completion of the circuit through both hands even if you accidentally touch the circuit.
- Do not use a dental mirror near an exposed live electric circuit.
  The mirror surface is conductive and can become hazardous even if it is made of plastic.
- Unless otherwise specifically instructed, do not supply power to any subassembly such as a power supply unit or a motor while it is removed from the machine.

Copyright ©1997,1998, Hitachi, Ltd.

1.5 Preventing being caught by rotating or moving parts

- Tuck in your tie, scarf, shirt, or any other loose clothing so that it will not be caught by a rotating or moving part.
- Tie up long hair.
- Unless otherwise specifically instructed, do not supply power to any device with rotating or moving parts which are not properly covered.
- When instructed to supply power to any device with rotating or moving parts whose covers have been removed, work with another person who can immediately turn off the power in an emergency.

1.6 Procedures in an emergency

1.6.1 For electric shock

- Do not be panicked. Do not become another victim through contact with the injured person.
- First, shut off the electric current passing through the victim.
  Use the emergency power-off switch if there is one, or otherwise a normal power-off switch.
  If this cannot be done, push the victim away from the source of the electric current by using a nonconductive object such as a dry wooden stick.
- Then, call an ambulance.
- If the victim is unconscious, artificial respiration may be necessary.
  A proper method for performing artificial respiration or resuscitation should be learned beforehand.
- If the victim's heart is not beating, cardio-pulmonary resuscitation should be performed by a trained and qualified person.

1.6.2 For outbreak of fire

- First, shut off all the power from the machine using the emergency power-off switch if there is one, or otherwise the normal power-off switch.
- If the fire continues burning after the power is shut off, take suitable actions including the use of a fire extinguisher or a call for the fire department.

2 Hazard Warning Statements

The following are the hazard warning statements contained in this manual.

2.1 ⚠ DANGER Statements

- The DKC and the basic DKU commonly have Two Main Disconnect Devices (Two Main Breaker CB101s for Dual Power Lines) so that AC Power of the unit can be supplied from the separate power distribution board with Two Power Supply Cords. Similarly, each of the 2nd DKU, the 3rd DKU, and the 4th DKU also has Two Main Disconnect Devices.
  (LOCATION04-10, LOCATION04-20)

2.2 ⚠ WARNING Statements

- Do not touch the internal parts of the AC power cable, the AC Box, or the Breaker Box. Line voltage is present even if the circuit breaker is off.
  (INST03-610, INST03-3000)

- Be Careful of Electric Shock.
  (INST04-1810, INST04-1830, INST04-1880, INST04-1900, REP03-1420, REP03-1440, REP03-1510, REP03-1530, REP03-1630, REP03-1650, REP03-1690, REP03-1850, REP03-1880, REP03-1980, REP03-2000, REP03-2080, REP03-2090)

2.3 ⚠ CAUTION Statements

- Mind Your Head.
  (INST04-1810, INST04-1880, REP03-1420, REP03-1510, REP03-1630, REP03-1850, REP03-1980)

- Perform The Hz Conversion with care.
  (INST03-630)

- Perform The Outlet Box with care.
  (INST03-2500, INST03-2540)

All Maintenance Procedures Start from Here!

1 Precautions

- All maintenance operations to be performed on this subsystem are controlled through the SVP. When taking maintenance actions, carefully read this maintenance manual to avoid operation mistakes.
- The subsystem is designed so that troubles are isolated using the action code (ACC). If no ACC is presented, isolate the trouble based on TROUBLE SHOOTING SECTION.
- This subsystem supports new technologies such as RAID and live part plugging/unplugging. The service personnel should read THEORY OF OPERATION SECTION and understand its contents.

1.1 How to Use This Maintenance Manual

When servicing the subsystem by using this manual, select the item to be checked from the START ENTRY TABLE in START SECTION and follow the instructions given in the corresponding test procedure.

(Note)
Each SVP screen on this maintenance manual is a sample, and it may not be the same as the actual screen.

3 Panel

3.1 Operator Panel

[1] Operator Panel
Fig. 3.1-1 and Table 3.1-1 show the Operator Panel and its functions respectively.
Circled numbers in Fig. 3.1-1 correspond to the numbers in Table 3.1-1.

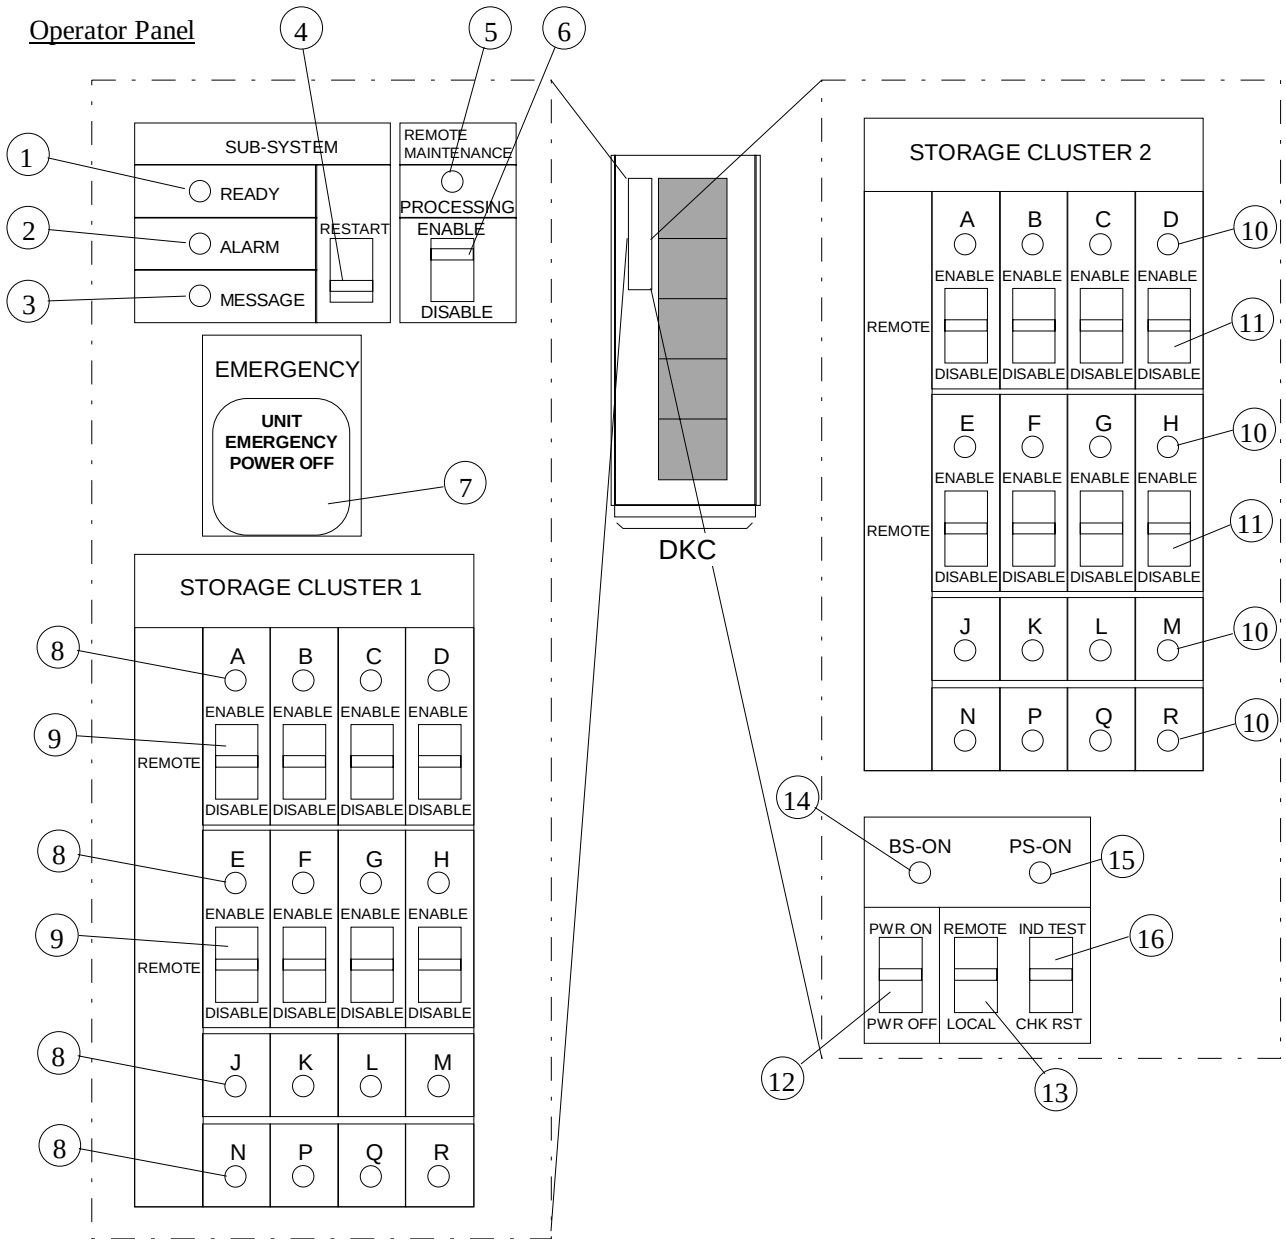

Fig. 3.1-1 Operator Panel

Copyright ©1997,1998, Hitachi, Ltd.

Table 3.1-1 Part Function on Operator Panel

No.	Parts Name	Class	Function
1	SUBSYSTEM READY	LED (Green)	Indicates that input/output operation on the channel interface is enabled.
2	SUBSYSTEM ALARM	LED (Red)	Indicates DC under voltage, DC over current, abnormally high temperature, or an unrecoverable failure occurred.
3	SUBSYSTEM MESSAGE	LED (Amber)	Indicates that any message has been issued from Clusters.
4	SUBSYSTEM RESTART	Switch	Used to unfence the fenced drive path and to release Write Inhibit.
5	REMOTE MAINTENANCE PROCESSING	LED (Amber)	Indicates that remote maintenance is being processed.
6	REMOTE MAINTENANCE ENABLE/DISABLE	Switch	Used to permit remote maintenance.
7	EMERGENCY POWER OFF	Switch	Used to power off the storage subsystem in an emergency situation.
8	STORAGE CLUSTER 1 CHANNEL A-R ENABLE	LED (Green)	Parallel Channel (Only Channel A-H): Indicates that corresponding channel route is enabled. Serial Channel/Fibre Channel: (1) On : Indicates some of the logical paths are established. (2) Fast blinking : Indicates that the corresponding channel route is executing the channel command. (Only Serial Channel) (3) Slow blinking : Indicates none of the logical path is established. (4) Off : Indicates that the corresponding channel route is not enabled. SCSI Channel: On : Indicates the SCSI cable and terminator are connected correctly to the corresponding channel route and channel route is ready. Off : Indicates the some of the following conditions occured. • None of Logical Unit is set up to the corresponding channel route • SCSI cable or terminator is not connected correctly. • Corresponding channel route is not ready.
9	STORAGE CLUSTER 1 CHANNEL A-H ENABLE	Switch	Parallel Channel: Used to enable or disable the corresponding channel routes. (1) Enable : Enable the corresponding channel route. (2) Disable : Disable the corresponding channel route. (3) Remote : Enable/Disable control is made by remote switch. Serial Channel/SCSI Channel/Fibre Channel: This switch is ineffective.

Copyright ©1997,1998, Hitachi, Ltd.

Table 3.1-1 Part Function on Operator Panel

No.	Parts Name	Class	Function
10	STORAGE CLUSTER 2 CHANNEL A-R ENABLE	LED (Green)	Parallel Channel (Only Channel A-H): Indicates that corresponding channel route is enabled. Serial Channel/Fibre Channel: (1) On : Indicates some of the logical paths are established. (2) Fast blinking : Indicates that the corresponding channel route is executing the channel command. (Only Serial Channel) (3) Slow blinking : Indicates none of the logical path is established. (4) Off : Indicates that the corresponding channel route is not enabled. SCSI Channel: On : Indicates the SCSI cable and terminator are connected correctly to the corresponding channel route and channel route is ready. Off : Indicates the some of the following conditions occured. • None of Logical Unit is set up to the corresponding channel route • SCSI cable or terminator is not connected correctly. • Corresponding channel route is not ready.
11	STORAGE CLUSTER 2 CHANNEL A-H ENABLE/REMOTE/DISABLE	Switch	Parallel Channel: Used to enable or disable the corresponding channel routes. (1) Enable : Enable the corresponding channel route. (2) Disable : Disable the corresponding channel route. (3) Remote : Enable/Disable control is made by remote switch. Serial Channel/SCSI Channel/Fibre Channel: This switch is ineffective.
12	PWR ON/PWR OFF	Switch	Used to power on/off the subsystem. This switch is valid when the REMOTE/LOCAL switch is set to the LOCAL position.
13	PWR ON/PWR OFF REMOTE/LOCAL	Switch	REMOTE position : Subsystem is powered on/off by the instructions from the CPU. LOCAL position : Subsystem is powered on/off by PWR ON/PWR OFF switch.
14	BS ON	LED (Yellow)	Indicates that the Sub-PS is on.(CL 1 or CL 2)
15	PS ON	LED (Green)	Indicates that the subsystem is powered on.
16	IND TEST/CHK RESET	Switch	IND TEST position : The LEDs on Operator panel and CE panel go on. CHK RESET position : The PS ALARM and TH ALARM is reset.

Table 3.2-1 Function of Other Switches and LEDs

No.	Parts Name	Class	Function
17	STORAGE CLUSTER 1 FORCE OFFLINE	Switch	Parallel Channel: Used to inhibit channel interface operations for all channel routes of storage cluster 1 Serial channel/SCSI channel: This switch is ineffective.
18	STORAGE CLUSTER 2 FORCE OFFLINE	Switch	Parallel Channel: Used to inhibit channel interface operations for all channel routes of Storage Cluster 2. Serial channel/SCSI channel: This switch is ineffective.
19	PS Enable/Disable	Switch	Used to power on/off the PS.
20	PS Enable	LED (Green)	Indicates that the PS is providing output voltage.
21	SVP PS ENABLE	LED (Green)	Indicates that the SVP PS is powered on.
22	SVP PS Shut Down LED	LED (Red)	Indicates that the removal of the SVP PS is possible when the subsystem is powered on.
23	BAT CTR Shut Down LED	LED (Red)	Indicates that the removal of the BAT CTR is possible when the subsystem is powered on.
24	PWRCTL-1 ENABLE	LED (Green)	Indicates that the PWRCTL-1 is powered on.
25	PWRCTL-1 Shut Down LED	LED (Red)	Indicates that the removal of the PWRCTL-1 is possible when the subsystem is powered on.
26	SSVP ENABLE	LED (Green)	Indicates that the SSVP is powered on.
27	SSVP Shut Down LED	LED (Red)	Indicates that the removal of the SSVP is possible when the subsystem is powered on.
28	SSVP DUMP	Switch	The data in SVP memory is written to the HDD.
29	SSVP ALARM	LED (Red)	This LED shows the state of SSVP. Lighting.....BOOT detected abnormality of hardware. Slow blinking ..The dump acquisition of SSVP ended. Fast blinking....Micro Code of SSVP ended abnormally.
30	SSVP ALARM RESET	Switch	The SSVP detection alarm is reset. Then IMPL of the SVP is executed.
31	HUB ENABLE	LED (Green)	Indicates that the HUB is powered on.
32	HUB Shut Down LED	LED (Red)	Indicates that the removal of the HUB is possible when the subsystem is powered on.
33	PWRCTL-2 ENABLE	LED (Green)	Indicates that the PWRCTL-2 is powered on.
34	PWRCTL-2 Shut Down LED	LED (Red)	Indicates that the removal of the PWRCTL-2 is possible when the subsystem is powered on.
35	DKUMN POWER ON	LED (Green)	Indicates that each DKUMN is powered on.
36	DKUMN POWER ON/OFF	Switch	Used to power on/off each DKUMN.

4 Connection of External Cable

4.1 AC Cabling

4.1.1 DKC310I/DKU305IU

⚠ DANGER

The DKC and the basic DKU commonly have Two Main Disconnect Devices (Two Main Breaker CB101s for Dual Power Lines) so that AC Power of the unit can be supplied from the separate power distribution board with Two Power Supply Cords. Similarly, each of the 2nd DKU, the 3rd DKU and, the 4th DKU also has Two Main Disconnect Devices. Refer to LOCATION03-70 "Circuit Breakers".
Observe all instructions described in this manual before connecting the equipment to the power source and before servicing.

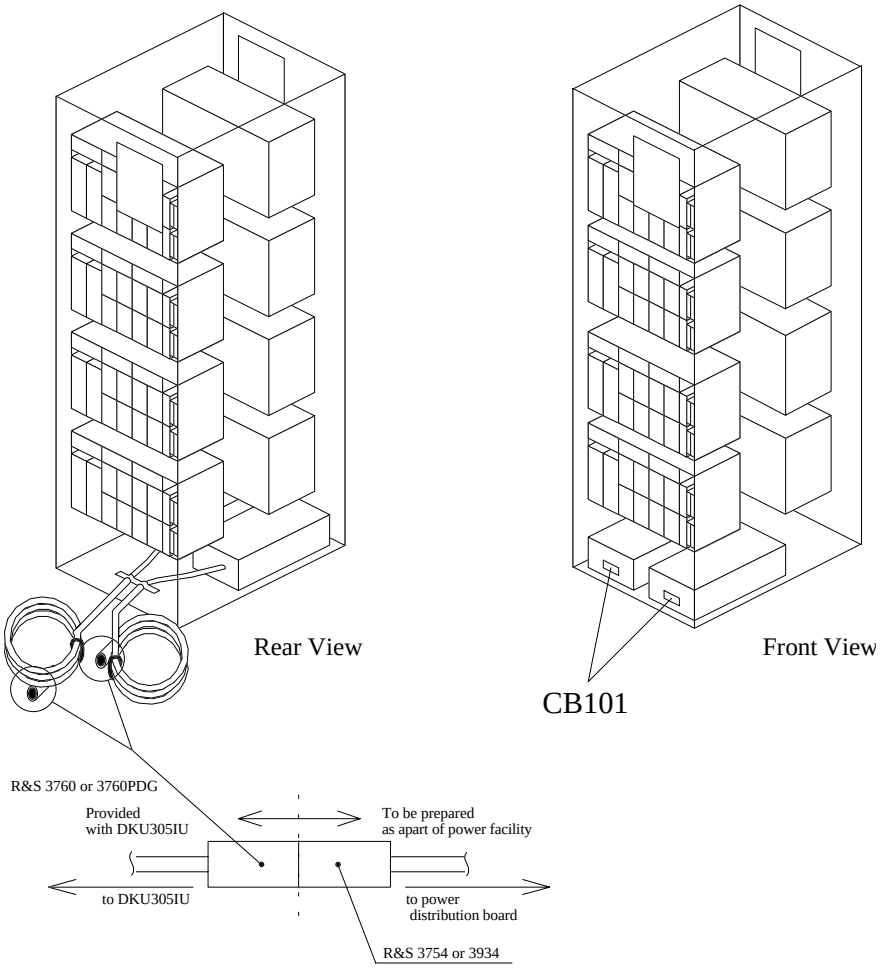
A. Connection of Power Supply Cord
The unit has two power supply cords with attachment plug type R&S 3760 or 3760PDG. Be sure to prepare the following socket receptacles and power cords between the power distribution board of the building and the attachment plugs for the unit.

Socket Receptacle : R&S 3754 or 3934
Power Cord : Type ST or equivalent, shielded type, with four min. #8 AWG conductors. Terminated at one end with an assembled on above socket receptacle cap.

B. Requirements to Branch Circuit
This unit relies on the building installation for protection of the internal components of the equipment. Each line (R/S/T line) should be protected by a short circuit protective device and by an overcurrent protective device rated 30 amp on building installation.
The protective device on building installation shall comply with the NEC requirements (or CEC requirements when installed in Canada), and if a protective device interrupts a conductor, it shall also interrupt all other supply conductors.
This protection is not required for the neutral line of this unit.

C. Disconnection from Power Supply
Each unit has Two Main Disconnect Device(Two Main Breaker CB101s for Dual Power Lines). To remove all utility power from the unit, turn off both main disconnect device CB101s at the same time.

Copyright ©1997, Hitachi, Ltd.



4.1.2 DKC310I/DKU305IE

⚠ DANGER

The DKC and the basic DKU commonly have Two Main Disconnect Devices (Two Main Breaker CB101s for Dual Power Lines) so that AC Power of the unit can be supplied from the separate power distribution board with Two Power Supply Cords. Similarly, each of the 2nd DKU, the 3rd DKU, and the 4th DKU also has Two Main Disconnect Devices. Refer to LOCATION03-70 "Circuit Breakers".
Observe all instructions described in this manual before connecting the equipment to the power source and before servicing.

A. Connection of Power Supply Cord

The unit has two power supply cords. Be sure to prepare the following socket receptacles and power cords between the power distribution board of the building and the power cords for the unit.

Socket Receptacle : As shown in the following figure.
Power Cord : Type H07RN-F or equivalent, with five 6.0 mm^2 conductors.

Copyright ©1997, Hitachi, Ltd.

Be sure to connect a power cord to the distribution box as illustrated in the following figure. The wrong connection of neutral line may cause damages or fire of the equipment.
To reduce the risk of wrong connection, you should use approved type attachment plug and socket for power cord connection.
High leakage current may be caused between the power supply and this unit. To avoid an electric shock by high leakage current, perform the protective earthing connection before the supply connections and disconnect it after the supply connections.

B. Requirements to Branch Circuit

This unit relies on the building installation for protection of the internal components of the equipment. Each line (R/S/T line) should be protected by a short circuit protective device and by an overcurrent protective device rated 30 amp on building installation.
The protective device on building installation shall be comply with National Standards of the country where the units shall be installed, and if a protective device interrupts a conductor, it shall also interrupt all other supply conductors.
This protection is also required for the neutral line of this unit.

C. Disconnection from Power Supply

Each unit has Two Main Disconnect Device (Two Main Breaker CB101s for Dual Power Lines). To remove all utility power from the unit, turn off both main disconnect device CB101s at the same time.

6 Jumper Setting

6.1 Shut Down Jumpers

[1] Front or Rear Logic Box
Check that the Shut Down LED is turned on. If not, connect the Shut Down Jumper to the Shut Down Connector. (Only hot replace procedure)

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be replaced. Make sure that it is the PCB to be replaced.

Table 6.1-1 Shut Down Jumpers List

[1] CE PANEL

JP1, 2: EPO Signal

Setting	JP1 and JP2 Settings
When power is controlled from the host (at least one PCI cable attached to JP1-JP8 on PCI CONN PCB), set the jumpers as shown.	When power is not controlled from the host, no PCI Cable attached to JP1-JP8 PCI CONN PCB or to disable the EPO of host, set the jumpers as shown.

[2] RS CONN

JP2: Termination

Setting	JP2 Settings
This setting attaches terminator to RS-422.	This setting detaches terminator to RS-422.

[3] BAT CTR

Set the jumper connectors shown below to make mounted batteries operative.

When the power is off over 48 hours.

Be sure to save the data in the cache and shared memories before disconnecting the jumper plugs.

Note: The data in the cache and shared memories is deleted when turning off the power and disconnecting the jumper plugs before saving the data.

1 Subsystem Configuration Outline

1.1 General Information

1.1.1 Model List

1. Model of DKC310I

Table 1.1.1-1 shows the model list of DKC310I.

Table 1.1.1-1 Model List of DKC310I

No	Model Number	Model Name	Major Part	Remarks
1	DKC310I-5	Disk Controller	• Breaker Box × 2 • LP483-A (3VPS-PL) • LP485-A (5VPS-PL) • LP484-A (MPS-PL) • +5V PS × 2 • +3V PS × 2 • Multi PS × 2 • FAN ASSY × 16 • SCSI Cable between DKC and 1st DKU • LR001-A (L/G-PL) • WP102-A (DKA) × 2 • WP108-A/WP118-A (CACHE) × 2 • WP100-A (TM2) × 1 • WP100-B (TM2) × 1 • WP105-A (TM1) × 1 • WP105-B (TM1) × 1	DKC310 Disk Controller doesn't contain channel switches, cache memory module and shared memory module. It is necessary to attach the following options according to the configuration. • Channel Adapters DKC-F310I-4S/8S/8P/ 8PS/8C/4F • Cache Memory Module DKC-F310I-256/1024 • Shared Memory Module DKC-F310I-32/128
2	DKC310I-5E	Disk Controller (Support of HMRCF)	• Breaker Box × 2 • LP483-A (3VPS-PL) • LP485-A (5VPS-PL) • LP484-A (MPS-PL) • +5V PS × 2 • +3V PS × 2 • Multi PS × 2 • FAN ASSY × 16 • SCSI Cable between DKC and 1st DKU • LR001-A (L/G-PL) • WP102-B/WP132-B (DKA) × 2 • WP108-A/WP118-A (CACHE) × 2 • WP100-A (TM2) × 1 • WP100-B (TM2) × 1 • WP105-A (TM1) × 1 • WP105-B (TM1) × 1	DKC310 Disk Controller doesn't contain channel switches, cache memory module and shared memory module. It is necessary to attach the following options according to the configuration. • Channel Adapters DKC-F310I-4S/8S/8P/ 8PS/8C/4F • Cache Memory Module DKC-F310I-256/1024 • Shared Memory Module DKC-F310I-32/128

(Continued from the preceding page)

No	Model Number	Model Name	Major Part	Remarks
3	DKC-F310I-20	Additional Cache Board	• WP108-B/WP118-B (CACHE) × 2 • Battery ASSY × 2 • BATT CTR (SH093-A) × 2	Required for cache capacity of more than 2 GB or 8 GB.
4	DKC-F310I-256	Additional Cache Memory Module (256 MB)	• SH024-A (32 MB)	
5	DKC-F310I-1024	Additional Cache Memory Module (1024 MB)	• SH100-A (128 MB)	
6	DKC-F310I-32	Additional Shared Memory Module (32 MB)	• SH024-B (16 MB)	
7	DKC-F310I-128	Additional Shared Memory Module (128 MB)	• SH100-B (64 MB)	
8	DKC-F310I-50	Additional Disk Adapter	• WP102-A (DKA) × 2	
9	DKC-F310I-50E	Additional Disk Adapter	• WP102-B/WP132-B (DKA) × 2	Support of HMRCF
10	DKC-F310I-4S	Serial 4-port Adapter	• SH086/149-A (MP) × 2 WP207/217-B (2-port) × 2 • I/F Con. Panel	
11	DKC-F310I-8S	Serial 8-port Adapter	• SH086/149-A (MP) × 4 WP207/217-A (4-port) × 2 • I/F Con. Panel	
12	DKC-F310I-8P	Parallel 8CH Switch (Previous I/F Connector)	• SH086/149-B (MP) × 2 WP209-A (4CH) × 2 • I/F Con. Panel (1) • Internal Cable (1)	
13	DKC-F310I-8PS	Parallel 8CH Switch (Shrink I/F Connector)	• SH086/149-B (MP) × 2 WP209-A (4CH) × 2 • I/F Con. Panel (2) • Internal Cable (2)	
14	DKC-F310I-8C	SCSI 8-port Adapter	• SH086/149-C (MP) × 4 WP204/214-A (4 SCSI) × 2 • I/F Con. Panel • Internal Cable	
15	DKC-F310I-4F	Fibre 4-port Adapter for Optical Cable	• SH086/149-D (MP) × 2 SH113-A (LC) × 2 WP206-A (2 port) × 2 • I/F Con. Panel (1)	
16	DKC-F310I-80	CL Additional Power Supply	• +5V PS × 2 • +3V PS × 2	This model must be installed when installing three or more channel options.
17	DKC-F310I-81	CL Redundant Power Supply	• +5V PS × 2 • +3V PS × 2 • Multi PS × 2	
18	DKC-F310I-82	CL Additional Redundant Power Supply	• +5V PS × 2 • +3V PS × 2	
19	DKC-F310I-18	PCI I/F Connector	• PCI I/F Con.	
20	DKC-F310I-19	RCU I/F Connector	• RCU I/F Con.	
21	DKC-F310I-M80	Backup/Restore Function for Multi-Platform	• Floppy Disk	

(To be continued)

Copyright ©1997,1998, Hitachi, Ltd.

(Continued from the preceding page)

No	Model Number	Model Name	Major Part	Remarks
22	DKC-F310I-M81	Dynamic Cache Resident Feature	• Floppy Disk	
23	DKC-F310I-M82	Customized Volume Size Feature	• Floppy Disk	
24	DKC-F310I-M83	Hitachi Multiple RAID Coupling Facility Feature	• Floppy Disk	Support of HMRCF
25	—	Outlet Box	• Outlet Box (IE Type) • Outlet Box (IU Type)	This is Special Tool. (See to PARTS07-10.)
26	DKC-F310I-4FE	Fibre 4-port Adapter for Optical Cable	• SH086/149-D (MP) × 2 SH160-A (LC) × 2 WP206-B (2 port) × 2 • I/F Con. Panel	
27	DKC-F310I-4GS	Fibre 4-port Adapter for Short Wavelength	• SH164-A (MP) WP256-A (LC) × 2 • I/F Con. Panel	
28	DKC-F310I-4GL	Fibre 4-port Adapter for Long Wavelength	• SH164-A (MP) WP256-B (LC) × 2 • I/F Con. Panel

2. Model of DKU305I

Table 1.1.1-2 shows the model list of DKU305I.

Table 1.1.1-2 Model List of DKU305I

No	Model Number	Model Name	Major Part	Remarks
1	DKU305IU-14 DKU305IE-14 (DKU305I-14)	Disk Unit	• AC Box × 2 • AC Cable • Input Power Cable • SZ601-A × 2 • HDU Box × 4 • LP481-A × 4 • SH087-A × 8 • FAN ASSY × 12 • 5/12V PS × 8	The basic part of Disk Unit has no HDD canister.
2	DKU-F305I-B4	Platform for Canister Mount	• HDU Box × 4 • LP481-A × 4 • SH087-A × 8 • FAN ASSY × 12 • 5/12V PS × 8	
3	DKU-F305I-3C	DEV I/F Cable (1)	• SCSI Cable × 16	DKC ↔ 3rd DKU
4	DKU-F305I-24C	DEV I/F Cable (2)	• SCSI Cable × 16	1st DKU ↔ 2nd DKU or 3rd DKU ↔ 4th DKU
5	DKU-F305I-6F4	4 HDD Canisters	• DK3F1-60 × 4	
6	DKU-F305I-6F1	1 HDD Canister	• DK3F1-60 × 1	
7	DKU-F305I-907	7 HDD Canisters	• DK308/309-90 × 7	
8	DKU-F305I-904	4 HDD Canisters	• DK308/309-90 × 4	
9	DKU-F305I-901	1 HDD Canister	• DK308/309-90 × 1	
10	DKU-F305I-1804	4 HDD Canisters	• DK309/30A-180 × 4	
11	DKU-F305I-1801	1 HDD Canister	• DK309/30A-180 × 1	
12	DKU-F305I-9F1	1 HDD Canister	• DK3F2-90 × 1	
13	DKU-F305I-9F4	4 HDD Canisters	• DK3F2-90 × 4	
14	DKU-F305I-15F4	4 HDD Canisters	• DK3F2-150 × 4	
15	DKU-F305I-15F1	1 HDD Canister	• DK3F2-150 × 1	
16	DKU-F305I-3604	4 HDD Canisters	• DK30A-360 × 4	
17	DKU-F305I-3601	1 HDD Canister	• DK30A-360 × 1	
18	DKU-F305I-18J4	4 HDD Canisters	• DKR2B-J18SC × 4	
19	DKU-F305I-18J1	1 HDD Canister	• DKR2B-J18SC × 1	
20	DKU-F305I-47J4	4 HDD Canisters	• DKR1B-J47SC × 4	
21	DKU-F305I-47J1	1 HDD Canister	• DKR1B-J47SC × 1	
22	DKU-F305I-56	Hz Conversion Kit (50 Hz → 60 Hz)	• Input Power Cable • Nameplate (IE → IU)	
23	DKU-F305I-65	Hz Conversion Kit (60 Hz → 50 Hz)	• Input Power Cable • Nameplate (IU → IE)

1.1.2 Cache / Shared memory capacity and number of necessary options

1.1.2.1 Cache memory capacity and number of necessary options

There are two types of cache memory: SH024-A (16 Mbit DRAM) and SH100-A (64 Mbit DRAM). Cache memory capacities and corresponding number of options required are shown in Table 1.1.2-1.

Table 1.1.2-1 Cache memory capacity and number of necessary options

Cache memory capacity (MB)	Configuration with SH024-A only		Configuration with SH100-A only	
	DKC-F310I-256	DKC-F310I-20	DKC-F310I-1024	DKC-F310I-20
256	1	0	-	-
512	2	0	-	-
768	3	0	-	-
1,024	4	0	1	0
1,280	5	0	-	-
1,536	6	0	-	-

1.1.2.2 Shared memory capacity and number of necessary options

There are two types of shared memory: SH024-B (16Mbit DRAM) and SH100-B (64Mbit DRAM). Shared memory capacities and corresponding number of options required are shown in Table 1.1.2-2.

Table 1.1.2-2 Shared memory capacity and number of necessary options

Shared Memory capacity	Configuration with SH100-B	Configuration with mixture of SH024-B and SH100-B	
	DKC-F310I-128	DKC-F310I-32	DKC-F310I-128
256MB	2	4	1
384MB	3	-	-
512MB	4	-	-

In the table above, shared memory capacities corresponding column(s) to which is filled up with hyphen(s) ("-") cannot be set.

1.1.2.3 Relation between Shared Memory and Cache Memory

The relation between the Shared Memory capacity and the Cache Memory capacity is shown below.

Table 1.1.2-3 Sizes of Cache Memory and Shared Memory
(In the case that one or two CUs are installed)

Item. No	Cache Memory capacity	Number of Configuration with DKC-F310I-128			
		BASIC	DK30A-360	MRCF (64 pairs or more)	TPF
1	256 MB to 4GB	2 sets (256 MB)	2 sets (256 MB)	3 sets (384 MB)	3 sets or 4 sets *1
2	5 GB	2 sets (256 MB)	2 sets (256 MB)	3 sets (384 MB)	3 sets or 4 sets *1
3	6 GB	2 sets (256 MB)	2 sets (256 MB)	3 sets (384 MB)	3 sets or 4 sets *1
4	7 GB	2 sets (256 MB)	3 sets (384 MB)	3 sets (384 MB)	3 sets or 4 sets *1
5	8 GB	2 sets (256 MB)	3 sets (384 MB)	3 sets (384 MB)	3 sets or 4 sets *1
6	9 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
7	10 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
8	11 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
9	12 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
10	13 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
11	14 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
12	15 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
13	16 GB	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)	4 sets (512 MB)

Table 1.1.2-4 Sizes of Cache Memory and Shared Memory
(In the case that three or four CUs are installed)

Item No.	Cache Memory capacity	Number of Configuration with DKC-F310I-128			
		BASIC	DK30A-360	MRCF (64 pairs or more)	TPF
1	256 MB to 4 GB	2 sets (256 MB)	3 sets (384 MB)	3 sets (384 MB)	3 sets or 4 sets *1
2	5 GB	2 sets (256 MB)	3 sets (384 MB)	3 sets (384 MB)	3 sets or 4 sets *1
3	6 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
4	7 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
5	8 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
6	9 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
7	10 GB	3 sets (384 MB)	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)
8	11 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
9	12 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
10	13 GB	3 sets (384 MB)	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)
11	14 GB	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)	4 sets (512 MB)
12	15 GB	3 sets (384 MB)	4 sets (512 MB)	4 sets (512 MB)	4 sets (512 MB)
13	16 GB	4 sets (512 MB)	4 sets (512 MB)	4 sets (512 MB)	4 sets (512 MB)

*1 : The number of sets of the shared memory (DKC-F310I-128) required when supporting the TPF is that obtained by adding one to each number of sets required for the BASIC, DK30A-360, or MRCF (64 pairs or more).

1.1.4 Specifications

1. DKU305I Specifications

The DKU305I specifications are shown in the following table:

DKU305I Specifications (1/3) (DK3F1-60, RAID5)

Item			Specification					
			3390-3	3390-2	3390-1	3380-J	3380-E	3380-K
Logical volumes per unit	Minimum		6	8	16	16	12	8
	Maximum		348	464	928	928	696	464
	Increment		6	8	16	16	12	8
RAID level			5 (3 data + 1 parity configuration)					
Spare drives (optional)			Max. 8					
Logical volume characteristics	Capacity (GB)		2.83	1.89	0.95	0.63	1.26	1.89
	Data format		CKD					
	Bytes per track		56,664			47,476		
	Tracks per cylinder		15					
	Cylinders		3,339	2,226	1,113	885	1,770	2,655
Drive characteristics	Capacity (GB)		6					
	Data format		FBA					
	Average latency (ms)		2.5					
	Seek time (Read/Write)	Min. (ms)	0.6 / 0.8					
		Ave. (ms)	6.0 / 7.0					
		Max. (ms)	14.0 / 16.0					
	Data transfer rate (MB/s)		13.8 - 16.2					
	Ports		2					
	Access mechanism		1					
Drive/Unit			Max. 64 (Containing 8 spare drives)

DKU305I Specifications (2/3) (DK308/309-90, RAID5)

Item			Specification						
			3390-9	3390-3	3390-2	3390-1	3380-J	3380-E	3380-K
Logical volumes per unit	Minimum		6	16	16 or 24 or 32 *1				
	Maximum		192	512	768	768	1024	768	768
	Increment		6	16	16 or 24 or 32 *1				
RAID level			5 (6 data + 1 parity configuration)						
Spare drives (optional)			Max. 8						
Logical volume characteristics	Capacity (GB)		8.49	2.83	1.89	0.95	0.63	1.26	1.89
	Data format		CKD						
	Bytes per track		56,664				47,476		
	Tracks per cylinder		15						
	Cylinders		10,017	3,339	2,226	1,113	885	1,770	2,655
Drive characteristics	Capacity (GB)		9.23						
	Data format		FBA						
	Average latency (ms)		4.8						
	Seek time (Read/Write)	Min. (ms)	2.0 / 2.0						
		Ave. (ms)	11.5 / 12.5						
		Max. (ms)	24.0 / 26.0						
	Data transfer rate (MB/s)		7.6 - 10.7						
	Ports		2						
	Access mechanism		1						
Drive/Unit			Max. 64 (Containing 8 spare drives)						

*1 : 32 is available only in 3380-J emulation.

1.1.5 Environmental Specifications

The environmental specifications are shown in the following table:

Table 1.1.5-1 Environmental Specifications

Item	Condition		
	Note 1 Operating	Note 2 Non-operating	Note 3 Shipping & Storage
Temperature (º)	16 ~ 32º	-10 ~ 43º	-25 ~ 60º
Note 4 Relative Humidity (%)	20 ~ 80	8 ~ 90	5 ~ 95
Max. Wet Bulb (ºC)	26	27	29
Temperature Deviation (ºC/hour)	10	10	20
Vibration	0.25mm, 5~10Hz 0.05G, 10~300Hz	2.5mm, 5~10Hz 0.5G, 10~70Hz 0.05mm, 70~99Hz 1.0G, 99~300Hz	0.5G, 15min. Note 6 At four most severe resonance between 5~200Hz
Shock	—	8G, 15ms	Horizontal: Note 7 Incline Impact 1.22m/s Vertical: Note 8 Rotational Edge 0.1m

Note: 1. Environmental specification for operating condition should be satisfied before the disk subsystem is powered on. Max. temperature of 32º should be strictly satisfied at the air inlet portion. The recommended temperature range is 21~24º.
2. Non-operating condition includes both packing and unpacking conditions unless otherwise specified.
3. On shipping/storage condition, the product should be packed with factory packing.
4. No condensation in and around the drive should be observed under any conditions.
5. The above specifications of vibration and shock apply to all three axes.
6. See ASTM D999-86 Standard Methods for Vibration Testing of Shipping Containers.
7. See ASTM D880-86 Standard Methods of Incline Impact Test for Shipping Containers.
8. See ASTM D775-80 Standard Methods for Drop Test for Loaded Boxes.

1.1.6 Power requirement

The input voltage and input frequency are as follows:

- DKU305IE/IU

  +6%
  One of 208V or 230V AC -8%
  60Hz ±0.5Hz 3 Phase 3 Wire + Ground

  +6%
  One of 220V, 230V, or 240V AC -8%
  50Hz ±0.5Hz 3 Phase 3 Wire + Ground

  +6%
  One of 380V, 400V, or 415V AC -8%
  50Hz ±0.5Hz 3 Phase 4 Wire + Ground

Note: The distribution board with circuit breaker or equivalent is rated 30A for the Disk Drive Unit.

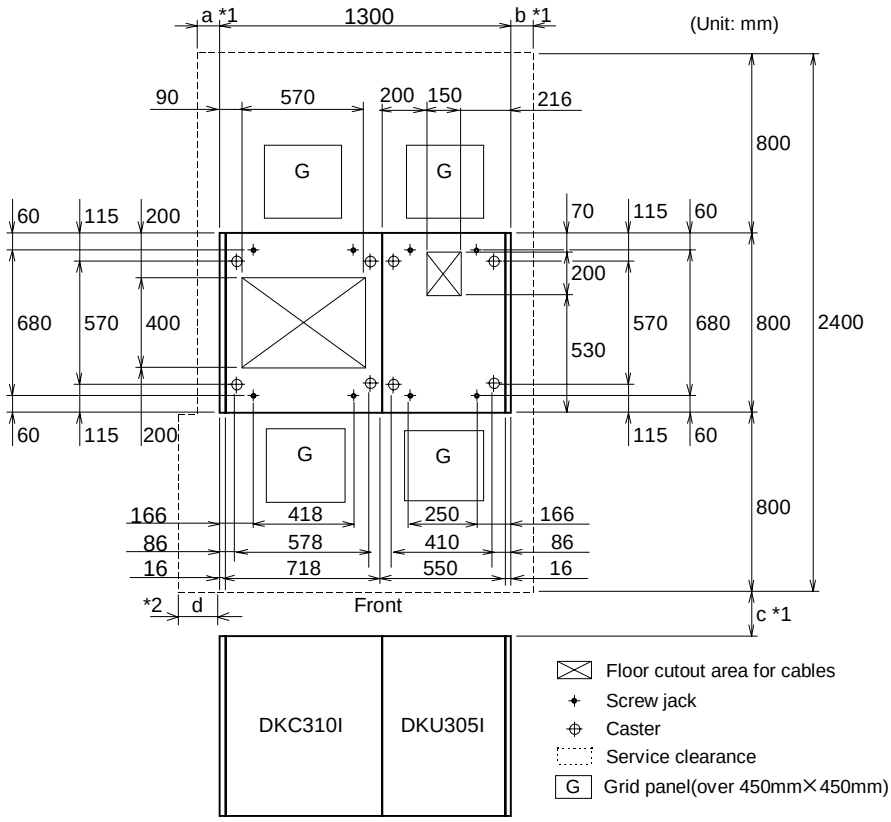
3. Subsystem Basic configuration

The service clearance is the space required for CE work. Never use this space for storage of any article to prevent damage.



*1: Clearance (a+b) is dependent on the floor load rating and clearance c.
Floor load rating and required clearances are shown below.

*2: Clearance (d) is required over 0.28m so as to open the DKC front door. In case that clearance (d) is less than clearance (a), give priority to clearance (a).

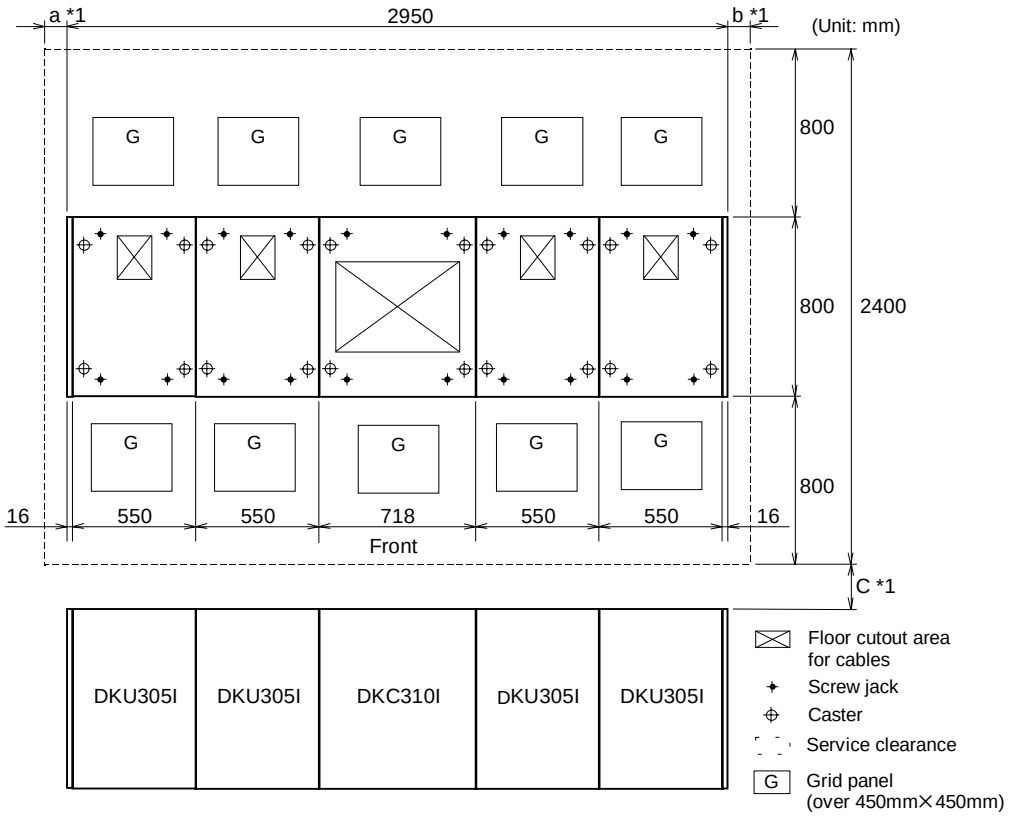
Floor load rating (kg/m^2)	Required clearance (a+b) (mm)				
	C=0	C=200	C=400	C=600	C=1000
500	0	0	0	0	0
450	200	100	0	0	0
400	500	300	100	0	0
350	900	700	500	300	100
300	1500	1200	1000	800	400

Note: 1. Actual clearances for installation should be decided after consulting with construction specialist responsible for installation building, as they could vary depending on the size/layout of the system and building conditions.
2. When various configurations of subsystems are arranged in a row, clearance values based on the largest subsystem configuration should be used.
3. From the viewpoint of maintenance operations, it is suggested that Clearance (c) be made as large as possible.

Copyright ©1997, Hitachi, Ltd.

4. Subsystem Full configuration

The service clearance is the space required for CE work. Never use this space for storage of any article to prevent damage.



*1: Clearance (a+b) is dependent on the floor load rating and clearance c.
Floor load rating and required clearances are shown below.

Floor load rating (kg/m^2)	Required clearance (a+b) (mm)				
	C=0	C=200	C=400	C=600	C=1000
500	400	0	0	0	0
450	900	400	100	0	0
400	1600	1100	700	300	0
350	2600	1900	1500	1100	400
300	4100	3300	2700	2200	1400

Note: 1. Actual clearances for installation should be decided after consulting with construction specialist responsible for installation building, as they could vary depending on the size/layout of the system and building conditions.
2. When various configurations of subsystems are arranged in a row, clearance values based on the largest subsystem configuration should be used.
3. From the viewpoint of maintenance operations, it is suggested that Clearance (c) be made as large as possible.

1.1.9 Power and Grounding Check

1.1.9.1 Facility power check

The customer's outlet for the 60Hz UL Listed unit must be either of the followings.

Connector R & S 3934
Receptacle R & S 3754

The plug type for the AC power cable must be R & S 3760 or 3760PDG.

1.1.9.2 Facility grounding check

The subsystem must meet all of the following three conditions of installation for GROUNDING.

a. An insulated grounding conductor that is identical in size and insulation material and thickness to the grounded and ungrounded branch-circuit supply conductors. It should be green, with or without yellow stripes, and is to be installed as a part of the branch circuit that supplies the unit or system.

b. The grounding conductor mentioned in item (a.), should be grounded to earth at the service equipment or other acceptable building earth ground such as the building frame in the case of a high rise steel-frame structure.

c. The attachment-plug receptacles in the vicinity of the unit or system are all to be a grounding type. The grounding conductors serving these receptacles should be connected to earth ground at the service equipment or other acceptable building earth ground such as the building frame in the case of a high-rise steel-frame structure.

Copyright ©1997, Hitachi, Ltd.

1.2 Subsystem Frame Configuration

Fig. 1.2 shows the subsystem configuration.

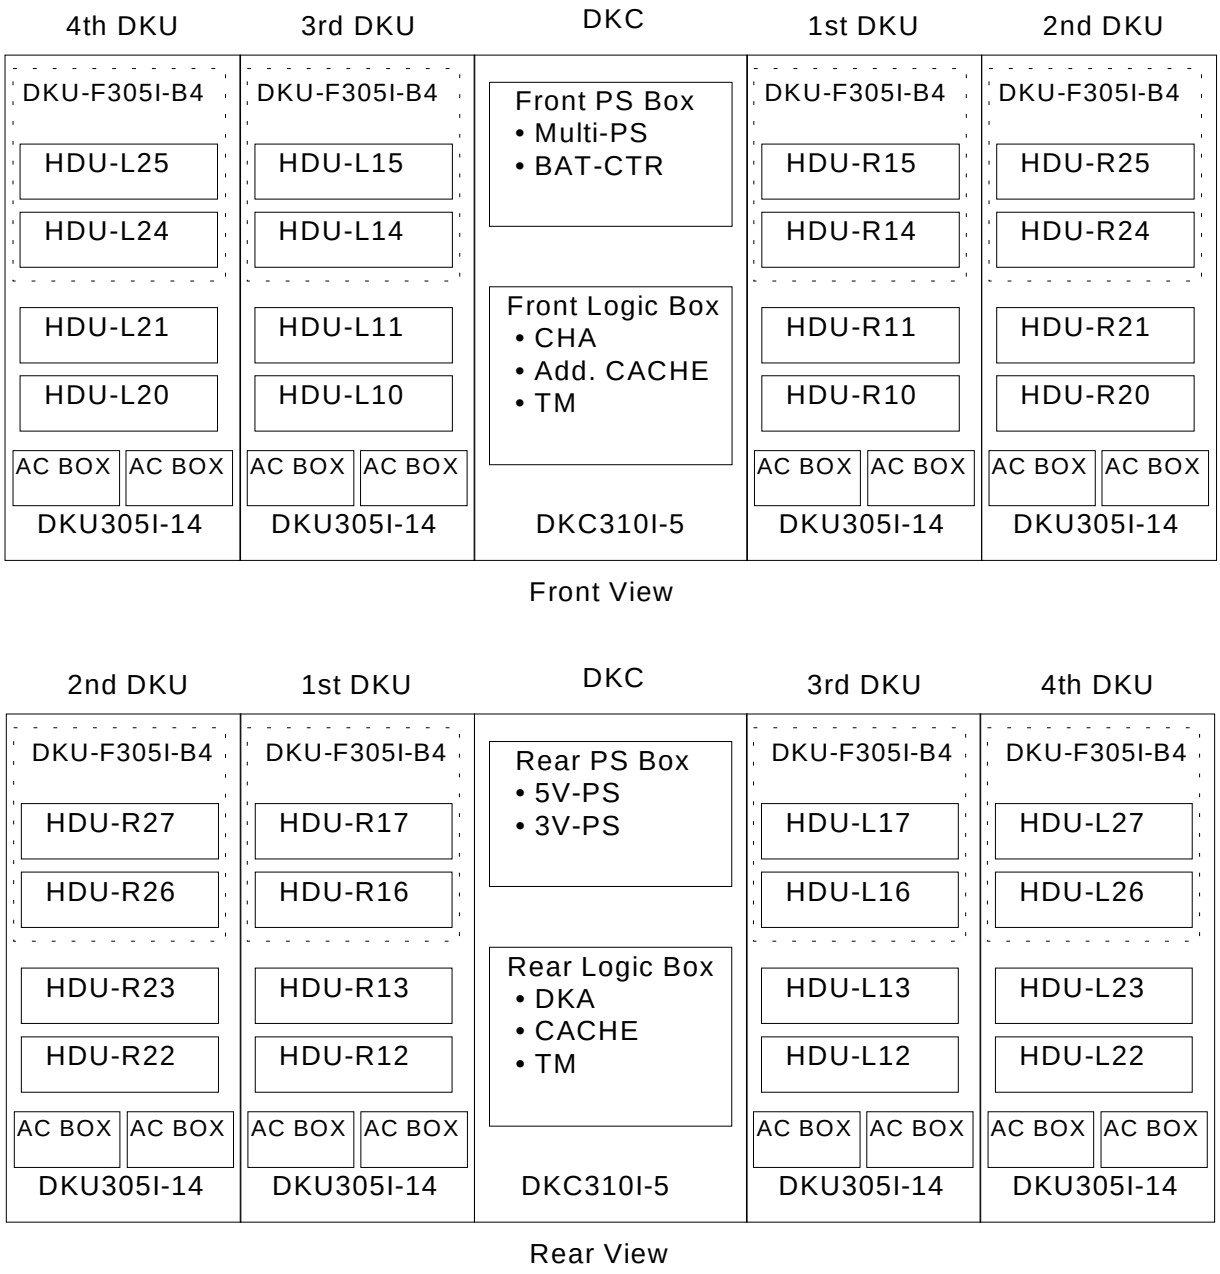

Fig. 1.2 Configuration of Subsystem Frame

Addition of the DKU frames are to be done in the following order: 1st DKU, 2nd DKU, 3rd DKU, and 4th DKU. However, when a mixture of different types of HDD is installed or a mixture of different emulation types is used, connection of the 3rd and 4th DKUs omitting the 2nd DKU is permitted. A disk drive connecting cable DKU-F305I-3C is required to add the 3rd DKU, and a cable DKU-F305I-24C to add the 2nd or 4th DKU.

Copyright ©1997, Hitachi, Ltd.

1.3 Drive Expansion Sequence

The order in which DKU-F305I-907 (7 HDD canisters) units are to be installed in a DKU-F305I-B4 is shown in Fig. 1.3-1 and the order in which DKU-F305I-901 (spare HDD) units are to be installed in Fig. 1.3-2.
The order in which DKU-F305I-1804/6F4/3604/15F4/9F4 (4 HDD canisters) units are to be installed in a DKU-F305I-B4 is shown in Fig. 1.3-3 and the order in which DKU-F305I-1801/6F1/3601/15F1/9F1 (spare HDD) units are to be installed in Fig. 1.3-4.
The order in which DKU-F305I-904 (4 HDD canisters) units are to be installed in a DKU-F305I-B4 is shown in Fig. 1.3-5 and the order in which DKU-F305I-901 (spare HDD RAID1) units are to be installed in Fig. 1.3-6.

NOTICE:

(1) The position to be installed in the 2nd or 4th DKU is different from one in the 1st or 3rd DKU. Be sure to set the HDDs in the right position.

(2) Don't use the position marked as X in the 2nd and 4th DKU.
Wrong setting of a HDD in the 2nd or 4th DKU may cause DKU failure on the same SCSI path.

(3) The specification for selecting the spare HDD can be common in the subsystem if there exists a spare HDD having the same capacity as that of the data HDD, though the HDD types coexist.

- Arrangement of the spare HDD is determined according to the RAID type (RAID 5: 6D + 1P, RAID5: 3D + 1P, or RAID1: 2D + 2D) of each DKA pair.
- Concerning the spare HDD type, install the HDD of the type supported in the subsystem.

No.	RAID type of DKA pair	Spare HDD arrangement (for each DKA pair)
1	RAID5 : 6D + 1P (DK308/9-90)	Shown in Fig. 1.3-2.
2	RAID5 : 3D + 1P (DK309-180, DK3F1-60, DK30A-360, DK3F2-150, DK3F2-90)	Shown in Fig. 1.3-4.
3	RAID1 : 2D + 2D (DK308/9-90, DK309-180, DK3F1-60, DK30A-360, DK3F2-150, DK3F2-90)	Shown in Fig. 1.3-4 (DK309-180, DK3F1-60, DK30A-360, DK3F2-150, DK3F2-90) and Fig. 1.3-6 (DK308/9-90)

Note : When the HDD types coexist, be careful that the HDD arrangement differs for each RAID type of the DKA pair.

(4) In case of changing the RAID type under DKA pair, all data HDD and spare HDD under the DKA pair have to be de-installed once. And then, install data HDD and spare HDD of new RAID type.

1.4 Explanation of Channel Option Configuration

1.4.1 List of Channel Options

Channel options which can be installed in the DKC310 are shown in Table 1.4-1. Up to 4 sets of them can be installed in the entire subsystem.

Table 1.4-1 List of Channel Options

No.	Model Number	Model Name	Major Part	Remarks
1	DKC-F310I-4S	Serial 4-port Adapter	• SH086/149-A (MP) × 2 WP207/217-B (2 Port) × 2 • I/F Con. Panel	For connection to the main frame
2	DKC-F310I-8S	Serial 8-port Adapter	• SH086/149-A (MP) × 4 WP207/217-A (4 Port) × 2 • I/F Con. Panel	For connection to the main frame
3	DKC-F310I-8P	Parallel 8CH Switch (Previous I/F Connector)	• SH086/149-B (MP) × 2 WP209-A (4CH) × 2 • I/F Con. Panel (1) • Internal Cable (1)	For connection to the main frame This option is installed in the basic unit; it uses a conventional type interface connector.
4	DKC-F310I-8PS	Parallel 8CH Switch (Shrink I/F Connector)	• SH086/149-B (MP) × 2 WP209-A (4CH) × 2 • I/F Con. Panel (2) • Internal Cable (2)	For connection to the main frame This option can be installed in either of the basic and additional units; it uses a small interface connector.
5	DKC-F310I-8C	SCSI 8-port Adapter	• SH086/149-C (MP) × 4 WP204/214-A (4SCSI) × 2 • I/F Con. Panel • Internal Cable	For connection to the open system
6	DKC-F310I-4F	Fibre 4-port Adapter for Optical Cable	• SH086/149-D (MP) × 2 SH113-A (LC) × 2 WP206-A (2 Port) × 2 • I/F Con. Panel	For connection to the open system
7	DKC-F310I-4FE	Fibre 4-port Adapter for Optical Cable	• SH086/149-D (MP) × 2 SH160-A (LC) × 2 WP206-B (2 Port) × 2 • I/F Con. Panel	For connection to the open system
8	DKC-F310I-4GS	Fibre 4-port Adapter for Short Wavelength	• SH164-A (MP) WP256-A (LC) × 2 • I/F Con. Panel	For connection to the open system
9	DKC-F310I-4GL	Fibre 4-port Adapter for Long Wavelength	• SH164-A (MP) WP256-B (LC) × 2 • I/F Con. Panel	For connection to the open system

Note: Only up to 2 sets of parallel 8-channel switches can be installed in each subsystem.

Copyright ©1997,1999, Hitachi, Ltd.

1.4.2 Channel Specifications

Specifications for each channel option are shown in table 1.4-2.

Table 1.4-2 Channel Specifications

Item	Main frame				Open system		
	Serial 4-port	Serial 8-port	Parallel 8-port		SCSI 8-port		Fibre 4-port
Option name	4S	8S	8P	8PS	8C		4F/4FE
Data transfer rate (MB/s)	10/17	10/17	3/4.5/6/9	3/4.5/6/9	Max.20	Max.40	Max.100
Number of connected ports/option	4	8	8	8	8	8	4
Number of MPs/option	4	8	4	4	8	8	4
Host interface	Serial channel	Serial channel	Parallel channel	Parallel channel	Fast/Wide SCSI	Ultra SCSI	Fibre channel (optical)
Number of installable options/subsystem	1/2/3/4	1/2/3/4	1	1/2	1/2/3/4	1/2/3/4	1/2/3/4
Cable length	3 km	3 km	122 m	122 m	20 m	20 m	500 m

Item	Open system	
	Fibre (Short) 4-port	Fibre (Long) 4-port
Option name	4GS	4GL
Data transfer rate (MB/s)	Max.100	Max.100
Number of connected ports/option	4	4
Number of MPs/option	8	8
Host interface	Fibre Channel (Short wavelength)	Fibre Channel (Long wavelength)
Number of installable options/subsystem	1/2/3/4	1/2/3/4
Cable length	500 m	10 km

Up to 4 sets of combinations of the aforementioned channel options and up to 32 ports can be connected to each subsystem. However, when the option 8P is installed, the number of connectable ports is restricted to up to 24 ports and when the options 8P and 8PS are installed, it is restricted to up to 16 ports.

1.4.4 Restrictions of Installation

When a parallel channel option is to be installed, following restrictions are imposed on the installing location.

(1) Types of parallel channel options

For the DKC310, a parallel channel option (DKC-F310I-8PS) with a miniaturized interface connector for the connection to the host CPU is newly provided in order to make it possible to connect up to 32 paths to the host CPU.

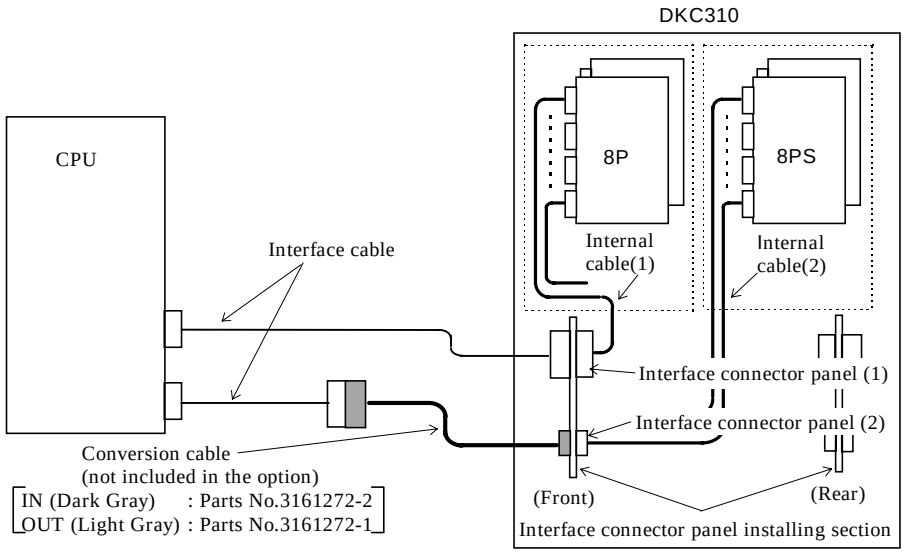

Fig. 1.4-2 Parallel Channel Connection Diagram

(2) Interface connector panel installing section

The interface connector panel installing section is shown in Fig. 1.4-3 and the number of necessary interface connector panels for each option is shown in Table 1.4-4.
(For the installing location, see Fig. 1.4-1)

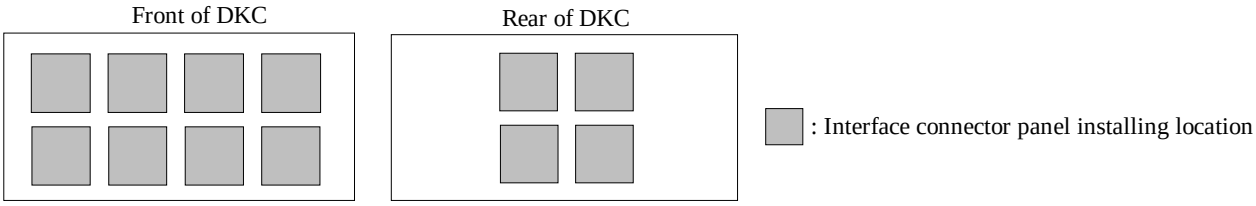

Fig. 1.4-3 Interface connector panel installing section

Table 1.4-4 Number of necessary interface connector panel

Option model	Number of necessary interface connector panels
DKC-F310I-4S/8S/8C/4F/4FE/ 4GS/4GL	CL1 CL2
DKC-F310I-8PS	CL1 CL1 CL2 CL2
DKC-F310I-8P	CL1 CL1 CL2 CL2 CL1 CL1 CL2 CL2

(3) Restrictions imposed on option installation

When installing a channel option, following restrictions are imposed on the installing location.

Case	Installing location				Maximum number of connectable channel ports	Interface connector panel installation diagram	
	Basic	Add.1	Add.2	Add.3		Front of DKC	Rear of DKC
1	8P	×	Not installed	Not installed	16		2	8P	8PS	—	—	16		3	8P	×	×	—	24		4	8PS	×	×	×	32		5	8PS	8PS	×	×	32		6	×	×	×	×	32		

— : Uninstallable

× : One of the options, that is, F8S, 4S, 8C, 4F, 4FE, 4GS, and 4GL can be installed.

2 Installation and De-installation procedure

2.1 New Installation Procedure General Flow

When installing Subsystem for the first time, perform all hardware installation procedures before initiating the installation through SVP procedure. The general procedure for installing a new Subsystem is shown below. Each procedure is performed referring to the following flow chart. Skip the next procedure when the procedure is not necessary. If any problems arise during the following procedure, isolate failure part with analysis of SIM log or SSB log. If neither SIM log nor SSB log has been created, re-check the general procedure and see TROUBLE SHOOTING SECTION.

Precaution on New Installation

- The CL Additional Power Supply (DKC-F310I-80) must be installed when installing three or more channel options.
  In such a case, be sure to add the channel option(s) after the CL Additional Power Supply is added.
- After all hardware Installation procedures , pull out the specified CHAs and DKAs temporarily (Location DKA:C,D,E,J,K,L CHA:Q,R,S,W,X,Y) in INST02-12 step 14.
  These CHAs and DKAs are reinserted in INST02-12 step 20.

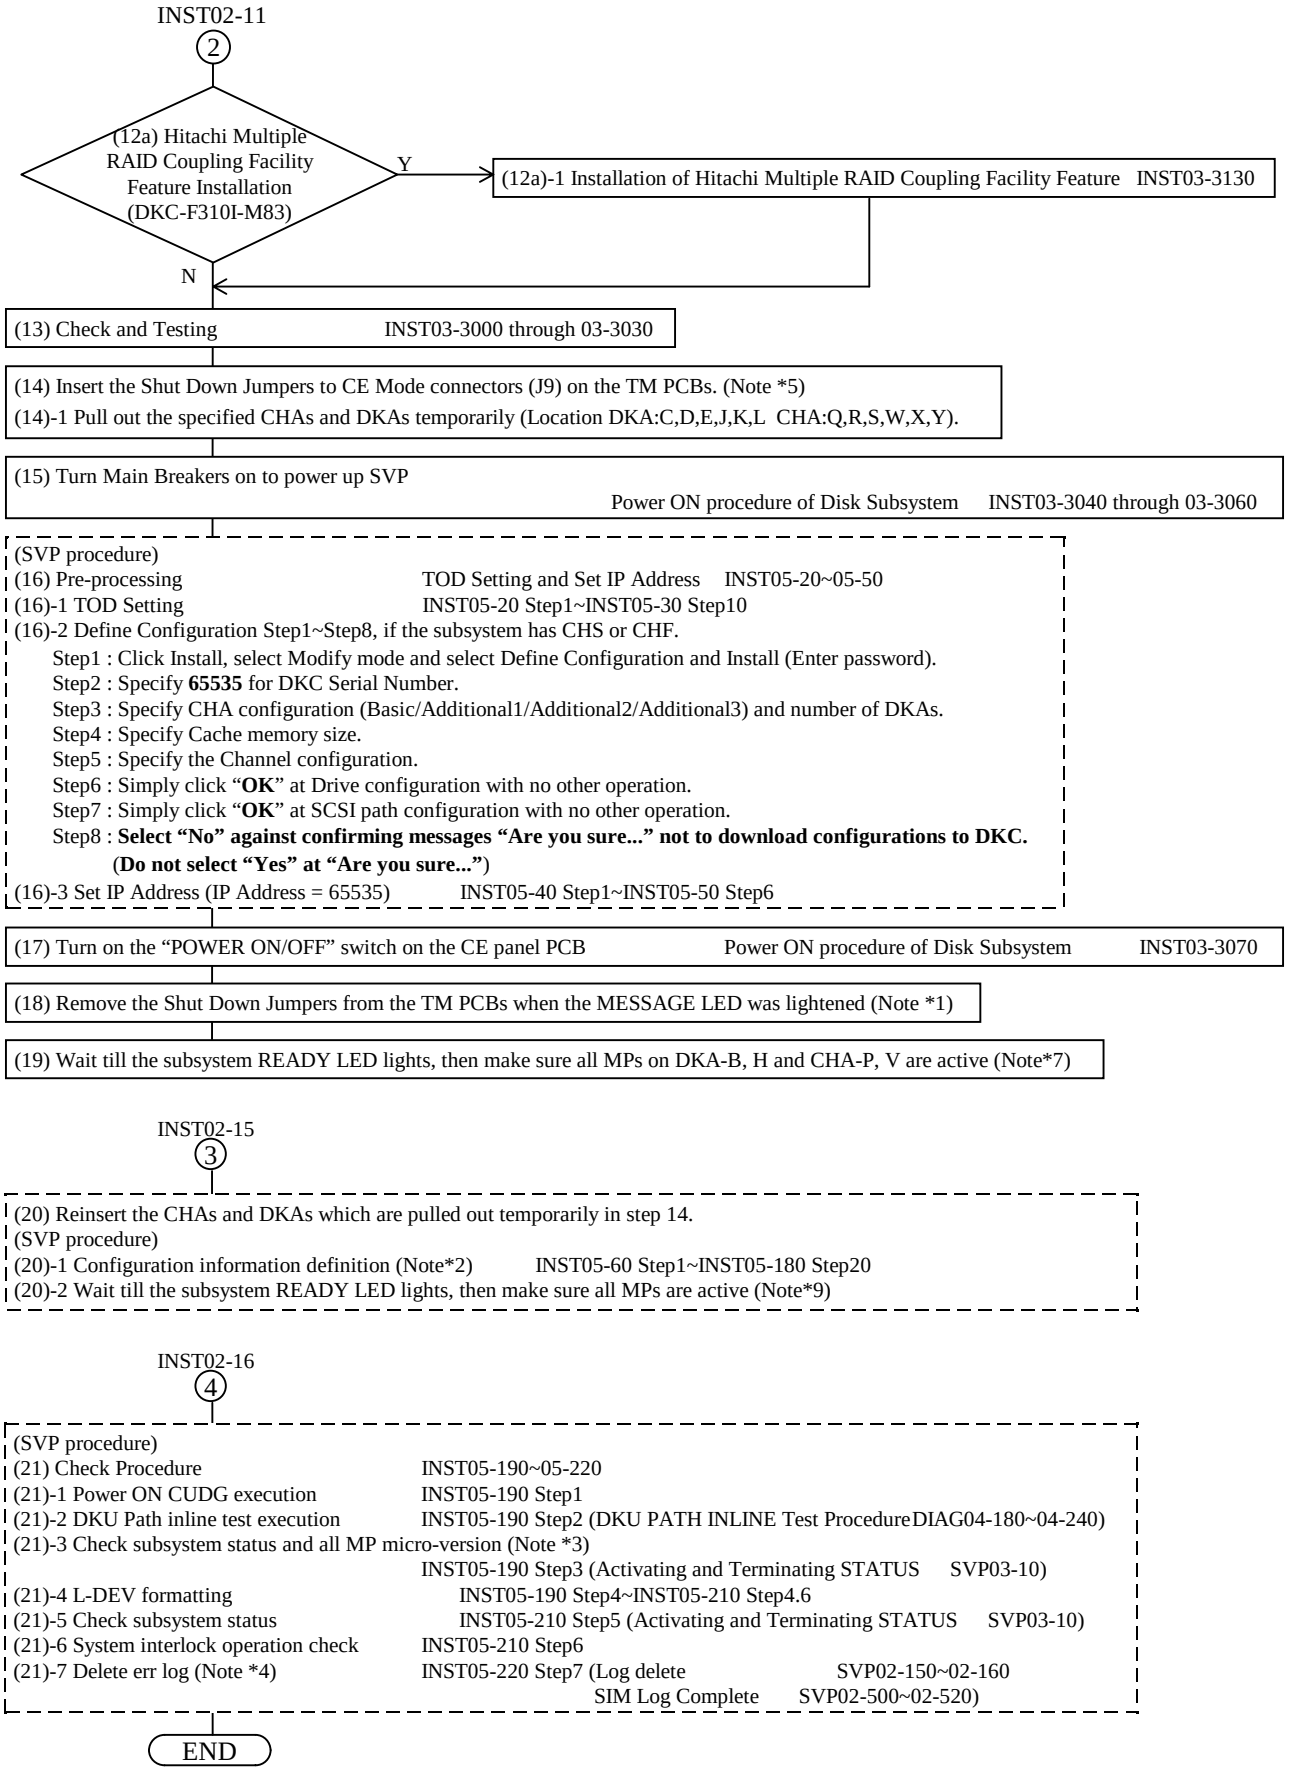
Copyright ©1997,2000, Hitachi, Ltd.



Copyright ©1997,1998, Hitachi, Ltd.

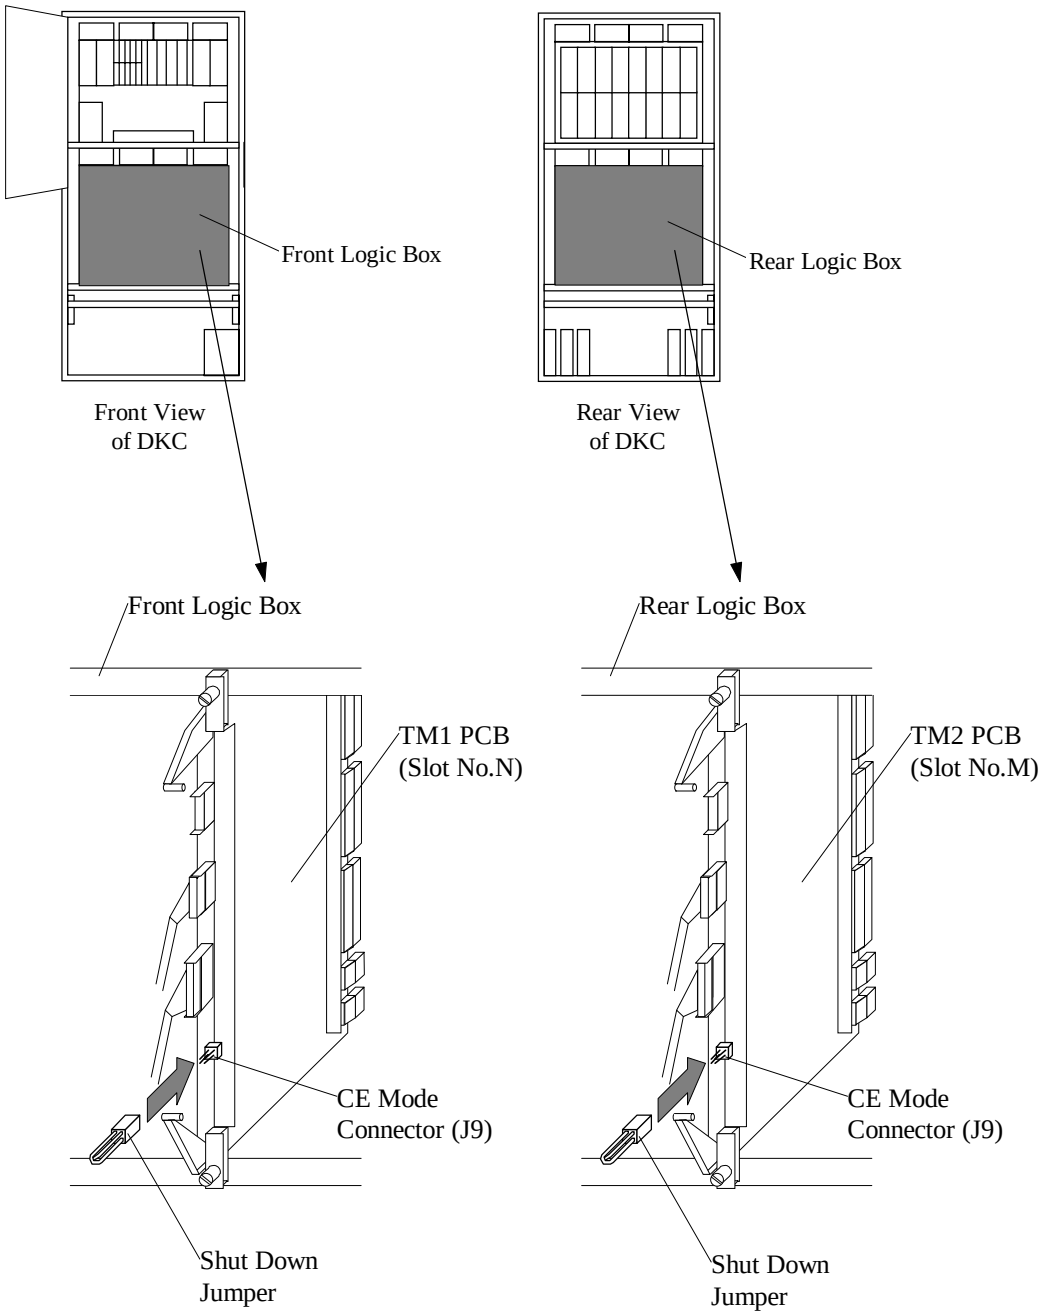
Note *1 : Pull out jumper plugs when the MESSAGE LED is lightened and while it's lighting. The MESSAGE LED is lightened for 3 minutes as soon as the Power on. The jumper plugs must not be set after it. If you forget or failed to pull out them while the MESSAGE LED is lighting, execute "Power Off Procedure". And then, re-execute from step (14).

Note *2 : At this time, specify the "DKC Serial Number" without fail. Refer to INST02-14 Note *6.

Note *3 : If the micro version is different from expected ones, execute the "Micro-Program Exchange". The procedure to exchange the Micro-Program, refer to MICRO-FC01-10~07-10.

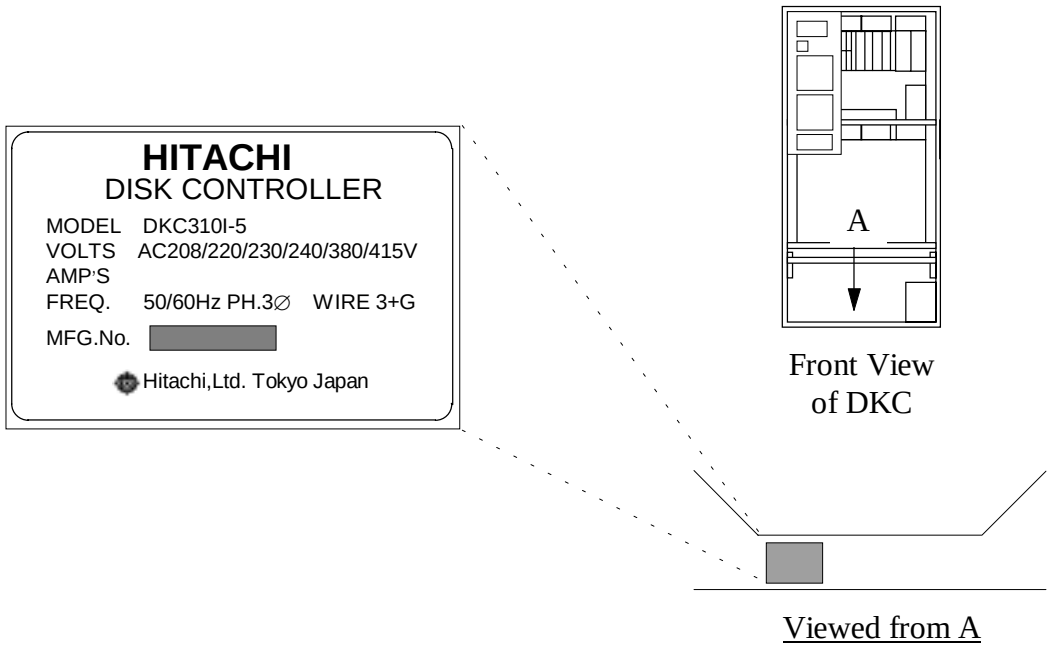
Note *4 : It's necessary to execute the procedure of "SIM Log Complete" before deleting SIM data.

Note *5



Copyright ©1997,1998, Hitachi, Ltd.

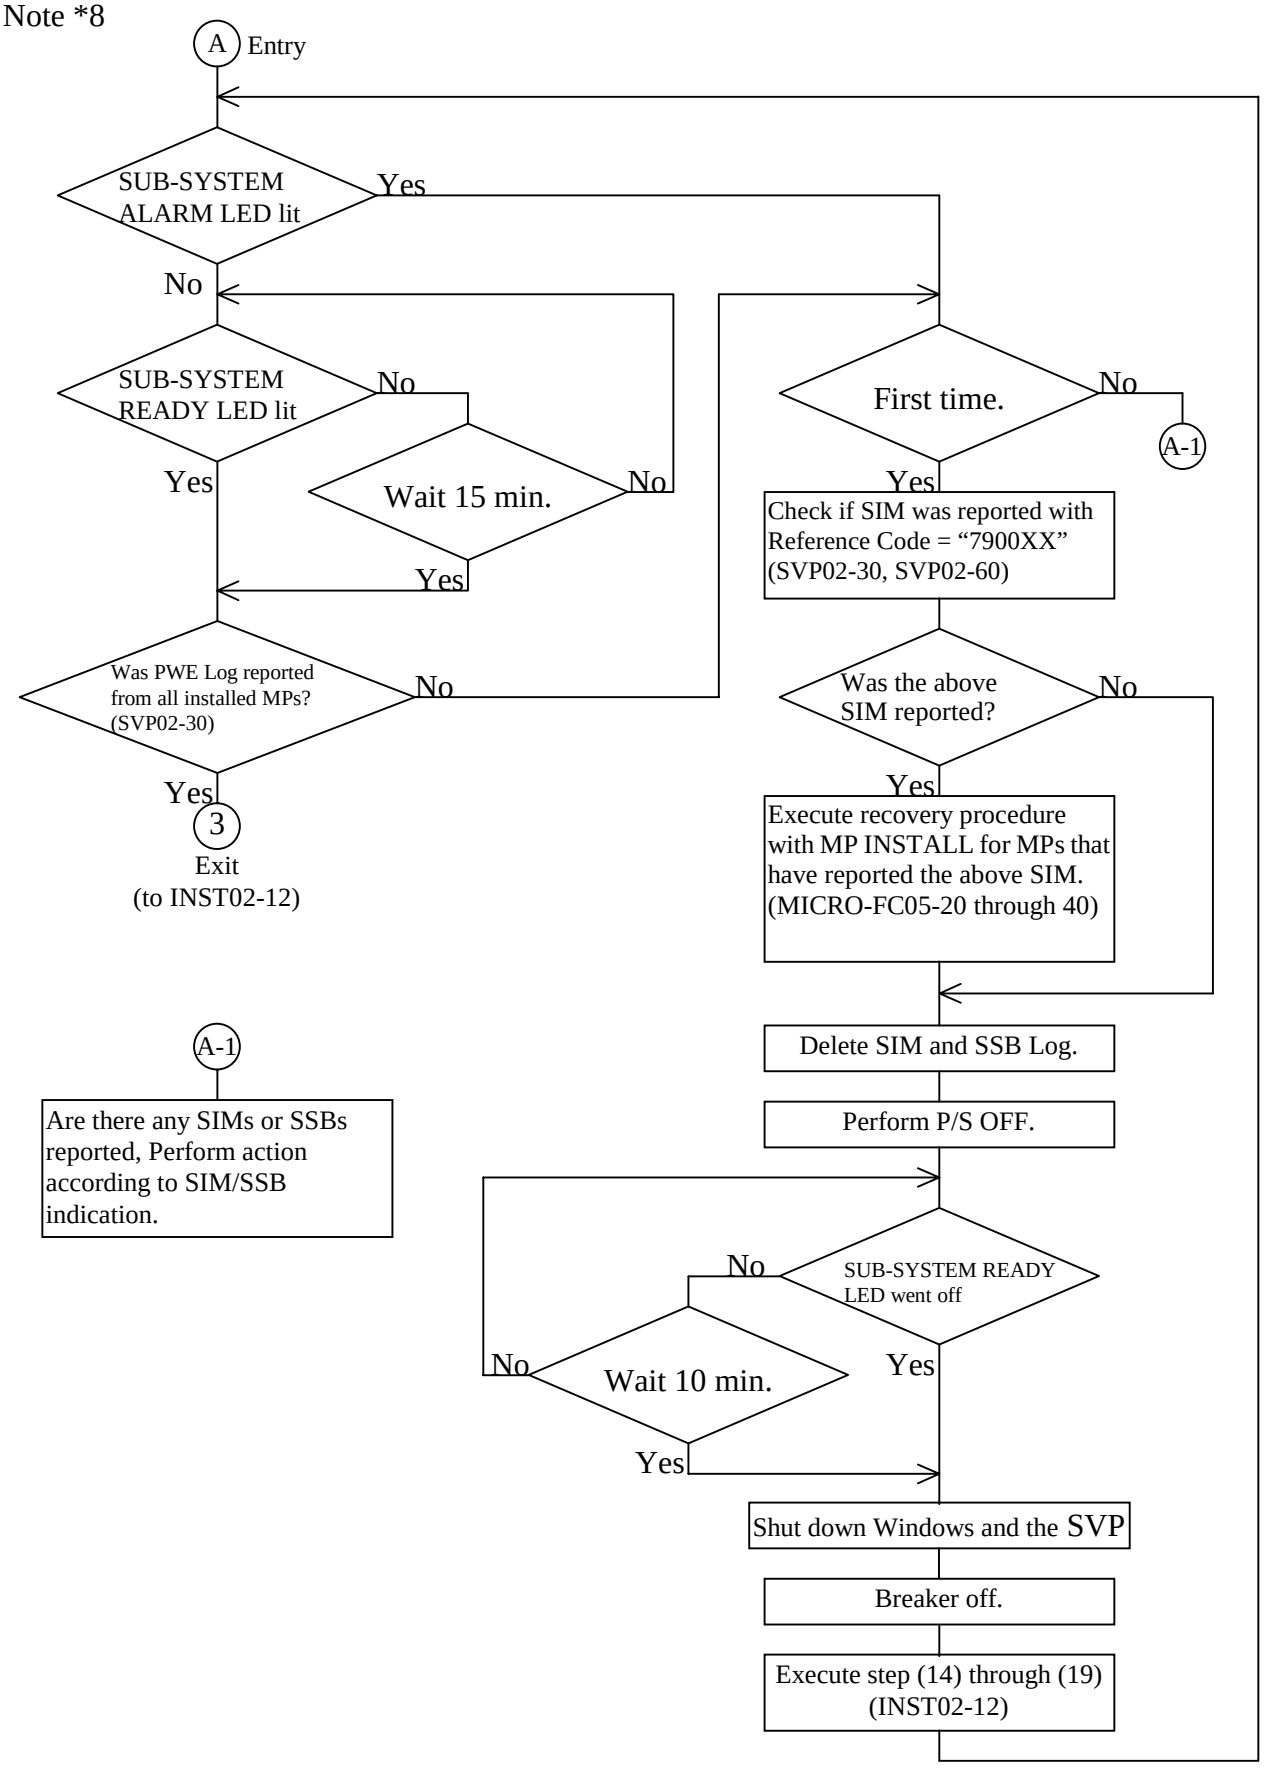
Note *6



Note *7 : Refer to Note *8 for the procedure. If Power Event Log (SYSTEM ON) was reported from all installed MPs, go to step (20) in the procedure. For MPs that did not report Power Event Log, execute the procedure shown in Note *8.

Copyright ©1997,1998, Hitachi, Ltd.

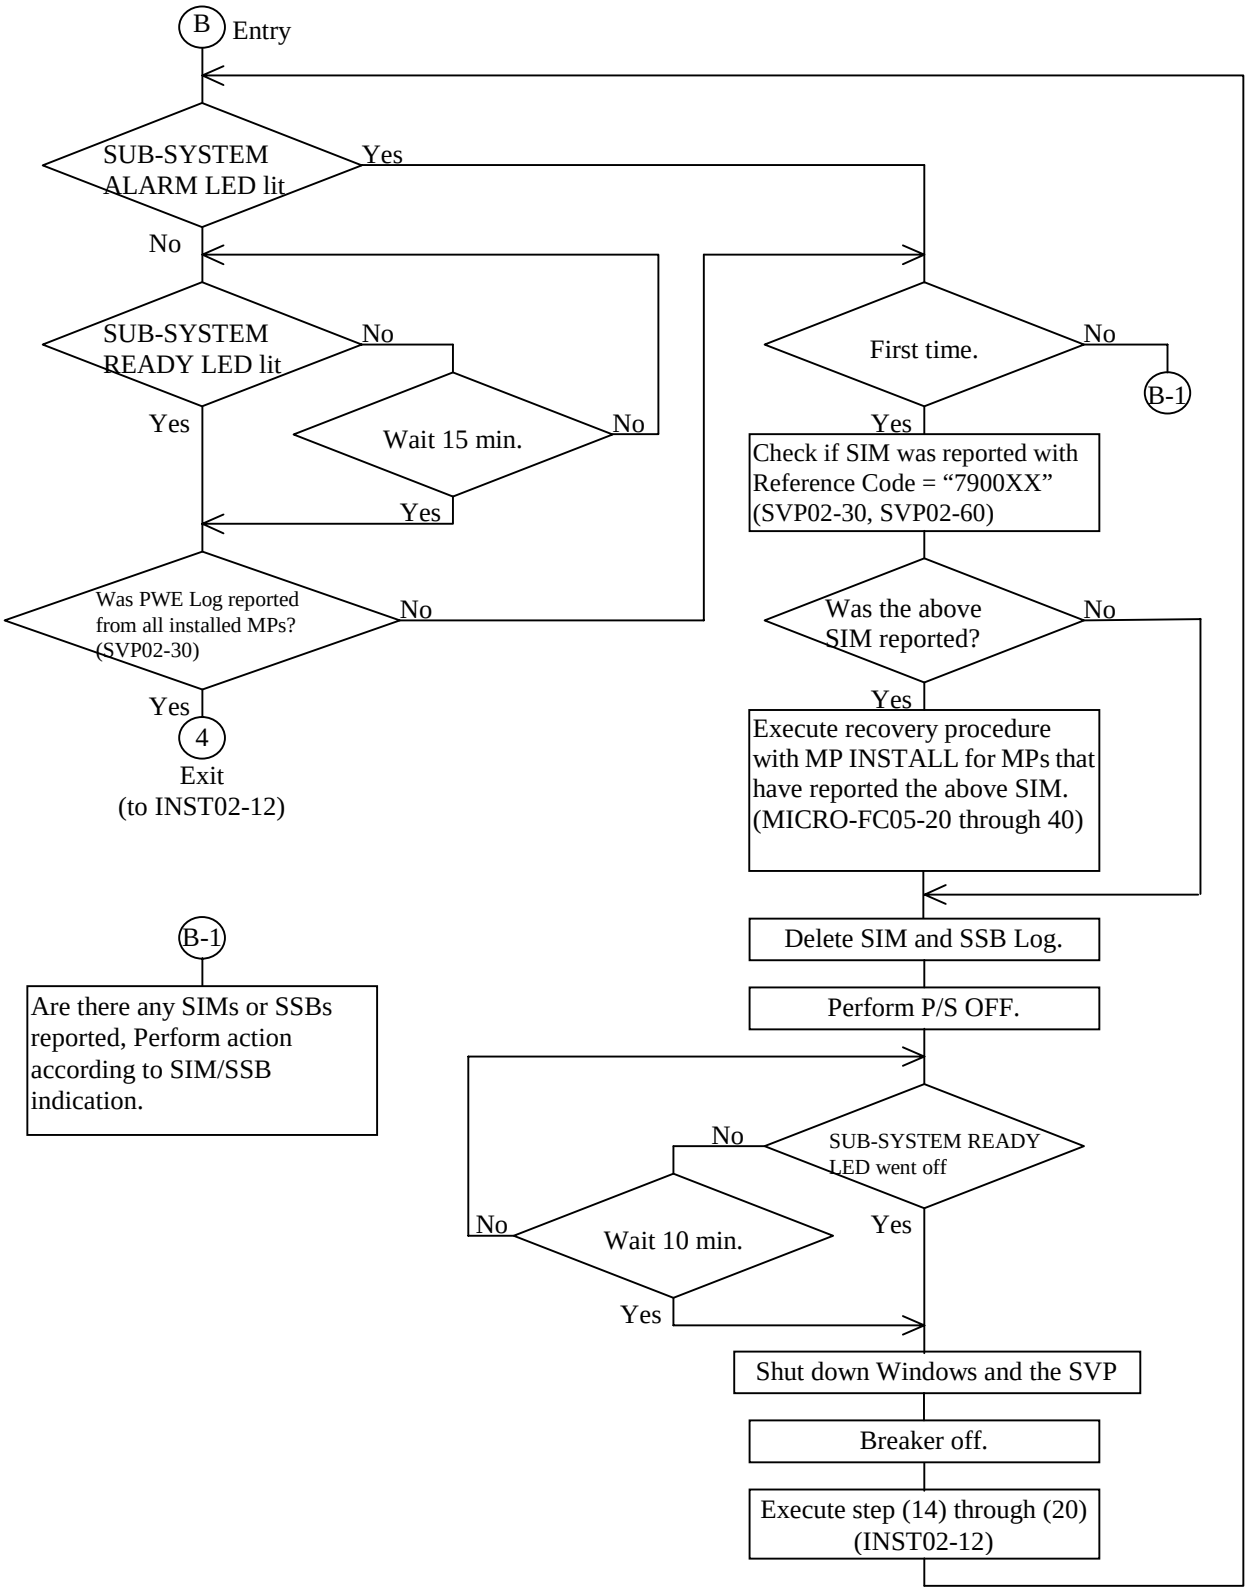
Note *8



Copyright ©1997,1998, Hitachi, Ltd.

Note *9 : Refer to Note *10 for the procedure. If Power Event Log (SYSTEM ON) was reported from all installed MPs, go to step (21) in the procedure. For MPs that did not report Power Event Log, execute the procedure shown in Note *10.

Note *10



Copyright ©1998, Hitachi, Ltd.

2.2 Non-Disruptive Installation Procedure General Flow

Install additional non-disruptive options according to the flow shown below. This work is completed by installing additional hardware for each option and performing SVP-controlled installation.
If a fault occurs during or after additional installation, see INST02-60 to locate a faulty unit and take action. If any other message than the list is displayed, see the SVP Message section.

Precautions on Non-Disruptive Installation

- "Non-Disruptive" means that the subsystem is connected to the host (OS). Non-Disruptive Installation shall be done with the subsystem power ON. However, the subsystem may be disconnected from the host (OS).
- Install additional Cache Memory and Shared Memory (DKC-F310I-20/32/128/256/1024) on one side first without affecting subsystem operation according to the SVP guidance.
- The CL Additional Power Supply (DKC-F310I-80) must be installed when installing three or more channel options.
  In such a case, be sure to add the channel option(s) after the CL Additional Power Supply is added.
- When the type of the CHAs is changed (e.g. from parallel to serial channel), de-install the old CHAs temporarily before installing new CHAs.
- When installing 2nd and 4th DKUs, it is necessary to block the target DKA from the SVP before connecting the SCSI cables.
- When adding a new HDD Box (DKU-F305I-B4) to the 1st or 3rd DKU or both, perform DKA upgrade procedure before proceeding with HDD upgrade procedure.
- When changing configuration definition of SCSI path, it is necessary to stop concerned SCSI channel path before proceeding with configuration definition change procedure.

2.3 Non-Disruptive De-installation Procedure General Flow

Remove additional non-disruptive options according to the flow shown below. This work is completed by removing hardware for each option and performing SVP-controlled removal.
When De-Installation has been all done, make sure that all the removed units are displayed as "empty" and that the other units are normal (See the STATUS Section).
If a fault occurs during or after removal, see INST02-70 to locate a faulty unit and take action. If any other message than the list is displayed, see the SVP Message section.

Precautions on Non-Disruptive De-Installation

- "Non-Disruptive" means that the subsystem is connected to the host (OS). Non-Disruptive De-Installation shall be done with the subsystem power ON. However, the subsystem may be disconnected from the host (OS).
- Remove additional Cache Memory and Shared Memory (DKC-F310I-20/32/128/256/1024) on one side first without affecting subsystem operation according to the SVP guidance.
- When de-installing HDU Box (DKU-F305I-B4) from the 2nd and 4th DKUs, it is necessary to maintenance-block the counterpart DKA from the SVP before disconnecting the SCSI cables.
- When removing HDU Box from 1st or 3rd DKU, remove HDD canisters first and then DKA.
- When de-installing HDU Box from the 1st or 3rd DKU or both, perform DKA de-installing procedure after proceeding with HDD de-installing procedure.
- When de-installing SCSI channel adapter, HDD assigned to SCSI volumes, or configuration definition of SCSI path, it is necessary to stop concerned SCSI channel path before proceeding with de-installing procedure.

2.4 Disruptive Installation Procedure General Flow

Install additional disruptive options according to the flow shown below.
If a fault occurs during or after additional installation, see INST02-60 to locate a faulty unit and take action. If any other message than the list is displayed, see the SVP Message section.

Precautions on Disruptive Installation

- "Disruptive" means that the subsystem is disconnected from the host (OS). Disruptive Installation shall be done with the subsystem power OFF. However, be sure to turn on the subsystem whenever installing additional Cache Memory and Shared Memory (DKC-F310I-20/32/128/256/1024) because configuration information must be updated simultaneously according to the SVP guidance.
- The CL Additional Power Supply (DKC-F310I-80) must be installed when installing three or more channel options.
  In such a case, be sure to add the channel option(s) after the CL Additional Power Supply is added.

2.5 Disruptive De-installation Procedure General Flow

Remove additional disruptive options according to the flow shown below.
When De-Installation has been all done, make sure that all the removed units are displayed as "empty" and that the other units are normal (See the STATUS Section).
If a fault occurs during or after removal, see INST02-70 to locate a faulty unit and take action. If any other message than the list is displayed, see the SVP Message section.

Precautions on Disruptive De-Installation

- "Disruptive" means that the subsystem is disconnected from the host (OS). Disruptive De-installation shall be done with the subsystem power OFF. However, be sure to turn on the subsystem whenever removing additional Cache Memory and Shared Memory (DKC-F310I-20/32/128/256/1024) because configuration information side must be updated simultaneously according to the SVP guidance.
- When de-installing SCSI channel adapter or HDD assigned to SCSI Volumes, it is necessary to stop concerned SCSI channel path before proceeding with de-installation procedure.

	De-installation	x	x	x	x	x	x
DKA	Installation	x	x	x	x	x	x
	De-installation	x	x	x	x	x	x

x: Maintenance is available.

*: When a maintenance operation is needed while CC/HXRC is using, I/O's for CC/HXRC pair volumes or CC/HXRC itself should be stopped before the maintenance operation.
If the maintenance operation must be done while CC/HXRC is using, you must confirm that the usage of Sidefile monitor less than 20% of total Cache capacity before you start the maintenance operation. Only when the usage of Sidefile monitor is less than 20% of total Cache capacity, you can proceed the maintenance operation.
Refer to "Monitoring" in the SVP SECTION about sidefile monitor.
Select the [Information] icon in the 'SVP' window.
Next select the [Monitor] menu in the 'Information' window and select [start...].
Next select the 'Sidefile' box in the 'Item' menu in the 'Monitoring' window and select [OK].

Availability of the System tuning when HXRC is used.

When the following System tuning operation is needed while CC/HXRC is using, CC/HXRC should be stopped before the System tuning operation.

- It is impossible to change the DKC No, SSID, or DKC Emulation type by System tuning operation while CC/HXRC is using.
- When the DRV emulation type of CC/HXRC pair volumes are 3390-3 or 3390-3R, it is impossible to change the emulation type between 3390-3 and 3390-3R by CHANGE EMULATION operation while CC/HXRC is using.

2.10 New Installation procedures without the pre-installation at a customer site

2.10.1 Application

These procedures are applied to a new installation without the pre-installation at a customer site or the pre-installation at the warehouse as shown below.

- Installing the appropriate micro programs according to the various types of the packages.
- Installing the configuration information appropriating for the customer.

If these procedures are used in other cases, their processes are not assured.

2.10.2 Conditions to use these procedures

These procedures can be used in the following conditions.

① The installation of the Hardware parts (for example, the connections of cables, power supplies and so on) have been finished.
② The PC (SVP) can be used.

For the Hardware installation, refer to “2.1 New Installation Procedure General Flow” (INST 02-10~02-12 (13)) of Maintenance Manual.

2.10.3 Procedures

(1) Summary

The procedures are divided roughly into 4 processes.

① Pre-processing ((1)-(11) in the following flow)
② Using 4 Packages (2 CHAs (or 2 CHSs/CHFs/CHTs) and 2 DKAs) at the basic locations (1P and 2V for CHA, 1B and 2H for DKA), the define configuration and installation of their packages is defined. ((12)-(32) in the following flow)
③ Installing more than 4 Packages, the additional installation of their packages is executed. ((33)-(42) in the following flow)
④ others ((43)-(61) in the following flow)

(2) Processing Flow

The processing flow of the new installation is as follows.

Copyright ©1999, Hitachi, Ltd.

START

(1)-1 Confirm to be in the breaker off (DKU). (Turn off the breaker if it is “on”). [INST03-3110]
(1)-2 Make sure that the size of the Cache and SM SIMM equipped with the DKC and memorize them. They must be specified in step (31).

(2) Insert the Shut Down Jumpers to CE Mode connectors (J9) on the TM PCBs. (Note *1)

(3) Pull out the SSVP to disconnect from the SVP. (Note *2)

(4) Breaker on (DKU and DKC)
(Execute Power ON procedures except the “POWER ON/OFF” switch on the CE panel PCB)
(Power ON procedures of Disk Subsystem:[INST03-3040 – INST03-3050])

(SVP procedure)
(5) TOD setting
(In this time, “Communication Error” may occurred. But it should be neglected.)
[INST05-20 – INST05-40]

(SVP procedure)
(6) Execute “setcopy.bat” to install micro-programs into the HD 0f SVP.
[Install FD to SVP] [REP04-660 2.(1), (2) and 3.]
step1: Prepare Fds (Note *3).
step2: Shut down Windows.
step3: Restart the computer in MS-DOS mode.
step4: Set No.1 FD into FDD of SVP PC.
step5: Enter the following command in the DOS mode.
a:\setcopy.bat (return)
step6: Set FDs according to the SVP guidance to install their FDs into the SVP HD.
step7: Reboot PC (Press the following keys at the same time:[Ctrl],[Alt],[Delete]).
[Initialize SVP icon]
step8: Set the No.1 FD into FDD of SVP.
step9: Click [Start] and select [Run].
step10: Enter below
a: \setup.exe (return)
The ‘SVP’ and the ‘Startup’ groups are made.
step11: Remove the No.1 FD from FDD.

Copyright ©1999, Hitachi, Ltd.

(SVP procedure) -- (Define Configuration for the SVP)

(7) Execute the "Define Configuration and Install" without installing into the DKC.
In this definition, define the configuration information for the basic configuration only even if it's needed to install the packages more than 4 (that is, more than 2 CHAs and 2 DKAs). (Note *4) [INST05-60 – INST05-170 14.(1)]

step1: Change the mode to "Initial Setting", select "Install" and select "Define Configuration and Install". (Note *5, Note *6)

step2: Specify 65535 for "DKC Serial Number" in the DKC configuration screen.

step3: Select Basic for "CHA", and specify 2 for "Number of DKA" in the DKC configuration screen.

step4: Specify Cache memory size (as installed at step (1)-2 of this procedure).

step5: Specify the Channel configuration corresponding to the current packages setting in the basic location. (Note *7)

step6: Simply click "Next" at Drive configuration with no other operation.

step7: Simply click "OK" at SCSI path configuration with no other operation. (Note *8, Note *9)

step8: Simply click "OK" at Lun Security configuration with no other operation. (Note *8, Note *9)

step9: Reply "NO" to the message "Are you sure you want to install the defined config…?". For, the SVP need this configuration information, the DKC need not it. (Never reply "YES" to the message "Are you sure ...?")

(8) Set IP Address (IP Address=65535) [INST05-40 – INST05-50]

(9) Shut down the SVP.

(10) Turn off the breaker (DKC).

(11) Set the SSVP to connect to the SVP. (reverse action as step (3) of this procedure)

(12) Set the packages according to the definition information in (7), that is, CHAs (or CHS/CHF/CHT) to 1P and 2V, and DKAs to 1B and 2H. [LOCATION02-20 – LOCATION02-30]

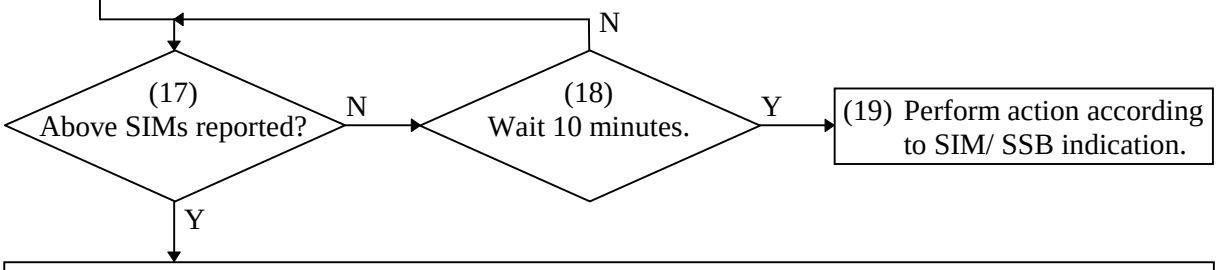
(13) Confirm that the Shut Down Jumpers to CE mode connectors (J9) on the TM PCBs is set. (Note *1)

Copyright ©1999, Hitachi, Ltd.

(14) Turn on the breaker(DKC) and the "POWER ON/OFF" switch on the CE panel PCB.
And then, execute quickly the step (15).
(Power ON procedure of Disk Subsystem:[INST03-3050 , INST03-3070])

(15) Pull out the Shut Down Jumpers from the TM PCBs when the MESSAGE LED is lit after the step (14) was done. Also, after pulling out the Shut Down Jumpers from the TM PCBs, then insert the Shut Down Jumpers to CE Mode connectors(J9) on the TM PCBs again within 10~20 seconds after pulling out the Shut Down Jumpers. The MESSAGE LED is lit for about 3 minutes. (Note *10)
If you have failed this processes, for example, you were too late to pull out the Shut Down jumpers, try again the step (13) – (15) after Turn off the "POWER ON/OFF" switch on the CE Panel PCB.

(16) Wait until SIMs with Reference Code = "7900XX/7901XX" are reported for all installed Mps.
(Check SVP Information SIM LOG.)



(20) Execute MP INSTALL with the minimum configuration for all MPs of the basic configuration.
[MICRO-FC05-20 – MICRO-FC50-40] (Note *11, Note*12)

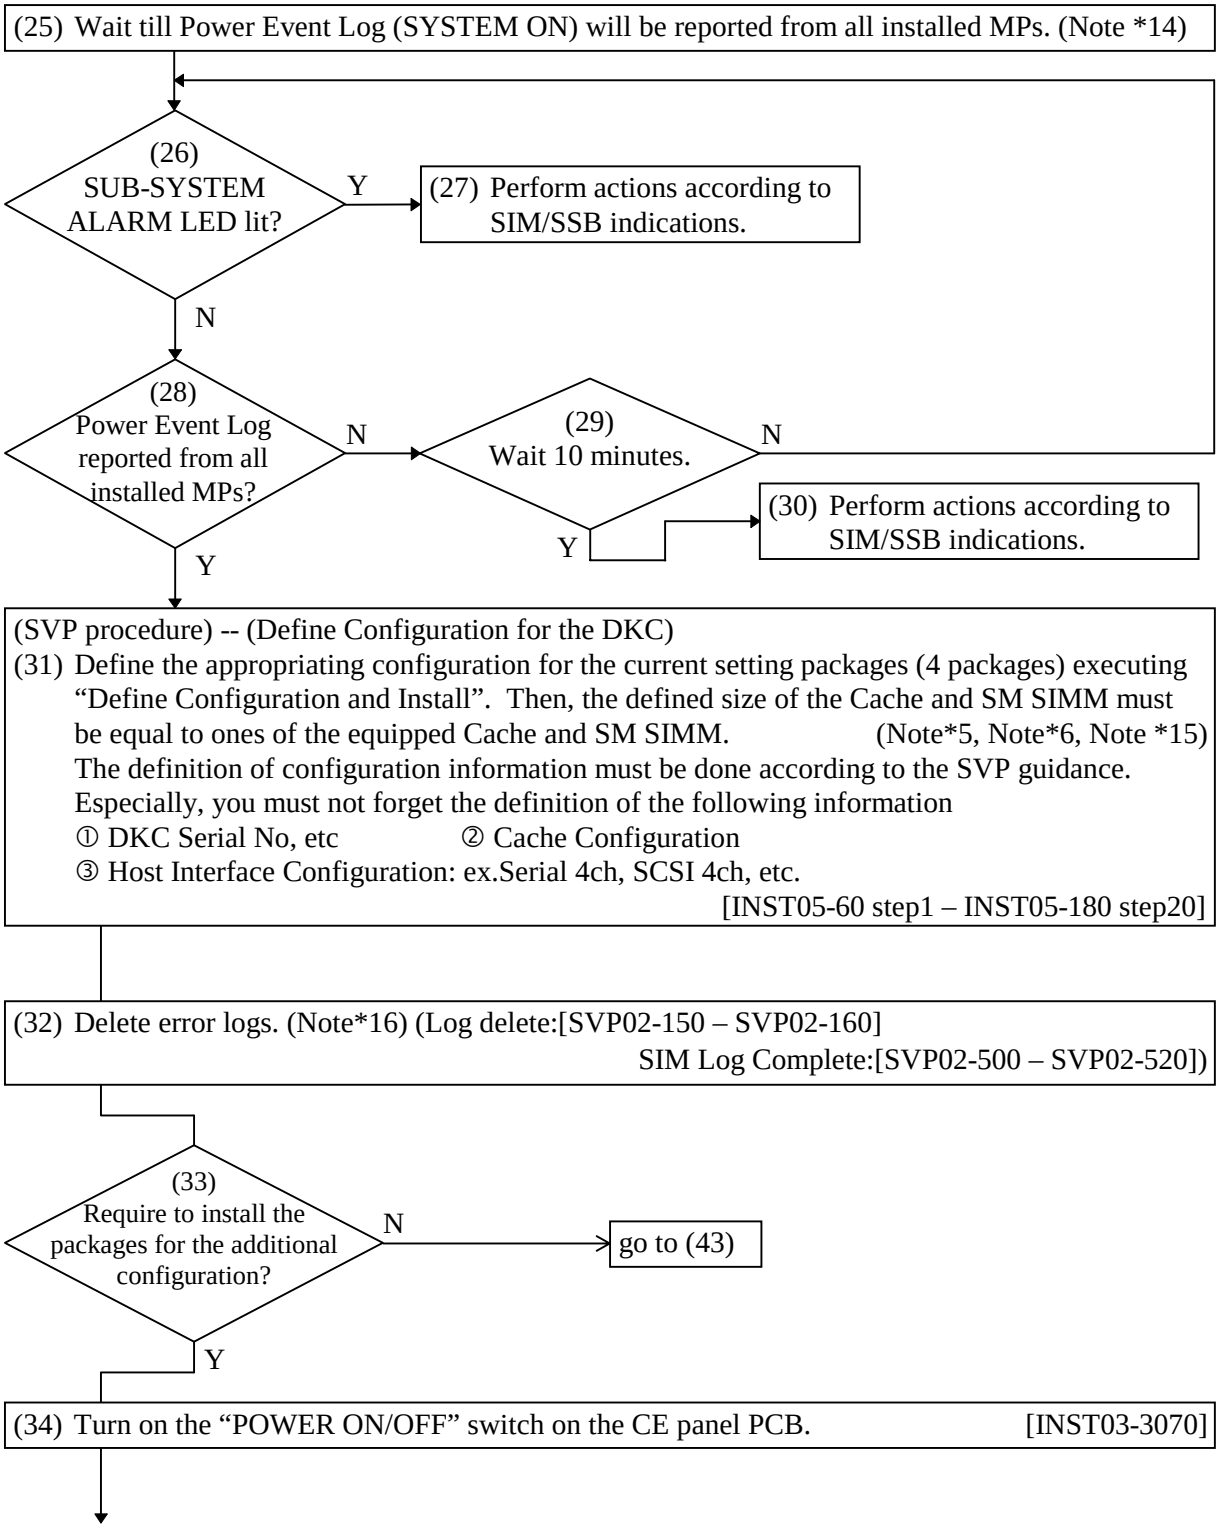
(21) Turn off the "POWER ON/OFF" switch on the CE Panel PCB. [INST03-3070]

(22) Pull out the Shut Down Jumpers from the TM PCBs. (Note *1)

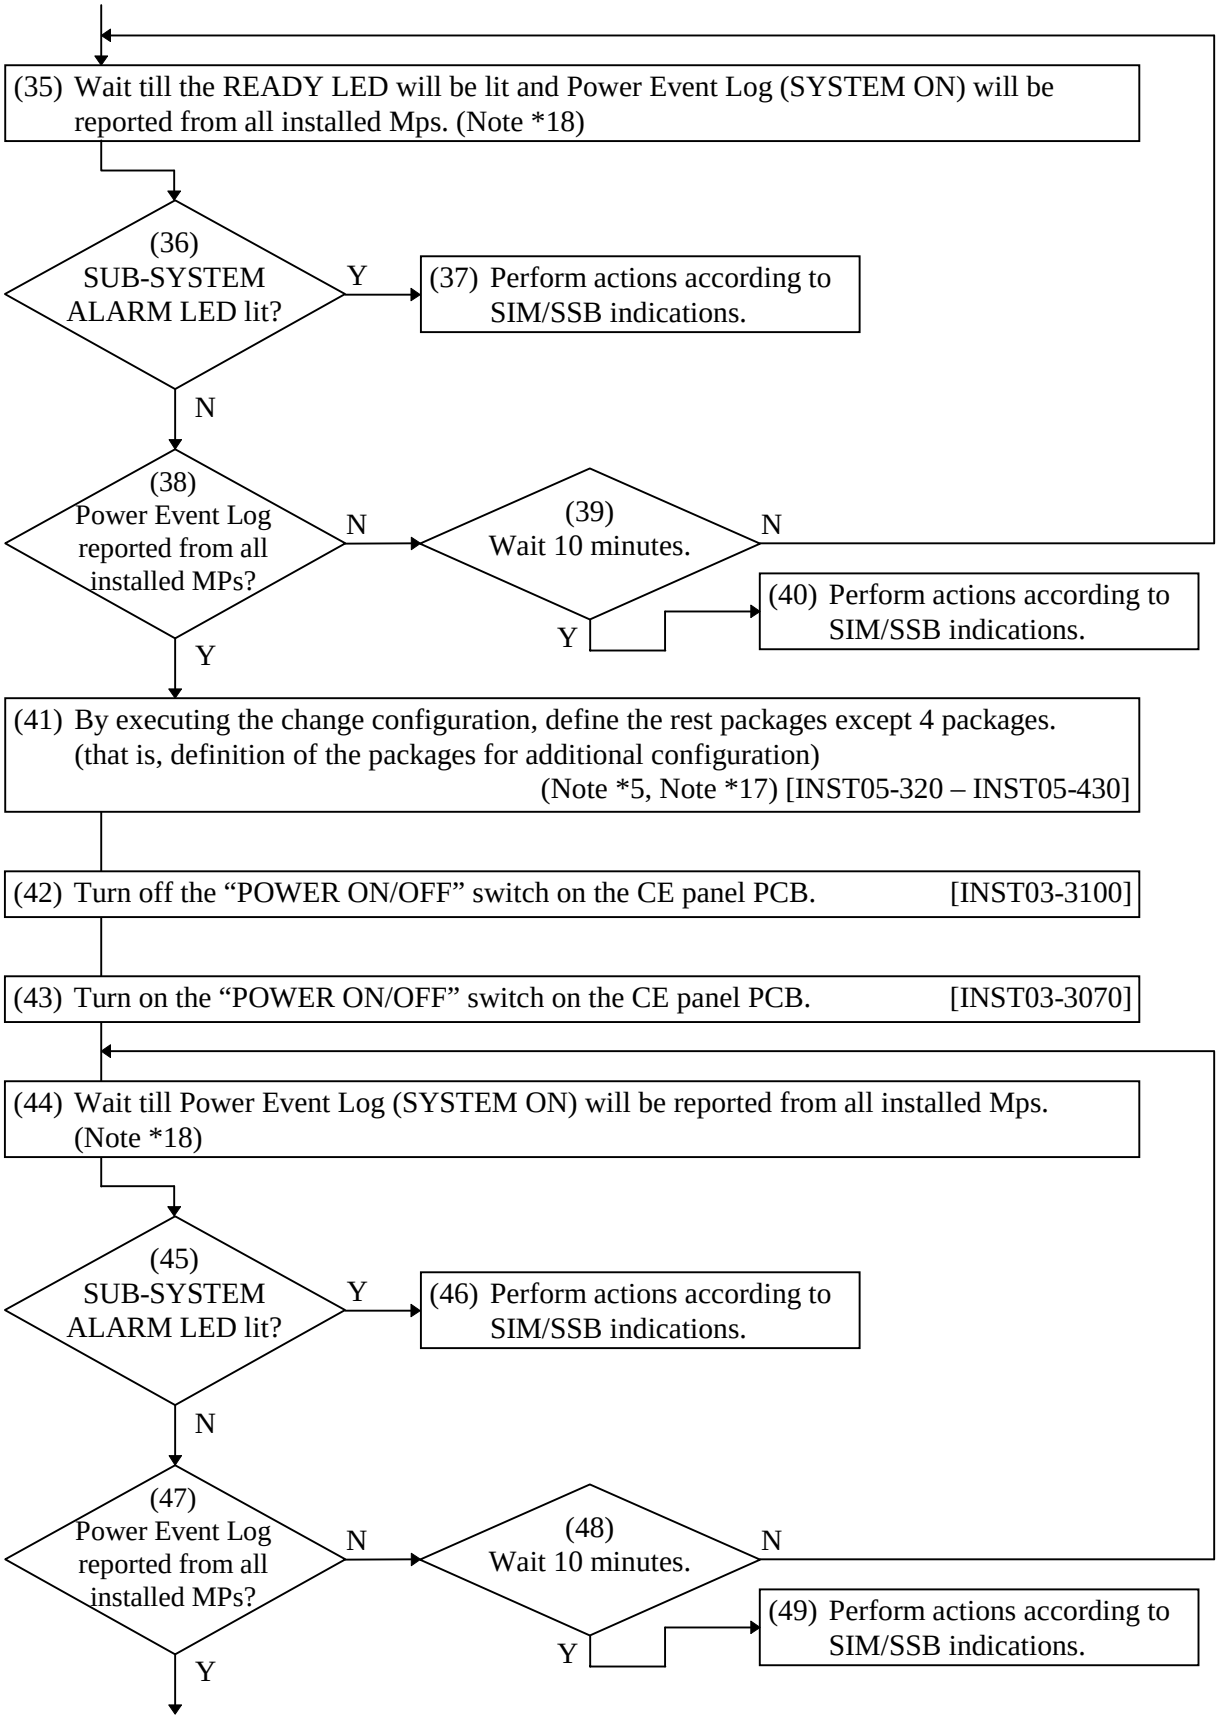
(23) Pull out the jumper connectors in the BATT CTR PCBs to make the SM volatilize, and wait for 1 minute. And set them again. [LOCATION06-60] (Note *13)

(24) Turn on the "POWER ON/OFF" switch on the CE panel PCB.
(Power ON procedure of Disk Subsystem: [INST03-3070])

Copyright ©1999, Hitachi, Ltd.



Copyright ©1999, Hitachi, Ltd.



Copyright ©1999, Hitachi, Ltd.

(50) Confirm that the status come to be the appropriating configuration for the customer which was defined in (31). (Note *19) [SVP03-10 – SVP03-90, SVP03-130 – SVP03-170]

(51) Turn off the “POWER ON/OFF” switch on the CE panel PCB. [INST03-3100]

(SVP procedure)
(52) Turn on the “POWER ON/OFF” switch on the CE panel PCB. [INST03-3070]
(53) DKU Path inline test execution [INST05-190 step2.]
(DKU PATH INLINE Test Procedure :[DIAG04-180 – DIAG04-240])
(54) Check subsystem status and all MP micro-versions (Note *19)
[INST05-190 step3 (Activating and Terminating STATUS :
[SVP03-10 – SVP03-90, SVP03-130 – SVP03-170])
(55) LDEV formatting [INST05-200 – INST05-210 step4.5]
READY LED will be lit after LDEV formatting for CHS, CHF and/or CHT only configuration.
(56) Check subsystem status.
[INST05-210 step5(Activating and Terminating STATUS: SVP03-10 – SVP03-90])

(57) Was the CHT defined at (31) or (41)?

N

Y

(58) Execute the Micro-program Exchange Procedure (Off-line) to install FOP into the CHAs. (Note *20, *21) [MICRO-FC03-10 – MICRO-FC03-130]

(SVP procedure)
(59) Check subsystem status and all MP micro-versions
[INST05-190 step3(Activating and Terminating STATUS:
[SVP03-10 – SVP03-90, SVP03-130 – SVP03-170])

(60) Execute the “Online Micro program Exchange” for the DKU
[MICRO-FC04-10 – MICRO-FC04-60]

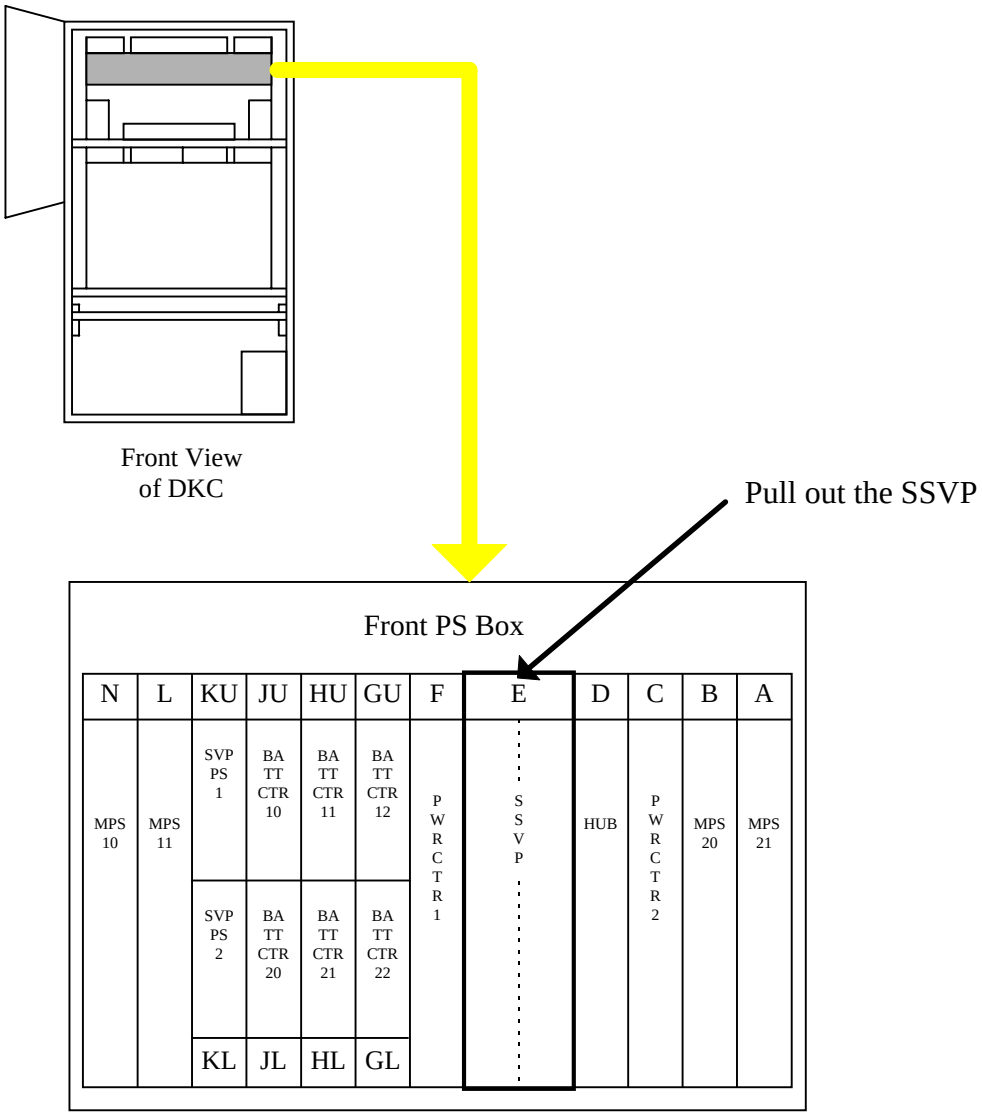
(SVP procedure)
(61) Delete error logs. (Note *16)
[INST05-220 step7(Log delete SVP02-150 – SVP02-160
SIM Log Complete SVP02-500 – SVP02-520])

END

Copyright ©1999, Hitachi, Ltd.

Note *1: Refer to “INST02-13 Note*5” about the Shut Down Jumpers.

Note *2: Before (3) is executed, the SVP must be powered off.



Note *3: The FDs include the micro-programs installed into the DKC subsystem.

Note *4: The basic configuration means the configuration with 2 CHAs (or CHSs/CHFs/CHTs) and 2 DKAs. And their PCB locations must be as follows.
1P and 2V for CHA. 1B and 2H for DKA.

Note *5: To change the mode to “Initial Setting”, press the following keys at the same time on the SVP window. :[CTRL], [SHIFT], [I]
And reply the password. (*22)

Copyright ©1999, Hitachi, Ltd.

Note *6: Reply the password required to execute the Define Configuration. (*22)

Note *7: For example, if the CHS packages are set, specify SCSI 4ch and if the CHA 4ch packages are set, specify Serial 4ch. If the right package type (Host interface configuration) for the setting packages is not specified, the different micro programs form setting packages are output. So, the unexpected errors are caused in new installation procedures.

Note *8: If the Serial 4/2ch or Parallel 4ch is specified at the step5, the step7 and 8 is not required. Also, if the SCSI 4ch is specified, the step8 is not required.

Note *9: In the step (7), the DKC is not operated yet, that is, the POWER ON/OFF switch on the CE panel PCB is still off. So, the following messages may be output.
[SVP2019W] Time out error has occurred [err Code=8001]…at step7
[INS0469E] Communication error has occurred.…at step8
But they should be neglected. (You neglect them and can progress the processing.)

Copyright ©1999, Hitachi, Ltd.

Note *10: Notice of the jumper operation

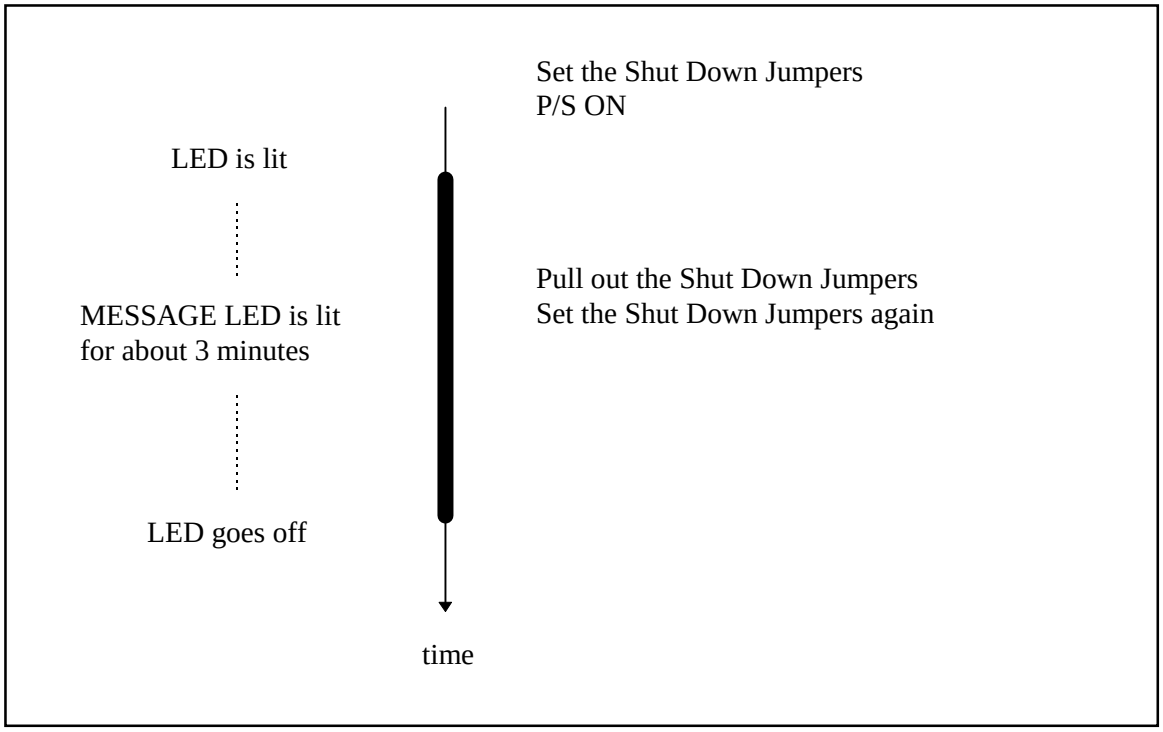
MESSAGE LED is lit after turning on P/S ON switch and the LED is lighting for about 3 minutes.

(1) Turn on P/S ON switch.

(2) Pull out the Shut Down Jumpers from the TM PCBs soon after MESSAGE LED is lit. The LED is lighting for about 3 minutes.
Please pull out the Shut Down Jumpers within 10~20 seconds after the LED began to be lighted.

(3) Insert the Shut Down Jumpers to CE Mode connectors (J9) on the TM PCBs again soon after pulling out them.
Please insert the Shut Down Jumpers again within 10~20 seconds after pulling out them.

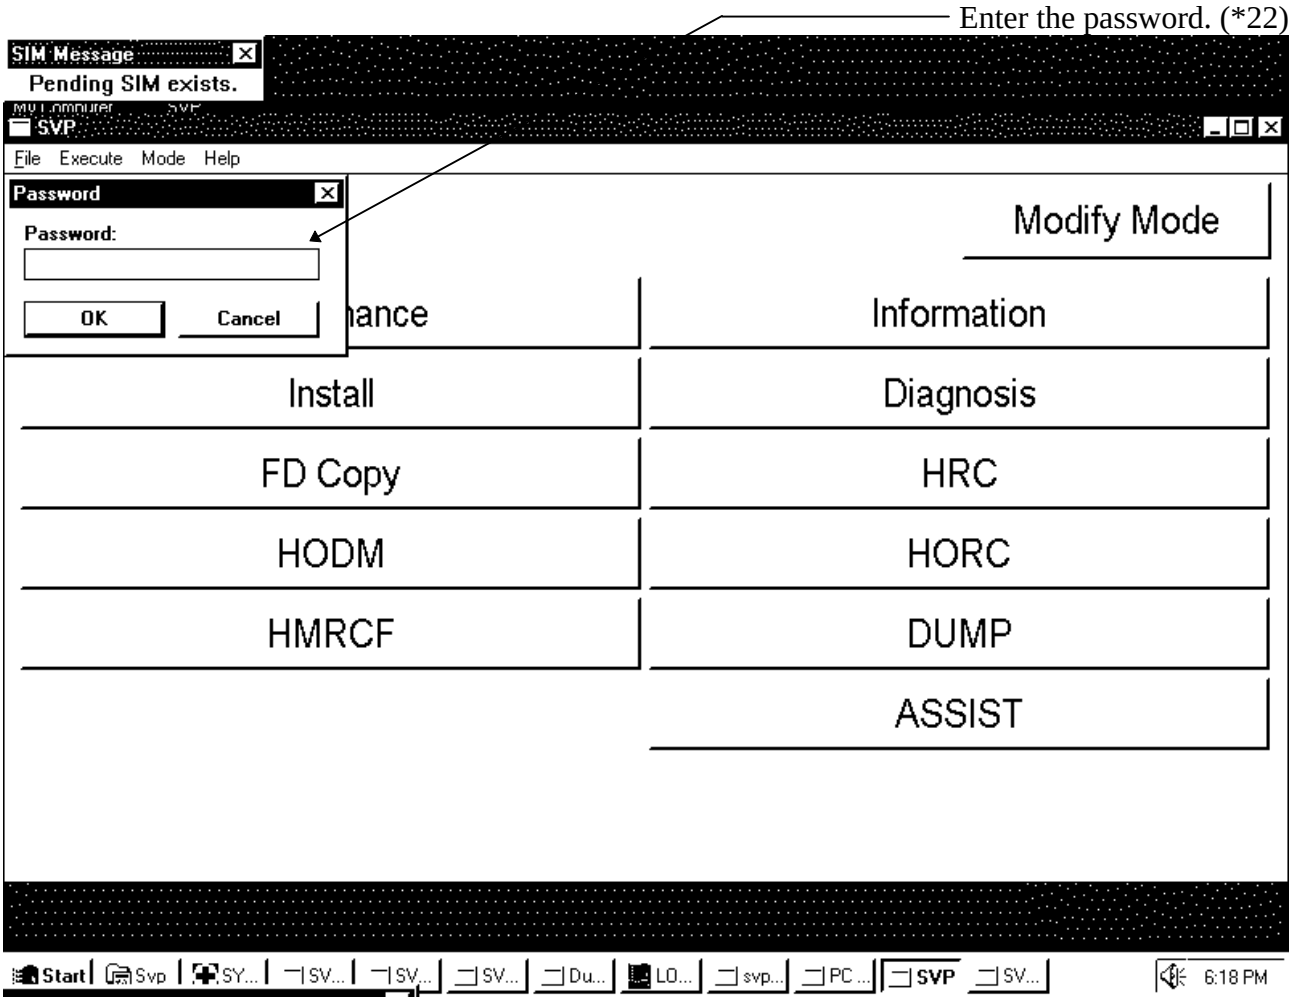
Operation (2) and (3) must be executed during the Message LED is lighing.



Copyright ©1999, Hitachi, Ltd.

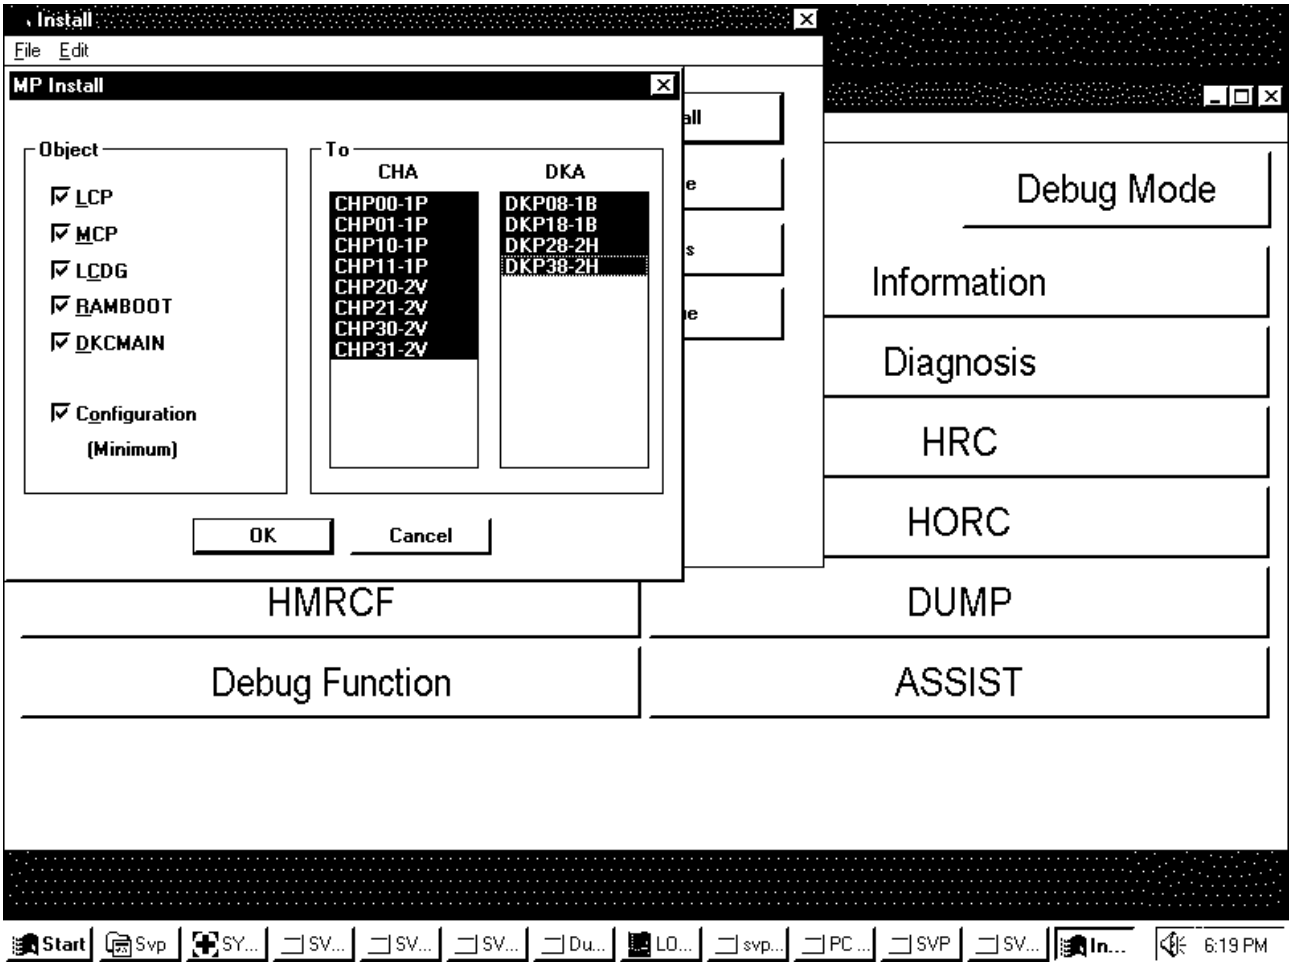
Note *11: The procedure of the MP Install with the minimum configuration is as follows.

(1) Return to the SVP window.
(2) Press the some keys at the same time. (*22)
(3) Enter the password.
This password must be used only for this procedure. Don't use for other purposes without approval by the technical support center or the factory.



(4) Select "INSTALL".
(5) <INSTALL window>
Select "Micro Program Install".
(6) <Menu Dialog window>
Select "MP Install"
(7) <MP Install window>
(a) Select all objects and all CHAs and DKAs displayed in the screen.
(LCP/MCP/LCDG/RAMBOOT/DKCMAIN/Configuration(Minimum))
(b) Select "OK".

Copyright ©1999, Hitachi, Ltd.



Note *12: The minimum configuration is the temporary and is used forcibly to unify the configuration of the DKC when it is unknown.
The following information is defined in the minimum configuration.
① Basic DKC Configuration
IP Address=65535
Serial 4ch for Host interface configuration of CL-1(CHA-1P)
Serial 2ch for Host interface configuration of CL-2(CHA-2V)
2 as the number of DKA
② Others
The LDEV information is not defined at all.
And so on.

Note *13: The following SIM Logs are output by pulling out the jumper connectors in the BATT CTR PCBs.
SIM Logs: bf5010, bf5210, bf5020, bf5220
But you can neglect them.

Copyright ©1999, Hitachi, Ltd.

Note *14: In this time, the standing-up by the Power on is performed, using the minimum configuration. So, the READY LED is not lit and the SIM Log (3073XX) may be output if the other packages than the CHA and the DKA as the minimum configuration are set. Also, 399042 and 399043 SIM Log may be output. But they should be neglected.

Note *15: The current setting packages should be 4 packages and their locations should be 1P and 2V for CHA (or CHS/CHF/CHT), 1B and 2H for DKA.
And at (20), the minimum configuration is installed and it is a temporary configuration. Therefore the right configuration must be defined for them (current setting 4 packages) at (31).
Also, at (31), specify the actual DKC Serial Number.
And, the defined value for the size of the Cache and SM SIMM should be equal to the value that was confirmed at (1). After the P/S OFF of the DKC and the reboot of the SVP according to the execution of "Define Configuration and Install" in (31) was finished, the Serial Number of the DKC and SVP should be same.

Note *16: It's necessary to execute the procedure of "SIM Log Complete" before deleting SIM data.

Note *17: In (41), "Change Configuration", that is, the procedures of the additional installation of the packages that were not defined in (31) are needed.
If the addition of CHAs (or CHS/CHF/CHT) and DKAs are needed, the following procedures must be executed.

(a) Changing of "number of Channel" for CHAs (or CHS/CHF/CHT).
(b) Changing of "DKA+ECC group+LDEV" for DKAs.

Note *18: In the case of CHTs, those channel lamps may be not lit. But, it should be neglected.

Note *19: In the CHTs, the installation of the micro-program of FOP are not executed yet. So, it's micro-program version (or revision) is not same one that you will expect. But it should be neglected.

Note *20: When this Micro-program Exchange (Off-line) is executed, the password is required. Reply to it. (*22)

Note *21: It need to install FOP.
At (6), the micro-programs are installed into the HD of SVP. So, select 'Offline FC' for 'HOW', and 'Hard disk' for 'From' in the 'Setup Microprogram' dialog box. And in the 'Microprogram Exchange' dialog box, select 'FOP'.
('DKCMAIN' must be already selected. Select nothing except 'DKCMAIN' and 'FOP'.)

Note *22: For the passwords or the keys, ask the technical support center. And use them with it's approval.

3.2 UNPACKING AND INSPECTION

Receiving and Inspection

Before unpacking the unit, check the physical condition of the packed unit.

1. Prior to unpacking, check the container for visible damage or any indication of excessive shock, tilt or anything else abnormal during transportation and handling.

2. Obtain and check shipping manifest for missing units.

3. If anything abnormal is found, appropriate action should be taken before starting an installation.

Unpacking Procedure

NOTICE:
- Be very careful when handling the equipment.
- Do not drop the equipment from a height more than 5 mm (0.2in.) high.
- Floor unevenness must be less than 10 mm (0.4in.). Move slowly and lift the four screw jacks at the bottom of each frame to the highest position to prevent contact with the ramp.

3.2.1.2 Disk Unit (DKU305I)

1. The container overview is shown in Fig. 3.2.1.2-1.
2. Cut the polyester bands.
3. Remove the nails and washers on the lower part of the crate.
4. The container breakdown is shown in Fig. 3.2.1.2-2
5. Unfasten P-JOINT Fasteners.
6. Remove the cap by lifting.
7. Remove the sleeves.
8. Cut polypropylene tapes.
9. Remove the corner protectors.
10. Break the seal of polyethylene bag and open it.
11. Take the unit down from the FLOATER by lifting the unit with forklift a minimum amount needed to remove FLOATER/DECK/SKID assembly.
12. Gently lower the equipment onto floor.
13. Remove adhesive tape and cushions from the unit.
14. Visually check the unit for any damage.

3.3 Basic Subsystem Installation

See SECTION 3.4 INSTALLATION OF DISK UNIT (DKU305I-14) when there are two or more Disk Units. [INST03-380]

3.3.1 Flowchart

1.	Cabinet Setting	[INST03-170]
↓		
2.	Frame Connection	[INST03-210]
↓		
3.	Switch and Jumper Plug Installation	[INST03-250]
↓		
4.	Cabling	[INST03-290]
↓		
5.	Check of Jumper Settings	[INST03-370]

3.3.2 Cabinet Setting

- Refer to Table 3.3.2-1 when laying out the First Disk Unit with respect to the Disk Controller and relocating the side cover.

1. Place the Disk Controller and Disk Unit in the required position.

Table 3.3.2-1 Removal and Re-installation of Side Cover

Configuration	Disk Controller	First Disk Unit
Disk Controller (DKC310I) and Disk Unit (DKU305I-14)		

Copyright ©1997, Hitachi, Ltd.

2. Remove the fall proof adapters from the Disk Unit.

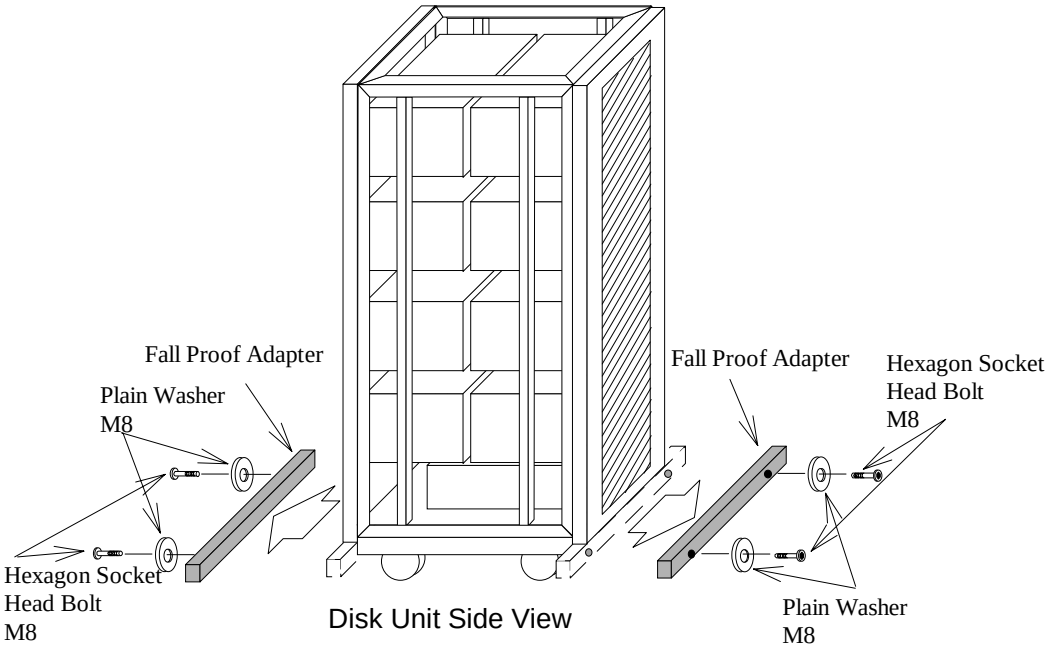

Fig. 3.3.2-1 Removal of Fall Proof Adapter

Note: The fall proof adapters, hexagon socket head bolt M8s, and plain washer M8s should be stored in the place of installation for future use in moving or taking out the unit.

3. Open the front and rear doors on the Disk Controller and the Disk Unit.
4. Remove the screw for transporting the movable rack.

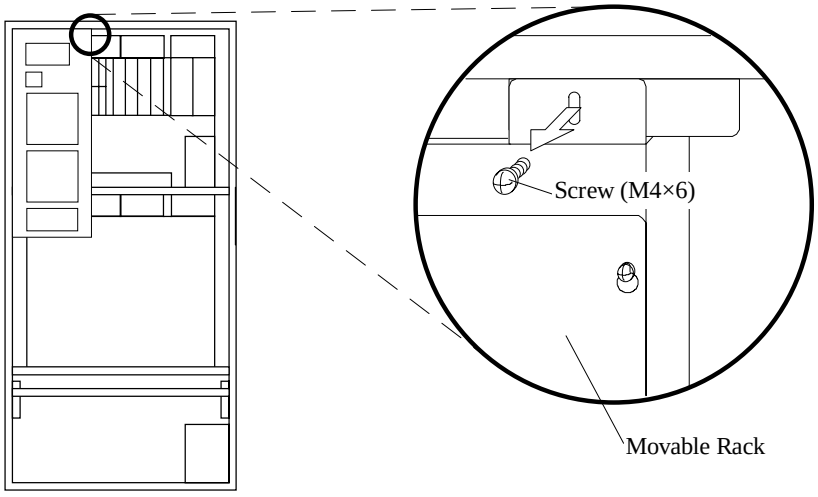

Fig. 3.3.2-2 Removal of Screw for Transporting the Movable Rack

Note: The screw for transporting the movable rack (screw M4×6) should be stored in the place of installation for future use in taking out and transporting the unit.

Copyright ©1997,1998, Hitachi, Ltd.

5. Loosen the repeat binders which secure the DKUMN cables, the SCSI interface cables and the AC power cables for the Disk Controller

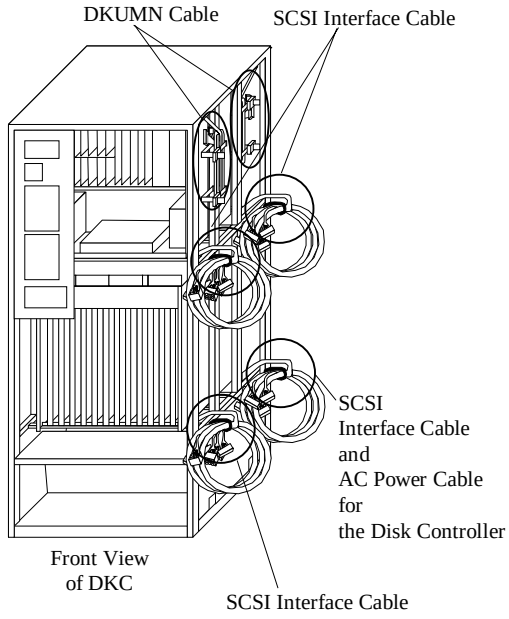

Fig. 3.3.2-3 Removal of Cables

6. Pass the DKUMN cables, the SCSI interface cables and the AC power cables for the Disk Controller through the Basic Disk Unit frame. Refer to Fig. 3.3.2-4. Be extremely careful not to pinch the inter-frame cable when coupling the frames to each other.

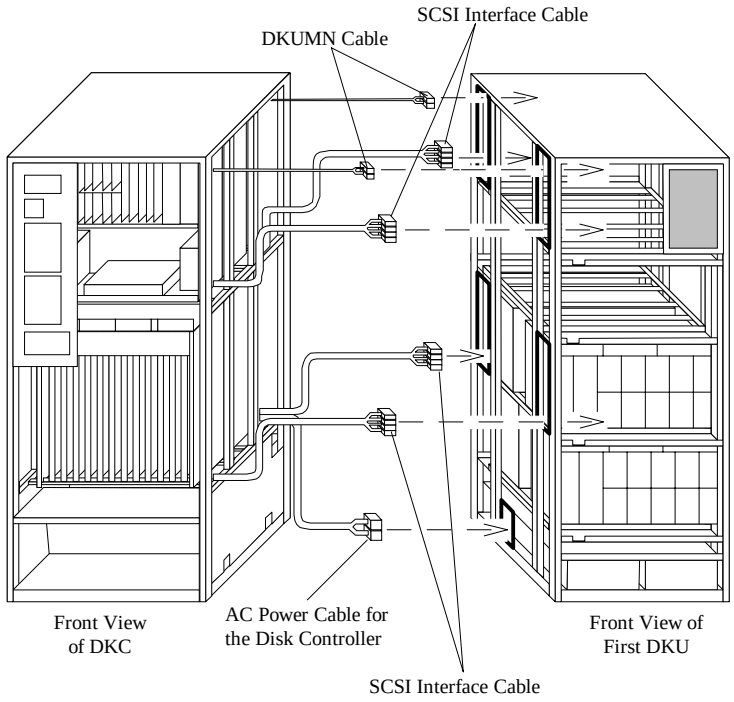

Fig. 3.3.2-4 Attachment of Cables

Copyright ©1997, Hitachi, Ltd.

7. Lower the screw jacks until frame is 57mm (2.25in.) from the floor before connecting frames.
8. Level the device as shown Fig. 3.3.3.2-5.

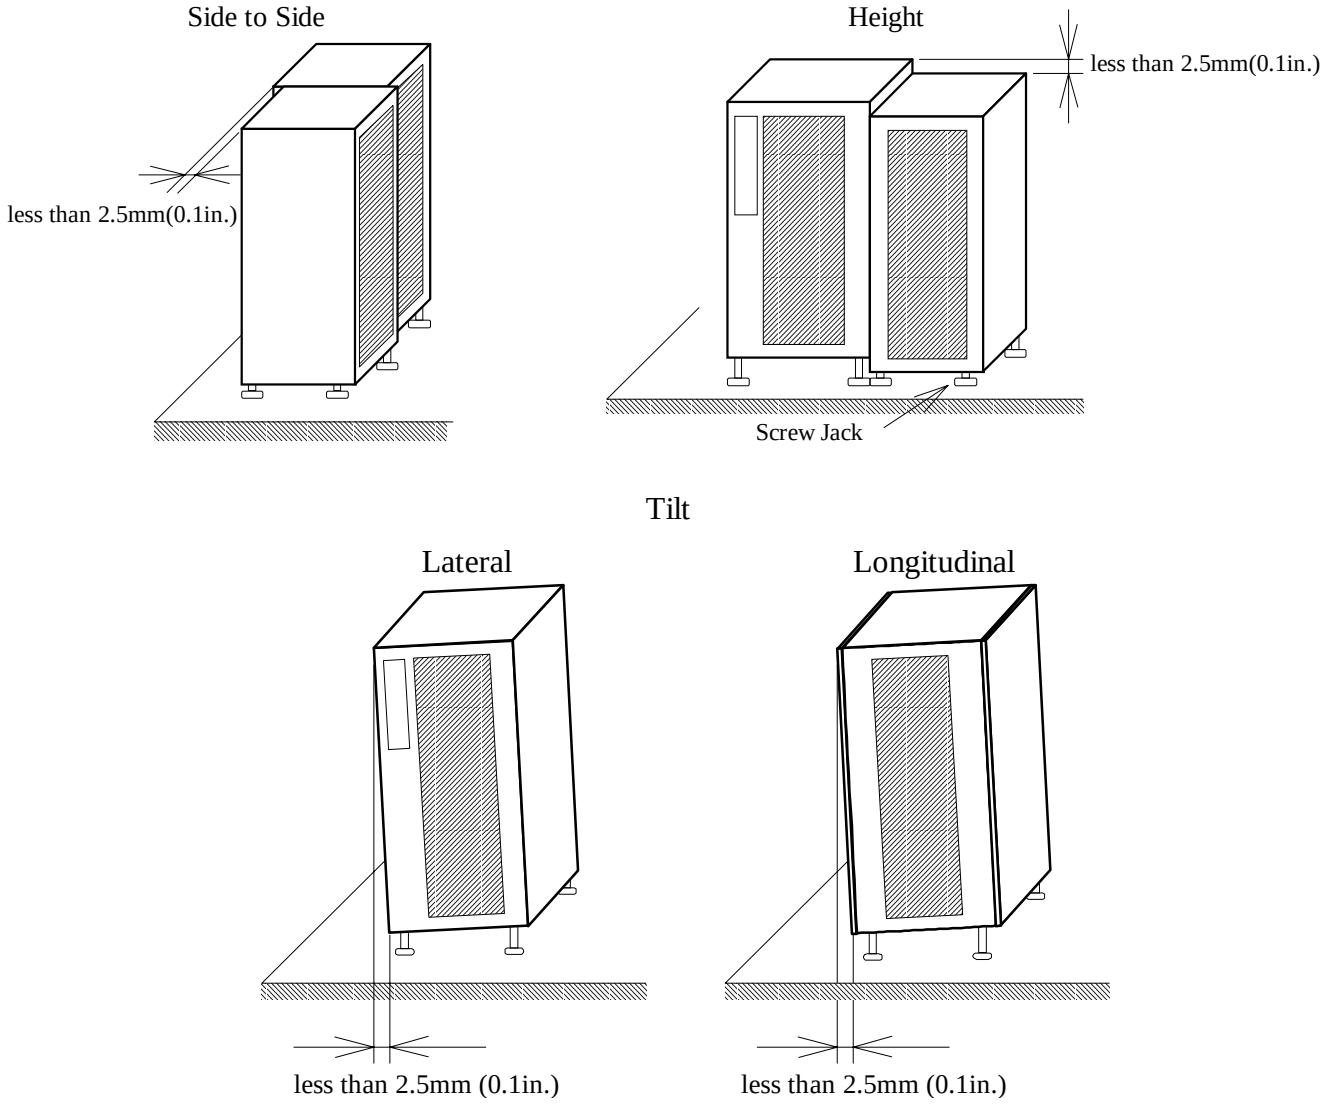

Fig. 3.3.2-5 Unit Layout, Height, and Tilt

Copyright ©1997, Hitachi, Ltd.

9. Loosen the four screws (M3) and the two screws (M4), remove the Front Logic Box Cover from the Disk Controller Unit.
10. Loosen the two screws (M3) and remove the cover (frame) 2.

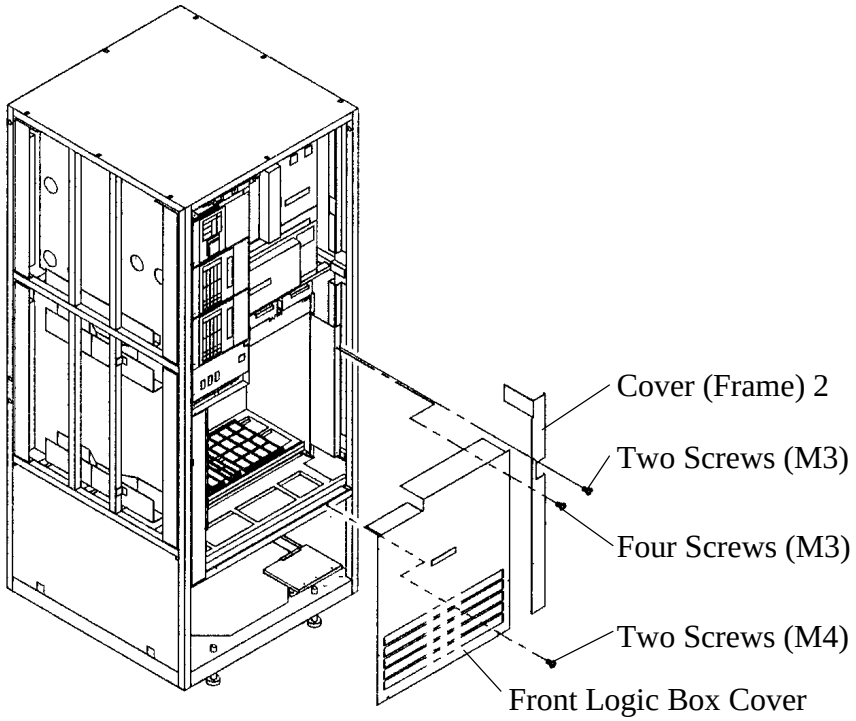

Fig. 3.3.2-6 Removal of Covers (DKC front side)

11. Loosen the four screws (M3) and the two screws (M4), remove the Rear Logic Box Cover.
12. Loosen the two screws (M3) and remove the cover (frame) 1.

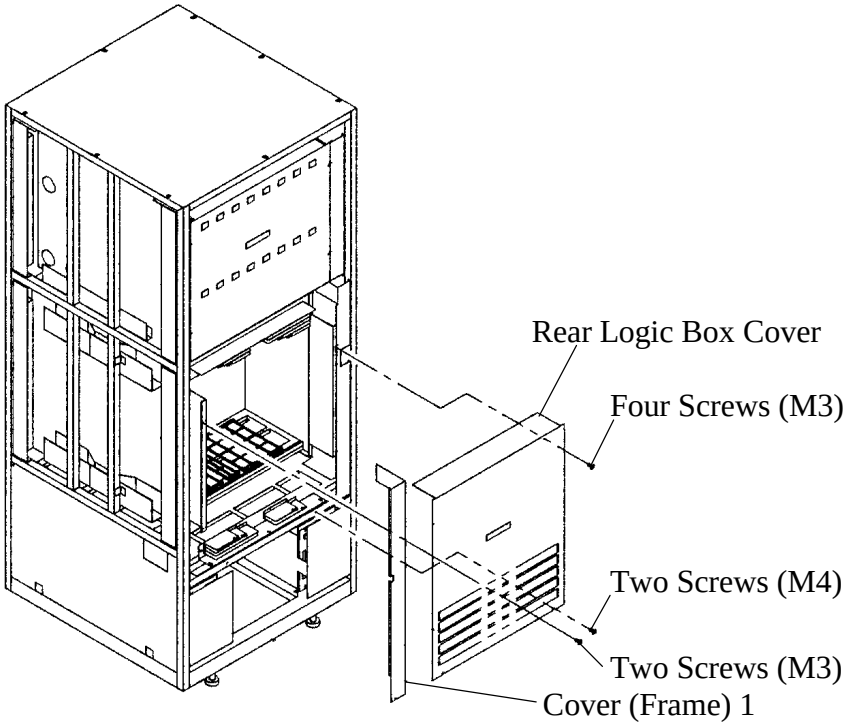

Fig. 3.3.2-7 Removal of Covers (DKC rear side)

Copyright ©1998, Hitachi, Ltd.

3.3.3 Frame Connection

3.3.3.1 Frame Connection

Connect the devices together using six of Connecting Bolt assemblies, three in front and three in rear. See Fig. 3.3.3.1-1.
The direction of hexagon socket head bolts, binding screws and connecting nuts must be the same as shown in the figure.

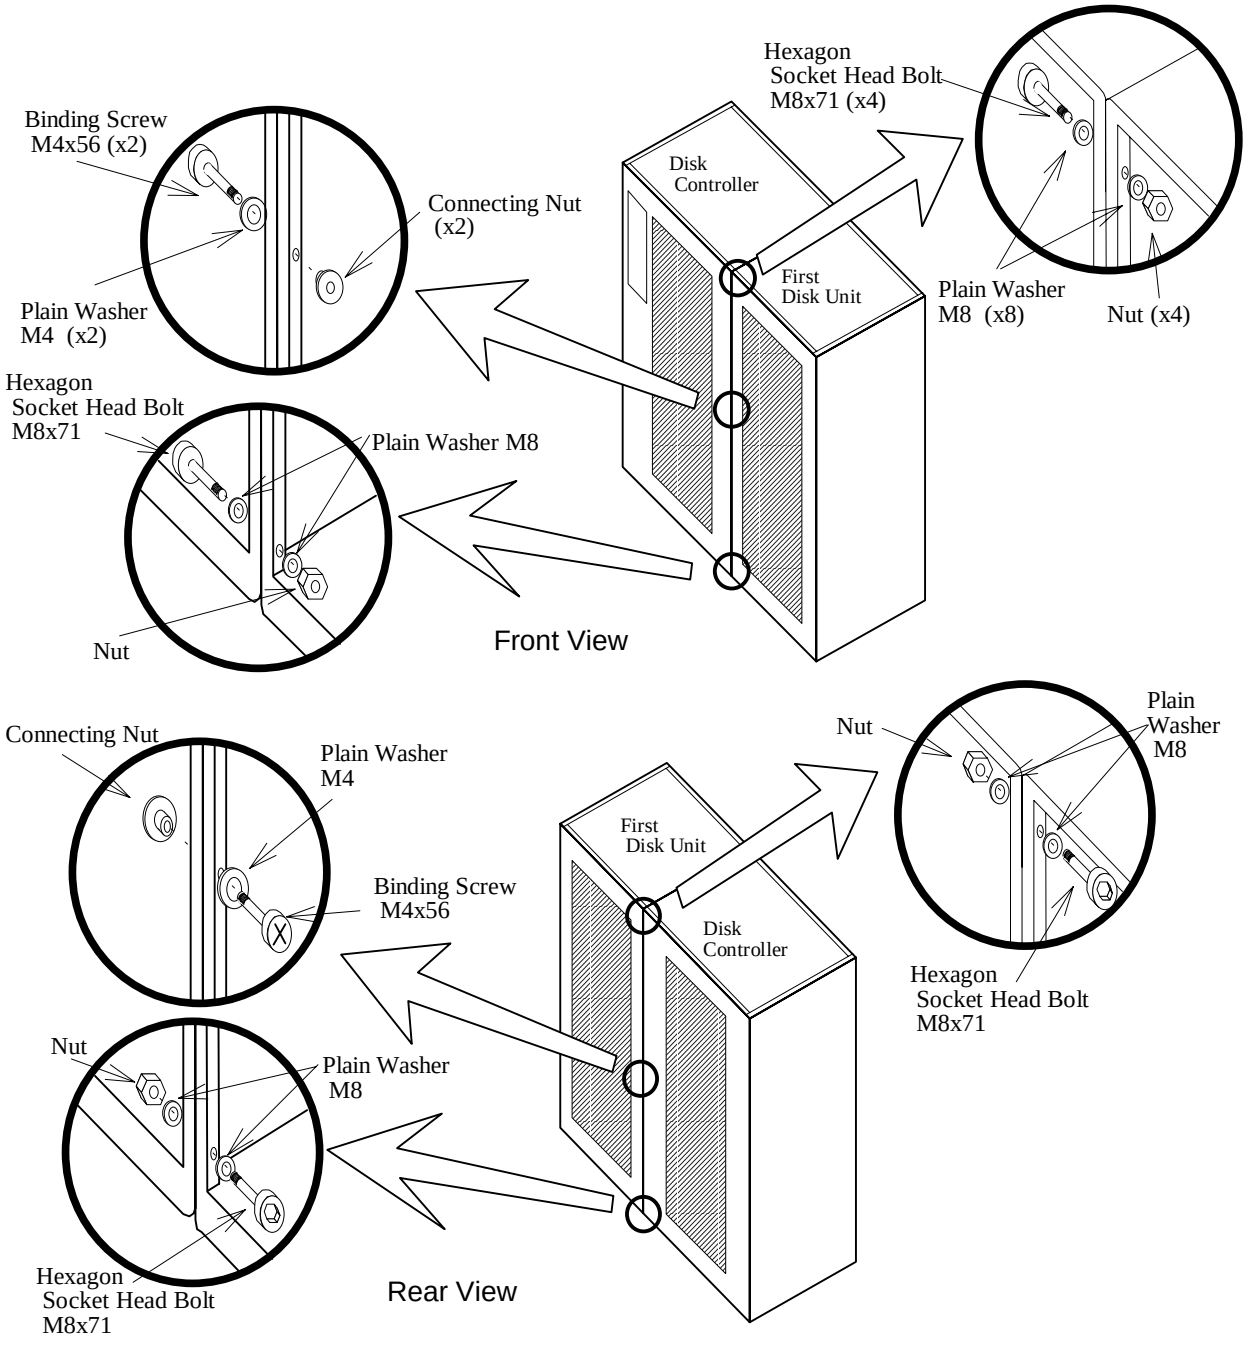

Fig. 3.3.3.1-1 Frame Connection

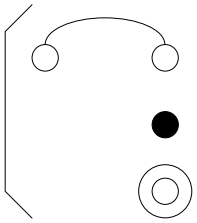
Copyright ©1997, Hitachi, Ltd.

3.3.3.2 Frame Ground Cable Attachment

Note

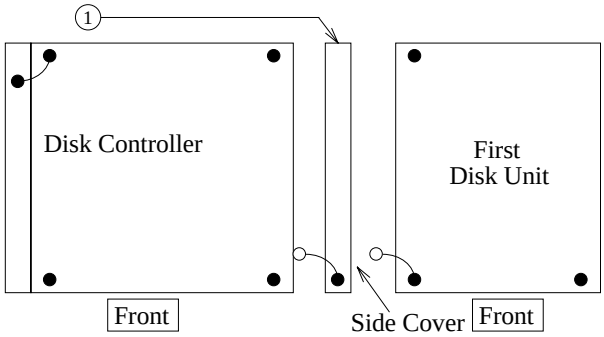


: Frame ground cable

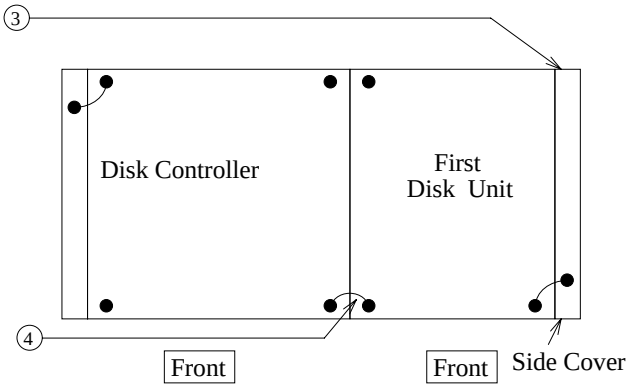
: Screw and washer (lock washer)

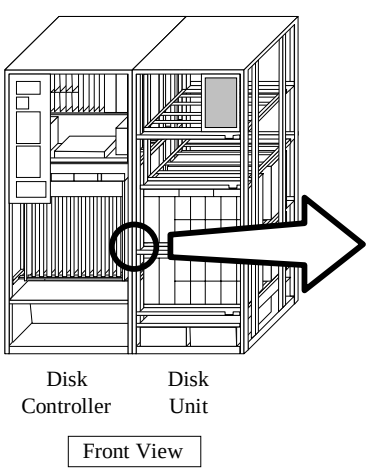
: Thread

1. Remove the right side cover of the Disk Controller.
2. Connect the cabinets.



3. Attach the side cover to the Disk Unit. Refer to SECTION 3.3.3.3.3 Side Cover Re-installation.
4. Attach the frame ground cable with the screw and lock washer.
5. Attach the Front and Rear Logic Box Covers to the Disk Controller Unit in the reverse order of SECTION 3.3.2 item 9 through 12 [INST03-201].





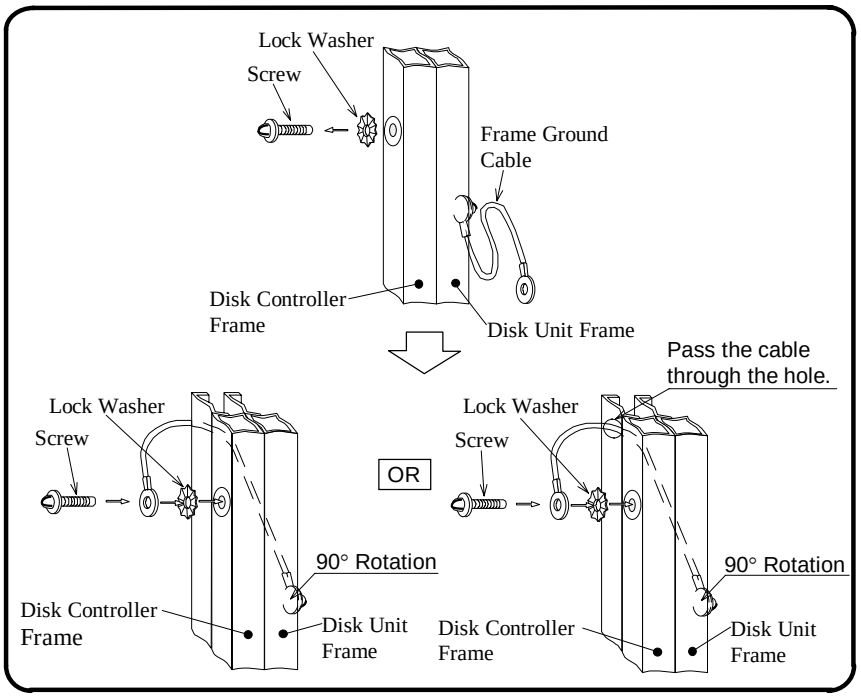


Fig. 3.3.3.2-1 Attachment of Frame Ground Cable

Copyright ©1997,1998, Hitachi, Ltd.

3.3.3.3 Side Cover Re-installation

Attach the side cover to the end of the string with the four binding screws and washers.

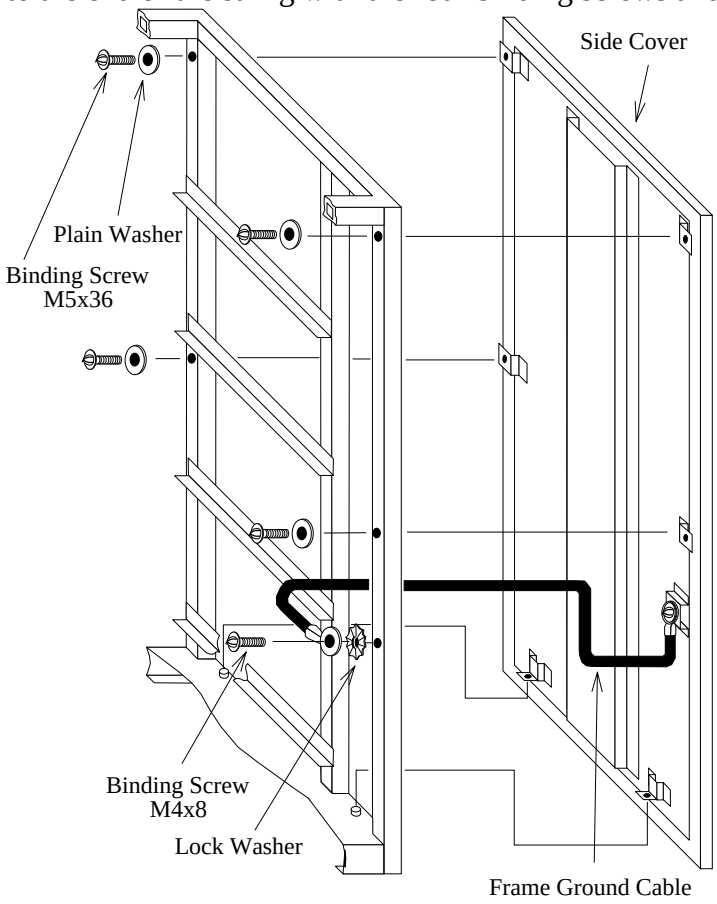

Fig. 3.3.3.3-1 Re-installation of Side Cover

Copyright ©1997, Hitachi, Ltd.

3.3.3.4 Installation of Kick Plate

Attach the kick plates with the binding screws. See Fig. 3.3.3.4-1.

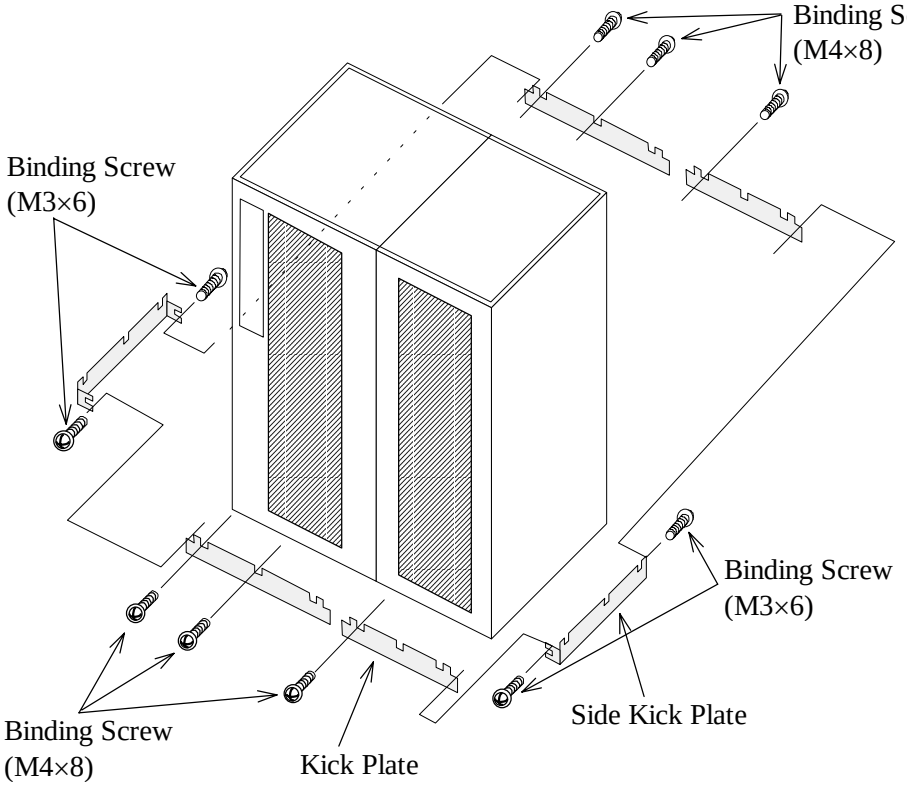

Fig. 3.3.3.4-1 Installation of Kick Plate

NOTICE: Contact the Kick Plate to the floor to prevent static electricity.

Copyright ©1997, Hitachi, Ltd.

3.3.4 Installation of Switches and Jumper Plugs

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

3.3.4.1 Installation of Switches and Jumper Plugs in DKUMN PCB

Set the switches and install the jumper plugs in the DKUMN PCBs as indicated in the table below.

Table 3.3.4.2-1 SWITCH and JUMPER PLUG installation of the DKUMN PCB

Location No.	S1	JP1	JP2	JP3		Remarks
				Note 1	**Note 2**

3.3.4.4 Installation of Jumper Connectors in BATT CTR PCB

This following shows the settings for the unit containing no Additional Cache Board (DKC-F310I-20). For the settings for the unit containing the Additional Cache Board (DKC-F310I-20), see [INST03-1280].

1. Open the four locking clamps on the Front PS Box Cover 2 and remove the four jumper connectors.

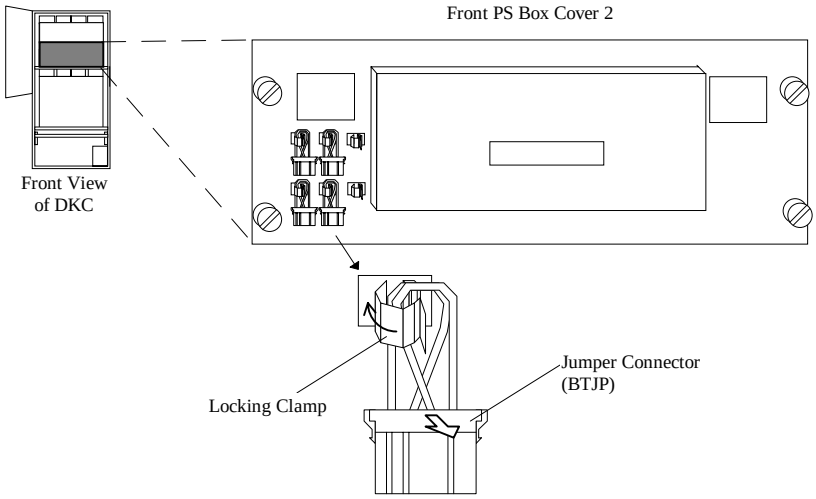

Fig. 3.3.4.4-1 Removal of Jumper Connectors

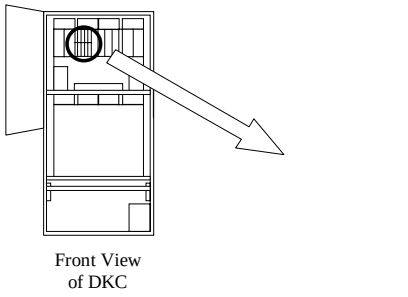
2. Install the jumper connectors in the BATT CTR PCBs as indicated in the figure below.



Front PS Box

N	L	KU	JU	HU	GU	F	E	D	C	B	A
MPS 10	MPS 11	SVP PS 1	BATT CTR 10	BATT CTR 11	BATT CTR 12	PWR CTR 1	SSVP	HUB	PWR CTR 2	MPS 20	MPS 21

3.3.5.2 Cabling Procedure of the DKUMN Cables

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Connect the PWRCTL PCBs or MPS Back Board (PL) and the DKUMN PCBs as summarized in the table below.

Table 3.3.5.2-1 Connection of DKUMN Cables

No.	Disk Controller			First Disk Unit			Remarks
	Location No.	Connector No.	Cable No.	Location No.	Connector No.	Cable No.	
1	PWRCTL-1	J11	SH-F21	DKUMN-R1F	J04	P4-1R	
2	MPS BB (PL)	N10	SH-N10	DKUMN-R1F	J02	P2-1R	
3	PWRCTL-2	J11	SH-C21	DKUMN-R1R	J04	P4-2R	
4	MPS BB (PL)	A10	SH-A10	DKUMN-R1R	J02	P2-2R	

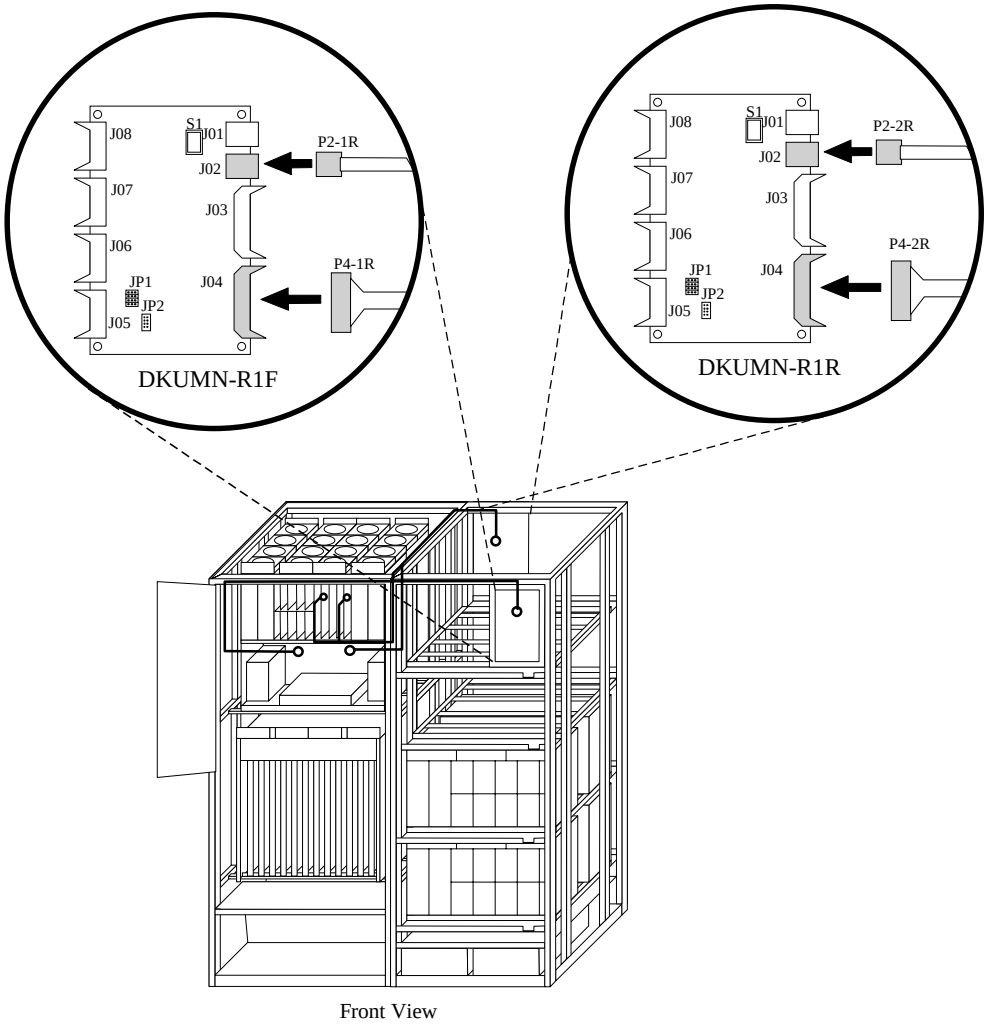

Fig. 3.3.5.2-1 Connection of DKUMN Cables

2. Before binding the DKUMN cables. Secure the DKUMN PCB. Refer to Fig. 3.3.5.2-3
   a. Loosen the four screws.
   b. Lift the DKUMN PCB.
   c. Slide and secure the DKUMN PCB

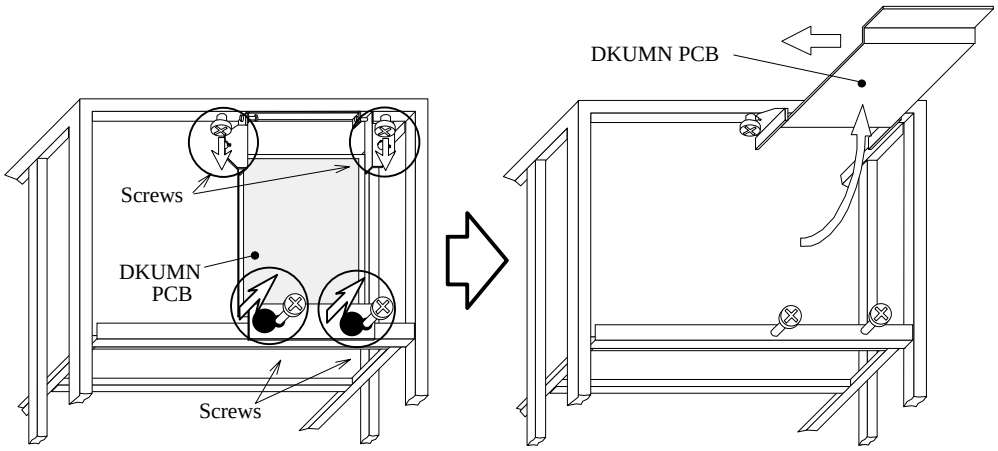

Fig. 3.3.5.2-2 Lift of DKUMN PCB

3. Bind the cables with binders to prevent them from sagging.

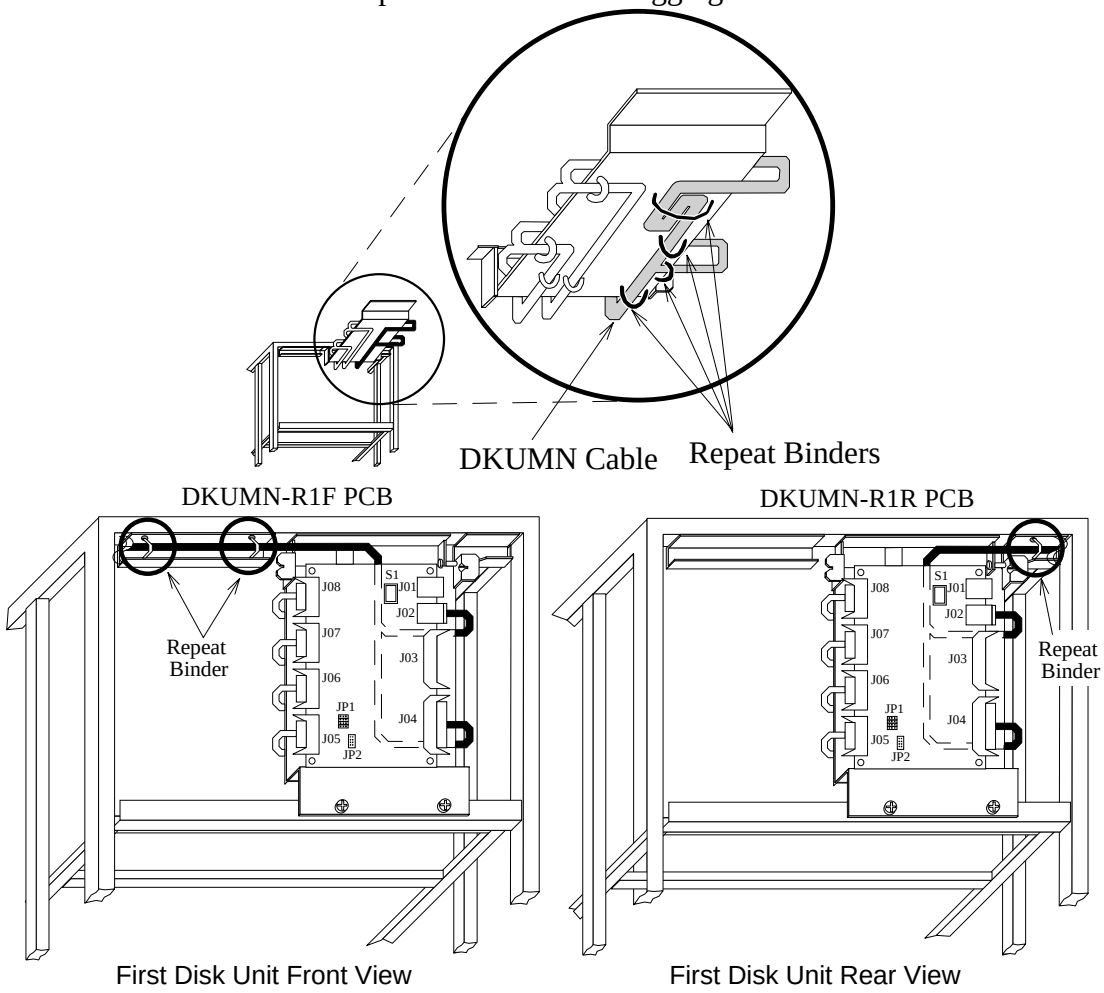

Fig. 3.3.5.2-3 Binding of DKUMN Cables

Copyright ©1997, Hitachi, Ltd.

3.3.5.3 Cabling Procedure of SCSI Interface Cables

1. Connect the SCSI interface cables to the sub-edges on the SCSI BFR PCBs located in the HDU box.

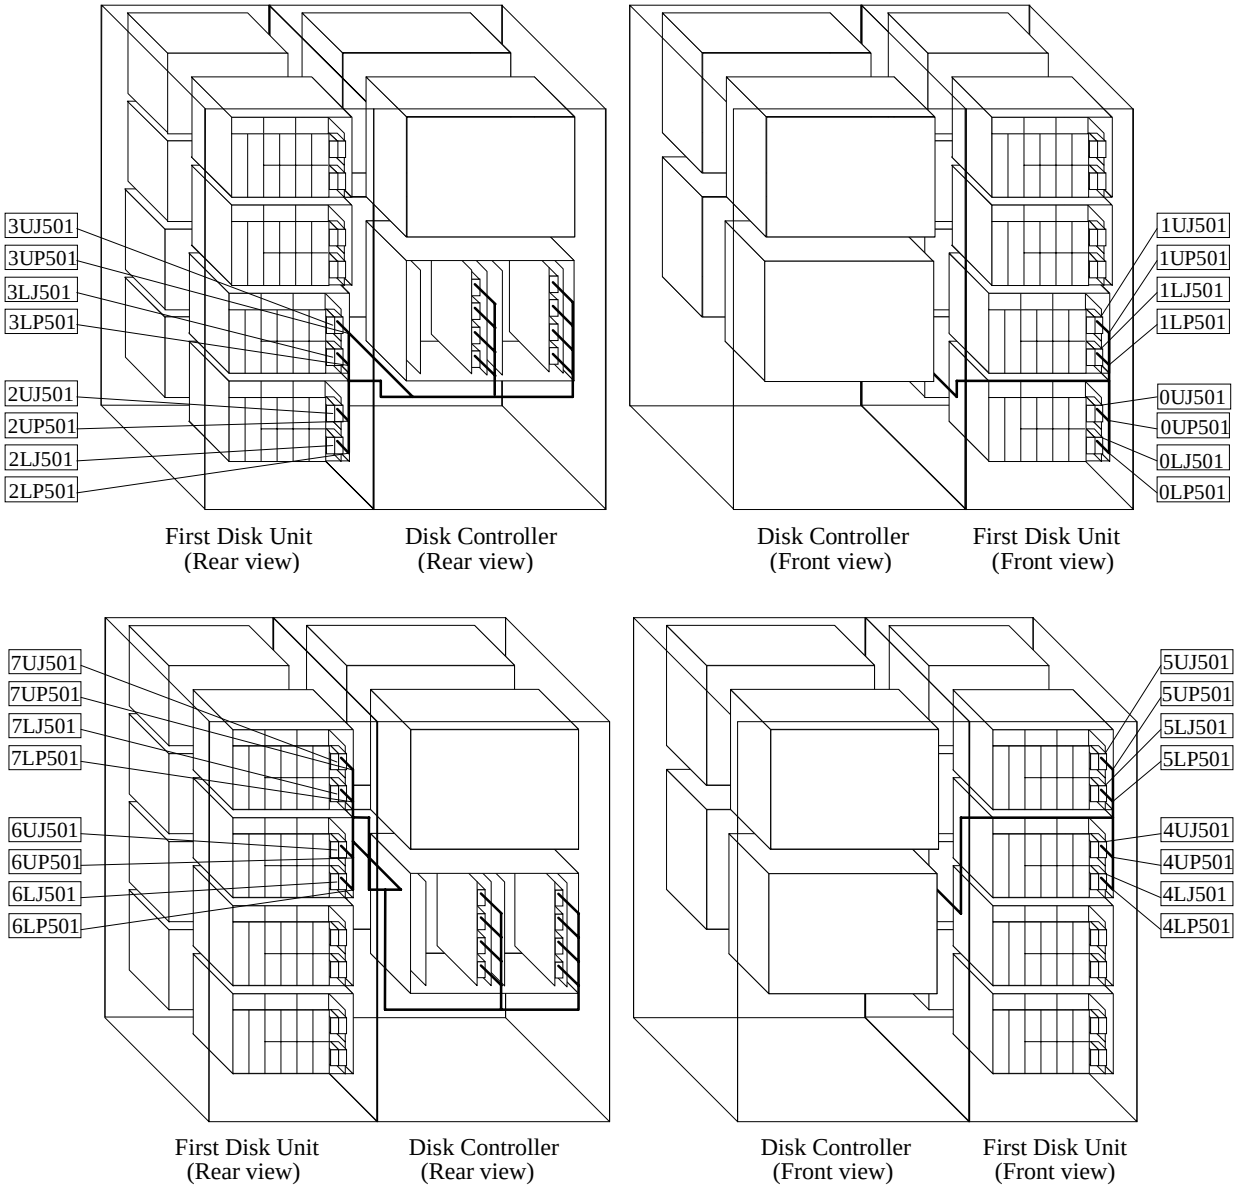

Fig. 3.3.5.3-1 SCSI Interface Cabling Diagram (SCSI BFR PCB Side)

Copyright ©1997, Hitachi, Ltd.

2. Secure the SCSI interface cables to the cable conduit with cable fixing wire and repeat binder. If the SCSI interface cables are too long, fold them over inside the cable conduit and secure them with cable fixing wire and repeat binder.

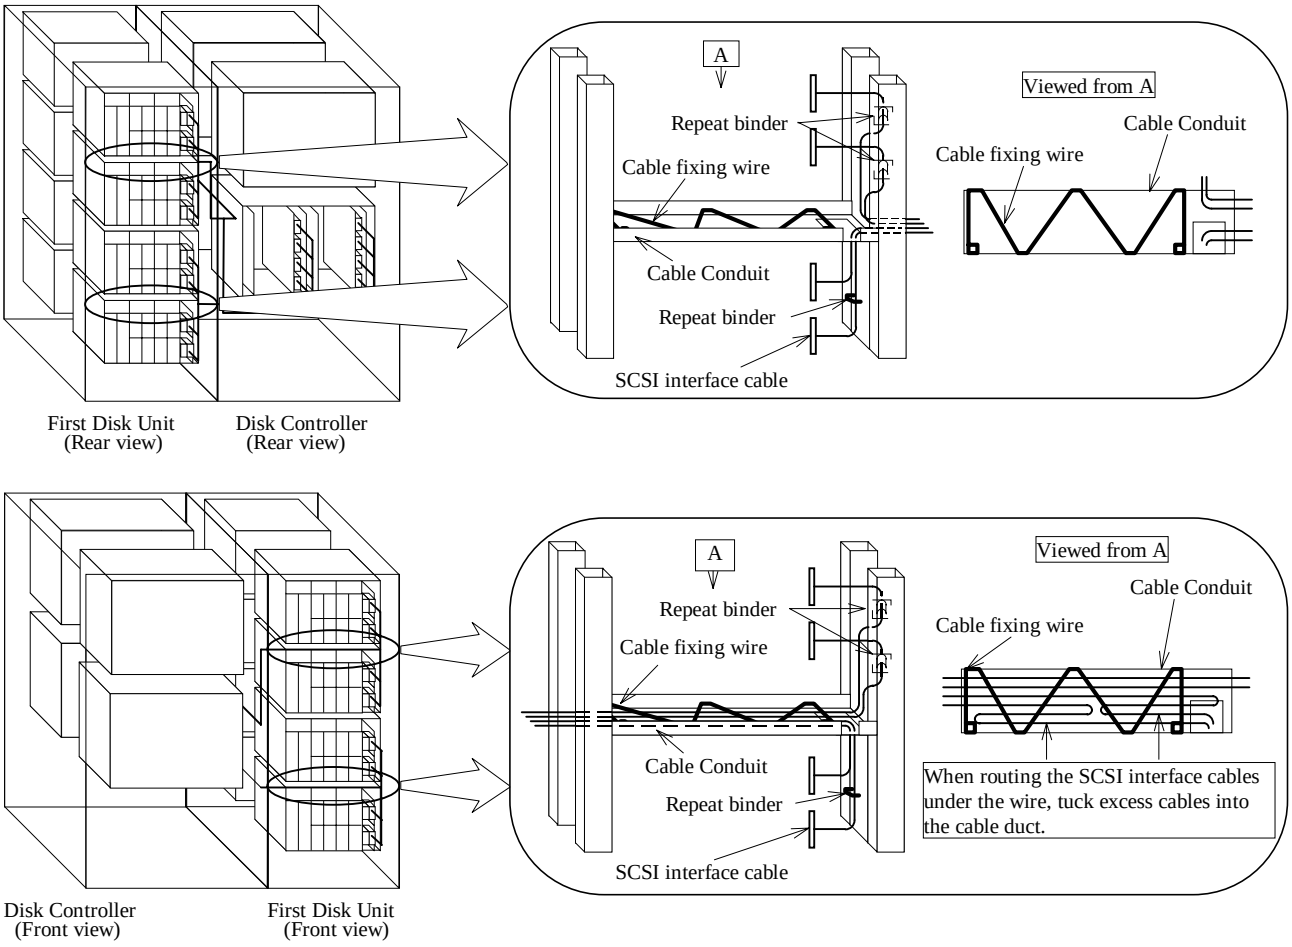

Fig. 3.3.5.3-2 Fixing of SCSI Interface Cables

Copyright ©1997, Hitachi, Ltd.

3.3.6 Check of Jumper Settings

1. Check the jumper settings (JP1, JP2 and JP3) on the DKUMN PCBs. Refer to Section 3.3.4.1 Installation of Switches and Jumper Plugs in DKUMN PCB [INST03-250].
   When the jumper plugs are not installed to the correct sockets, install the jumper plugs to the correct sockets.

2. Check the SCSI ID jumpers on the HDD back boards. Refer to Fig. 3.3.6-1.
   When the SCSI ID jumpers are not installed to the correct sockets, install the SCSI ID jumpers to the correct sockets.

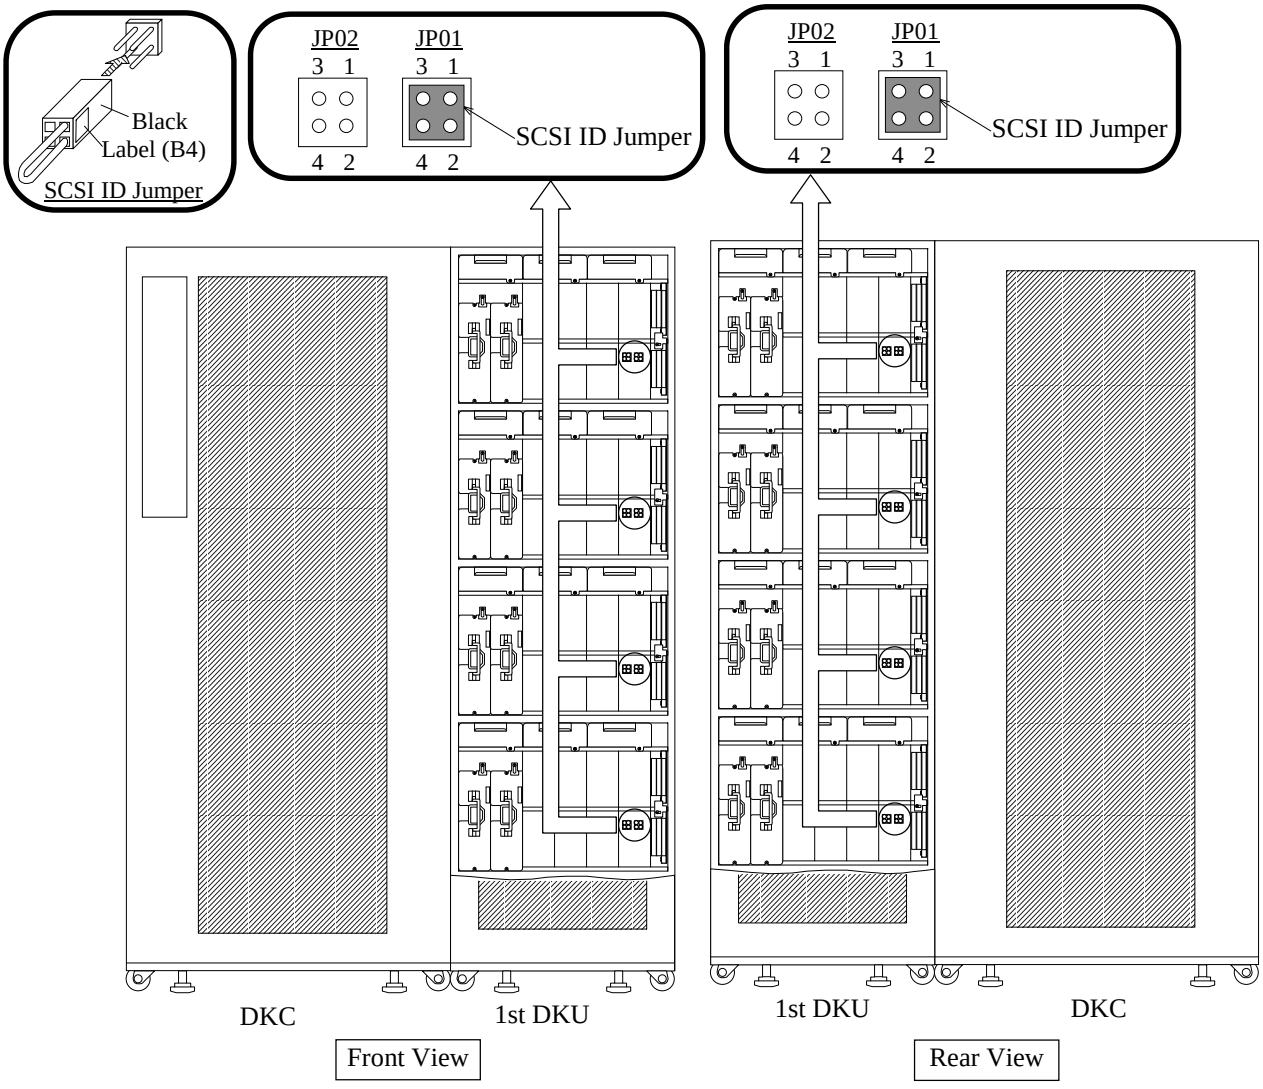

Fig. 3.3.6-1 Setting the SCSI ID Jumpers

3. Return to General Flow.
   New Installation : Go to INST02-10 step (3).

3.4.2 Cabinet Setting (Adjusting the Cabinet Height)

3.4.2.1 Flowchart

Place the Disk Unit in the required position.
↓
Remove the side cover.
↓
Adjust level and height of the cabinet.

3.4.2.2 Disk Unit(s) Layout

Refer to Table 3.3.2-1 when laying out the First Disk Unit with respect to the Disk Controller and relocating the side cover.
Install the Disk Unit(s) in one of the locations shown in Table 3.4.2.2-1.

Table 3.4.2.2-1 Removal and Re-installation of Side Cover

Configuration	Fourth Disk Unit	Third Disk Unit	Disk Controller	First Disk Unit	Second Disk Unit
Disk Controller and Two Disk Units					
Disk Controller and Three Disk Units					
Disk Controller and Four Disk Units					

Copyright ©1997, Hitachi, Ltd.

3.4.2.3 Side Cover Removal

Remove the side covers shown in Table 3.4.2.2-1 from the installed Disk Controller or Disk Unit(s).

Note: When the left side cover is removed from the Disk Controller Unit, must be removed the Front and Rear Logic Box Covers beforehand. Refer to SECTION 3.4.2.6 Logic Box Covers Removal.

3.4.2.4 Remove the Fall Proof Adapter

Remove the fall proof adapters form the Disk Unit(s).

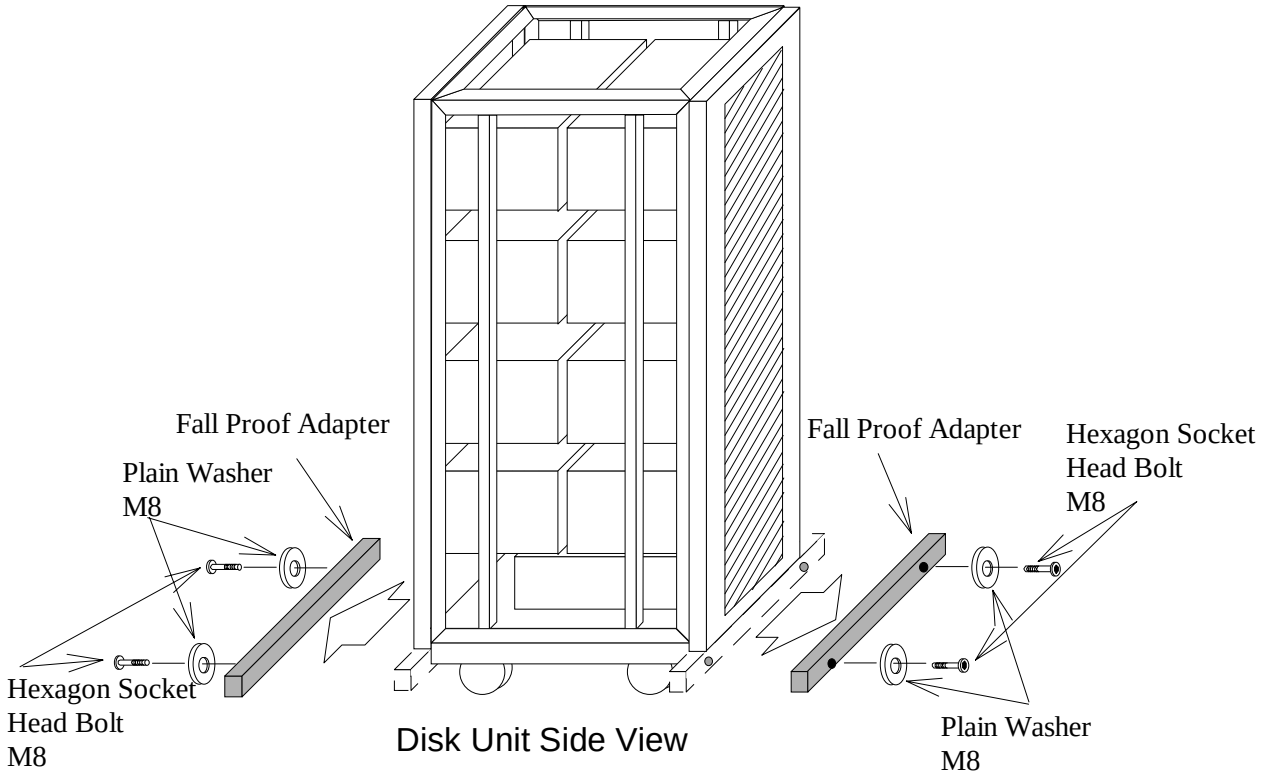

Fig. 3.4.2.4-1 Removal of Fall Proof Adapter

Note: The fall proof adapters, hexagon socket head bolt M8s, and plain washer M8s should be stored in the place of installation for future use in moving or taking out the unit.

Copyright ©1997,1998, Hitachi, Ltd.

3.4.2.5 Adjusting the Cabinet Height and Level

1. Lower the screw jacks until the frame is 57 mm (2.25 in.) from the floor before connecting the frames.
2. Level the device as shown on Fig. 3.4.2.5-1.
3. When adjusting the cabinet height, make sure that there is a clearance of approximately 2.5 mm (0.1 in.) between the casters and the floor.

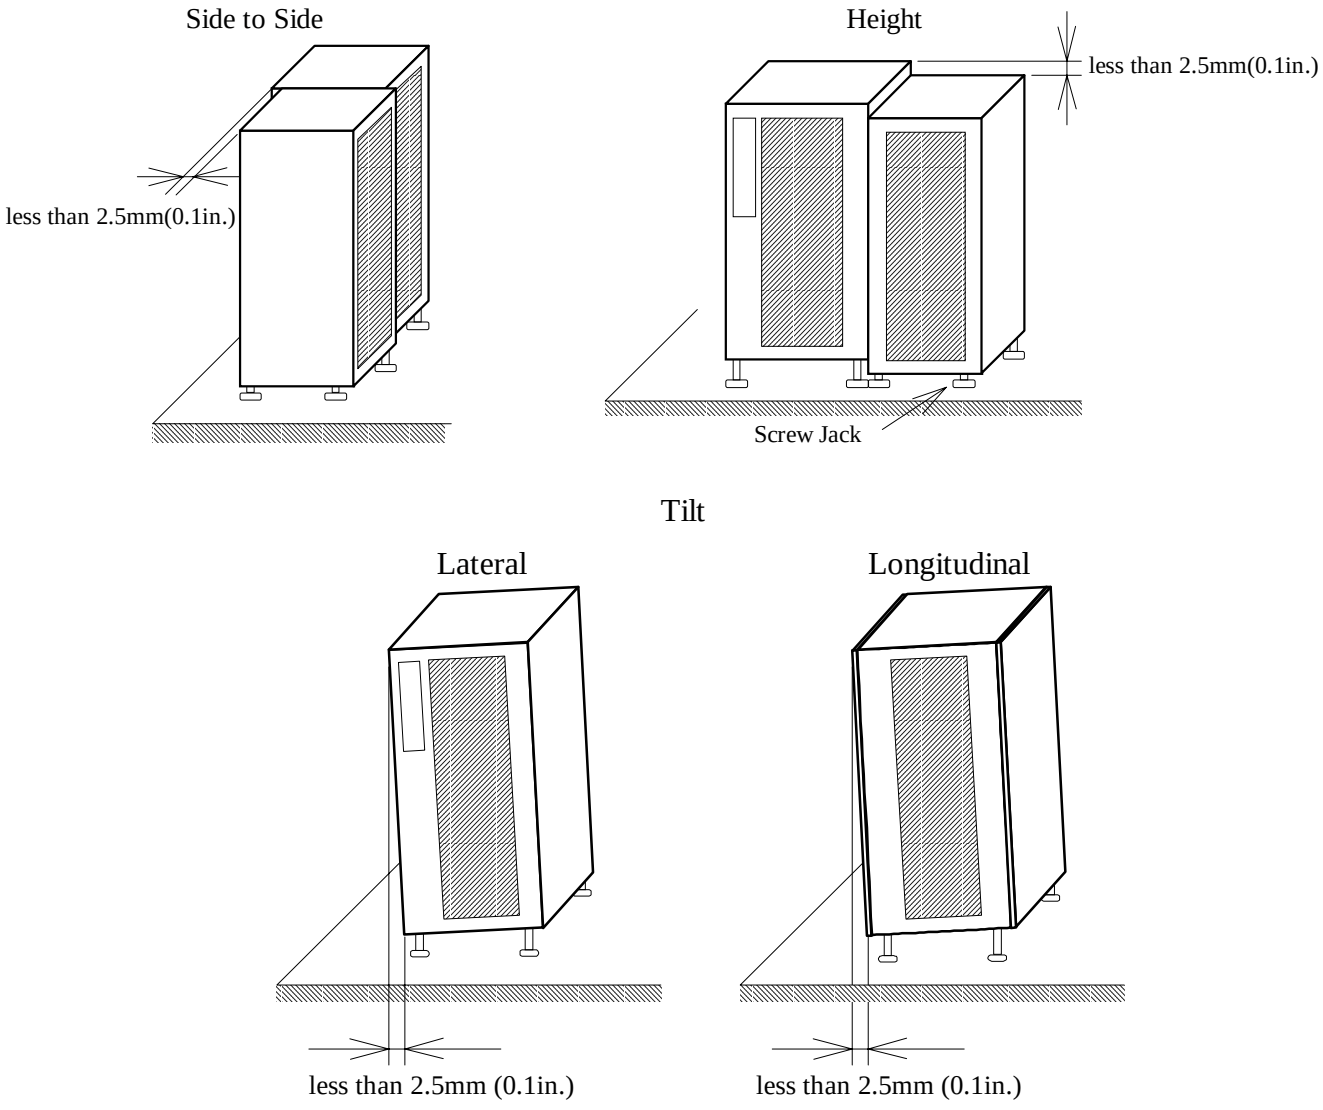

Fig. 3.4.2.5-1 Cabinet Setting

Copyright ©1997, Hitachi, Ltd.

3.4.2.6 Logic Box Covers Removal

Note: When the third Disk Unit is connected to the Disk Controller Unit, must be removed the following covers.

1. Loosen the four screws (M3) and the two screws (M4), remove the Front Logic Box Cover from the Disk Controller Unit.
2. Loosen the two screws (M3) and remove the cover (frame) 4.

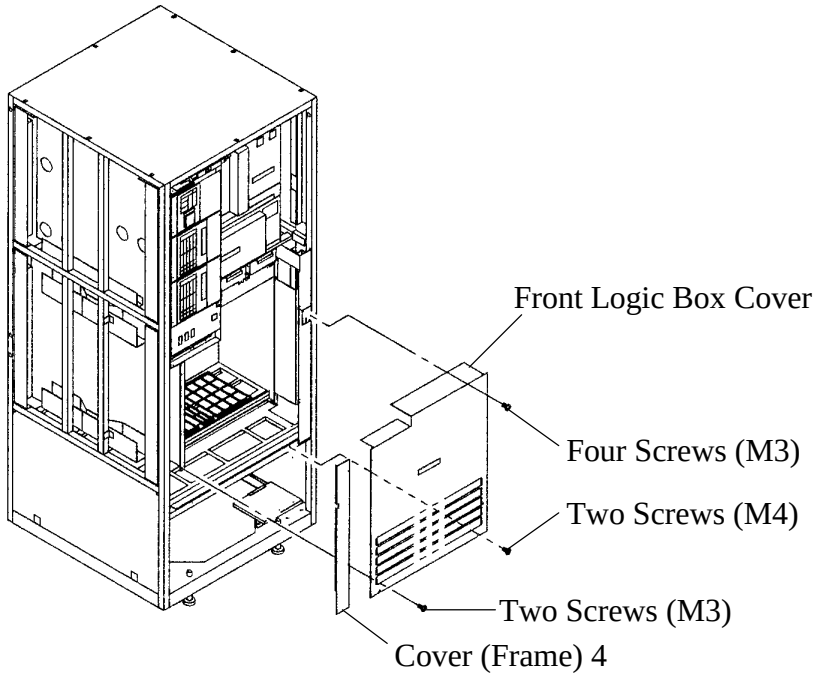

Fig. 3.4.2.6-1 Removal of Covers (DKC front side)

3. Loosen the four screws (M3) and the two screws (M4), remove the Rear Logic Box Cover.
4. Loosen the two screws (M3) and remove the cover (frame) 1.

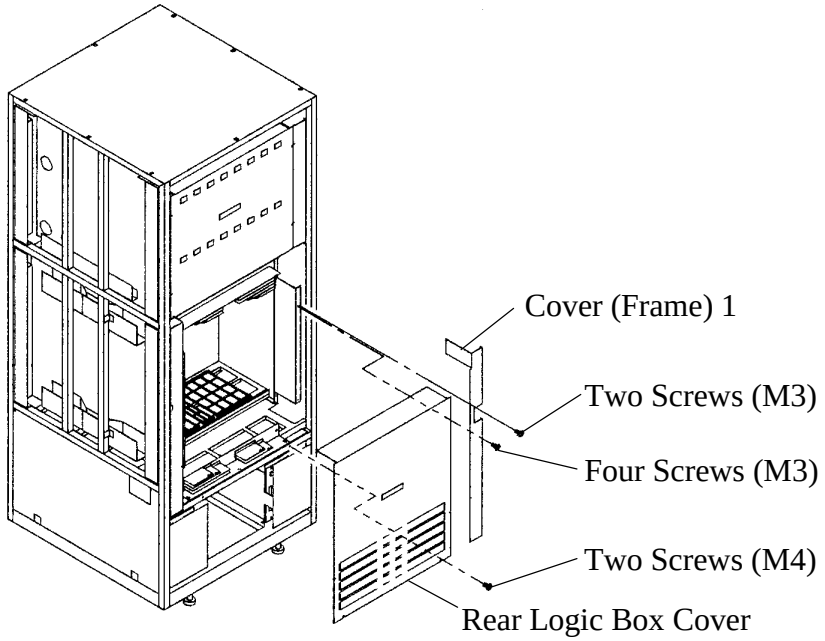

Fig. 3.4.2.6-2 Removal of Covers (DKC rear side)

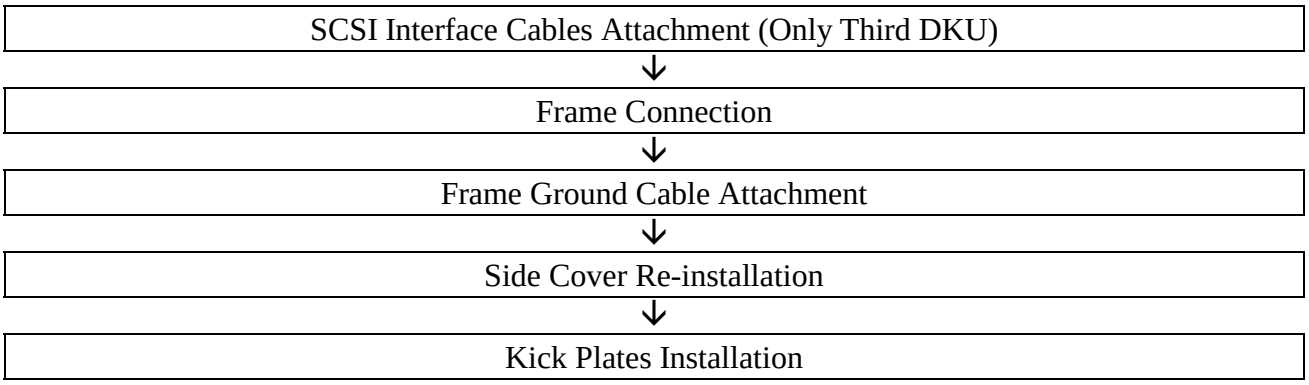
Copyright ©1998, Hitachi, Ltd.

3.4.3 Frame Connection

3.4.3.1 Flowchart



Copyright ©1997, Hitachi, Ltd.

3.4.3.2 Frame Connection

Connect the devices together using four of the Connecting Bolt Assy. Place two at the front and two at the rear . See figures 3.4.3.2-1 and 3.4.3.2-2. The direction of the hexagon socket head bolts must be the same as shown in the figure.

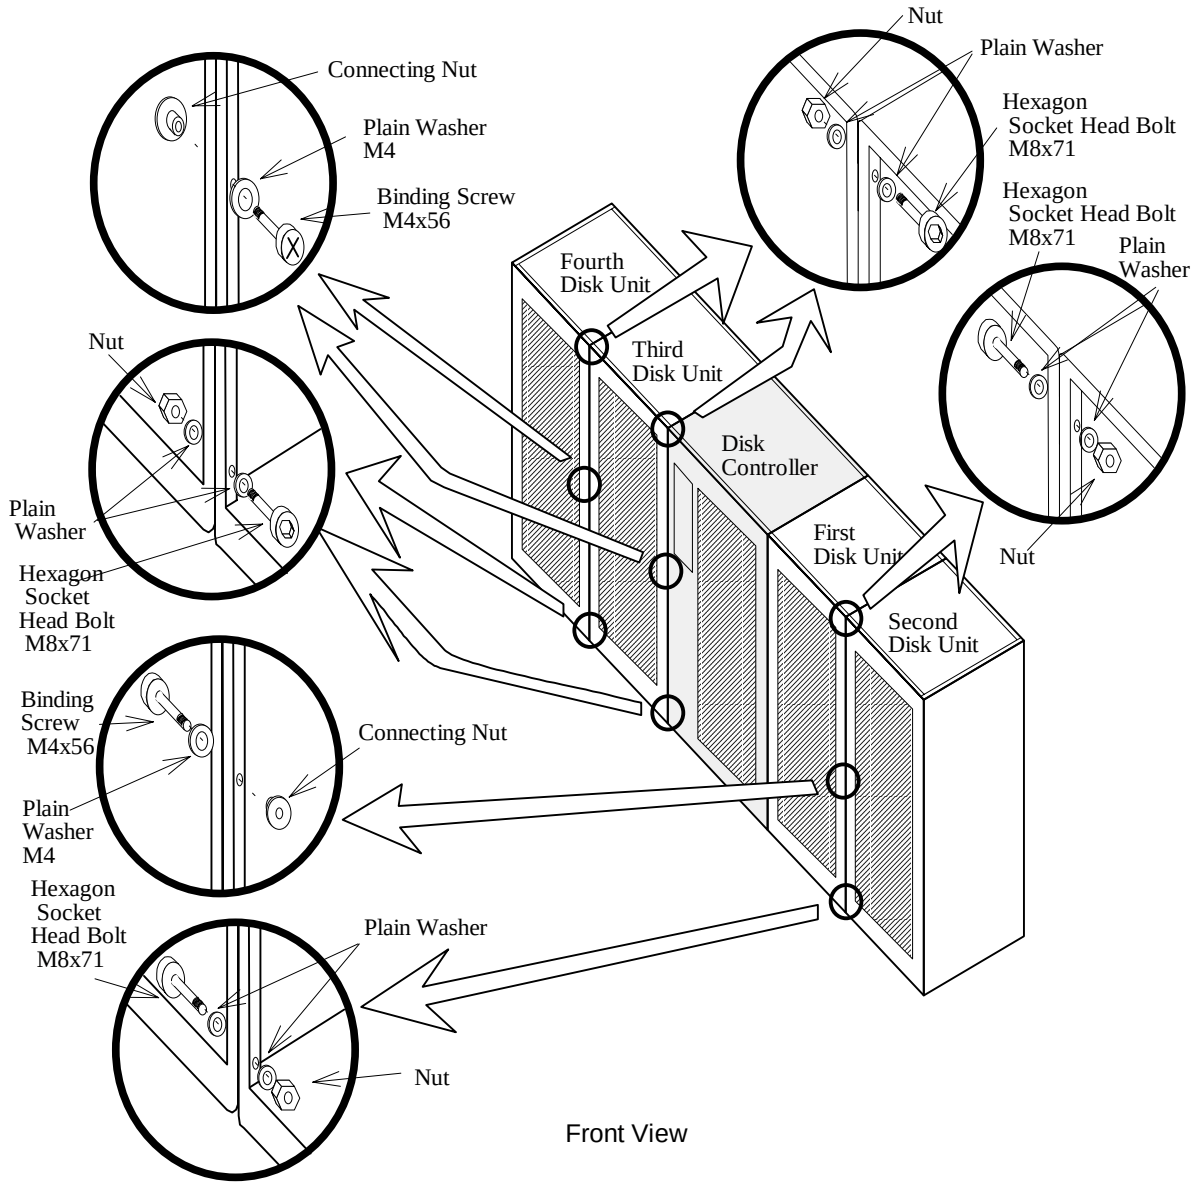


Fig. 3.4.3.2-1 Connection of Frame

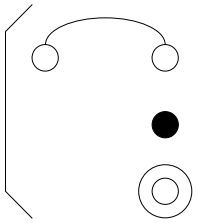
3.4.3.3 Frame Ground Cable Attachment

Note



Frame ground cable

: Screw and washer (lock washer)

: Thread

Second Disk Unit

1. Remove the right side cover together with the frame ground cable from the Disk Controller or First Disk Unit.
2. Connect the cabinet.
3. Attach the side cover to the Second Disk Unit. Refer to SECTION 3.4.3.4 Side Cover Re-Installation [INST03-470].
4. Attach the frame ground cable with the screw and lock washer.

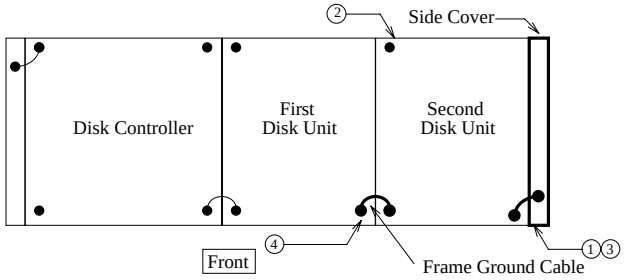


Fig. 3.4.3.3-1 Attachment of Frame Ground Cable

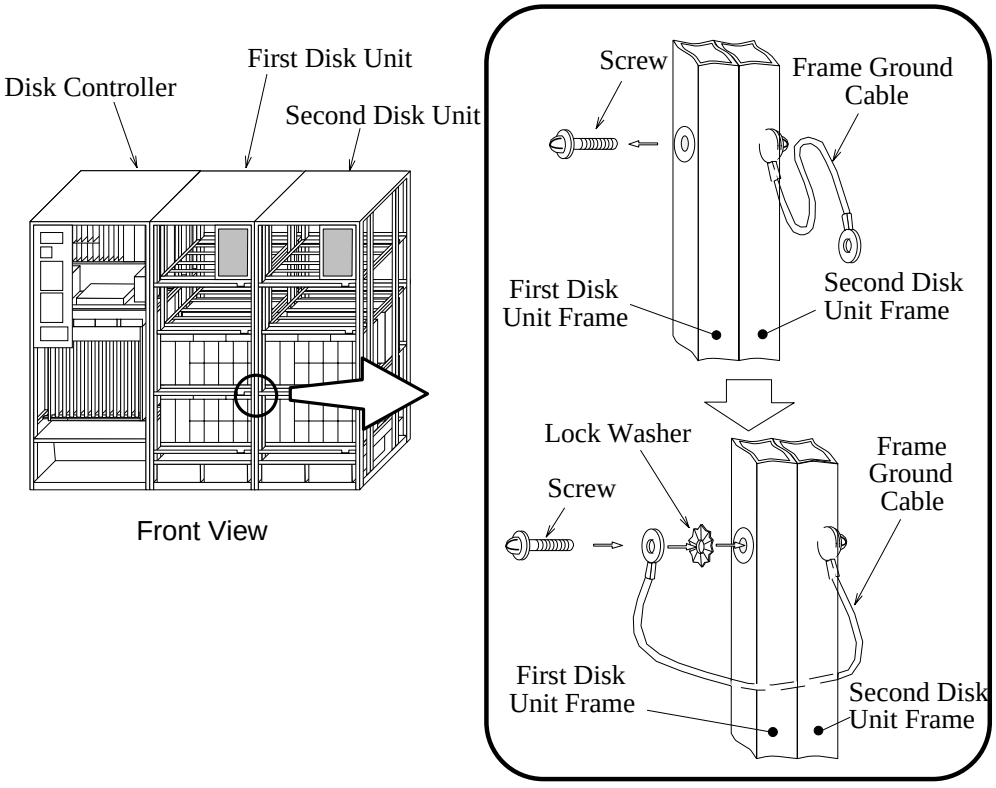

Fig. 3.4.3.3-2 Attachment of Frame Ground Cable

Copyright ©1997, Hitachi, Ltd.

Third Disk Unit

1. Remove the left side cover of the Disk Controller with the frame ground cable.
2. Attach the four SCSI Interface Cables to the Disk Controller. Refer to Section 3.12.1.3 Connection Procedure of Additional SCSI Interface Cables (In case of HDU-L13 from L10) step 1 [INST03-1900 through 1910].
3. Remove the frame ground cable from the Third Disk Unit.
4. Connect the cabinets.
5. Attach the side cover to the Third Disk Unit. Refer to Section 3.4.3.4 Side Cover Re-Installation [INST03-470].
6. Attach frame ground cable with the screw and lock washer.

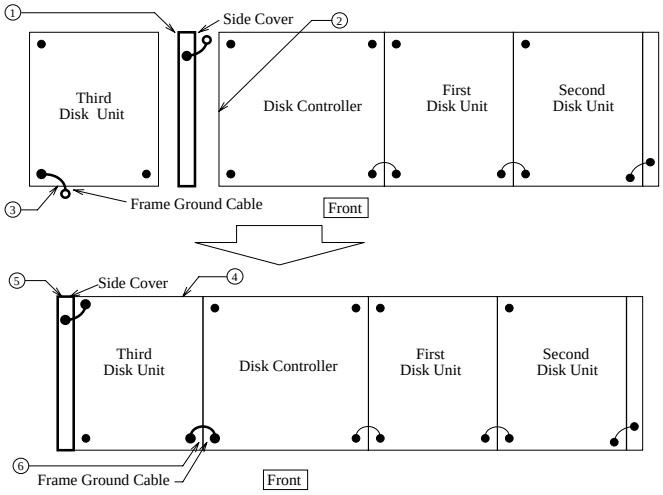

Fig. 3.4.3.3-3 Attachment of Frame Ground Cable

7. Attach the Front and Rear Logic Box Covers to the Disk Controller Unit in the reverse order of SECTION 3.4.2.6 Logic Box Covers Removal [INST03-411].

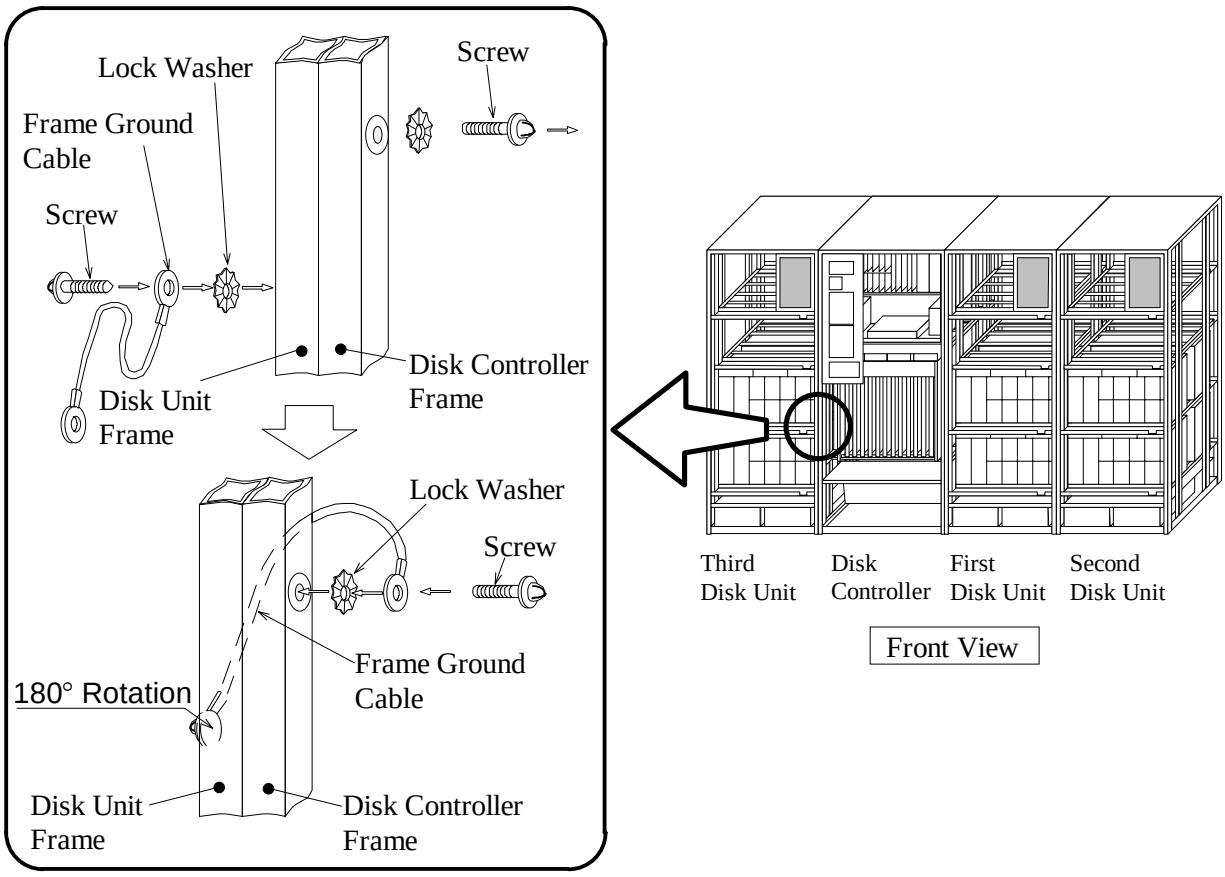

Fig. 3.4.3.3-4 Attachment of Frame Ground Cable

Copyright ©1997,1998, Hitachi, Ltd.

Fourth Disk Unit

1. Remove the left side cover together with the frame ground cable from the Disk Controller or Third Disk Unit.
2. Remove the frame ground cable from the Fourth Disk Unit.
3. Connect the cabinet.
4. Attach the side cover to the Fourth Disk Unit. Refer To Section 3.4.3.4 Side Cover Re-Installation [INST03-470].
5. Attach the frame ground cable with the screw and lock washer.

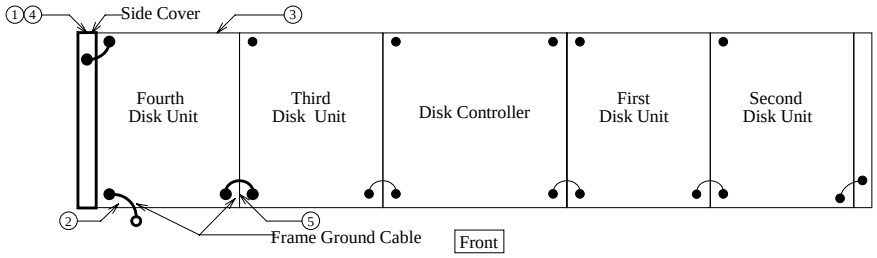

Fig. 3.4.3.3-5 Attachment of Frame Ground Cable

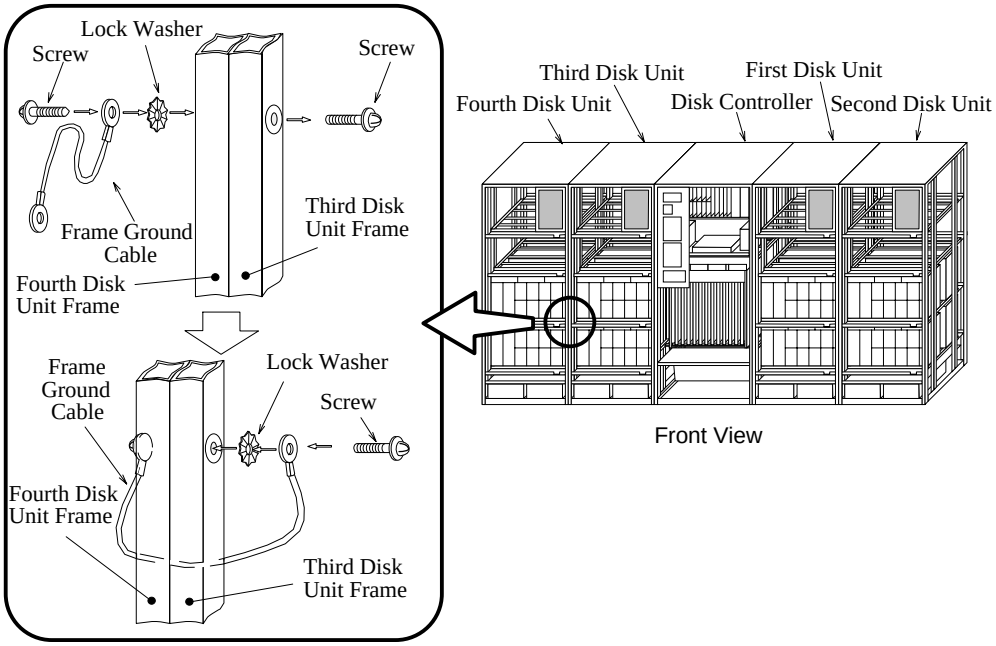

Fig. 3.4.3.3-6 Attachment of Frame Ground Cable

Copyright ©1997, Hitachi, Ltd.

3.4.3.4 Side Cover Re-Installation

Attach the side cover to the end of the string with the four binding screws and washers. See Fig. 3.4.3.4-1 and Table 3.4.2.2-1.

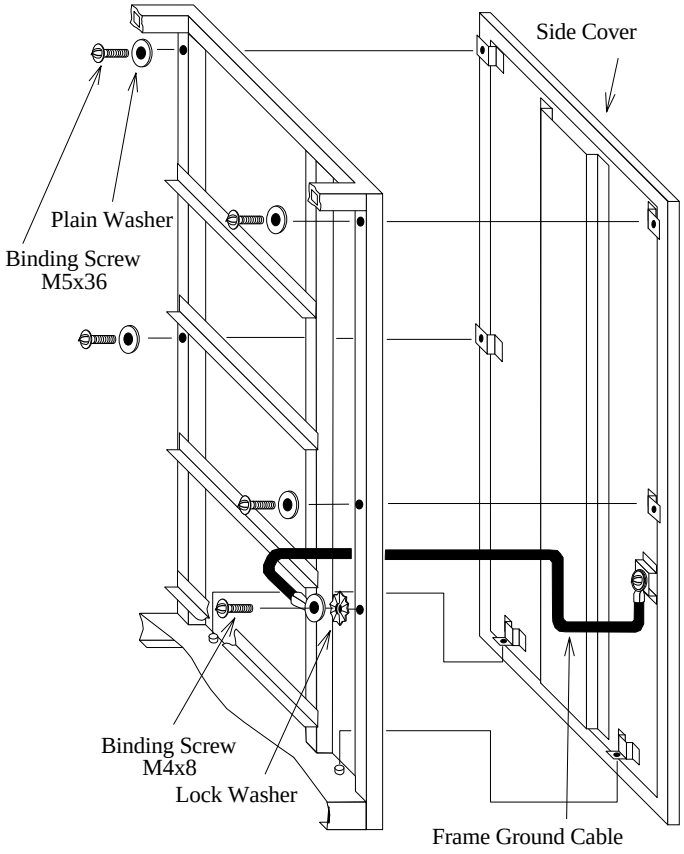

Fig. 3.4.3.4-1 Re-Installation of Side Cover

3.4.4 Switch and Jumper Plug Installation

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

3.4.4.1 DKUMN Setting

Set the switches and install the jumper plugs in the DKUMN PCBs as indicated in the table below.

Table 3.4.4.1-1 DKUMN PCB Jumper Plug Positions

	1	2	3	4	5	6	Remarks
	DKUMN-R2F	DKUMN-R2R	DKUMN-L1F	DKUMN-L1R	DKUMN-L2F	DKUMN-L2R

3.4.5 Cabling

3.4.5.1 Connection of DKUMN Cable

1. Loosen the repeat binders which secure the DKUMN cables.

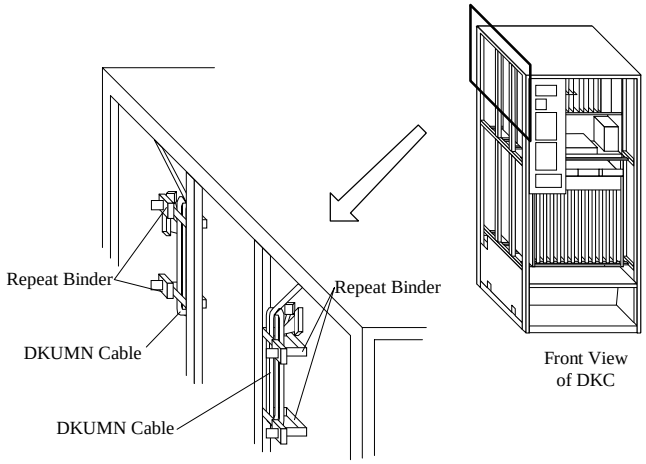

Fig. 3.4.5.1-1 Binding of DKUMN Cables

2. Before binding the DKUMN cables, secure the DKUMN PCB. Refer to Fig. 3.4.5.1-2.
   a. Loosen the screws.
   b. Lift the DKUMN PCB.
   c. Slide and secure the DKUMN PCB.

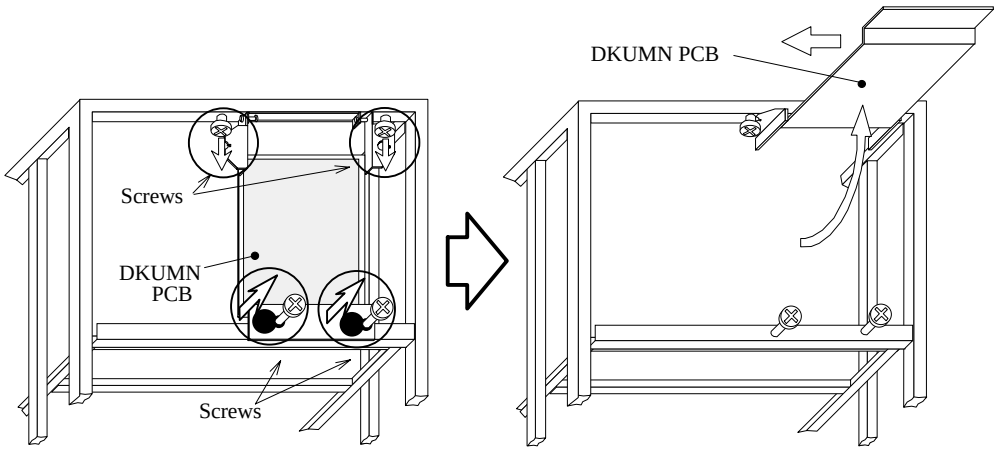

Fig. 3.4.5.1-2 Lift of DKUMN PCB

3. Bind the cables with repeat binders to prevent them from sagging.

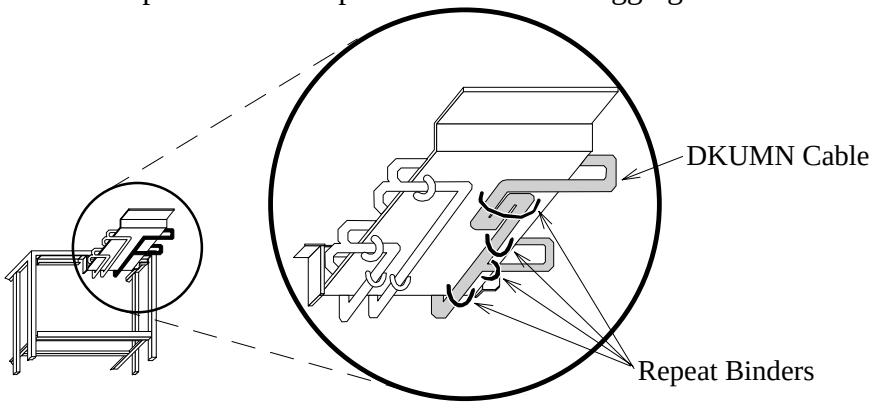

Fig. 3.4.5.1-3 Binding of DKUMN Cables

Copyright ©1997, Hitachi, Ltd.

Second Disk Unit

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Connect the DKUMN cables between the First Disk Unit and the second Disk Unit as indicated in the table below.
2. Bind the cables with repeat binders to prevent them from sagging.

Table 3.4.5.1-1 Connection of DKUMN Cables

No.	First Disk Unit			Second Disk Unit			Remarks

Third Disk Unit

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Connect the PWRCTL PCBs or MPS Back Board (PL) and DKUMN PCBs as summarized in the table below.
2. Bind the cables with repeat binders to prevent them from sagging.

Table 3.4.5.1-2 Connection of DKUMN Cable

No.	Disk Controller			Third Disk Unit			REMARKS

3.4.6 Check of Jumper Settings

1. Check the jumper settings (JP1, JP2 and JP3) on the DKUMN PCBs. Refer to Section 3.4.4.1 DKUMN Setting [INST03-500].
   When the jumper plugs are not installed to the correct sockets, install the jumper plugs to the correct sockets.

2. Check the SCSI ID jumpers on the HDD back boards. Refer to Section 3.4.4.2 SCSI ID Setting step 2 [INST03-530 through 540].
   When the SCSI ID jumpers are not installed to the correct sockets, install the SCSI ID jumpers to the correct sockets.

3.4.7 Check and Testing

3.4.7.1 AC Input Voltage Check

⚠WARNING

Do not touch the internal parts of the AC power cable, the AC Box, or the Breaker Box.
Line voltage is present even if the circuit breaker is off.

1. Check the AC input voltage using a voltmeter at the customer's AC power source (at the distribution board or receptacle for R & S connectors).

Copyright ©1997, Hitachi, Ltd.

3.4.7.2 Checking the AC Input Cable, and AC Input Voltage Select Jumper Cable

1. Check the input power cable and jumper cable (P104) at the AC Boxes in Disk Units. See Table 3.4.7.2-1, Fig. 3.4.7.2-1, and Fig. 3.4.7.2-2 for items.

Table 3.4.7.2-1 AC Input Cable Conditions and Jumper Cable (P104) Positions

Input Voltage	AC Input Cable Conditions	Jumper Cable (P104) Position	Remarks
200-240Vac	4 conductors (R,S,T,FG)	J104-1	J104-2 dummy connector
380-415Vac	5 conductors (R,S,T,N,FG)	J104-2	J104-1 dummy connector

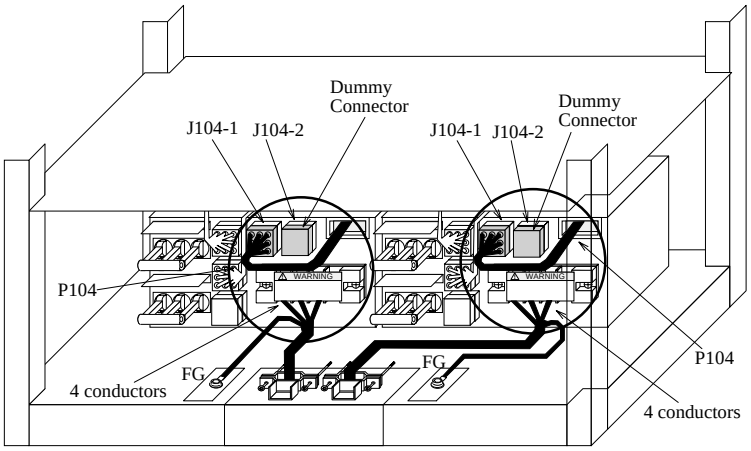

Fig. 3.4.7.2-1 AC Input Cable Conductors and Jumper Cable (P104) Positions 200-240Vac

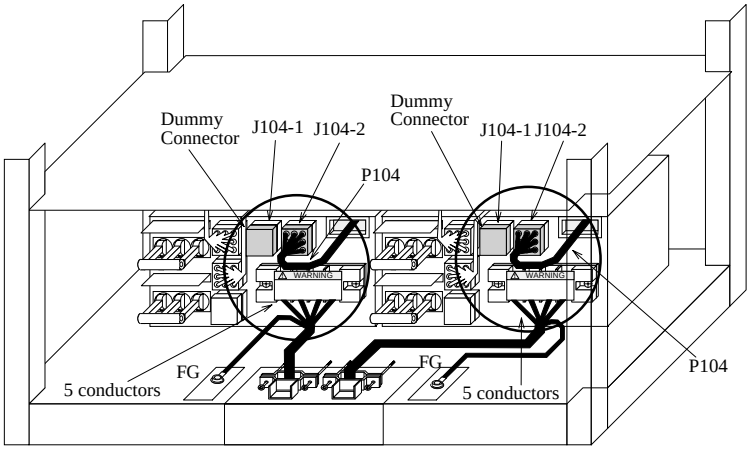

Fig. 3.4.7.2-2 AC Input Cable Conductors and Jumper Cable (P104) Positions 380-415Vac

2. Return to General Flow.
   New Installation : Go to INST02-11 step(7)-3.
   Non-Disruptive Installation : Go to INST02-21 step(7)-3.
   Disruptive Installation : Go to INST02-42 step(11)-3.

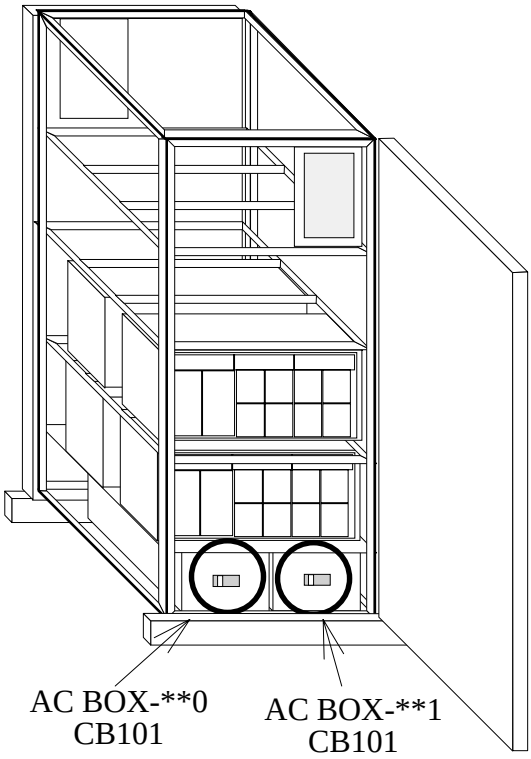
3.5 Installation of Hz Conversion Kit

3.5.1 Installation of Hz Conversion Kit for Disk Unit (DKU-F305I-56, DKU-F305I-65)

DKU-F305I-56	DKU305IE-14 (50Hz) to DKU305IU-14 (60Hz)
DKU-F305I-65	DKU305IU-14 (60Hz) to DKU305IE-14 (50Hz)

⚠ CAUTION

Perform The Hz Conversion with care.
This Hz Conversion is concerned with Primary Circuit.
Perform this procedure before connecting the Power Cable Assy.
(Turn off the circuit breakers on the power distribution panel)
Turn off the main circuit breaker CB101 located in the AC Box.



Front View

12. Change the Nameplate.
    Refer to Fig. 3.5.1.3-13 and Fig. 3.5.1.3-14 “Location of Nameplate and Labels”.

DKU-F305I-56

a. Change the Nameplate , Label (V. Hz) and Label (CSA).
   Engrave the manufacturing number and so forth on the new nameplate and labels.
b. Remove the Label (IN), Label (CE Mark) and Label (UL3).
c. Put the Label (UL/CUL) and Label Noise (FCC/CSA).

DKU-F305I-65

a. Change the Nameplate , Label (V. Hz) and Label (CSA).
   Engrave the manufacturing number and so forth on the new nameplate and labels.
b. Remove the Label (UL/CUL) and Label Noise (FCC/CSA).
c. Put the Label (IN), Label (CE Mark) and Label (UL3).

3.6 Installation of Channel Adapter

Note : When installing three or more channel options,
the CL Additional Power Supply (DKC-F310I-80) must be installed.
In such a case, be sure to add the channel option(s) after the CL Additional Power Supply is added.

3.6.1 Installation of Parallel 8-channel Switch (DKC-F310I-8P)

3.6.1.1 Parts list

Table 3.6.1-1 Parts List for Parallel 8-channel Switch

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-8P	Parallel 4-channel Switch PCB	3252510-A	2	
		I/F Connector Panel (CH A)	2102090-A	2	For CH A
		I/F Connector Panel (CH B)	2102090-B	2	For CH B
		I/F Connector Panel (CH C)	2102090-C	2	For CH C
		I/F Connector Panel (CH D)	2102090-D	2	For CH D
		Screw	SB408	32	
		Label	5500246-1	4	Parallel
		Nameplate	3252542-5	1	For DKC-F310I-8P
		Bypass Connector	5430027-8	8	For removal of CHA

3.6.1.2 Flowchart

(1) Insert the PCBs.
↓
(2) Install the I/F connector panels.

3.6.1.3 Installation Procedure of Parallel 8-channel Switch

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Insertion of the PCBs
   a. Remove the dummy plate installed in the installation location referring to the Fig. 3.6.1-1. (Note) Dummy plates should be stored for future use in De-installation.
   b. Set the jumper sockets (JP1 to JP4) referring to Fig. 3.6.1-2A.
   c. Insert the PCBs to the correct locations in the Logic Box. Refer to Table 3.6.1-2.
   d. Fasten the two screws referring to Fig. 3.6.1-2B.

Table 3.6.1-2 Inserting Location (Front of the unit)

Cluster	CL1						CL2					CL1

3.6.2.3 Installation Procedure of Parallel 8-channel Switch

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Insertion of the PCBs
   a. Remove the dummy plate installed in the installation location referring to the Fig. 3.6.2-1. (Note) Dummy plates should be stored for future use in De-installation.
   b. Set the jumper sockets (JP1 to JP4) referring to Fig. 3.6.2-2A.
   c. Insert the PCBs to the correct locations in the Logic Box. Refer to Table 3.6.2-2.
   d. Fasten the two screws referring to Fig. 3.6.2-2B.

Table 3.6.2-2 Inserting Location (Front of the unit)

Cluster	CL1						CL2					CL1
Slot No.	N	P	Q	R	S	T	U	V	W	X	Y	Z
Function	TM	CHA	CHA	CHA	CHA	CACHE	CACHE	CHA	CHA	CHA	CHA	TM

3.6.5 Installation of SCSI 8-port Adapter (DKC-F310I-8C)

Note : When installing three or more channel options,
the CL Additional Power Supply (DKC-F310I-80) must be installed.
In such a case, be sure to add the channel option(s) after the CL Additional Power Supply is added.

3.6.5.1 Parts list

Table 3.6.5-1 Parts List for SCSI 8-port Adapter

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-8C	SCSI 4-port Adapter PCB	3252505-A	2	
		I/F Connector Panel	2102035-A	1	Cluster 1 side
		I/F Connector Panel	2102035-B	1	Cluster 2 side
		Screw	SB408	8	
		Label	5500247-1	4	SCSI
		Nameplate	3252542-6	1	For DKC-F310I-8C
		Connector (Terminator)	5486080-868	8	

3.6.5.2 Flowchart

(1) Insert the PCBs.
↓
(2) Install the I/F connector panels.
↓
(3) Connect the SCSI cables.
↓
(4) Attach the labels.
↓
(5) Attach the nameplate.

3.6.5.3 Installation Procedure of SCSI 8-port Adapter

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Insertion of the PCBs
   a. Remove the dummy plate installed in the installation location referring to the Fig. 3.6.5-1. (Note) Dummy plates should be stored for future use in De-installation.
   b. Insert the PCBs to the correct locations in the Logic Box. Refer to Table 3.6.5-2.
   c. Fasten the two screws referring to Fig. 3.6.5-2.

Table 3.6.5-2 Inserting Location (Front of the unit)

Cluster	CL1						CL2					CL1
Slot No.	N	P	Q	R	S	T	U	V	W	X	Y	Z
Function	TM	CHA	CHA	CHA	CHA	CACHE	CACHE	CHA	CHA	CHA	CHA	TM
Location No.	TM-1N	CHA-1P	CHA-1Q	CHA-1R	CHA-1S	CACHE-1T	CACHE-2U	CHA-2V	CHA-2W	CHA-2X	CHA-2Y	TM-1Z
Order of addition		Basic	Add.1	Add.2	Add.3			Basic	Add.1	Add.2	Add.3	

Up to 4 SCSI 8-port adapters can be installed in the subsystem.

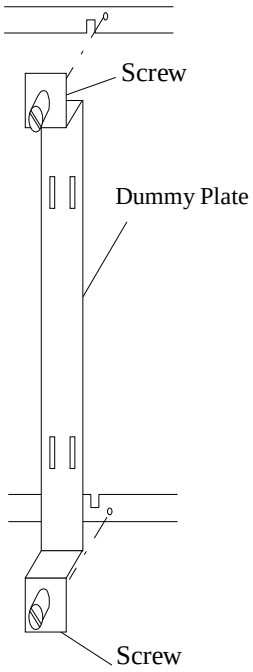

Fig. 3.6.5-1 Removal of Dummy Plate

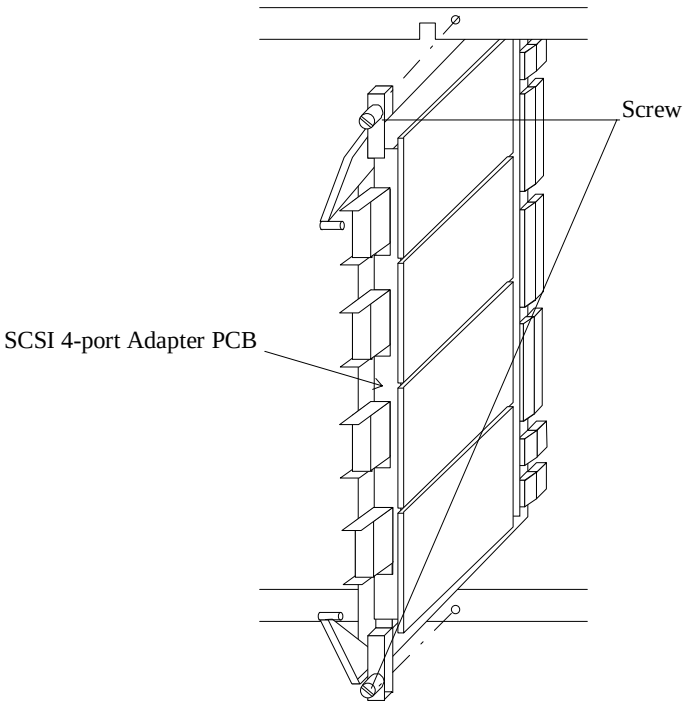

Fig. 3.6.5-2 Insertion of PCB

2. Installation of the I/F connector panel
   Install the I/F connector panel in the order of the location number ①②③④ shown in Fig. 3.6.5-3. When the I/F connector panel is installed to the location ④ in the DKC which installs the OUTLET BOX (maintenance tool), remove the OUTLET BOX referring to Fig. 3.6.5-4 before installation of the I/F connector panel. However, when a mixture of parallel channel is installed, referring to [LOCATION04-40,70] in a LOCATION Section.

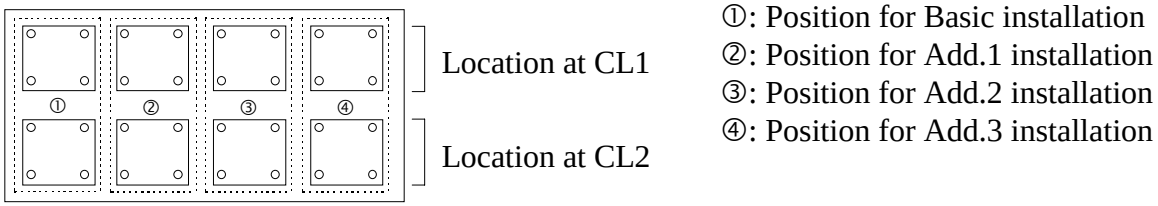

Fig. 3.6.5-3 Location of I/F Connector Panel (Front)

a. When the I/F connector panel is installed to the location ④, remove the OUTLET BOX referring to Fig. 3.6.5-4.
b. Remove the dummy plate referring to Fig. 3.6.5-5.
c. Wire the SCSI cables to the front of DKC and then install the I/F connector panel referring to Fig. 3.6.5-6.
   (Note): Dummy plates should be stored for future use in de-installation.
d. When the OUTLET BOX was removed, install the OUTLET BOX to the original position after installing the I/F connector panel.

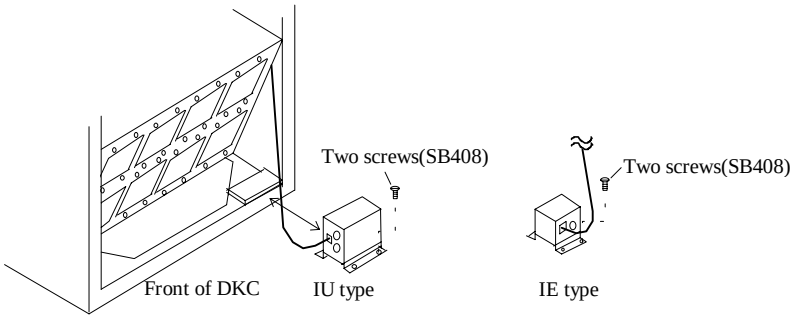

Fig. 3.6.5-4 Removal of OUTLET BOX

3.7 Installation of Shared Memory and Cache Memory

a. When only Shared Memory is to be installed,
go to “3.7.1 Installation of Additional Shared Memory (DKC-F310I-32/128)”.
b. When only Cache Memory is to be installed or when Shared Memory and Cache Memory are to be installed at the same time,
go to “3.7.2 Installation of Additional Cache Memory (DKC-F310I-20/256/1024)”. (INST03-1260)

3.7.1 Installation of Additional Shared Memory (DKC-F310I-32/128)

3.7.1.1 Flowchart

(1) When the subsystem is powered on, blockade the Shared Memory on the cluster 1 from SVP.
When powered off, go to step (2).

↓

(2) Install the Shared Memory on the cluster 1.

↓

(3) When the subsystem is powered on, restore the Shared Memory on the cluster 1 and blockade the Shared Memory on the cluster 2 from SVP.
When powered off, go to step (4).

↓

(4) Install the Shared Memory on the cluster 2.

↓

(5) When the subsystem is powered on, restore the Shared Memory on the cluster 2 from SVP.
When powered off, go to step (6).

↓

(6) Change the nameplate.

3.7.1.2 Parts List

Table 3.7.1.2-1 Parts List

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-32	SH024-B	1505404-B	2	Shared Memory Module (16MB)
		Nameplate	3252736-1	1	Not used
2	DKC-F310I-128	SH100-B	1501164-B	2	Shared Memory Module (64MB)

Copyright ©1997,1998, Hitachi, Ltd.

3.7.1.3 Installation Procedure of Additional Shared Memory

1. When the subsystem is powered on, blockade the Shared Memory on the cluster 1 from SVP. When powered off, go to step 2.
   a. Go to INST02-59B step ⑨.

2. Install the Shared Memory on the Cluster 1.
   Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

2-1. Remove the PCBs.
   a. While referring to Fig. 3.7.1.3-1 and Table 3.7.1.3-1, check the Shut Down LED on the Cache Memory PCB in the Rear Logic Box. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on. (This procedure [2-1. a.] is not valid for a New Installation.)

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is a PCB to be added.

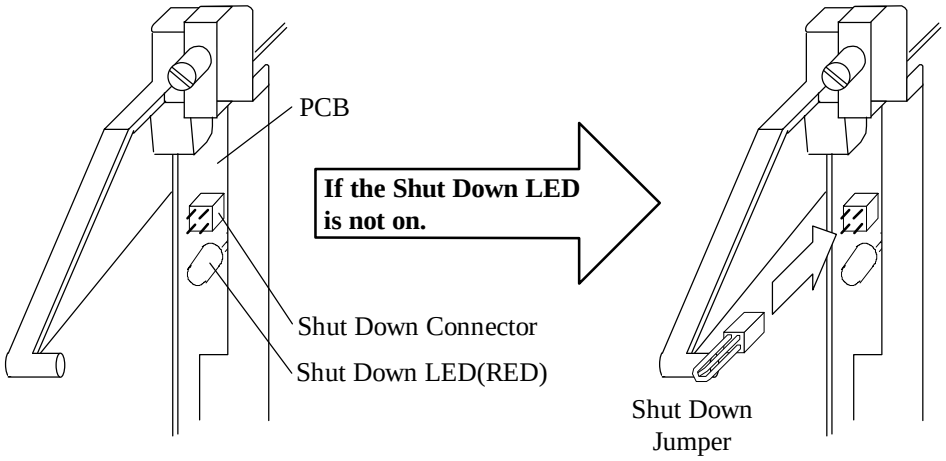

Fig. 3.7.1.3-1 Location of the Shut Down LED

Table 3.7.1.3-1 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB

Copyright ©1997,1998, Hitachi, Ltd.

b. Remove the two screws and remove the Cache Memory PCB.

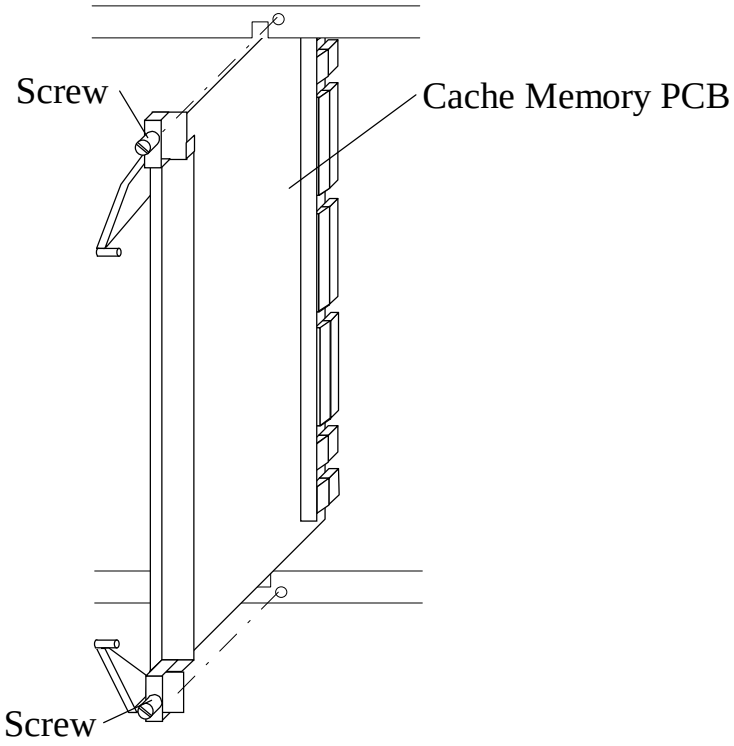

Fig. 3.7.1.3-2 Removal of the Cache Memory PCB

c. Remove the Shut Down Jumper if it is mounted.

Copyright ©1997, Hitachi, Ltd.

2-2. Insert the Shared Memory Modules.

a. Insert the Shared Memory Modules that match the required Shared Memory capacity referring to Fig. 3.7.1.3-3 and Table 3.7.1.3-2 or 3.

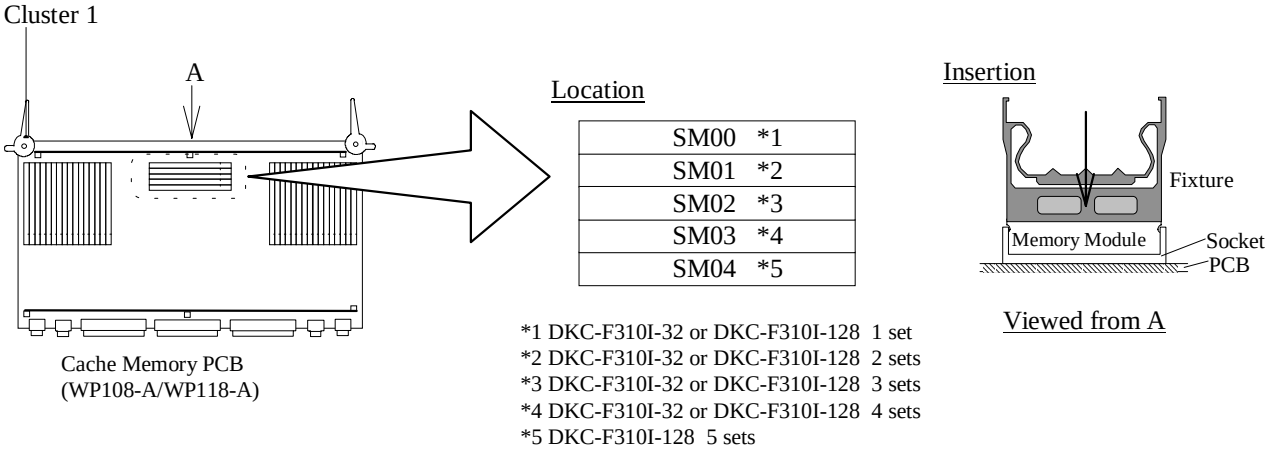

Fig. 3.7.1.3-3 Inserting Location of the Shared Memory Module

Table 3.7.1.3-2 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed of DKC-F310I-32 and DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 1	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	16 MB	DKC-F310I-32 1 set	SH024-B	1
2	16 MB	32 MB	DKC-F310I-32 2 sets	SH024-B	1
3	32 MB	48 MB	DKC-F310I-32 3 sets	SH024-B	1
4	48 MB	64 MB	DKC-F310I-32 4 sets	SH024-B	1
5	64 MB	128 MB	DKC-F310I-128 1 set	SH100-B	1

Note: This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Table 3.7.1.3-3 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed only of DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 1	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	64 MB	DKC-F310I-128 1 set	SH100-B	1
2	64 MB	128 MB	DKC-F310I-128 2 sets	SH100-B	1
3	128 MB	192 MB	DKC-F310I-128 3 sets	SH100-B	1
4	192 MB	256 MB	DKC-F310I-128 4 sets	SH100-B	1

Note: This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

2-3. Insert the PCB.

a. Insert the Cache Memory PCB into the Rear Logic Box referring to Table 3.7.1.3-4.

b. Fasten the two screws.

Table 3.7.1.3-4 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB

c. Go to INST02-59B step ⑪.

Copyright ©1997,1998, Hitachi, Ltd.

3. When the subsystem is powered on, restore the Shared Memory on the cluster 1 and blockade the Shared Memory on the cluster 2 from SVP. When powered off, go to step 4.
   a. Go to INST02-59B step ⑪.

4. Install the Shared Memory on the Cluster 2.
   Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

4-1. Remove the PCBs.
   a. While referring to Fig. 3.7.1.3-4 and Table 3.7.1.3-5, check the Shut Down LED on the Cache Memory PCB in the Rear Logic Box. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on. (This procedure [4-1. a.] is not valid for a New Installation.)

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is a PCB to be added.

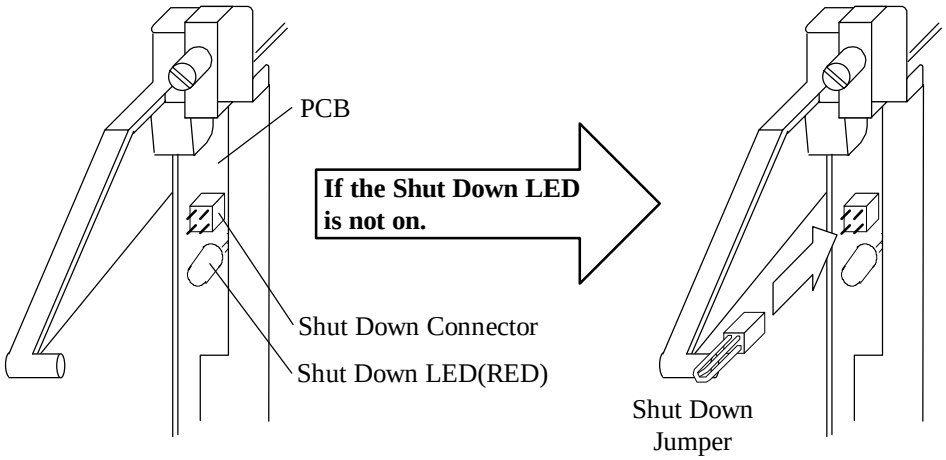

Fig. 3.7.1.3-4 Location of the Shut Down LED

Table 3.7.1.3-5 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks

4-2. Insert the Shared Memory Modules.

a. Insert the Shared Memory Modules that match the required Shared Memory capacity referring to Fig. 3.7.1.3-6 and Table 3.7.1.3-6 or 7.

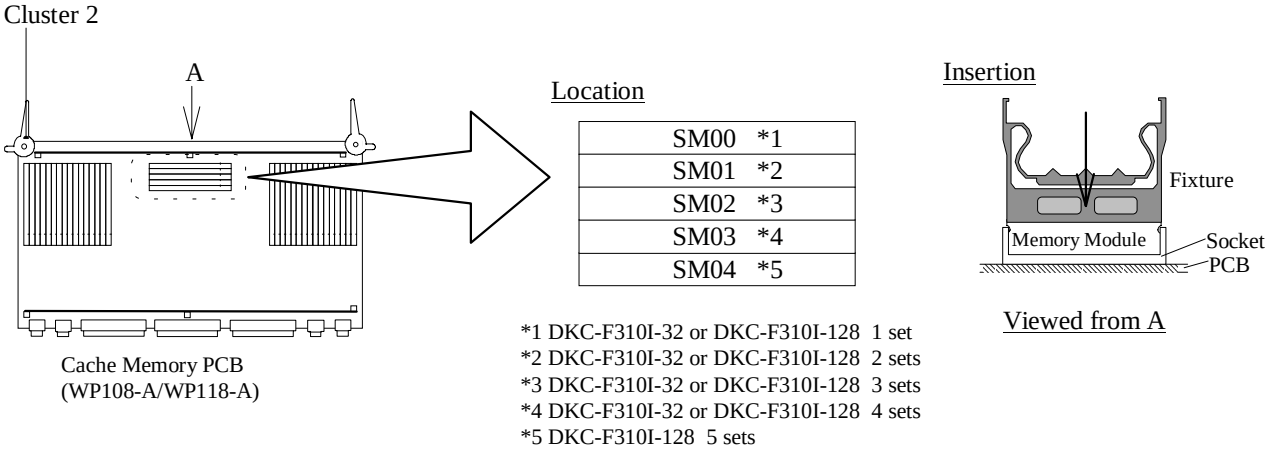

Fig. 3.7.1.3-6 Inserting Location of the Shared Memory Module

Table 3.7.1.3-6 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed of DKC-F310I-32 and DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 2	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	16 MB	DKC-F310I-32 1 set	SH024-B	1
2	16 MB	32 MB	DKC-F310I-32 2 sets	SH024-B	1
3	32 MB	48 MB	DKC-F310I-32 3 sets	SH024-B	1
4	48 MB	64 MB	DKC-F310I-32 4 sets	SH024-B	1
5	64 MB	128 MB	DKC-F310I-128 1 set	SH100-B	1

Note: This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Table 3.7.1.3-7 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed only of DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 2	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	64 MB	DKC-F310I-128 1 set	SH100-B	1
2	64 MB	128 MB	DKC-F310I-128 2 sets	SH100-B	1
3	128 MB	192 MB	DKC-F310I-128 3 sets	SH100-B	1
4	192 MB	256 MB	DKC-F310I-128 4 sets	SH100-B	1

Note: This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

3.7.2 Installation of Additional Cache Memory (DKC-F310I-20/256/1024)

3.7.2.1 Flowchart

(1) When the Additional Cache Board (DKC-F310I-20) is installed, install the Battery Boxes and BATT CTR PCBs.
When the Additional Cache Board (DKC-F310I-20) is not installed, go to step (2).

↓

(2) When the subsystem is powered on, blockade the Cache Memory on the cluster 1 from SVP.
When powered off, go to step (3).

↓

(3) Install the Cache Memory and Shared Memory on the cluster 1.

↓

(4) When the subsystem is powered on, restore the Cache Memory on the cluster 1 and blockade the Cache Memory on the cluster 2 from SVP.
When powered off, go to step (5).

↓

(5) Install the Cache Memory and Shared Memory on the cluster 2.

↓

(6) When the subsystem is powered on, restore the Cache Memory on the cluster 2 from SVP.
When powered off, go to step (7).

↓

(7) Change the nameplate.

3.7.2.2 Parts List

Table 3.7.2.2-1 Parts List

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-20	WP108-B	1505482-B	2	Cache Memory PCB
		WP118-B	1505847-B		
		Battery Box	3236759-A	2	
		BATT CTR PCB	1514192-A	2	
		Jumper (Battery)	3250530-A	2	Jumper Connector (BTJP)
		Nameplate	3252542-1	1	
2	DKC-F310I-256	SH024-A	1505404-A	8	Cache Memory Module (32MB)
		Nameplate	3252543-1	1	Not used

3.7.2.3 Installation Procedure of Additional Cache Memory

Notice : Confirm the quantity of the options to be installed prior to installing the cache memory. Refer to Table 1.1.2-1 and Table 1.1.2-2 (INST01-40 through 50) for the required quantity of options.

1. When the Additional Cache Board (DKC-F310I-20) is installed, install Battery Boxes and the BATT CTR PCBs.
   When the Additional Cache Board (DKC-F310I-20) is not installed, go to step 2.

   a. Remove the two screws and open the covers.

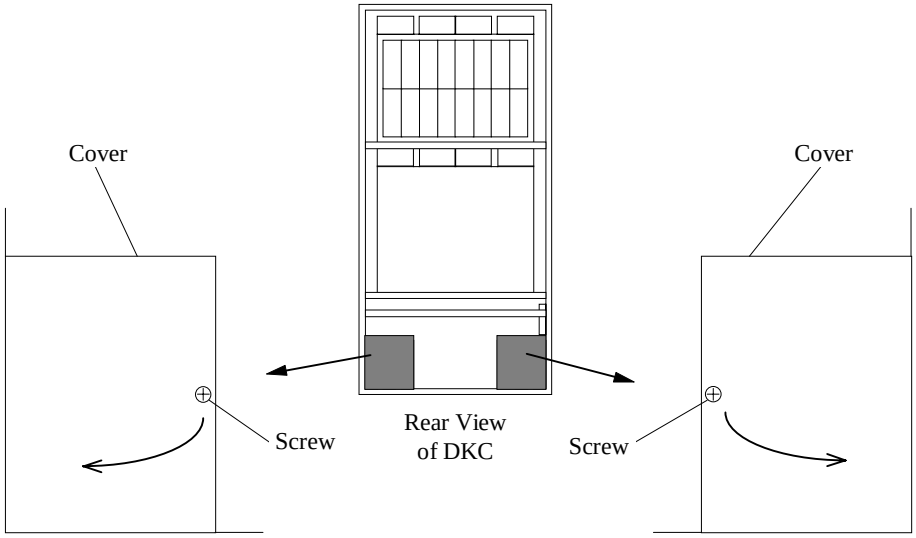

Fig. 3.7.2.3-1 Opening of the Cover

   b. Insert the Battery Boxes (BATTERY-12 and BATTERY-22) and fasten the four screws. Connect the cables to the Battery Boxes.

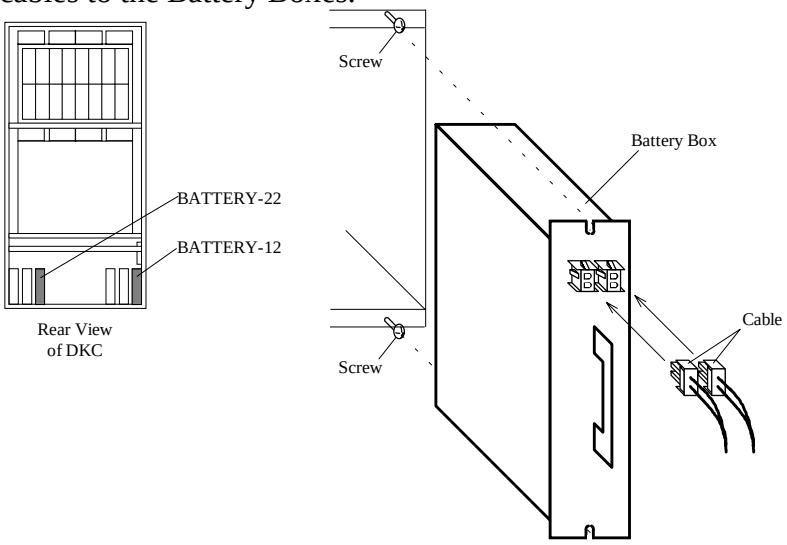

Fig. 3.7.2.3-2 Insertion of the Battery Box

Copyright ©1997, Hitachi, Ltd.

c. Insert the BATT CTR PCBs (BATT CTR-12 and BATT CTR-22). Rotate the stoppers and fasten the screws. Insert the Jumper Connectors to BATT CTR PCBs.

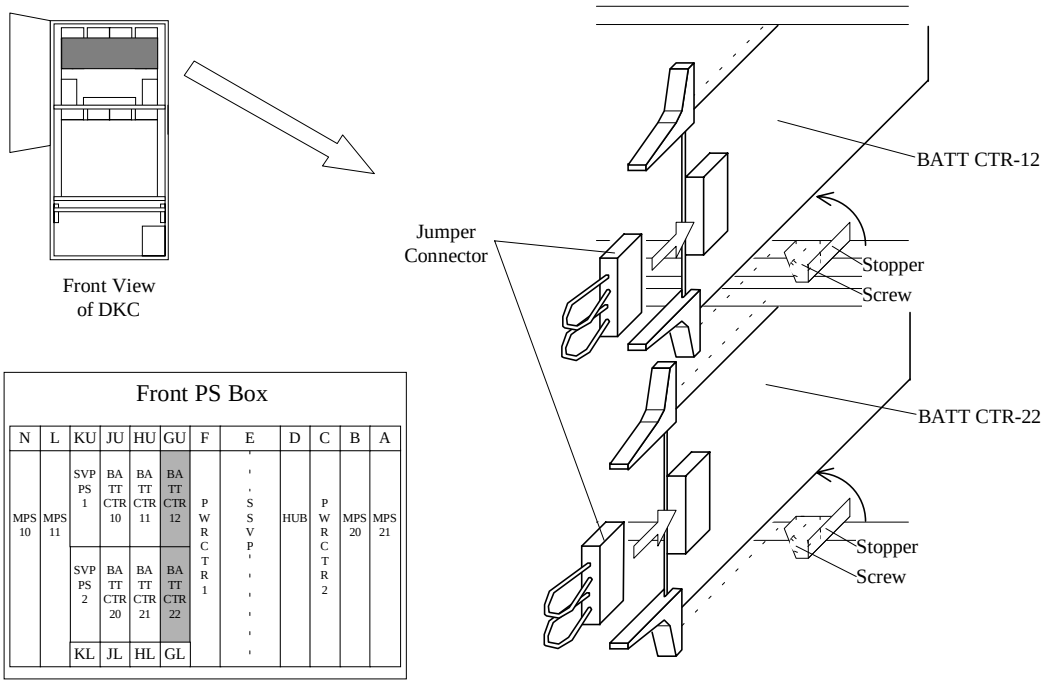

Fig. 3.7.2.3-3 Insertion of the BATT CTR

d. Close the covers and fasten the screws.

e. Go to INST02-59A step ②.

Copyright ©1997,1998, Hitachi, Ltd.

2. When the subsystem is powered on, blockade the Cache Memory on the cluster 1 from SVP. When powered off, go to step 3.
   a. Go to INST02-59A step ②.

3. Install the Cache Memory and Shared Memory on the cluster 1.
   Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

3-1. Remove the PCBs.
   a. While referring to Fig. 3.7.2.3-4 and Table 3.7.2.3-1, check the Shut Down LED on the Cache Memory PCB. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on. (This procedure [3-1 a.] is not valid for a New Installation.)

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is a PCB to be added.

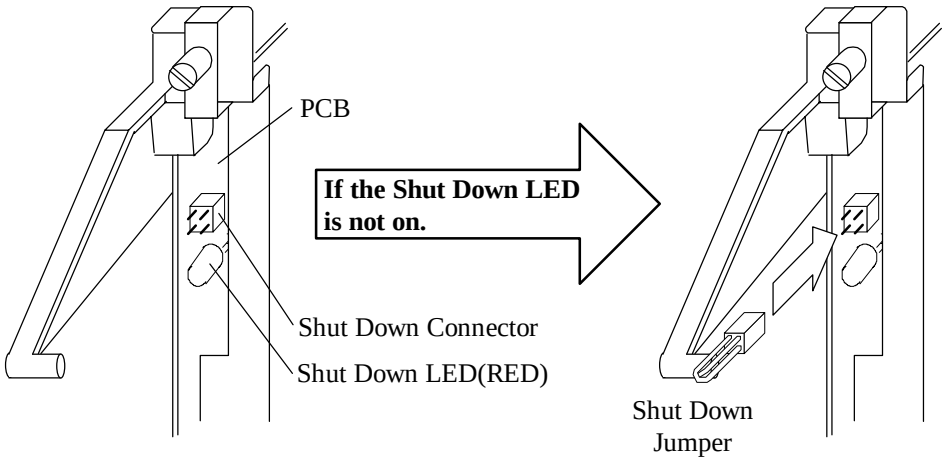

Fig. 3.7.2.3-4 Location of the Shut Down LED

Table 3.7.2.3-1 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/ WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB (Note 1)
	WP108-B/ WP118-B	Front Logic Box	T	CACHE-1T	Cache Memory PCB (Note 2)

Note 1: No PCB needs to be removed if 8 or more DKC-F310I-256 or DKC-F310I-1024 sets are installed, except when installing DKC-F310I-32 or DKC-F310I-128 sets.
Note 2: Remove the PCB only when it is installed.

Note : This value is a half value of whole capacity of cache memories. (the capacity of cache memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

b. When the Additional Shared Memory Module (DKC-F310I-32) is installed, insert the Shared Memory Modules. Refer to Section 3.7.1.3 Installation Procedure of Additional Shared Memory step 2-2 Insert the Shared Memory Modules (INST03-1190).
When the Additional Shared Memory Module (DKC-F310I-32) is not installed, go to step 3-3.

Copyright ©1997,1998, Hitachi, Ltd.

3-3. Insert the PCBs.

a. If the Additional Cache Board (DKC-F310I-20) is installed, remove the two screws and remove the dummy plate. Refer to Fig. 3.7.2.3-7.
   If the Additional Cache Board (DKC-F310I-20) is not installed, go to step b.
b. Install the Cache Memory PCB referring to Table 3.7.2.3-5.
c. Fasten the two screws.

Note : Dummy plate should be stored for future use in De-installation.

Table 3.7.2.3-5 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/ WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB
	WP108-B/ WP118-B	Front Logic Box	T	CACHE-1T	Cache Memory PCB (Note)

Note : Insert the PCB when DKC-F310I-20 is installed.

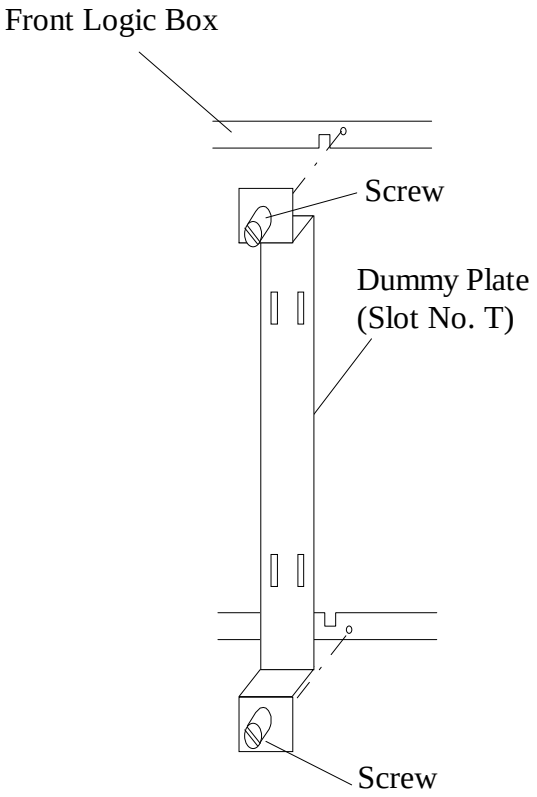

Fig. 3.7.2.3-7 Removal of the Dummy Plate

d. Go to INST02-59A step ④.

Copyright ©1997,1998, Hitachi, Ltd.

4. When the subsystem is powered on, restore the Cache Memory on the cluster 1 and blockade the Cache Memory on the cluster 2 from SVP. When powered off, go to step 5.
   a. Go to INST02-59A step ④.

5. Install the Cache Memory and Shared Memory on the cluster 2.
   Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

5-1. Remove the PCBs.
   a. While referring to Fig. 3.7.2.3-8 and Table 3.7.2.3-6, check the Shut Down LED on the Cache Memory PCB. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on. (This procedure [5-1. a.] is not valid for a New Installation.)

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is a PCB to be added.

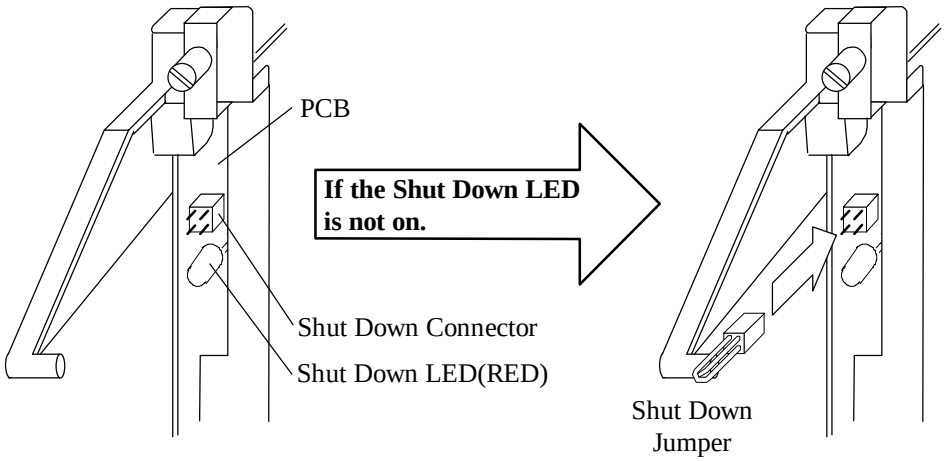

Fig. 3.7.2.3-8 Location of the Shut Down LED

Table 3.7.2.3-6 Location of the Cache Memory PCB

b. When the Additional Shared Memory Module (DKC-F310I-32) is installed, insert the Shared Memory Modules. Refer to Section 3.7.1.3 Installation Procedure of Additional Shared Memory step 4-2 Insert the Shared Memory Modules (INST03-1230).
When the Additional Shared Memory Module (DKC-F310I-32) is not installed, go to step 5-3.

Copyright ©1997,1998, Hitachi, Ltd.

5-3. Insert the PCBs.

a. If the Additional Cache Board (DKC-F310I-20) is installed, remove the two screws and remove the dummy plate. Refer to Fig. 3.7.2.3-11.
   If the Additional Cache Board (DKC-F310I-20) is not installed, go to step b.
b. Install the Cache Memory PCB referring to Table 3.7.2.3-10.
c. Fasten the two screws.

Note : Dummy plate should be stored for future use in De-installation.

Table 3.7.2.3-10 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
2	WP108-A/ WP118-A	Rear Logic Box	G	CACHE-2G	Cache Memory PCB
	WP108-B/ WP118-B	Front Logic Box	U	CACHE-2U	Cache Memory PCB (Note)

Note : Insert the PCB when DKC-F310I-20 is installed.

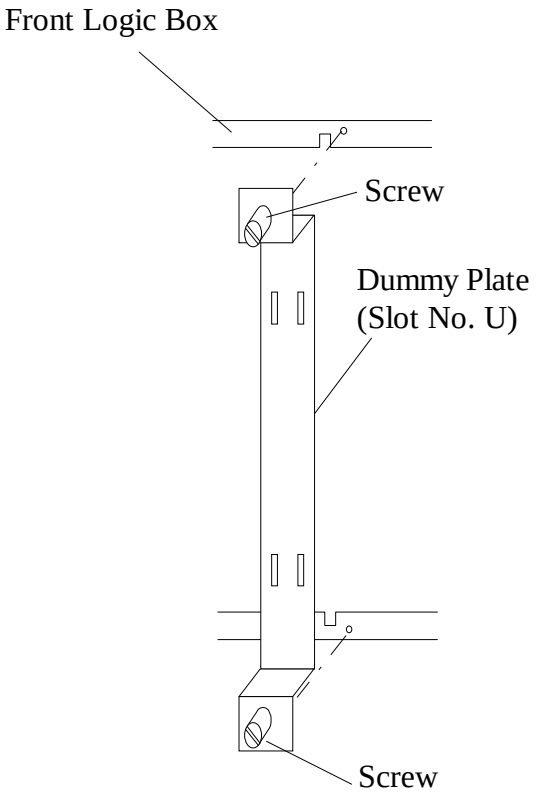

Fig. 3.7.2.3-11 Removal of the Dummy Plate

d. Go to INST02-59A step ⑥.

Copyright ©1997,1998, Hitachi, Ltd.

6. When the subsystem is powered on, restore the Cache Memory on the cluster 2 from SVP. When powered off, go to step 7.
   a. Go to INST02-59A step ⑥.

7. Change the nameplate.
   a. Refer to Fig. 3.7.2.3-12 and Table 3.7.2.3-11 to paint out unnecessary numbers and wipe off a necessary number painted previously so that the "Qt." marking for the corresponding nameplate can be seen. Indicate the number which is added the number installed previously on the number of options added newly.

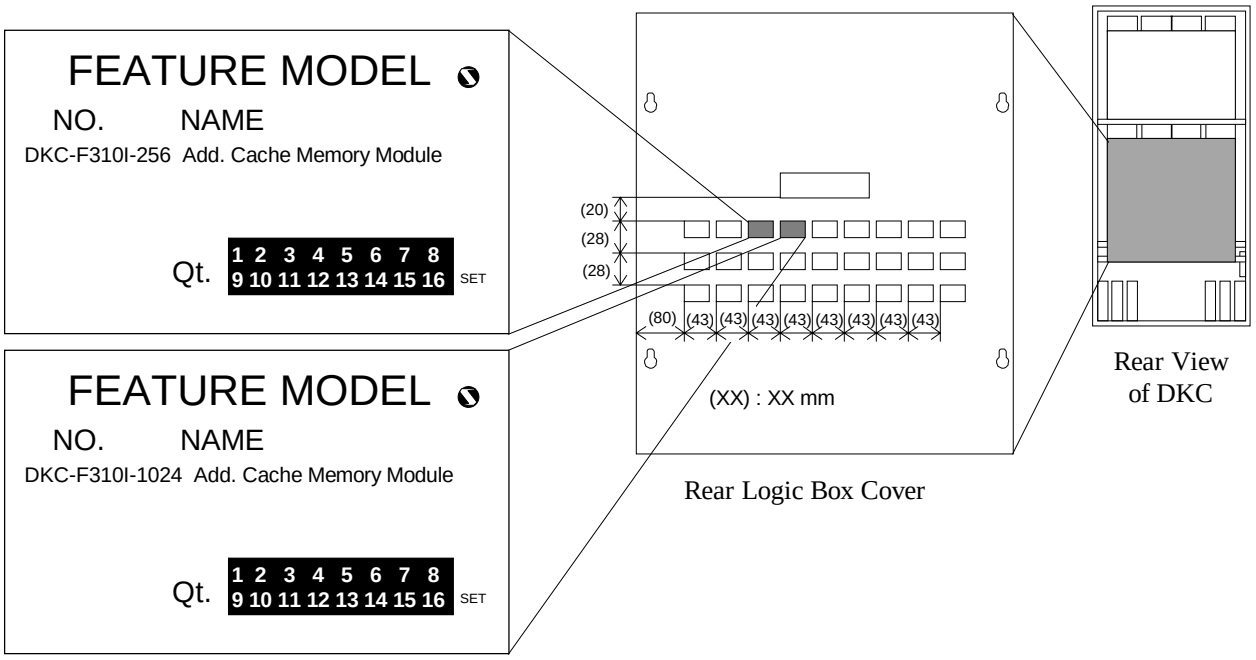

Fig. 3.7.2.3-12 Location of the Nameplate

b. When the Additional Shared Memory Module (DKC-F310I-32) is installed, change the nameplate. Refer to Section 3.7.1.3 Installation Procedure of Additional Shared Memory step 6 Change the nameplate (INST03-1250).
When the Additional Shared Memory Module (DKC-F310I-32) is not installed, go to step c.

c. When the Additional Cache Board (DKC-F310I-20) is installed, attach the nameplate. Refer to Fig. 3.7.2.3-13.
When the Additional Cache Board (DKC-F310I-20) is not installed, go to step 8.

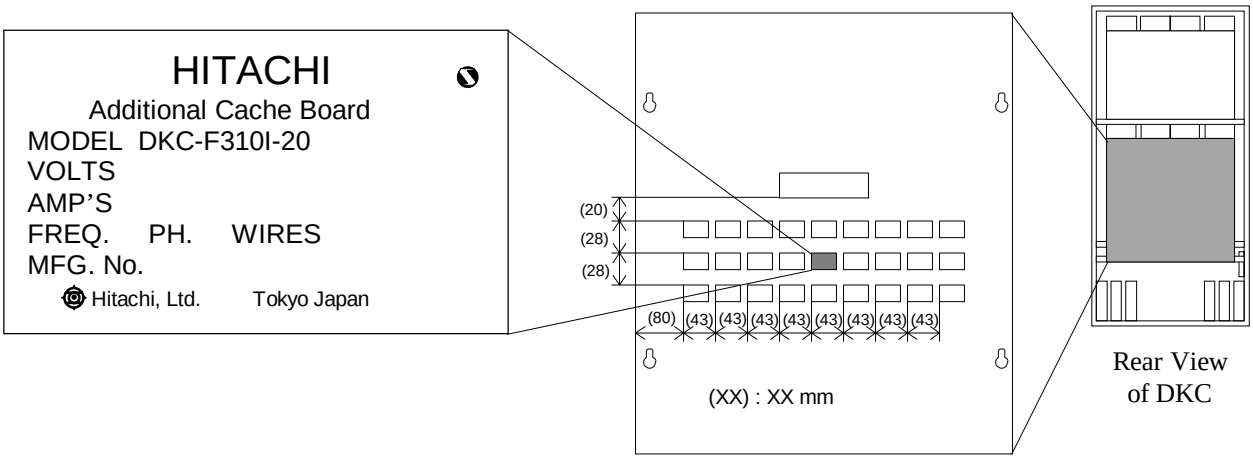

Fig. 3.7.2.3-13 Location of the Nameplate

8. Return to General Flow.
Go to INST02-59A step ⑧.

3.8 Installation of Redundant Power Supply

3.8.1 Flowchart

3.8.1.1 Installation of the CL Additional Power Supply (DKC-F310I-80).....[INST03-1460]

1. Confirm the PS Enable/Disable Switch.
↓
2. Install the Additional Power Supply (5V and 3V PS).
↓
3. Connect the inlet cable.
↓
4. Turn on the Additional Power Supply.
↓
5. Attach the nameplate.
↓
6. Check the DC voltage.

3.8.1.2 Installation of the CL Redundant Power Supply (DKC-F310I-81).....[INST03-1500]

1. Confirm the PS Enable/Disable Switch.
↓
2. Install the Redundant Power Supply (5V, 3V, and Multi PS).
↓
3. Connect the inlet cable.
↓
4. Turn on the Redundant Power Supply.
↓
5. Attach the nameplate.
↓
6. Check the DC voltage.

Copyright ©1997, Hitachi, Ltd.

3.8.1.3 Installation of the CL Additional Redundant Power Supply (DKC-F310I-82) .....[INST03-1540]

1. Confirm the PS Enable/Disable Switch.
↓
2. Install the Redundant Power Supply (5V and 3V PS).
↓
3. Connect the inlet cable.
↓
4. Turn on the Redundant Power Supply.
↓
5. Attach the nameplate.
↓
6. Check the DC voltage.

3.8.2 Installation of the CL Additional Power Supply (DKC-F310I-80)

3.8.2.1 Parts List

Table 3.8.2.1-1 Parts List

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-80	5V power supply	5500003-A	2	HS05065C-S
					TAH-325HSA
					HS05065C-W
		3V power supply	5500003-B	2	HS03075C-S
					TAH-264HSA
					HS03075C-W
		Nameplate	3252542-9	1	

3.8.2.2 Installation Procedure of the CL Additional Power Supply

1. Confirmation of the PS Enable/Disable Switch
   a. Confirm the PS Enable/Disable Switch is turned to (DOWN) **Disable**. Refer to Fig. 3.8.2.2-1.

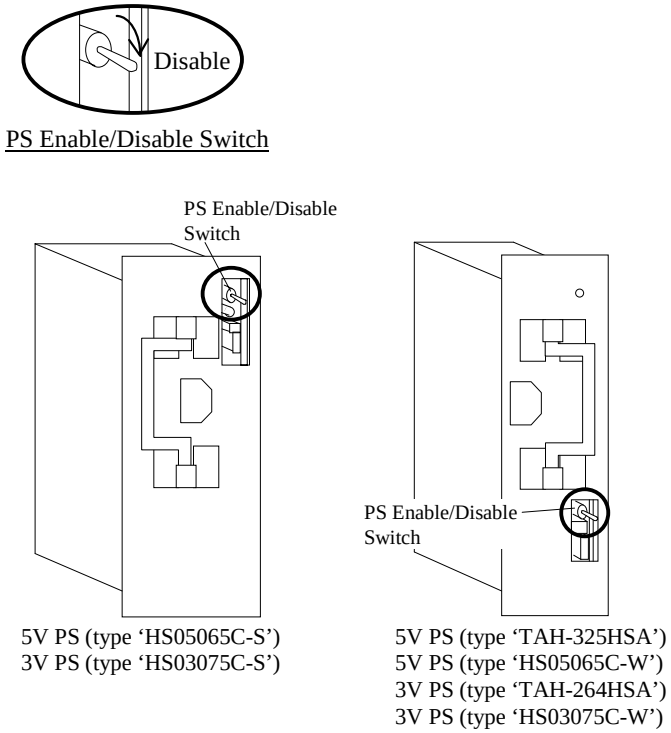

Fig. 3.8.2.2-1 Switch

Copyright ©1997,2000, Hitachi, Ltd.

2. Installation of the additional power supply
   a. Open the locking clamps and remove the inlet cables from the inserting locations. Refer to Table 3.8.2.2-1, Fig. 3.8.2.2-2, and Fig. 3.8.2.2-3.
   b. Loosen the screws and remove the dummy plates.
   c. Install the additional power supplies in the correct locations and fasten the screws. Refer to Table 3.8.2.2-1, Fig. 3.8.2.2-2, and Fig. 3.8.2.2-4.

   Note: Dummy plates should be stored for future use in De-installation.

Table 3.8.2.2-1 Inserting Location

No.	Part Name	PS Location		Remarks
		Cluster 1	Cluster 2	
1	5V Power Supply	5VPS12	5VPS22	
2	3V Power Supply	3VPS12	3VPS22	

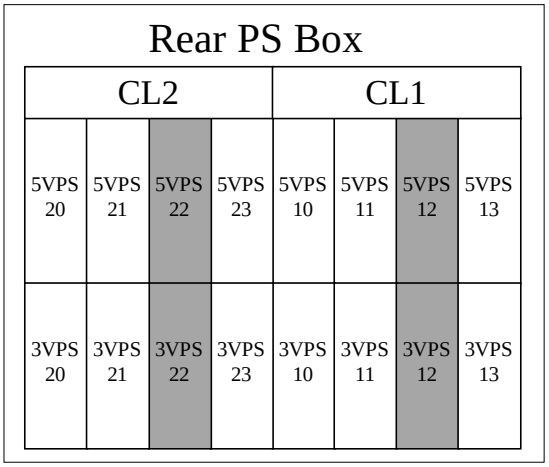

Fig. 3.8.2.2-2 Inserting Location

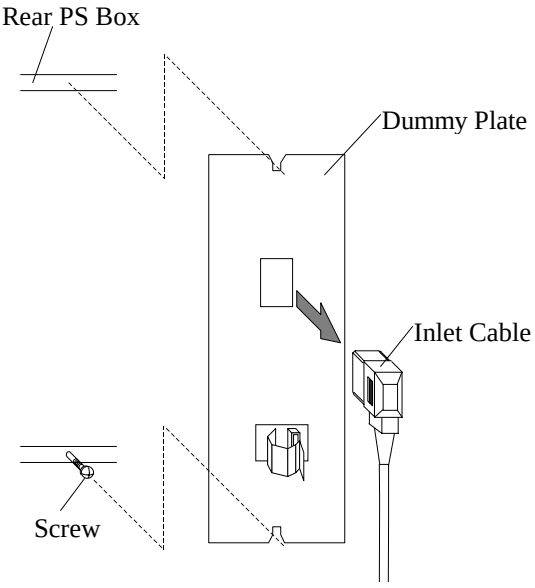

Fig. 3.8.2.2-3 Removal of Dummy Plate

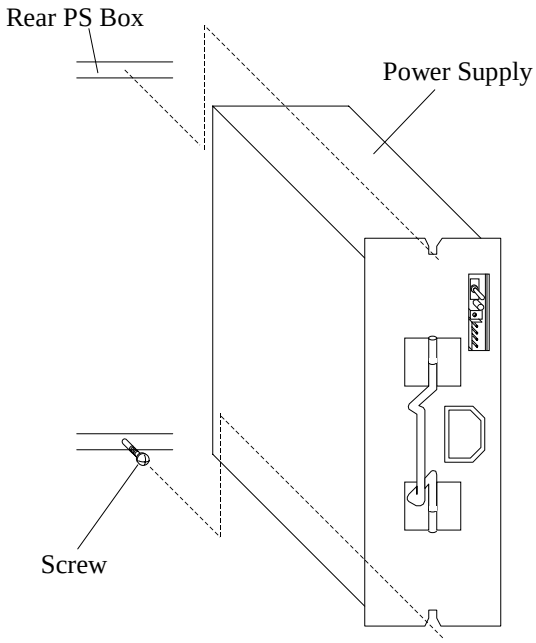

Fig. 3.8.2.2-4 Installation of Power Supply

Copyright ©1997, Hitachi, Ltd.

3. Connection of the inlet cable
   a. Connect the inlet cables to the power supply and fix them with the lever. Refer to Fig. 3.8.2.2-5.

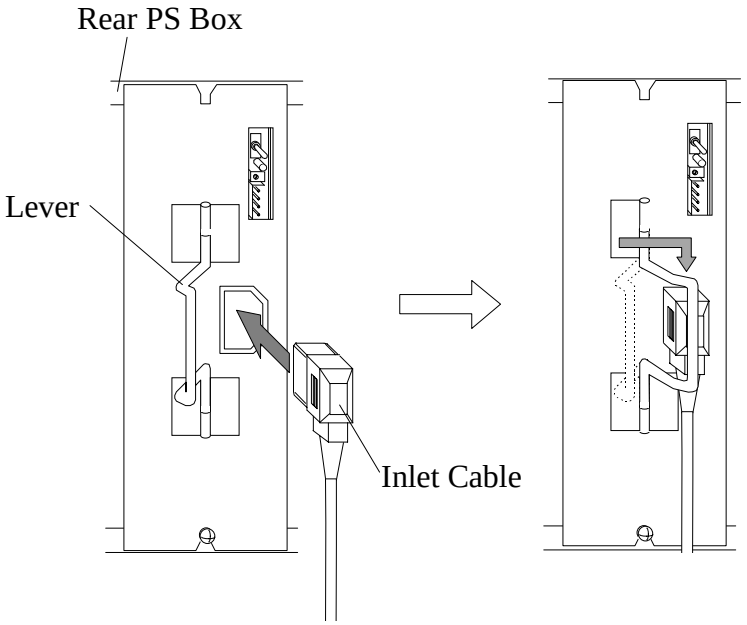

Fig. 3.8.2.2-5 Connection of Inlet Cable

4. Turn on the Additional Power Supply
   a. Turn the PS Enable/Disable Switch to (UP) **Enable**. Refer to Fig. 3.8.2.2-6.

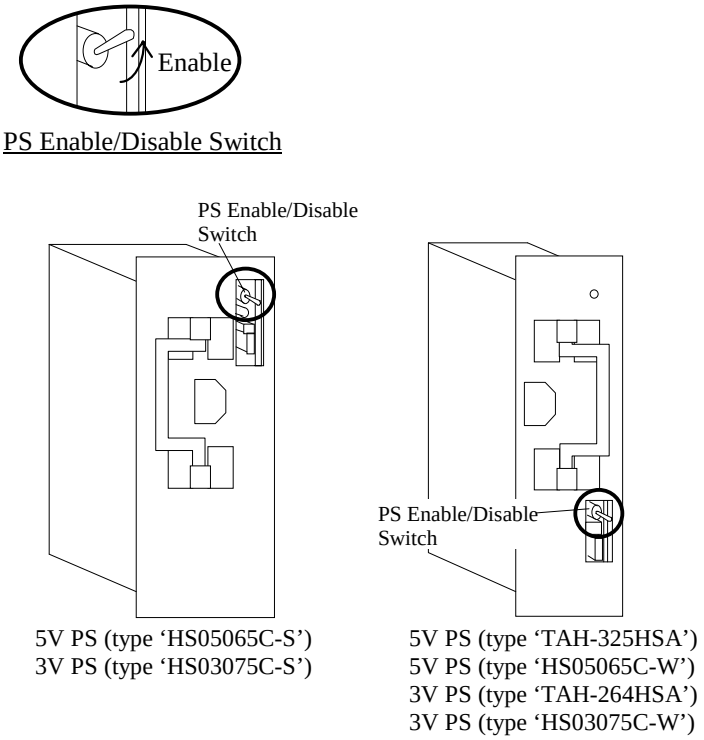

Fig. 3.8.2.2-6 Switch

Copyright ©1997,2000, Hitachi, Ltd.

5. Attachment of the nameplate
   a. Attach the nameplate of DKC-F310I-80 referring to Fig. 3.8.2.2-7.

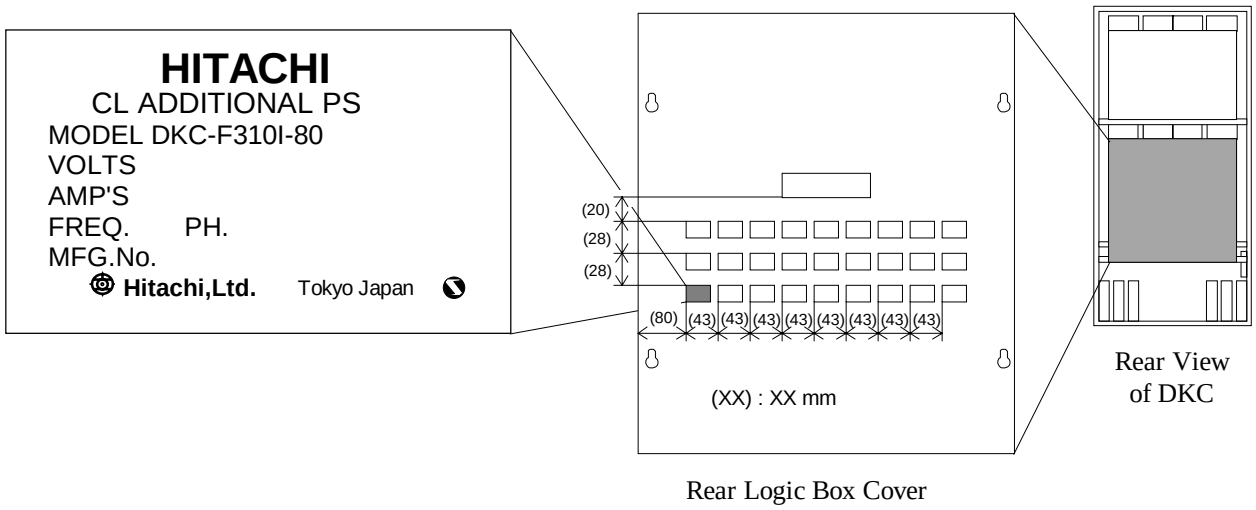

Fig. 3.8.2.2-7 Attachment of Nameplate

6. Check of DC voltage
   a. See CHECK OF DC VOLTAGE in PERIODIC SECTION.

7. Return to General Flow.
   New Installation: Go to INST02-10 step (4A).
   Non-disruptive Installation: Go to INST02-20 Step (2)-2.
   Disruptive Installation: Go to INST02-40 Step (3A).

3.9 Installation of the Platform for Canister Mount (DKU-F305I-B4)

3.9.1 Flowchart

The procedure for expanding the platform for the canister mount is shown below.

(1) Confirmation of installation position of platform for the canister mount.	[INST03-1590]
↓	
(2) Removal of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate.	[INST03-1590]
↓	
(3) Removal of the side plate.	[INST03-1610]
↓	
(4) Installation of the HDU box.	[INST03-1610]
↓	
(5) Connection of the DKUMN cable.	[INST03-1620]
↓	
(6) Address setting of the HDU box.	[INST03-1630]
↓	
(7) Attachment of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate.	[INST03-1630]
↓	
(8) Attachment of the side plate.	[INST03-1630]
↓	
(9) Connection of the INLET cable.	[INST03-1640]
↓	
(10) Attachment of the nameplate and label (REV).	[INST03-1650]
↓	
(11) Setting of the PS enable switch on the multi power supply.	[INST03-1660]
↓	
(12) Installation of the Jumper plug in the DKUMN PCB.	[INST03-1670]
↓	
(13) Check of the SCSI ID Jumpers	[INST03-1670]

3.9.2 Parts List

Table 3.9.2-1 Parts List for Platform for Canister Mount

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKU-F305I-B4	HDU Box	1505534-A	4	
		Multi Power Supply	5497470-A/B/C	8	
		SCSI BFR PCB	5497468-A	8	
		HDD FAN Assembly	5497471-A	12	
		Nameplate E (DKU-F305I)	2099650-57	1	
		Label (REV)	5497283-1	1

3.9.3 Installation Procedure of the Platform for Canister Mount

1. Refer to Chapter 1.2 Subsystem Frame Configuration (INST01-250). Confirm a position to install platform for the canister mount.

2. Removal of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate.

   a. Remove the acrylic cover①.

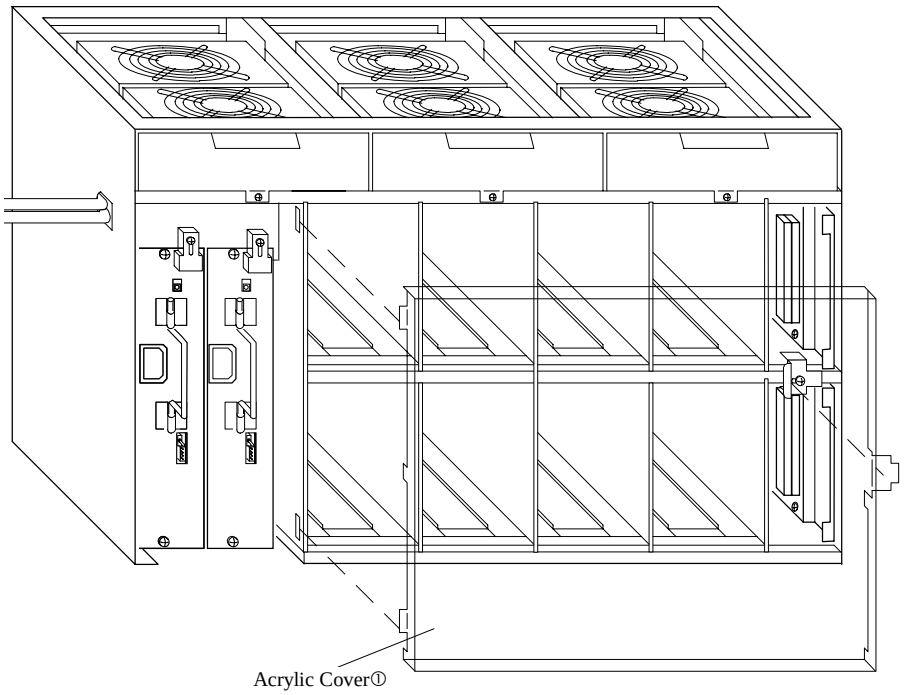

Fig. 3.9.3-1 Removal of the Acrylic Cover

   b. Loosen screw ① on stopper ② securing the SCSI BFR PCB ③ in the HDU box to be installed, slide stopper ② to the left, and pull out the SCSI BFR PCB ③.

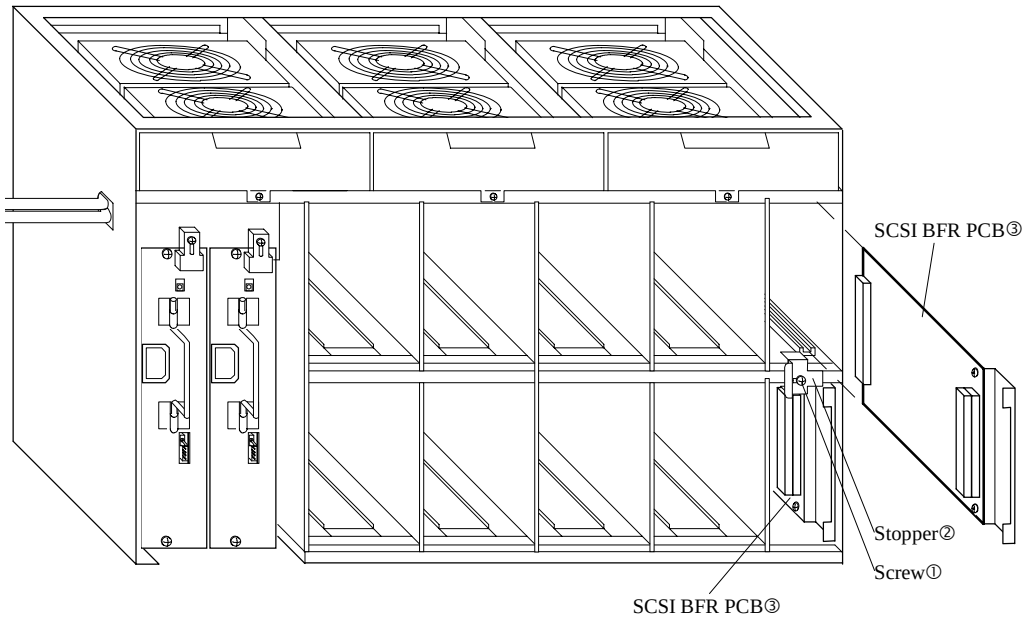

Fig. 3.9.3-2 Removal of the SCSI BFR PCB

Copyright © 1997, Hitachi, Ltd.

c. Remove screws ① securing the multi power supply ② in the HDU box to be installed, flip up the buffering rubbers ③, and pull out the multi power supply ②.

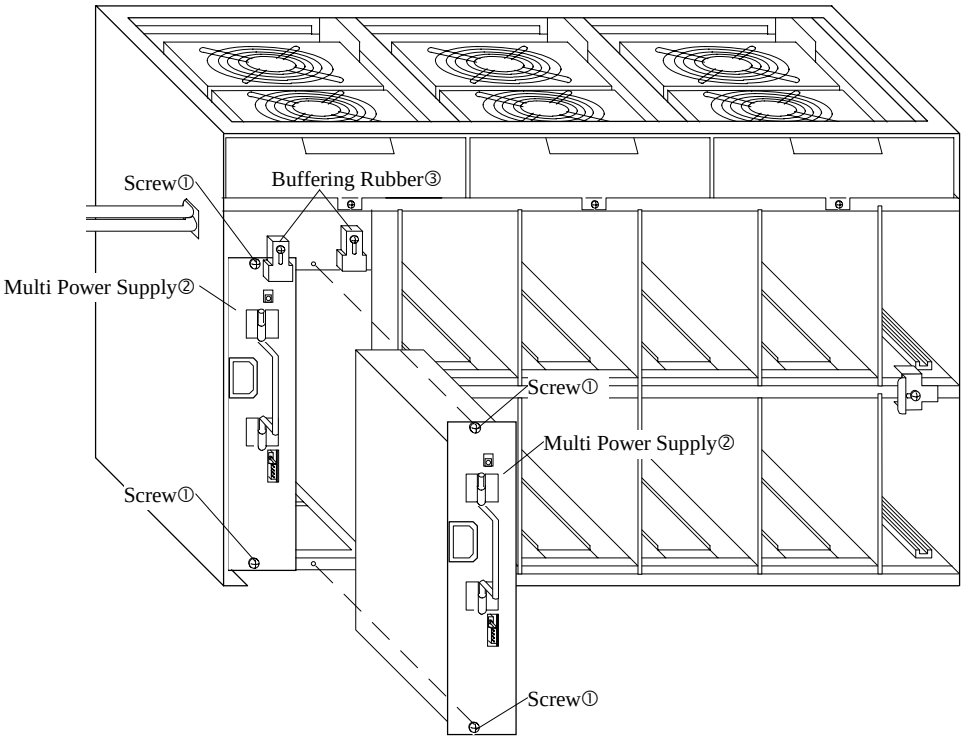

Fig. 3.9.3-3 Removal of the Multi Power Supply

d. Pull out the partition plates ①.

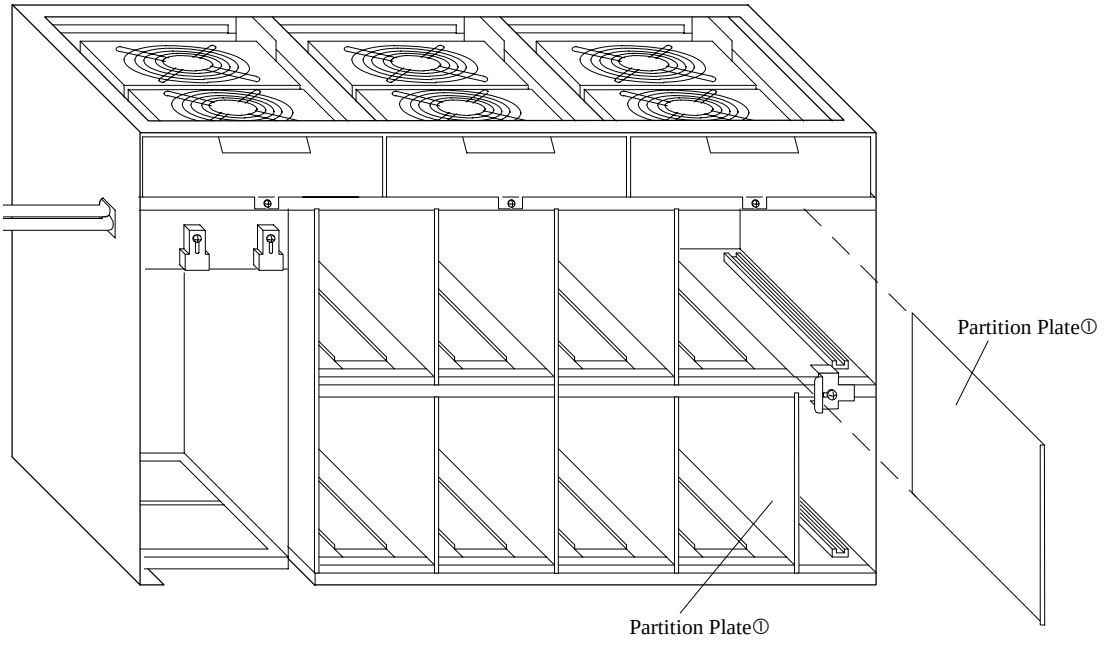

Fig. 3.9.3-4 Removal of the Partition Plate

Copyright © 1997, Hitachi, Ltd.

3. Removal of the side plate.

a. Loosen screws ① and raise DKUMN PCBs ② and secure DKUMN PCBs ② with screws ③.
b. Remove screws ④ and side plates ⑤.
c. Loosen screws ⑥ and raise cable ducts ⑦ when installing a new HDU box.

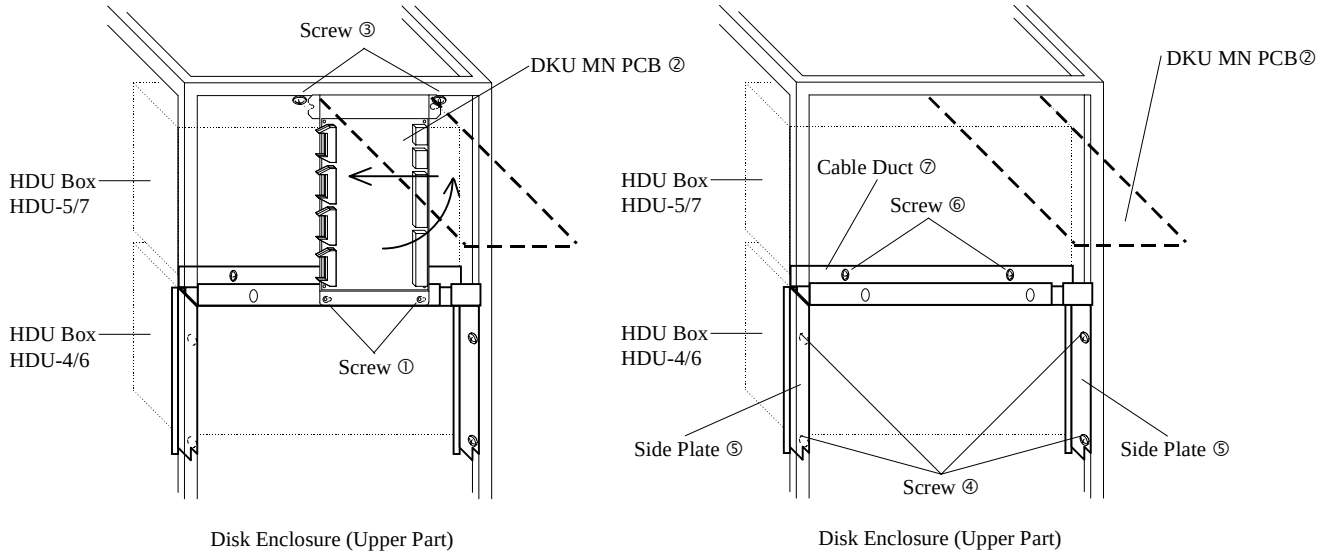

Fig. 3.9.3-5 Removal of the Side Plate

4. Installation of the HDU Box.

a. Install the HDU box on the disk unit and secure it with screws ① and plastic washers ②.

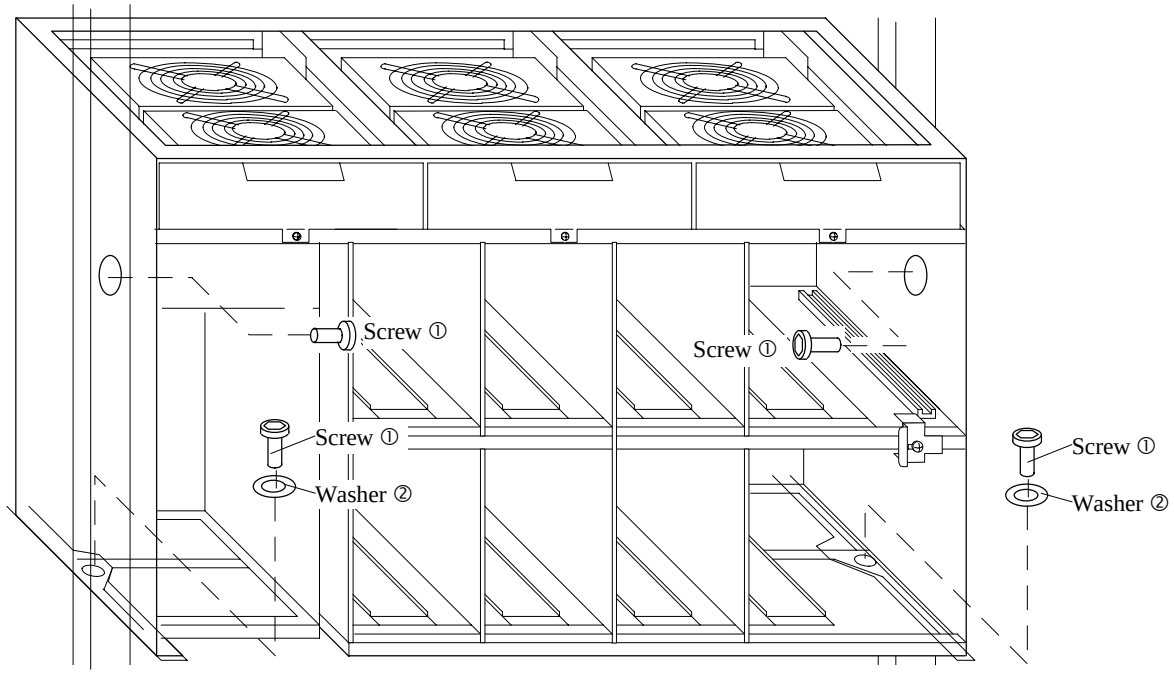

Fig. 3.9.3-6 Installation of the HDU Box

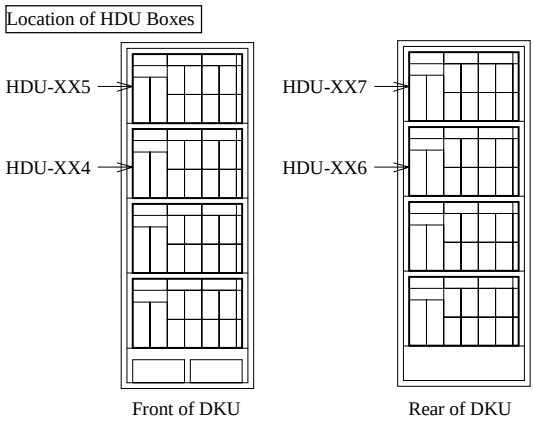
Copyright © 1997, Hitachi, Ltd.

5. Connection of the DKUMN cable.

a. Connect the DKUMN cables ① referring to Table 3.9.3-1 and Fig. 3.9.3-7.

Table 3.9.3-1 DKUMN Cables and Matching Connectors

Location of HDU Box	No.	DKUMN Cable ①	Connector
XX4	1	4-P301	4-J301
	2	4-P302	4-J302
XX5	1	5-P301	5-J301
	2	5-P302	5-J302
XX6	1	6-P301	6-J301
	2	6-P302	6-J302
XX7	1	7-P301	7-J301
	2	7-P302	7-J302



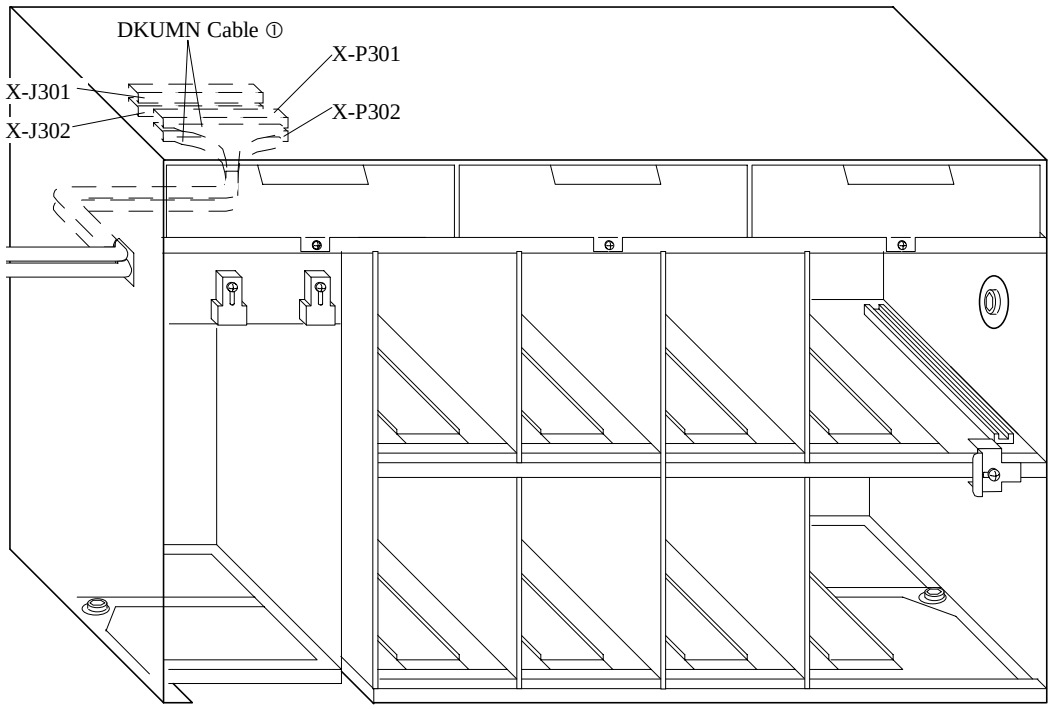


Fig. 3.9.3-7 Connection of the DKUMN Cables

Copyright © 1997, Hitachi, Ltd.

6. Address setting of the HDU Box.
   a. For the first and third disk units, install a SCSI ID jumper to socket JP01 on the HDD back board.
   b. For the second and fourth disk units, install a SCSI ID jumper to socket JP02 on the HDD back board.

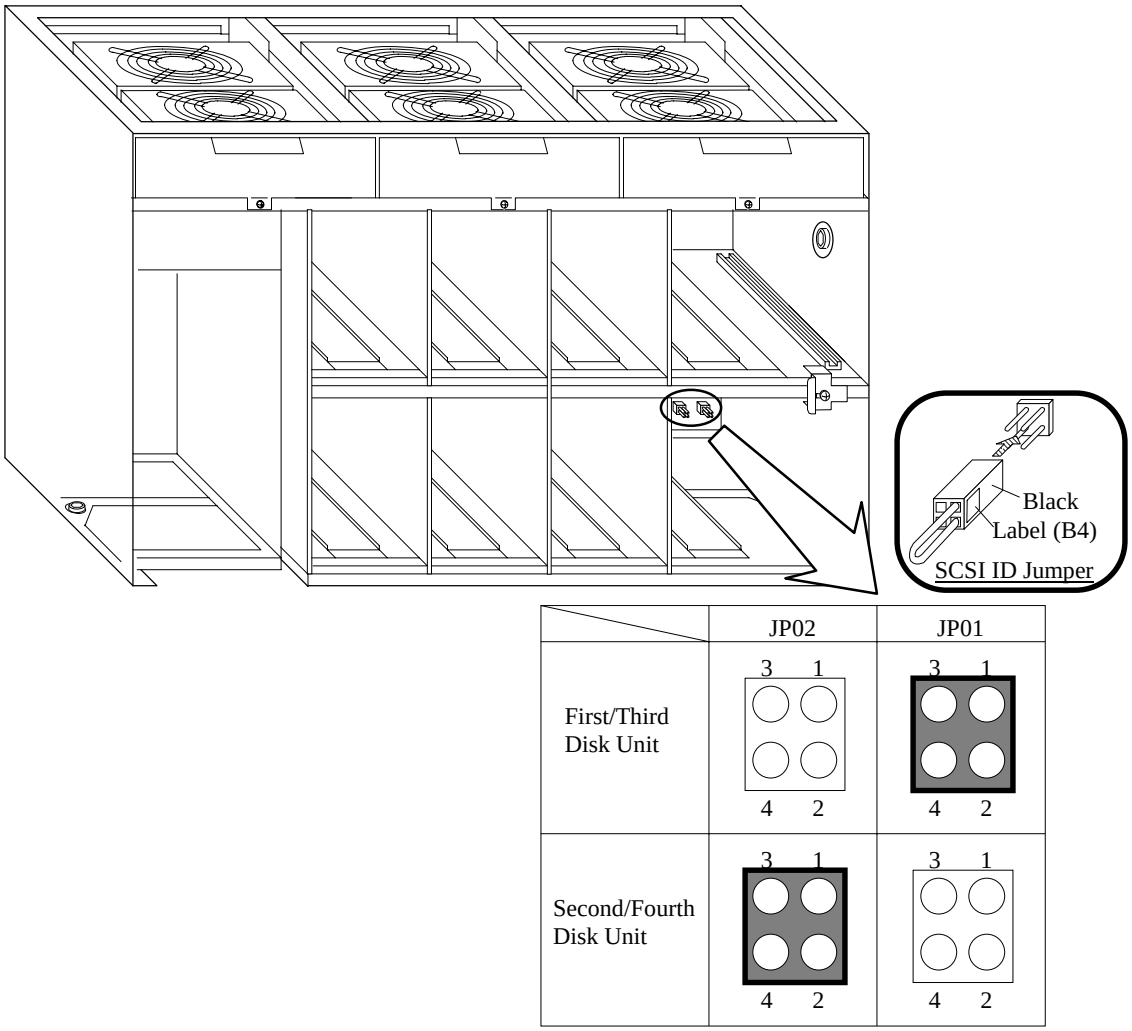

Fig. 3.9.3-8 Address Setting of the HDU Box

7. Attachment of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate.
   a. Attach the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate in the HDU box in the reverse order of Step 2.

8. Attachment of the side plate.
   a. Attach the side plates in the reverse order of Step 3.

Copyright ©1997,1998, Hitachi, Ltd.

9. Connection of the INLET cable.

a. Connect the INLET cables ① referring to Table 3.9.3-2 and Fig. 3.9.3-9.

Table 3.9.3-2 INLET Cables and Matching Connectors

Location of HDU Box	No.	INLET Cable ①	Connector
XX4	1	4-P601-1	4-J601-1
	2	4-P601-2	4-J601-2

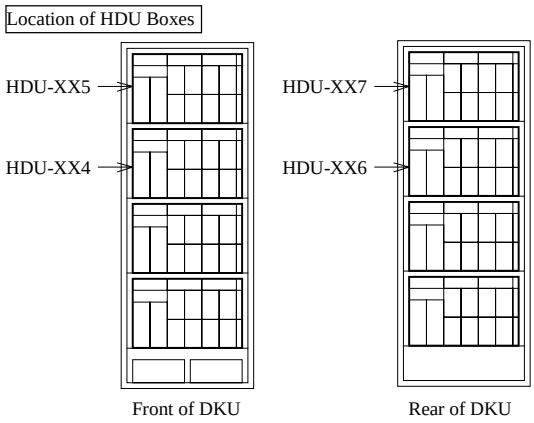
	2	6-P601-2	6-J601-2
XX7	1	7-P601-1	7-J601-1
	2	7-P601-2	7-J601-2



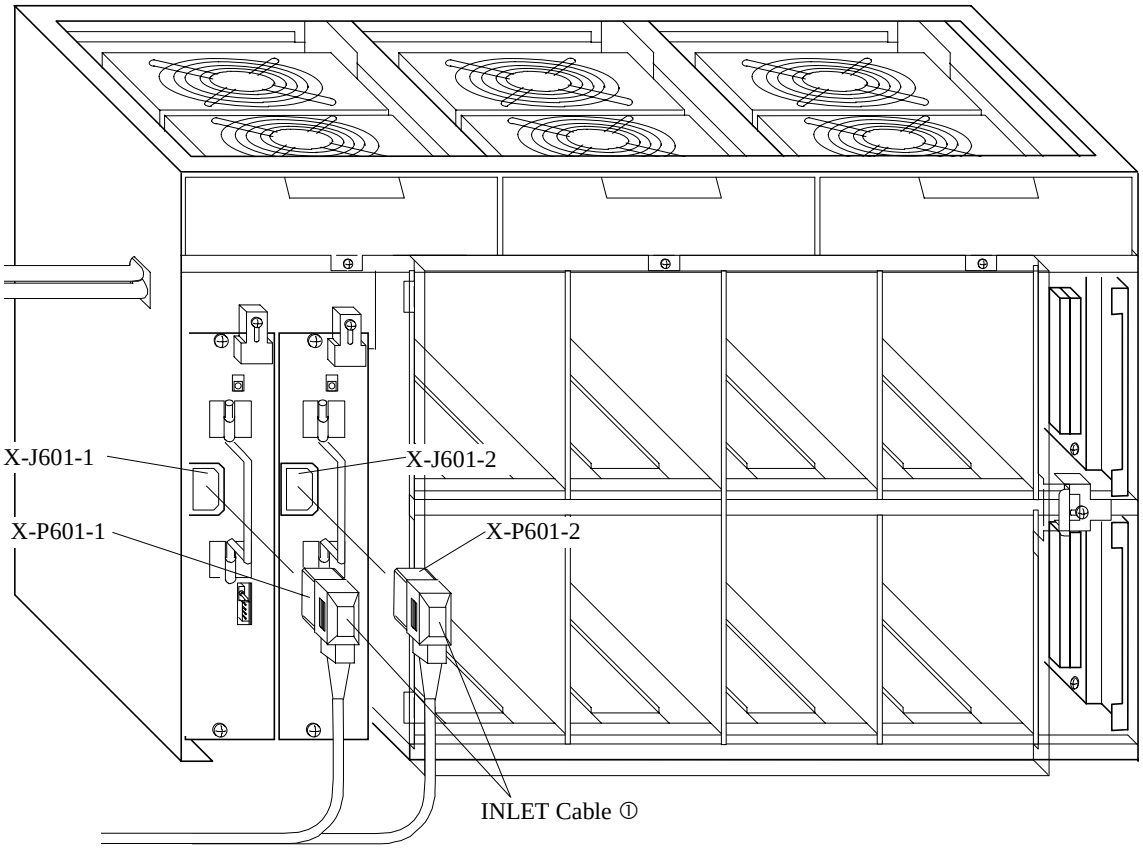


Fig. 3.9.3-10 Connection of the INLET Cable

Copyright © 1997, Hitachi, Ltd.

10. Attachment of the nameplate and label (REV).

a. Attach the nameplate ① and label (REV) ② of additional HUD box, referring to Fig. 3.9.3-10.

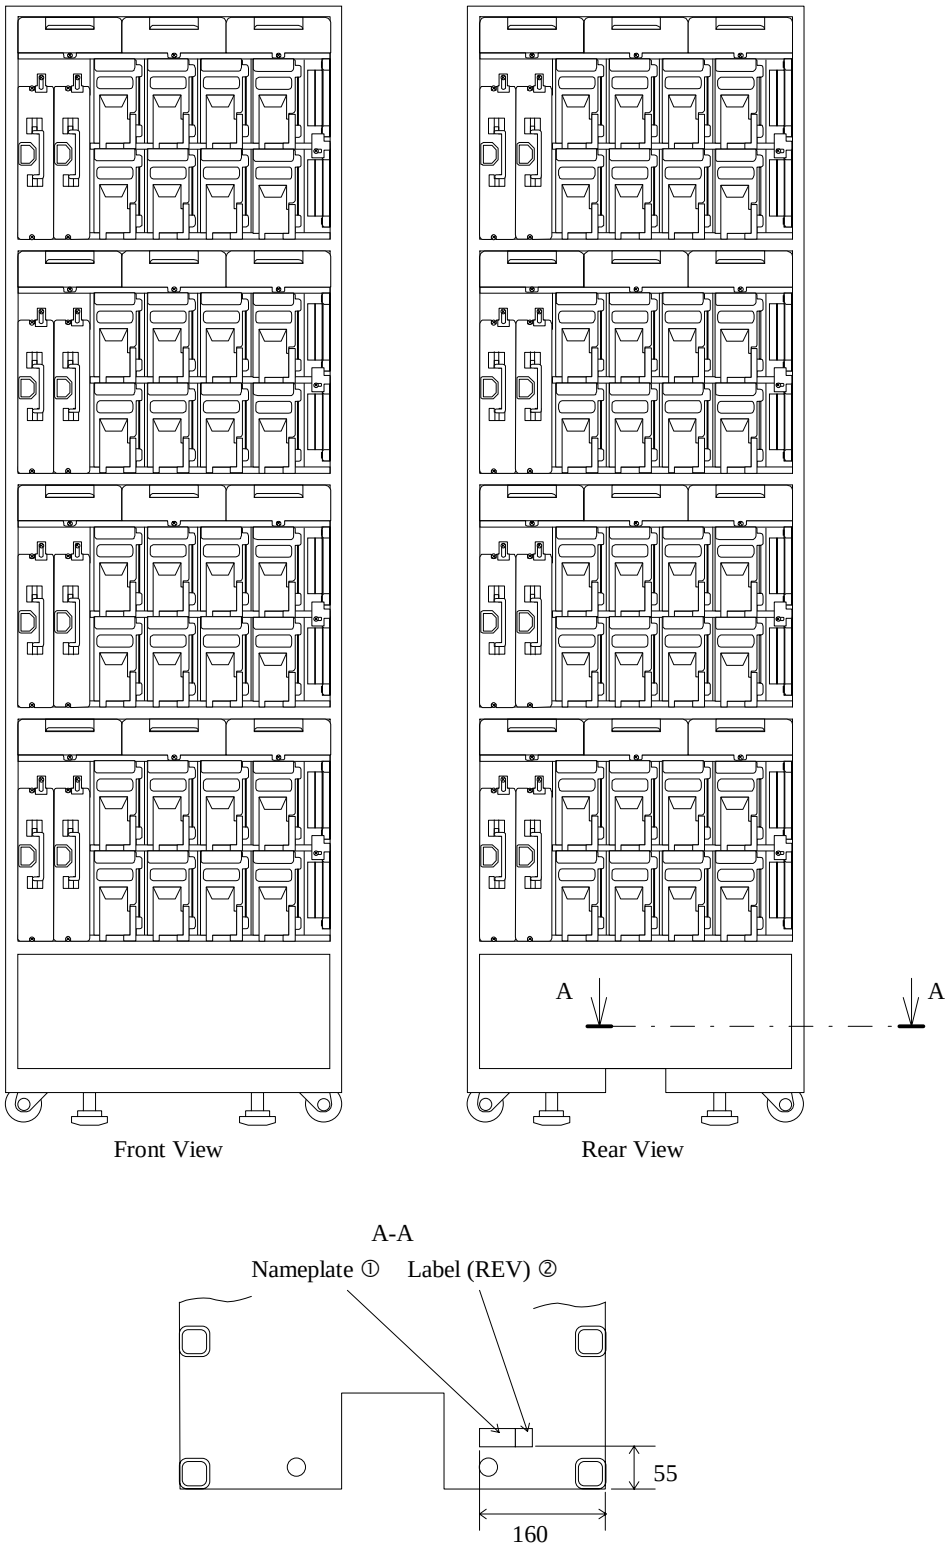

Fig. 3.9.3-10 Attachment of the Nameplate and Label (REV)

Copyright © 1997, Hitachi, Ltd.

11. Setting of the PS enable switch on the multi power supply.

a. Set the PS enable switch ① on the multi power supply ② to Enable and make sure that the PS enable LED ③ goes on.

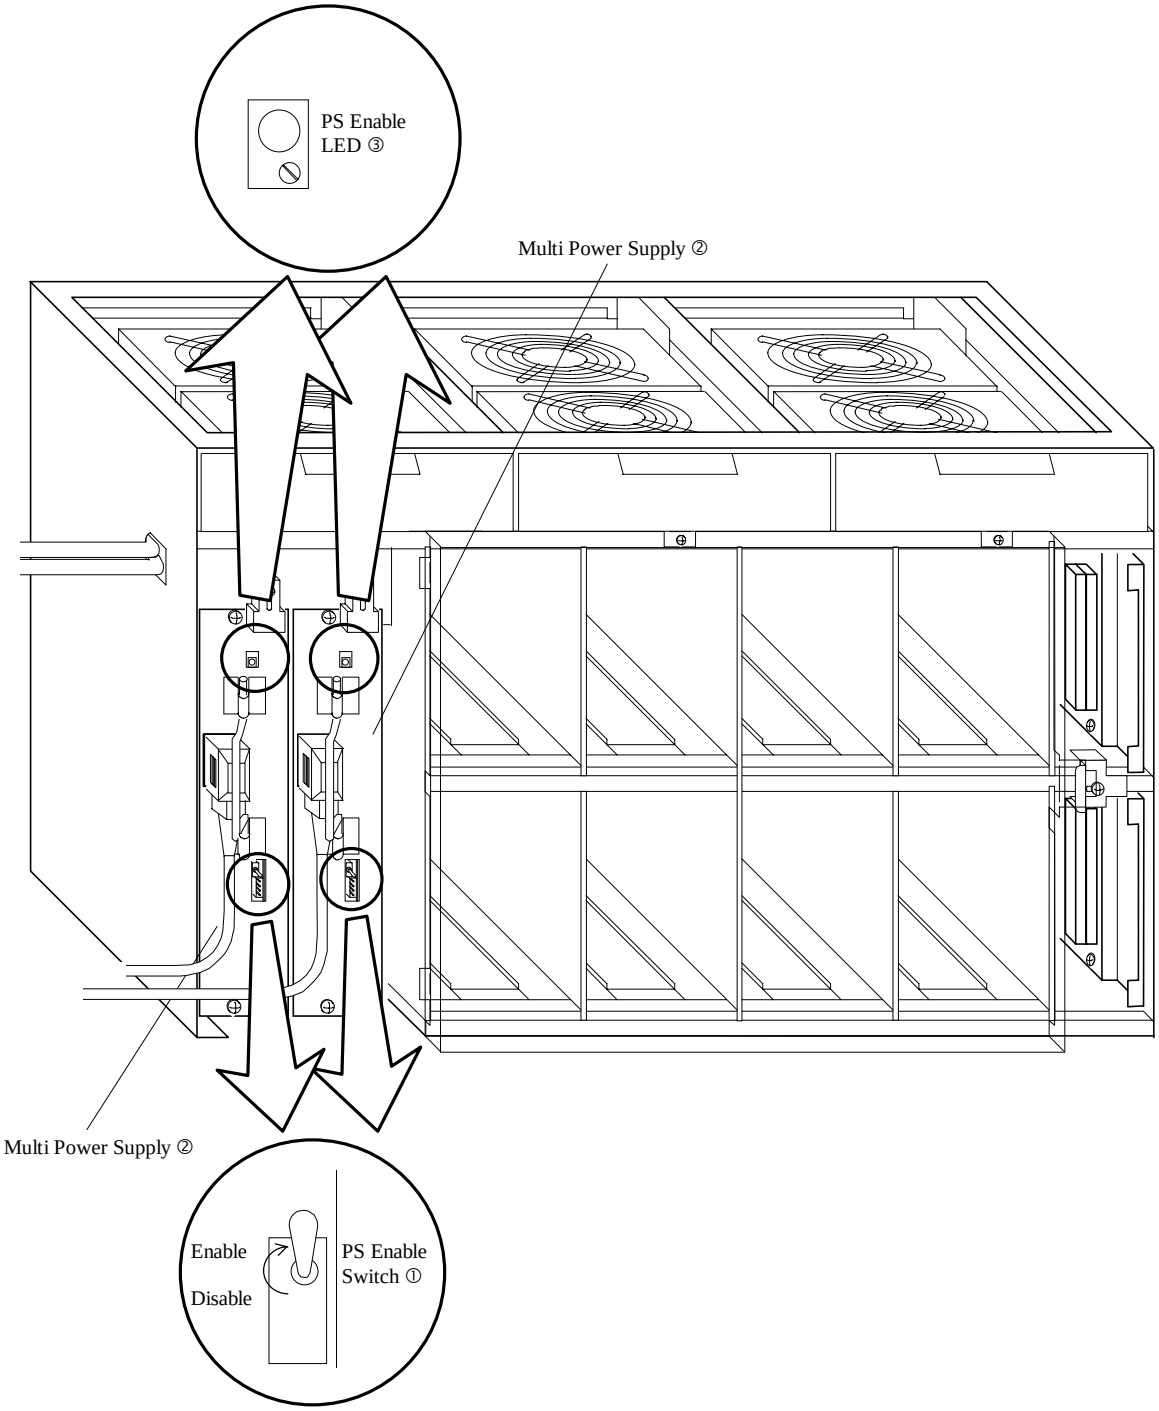

Fig. 3.9.3-11 Setting of the PS Enable Switch on the Multi Power Supply

Copyright © 1997, Hitachi, Ltd.

12. Installation of the jumper plug on the DKUMN PCB.

a. Install the jumper plugs for JP3 ① on the DKUMN PCBs ②, referring to Fig. 3.9.3-12.

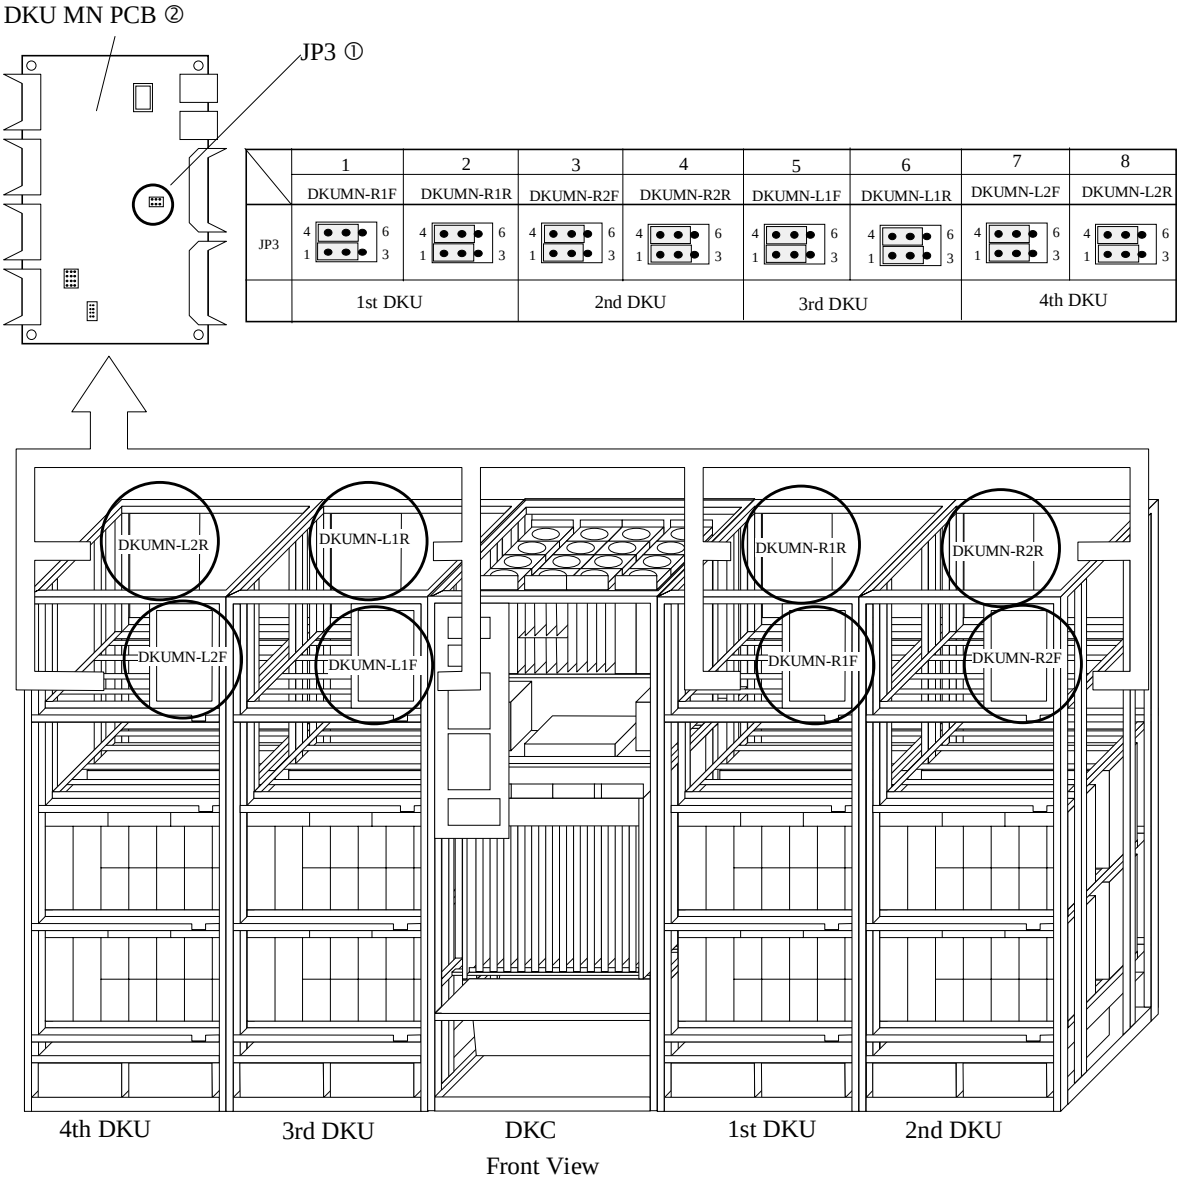

Fig. 3.9.3-12 DKUMN PCB Jumper Plug Positions

13. Check of the SCSI ID Jumpers

a. Check the SCSI ID jumpers on the HDD back boards. Refer to step 6 Address setting of the HDD box [INST03-1630].

When the SCSI ID jumpers are not installed to the correct sockets, install the SCSI ID jumpers to the correct sockets.

14. Return to General Flow.

New Installation : Go to INST02-11 step (8)-3.

Non-Disruptive Installation : Go to INST02-22 step (8)-4.

Disruptive Installation : Go to INST02-42 step (12)-4.

3.10.3 Installation Procedure of HDD Canister

1. Installation of the HDD Canister.
   a. Refer to Chapter 1.4 Drive Expansion Sequence (INST01-260 through INST01-300). Confirm a position to install HDD canister.

Notice!
The position to be installed in the 2nd or 4th DKU is different from one in the 1st or 3rd DKU. Be sure to set the HDDs in the right position. Wrong setting in the 2nd or 4th DKU may cause DKU failure on the same SCSI path.

   b. Remove the acrylic cover ①.
   c. Remove connector ② from the HDD canister ③.
   d. Insert the HDD canister ③ into the HDU Box ④ and secure it with screw ⑤.
   e. Insert connector ② into Jxxx ⑥.
   f. Attach the acrylic cover ①.

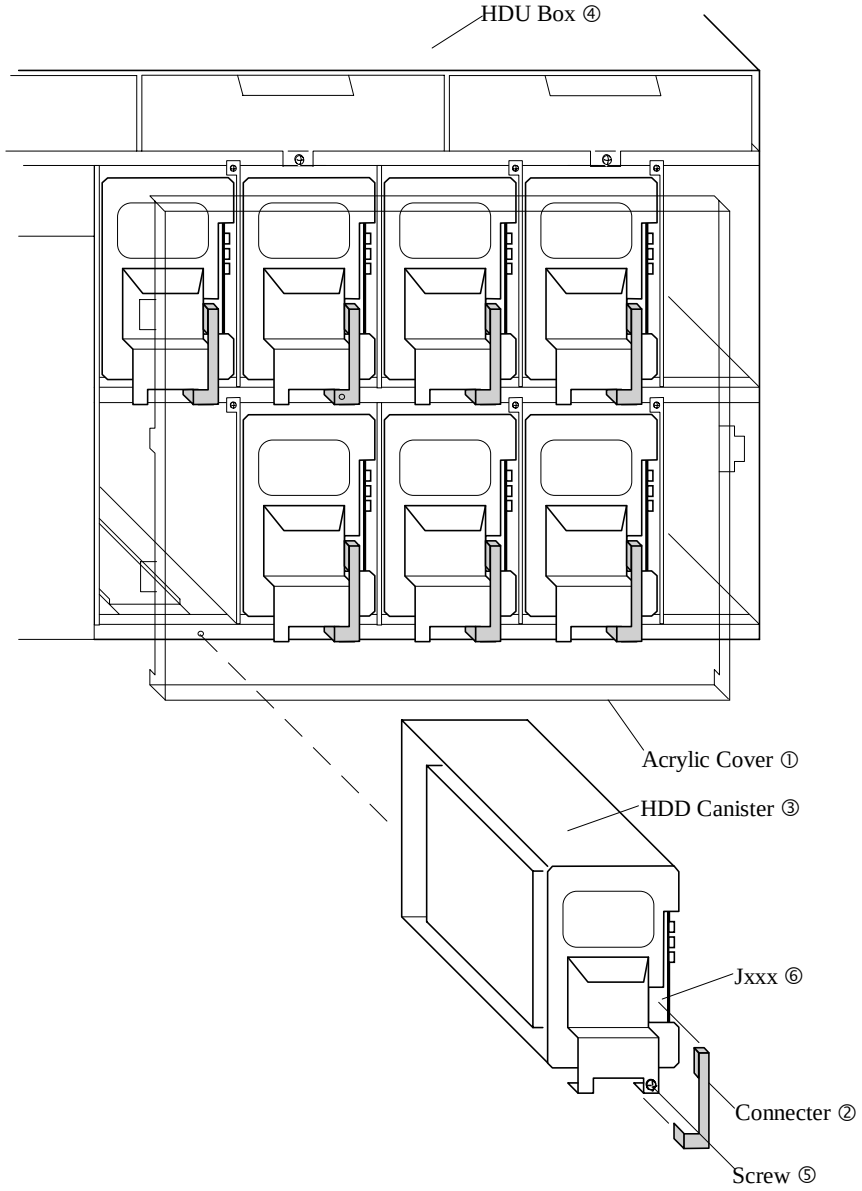

Fig. 3.10.3-1 Installation of HDD Canister

2. Attachment of the nameplate.

a. Attach the nameplate to any locations of 24 parts/DKU regardless of the model number and location of the added HDD canister(s). (Fig. 3.10.3-2)

3.11.3 Installation Procedure of Additional Disk Adapter

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Insertion of the PCBs
   a. Remove the dummy plate installed in the installation location referring to the Fig. 3.11-1. (Note) Dummy plates should be stored for future use in De-installation.
   b. Insert the PCBs to the correct locations in the Logic Box. Refer to Table 3.11-2.
   c. Fasten the two screws referring to Fig. 3.11-2.

Table 3.11-2 Inserting Location (Rear of the unit)

Cluster	CL2						CL1					CL2
Slot No.	M	L	K	J	H	G	F	E	D	C	B	A
Function	TM	DKA	DKA	DKA	DKA	CACHE	CACHE	DKA	DKA	DKA	DKA	TM
Location No.	TM -2M	DKA -2L	DKA -2K	DKA -2J	DKA -2H	CACHE -2G	CACHE -1F	DKA -1E	DKA -1D	DKA -1C	DKA -1B	TM -2A
Order of addition		Add.3	Add.2	Add.1	Basic			Add.3	Add.2	Add.1	Basic	

Up to 4 disk adapters can be installed in the subsystem.

3.12 Connection of SCSI Interface Cables

3.12.1 Connection of Additional SCSI Interface Cables (DKU-F305I-3C)

3.12.1.1 Flowchart

1. Connection Procedure of SCSI Interface Cables between DKC and Third DKU (HDU-L10-L13) Chassises

1 Attachment of the SCSI Interface Cables (Before attachment of Third DKU(DKU305I-14)) [INST03-1900]

(1) Remove the cable duct cover. [INST03-1900]
↓
(2) Attach the four SCSI interface cables to DKC. [INST03-1910]

2 Connection of the SCSI Interface Cables (After attachment of Third DKU(DKU305I-14)) [INST03-1920]

(1) Connect the SCSI interface cables. [INST03-1920]
↓
(2) Fix the SCSI interface cables. [INST03-1930]
↓
(3) Attach the nameplate. [INST03-1940]
↓
(4) Attach the covers. [INST03-1940]

2. Connection Procedure of SCSI Interface Cables between DKC and Third DKU (HDU-L14-L17) Chassises

1 Attachment of the SCSI Interface Cables (Before attachment of HDD Boxes(DKU-F305I-B4)) [INST03-1950]

(1) Remove the cable duct cover. [INST03-1950]
↓
(2) Attach the four SCSI interface cables to DKC. [INST03-1960

2 Connection of the SCSI Interface Cables (After attachment of HDD Boxes(DKU-F305I-B4)) [INST03-1970]

(1) Connect the SCSI interface cables. [INST03-1970]
↓
(2) Fix the SCSI interface cables. [INST03-1980]
↓
(3) Attach the covers. [INST03-1980]

3.12.2 Connection of Additional SCSI Interface Cables (DKU-F305I-24C)

3.12.2.1 Flowchart

The connection procedure of the extension SCSI interface cables (DKU-F305I-24C) is shown below. You must perform the operations actually after referring to the details of the procedure.
When connecting the SCSI interface cable with disk subsystem inactive, you don't have to check Shut Down LED on the SCSI BFR PCB and blocking/restoring both DKA PCB and SCSI BFR PCB through SVP.

1. Connection Procedure of SCSI Interface Cables between First (HDU-R10-R13) and Second DKU (HDU-R20-R23) Chassises---------- [INST03-1990]
2. Connection Procedure of SCSI Interface Cables between First (HDU-R14-R17) and Second DKU (HDU-R24-R27) Chassises---------- [INST03-2000]
3. Connection Procedure of SCSI Interface Cables between Third (HDU-L10-L13) and Fourth DKU (HDU-L20-L23) Chassises---------- [INST03-2010]
4. Connection Procedure of SCSI Interface Cables between Third (HDU-L14-L17) and Fourth DKU (HDU-L24-L27) Chassises---------- [INST03-2020]

1. Connection Procedure of SCSI Interface Cables between First (HDU-R10-R13) and Second DKU (HDU-R20-R23) Chassises

(1) Connect the SCSI interface cables to the SCSI BFR PCBs in the Second DKU chassis. [INST03-2030]

↓

(2) In the first DKU chassis, use the SVP to block the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2040]

↓

(3) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2050]

↓

(4) Connect the SCSI interface cables to the SCSI BFR PCBs in the first DKU chassis. [INST03-2060]

↓

(5) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST03-2070]

↓

(6) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side to which the SCSI interface cables are to be connected. [INST03-2080]

↓

(7) Connect the SCSI interface cables to the SCSI BFR PCBs in the first DKU chassis. [INST03-2090]

↓

(8) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. [INST03-2100]

↓

(9) Fix the SCSI interface cables in the DKU chassises. [INST03-2110]

↓

(10) Attach the nameplate to the Second DKU chassis. [INST03-2120]

↓

(11) When the Second DKU chassis consists of 4 HDU boxes, fix the rest of the SCSI interface cables in the Second DKU chassis. [INST03-2120]

Copyright ©1997, Hitachi, Ltd.

2. Connection Procedure of SCSI Interface Cables between First (HDU-R14-R17) and Second DKU (HDU-R24-R27) Chassises

(1) Connect the SCSI interface cables to the SCSI BFR PCBs in the Second DKU chassis. [INST03-2130]

↓

(2) In the first DKU chassis, use the SVP to block the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2140]

↓

(3) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2150]

↓

(4) Connect the SCSI interface cables to the SCSI BFR PCBs in the first DKU chassis. [INST03-2160]

↓

(5) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST03-2170]

↓

(6) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side to which the SCSI interface cables are to be connected. [INST03-2180]

↓

(7) Connect the SCSI interface cables to the SCSI BFR PCBs in the first DKU chassis. [INST03-2190]

↓

(8) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. [INST03-2200]

↓

(9) Fix the SCSI interface cables in the DKU chassises. [INST03-2210]

Copyright ©1997, Hitachi, Ltd.

3. Connection Procedure of SCSI Interface Cables between Third (HDU-L10-L13) and Fourth DKU (HDU-L20-L23) Chassises

(1) Connect the SCSI interface cables to the SCSI BFR PCBs in the fourth DKU chassis. [INST03-2220]

↓

(2) In the Third DKU chassis, use the SVP to block the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2230]

↓

(3) In the Third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2240]

↓

(4) Connect the SCSI interface cables to the SCSI BFR PCBs in the Third DKU chassis. [INST03-2250]

↓

(5) In the Third DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST03-2260]

↓

(6) In the Third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side to which the SCSI interface cables are to be connected. [INST03-2270]

↓

(7) Connect the SCSI interface cables to the SCSI BFR PCBs in the Third DKU chassis. [INST03-2280]

↓

(8) In the Third DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. [INST03-2290]

↓

(9) Fix the SCSI interface cables in the DKU chassises. [INST03-2300]

↓

(10) Attach the nameplate to the fourth DKU chassis. [INST03-2310]

↓

(11) When the fourth DKU chassis consists of 4 HDU boxes, fix the rest of the SCSI interface cables in the fourth DKU chassis. [INST03-2310]

4. Connection Procedure of SCSI Interface Cables between Third (HDU-L14-L17) and Fourth DKU (HDU-L24-L27) Chassises

(1) Connect the SCSI interface cables to the SCSI BFR PCBs in the fourth DKU chassis. [INST03-2320]

↓

(2) In the Third DKU chassis, use the SVP to block the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2330]

↓

(3) In the Third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs to which the SCSI interface cables are to be connected. [INST03-2340]

↓

(4) Connect the SCSI interface cables to the SCSI BFR PCBs in the Third DKU chassis. [INST03-2350]

↓

(5) In the Third DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST03-2360]

↓

(6) In the Third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side to which the SCSI interface cables are to be connected. [INST03-2370]

↓

(7) Connect the SCSI interface cables to the SCSI BFR PCBs in the Third DKU chassis. [INST03-2380]

↓

(8) In the Third DKU chassis, use the SVP to restore the SCSI BFR PCBs to which the SCSI interface cables are connected. [INST03-2390]

↓

(9) Fix the SCSI interface cables in the DKU chassises. [INST03-2400]

3.12.2.2 Parts List

Table 3.12.2.2-1 Parts List of the SCSI Interface Cable

No.	Model Number	Part Name	Part No. (Spare Parts No.)	Quantity	Remarks
1	DKU-F305I-24C	SCSI Interface Cable	2098192-A-R (5487067-A-R)	16	HDU-R20-R27/L20-L27
		DKUMN Cable	3239256-A,B	2	Dynamic 6
		DKUMN Cable	2098190-A,B	2	MRP 100
		Nameplate	2099650-78	1

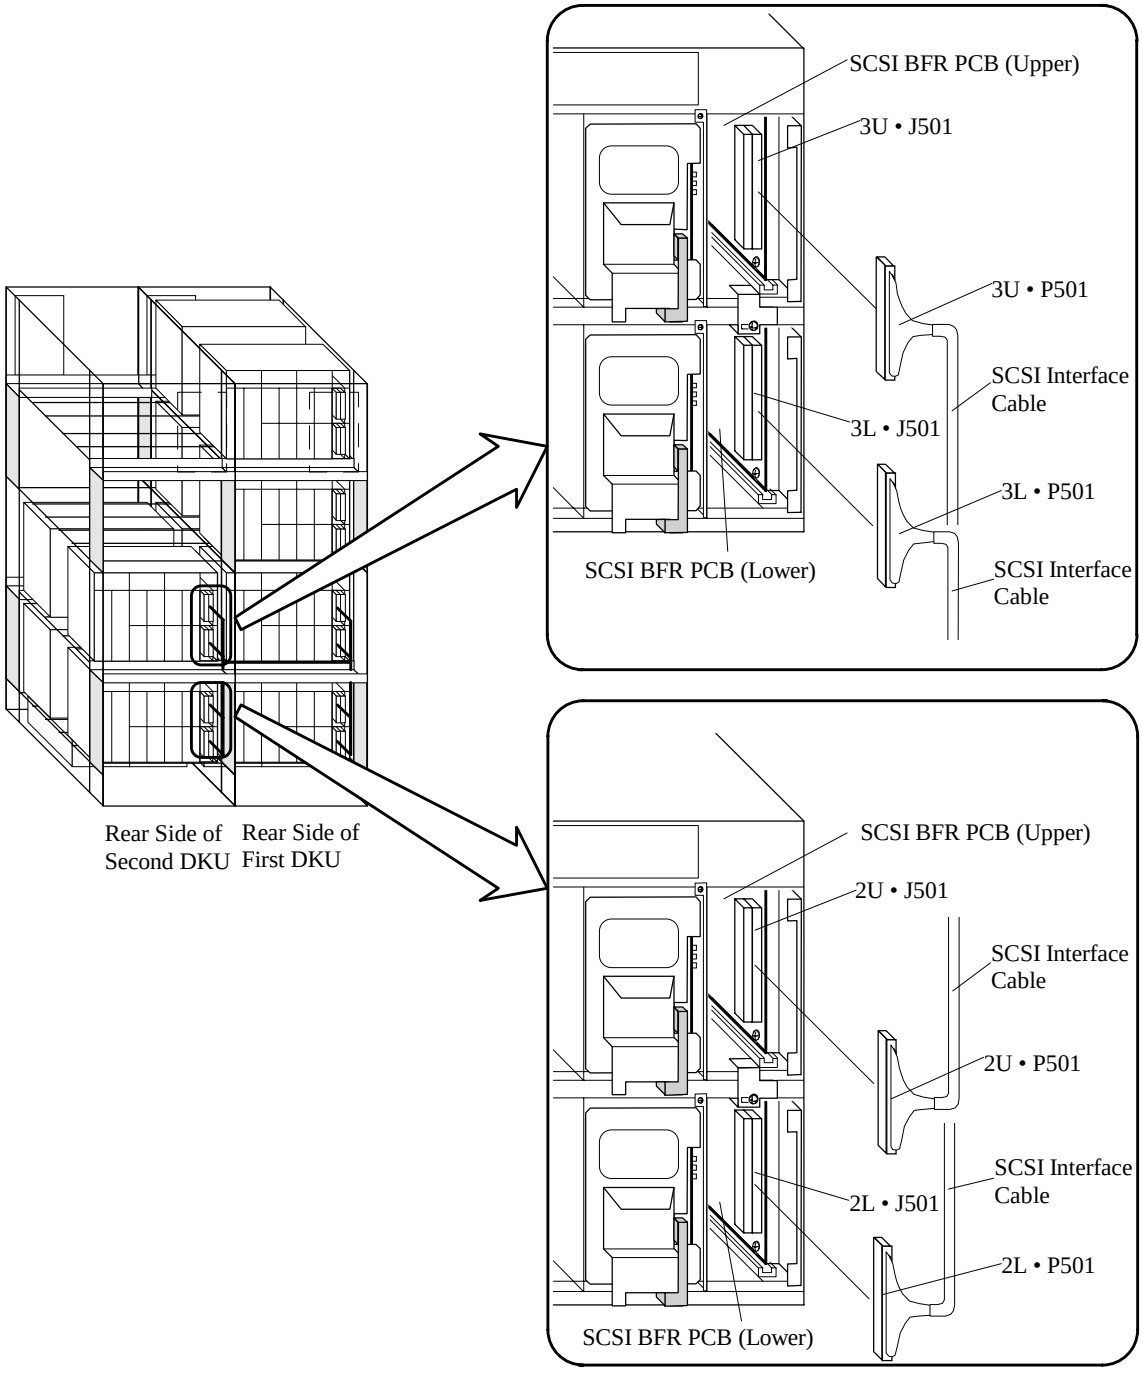

Fig. 3.12.2.3-2 Connection of the SCSI Interface Cables

2. Refer to INST02-56② when connecting the additional SCSI interface cable while the sub-system is in operation. Refer to INST03-2060 when connecting the additional SCSI interface cable with the sub-system switched off.

Copyright ©1997,1998, Hitachi, Ltd.

3. In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs to which the SCSI interface cables are to be connected.

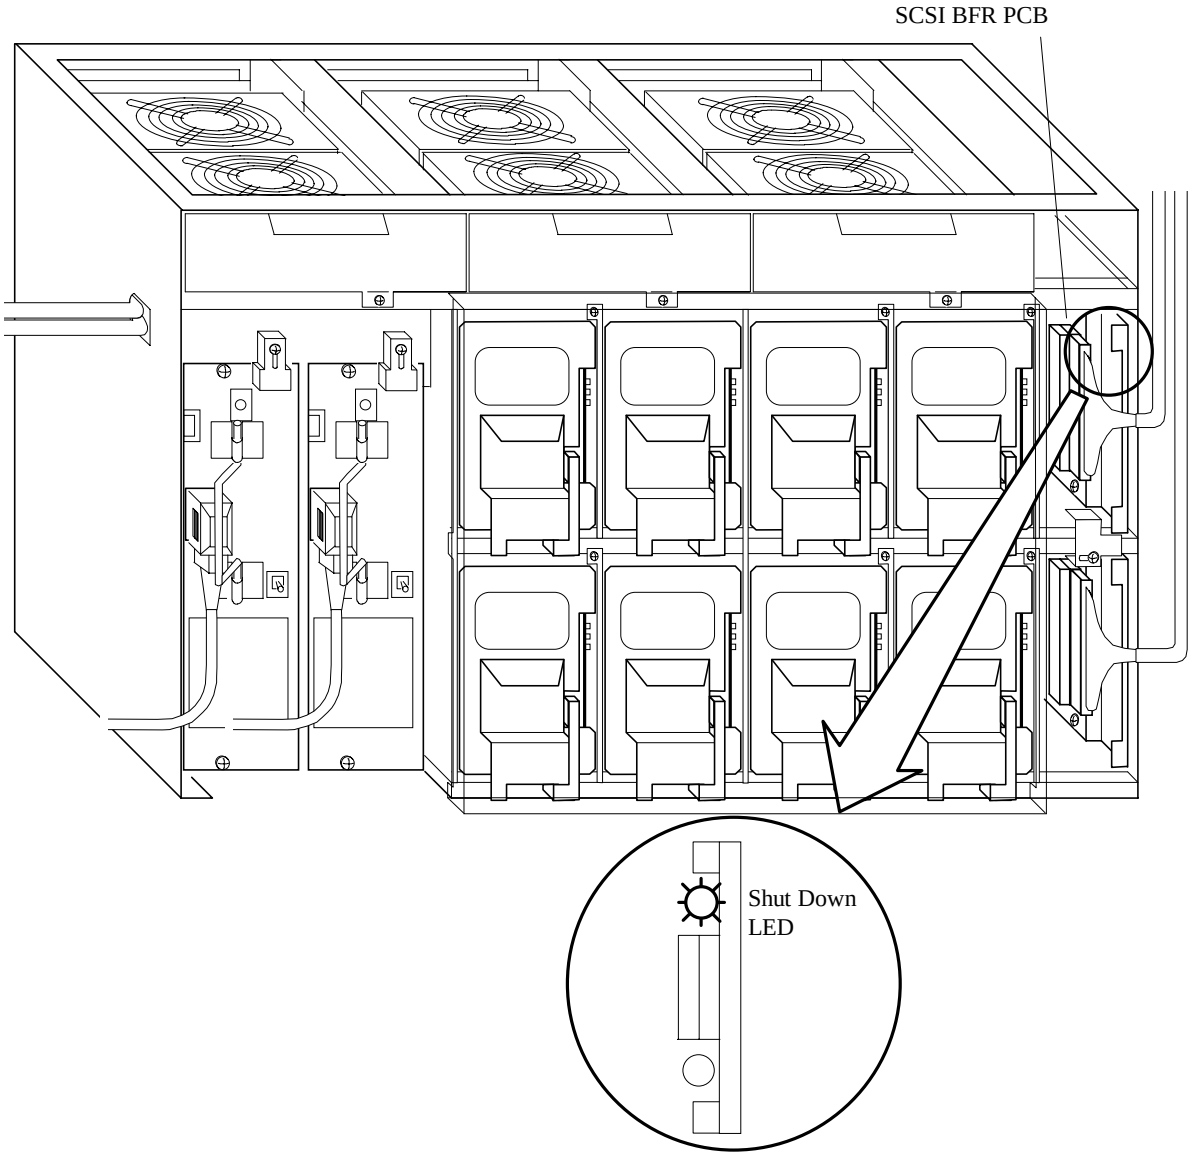

Fig. 3.12.2.3-3 Confirmation of the Shut Down LED Light

Copyright ©1997,1998, Hitachi, Ltd.

4. Connect the SCSI interface cables to the SCSI BFR PCBs in the first DKU chassis referring to figures 3.12.2.3-4 and 3.12.2.3-5.

NOTICE:
When connecting the SCSI interface extension cable (DKU-F305I-24C) during the operation of subsystem, take the following actions from SVP to allow connection of only the SCSI interface cable whose Shut Down LED goes on.

1. Block the SCSI bus connecting the SCSI interface cable.
2. Light the Shut Down LED on the SCSI BFR PCB on the SCSI bus.

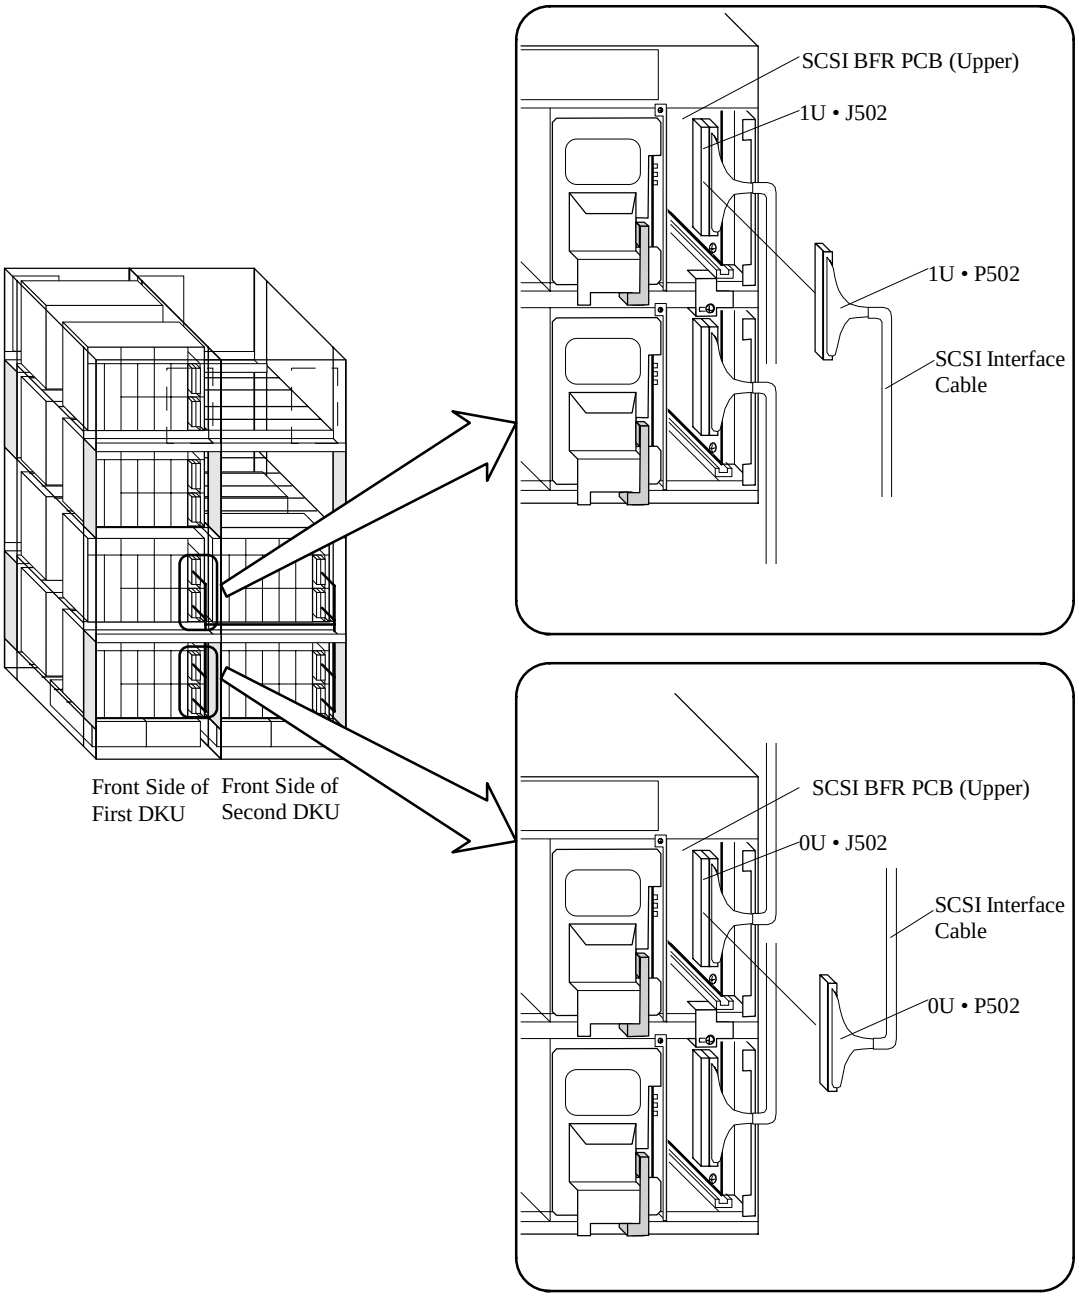

Fig. 3.12.2.3-4 Connection of the SCSI Interface Cables

Copyright ©1997,1998, Hitachi, Ltd.

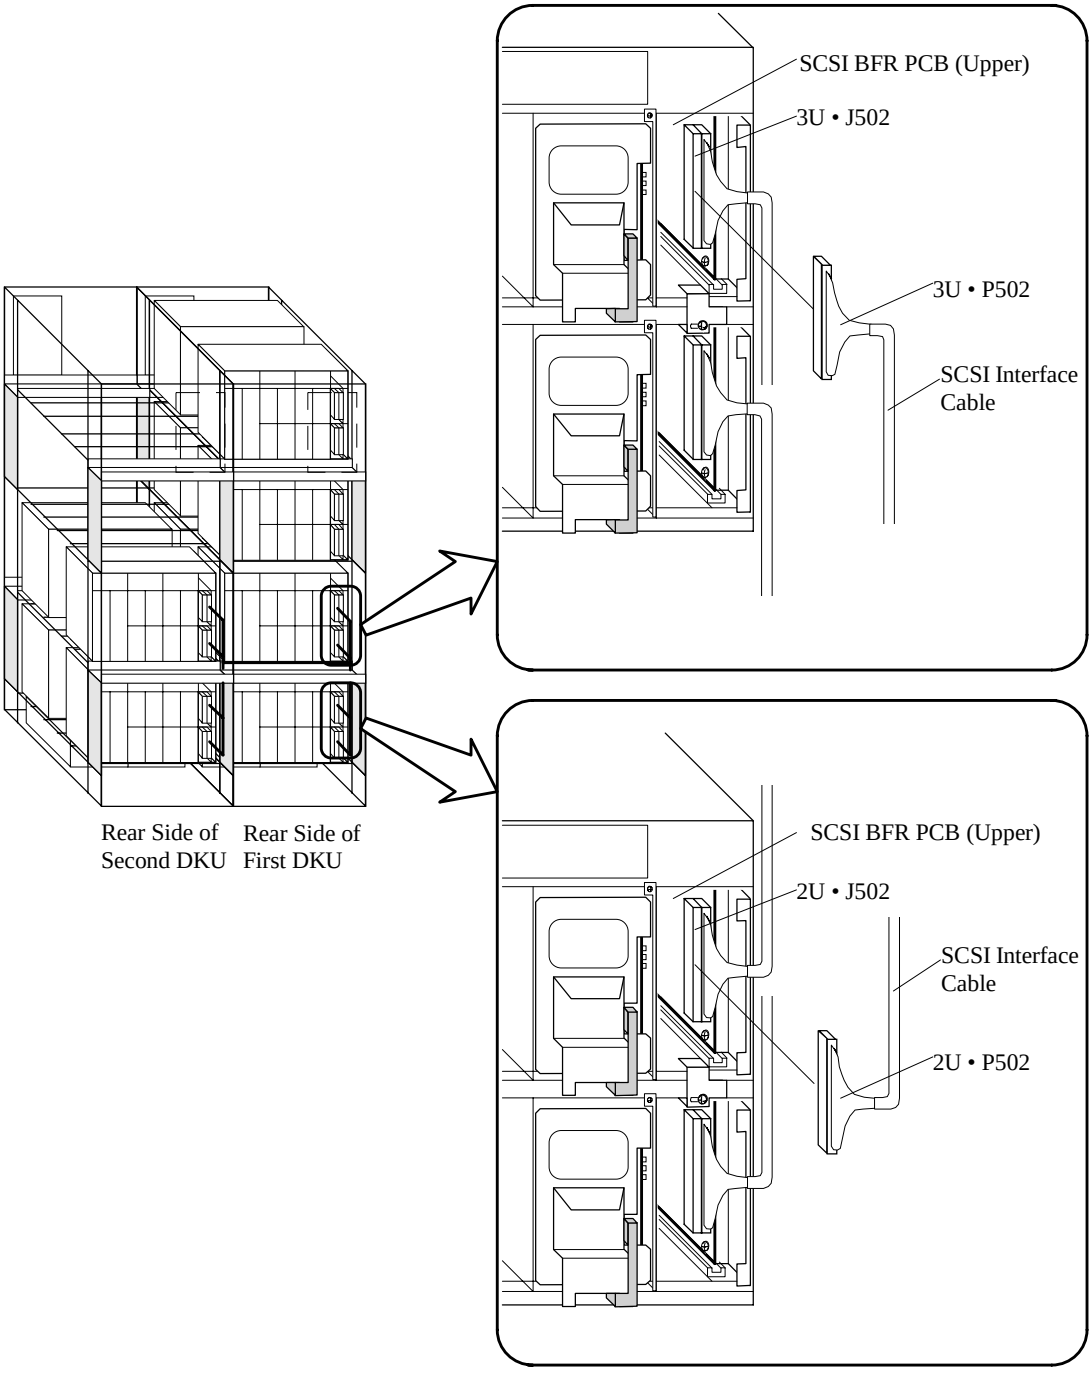

Fig. 3.12.2.3-5 Connection of the SCSI Interface Cables

5. Refer to INST02-57④ when connecting the additional SCSI interface cable while the sub-system is in operation. Refer to INST03-2090 when connecting the additional SCSI interface cable with the sub-system switched off.

3.13 Installation of Interface Connector

3.13.1 Installation of PCI I/F Connector (DKC-F310I-18)

3.13.1.1 Flowchart

1. Confirm that the REMOTE/LOCAL Switch of CE Panel is set to LOCAL. If not, set the REMOTE/LOCAL Switch to LOCAL.

↓

2. Connect the "CE Panel INH" jumper plug to the sockets on the HUB.

↓

3. Set the jumper connectors(JP1 and JP2) of the CE Panel.

↓

4. Attach the PCI CONN PCB.

↓

5. Restore the REMOTE/LOCAL switch and jumpers (JP1 and JP2) on the CE panel.

↓

6. Disconnect the "CE Panel INH" jumper plug from the socket on the HUB.

↓

7. Attach the nameplate.

3.13.1.2 Parts List

Table 3.13.1.2-1 Parts List

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-18	PCI CONN	3236713-A	1	
		Nameplate	3252542-14	1	

Copyright ©1997, Hitachi, Ltd.

3.13.1.3 Installation Procedure of PCI I/F Connector

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Confirm that the REMOTE/LOCAL Switch of CE Panel is set to LOCAL. If not, set the REMOTE/LOCAL Switch to LOCAL.

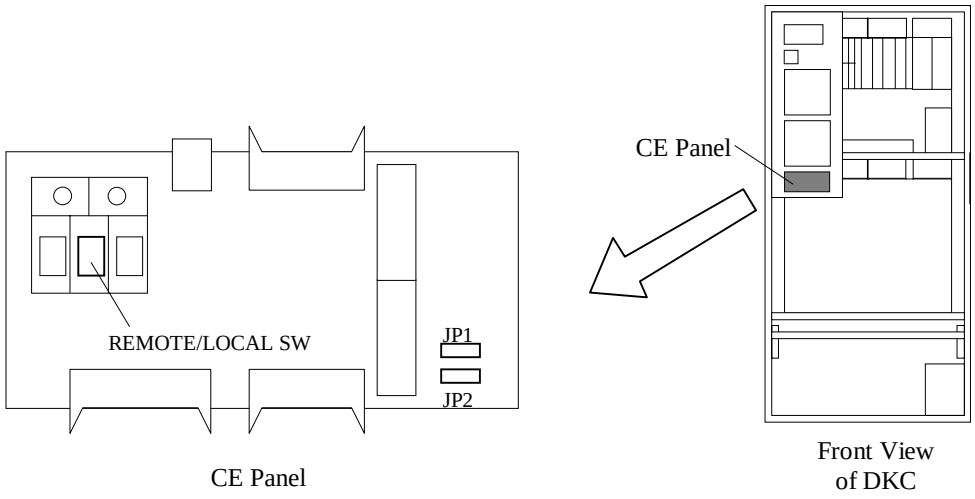

Fig. 3.13.1.3-1 Setting of REMOTE/LOCAL Switch

2. Connect the "CE Panel INH" jumper plug to the sockets on the HUB.

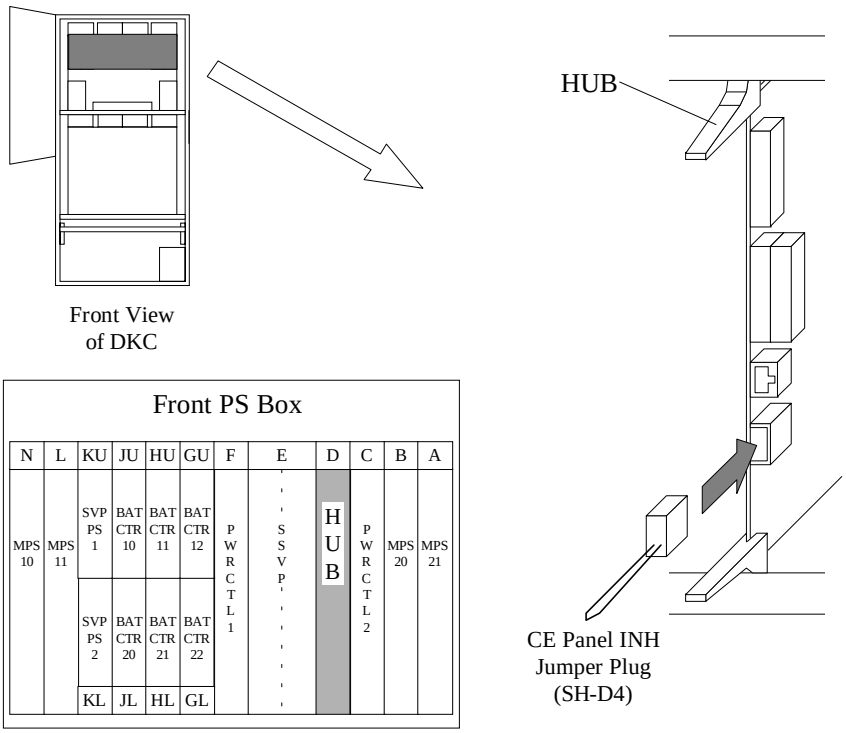

Fig. 3.13.1.3-2 Insertion of Jumper Plug

Copyright ©1997, Hitachi, Ltd.

3. Set the jumper connectors(JP1 and JP2) of the CE Panel.

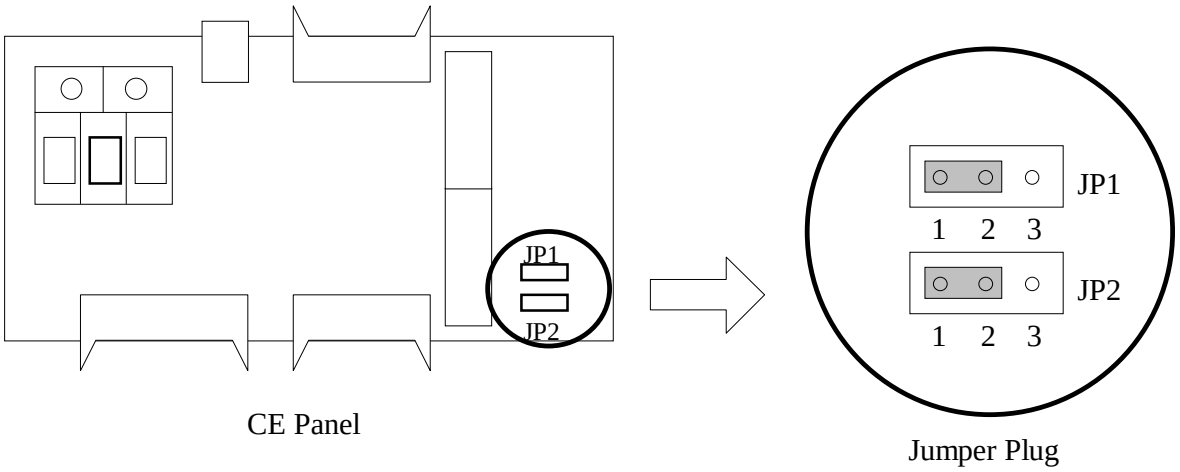

Fig. 3.13.1.3-3 Insertion of Jumper Plug

4. Attach the PCI CONN PCB.
   a. Remove the screw① and remove the plate.
   b. Attach the PCI CONN PCB and fasten the screw②.
   c. Attach the plate and fasten the screw①.
   d. Connect the cable.

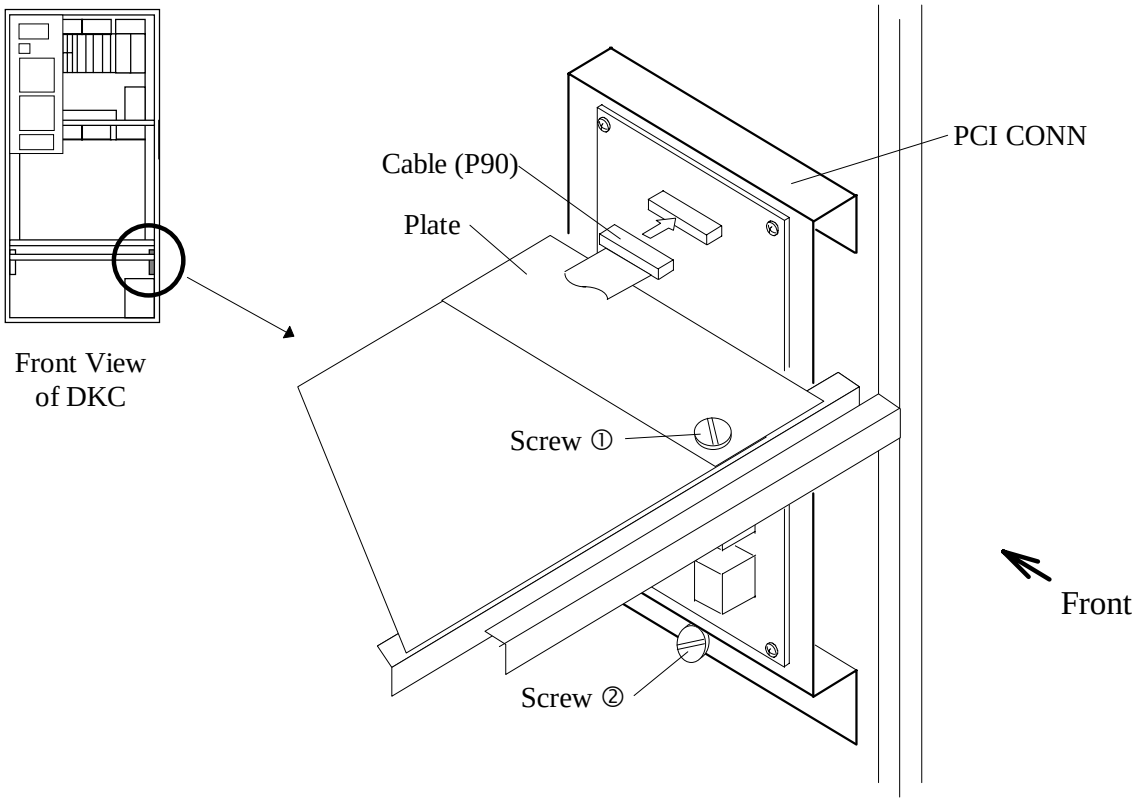

Fig. 3.13.1.3-4 Attachment of PCI CONN PCB

Copyright ©1997, Hitachi, Ltd.

5. Restore the REMOTE/LOCAL switch and jumpers (JP1 and JP2) on the CE panel.
   a. Restore the REMOTE/LOCAL switch and jumpers (JP1 and JP2) on the CE panel set in step 1 and 2 to its previous setting. The relation between the REMOTE/LOCAL switch and the jumper settings are shown below.

Table 3.13.1.3-1 Jumper setting of CE Panel

No.	Description	JP1 and JP2 Setting
1	When power is controlled from the host (at least one PCI cable attached to JP1-JP8 on PCI CONN PCB), set the jumpers as shown.	2	When power is not controlled from the host, no PCI Cable attached to JP1-JP8 PCI CONN PCB, to disable the EPO of host, set the jumpers as shown.	
6. Disconnect the "CE Panel INH" jumper plug from the socket on the HUB.

7. Attach the nameplate.
   a. Attach the nameplate of DKC-F310I-18.

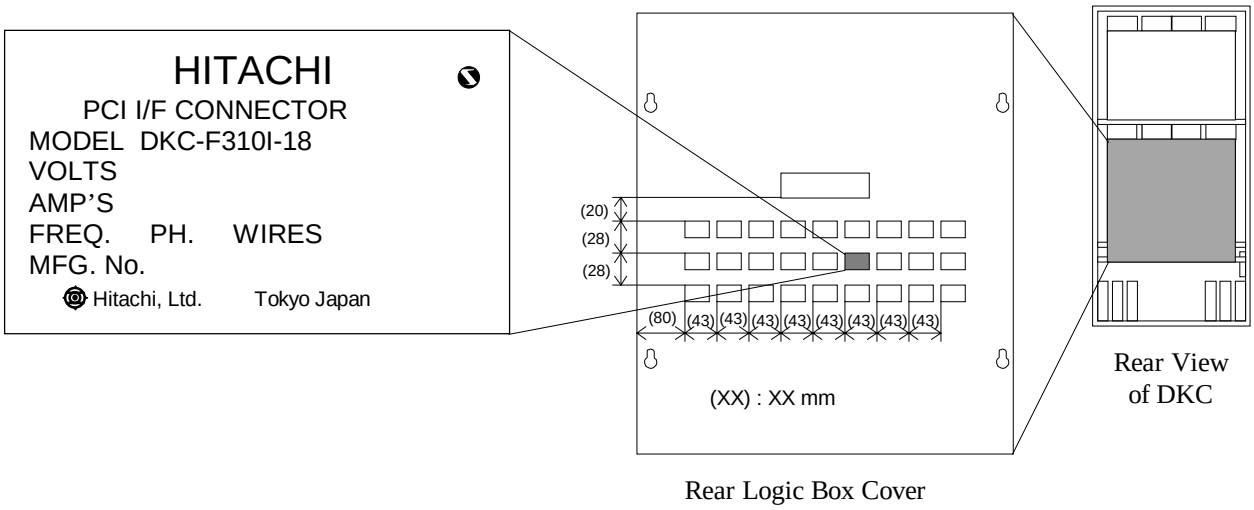

Fig. 3.13.1.3-5 Location of the Nameplate

8. Return to General Flow.
   New Installation : Go to INST02-10 step (2)-2. But if RCU I/F Connector must be installed, perform INST03-2450 through 2470.
   Non-Disruptive Installation : Go to INST02-24 step (11)-2.
   Disruptive Installation : Go to INST02-41 step (6)-2.

Copyright ©1997, Hitachi, Ltd.

3.13.2 Installation of RCU I/F Connector (DKC-F310I-19)

3.13.2.1 Flowchart

1. Attach the RCU CONN PCB.

↓

2. Attach the nameplate.

3.13.2.2 Parts List

Table 3.13.2.2-1 Parts List

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKC-F310I-19	RCU CONN	3236713-B	1	
		Nameplate	3252542-15	1	

Copyright ©1997, Hitachi, Ltd.

3.13.2.3 Installation Procedure of RCU I/F Connector

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Attach the RCU CONN PCB.
   a. Remove the screw① and remove the plate.
   b. Attach the RCU CONN and fasten the screw②.
   c. Attach the plate and fasten the screw①.
   d. Connect the cables(P70, 71).

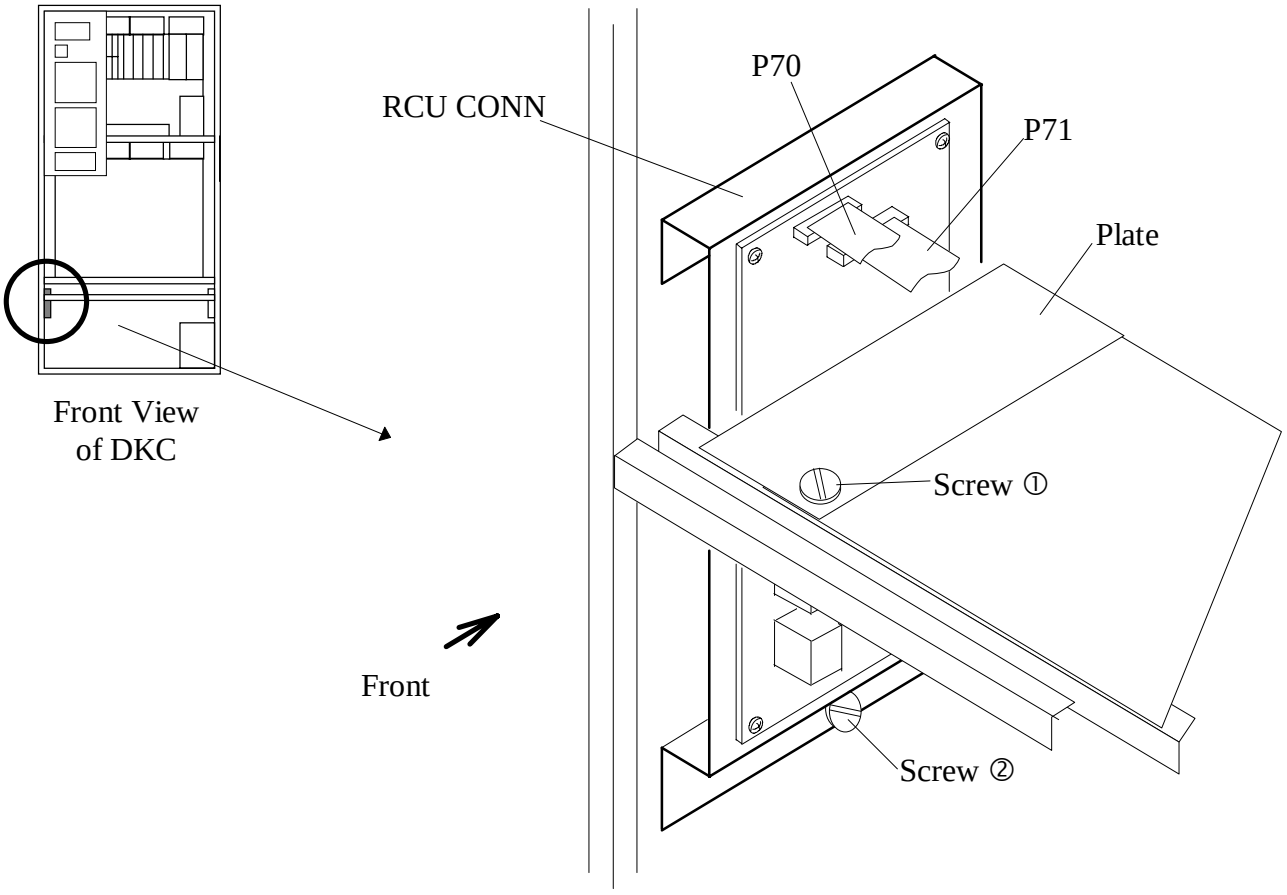

Fig. 3.13.2.3-1 Attachment of RCU CONN PCB

Copyright ©1997, Hitachi, Ltd.

2. Attach the nameplate.
   a. Attach the nameplate of DKC-F310I-19.

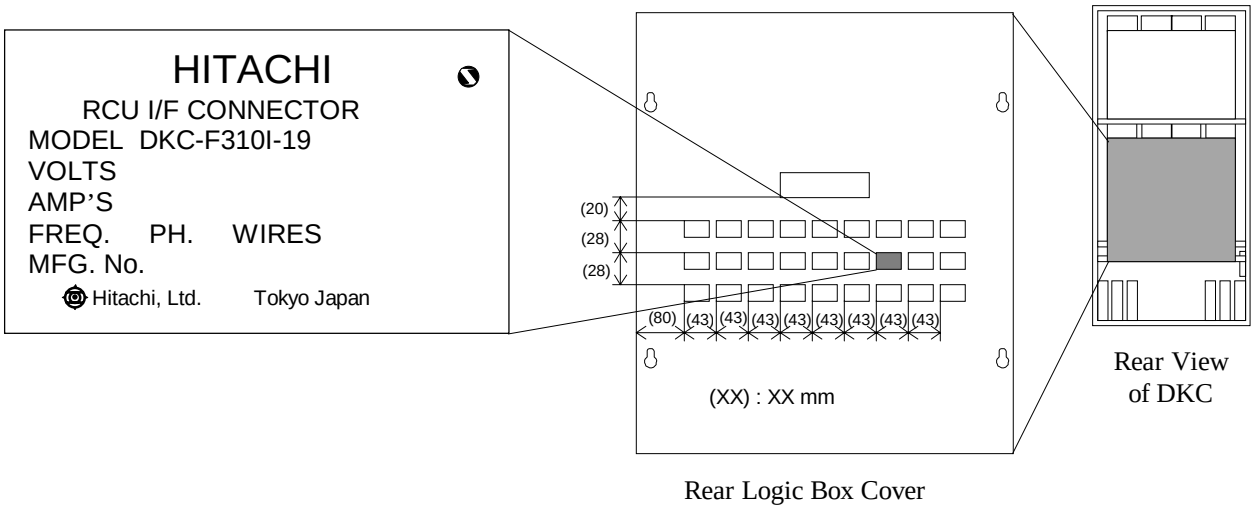

Fig. 3.13.2.3-2 Location of the Nameplate

3. Return to General Flow.
   New Installation : Go to INST02-10 step (2)-2.
   Non-Disruptive Installation : Go to INST02-24 step (11)-3.
   Disruptive Installation : Go to INST02-41 step (7).

3.14 Installation of Outlet Box

3.14.1 Installation of Outlet Box(IU)

⚠ CAUTION

Perform The Outlet Box with care.
This Outlet Box is concerned with Primary Circuit.
Perform this procedure before connecting the Disk Unit to the frame and the Power Cable Assy.
Be sure to mind your head during operation, or you might hit your head against the movable rack, which causes injury.

3.14.1.1 Flowchart

Cover Removal

3.14.1.3 Procedure of Outlet Box(IU) Installation

1. Cover removal
   a. Remove the Front PS Box Cover 2. Refer to INST03-10.
   b. Loosen the two screws and remove the cable duct cover.

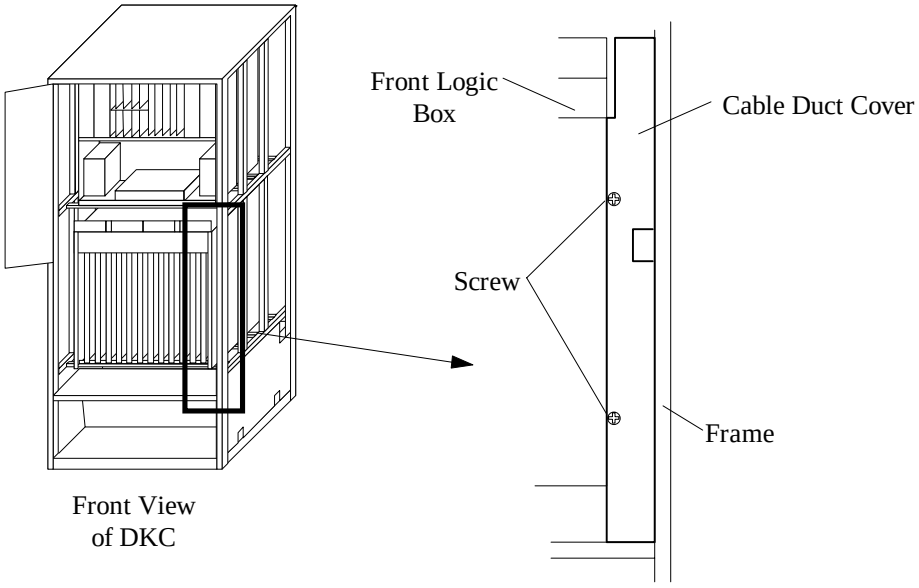

Fig. 3.14.1.3-1 Removal of Cable Duct Cover

2. Outlet Box attachment
   a. Loosen the screw① and attach the OLB BASE ASM with three screws.

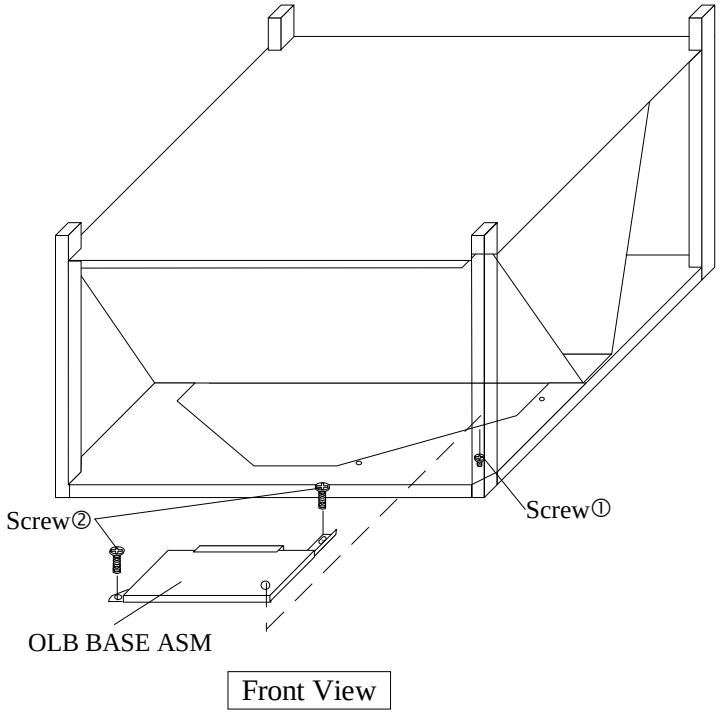

Fig. 3.14.1.3-2 Attachment of OLB BASE ASM

Copyright ©1997,1998, Hitachi, Ltd.

b. Insert the Outlet Box to the stopper position located at the bottom of the Disk Controller.

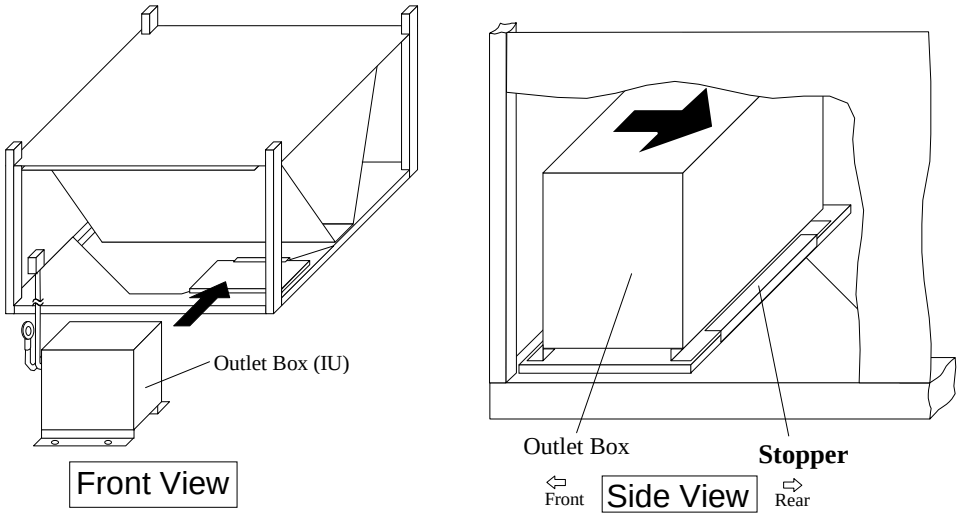

Fig. 3.14.1.3-2A Attachment of Outlet Box

Copyright ©1998, Hitachi, Ltd.

c. Attach the Outlet Box with two screws.
Attach the frame ground cable to the Disk Controller frame using the screw and lock washer.

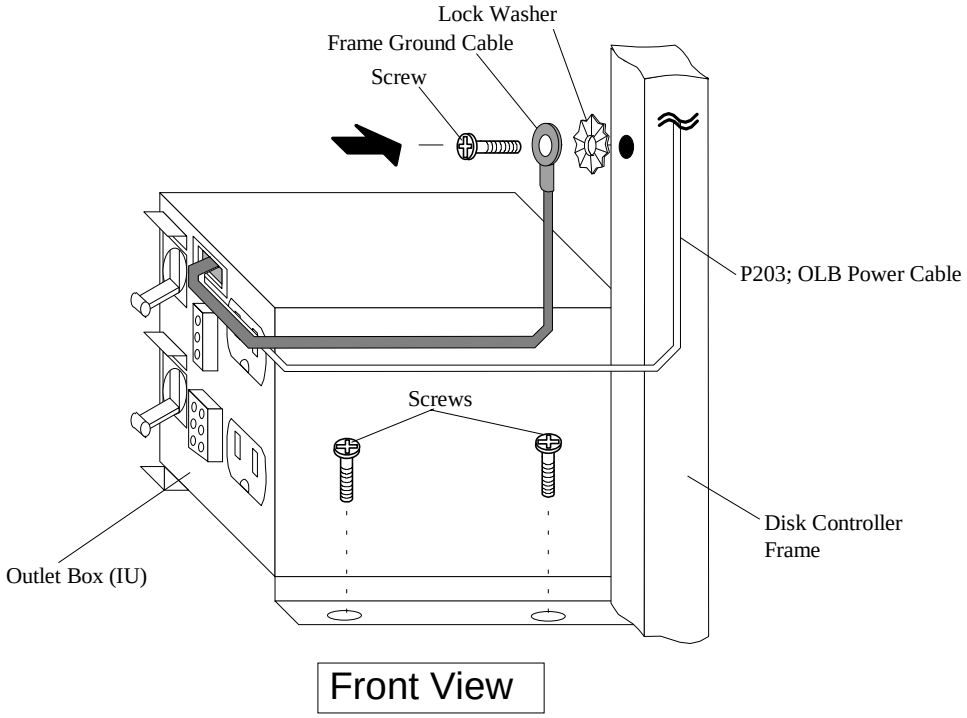

Fig. 3.14.1.3-3 Attachment of Outlet Box

d. Remove the cover and pass the OLB power cable (P203) through the gap in the plate. Attach the cover.

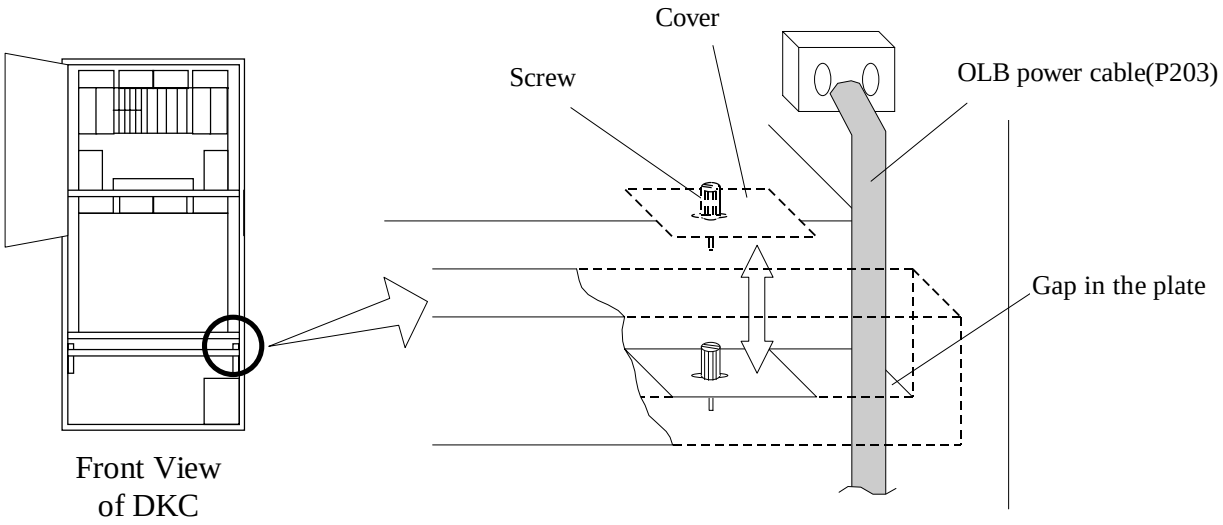

Fig. 3.14.1.3-4 Attachment of Outlet Box Power Cable

Copyright ©1998, Hitachi, Ltd.

e. Insert the Outlet Box connector as it was.
Attach the OLB power cable (P203).

3.14.2.2 Parts List

Table 3.14.2.2-1 Parts List

No.	Name of Part	Part Number	Quantity/Unit	Remarks
1	Outlet Box (IE type)	5497351-B	1	
2	OLB BASE ASM	3252602-A	1	

Copyright ©1997,1998, Hitachi, Ltd.

3.14.2.3 Procedure of Outlet Box(IE) Installation

1. Cover removal
   a. Remove the Front PS Box Cover 2. Refer to INST03-10.
   b. Loosen the two screws and remove the cable duct cover.

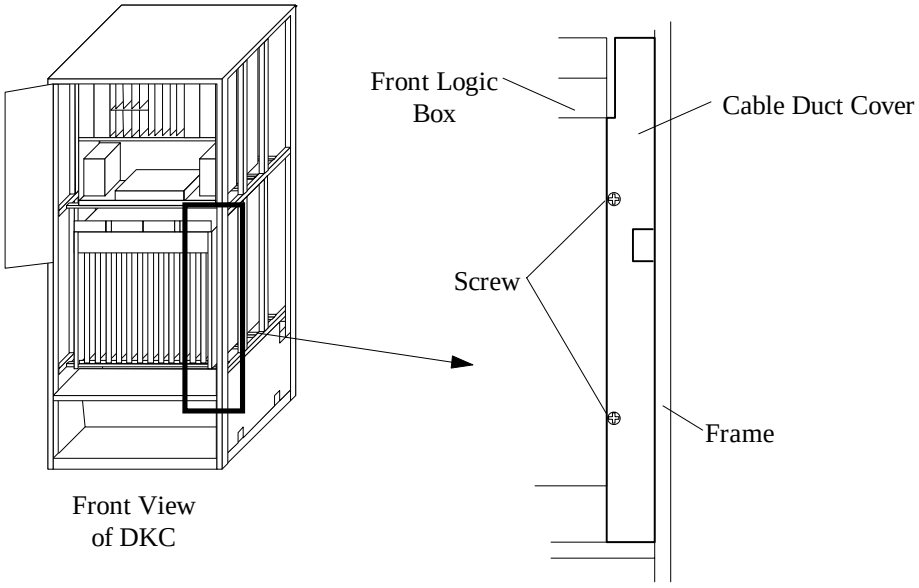

Fig. 3.14.2.3-1 Removal of Cable Duct Cover

2. Outlet Box attachment
   a. Loosen the screw① and attach the OLB BASE ASM with three screws.

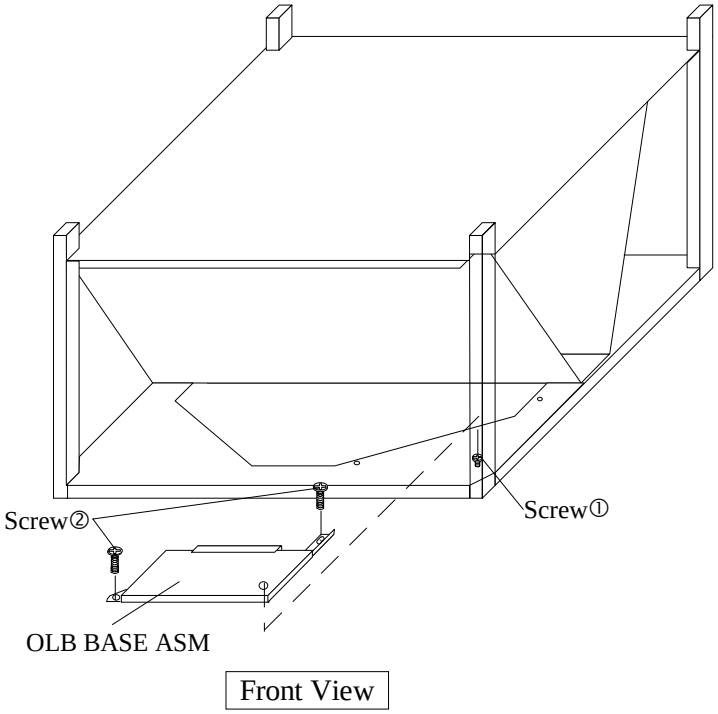

Fig. 3.14.2.3-2 Attachment of OLB BASE ASM

Copyright ©1997,1998, Hitachi, Ltd.

b. Insert the Outlet Box to the stopper position located at the bottom of the Disk Controller.

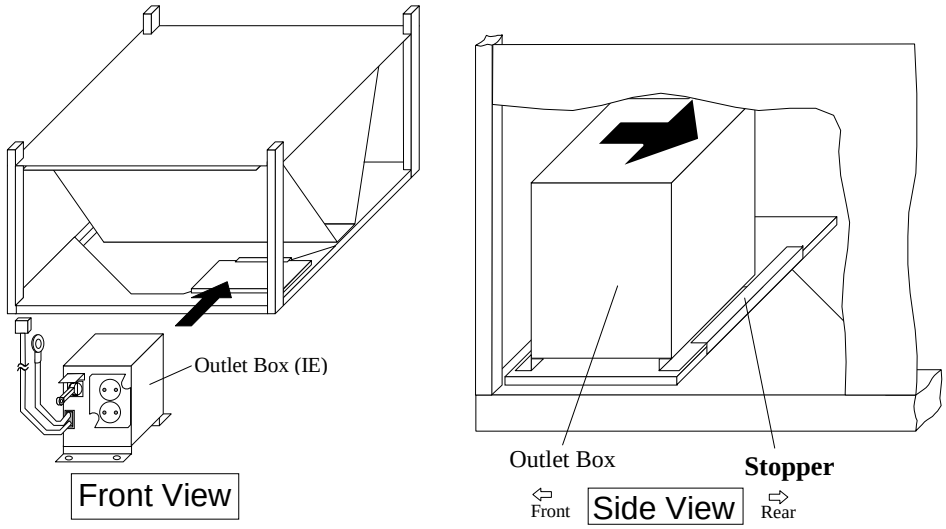

Fig. 3.14.2.3-2A Attachment of Outlet Box

Copyright ©1998, Hitachi, Ltd.

c. Attach the Outlet Box with two screws
Attach the frame ground cable to the Disk Controller frame using the screw and lock washer.

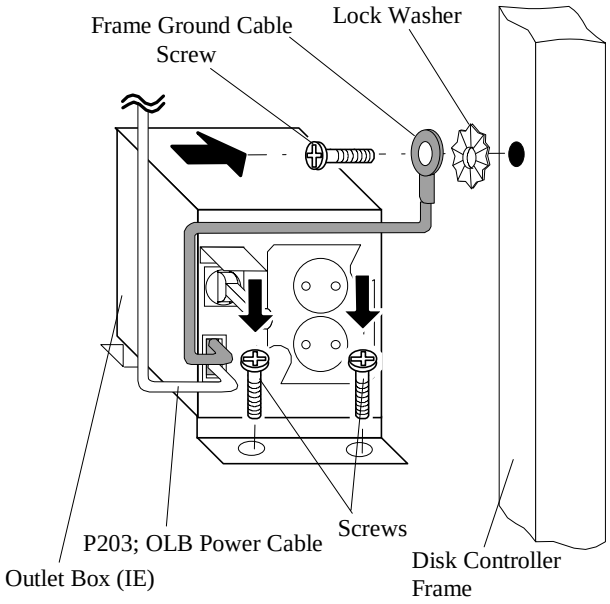

Fig 3.14.2.3-3 Attachment of Outlet Box

d. Remove the cover and pass the OLB power cable (P203) through the gap in the plate. Attach the cover.

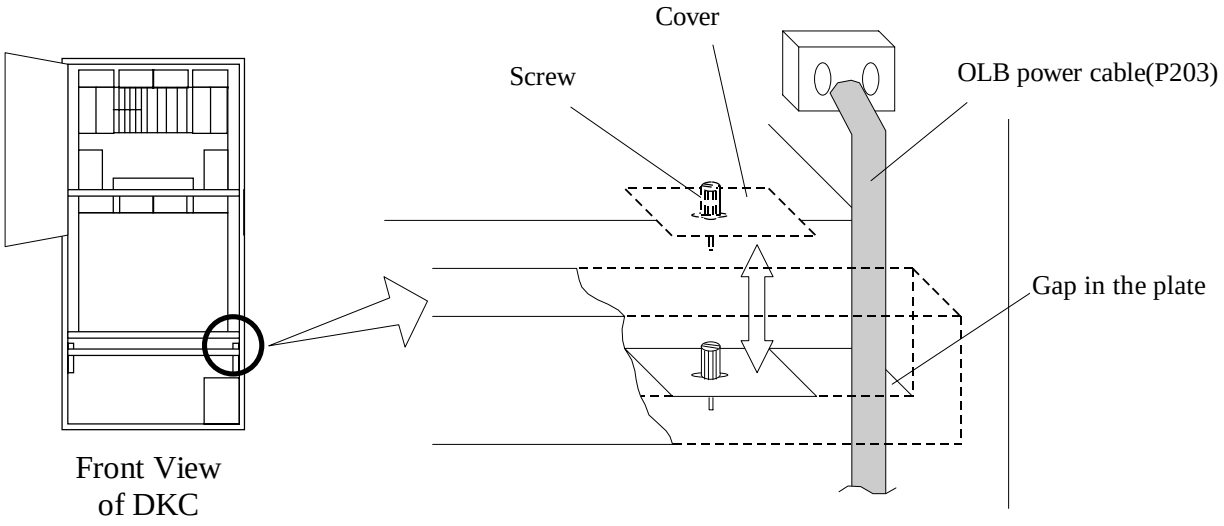

Fig. 3.14.2.3-4 Attachment of Outlet Box Power Cable

Copyright ©1998, Hitachi, Ltd.

e. Insert the Outlet Box connector as it was.
Attach the OLB power cable (P203) with three repeat binders.

Table 3.14.2.3-1 Outlet Box Connectors

Part Name	Connector No.					Remarks
	P203	P311	P312	J313		
Outlet Box(IE)	○	—	—	◆	◆	
	OLB power cable (Breaker Box-1)	For setting the input voltage	For setting the output voltage			

Symbols) ○: Insert the connector. ×: Do not insert the connector.
◆: Insert the connector as needed

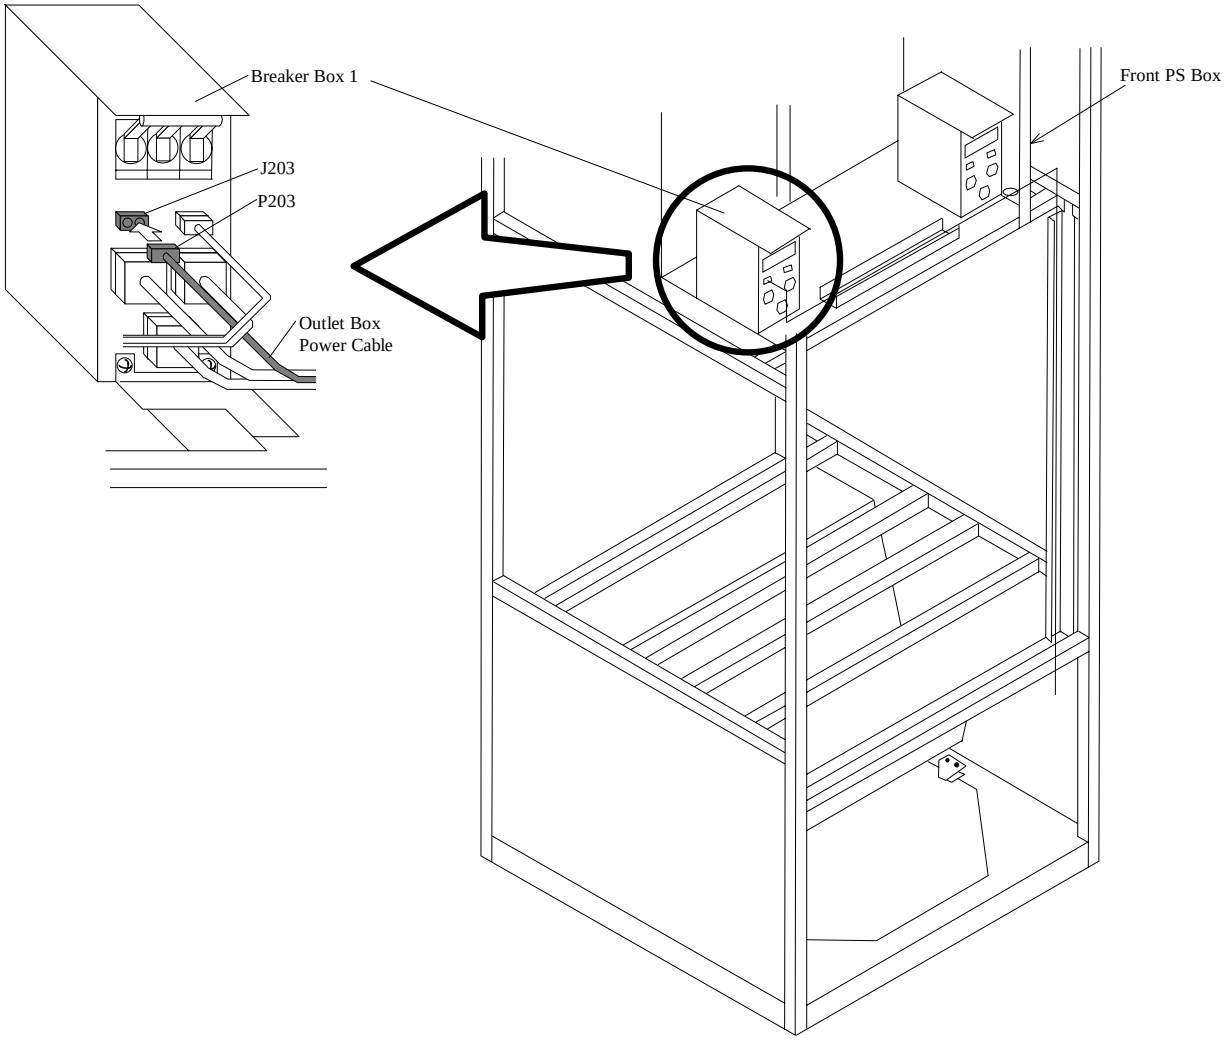

Fig. 3.14.2.3-5 Connection of Outlet Box Power Cable

Copyright ©1997,1998, Hitachi, Ltd.

3. Cover Attachment
   a. Attach the Front PS Box Cover 2. Refer to INST03-10.
   b. Attach the cable duct cover and fasten the two screws. Refer to Fig. 3.14.2.3-1.

4. Return to General Flow.
   New Installation: Go to INST02-10 step (2)-3.
   Non-Disruptive Installation : Go to INST02-24 step (12)-3.
   Disruptive Installation : Go to INST02-41 step (8).

3.15 Installation of Dump/Restore Function for Multi-Platform (DKC-F310I-M80)

3.15.1 Installation Procedure of Dump/Restore Function for Multi-Platform

1. Change the Nameplate.
   a. Wipe off the number ① of the nameplate.

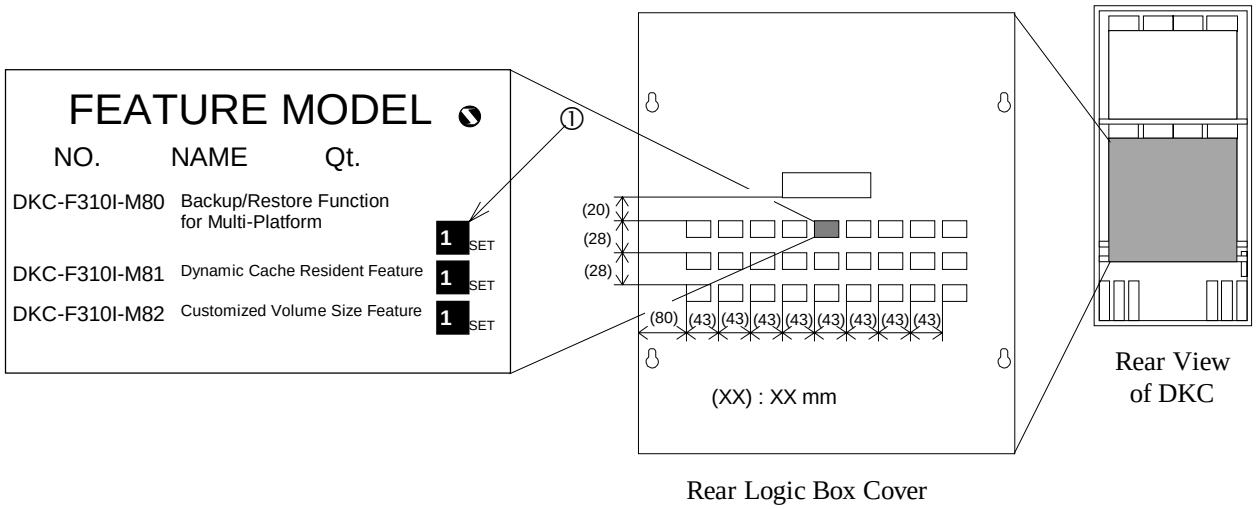

Fig. 3.15.1-1 Location of the Nameplate

2. Return to General Flow.
   New Installation : Go to INST02-11 step (11).
   Non-Disruptive Installation : Go to INST02-24 step (14).
   Disruptive Installation : Go to INST02-41 step (9).

Copyright ©1997, Hitachi, Ltd.

3.16 Installation of Dynamic Cache Resident Feature (DKC-F310I-M81)

3.16.1 Installation Procedure of Dynamic Cache Resident Feature

1. Change the Nameplate.
   a. Wipe off the number ① of the nameplate.

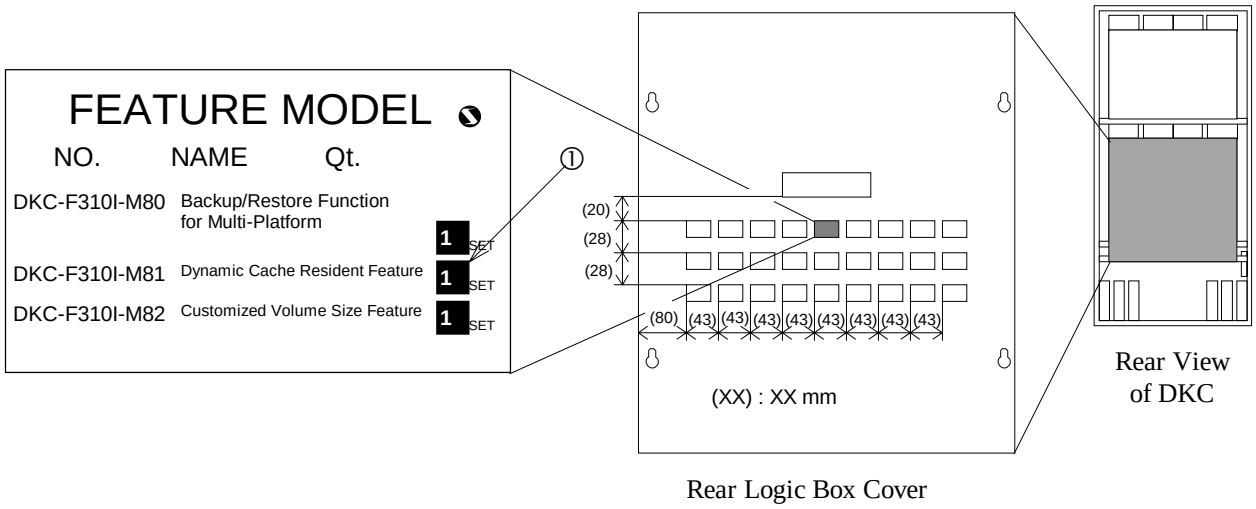

Fig. 3.16.1-1 Location of the Nameplate

2. Return to General Flow.
   New Installation : Go to INST02-11 step (12).
   Non-Disruptive Installation : Go to INST02-24 step (15).
   Disruptive Installation : Go to INST02-41 step (10).

Copyright ©1997, Hitachi, Ltd.

3.17 Installation of Customized Volume Size Feature (DKC-F310I-M82)

3.17.1 Installation Procedure of Customized Volume Size Feature

1. Change the Nameplate.
   a. Wipe off the number ① of the nameplate.

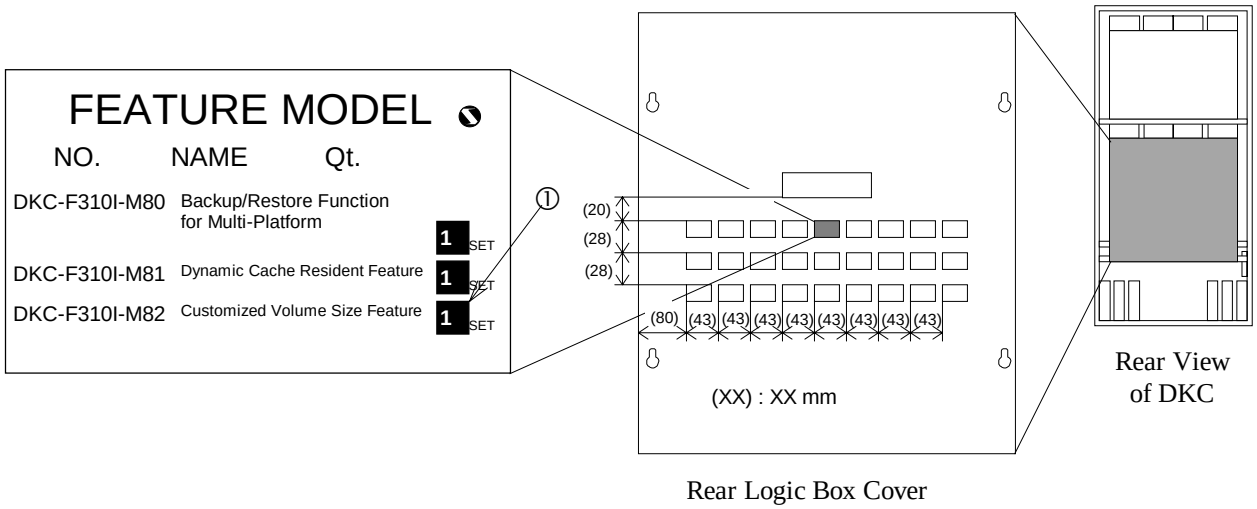

Fig. 3.17.1-1 Location of the Nameplate

2. Return to General Flow.
   New Installation : Go to INST02-12 step (12a).
   Non-Disruptive Installation : Go to INST02-24 step (16).
   Disruptive Installation : Go to INST02-41 step (10a).

Copyright ©1997,1998, Hitachi, Ltd.

3.18 Check and Testing

NOTICE:
Install all of the remaining optional parts.

3.18.1 Checking Input Voltage

⚠WARNING

Do not touch the internal parts of the AC power cable the AC Box or the Breaker Box. Line voltage is present even if the circuit breaker is off.

1. Check the AC input voltage using a voltmeter at the customer's AC power source (at the distribution board or receptacle for R & S connectors).

Copyright ©1997, Hitachi, Ltd.

3.18.2 Checking Input Power Cable and Voltage Select Jumper Cable

Check the input power cable and jumper cable (P104) at the AC BOX-R10 and AC BOX-R11 in the Basic Disk Unit. See Table 3.18.2-1 and figures 3.18.2-1 and 3.18.2-2 for check items.

Table 3.18.2-1 AC Input Cable Conductors and Jumper Cable (P104) Positions

Input Voltage	AC Input Cable Conductors	Jumper Cable (P104) Position	Remarks
200-240Vac	4 conductors (R,S,T,FG)	J104-1	J104-2 dummy connector
380-415Vac	5 conductors (R,S,T,N,FG)	J104-2	J104-1 dummy connector

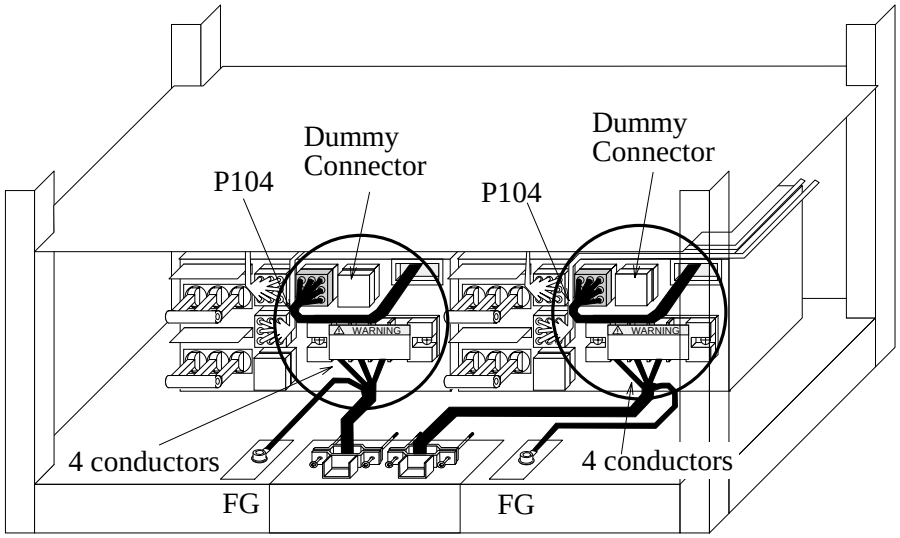

Fig. 3.18.2-1 AC Input Cable Conductors and Jumper Cable (P104) Positions 200-240Vac

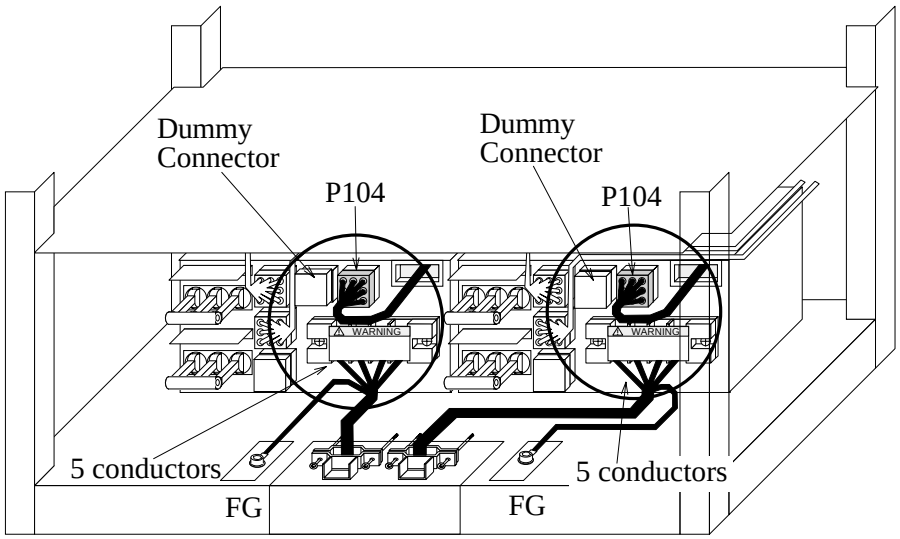

Fig. 3.18.2-2 AC Input Cable Conductors and Jumper Cable (P104) Positions 380-415Vac

Copyright ©1997,1999, Hitachi, Ltd.

3.18.3 Checking the Voltage Select Jumper Connector at the OUTLET BOX

Input voltage 200-240 Vac ONLY

Check the P311 and P312 jumper connectors at the Outlet Box

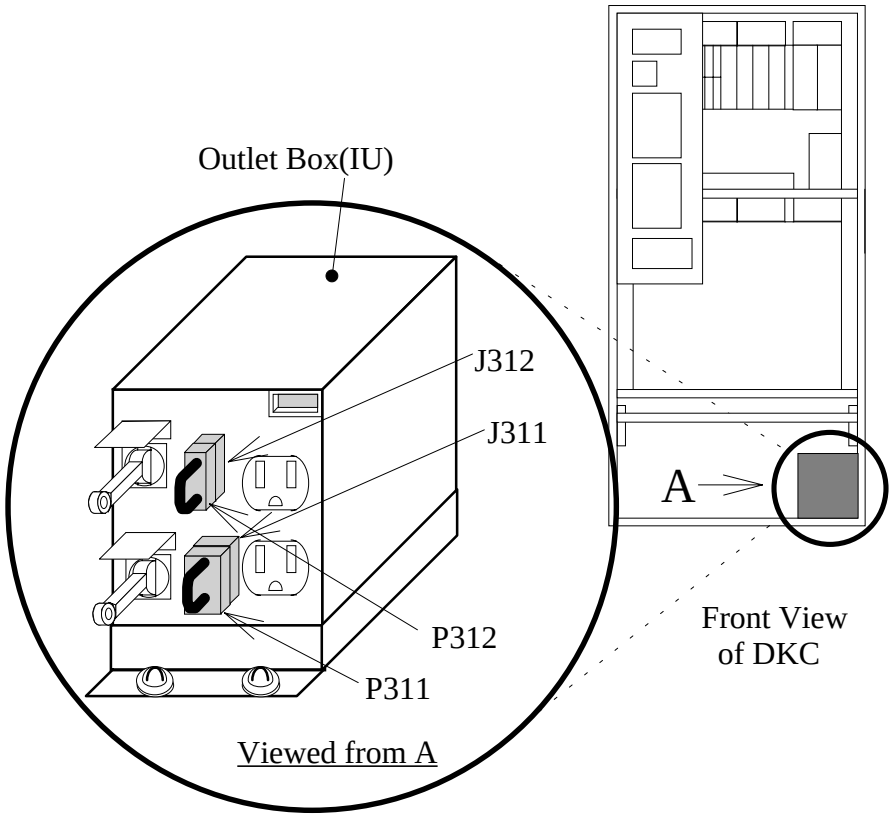

Fig. 3.18.3-1 Voltage Select Jumper Connectors

Table 3.18.3-1 Voltage Select Jumper Connector Setting

Input		Jumper Connectors		Output Voltage
Input Voltage	Frequency	J311	J312	
208 Vac	60 Hz	P311 208 V	P312 115 V	115 Vac
230 Vac		P311 230/400 V	P312 115 V	

Copyright ©1997, Hitachi, Ltd.

3.18.4 Power On/Off Check

1. Install all the remaining optional parts.

2. Turn on the disk controller according to the procedure shown in SECTION 3.19 POWER ON/OFF PROCEDURE. Refer to INST03-3040 through 3090.

3. Check the power supply output voltage to verify that it indicates the required level. Refer to PERIOD.

4. Turn off the Disk Subsystem according to the procedure shown in SECTION 3.19 POWER ON/OFF PROCEDURE. Refer to INST03-3100 through 3120.

5. New Installation: Go to INST02-12 step (14).

Copyright ©1997, Hitachi, Ltd.

3.19 Power ON/OFF Procedure

3.19.1 Power ON Procedure

3.19.1.1 Power ON Procedure of Disk Subsystem

Power on procedures are shown below. Refer to the details and start the operation.

1. Turn on the main circuit breaker at the AC Box on the Disk Unit.

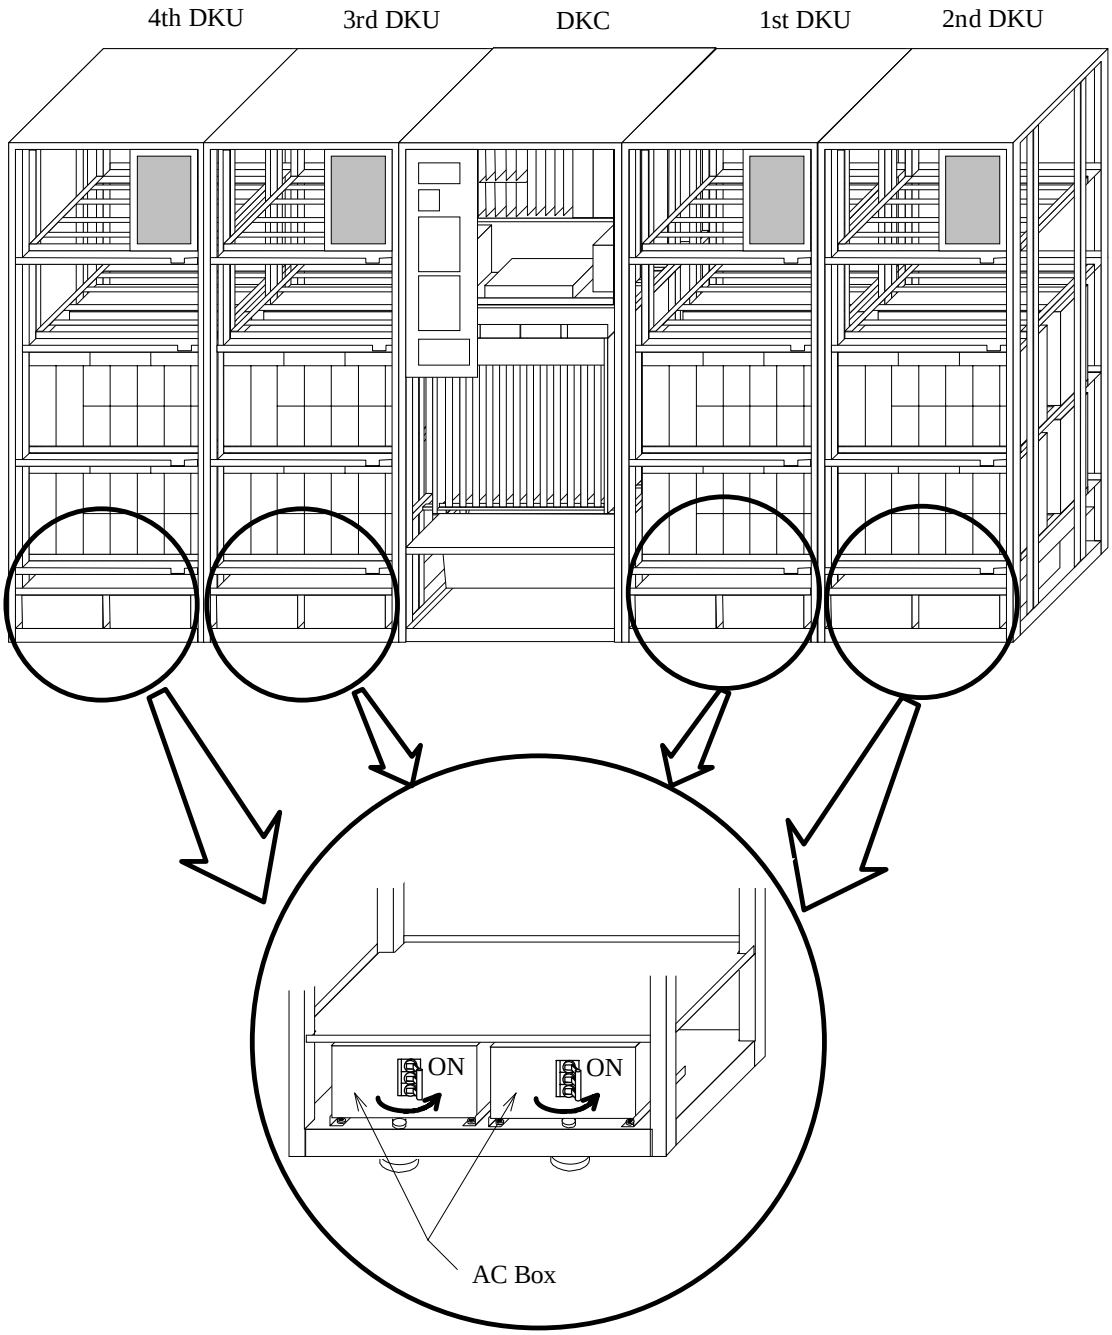

Fig. 3.19.1.1-1 Main Circuit Breaker on AC Box

Copyright ©1997,1999, Hitachi, Ltd.

2. Turn on the circuit breaker at the Breaker Box-1 and 2 in the Disk Controller.

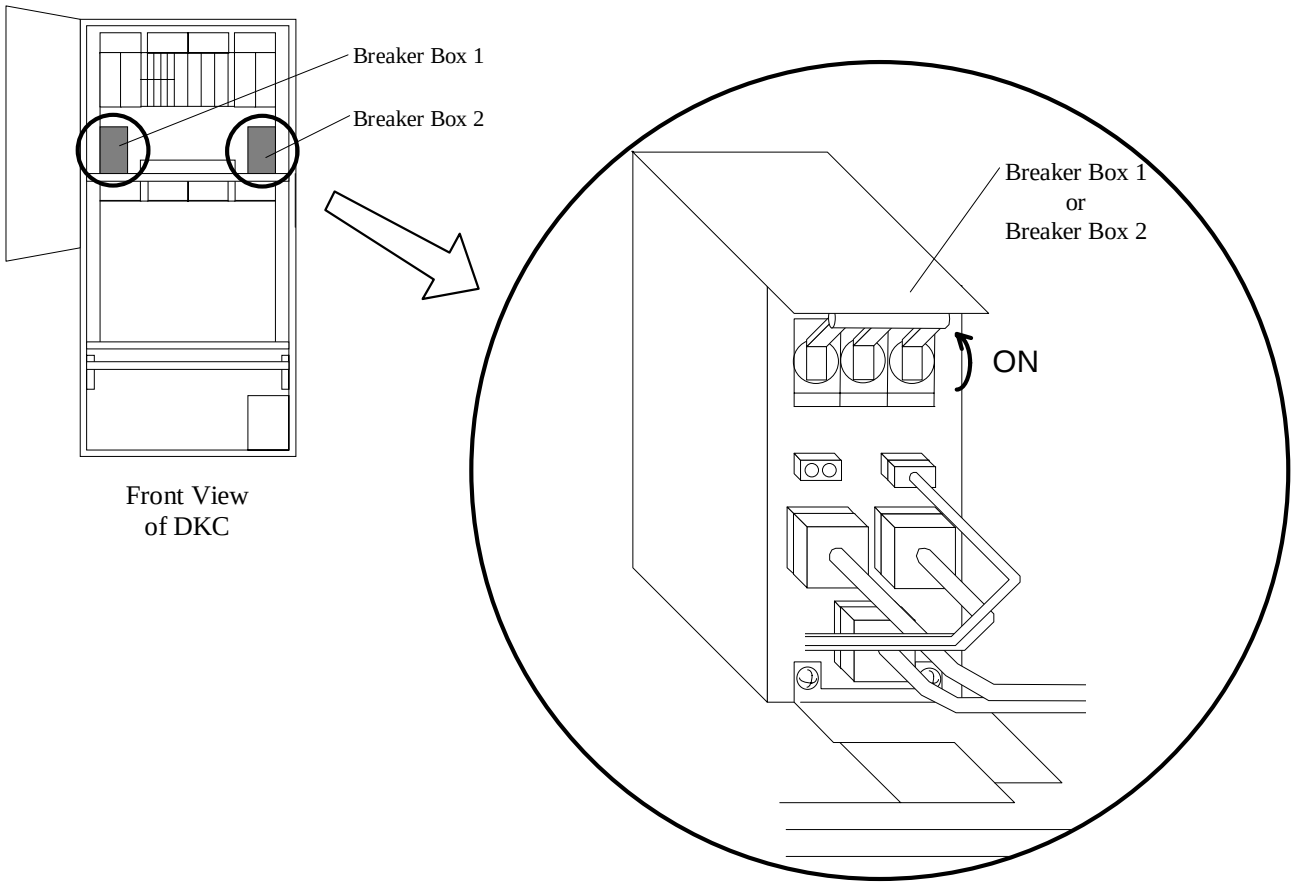

Fig. 3.19.1.1-2 Circuit Breaker in Breaker Box-1 and 2 and Outlet Box

Copyright ©1997,1999, Hitachi, Ltd.

3. Check battery charge voltage and fuse blow up on Battery Controller PCBs.
   Check charge voltage on BATTERY 10 through 12 and BATTERY 20 through 22.
   a. Disconnect the two cables ①.
   b. Insert the pins of the digital voltmeter into the cable ① removed from battery to make sure that battery charge voltage is within the allowable charge voltage.
      If the battery charge voltage is not within the allowable charge voltage, replace the BAT-CTR PCB.
   c. Connect the two cables ①.

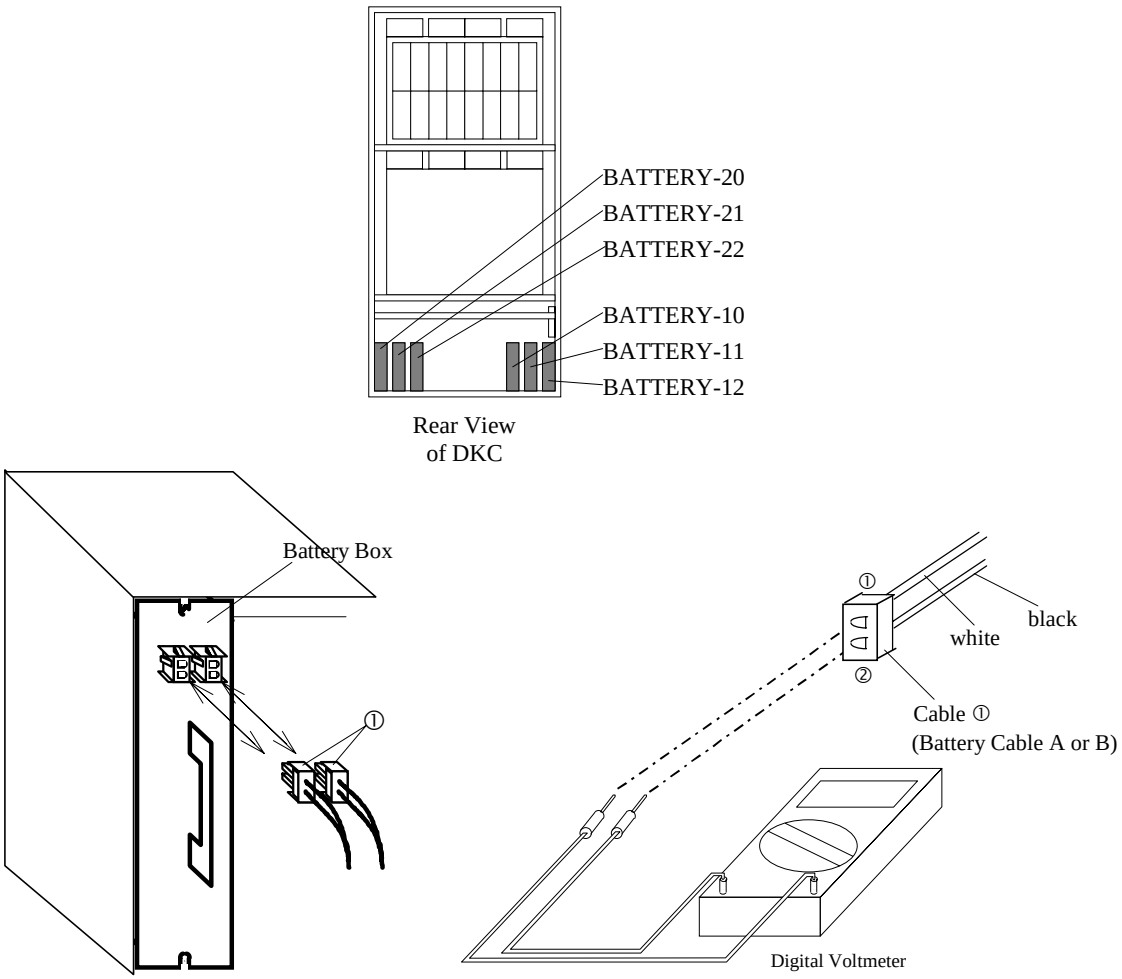

Fig. 3.19.1.1-3 Voltage Checkpoint

Table 3.19.1.1-1 Voltage Checkpoint and Allowable Voltage

No.	Pin No.		Allowable charge voltage
	+	-	
1	①	②	DC4.3V through DC4.95V

Copyright ©1999, Hitachi, Ltd.

4. Check battery voltage.
   Check battery voltage of the BATTERY 10 through 12 and BATTERY 20 through 22.
   a. Disconnect the two cables ①.
   b. Insert the pins of the digital voltmeter into the connector A on battery box to make sure that battery voltage is within the allowable battery voltage.
   c. Insert the pins of the digital voltmeter into the connector B on battery box to make sure that battery voltage is within the allowable battery voltage.
      If the battery voltage is not within the allowable battery voltage, replace the battery assembly.
   d. Connect the two cables ①.

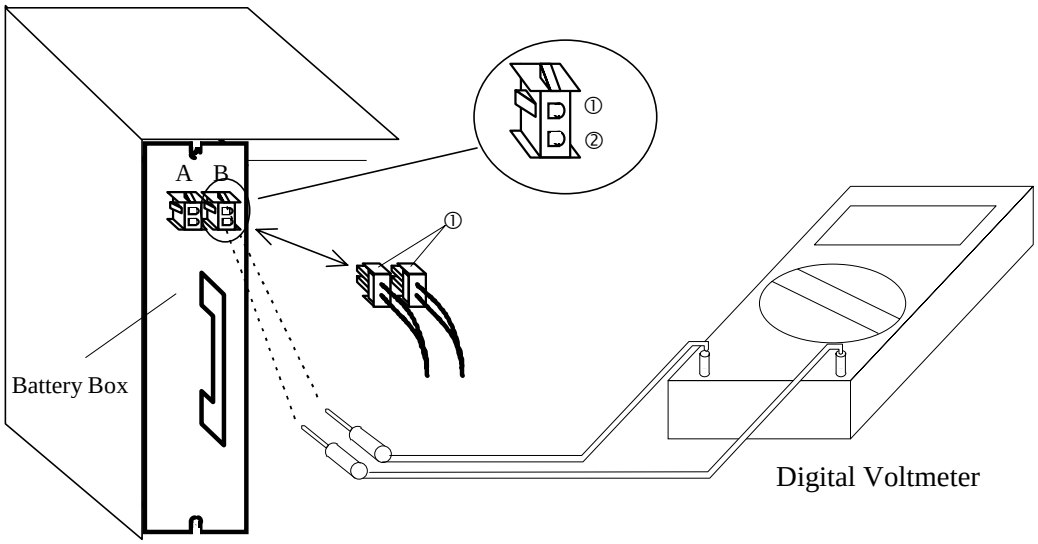

Fig. 3.19.1.1-4 Voltage Checkpoint

Table 3.19.1.1-2 Voltage Checkpoint and Allowable battery Voltage

Connector	Pin No.		Allowable battery voltage
	+	-	
A	①	②	DC4.0V through DC4.75V
B	①	②	DC4.0V through DC4.75V

5. Turn the “ENABLE/DISABLE” switch on the DKUMN PCB’s to “ENABLE”.

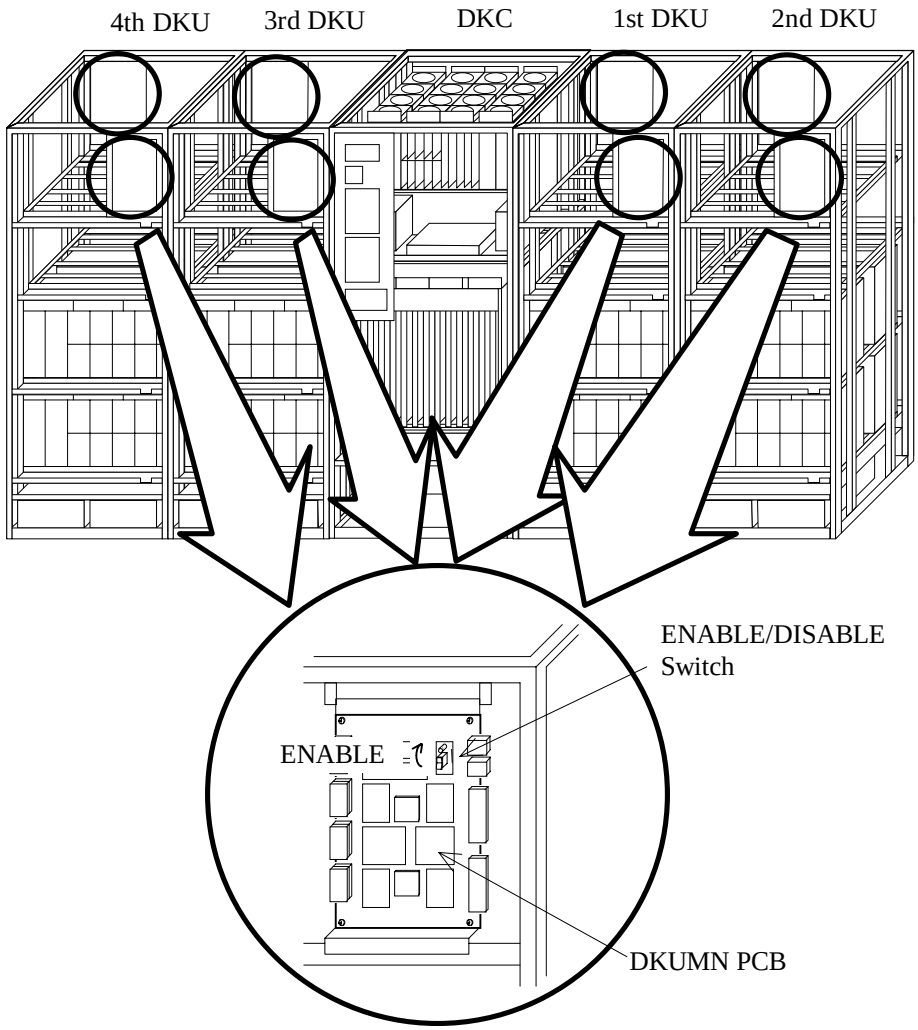

Fig. 3.19.1.1-5 ENABLE/DISABLE Switch on DKUMN PCBs

6. Return to General Flow.
   New Installation: Go to INST02-12 step (16).
   Disruptive Installation: Go to INST03-3070 step “7”.
   Disruptive De-installation: Go to INST03-3070 step “7”

Copyright ©1997,1999, Hitachi, Ltd.

7. Turn “ENABLE/DISABLE” switch on the CE panel PCB to “ENABLE”.
8. [Case as custom engineer operates]
   Turn the “REMOTE/LOCAL” switch on the CE panel PCB to “LOCAL”.
   Turn the “POWER ON/OFF” switch on the CE panel PCB to “ON”.
   [Case as that operate from CPU]
   Turn the “REMOTE/LOCAL” switch on the CE panel PCB to “REMOTE”.
   Turn on the power supply from CPU.

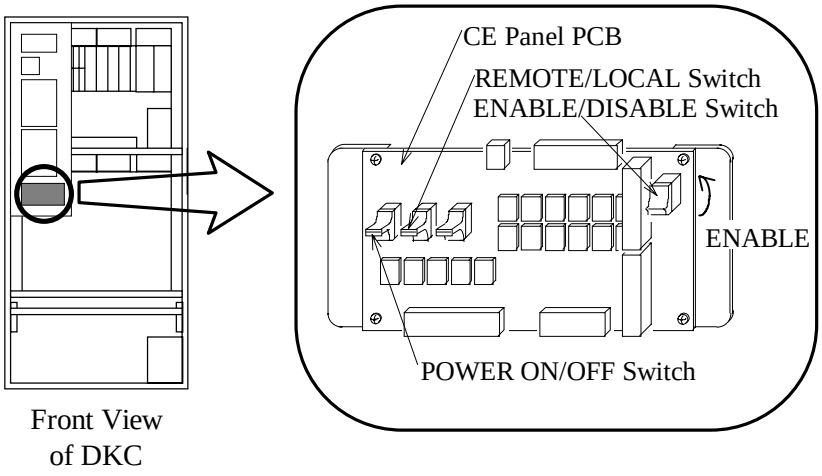

Fig. 3.19.1.1-6 CE Panel PCB

9. Return to General Flow.
   New Installation : Go to INST02-12 step (18).
   Disruptive Installation : Go to INST02-43 step (15).
   Disruptive De-installation : Go to INST02-54 step (21).

Copyright ©1997,1999, Hitachi, Ltd.

3.19.1.2 Power ON Procedure of Additional Disk Unit

Before turning the power of AC BOX on, make sure that the Enable/Disable switch on the DKU Monitor is in “Disable” position. If the switch is in “Enable” position, turn the switch to “Disable” position.

1. Power on procedures are shown below. Refer to the details and start the operation.
   a. Turn on the main circuit breaker at the AC Box on the Disk Unit.

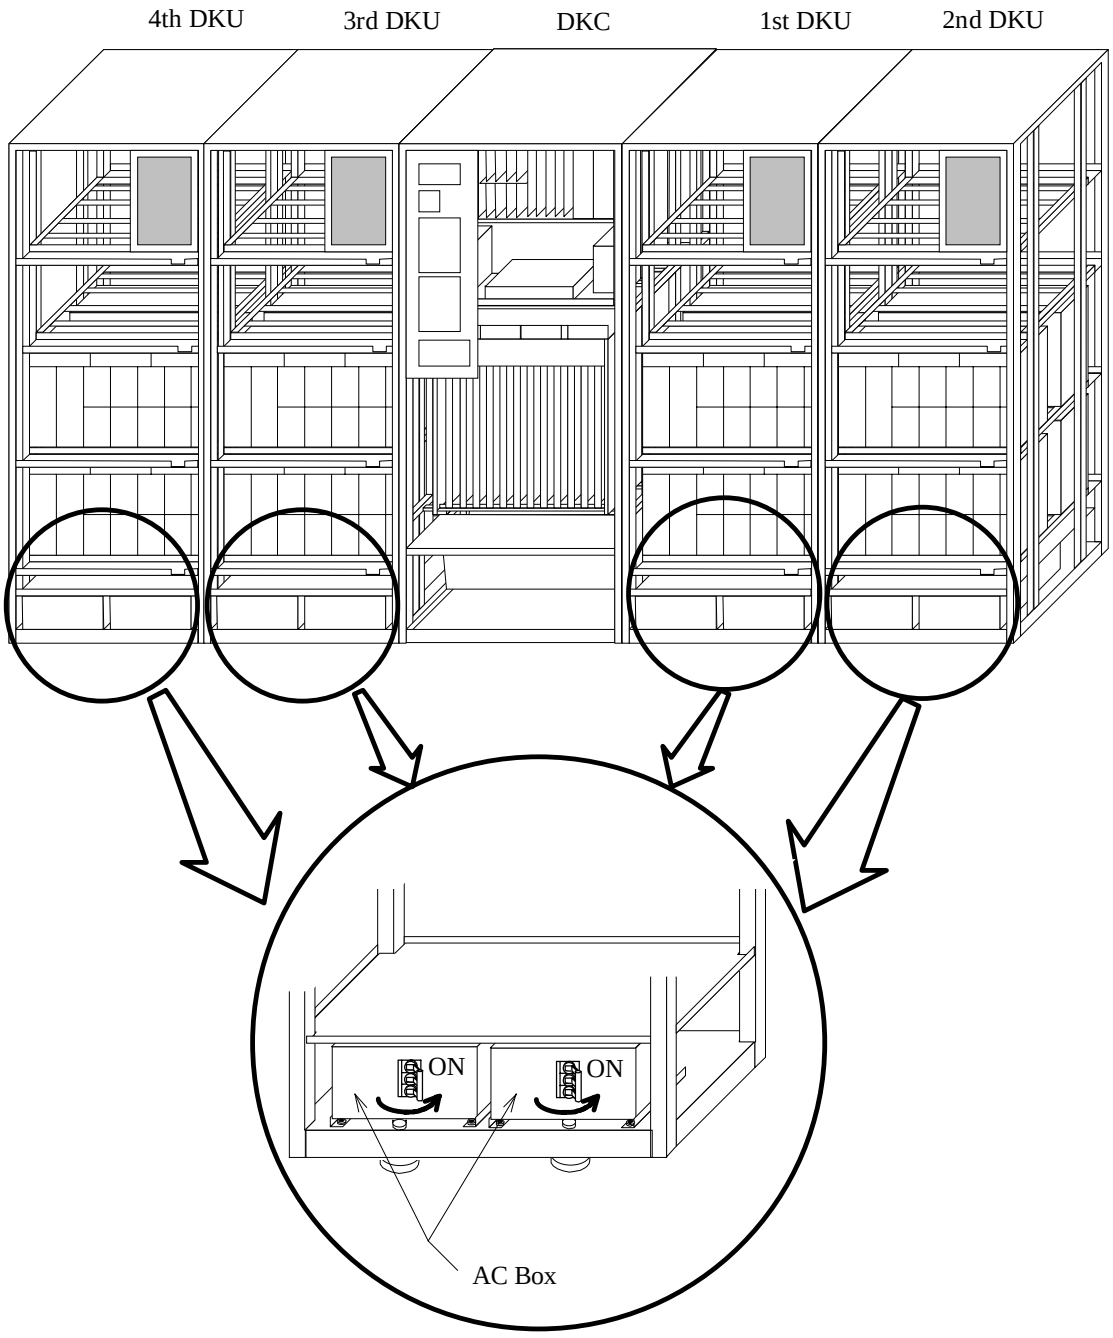

Fig. 3.19.1.2-1 Main Circuit Breaker on AC Box

Copyright ©1997, Hitachi, Ltd.

b. Turn the “ENABLE/DISABLE” switch on the DKUMN PCB’s to “ENABLE”.

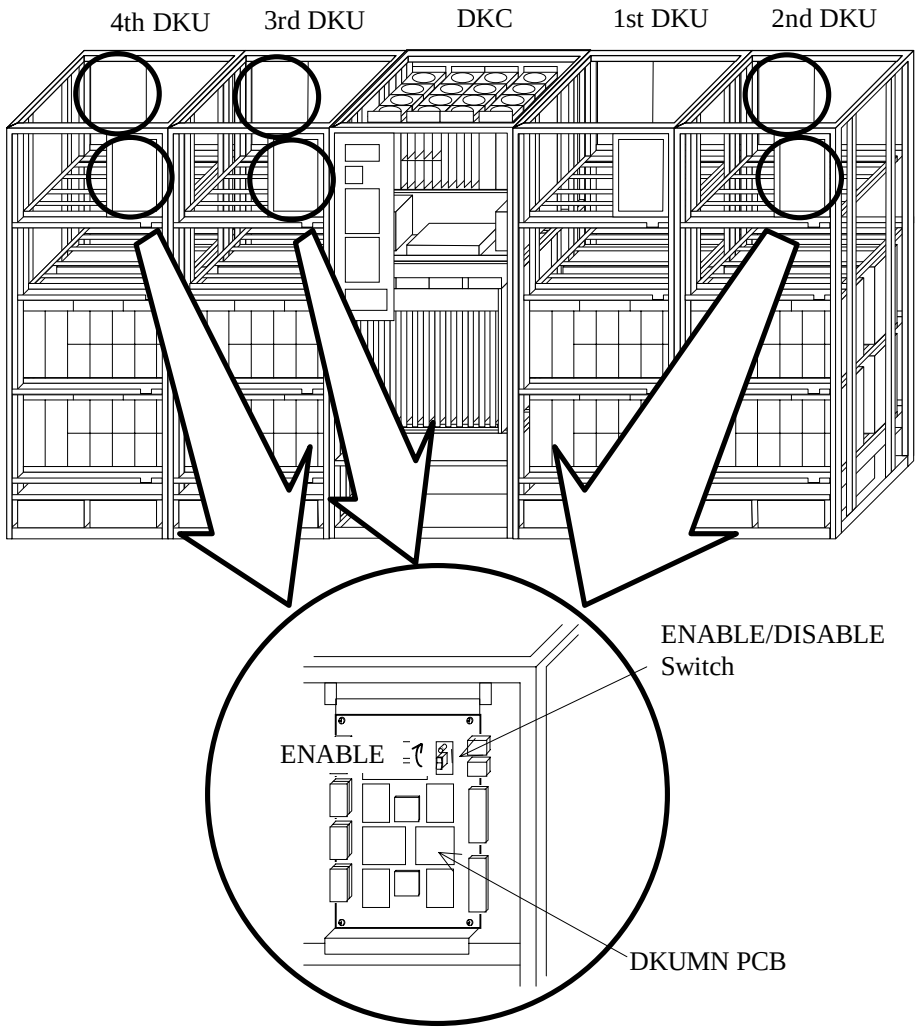

Fig. 3.19.1.2-2 ENABLE/DISABLE Switch on DKUMN PCBs

c. Return to General Flow.
Non-Disruptive Installation : Go to INST02-21 step (7)-4.

3.19.2 Power OFF Procedure

3.19.2.1 Power OFF Procedure of Disk Subsystem

⚠ NOTICE

In this case power off Disk subsystem, after turn off power of DKC, be sure to off READY LED on the operate panel and PS-ON LED on the CE panel, and then turn off the main circuit breaker at the AC Box on the Disk Unit.

1. Power off procedures are shown below. Refer to the details and start the operation.
   a. Stop the SVP.
   b. [Case as custom engineer operates]
      Turn the “REMOTE/LOCAL” switch on the CE panel PCB to “LOCAL”.
      Turn the “POWER ON/OFF” switch on the CE panel PCB to “OFF”.
      [Case as that operate from CPU]
      Turn the “REMOTE/LOCAL” switch on the CE panel PCB to “REMOTE”.
      Turn off the power supply from CPU.

c. Turn off the main circuit breaker at the AC Box on the Disk Unit.

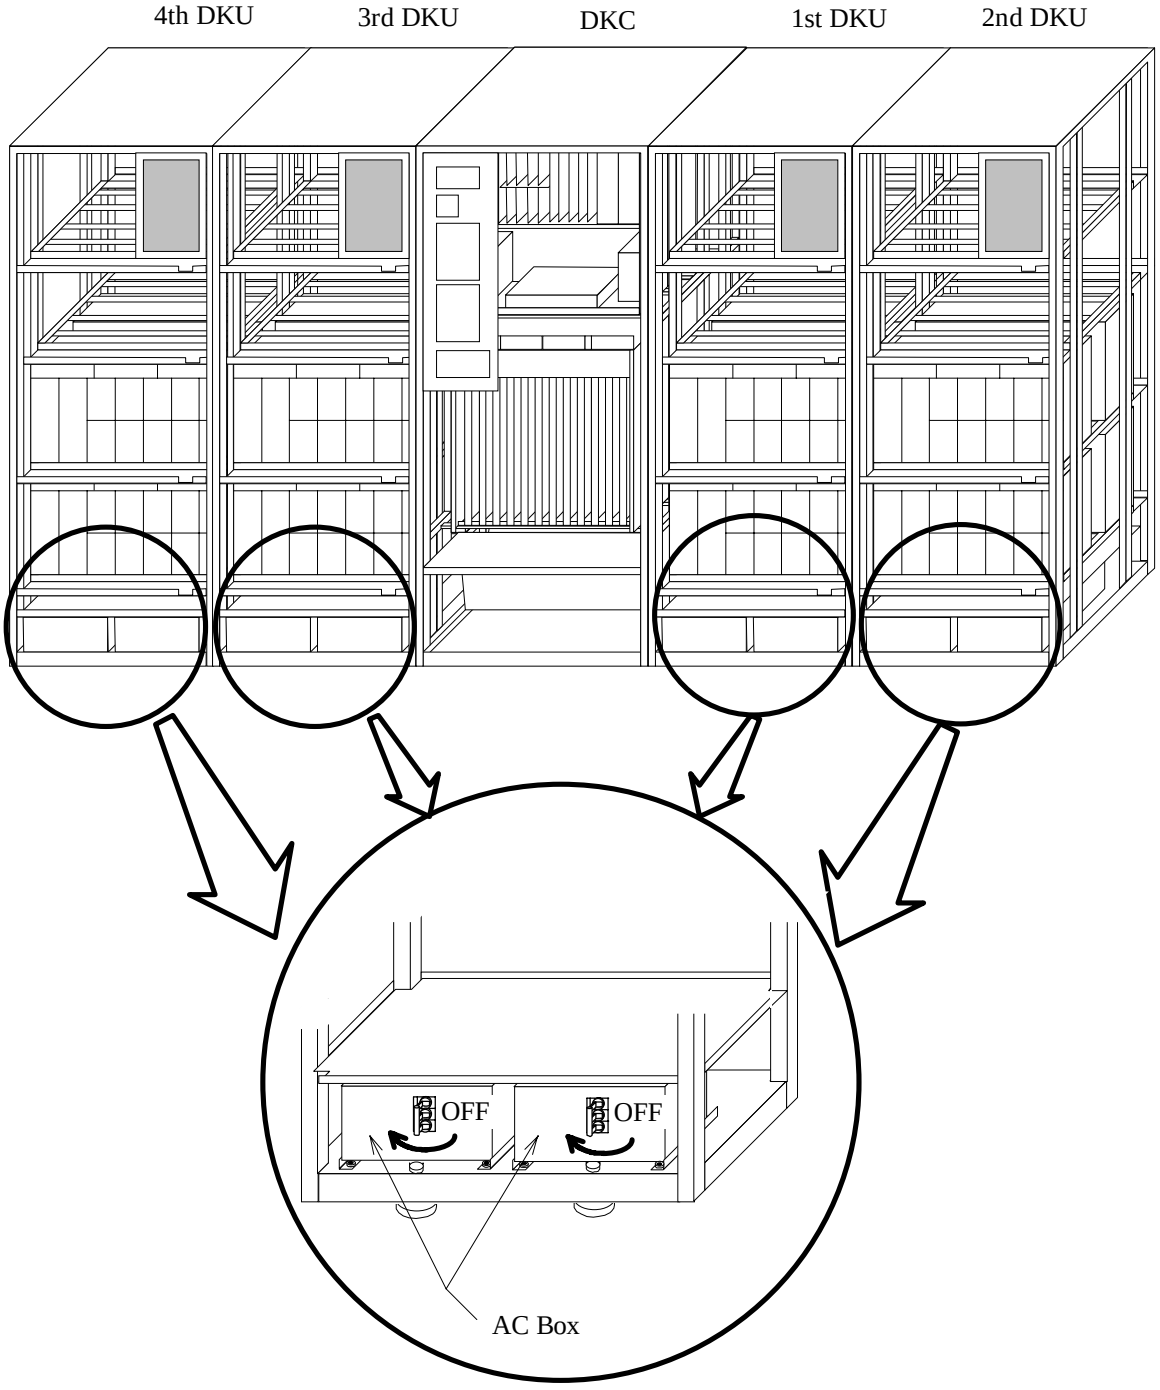

Fig. 3.19.1.2-2 Main Circuit Breaker on AC Box

d. Return to General Flow.
Disruptive Installation : Go to INST02-40 step (3).
Disruptive De-installation : Go to INST02-52 step (10).

Copyright ©1997, Hitachi, Ltd.

3.19.2.2 Power OFF Procedure of Additional Disk Unit

1. Power off procedures are shown below. Refer to the details and start the operation.
   a. Turn off the main circuit breaker at the AC Box on the Disk Unit.

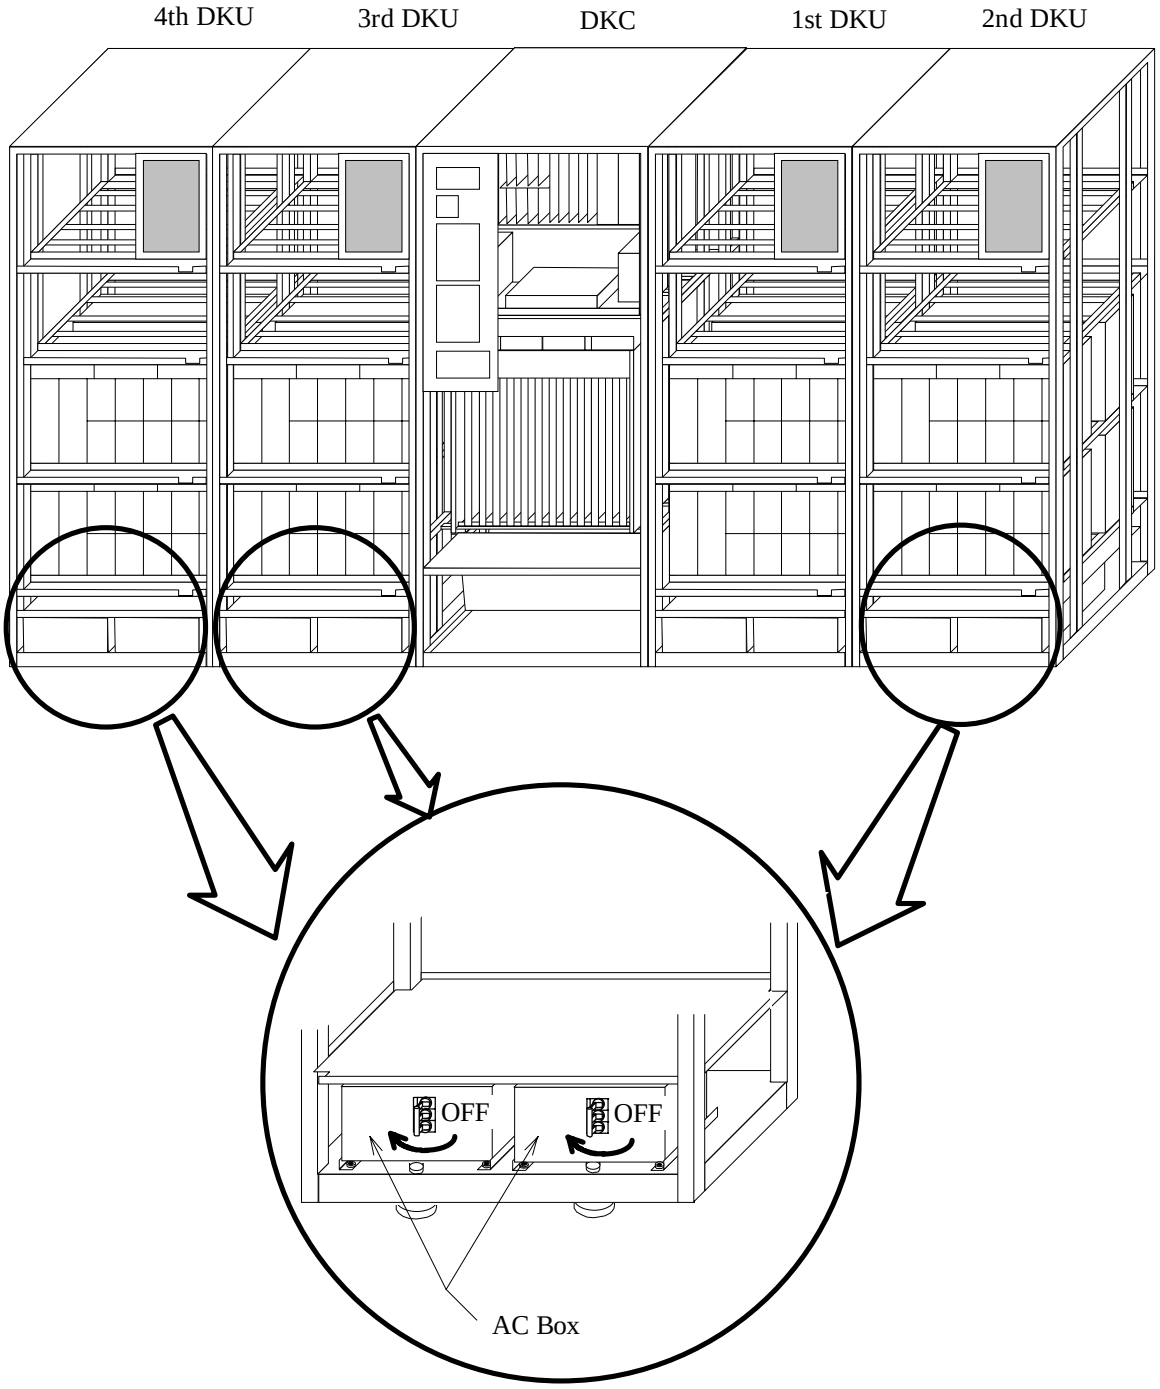

Fig. 3.19.2.2-1 Main Circuit Breaker on AC Box

3.20 Installation of Hitachi Multiple RAID Coupling Facility Feature (DKC-F310I-M83)

3.20.1 Installation Procedure of Hitachi Multiple RAID Coupling Facility Feature

1. Change the Nameplate.
   a. Wipe off the number ① of the nameplate.

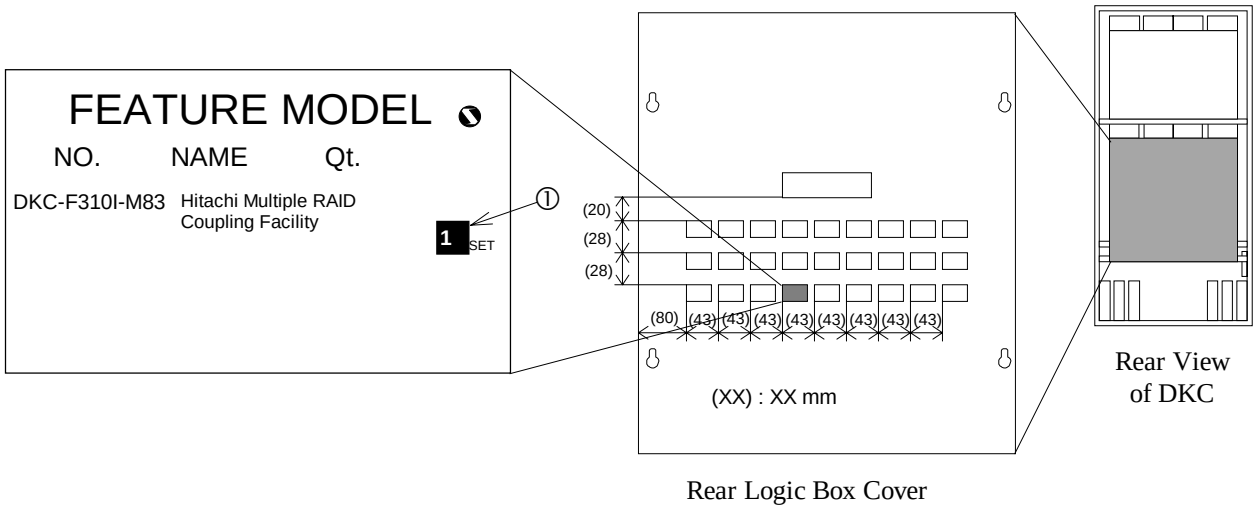

Fig. 3.17.1-1 Location of the Nameplate

2. Return to General Flow.
   New Installation : Go to INST02-12 step (13).
   Non-Disruptive Installation : Go to INST02-24 step END.
   Disruptive Installation : Go to INST02-41 step (11).

Copyright ©1998, Hitachi, Ltd.

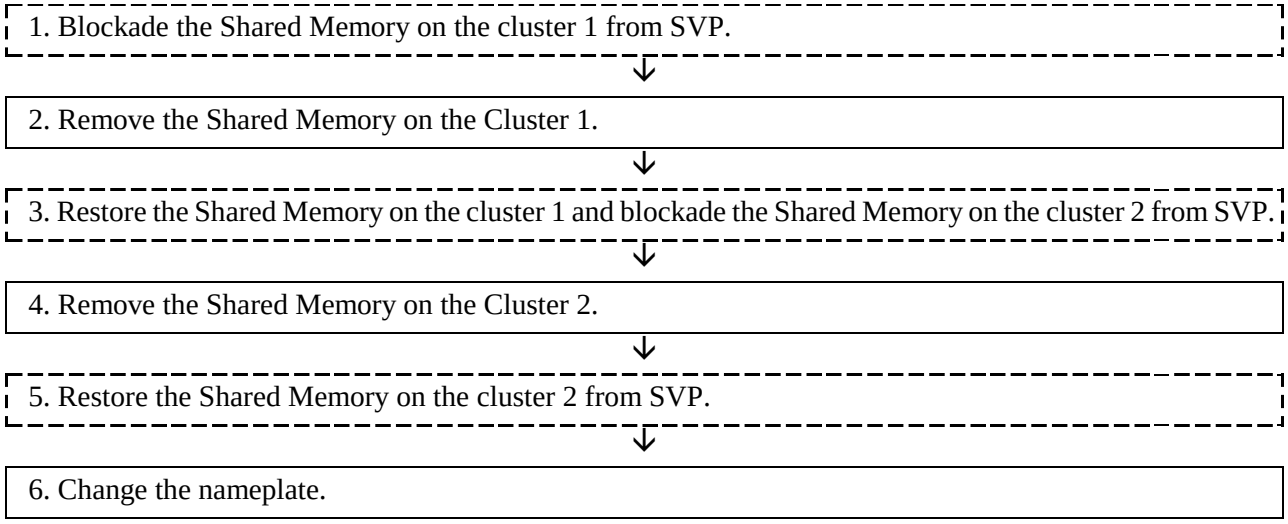
4. Hardware De-Installation

4.1 De-Installation of Shared Memory and Cache Memory

a. When only Shared Memory is to be de-installed,
go to “4.1.1 De-Installation of Additional Shared Memory (DKC-F310I-32/128)”.
b. When only Cache Memory is to be de-installed or when Shared Memory and Cache Memory are to be de-installed at the same time,
go to “4.1.2 De-Installation of Additional Cache Memory (DKC-F310I-20/256/1024)”.
(INST04-110)

4.1.1 De-Installation of Additional Shared Memory (DKC-F310I-32/128)

4.1.1.1 Flowchart



4.1.1.2 Parts List

Table 4.1.1.2-1 Parts List

No.	Model Number	Parts Name	Parts No.	Quantity	Remarks
1	DKC-F310I-32	SH024-B	1505404-B	2	Shared Memory Module(16MB)
		Nameplate	3252736-1	1	Not used
2	DKC-F310I-128	SH100-B	1501164-B	2	Shared Memory Module(64MB)

Copyright ©1997,1998, Hitachi, Ltd.

4.1.1.3 De-Installation Procedure of Additional Shared Memory

1. Blockade the Shared Memory on the cluster 1 from SVP.
   a. Go to INST02-59D step ⑨.

2. Remove the Shared Memory on the Cluster 1.

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

2-1. Remove the PCB.

a. While referring to Fig. 4.1.1.3-1 and Table 4.1.1.3-1, check the Shut Down LED on the Cache Memory PCB in the Rear Logic Box. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

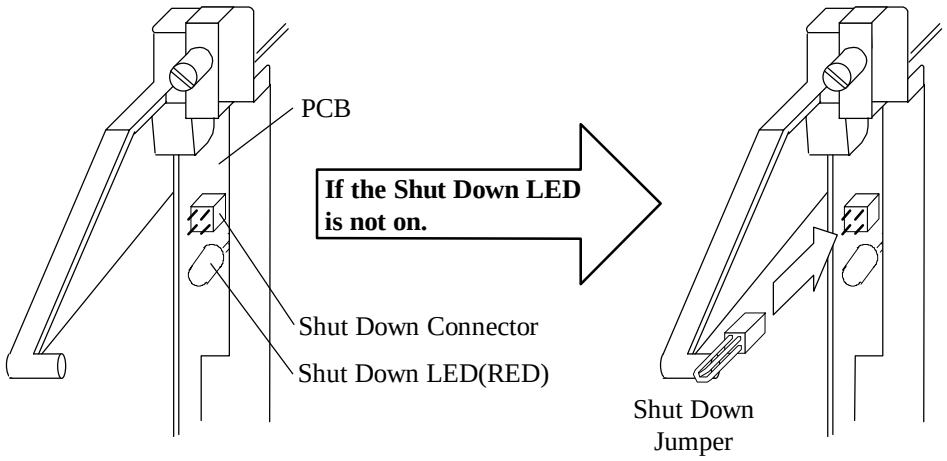


Fig. 4.1.1.3-1 Location of the Shut Down LED

Table 4.1.1.3-1 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB

Copyright ©1997,1998, Hitachi, Ltd.

b. Remove the two screws and remove the Cache Memory PCB. Refer to Fig. 4.1.1.3-2 and Table 4.1.1.3-1.

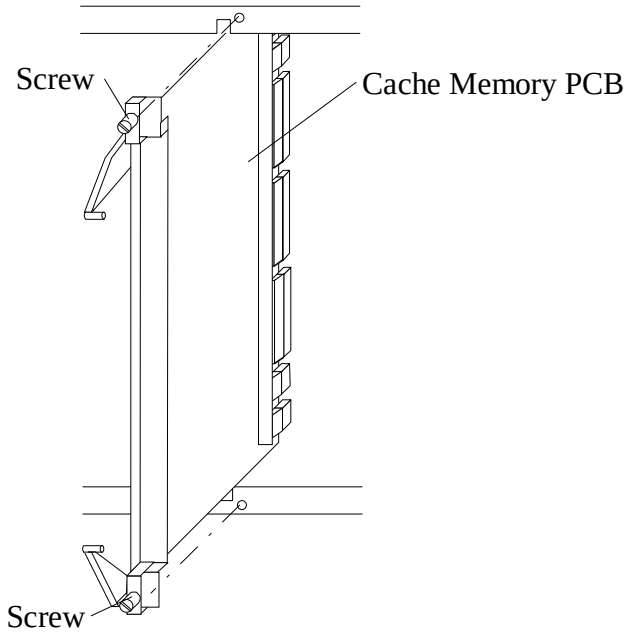

Fig. 4.1.1.3-2 Removal of the Cache Memory PCB

c. Remove the Shut Down Jumper if it is mounted.

Copyright ©1997, Hitachi, Ltd.

2-2. Remove the Shared Memory Modules.

a. Remove the extra Shared Memory Modules according to the required Shared Memory capacity referring to Fig. 4.1.1.3-3 and Table 4.1.1.3-2 or 3.

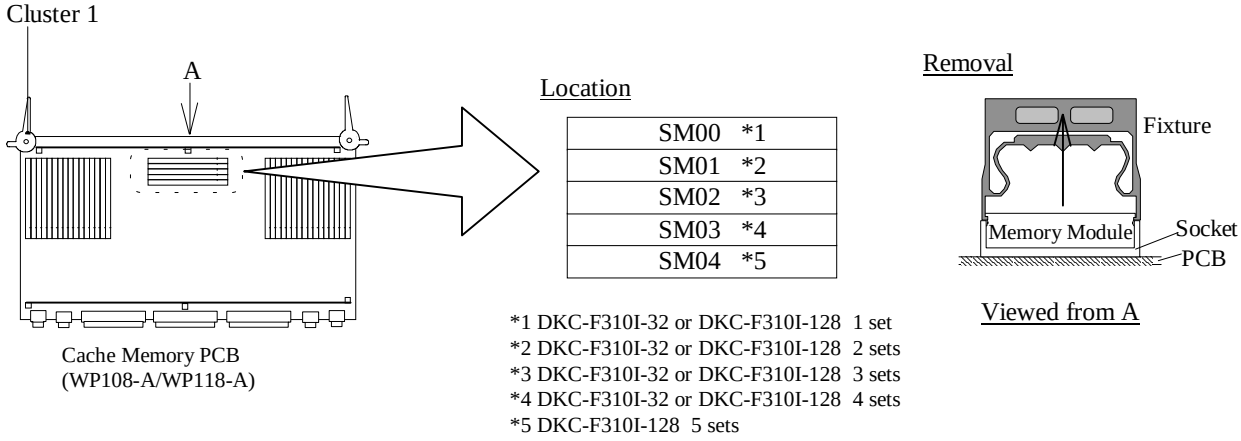

Fig. 4.1.1.3-3 Inserting Location of the Shared Memory Module

Table 4.1.1.3-2 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed of DKC-F310I-32 and DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 1	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	16 MB	DKC-F310I-32 1 set	SH024-B	1
2	16 MB	32 MB	DKC-F310I-32 2 sets	SH024-B	1
3	32 MB	48 MB	DKC-F310I-32 3 sets	SH024-B	1
4	48 MB	64 MB	DKC-F310I-32 4 sets	SH024-B	1
5	64 MB	128 MB	DKC-F310I-128 1 set	SH100-B	1

Note : This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Table 4.1.1.3-3 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed only of DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 1	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	64 MB	DKC-F310I-128 1 set	SH100-B	1
2	64 MB	128 MB	DKC-F310I-128 2 sets	SH100-B	1
3	128 MB	192 MB	DKC-F310I-128 3 sets	SH100-B	1
4	192 MB	256 MB	DKC-F310I-128 4 sets	SH100-B	1

Note : This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

2-3. Insert the PCB.

a. Insert the Cache Memory PCB into the Rear Logic Box referring to Table 4.1.1.3-4.

b. Fasten the two screws.

Table 4.1.1.3-4 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB

c. Go to INST02-59D step ⑪.

Copyright ©1997,1998, Hitachi, Ltd.

3. Restore the Shared Memory on the cluster 1 and blockade the Shared Memory on the cluster 2 from SVP.
   a. Go to INST02-59D step ⑪.

4. Remove the Shared Memory on the Cluster 2.

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

4-1. Remove the PCB.

a. While referring to Fig. 4.1.1.3-4 and Table 4.1.1.3-5, check the Shut Down LED on the Cache Memory PCB in the Rear Logic Box. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

Copyright ©1997,1998, Hitachi, Ltd.

b. Remove the two screws and remove the Cache Memory PCB. Refer to Fig. 4.1.1.3-5 and Table 4.1.1.3-6.

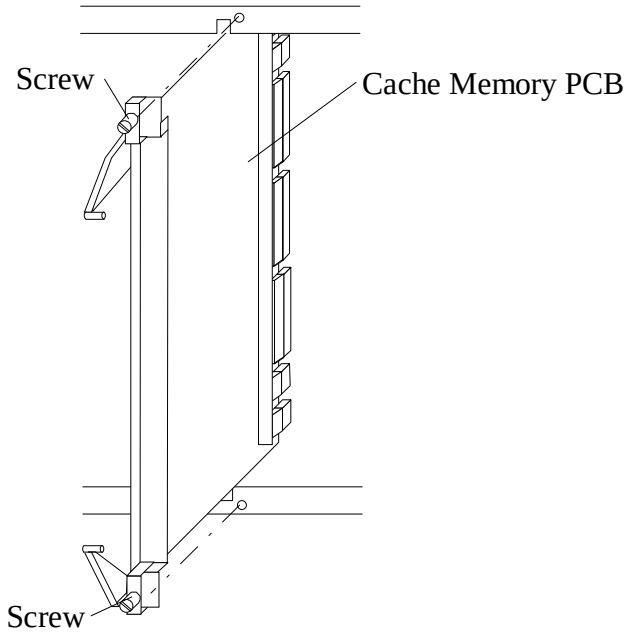

Fig. 4.1.1.3-5 Removal of the Cache Memory PCB

c. Remove the Shut Down Jumper if it is mounted.

Copyright ©1997, Hitachi, Ltd.

4-2. Remove the Shared Memory Modules.

a. Remove the extra Shared Memory Modules according to the required Shared Memory capacity referring to Fig. 4.1.1.3-6 and Table 4.1.1.3-6 or 7.

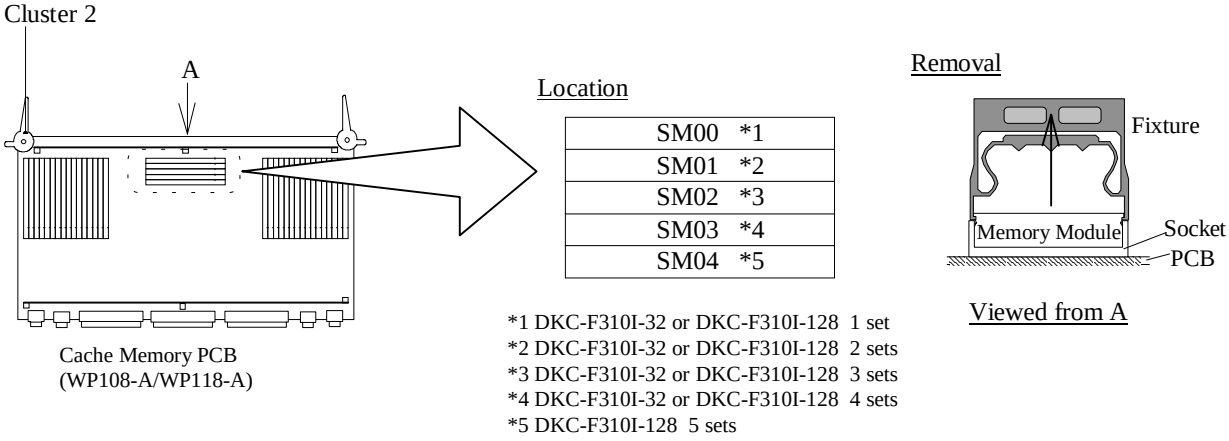

Fig. 4.1.1.3-6 Inserting Location of the Shared Memory Module

Table 4.1.1.3-6 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed of DKC-F310I-32 and DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 2	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	16 MB	DKC-F310I-32 1 set	SH024-B	1
2	16 MB	32 MB	DKC-F310I-32 2 sets	SH024-B	1
3	32 MB	48 MB	DKC-F310I-32 3 sets	SH024-B	1
4	48 MB	64 MB	DKC-F310I-32 4 sets	SH024-B	1
5	64 MB	128 MB	DKC-F310I-128 1 set	SH100-B	1

Note : This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Table 4.1.1.3-7 Number of SMs and Corresponding Shared Memory Capacity
(When the Shared Memory was composed only of DKC-F310I-128)

No.	Shared Memory capacity (×2)		Model No.	Cluster 2	
	From (Note)	To (Note)		Part name	Quantity
1	0 MB	64 MB	DKC-F310I-128 1 set	SH100-B	1
2	64 MB	128 MB	DKC-F310I-128 2 sets	SH100-B	1
3	128 MB	192 MB	DKC-F310I-128 3 sets	SH100-B	1
4	192 MB	256 MB	DKC-F310I-128 4 sets	SH100-B	1

Note : This value is a half value of whole capacity of shared memories. (the capacity of shared memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

4-3. Insert the PCB.

a. Insert the Cache Memory PCB into the Rear Logic Box referring to Table 4.1.1.3-8.

b. Fasten the two screws.

Table 4.1.1.3-8 Location of the Cache PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
2	WP108-A/WP118-A	Rear Logic Box	G	CACHE-2G	Cache Memory PCB

c. Go to INST02-59D step ⑬.

Copyright ©1997,1998, Hitachi, Ltd.

5. Restore the Shared Memory on the cluster 2 from SVP.
   a. Go to INST02-59D step ⑬.

6. Change the nameplate.
   a. Refer to Fig. 4.1.1.3-7 and Table 4.1.1.3-9 to paint out unnecessary numbers and wipe off a necessary number painted previously so that the "Qt." marking for the corresponding nameplate can be seen.

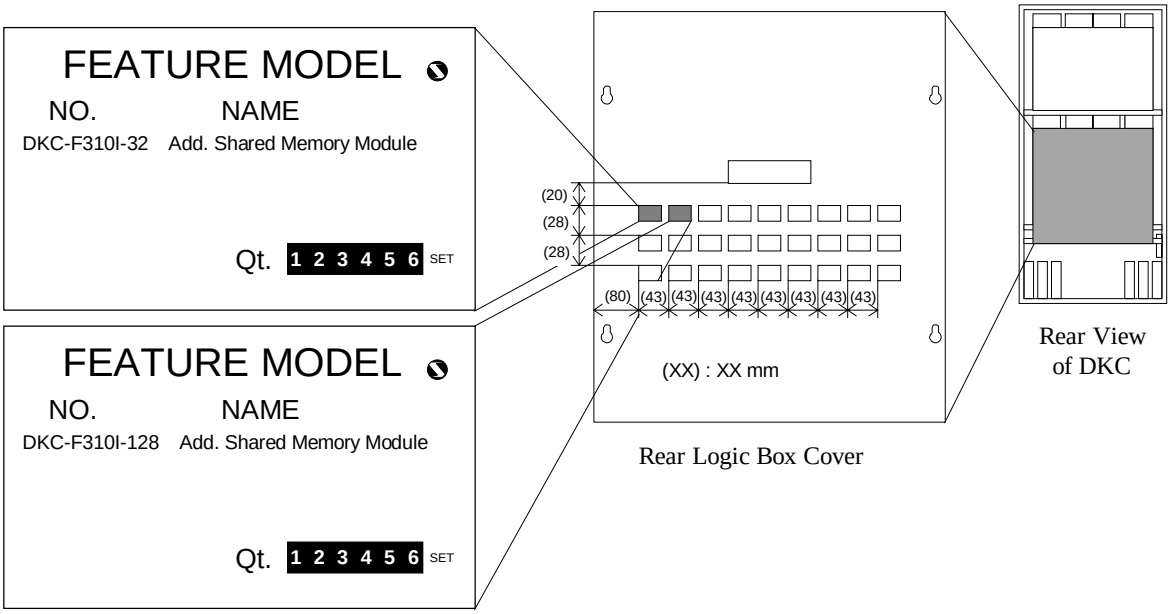

Fig. 4.1.1.3-7 Location of the Nameplate

Table 4.1.1.3-9 Quantity Marking

No.	Quantity Marking	
	Number of DKC-F310I-32/128 sets	Qt.
1	1 set	1
2	2 sets	2
3	3 sets	3
4	4 sets	4
5	5 sets	5
6	6 sets	6

7. Return to General Flow.
   Go to INST02-59D step ⑮.

4.1.2 De-Installation of Additional Cache Memory (DKC-F310I-20/256/1024)

4.1.2.1 Flowchart

1. Blockade the Cache Memory on the cluster 1 from SVP.

↓

2. Remove the Cache Memory and Shared Memory on the cluster 1.

↓

3. Restore the Cache Memory on the cluster 1 and blockade the Cache Memory on the cluster 2 from SVP.

↓

4. Remove the Cache Memory and Shared Memory on the cluster 2.

↓

5. Restore the Cache Memory on the cluster 2 from SVP.

↓

6. When the Additional Cache Board (DKC-F310I-20) is removed, remove the Battery Boxes and BATT CTR PCBs
   When the Additional Cache Board (DKC-F310I-20) is not removed, go to step 7.

↓

7. Change the nameplate.

4.1.2.2 Parts List

Table 4.1.2.2-1 Parts List

No.	Model Number	Parts Name	Parts No.	Quantity	Remarks
1	DKC-F310I-20	WP108-B	1505482-B	2	Cache Memory PCB
		WP118-B	1505847-B		
		Battery Box	3236759-A	2	
		BATT CTR PCB	1514192-A	2	
		Jumper (Battery)	3250530-A	2	Jumper Connector (BTJP)

4.1.2.3 De-Installation Procedure of Additional Cache Memory

Notice : Confirm the quantity of the options to be removed prior to de-installing the Cache Memory. Refer to Table 1.1.2-1 and Table 1.1.2-2 (INST01-40 through 50) for the required quantity of options.

1. Blockade the Cache Memory on the cluster 1 from SVP.
   a. Go to INST02-59C step ①.

2. Remove the Cache Memory and Shared Memory on the cluster 1.

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

2-1 Remove the PCBs.

a. While referring to Fig. 4.1.2.3-1 and Table 4.1.2.3-1, check the Shut Down LED on the Cache Memory PCB. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

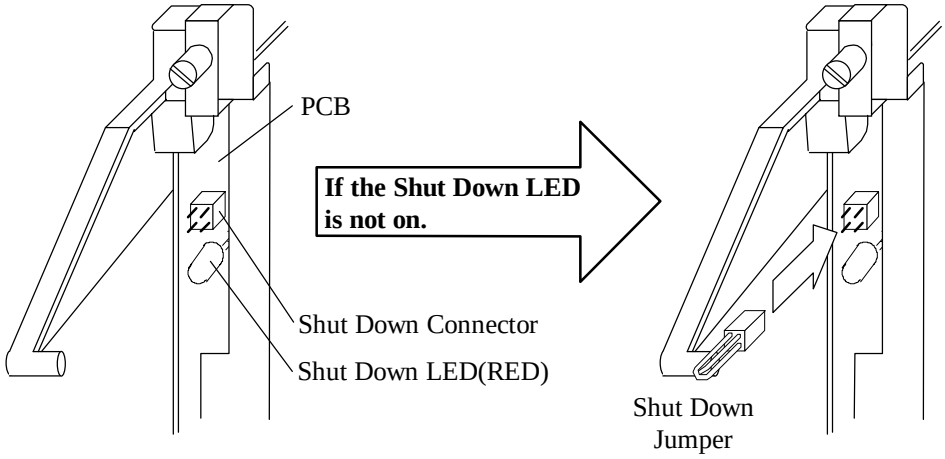

Fig. 4.1.2.3-1 Location of the Shut Down LED

Table 4.1.2.3-1 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB (Note 1)
	WP108-B/WP118-B	Front Logic Box	T	CACHE-1T	Cache Memory PCB (Note 2)

Note 1: No PCB needs to be removed if 8 or more DKC-F310I-256 or DKC-F310I-1024 sets are left after de-installation, except when installing DKC-F310I-32 or DKC-F310I-128 sets.

Note 2: Remove the PCB only when it is installed.

Copyright ©1997,1998, Hitachi, Ltd.

b. Remove the two screws and remove the Cache Memory PCB. Refer to Fig. 4.1.2.3-2 and Table 4.1.2.3-1

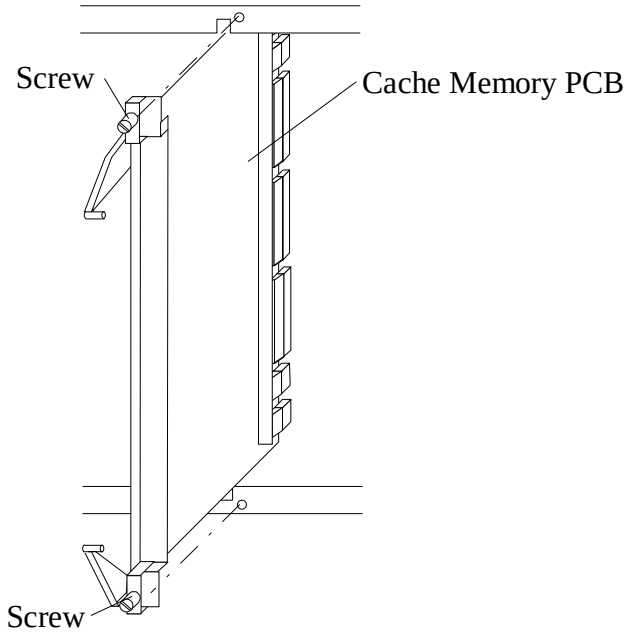

Fig. 4.1.2.3-2 Removal of the Cache Memory PCB

c. Remove the Shut Down Jumper if it is mounted.

Copyright ©1997, Hitachi, Ltd.

2-2 Remove the Cache Memory Modules.

a. Remove the extra Cache Memory Modules according to the required Cache Memory capacity referring to Fig. 4.1.2.3-3 and Table 4.1.2.3-2 or 3.

Note : The value is a half value of whole capacity of cache memories. (the capacity of cache memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

b. When the Additional Shared Memory Module (DKC-F310I-32) is removed, remove the Shared Memory Modules. Refer to Section 4.1.1.3 De-Installation Procedure of Additional Shared Memory Step 2-2 Remove the Shared Memory Modules (INST04-40).
When the Additional Shared Memory Module (DKC-F310I-32) is not removed, go to step 2-3.

Copyright ©1997,1998, Hitachi, Ltd.

2-3 Insert the PCBs.

a. When the Additional Cache Board (DKC-F310I-20) is removed, attach the dummy plate and fasten the two screws. Refer to Fig. 4.1.2.3-4.
When the Additional Cache Board (DKC-F310I-20) is not removed, go to step b.

b. Install the Cache Memory PCB referring to Table 4.1.2.3-5.

c. Fasten the two screws.

Table 4.1.2.3-5 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
1	WP108-A/WP118-A	Rear Logic Box	F	CACHE-1F	Cache Memory PCB (Note 1)
	WP108-B/WP118-B	Front Logic Box	T	CACHE-1T	Cache Memory PCB (Note 2)

Note 1 : Insert the PCB when it is removed in step 2-1.

Note 2 : Insert the PCB when DKC-F310I-20 is installed.

Front Logic Box

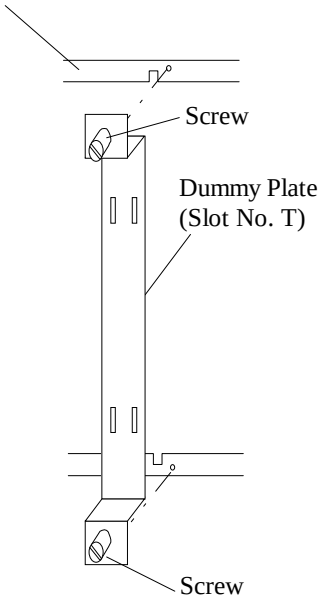

Fig. 4.1.2.3-4 Removal of the Dummy Plate

d. Go to INST02-59C step ③.

Copyright ©1997,1998, Hitachi, Ltd.

3. Restore the Cache Memory on the cluster 1 and blockade the Cache Memory on the cluster 2 from SVP.

a. Go to INST02-59C step ③.

4. Remove the Cache Memory and Shared Memory on the cluster 2.

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

4-1 Remove the PCBs.

a. While referring to Fig. 4.1.2.3-5 and Table 4.1.2.3-6, check the Shut Down LED on the Cache Memory PCB. Connect the Shut Down Jumper to the Shut Down Connector if the Shut Down LED is not on.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

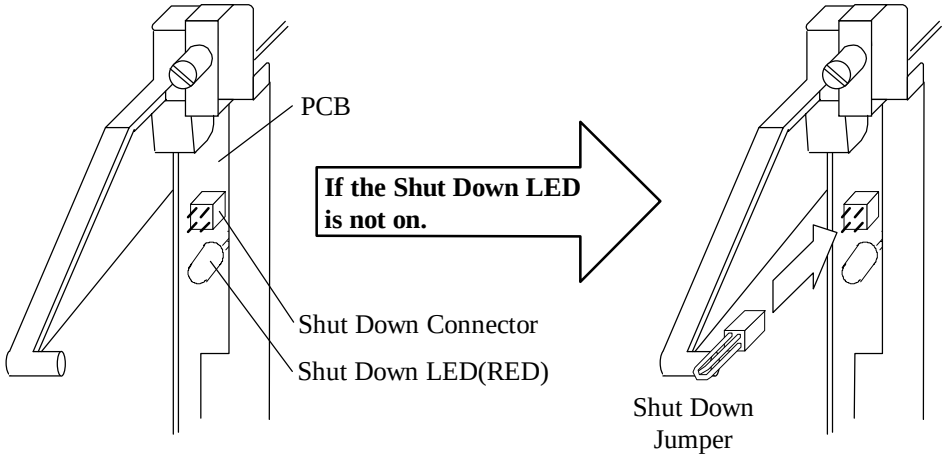

Fig. 4.1.2.3-5 Location of the Shut Down LED

Table 4.1.2.3-6 Location of the Cache Memory PCB

16	7680 MB	8192 MB	DKC-F310I-1024 16 sets	SH100-A	4

Note : The value is a half value of whole capacity of cache memories. (the capacity of cache memories on the one side)

Copyright ©1997,1998, Hitachi, Ltd.

b. When the Additional Shared Memory Module (DKC-F310I-32) is removed, remove the Shared Memory Modules. Refer to Section 4.1.1.3 De-Installation Procedure of Additional Shared Memory Step 4-2 Remove the Shared Memory Modules (INST04-80).
When the Additional Shared Memory Module (DKC-F310I-32) is not removed, go to step 4-3.

Copyright ©1997,1998, Hitachi, Ltd.

4-3 Insert the PCBs.

a. When the Additional Cache Board (DKC-F310I-20) is removed, attach the dummy plate and fasten the two screws. Refer to Fig. 4.1.2.3-8.
When the Additional Cache Board (DKC-F310I-20) is not removed, go to step b.

b. Install the Cache Memory PCB referring to Table 4.1.2.3-10.

c. Fasten the two screws.

Table 4.1.2.3-10 Location of the Cache Memory PCB

Cluster	PCB Name	Box	Slot No.	Location No.	Remarks
2	WP108-A/WP118-A	Rear Logic Box	G	CACHE-2G	Cache Memory PCB (Note 1)
	WP108-B/WP118-B	Front Logic Box	U	CACHE-2U	Cache Memory PCB (Note 2)

Note 1 : Insert the PCB when it is removed in step 4-1.

Note 2 : Insert the PCB when DKC-F310I-20 is installed.

Front Logic Box

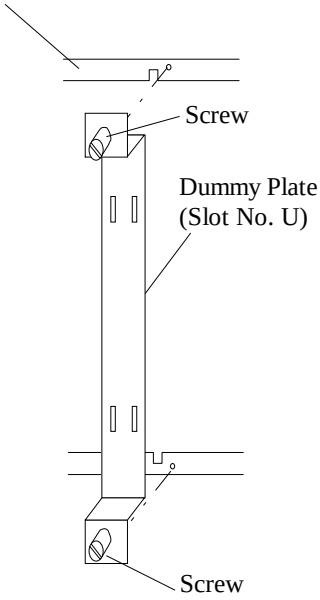

Fig. 4.1.2.3-8 Removal of the Dummy Plate

d. Go to INST02-59C step ⑤.

5. Restore the Cache Memory on the cluster 2 from SVP.

a. Go to INST02-59C step ⑤.

Copyright ©1997,1998, Hitachi, Ltd.

6. When the Additional Cache Board (DKC-F310I-20) is removed, remove the Battery Boxes and BATT CTR PCBs

When the Additional Cache Board (DKC-F310I-20) is not removed, go to step 7.

a. Remove the two screws and open the covers.

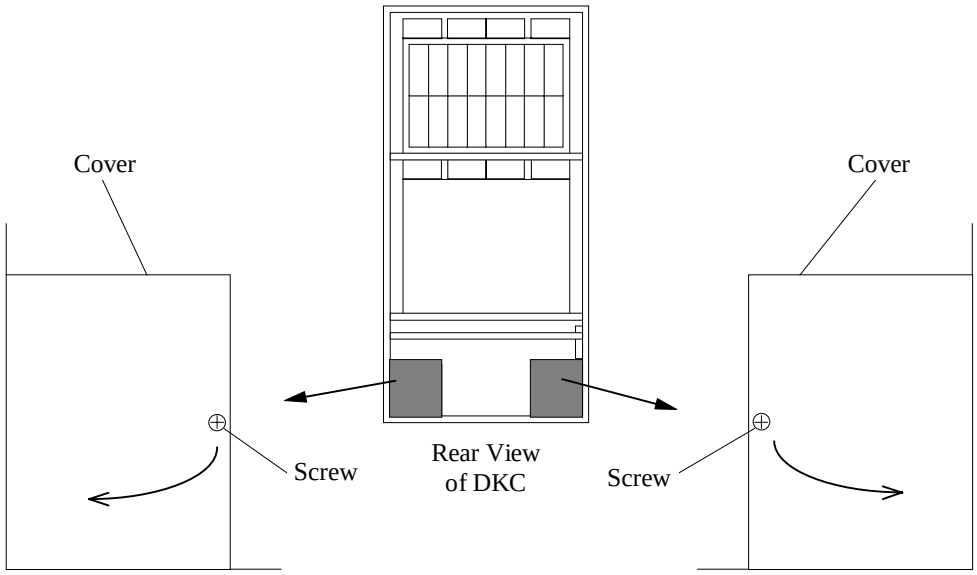

Fig.4.1.2.3-9 Opening of the Cover

b. Disconnect the Jumper Connectors from BATT CTR PCBs. Loosen the screws and rotate the stoppers. Remove the BATT CTR PCBs (BATT CTR-12 and BATT CTR-22).

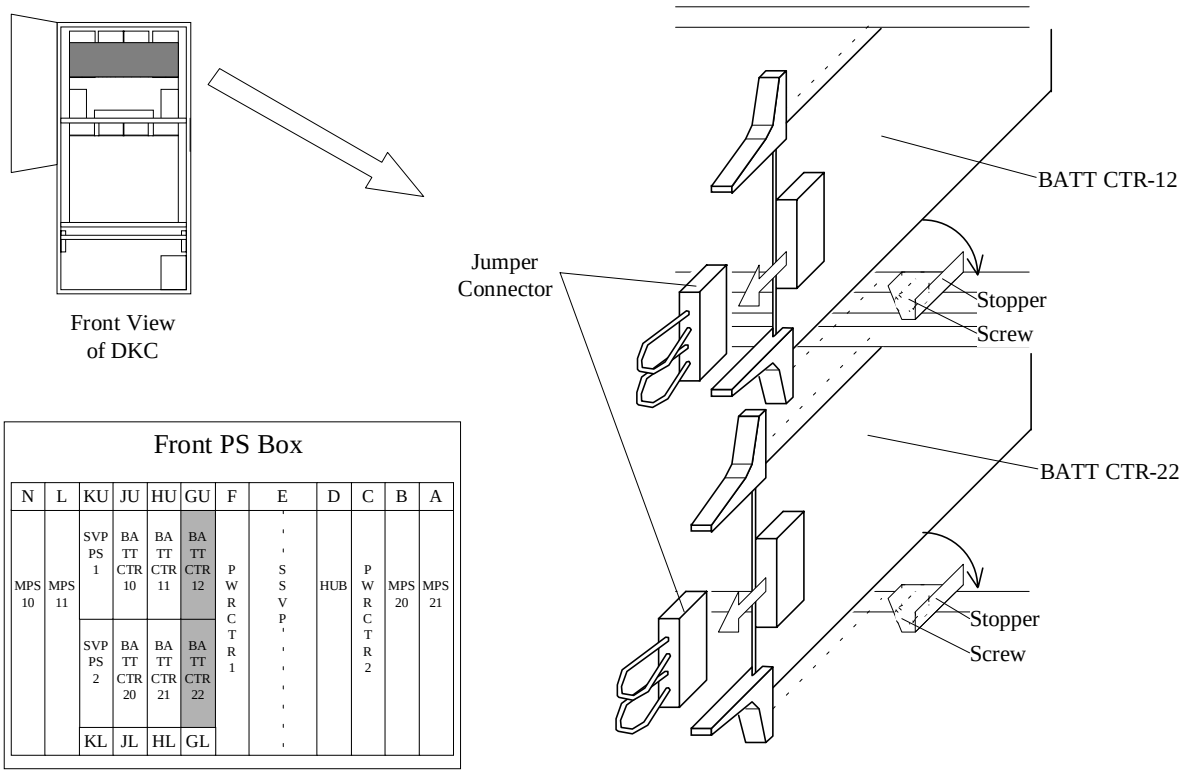

Fig.4.1.2.3-10 Insertion of the BAT CTR

Copyright ©1997, Hitachi, Ltd.

c. Disconnect the cables from the Battery Boxes. Loosen the screws and remove the Battery Boxes (BATTERY-12 and BATTERY-22).

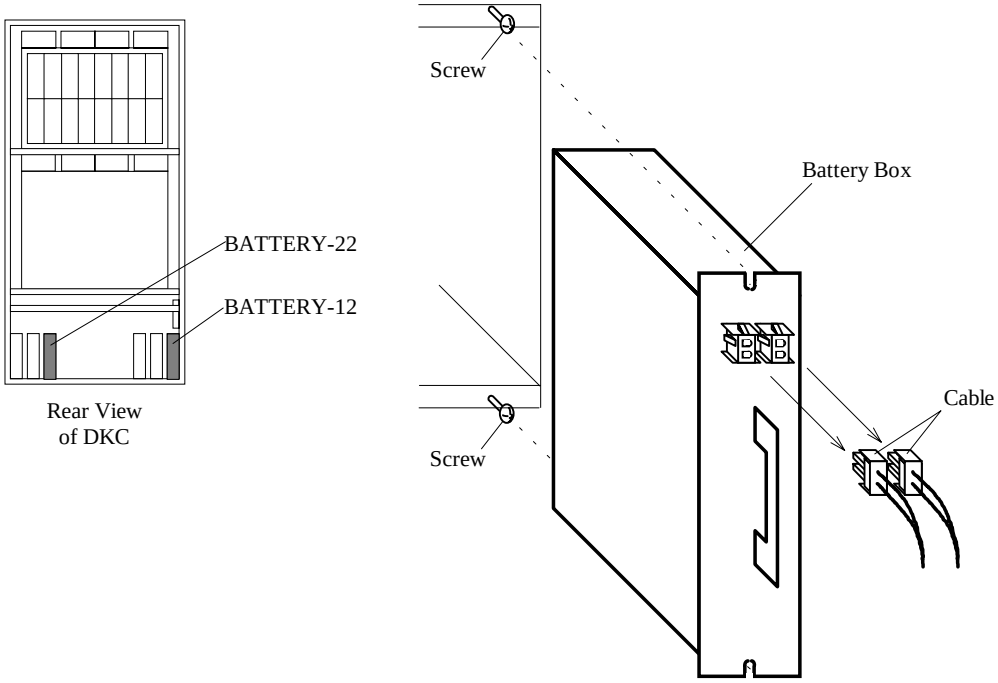

Fig.4.1.2.3-11 Insertion of the Battery Box

d. Close the covers and fasten the screws.

e. Go to INST02-59C step ⑦.

Copyright ©1997,1998, Hitachi, Ltd.

7. Change the nameplate.

a. Refer to Fig. 4.1.2.3-12 and Table 4.1.2.3-11 to paint out unnecessary numbers and wipe off a necessary number painted previously so that the "Qt." marking for the corresponding nameplate can be seen.

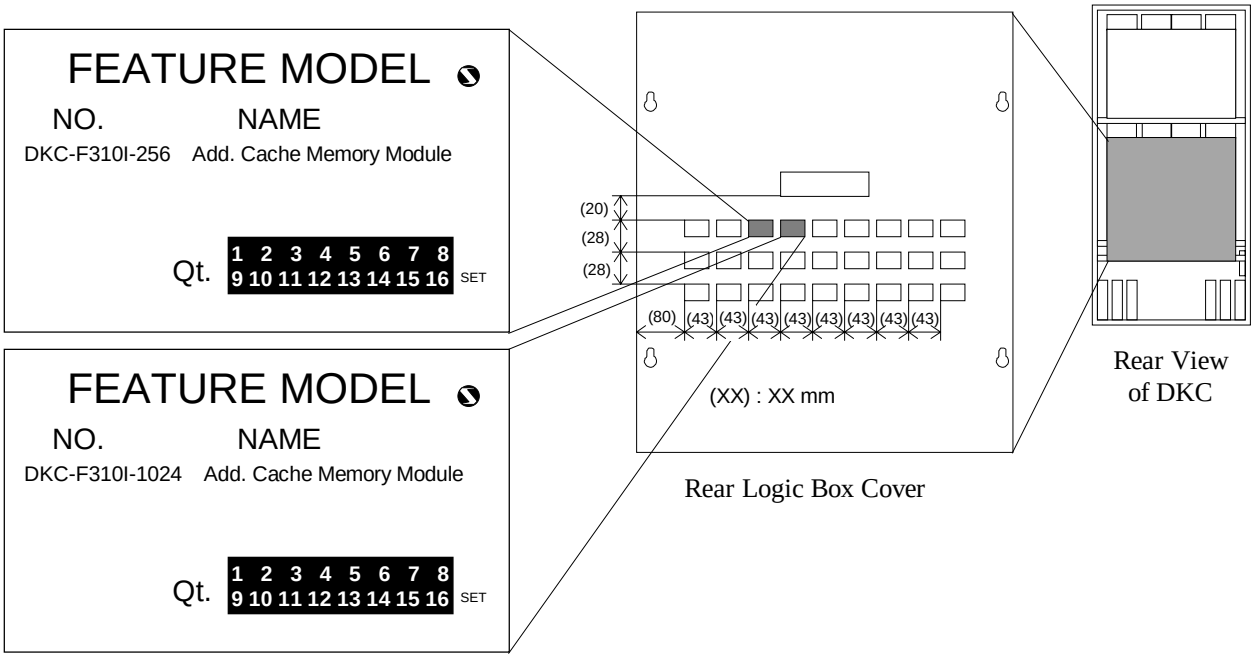

Fig. 4.1.2.3-12 Location of the Nameplate

Table 4.1.2.3-11 Quantity Marking

No.	Quantity Marking	
	Number of DKC-F310I-256/1024 sets	Qt.
1	1 set	1
2	2 sets	2
3	3 sets	3
4	4 sets	4
5	5 sets	5
6	6 sets	6
7	7 sets	7
8	8 sets	8

(To be continued)

b. When the Additional Shared Memory Module (DKC-F310I-32) is removed, change the nameplate of DKC-F310I-32. Refer to Section 4.1.1.3 De-Installation Procedure of Additional Shared Memory Step 6 Change the nameplate (INST04-100).
When the Additional Shared Memory Module (DKC-F310I-32) is not removed, go to step c.

c. When the Additional Cache Board (DKC-F310I-20) is removed, detach the nameplate of DKC-F310I-20. Refer to Fig. 4.1.2.3-13.
When the Additional Cache Board (DKC-F310I-20) is not removed, go to step 8.

4.2.3 De-Installation Procedure of Disk Adapter

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Confirmation of the Shut Down LED (Only Non-Disruptive Procedure)
   a. Confirm that Shut Down LED is on. (Fig. 4.2-1) If the LED is not on, connect the Shut Down Jumper to the Shut Down Connector.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

4.3.2 Disconnection of Additional SCSI Interface Cables (DKU-F305I-24C)

4.3.2.1 Flowchart

The disconnection procedure of the extension SCSI interface cables (DKU-F305I-24C) is shown below. You must perform the operations actually after referring to the details of the procedure. When connecting the SCSI interface cable with disk subsystem inactive, you don't have to check Shut Down LED on the SCSI BFR PCB and blocking/restoring both DKA PCB and SCSI BFR PCB through SVP.

1. Disconnection Procedure of SCSI Interface Cables between First (HDU-R10-R13) and Second DKU (HDU-R20-R23) ..... Chassises [INST04-420]
2. Disconnection Procedure of SCSI Interface Cables between First (HDU-R14-R17) and Second DKU (HDU-R24-R27) ..... Chassises [INST04-430]
3. Disconnection Procedure of SCSI Interface Cables between Third (HDU-L10-L13) and Fourth DKU (HDU-L20-L23) ..... Chassises [INST04-440]
4. Disconnection Procedure of SCSI Interface Cables between Third (HDU-L14-L17) and Fourth DKU (HDU-L24-L27) ..... Chassises [INST04-450]

1. Disconnection Procedure of SCSI Interface Cables between First (HDU-R10-R13) and Second DKU (HDU-R20-R23) Chassises

(1) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the first DKU chassis. [INST04-470]

↓

(2) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST04-480]

↓

(3) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side from which the SCSI interface cables are to be disconnected. [INST04-490]

↓

(4) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the first DKU chassis. [INST04-500]

↓

(5) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. [INST04-510]

↓

(6) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the second DKU chassis. [INST04-520]

↓

(7) Remove the SCSI interface cables from inside the DKU chassises. [INST04-540]

↓

(8) Remove the nameplate from the second DKU chassis. [INST04-550]

Copyright ©1997,1998, Hitachi, Ltd.

2. Disconnection Procedure of SCSI Interface Cables between First (HDU-R14-R17) and Second DKU (HDU-R24-R27) Chassises

(1) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the first DKU chassis. [INST04-570]

↓

(2) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST04-580]

↓

(3) In the first DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side from which the SCSI interface cables are to be disconnected. [INST04-590]

↓

(4) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the first DKU chassis. [INST04-600]

↓

(5) In the first DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. [INST04-610]

↓

(6) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the second DKU chassis. [INST04-620]

↓

(7) Remove the SCSI interface cables from inside the DKU chassises. [INST04-640]

↓

(8) When the third DKU chassis consists of 4 HDU boxes, fix the disconnected SCSI interface cables in the second DKU chassis. [INST04-650]

Copyright ©1997,1998, Hitachi, Ltd.

3. Disconnection Procedure of SCSI Interface Cables between Third (HDU-L10-L13) and Fourth DKU (HDU-L20-L23) Chassises

(1) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the third DKU chassis. [INST04-670]

↓

(2) In the third DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST04-680]

↓

(3) In the third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side from which the SCSI interface cables are to be disconnected. [INST04-690]

↓

(4) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the third DKU chassis. [INST04-700]

↓

(5) In the third DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. [INST04-710]

↓

(6) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the fourth DKU chassis. [INST04-720]

↓

(7) Remove the SCSI interface cables from inside the DKU chassises. [INST04-740]

↓

(8) Remove the nameplate from the fourth DKU chassis. [INST04-750]

Copyright ©1997,1998, Hitachi, Ltd.

4. Disconnection Procedure of SCSI Interface Cables between Third (HDU-L14-L17) and Fourth DKU (HDU-L24-L27) Chassises

(1) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the third DKU chassis. [INST04-770]

↓

(2) In the third DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. After the restoration is completed, block the SCSI BFR PCBs on the other side using the SVP. [INST04-780]

↓

(3) In the third DKU chassis, check that the Shut Down LEDs are lit on the SCSI BFR PCBs on the other side from which the SCSI interface cables are to be disconnected. [INST04-790]

↓

(4) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the third DKU chassis. [INST04-800]

↓

(5) In the third DKU chassis, use the SVP to restore the SCSI BFR PCBs from which the SCSI interface cables are disconnected. [INST04-810]

↓

(6) Disconnect the SCSI interface cables from the SCSI BFR PCBs in the fourth DKU chassis. [INST04-820]

↓

(7) Remove the SCSI interface cables from inside the DKU chassises. [INST04-840]

↓

(8) When the fourth chassis consists of 4 HDU boxes, fix the disconnected SCSI interface cables in the fourth DKU chassis. [INST04-850]

4.3.2.2 Parts List

Table 4.3.2.2-1 Parts List of the SCSI Interface Cable

No.	Model Number	Parts Name	Parts No. (Spare Parts No.)	Quantity	Remarks
1	DKU-F305I-24C	SCSI Interface Cable	2098192-A-R (5487067-A-R)	16	HDU-R20-R27/L20-L27
		DKUMN Cable	3239256-A,B	2	Dynamic 6
		DKUMN Cable	2098190-A,B	2	MRP 100
		Nameplate	2099650-78	1

2. Disconnect the SCSI interface cables from the SCSI BFR PCBs in the first DKU chassis referring to figures 4.3.2.3-2 and 4.3.2.3-3.

Notice

When disconnecting the SCSI interface extension cable (DKU-F305I-24C) during the operation of subsystem, take the following actions from SVP to allow disconnection of only the SCSI interface cable whose Shut Down LED goes on.

1. Block the SCSI bus disconnecting the SCSI interface cable.
2. Light the Shut Down LED on the SCSI BFR PCB on the SCSI bus.

Copyright ©1997,1998, Hitachi, Ltd.

5. Disconnect the SCSI interface cables from the SCSI BFR PCBs in the third DKU chassis referring to figures 4.3.2.5-5 and 4.3.2.5-6.

Notice

When disconnecting the SCSI interface extension cable (DKU-F305I-24C) during the operation of subsystem, take the following actions from SVP to allow disconnection of only the SCSI interface cable whose Shut Down LED goes on.

1. Block the SCSI bus disconnecting the SCSI interface cable.
2. Light the Shut Down LED on the SCSI BFR PCB on the SCSI bus.

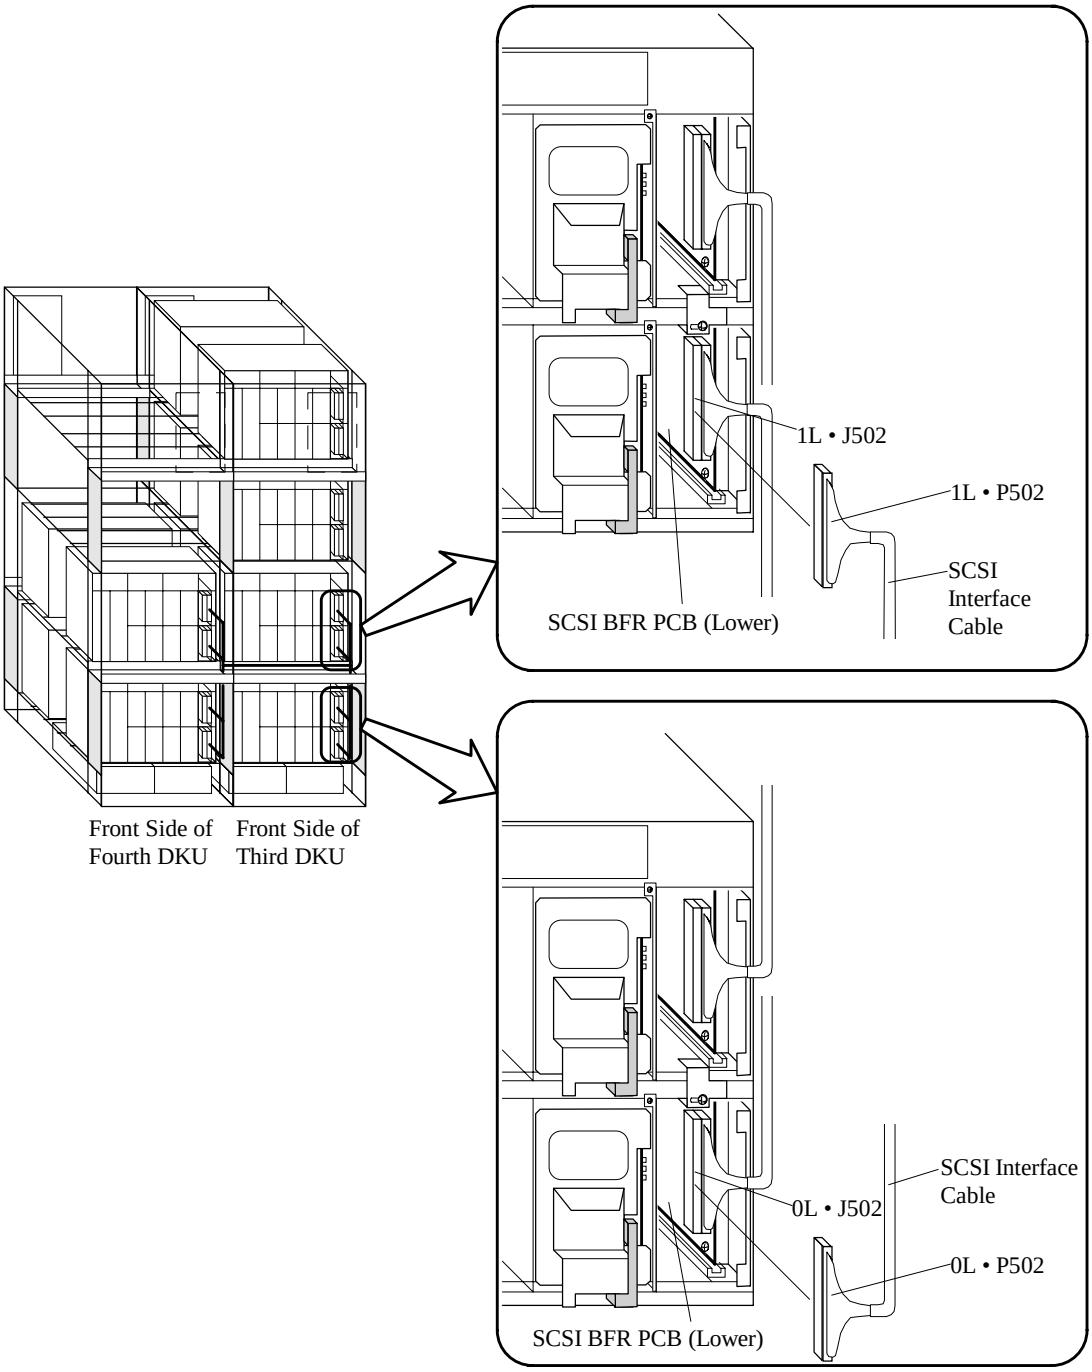

Fig. 4.3.2.5-5 Disconnection of the SCSI Interface Cables

8. Power Cable Assy Fixing	[INST04-960]
↓	
9. Fall Proof Adapter Attachment	[INST04-970]

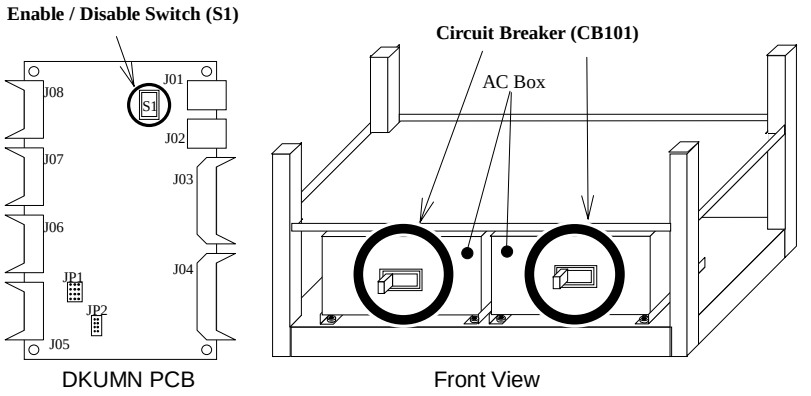
Copyright ©1997,1998, Hitachi, Ltd.

4.4.2 De-Installation Procedure of Disk Unit

1. Power OFF of Disk Unit being De-Installed
   a. Turn Enable / Disable switches (S1) to "DISABLE" position on the DKUMN PCBs of the Disk Unit.
   b. Turn off the circuit breaker (CB101) on the AC Boxes of the Disk Unit.

Table 4.4.2-1 De-Installed Disk Unit

No.	De-Installed Disk Unit	DKUMN PCB	AC Box	Remarks
1	Fourth Disk Unit	DKUMN-L2F DKUMN-L2R	AC BOX-R20 AC BOX-R21	
2	Third Disk Unit	DKUMN-L1F DKUMN-L1R	AC BOX-R10 AC BOX-R11	
3	Second Disk Unit	DKUMN-R2F DKUMN-R2R	AC BOX-L20 AC BOX-L21	



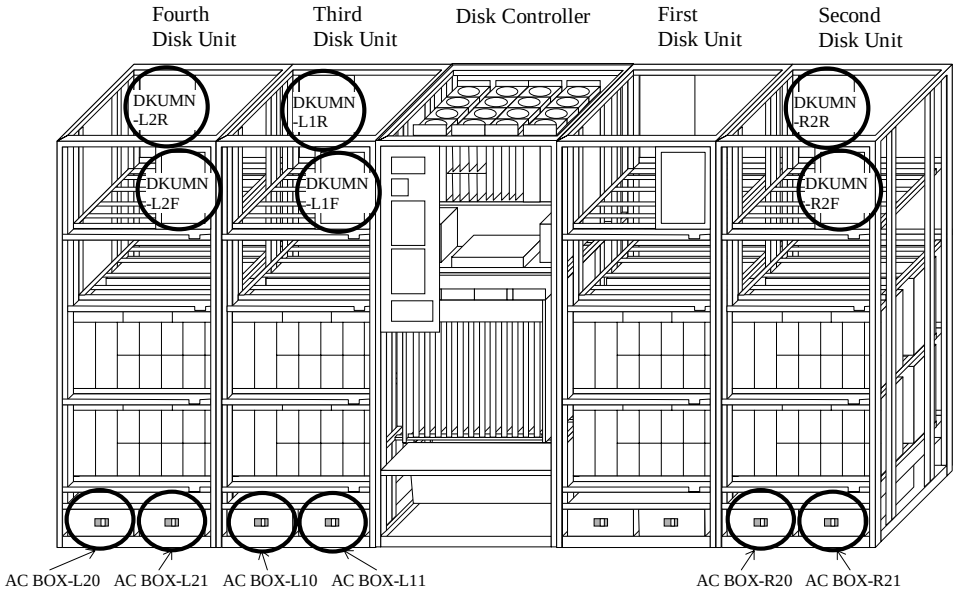


Fig. 4.4.2-1 AC Boxes and DKUMN PCBs

Copyright ©1997,1998, Hitachi, Ltd.

2. DKUMN Cable Removal
   Remove the DKUMN cables in the reverse order of installation.

   Fourth Disk Unit

   Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.
   Disconnect the DKUMN cables between the Third Disk Unit and the Fourth Disk Unit as indicated in the table below.

Table 4.4.2-2 Connection of DKUMN Cables

No.	Third Disk Unit			Fourth Disk Unit			Remarks
	Location No.	Connector No.	Cable No.	Location No.	Connector No.	Cable No.	
1	DKUMN-L1F	J03	P3-1	DKUMN-L2F	J04	P4-1	
2	DKUMN-L1F	J01	P1-1	DKUMN-L2F	J01	P1-1	
3	DKUMN-L1R	J03	P3-2	DKUMN-L2R	J04	P4-2	
4	DKUMN-L1R	J01	P1-2	DKUMN-L2R	J01	P1-2	

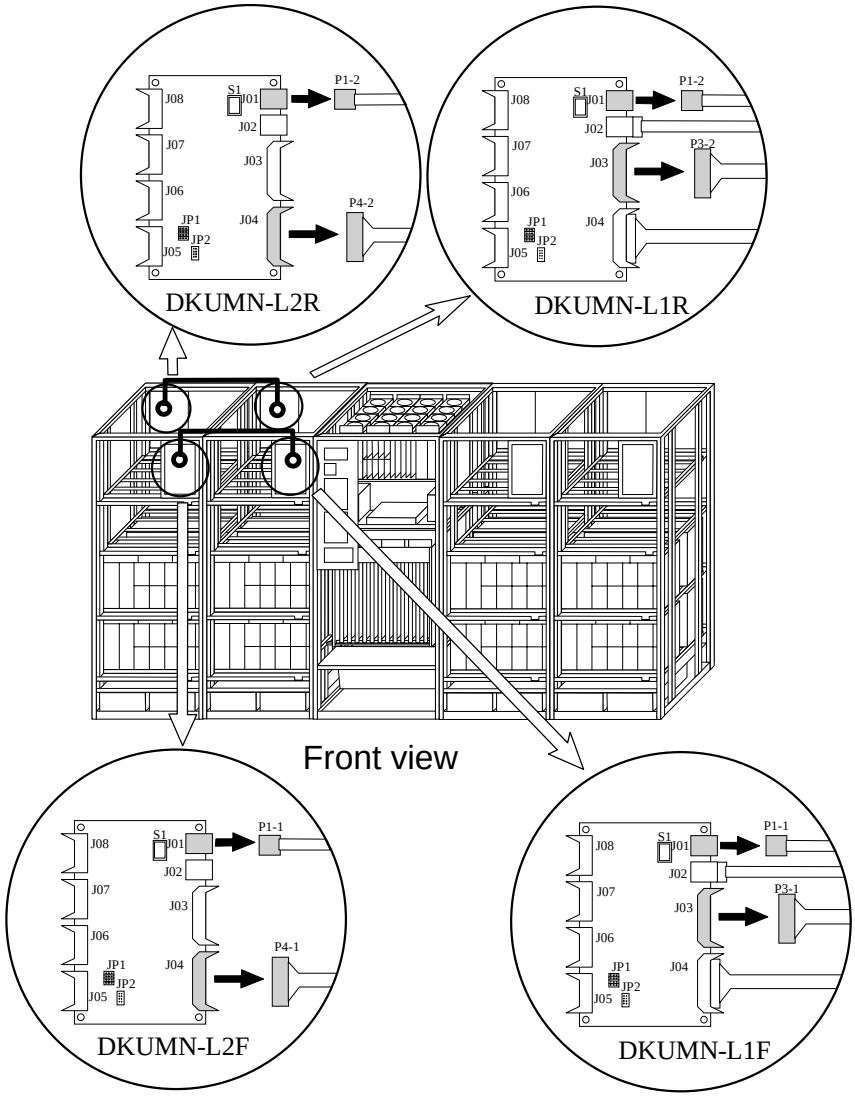

Fig. 4.4.2-2 Connection of DKUMN Cables

Third Disk Unit

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

Disconnect between the PWRCTL PCBs or MPS Back Board(PL) and the DKUMN PCBs as summarized in the table below.

Table 4.4.2-3 Connection of DKUMN cable

No.	Disk Controller			Third Disk Unit			Remarks
	Location No.	Connector No.	Cable No.	Location No.	Connector No.	Cable No	
1	PWRCTL-1	J11	SH-F22	DKUMN-L1F	J04	P4-1L	
2	MPS BB(PL)	N10	SH-N10	DKUMN-L1F	J02	P2-1L	
3	PWRCTL-2	J11	SH-F22	DKUMN-L1R	J04	P4-2L	
4	MPS BB(PL)	A10	SH-A10	DKUMN-L1R	J02	P2-2L	

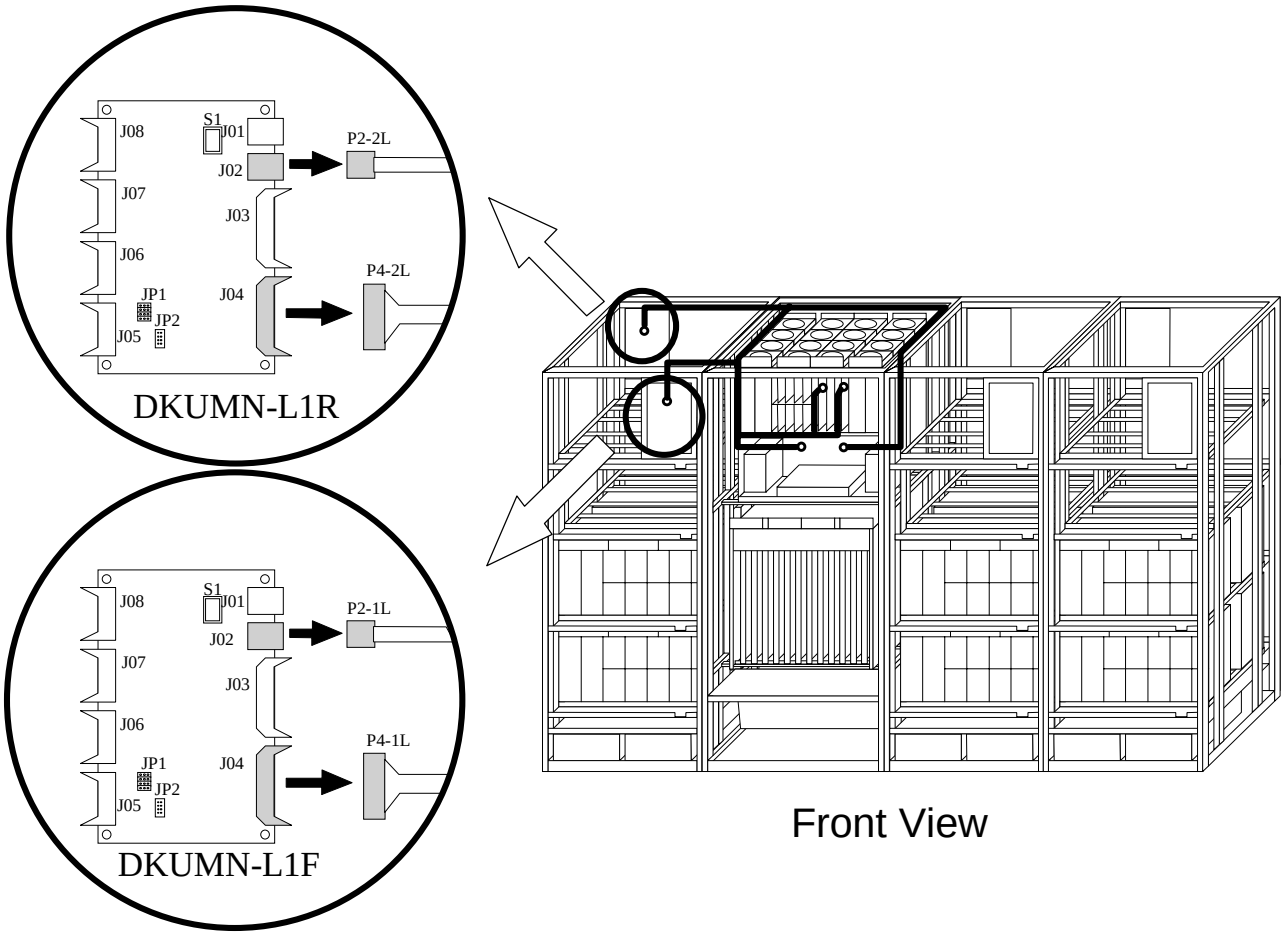

Fig. 4.4.2-3 Connection of DKUMN Cables

Copyright ©1997,1998, Hitachi, Ltd.

Second Disk Unit

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

Disconnect the DKUMN cables between the First Disk Unit and the Second Disk Unit as indicated in the table below.

Table 4.4.2-4 Connection of DKUMN Cables

No.	First Disk Unit			Second Disk Unit			REMARKS
	Location No.	Connector No.	Cable No.	Location No.	Connector No.	Cable No.	
1	DKUMN-R1F	J03	P3-1	DKUMN-R2F	J04	P4-1	
2	DKUMN-R1F	J01	P1-1	DKUMN-R2F	J01	P1-1	
3	DKUMN-R1R	J03	P3-2	DKUMN-R2R	J04	P4-2	
4	DKUMN-R1R	J01	P1-2	DKUMN-R2R	J01	P1-2

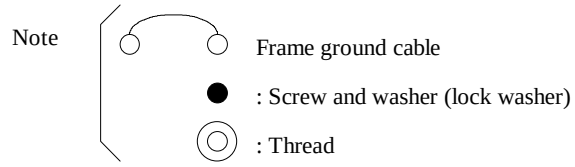
3 . Kick Plate De-Installation
Remove kick plate in the reverse order of installation.

SECTION 3.3.3.4 Installation of Kick Plate [INST03-240]
SECTION 3.4.3.5 Installation of Kick Plate [INST03-480]

4 . Side Cover and Frame Ground Cable Removal
Remove the side cover(s) and frame ground cable in the reverse order of installation.

Fourth Disk Unit

a. Remove the frame ground cable.
b. Remove the side cover from the Fourth Disk Unit.
c. Disconnect the frames.
d. Attach the left side cover to the Disk Controller or Third Disk Unit together with the frame ground cable.



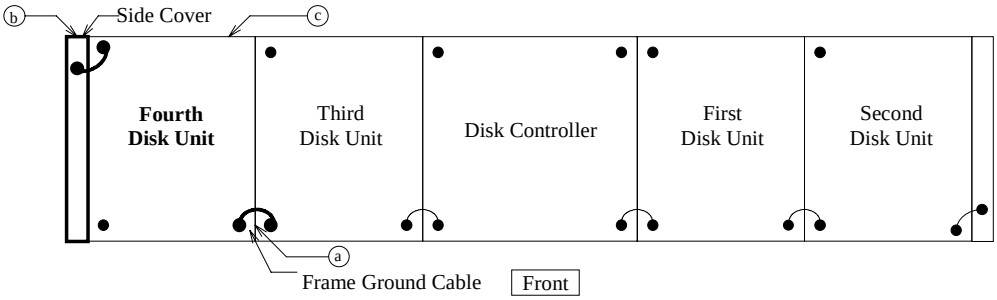


Fig. 4.4.2-5 Removal of Frame Ground Cable

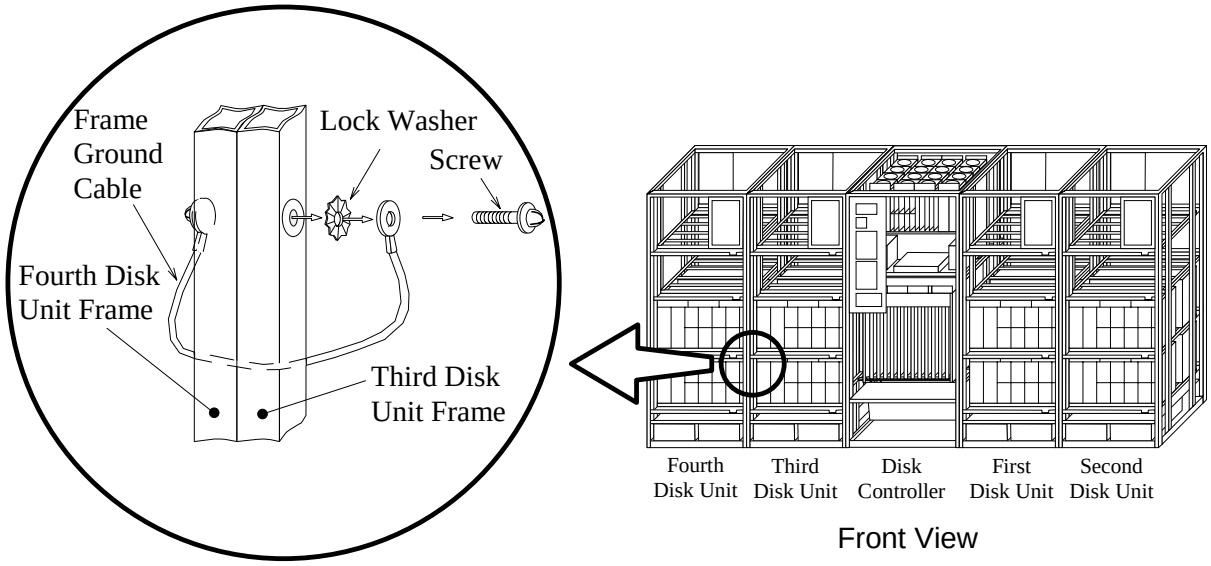

Fig. 4.4.2-6 Removal of Frame Ground Cable

Copyright ©1997,1998, Hitachi, Ltd.

Third Disk Unit

a. Remove the frame ground cable.
b. Remove the side cover from the Third Disk Unit.
c. Disconnect the frames.
d. Remove the four SCSI Interface Cables from the Disk Controller [INST04-360 through 370 step 2].
e. Attach the left side cover of the Disk Controller with the frame ground cable.

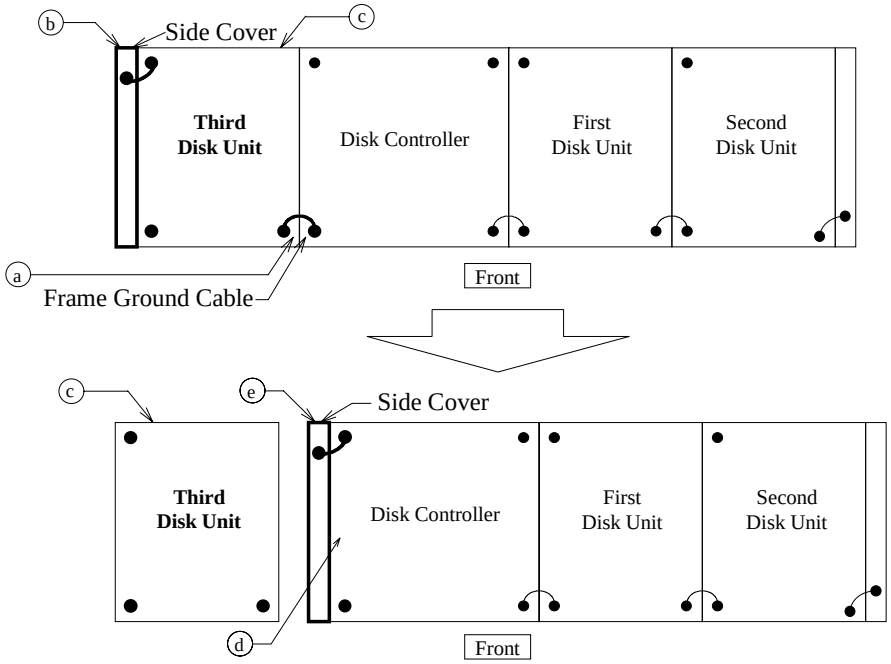

Fig. 4.4.2-7 Removal of Frame Ground Cable

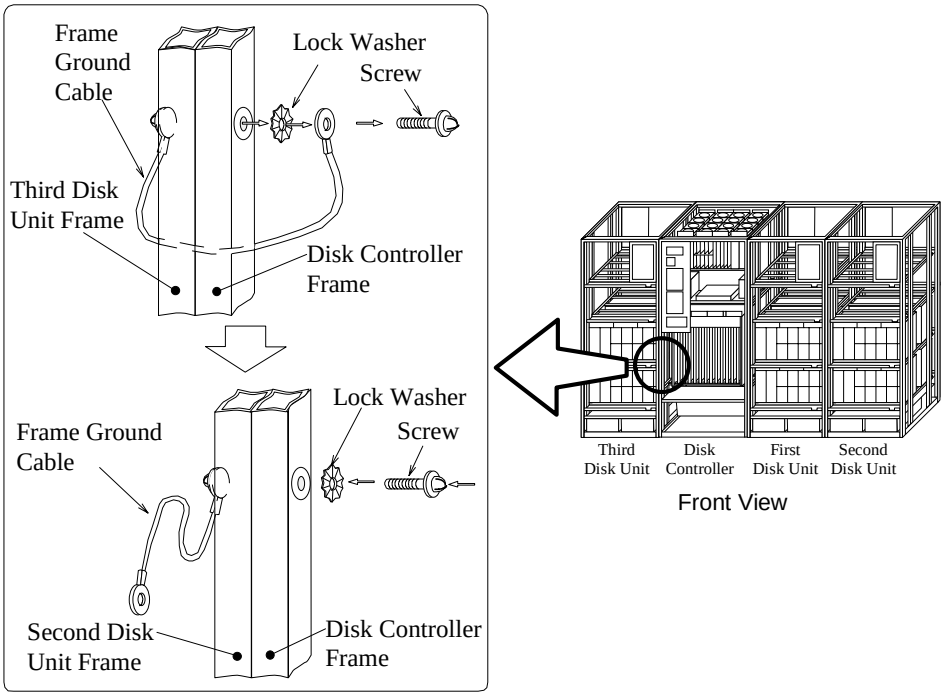

Fig. 4.4.2-8 Removal of Frame Ground Cable

Copyright ©1997,1998, Hitachi, Ltd.

Second Disk Unit

a. Remove the frame ground cable.
b. Remove the side cover from the Second Disk Unit.
c. Disconnect the frames.
d. Attach the right side cover to the Disk Controller or First Disk Unit together with the frame ground cable.

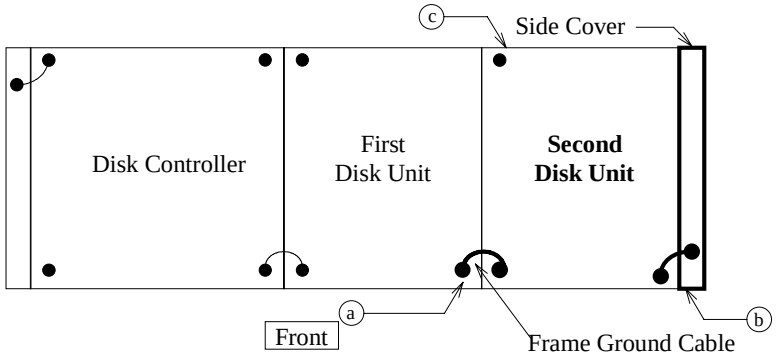

Fig. 4.4.2-9 Removal of Frame Ground Cable

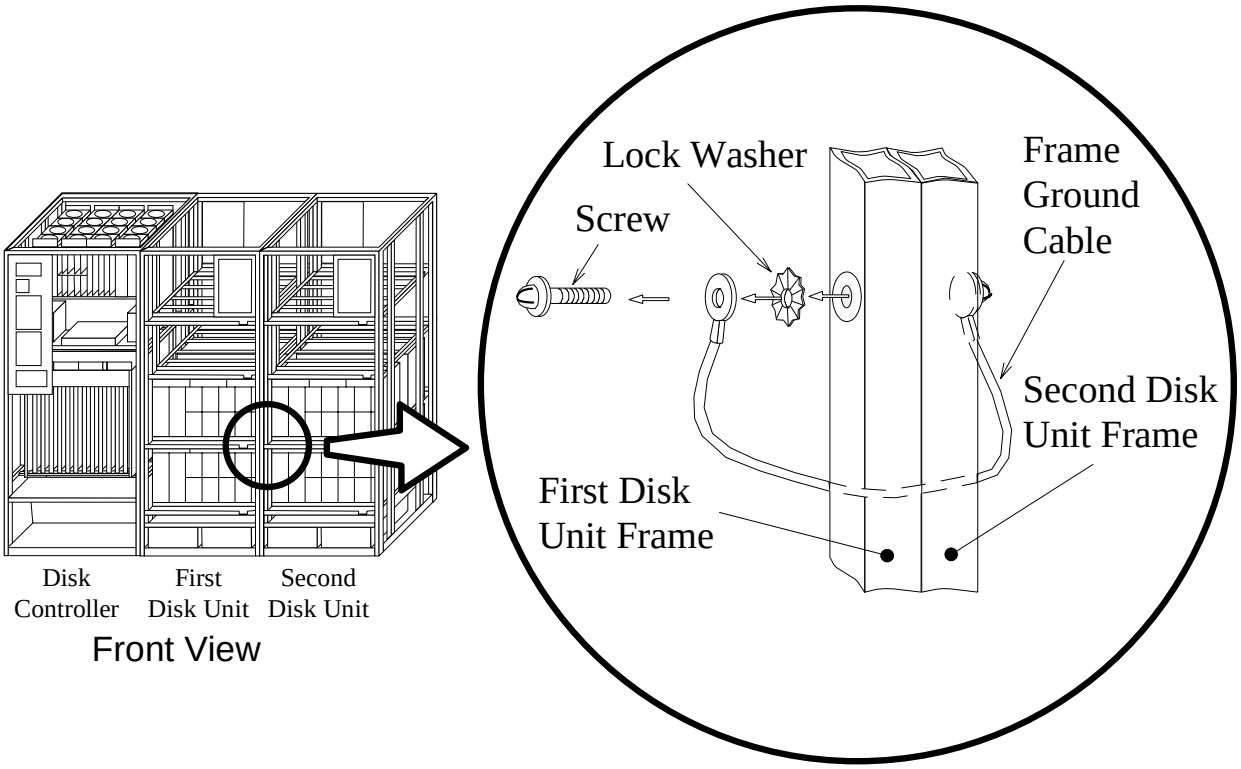

Fig. 4.4.2-10 Removal of Frame Ground Cable

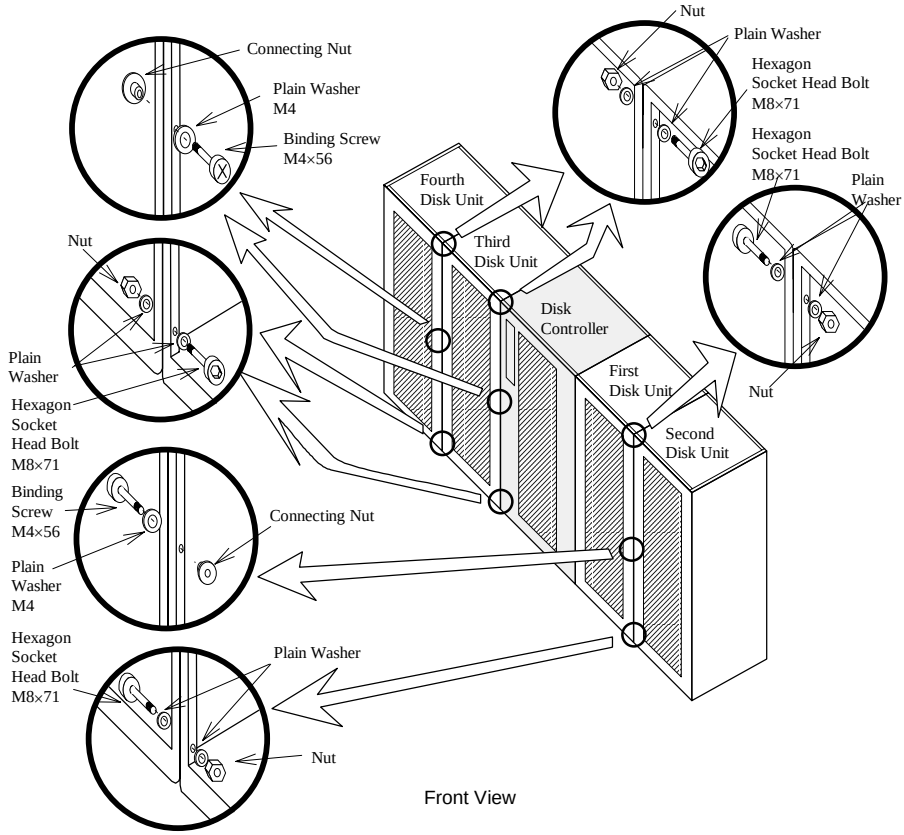
5. Frame Disconnection
   Disconnect the frames in the reverse order of frame connection.



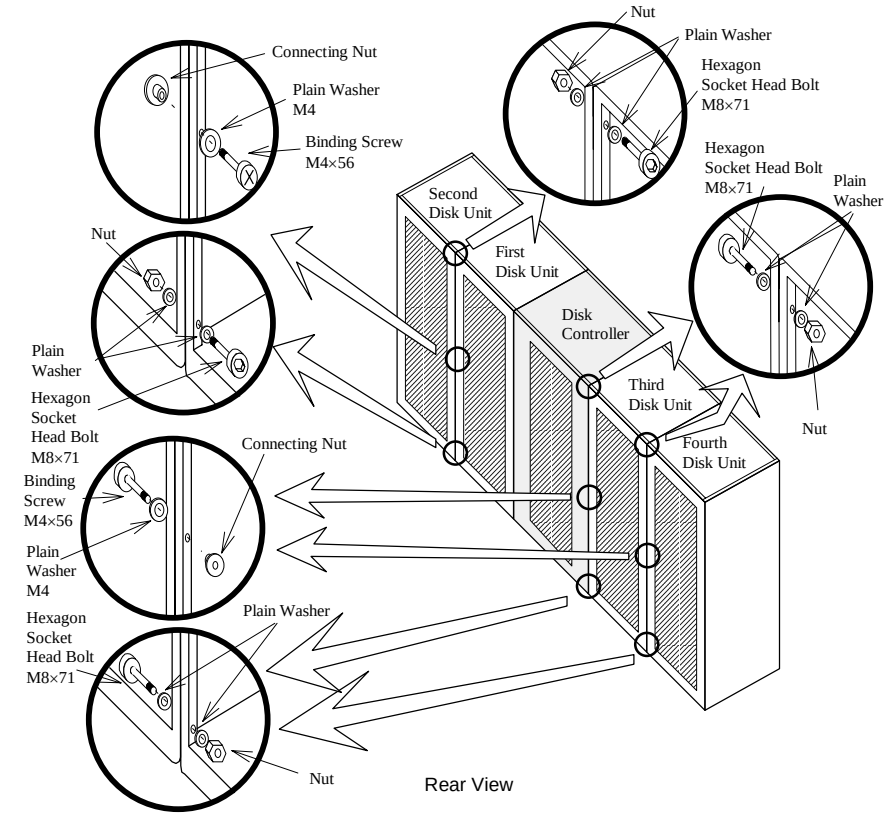


Fig. 4.4.2-11 Disconnection of Frame

Copyright ©1997,1998, Hitachi, Ltd.

6. Removal of SCSI Interface Cables
   a. When the Third Disk Unit is removed, remove the four SCSI Interface Cables from the DKC. See INST04-360 through 370 (step a through e).
      When the Third Disk Unit is not removed, go to step 7.

7. Side Cover Re-Installation
   a. Attach the side cover to the end of the frame. See Table 4.4.2-5.

Table 4.4.2-5 Removal and Re-installation of Side Cover

Configuration	Fourth Disk Unit	Third Disk Unit	Disk Controller	First Disk Unit	Second Disk Unit
De-Installation of Second Disk Unit	——	——	Side Cover, Disk Controller	First Disk Unit	Second Disk Unit
De-Installation of Third Disk Unit	——	Third Disk Unit	Side Cover, Disk Controller	First Disk Unit	Second Disk Unit
De-Installation of Fourth Disk Unit	Fourth Disk Unit	Third Disk Unit	Side Cover, Disk Controller	First Disk Unit	Second Disk Unit

   b. Attach the side cover to the end of the string with the four binding screws and washers.

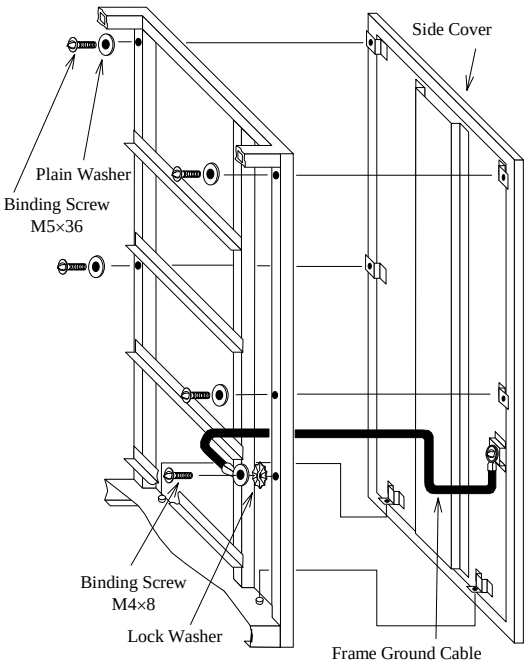

Fig. 4.4.2-12 Re-Installation of Side Cover

Copyright ©1997,1998, Hitachi, Ltd.

8. Power Cable Assy Fixing
   a. Loosen the four screws.

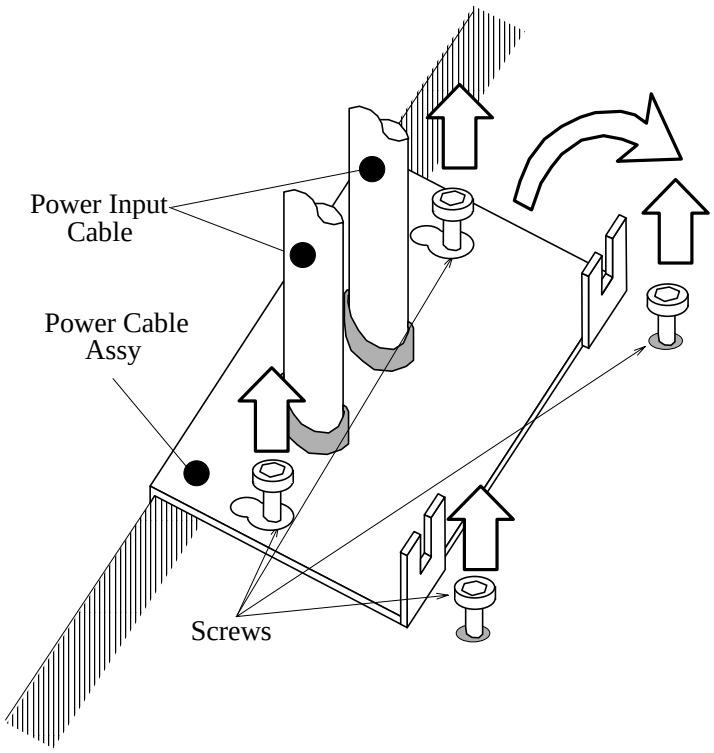

Fig. 4.4.2-13 Fixing of Power Cable Assy

   b. Secure the power cable Assy with the screws.

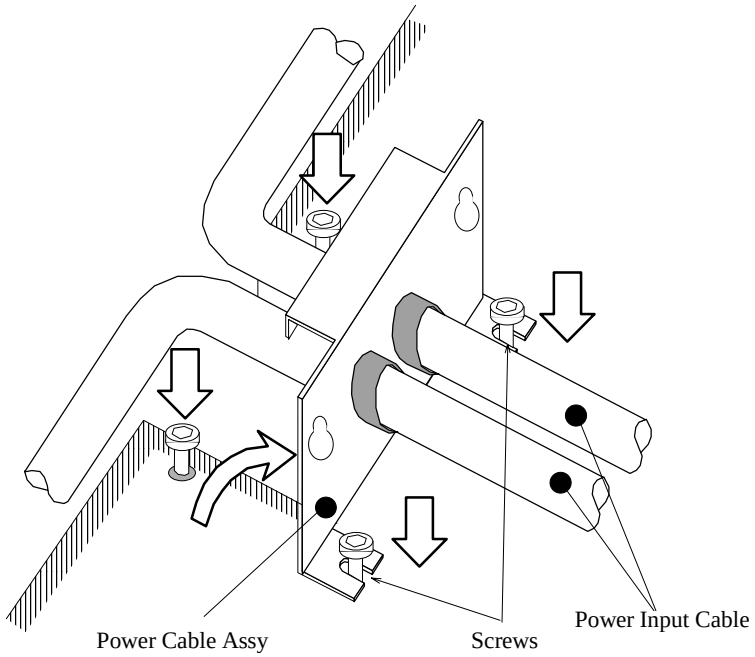

Fig. 4.4.2-14 Fixing of Power Cable Assy

Copyright ©1997,1998, Hitachi, Ltd.

9. Fall Proof Adapter Attachment

   Attach the fall proof adapters to the Disk Unit(s).

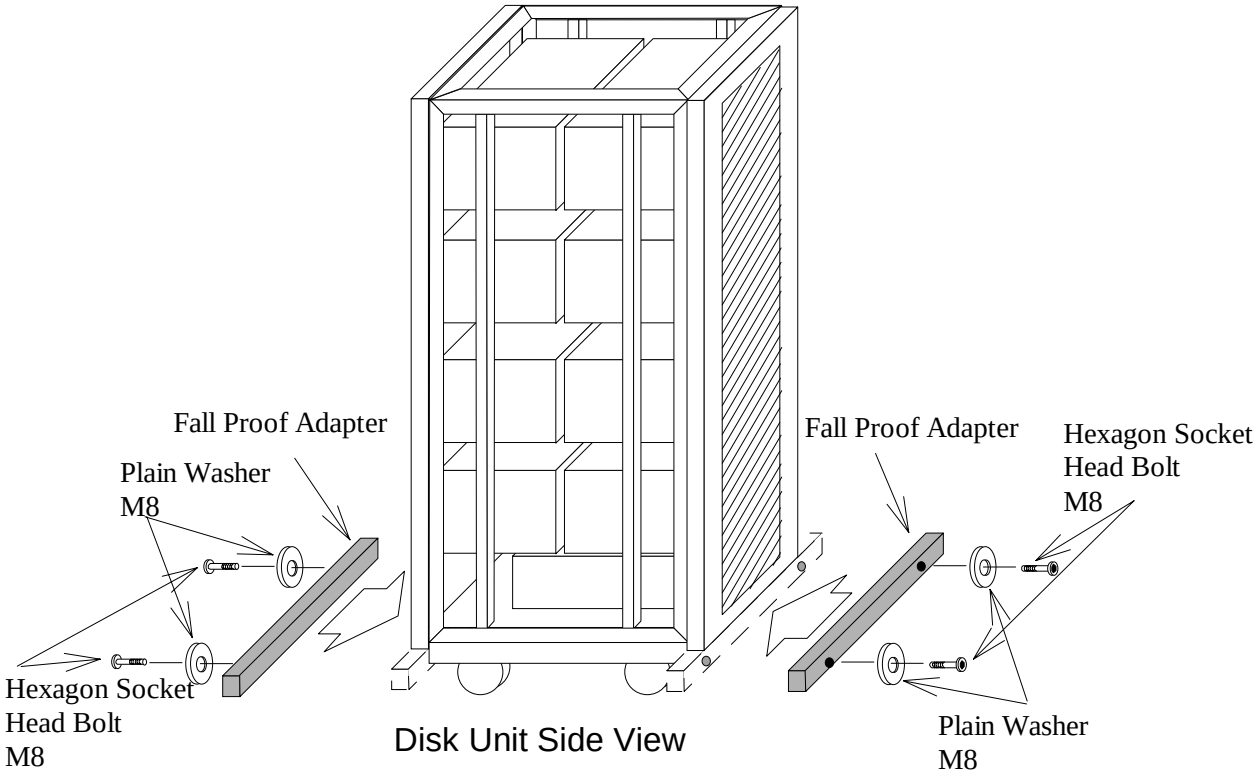

Fig. 4.4.2-15 Attachment of Fall Proof Adapter

10. Return to General Flow.
    Non-Disruptive De-installation : Go to INST02-32 Step (5)-9.
    Disruptive De-installation: Go to INST02-53 Step (13).

4.5.3 De-Installation Procedure of HDD Canister

1. De-installation of the HDD canister.

   a. Check the Shut Down LED ① on the HDD canister ②. (It should be RED.)

> **⚠ CAUTION**
> A system down may be caused by a removal of an HDD canister other than that to be removed. Make sure that it is the HDD canister to be removed.

   b. Remove the acrylic cover ③.
   c. Remove connector ④ from HDD canister ②.
   d. Loosen screw ⑤ and remove HDD canister ② from the HDU Box ⑥.
   e. Insert connector ④ into Jxxx ⑦.
   f. Attach the acrylic cover ③ to the HDU Box ⑥.

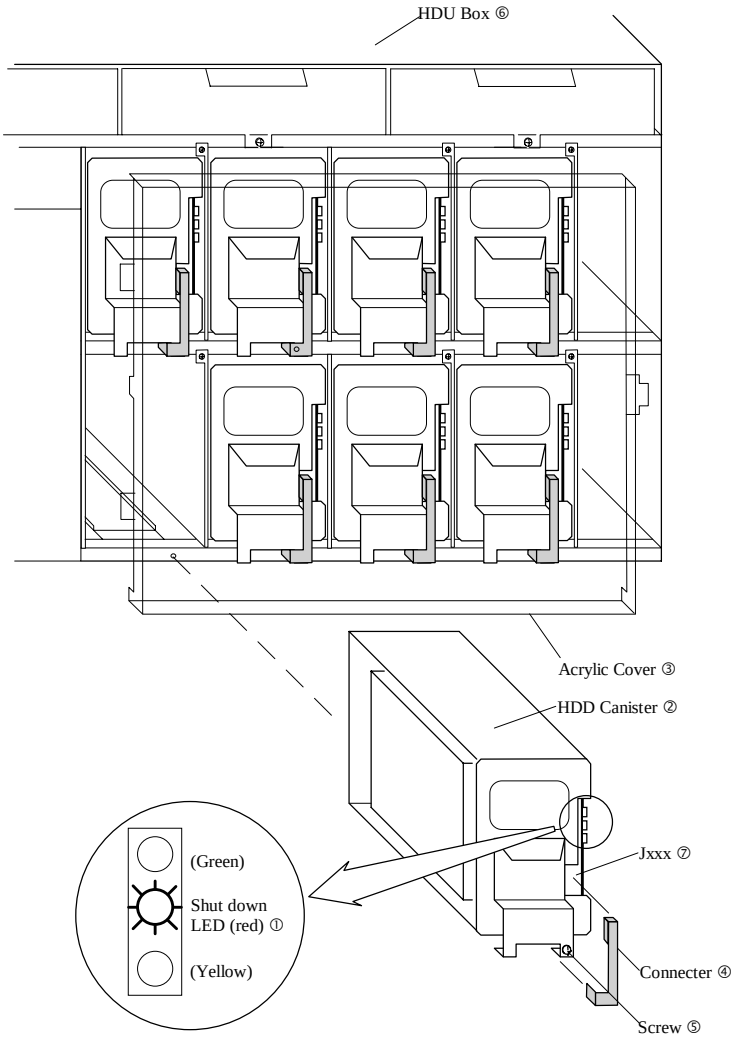

Fig. 4.5.3-1 De-Installation of HDD Canister

4.6 De-Installation of Platform for the Canister Mount (DKU-F305I-B4)

4.6.1 Flowchart

The procedure for de-installing the platform for the canister mount is shown below.

(1) Confirmation of de-installation position of platform for the canister mount. [INST04-1120]
↓
(2) Installation of the jumper plug in the DKUMN PCB. [INST04-1130]
↓
(3) Setting of the PS enable switch on the multi power supply. [INST04-1140]
↓
(4) Disconnection of the INLET cable. [INST04-1150]
↓
(5) Removal of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate. [INST04-1160]
↓
(6) Removal of the side plate. [INST04-1180]
↓
(7) Disconnection of the DKUMN cable. [INST04-1190]
↓
(8) De-Installation of the HDU Box. [INST04-1200]
↓
(9) Attachment of the acrylic cover, SCSI BFR PCB, multi power supply, and partition plate. [INST04-1200]
↓
(10) Attachment of the side plate. [INST04-1200]
↓
(11) Removal of the nameplate and label (REV). [INST04-1210]

4.6.2 Parts List

Table 4.6.2-1 Parts List for Platform for Canister Mount

No.	Model Number	Part Name	Part No.	Quantity	Remarks
1	DKU-F305I-B4	HDU Box	1505534-A	4	
		Multi Power Supply	5497470-A/B/C	8	
		SCSI BFR PCB	5497468-A	8	
		HDD FAN Assembly	5497471-A	12

4.7.1.3 De-Installation Procedure of Parallel 8-channel Switch

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Confirmation of the Shut Down LED (Only Non-Disruptive Procedure)
   a. Confirm that Shut Down LED is on.(Fig. 4.7.1-1). If the LED is not on, connect the Shut Down Jumper to the Shut Down Connector.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

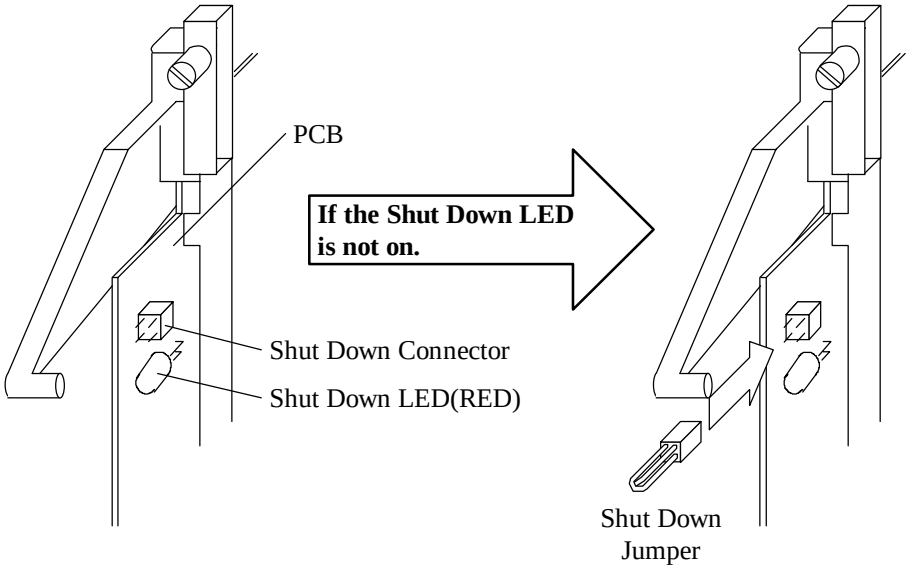

Fig. 4.7.1-1 Shut Down LED

4.7.6.3 De-Installation Procedure of Fibre 4-port Adapter

Note: Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Confirmation of the Shut Down LED (Only Non-Disruptive Procedure)
   a. Confirm that Shut Down LED is on.(Fig. 4.7.6-1). If the LED is not on, connect the Shut Down Jumper to the Shut Down Connector.

⚠ CAUTION

A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be removed. Make sure that it is the PCB to be removed.

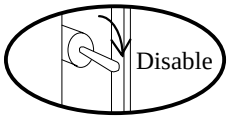
4.8.1.3 De-Installation Procedure of CL Additional Power Supply

1. Turn off the Additional Power Supply
   a. Turn the PS Enable/Disable Switch to (DOWN) **Disable**. Refer to Table 4.8.1.3-1, Fig. 4.8.1.3-1, and Fig. 4.8.1.3-2.

> **⚠ CAUTION**
> A system down may be caused by setting the PS Enable/Disable switch of the switching power supply other than that to be removed to "Disable". Make sure that it is a switching power supply to be removed.

Table 4.8.1.3-1 Removal Location

No.	Part Name	PS Location		Remarks
		Cluster 1	Cluster 2	
1	5V Power Supply	5VPS12	5VPS22	
2	3V Power Supply	3VPS12	3VPS22	



PS Enable/Disable Switch

4.9 De-Installation of Interface Connector

4.9.1 De-Installation of PCI I/F Connector (DKC-F310I-18)

4.9.1.1 Flowchart

1. Confirm that the REMOTE/LOCAL Switch of CE Panel is set to LOCAL. If not, set the REMOTE/LOCAL Switch to LOCAL.

↓

2. Connect the "CE Panel INH" jumper plug to the sockets on the HUB.

↓

3. Set the jumper connectors(JP1 and JP2) of the CE Panel.

↓

4. Remove the PCI CONN PCB.

↓

5. Disconnect the "CE Panel INH" jumper plug from the socket on the HUB.

↓

6. Detach the nameplate.

4.9.1.2 Parts List

Table 4.9.1.2-1 Parts List

No.	Model Number	Parts Name	Parts No.	Quantity	Remarks

4.9.2.3 De-Installation Procedure of RCU I/F Connector

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

1. Remove the RCU CONN PCB.
   a. Disconnect the cables(P70, 71).
   b. Remove the screw① and remove the plate.
   c. Remove the screw②and remove the RCU CONN.
   d. Attach the plate and fasten the screw①.

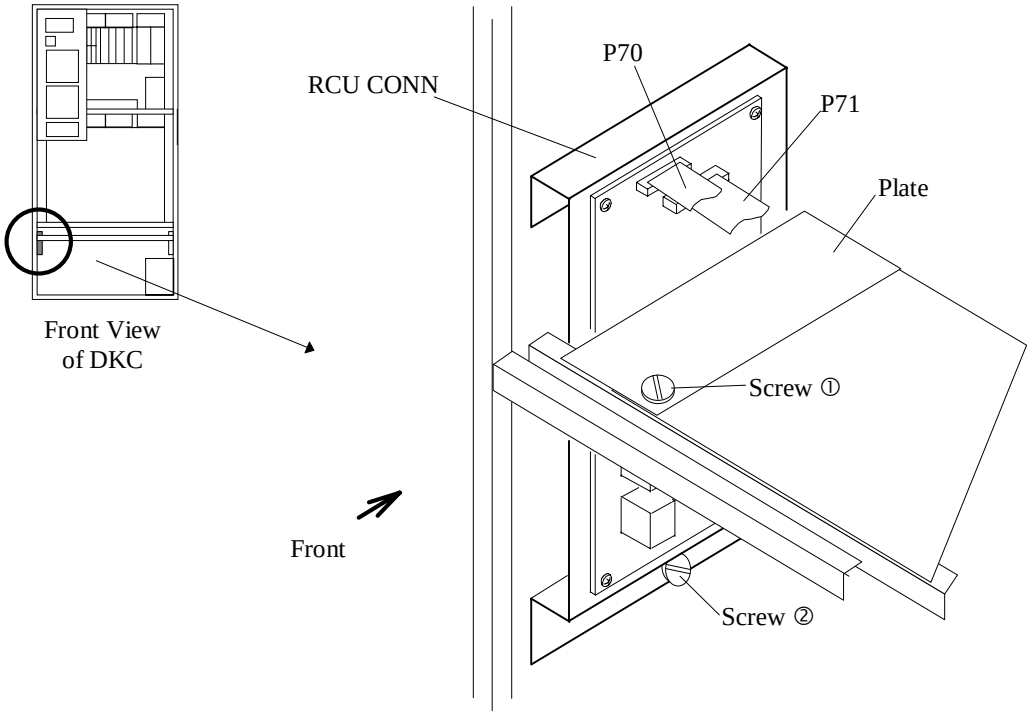

Fig. 4.9.2.3-1 Attachment of RCU CONN PCB

Copyright ©1997, Hitachi, Ltd.

2. Detach the nameplate.

a. Detach the nameplate of DKC-F310I-19.

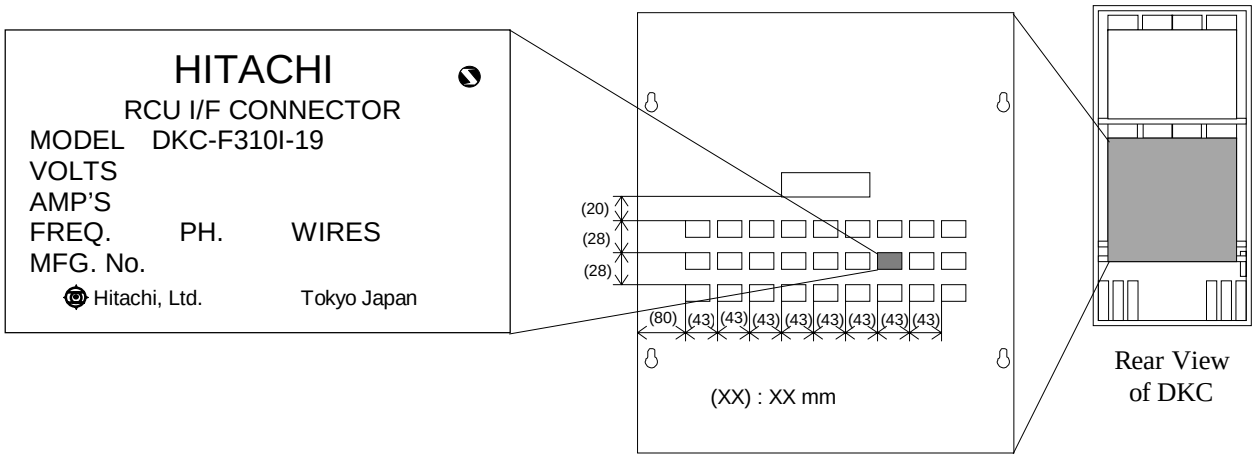

Fig. 4.9.2.3-2 Location of the Nameplate

3. Return to General Flow.

Non-Disruptive De-Installation : Go to INST02-33 step (10)-3.

Disruptive De-Installation : Go to INST02-54 step (17).

4.13.1.3 De-Installation Procedure of Outlet Box(IU)

1. Circuit Breaker (Off)

⚠ WARNING

Be Careful with Electric Shock

- The power of the device is still on after turning off the breakers shown below.
- The device may be powered off when turning off the breakers not shown below.

⚠ CAUTION

Mind Your Head

- Be sure to mind your head during operation, or you might hit your head against the movable rack, which causes injury.

a. Turn off the circuit breakers in the DKC.

Table 4.13.1.3-1 Circuit Breakers to be Turned Off

No.	Unit	Location No.	Breaker No.	Remarks
1	DKC	Outlet Box	CB301	Failure to turn off may result in an electric shock.
2	DKC	Outlet Box	CB302	Failure to turn off may result in an electric shock.

2. Cover Removal
   a. Remove the Front PS Box Cover 2. Refer to INST03-10.
   b. Loosen the two screws and remove the cable duct cover.

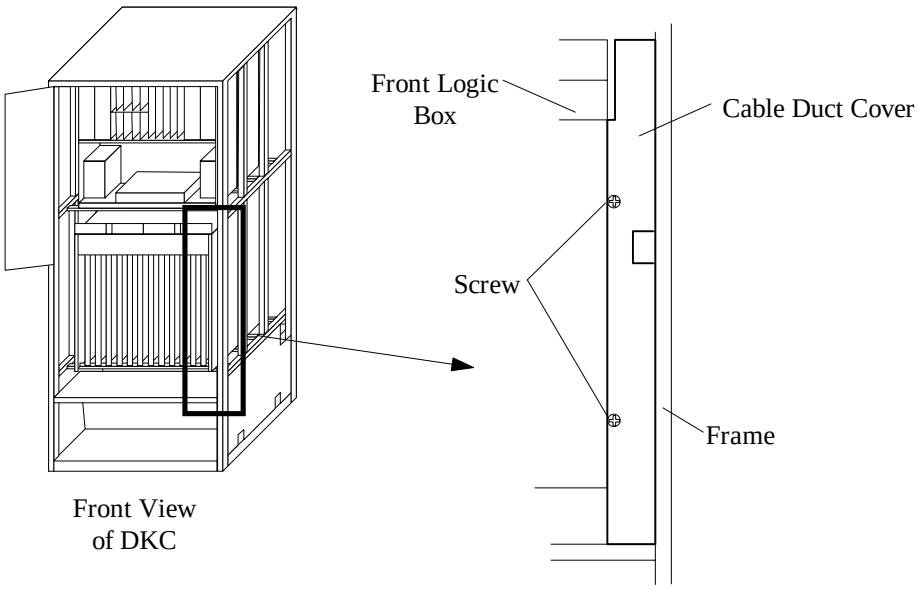

Fig. 4.13.1.3-2 Removal of Cable Duct Cover

Copyright ©1998, Hitachi, Ltd.

3. Outlet Box Removal
   a. Detach the OLB power cable (P203) from Breaker Box-1.

⚠ WARNING

Be Careful with Electric Shock

- Be sure to turn off the circuit breakers (CB301 and CB302) on Outlet Box before operation.
- The connector J203 on Breaker Box-1 is a live part. So be sure to keep tools and parts such as a screwdriver and screw from contact with the connector.
- The connector J203 on Breaker Box-1 is a live part. So be sure to keep tools and parts such as a screwdriver and screw from contact with the connector.

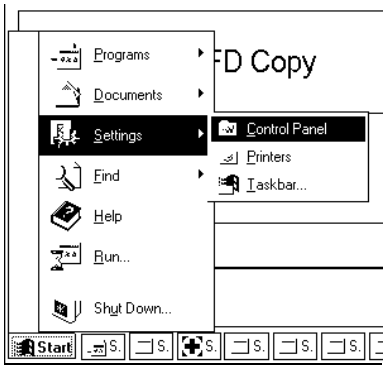
5.2 New Installation SVP Procedure

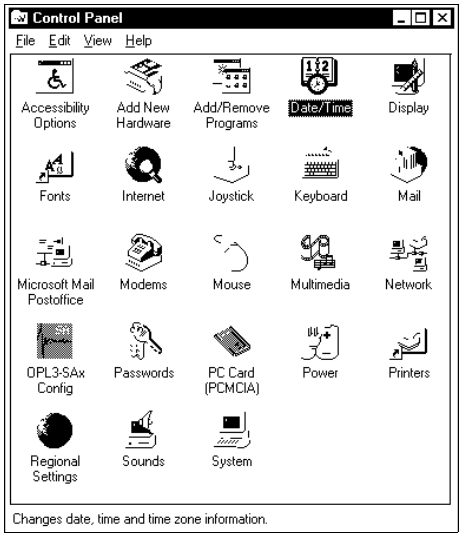
5.2.1 TOD Setting and Set IP Address

[1] TOD Setting (Turn on subsystem power before TOD Setting)

1. <Open [Control Panel]>
   Select (DR) [Settings] and then [Control Panel] from [Start].

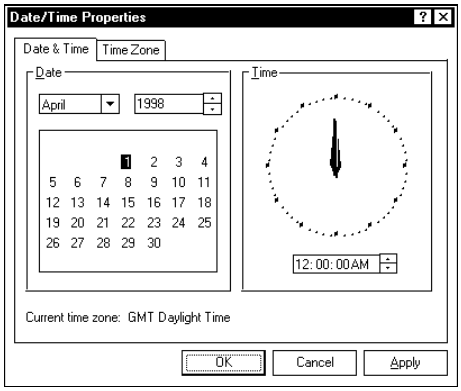


2. <Open [Date/Time]>
   Select (DC) [Date/Time] from [Control Panel].

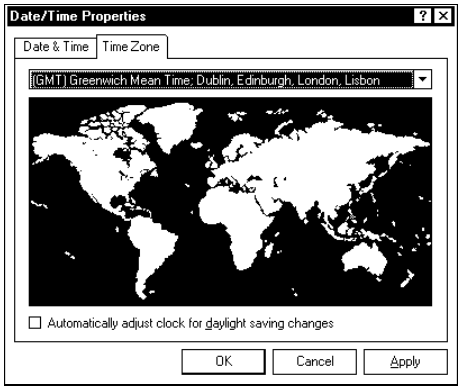


Copyright ©1997,1998, Hitachi, Ltd.

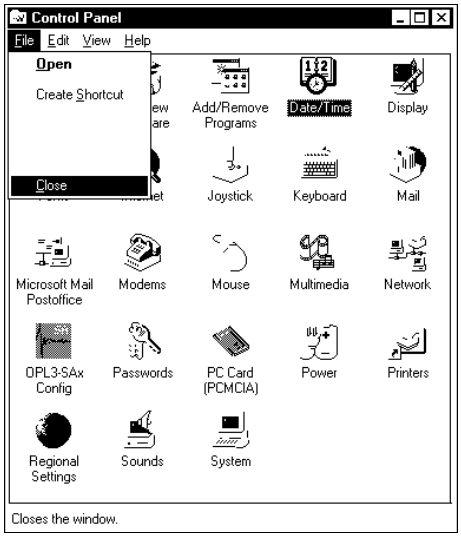
3. <Select [Time Zone]>
Select (CL) [Time Zone].



4. <Check the setting of [Time Zone]>
Make sure that the setting of [Time Zone] is "[GMT] Greenwich Mean Time; Dublin, Edinburgh, London, Lisbon". Also, make sure that a check box on the left of "Automatically adjust clock for daylight saving changes" is ☐ (without a check mark). Then, press [OK] (CL).



5. <Close [Control Panel]>
Select (DR) [File] and then [Close] from [Control Panel].



Copyright ©1998, Hitachi, Ltd.

6.

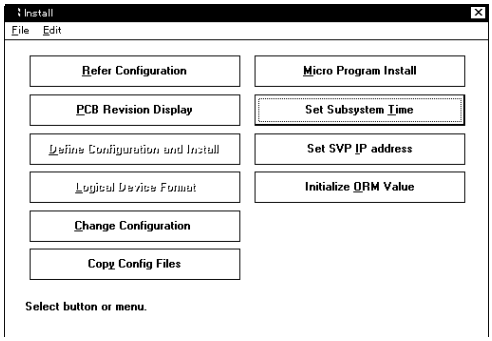
Change the mode to [Modify Mode] from [View Mode] (CL).

7.

Select (CL) [Install].

8.

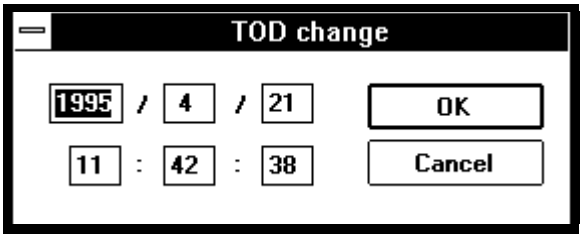
Select (CL) [Set Subsystem Time] in the ‘Install’ window.



Copyright ©1998, Hitachi, Ltd.

9.

Specify the date (year, month and day) and time (hour, minute and second) and select (CL) [OK].



10.

Close the ‘Install’ window.

In case of New Installation, go to INST02-12 step (16)-2.

Copyright ©1997,1998, Hitachi, Ltd.

[2] Set IP Address

1.

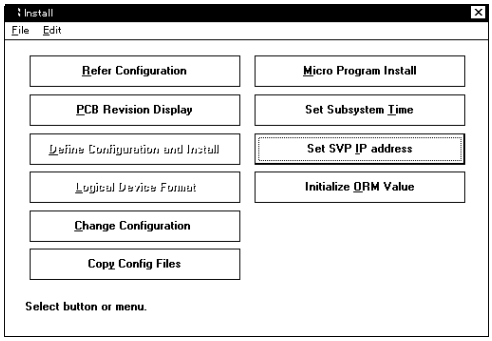
Change the mode to [Modify Mode] from [View Mode] (CL).

2.

Select (CL) [Install].

3.

Select (CL) [Set SVP IP address] in the 'Install' window.

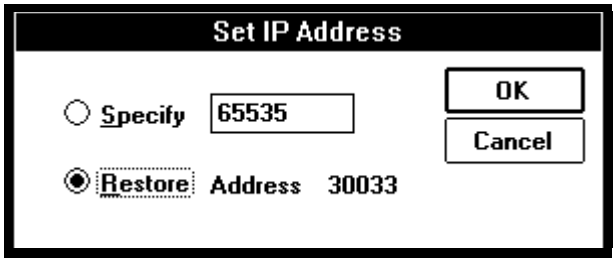


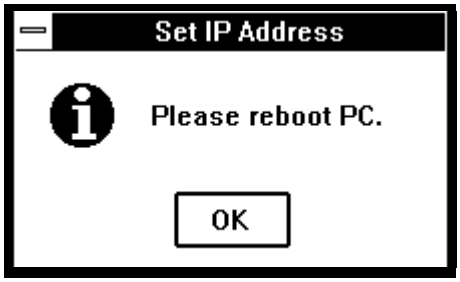
Copyright ©1997,1998, Hitachi, Ltd.

4. <Change the IP Address>

(i) In the case of setting “65535” as the IP Address of LAN of SVP.
   ① Select (CL) [Specify] and then select (CL) [OK] after you recognized that the value is 65535. If the value is not 65535, select (CL) [OK] after entering 65535.
   ② In response to the message “Please reboot PC”, select (CL) [OK].

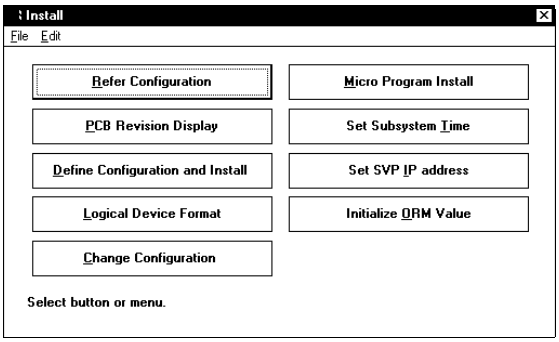
(ii) In the case of setting the DKC serial number that was specified in “Define Configuration and Install”.
   ① Select (CL) [Restore] and then select (CL) [OK].
   ② In response to the message “Please reboot PC”, select (CL) [OK].





5. <Termination of Install>

Select (CL) the [File] menu in the ‘Install’ window and select (DR) [Exit].



6. <Restart the PC>

Select (CL) “Start”.
Select (DR) “Shut down”.
Select (CL) “Restart the computer?”, and
Select (CL) [Yes].

Go to INST02-12 step (17).

Copyright ©1997,1998, Hitachi, Ltd.

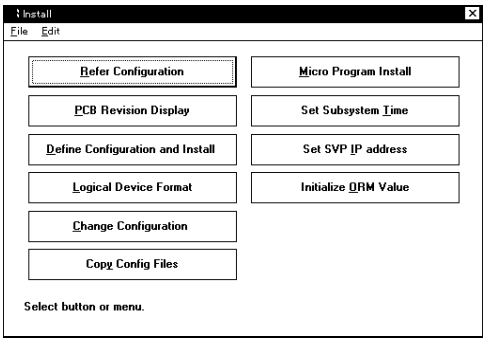
5.2.2 Configuration Information Definition

NOTICE
This operation is necessary only when a subsystem is newly installed. It is not performed afterward. If it is performed by mistake, a system down or a data loss may be caused.

1. <Mode Change>
   Change the mode to INITIAL SETUP Mode.
   Select “Shift” + “Ctrl” + “I”.

   Enter the password and select (CL) [OK].
   Please call Technical Support Center for asking it.
   Select (CL) [Install].

2.
   Select (CL) [Define Configuration and Install...].



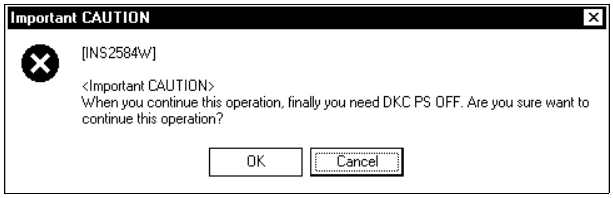
NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss if executed in an occasion other the new subsystem installation, and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

3.

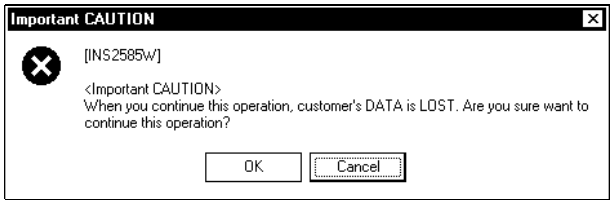
(1) Select (CL) [OK] in response to the confirmation message “<Important CAUTION>
This Operation is new installation. If you want to Non-disruptive Install or Non-disruptive de-install, terminate this procedure by [CANCEL] button and select INSTALL-CHANGE CONFIGURATION menu.”.

Copyright ©1997,1998, Hitachi, Ltd.

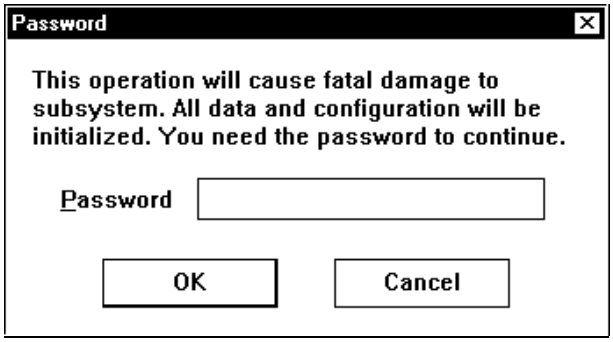
(2) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you continue this operation, finally you need DKC PS OFF. Are you sure want to continue this operation?".



(3) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you continue this operation, customer's DATA is LOST. Are you sure want to continue this operation?".

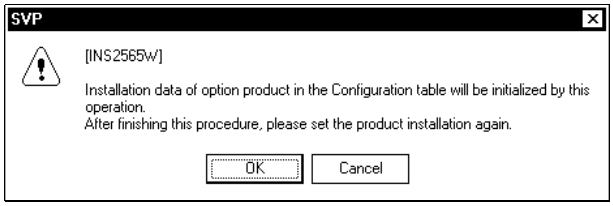


(4) Enter the password and select (CL) [OK].
Entering the password is required in this operation.
Please call Technical Support Center for asking it.



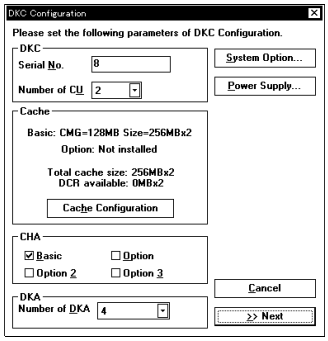
Copyright ©1998, Hitachi, Ltd.

(5) Select (CL) [OK] in response to the confirmation message “Installation data of option product in the Configuration table will be initialized by this operation. After finishing this procedure, please set the product installation again.”.



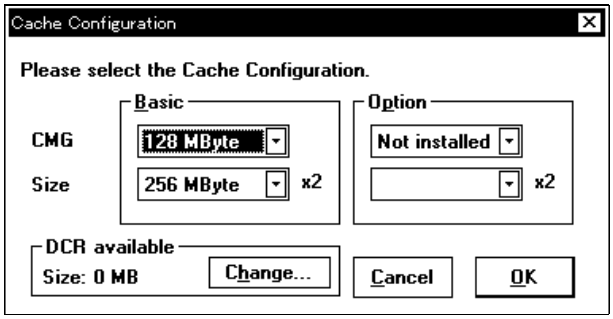
4. <Define configuration information>

Define the device configuration information from ‘DKC Configuration’ according to the device configuration worksheet.
After defining all input items is completed, select (CL) [>>Next].
If [Cache Configuration] is selected, ‘Cache Configuration’ dialog box is displayed. (See step 4-1.)
If [System Option] is selected, ‘System Option’ dialog box is displayed. (See step 4-2.)
If [Power Supply] is selected, ‘Redundant Power Supply’ dialog box is displayed. (See step 4-3.)
If [Cancel] is selected, this procedure is terminated.



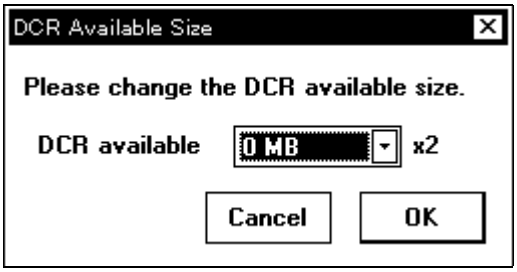
4-1. <Define Cache Capacity>

Define the cache capacity in the ‘Cache Configuration’ dialog box.
If you want to use DCR, select (CL) [Change...] to set DCR available size. (See SSD Optional Function Section)



4-1-1. <Define DCR Available Size>

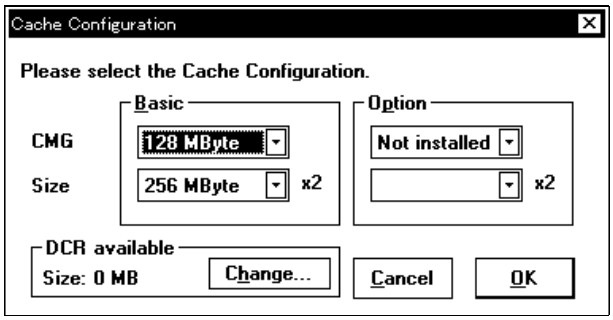
Define the DCR available size in the ‘DCR Available Size’ dialog box.
And select (CL) [OK].
Go to step 4-1.
Selecting (CL) [Cancel] returns you to step 4-1.



Copyright ©1997,1998, Hitachi, Ltd.

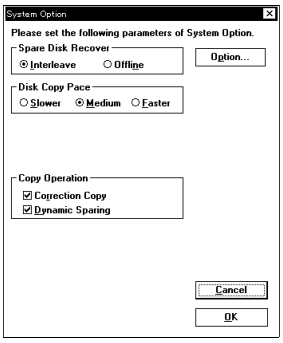
4-1-2.

Select (CL) [OK].
Go to step 4.
Selecting (CL) [Cancel] returns you to step 4.



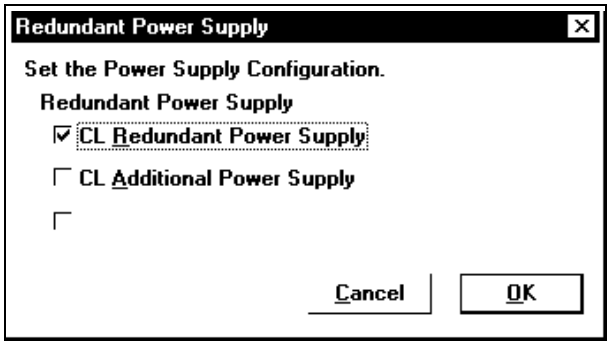
4-2. <Define System Options>

Define the device configuration information from 'System Option Setup' according to the device configuration worksheet.
After setting up all items, select (CL) [OK].
Go to step 4.
Selecting (CL) [Cancel] returns you to step 4.



4-3. <Set Power Supply>

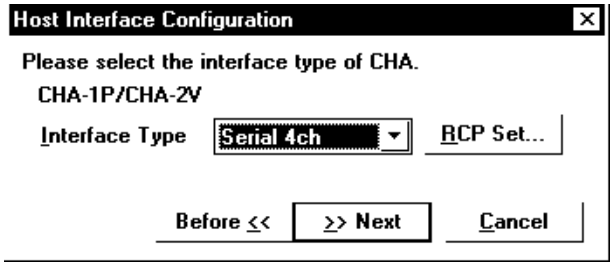
Set the power supply information in the 'Redundant Power Supply' dialog box.
After setting up all items, select (CL) [OK].
Go to step 4.
Selecting (CL) [Cancel] returns you to step 4.



Copyright ©1998, Hitachi, Ltd.

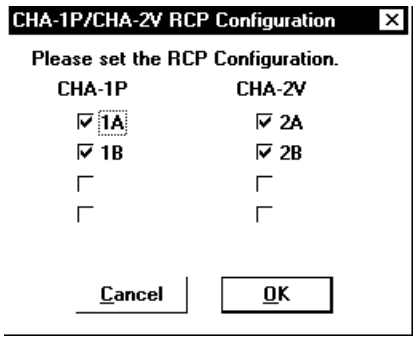
5. <Setting channel type>

Set the subsystem configuration information in the 'Host Interface Configuration' window according to the subsystem configuration information work sheet.
When [Serial 2 ch] or [Serial 4 ch] is selected, select (CL) [RCP Set...] and go to step 5-1.
When [Parallel 4 ch] is selected, select (CL) [>>Next] and go to step 5-2.
(Execute the operation above for all the channels installed.)
After all the items are set, select (CL) [>>Next]. Go to step 7.
When [Before<<] is selected (CL), the screen is returned to the previous one.



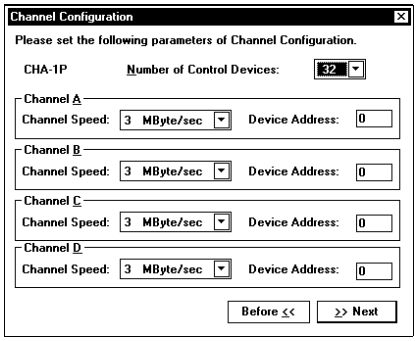
5-1. <Setting RCP port>

Select (CL) the port defined as the RCP port and select (CL) [OK].
Go to step 5-3.
When [Cancel] is selected (CL), the routine returns to step 5.



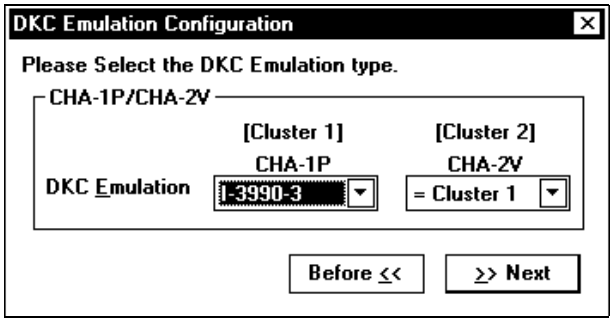
5-2. <Setting parallel CH>

Set the subsystem configuration information in the 'Cancel Configuration' window.
When all the items are set, select (CL) [>>Next]. Go to step 5-3.
When [Before<<] is selected (CL), the routine returns to step 5.



5-3. <Setting DKC emulation type>

Set the subsystem configuration information in the 'DKC Emulation Configuration' window according to the subsystem configuration information work sheet.
After the setting is completed, select (CL) [>>Next]. The routine returns to step 5.
When [Before<<] is selected (CL), the routine returns to step 5.



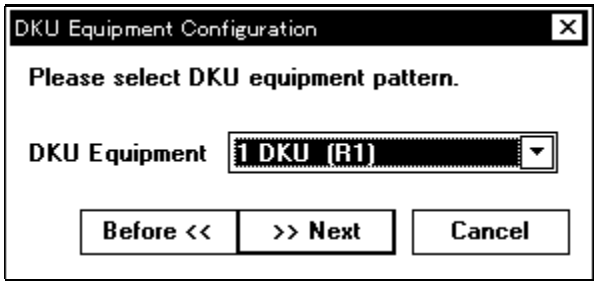
Copyright ©1997,1998, Hitachi, Ltd.

6.

BLANK

7. <Set DKU Equipment>

Define the DKU equipment pattern in the 'DKU Equipment'.
After setting up, select (CL) [>>Next].
Selecting (CL) [Before<<] returns you to the previous screen.
This procedure is terminated by selecting (CL) [Cancel].

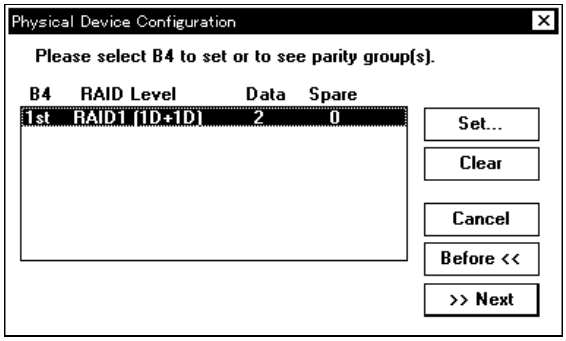


8. <Install Drive Configuration Information>

Define drive configuration according to the 'Physical Device Configuration' screen displaying the mounted B4 based on the result of setting of DKU mount pattern.
Detailed procedure is shown below.

- Select (CL) the item and select (CL) [Set...]. Go to step 8-1 through 8-3.
- Selecting (CL) [Clear...] after selecting (CL) the item clears the B4 setting.

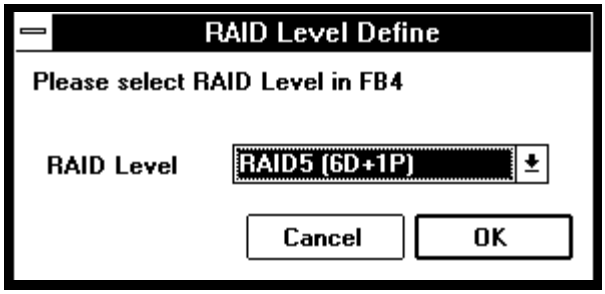
After setting up all items, select (CL) [>>Next].
Selecting (CL) [Before<<] returns you to the previous screen.
This procedure is terminated by selecting (CL) [Cancel].



FB4	Location
1st	HDU-R10, 11, 12, 13
2nd	HDU-R14, 15, 16, 17
3rd	HDU-L10, 11, 12, 13
4th	HDU-L14, 15, 16, 17
5th	HDU-R20, 21, 22, 23
6th	HDU-R24, 25, 26, 27
7th	HDU-L20, 21, 22, 23
8th	HDU-L24, 25, 26, 27

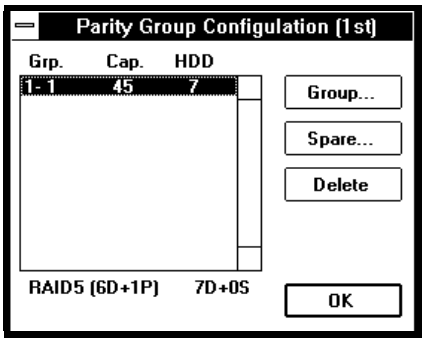
8-1.

Define RAID level of the B4 in the 'RAID Level Define'.



Copyright ©1997,1998, Hitachi, Ltd.

8-2.

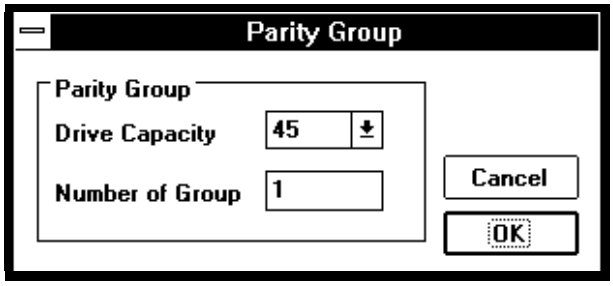


- To define Parity Group, select the drive to be defined and select (CL) [Group...] in the 'Parity Group Configuration' dialog box. See step 8-2-1.
- To define Spare, select the drive to be defined and select (CL) [Spare...] in the 'Parity Group Configuration' dialog box. See step 8-2-2.
- To delete an item, select an item to be deleted and select (CL) [Delete] in the 'Parity Group Configuration' dialog box.

After setting up all items, select (CL) [OK]. Return to step 8.

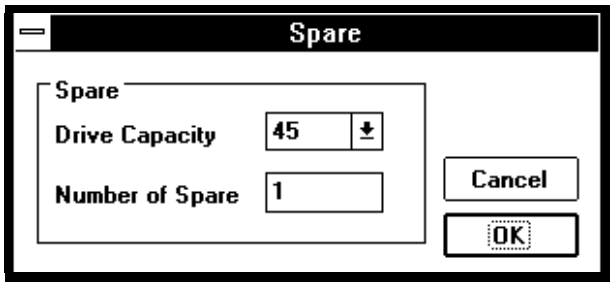
8-2-1.

Define the drive capacity and the number of parity groups in the 'Parity Group' dialog box. Then select (CL) [OK]. Return to step 8-2.



8-2-2.

Define the drive capacity and the number of spare drives in the 'Spare' dialog box. Then select (CL) [OK]. Return to step 8-2.



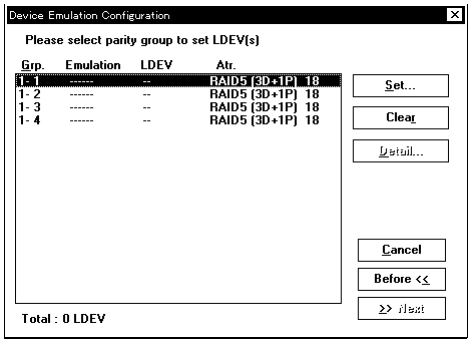
9. <Define Device Emulation>

After setting up all items for definition of Device Emulation, select (CL) [>>Next]. Selecting (CL) [Before<<] returns you to the previous screen.

Copyright ©1997, Hitachi, Ltd.

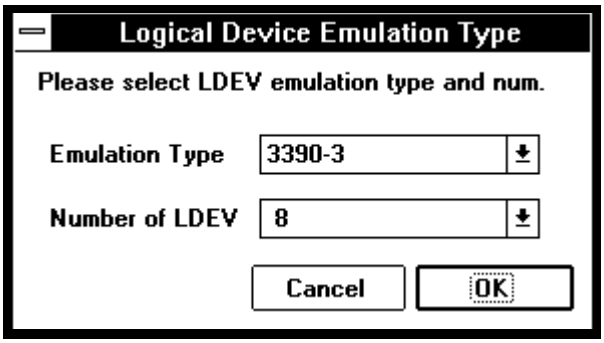
9-1.

In case of defining Device Emulation:
Select (CL) device and select (CL) [Set...].
This procedure is terminated by selecting (CL) [Cancel].



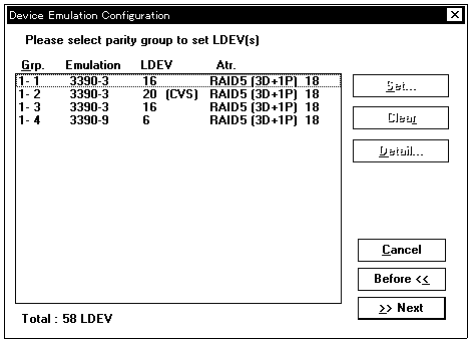
9-1-1.

After setting up all items in the 'Logical Device Emulation Type' dialog box, select (CL) [OK]. Selecting (CL) [Cancel] returns you to step 9-1.



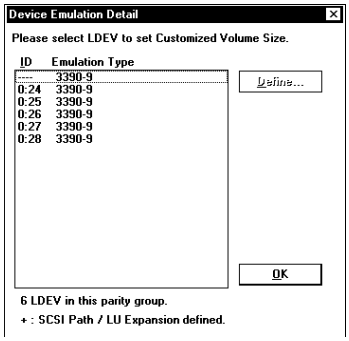
9-2. <Defining of Customized Volume Size (CVS)>

(1) Select (CL) a parity group for which the LDEV emulation type and the number of LDEVs have been set on the "Device Emulation Configuration" screen and select (CL) [Detail...].
This procedure is terminated by selecting (CL) [Cancel].

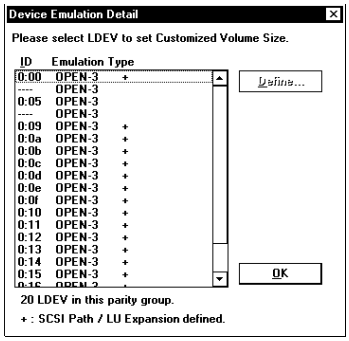


Copyright ©1997,1998, Hitachi, Ltd.

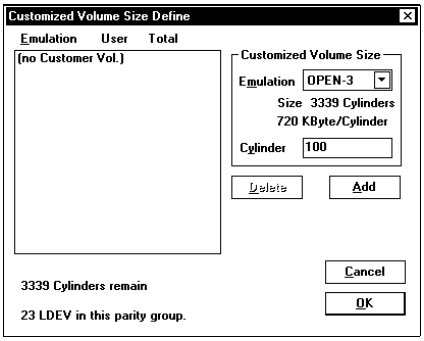
(2) Select (CL) an LDEV for which the CVS is to be set on the "Device Emulation Detail" screen and press (CL) the [Define...] button.
Selecting (CL) [Cancel] returns you to the previous screen.

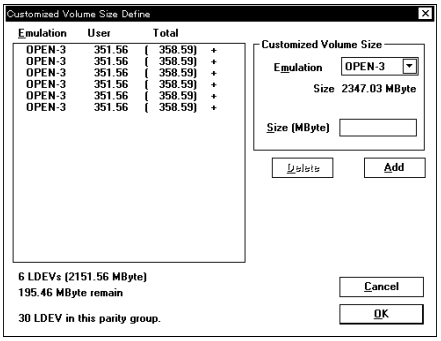


Note : Meaning of "+" character
1) Volume with SCSI path.
2) LU expanded volume.



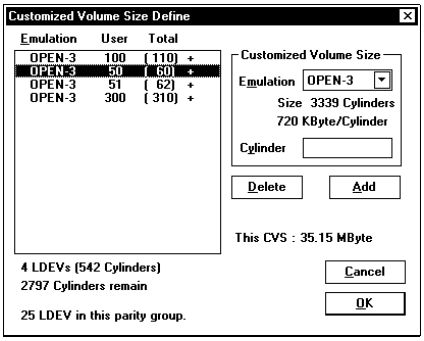
(3) Enter the LDEV emulation type of a customized volume(CV) to be registered and the number of user cylinders (in the case of Mainframe system. Refer to the upper screen) or the size (Mbyte) (in the case of open system. Refer to the lower screen) on the "Customized Volume Size Define" screen, then press (CL) the [Add] button to add them.





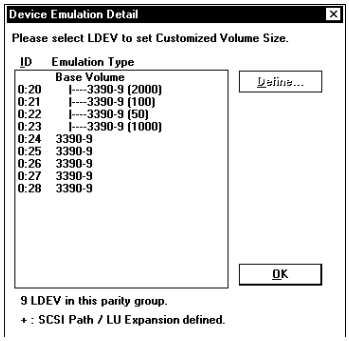
Copyright ©1997,2000, Hitachi, Ltd.

(4) The CV registered by mistake can be deleted by selecting it from the list box and pressing (CL) the [Delete] button.
Note: One or more CV can be selected.

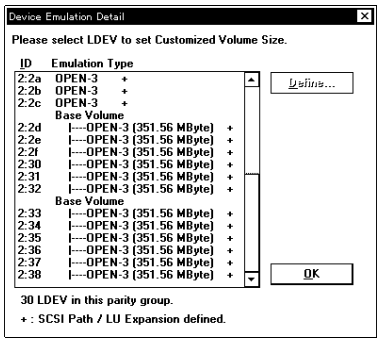


Copyright ©1999, Hitachi, Ltd.

(5) When the setting is decided, press (CL) the [OK] button to return the screen to the “Device Emulation Detail” screen. The added CV is displayed.



(In the case of Mainframe system)

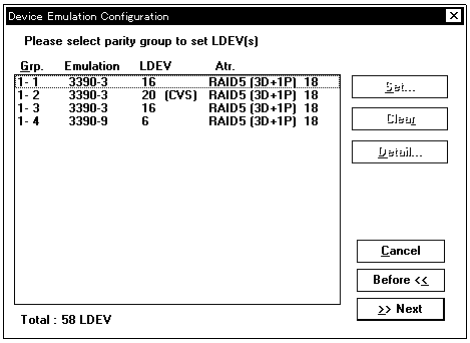


(In the case of open system)

(6) To add a CV to the base volume for which CV(s) has been defined, select (CL) Base Volume in the list box on the “Device Emulation Detail” screen and define the CV.

9-3.

In case of deletion:
Select (CL) device and select (CL) [Clear].
This procedure is terminated by selecting (CL) [Cancel].

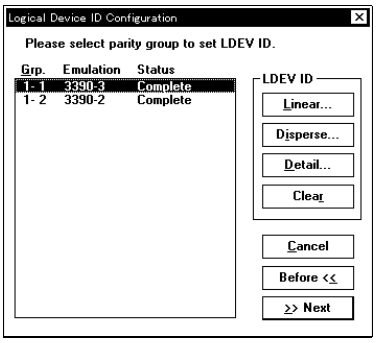


Copyright ©1997,2000, Hitachi, Ltd.

10. <Define LDEV ID>

After setting up all items, select (CL) [>>Next]. Selecting (CL) [Before<<] returns you to the previous screen. (Refer to INST05-181)

10-1. <Definition Screen for LDEV ID>

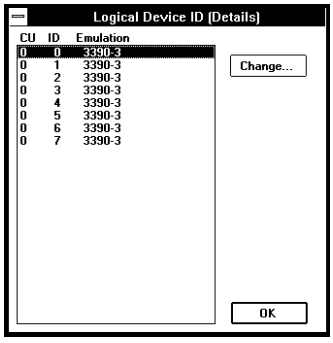


Select (CL) the parity group to be defined and select (CL) a function from [LDEV ID] list box.
[Linear...]: LDEV ID is assigned to LDEV in the order of parity group. See step 10-3.
[Disperse...]: LDEV is assigned discretely in the order of parity group. See step 10-3.
[Detail...]: A screen to define LDEV in detail is displayed. See step 10-2.

- '-----' is displayed in CU area and ID area for the parity group to which LDEV ID is not assigned.
- 'xxxxx' is displayed in ID area for the parity group to which any LDEV ID is not assigned.

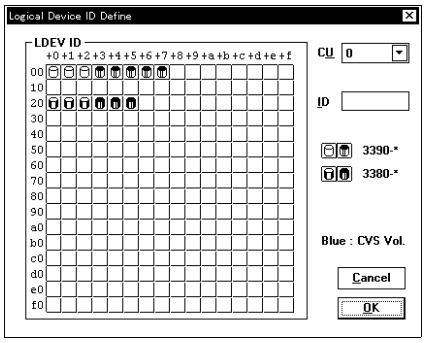
This procedure is terminated by selecting (CL) [Cancel].

10-2. <Detailed Definition Screen for LDEV ID>



LDEV ID is defined in detail for each LDEV in the parity group. Select (CL) [LEDV] from the list box and select (CL) [Change...]. The screen for LDEV ID input is displayed.

10-3. <Input LDEV ID>



Select CU ID in CU combo box.
The status of usage of ID in the CU is displayed in the LDEV ID panel.

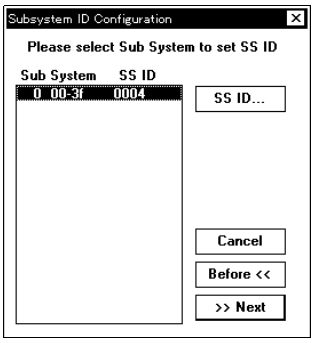
White disk of panel: not used
Black disk of panel: using

Input LDEV ID you want to set or head LDEV ID in the ID Edit box.
After setting, select (CL) [OK]. Return to step 10.

Copyright ©1997,1999, Hitachi, Ltd.

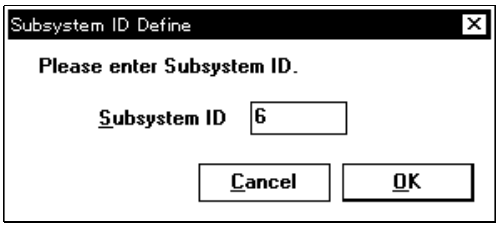
11. <Define Subsystem ID>

To define Subsystem ID, select (CL) [SSID].
After setting, select (CL) [>>Next].
This procedure is terminated by selecting (CL) [Cancel].



11-1.

Define Subsystem ID and select (CL) [OK].
Return to step 11.



12. <Defining DCR>

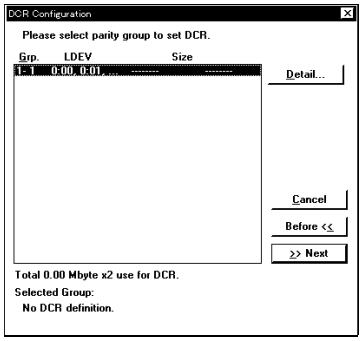
(1) Select (CL) a parity group having LDEV(s) for which the DCR is to be set on the "DCR Configuration" screen and press (CL) the [Detail...] button.

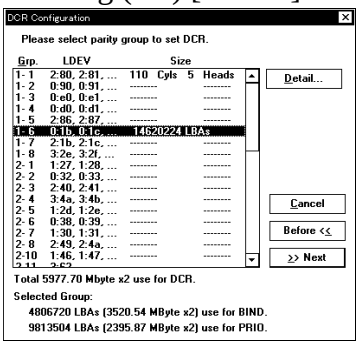
Total cache memory size which DCR area use is displayed.

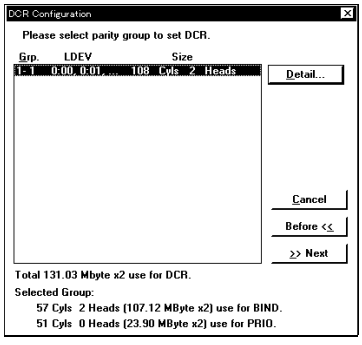
If parity group which selected have a DCR area, BIND size and PRIO size is displayed under "DCR Configuration" screen.

After setting, select (CL) [>>Next].

This procedure is terminated by selecting (CL) [Cancel].





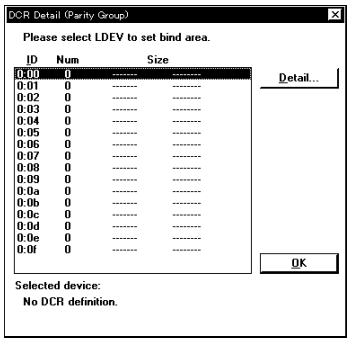


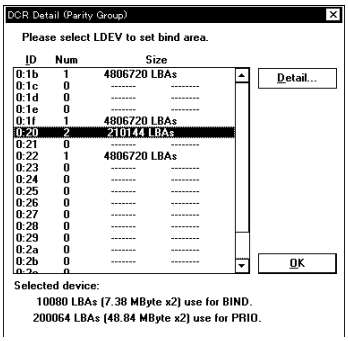
(In the case of open system) (In the case of Mainframe system)

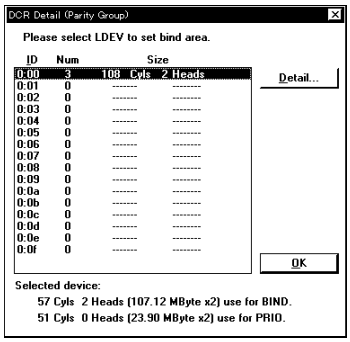
Copyright ©1997,2000, Hitachi, Ltd.

(2) Select (CL) an LDEV for which the DCR is to be set on the "DCR Detail (Parity Group)" screen and press (CL) the [Detail...] button.

If LDEV which selected have a DCR area, BIND size and PRIO size is displayed under "DCR Detail (Parity Group)" screen.

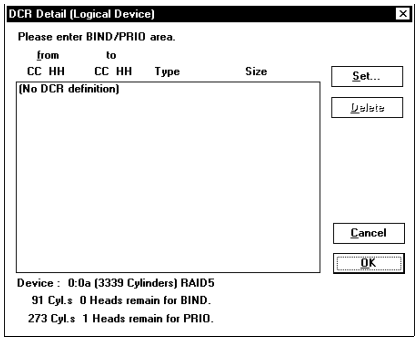




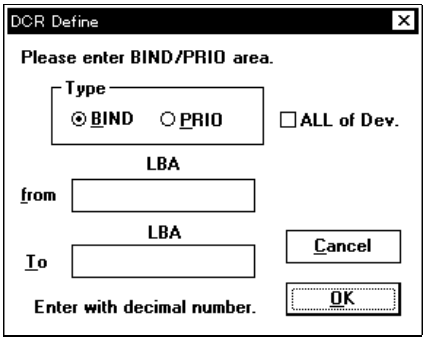


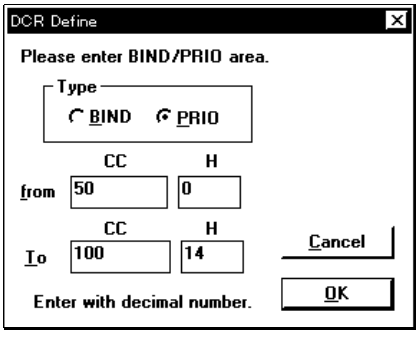
(In the case of open system) (In the case of Mainframe system)

(3) Confirm the LDEV size and the number of slots allowed to be set for each type on the "DCR Detail (Logical Device)" screen. Press (CL) the [Set...] button to set the DCR area.



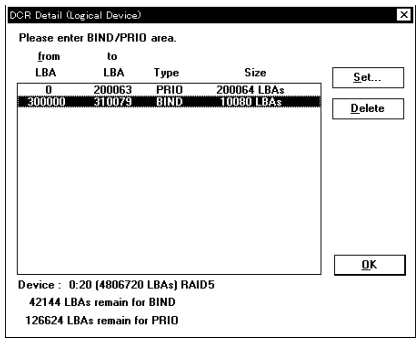
(4) Enter the type, starting cylinder number, starting head number, ending cylinder number, and ending head number (in the case of Mainframe system. Refer to the screen on the right.) or the tyepe, starting LBA, and ending LBA (in the case of open system. Refer to the screen on the left.) on the "DCR Define" screen and select (CL) [OK].
In the case of open system, all items are allowed to be set.



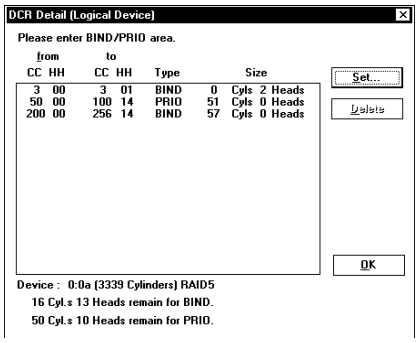


Copyright ©1998,1999, Hitachi, Ltd.

(5) When the screen is returned to the “DCR Detail (Logical Device)” screen, the entrance result is displayed.

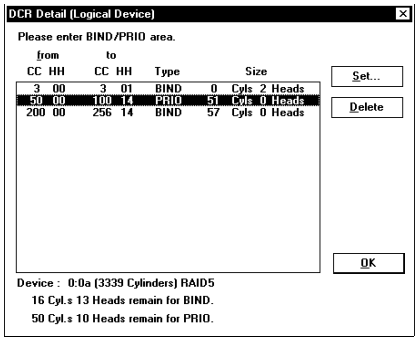


(In the case of open system)



(In the case of Mainframe system)

(6) When an item in the list box is selected (CL) and the [Delete] button is pressed (CL) on the “DCR Detail (Logical Device)” screen, the DCR setting is deleted. When the setting is completed, press (CL) the [OK] button.



(7) If you want to set other LDEV(s) in parity group which you selected, repeat steps (2) to (6) for the LDEV(s).

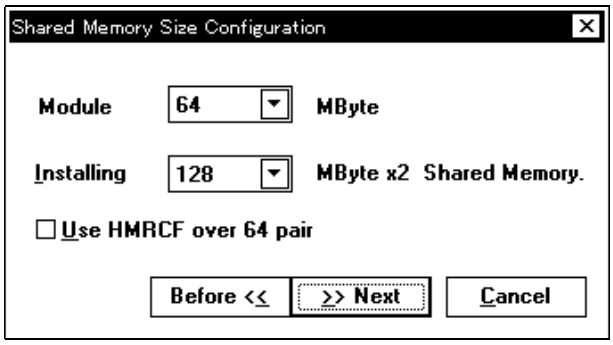
(8) If you want to set other LDEV(s) in other parity group, repeat steps (1) to (6) for the LDEV(s).

Copyright ©1997,1999, Hitachi, Ltd.

13. <Define Shared Memory Size>

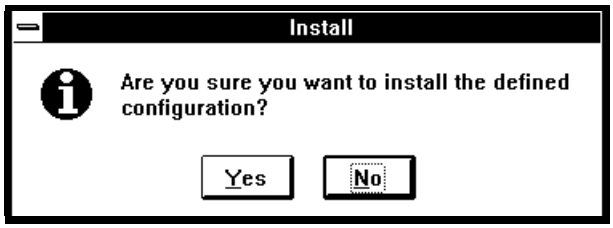
Define the shared memory size in the 'Shared Memory Size Configuration' dialog box.
Select (CL) [>>Next].
This procedure is terminated by selecting (CL) [Cancel].

When 64 or more pairs of HMRCF are used, please check the check box.
If SCSI path information is defined, go to INST05-591.

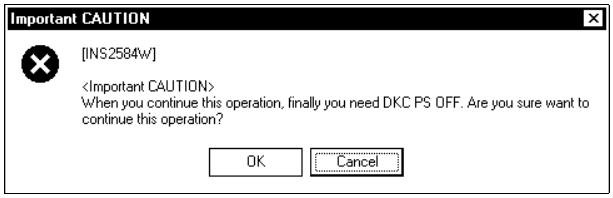


14. <Include configuration information>

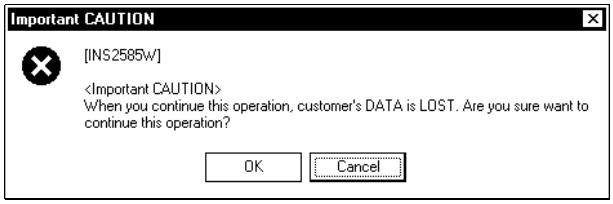
(1) Select (CL) [Yes] in response to the confirmation message "Are you sure you want to install the defined configuration?".
"Wait..." is displayed, then "Turn off DKC subsystem" is displayed.
Selecting (CL) [No] suppresses the configuration inclusion processing and terminates the installation procedure.



(2) Select (CL) [OK] in response to the confirmation message
"<Important CAUTION>
When you continue this operation, finally you need DKC PS OFF. Are you sure want to continue this operation?".

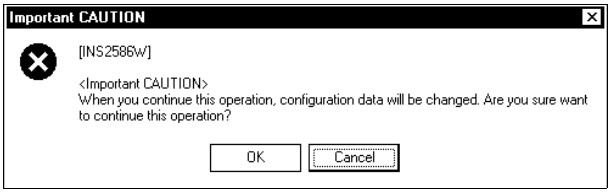


(3) Select (CL) [OK] in response to the confirmation message
"<Important CAUTION>
When you continue this operation, customer's DATA is LOST. Are you sure want to continue this operation?".

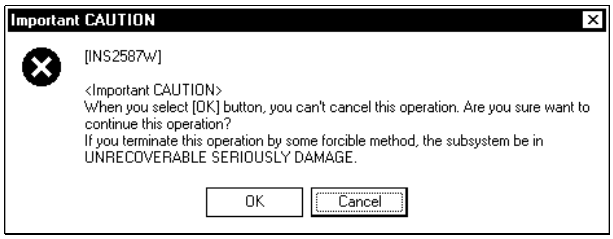


Copyright ©1997,1998, Hitachi, Ltd.

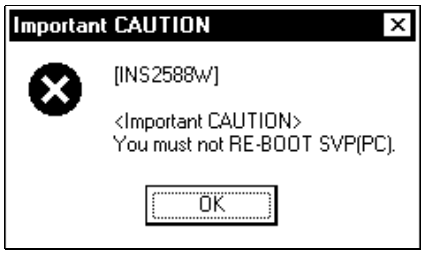
(4) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you continue this operation, configuration data will be changed. Are you sure want to continue this operation?".



(5) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you select [OK] button, you can't cancel this operation. Are you sure want to continue this operation?
If you terminate this operation by some forcible method, the subsystem be in UNRECOVERABLE SERIOUSLY DAMAGE.".

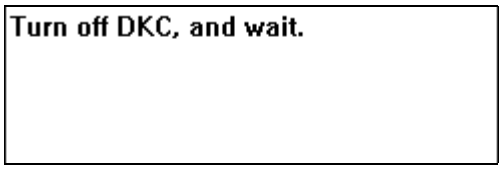


(6) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
You must not RE-BOOT SVP(PC).".



15. <Power off DKC P/S>
Make sure that "Turn off DKC, and wait." is displayed and perform the power-off procedure from the DKC maintenance panel.

After a while "Wait..." is displayed.



16.
This step causes the contents of the SVP HD to be loaded into SM and FM.
When this procedure is completed, message "Please insert config FD in FDD." is displayed.

Copyright ©1998, Hitachi, Ltd.

17.

Insert the configuration FD into FDD, select (CL) [OK].

18.

When this procedure is completed, message "Backup is done. Remove FD." is displayed. Remove the FD, select (CL) [OK].

19.

After making sure that DKC power is turned off, select (CL) [OK] in response to "Installation was finished.".
Select (CL) [OK] in response to "Please reboot PC.".
The initial Install screen is restored.

Note: SVP power will not turn off or reboot even when DKC is powered off.

20.

Close 'Install'.
Go to INST02-12 step (20)-2.

Copyright ©1997,1998, Hitachi, Ltd.

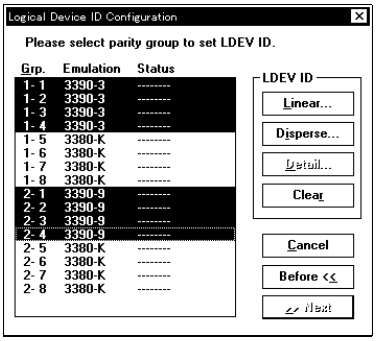
5.2.2.1 LDEV ID setting procedure when the emulation types of different systems coexist

5.2.2.1.1 Coexistence in units of parity group

The LDEV ID setting procedure is explained using an example of a case in which both the 3390 system LDEV and 3380 system LDEV are set in the same subsystem. This example shows the ID setting procedure when the B4-1/B4-2 is fully equipped with RAID5 (3D+1P), and the B4-1 and the B4-2 are defined as the 3390-3/3380-K and the 3390-9/3380-K respectively. Since systems other than the 3390 system and the 3390-3R cannot coexist in the parity group, the ID can be defined in this procedure.

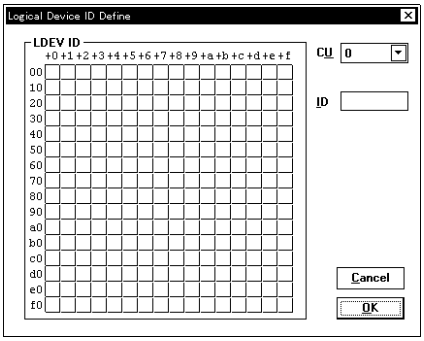
1.

Select only the parity group for which the 3390 system emulation type has been defined.



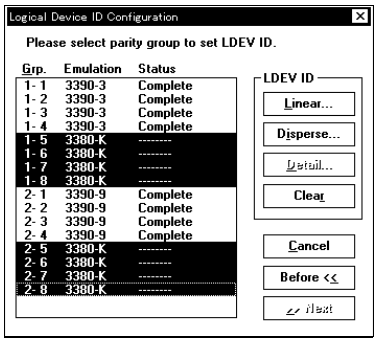
2.

Press the Linear or Disperse button to open the LDEV ID input screen and input the LDEV ID. (In the example, the Disperse button is pressed.)



3.

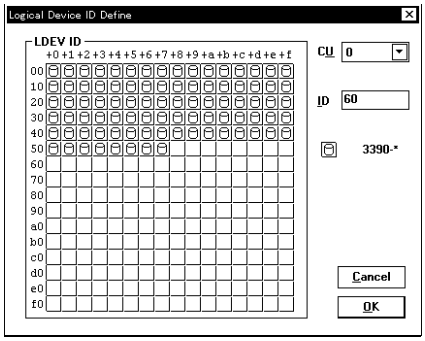
Next, select only the parity group for which the 3380 system emulation type has been set.



Copyright ©1998, Hitachi, Ltd.

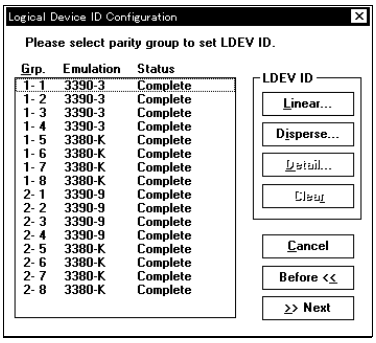
4.

Press the Linear or Disperse button to open the LDEV ID input screen and input the LDEV ID. In this case, take care not to make a coexistence occur in the block. In the example, 0:60 and the subsequent are unused blocks. Therefore, input 60.



5.

Setting is completed.



Needless to say, the setting sequence of steps (1) and (3) may reversed.
If emulation types of different systems are selected at the same time, the guarding function works to prevent the setting by making the Linear and Dispense buttons unselectable.

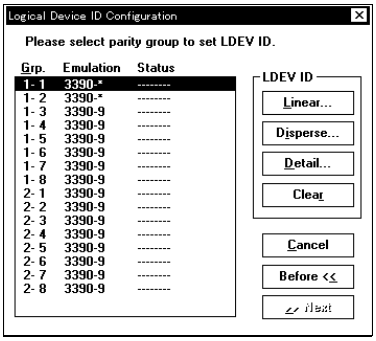
Copyright ©1998, Hitachi, Ltd.

5.2.2.1.2 Coexistence in a parity group

The 3390-3R can be set as a CV in the 3390 system parity group. The 3390 system LDEV can also be set as a CV in the 3390-3R parity group. If the ID is set in the procedure explained in Section 3.1 when this emulation setting has been performed, an intra-block coexistence setting violation occurs. To prevent the coexistence violation, set the ID following the procedure below.

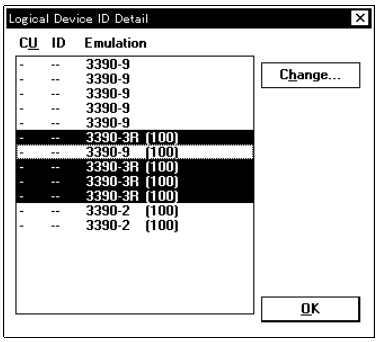
1.

For the parity group for which definitions of the 3390 system and 3390-3R coexist, the emulation type is displayed as "3390-*". Select one parity group defining the 3390-3R as the CV and press the Detail button to open the screen displaying the LDEV definition detail in the parity group.



2.

Select the 3390-3R on the detail screen and define the LDEV ID.

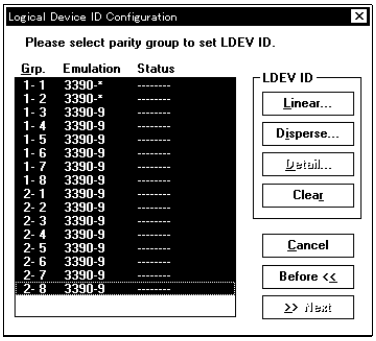


3.

Repeat (1) and (2) until the definition of the 3390-3R LDEV ID is finished. In the example, the 3390-3R is assigned to IDs starting from ID 0:80.

4.

When the definition of the 3390-3R is completed, select the parity group defining emulation type of the same system and define the LDEV ID in the same way as that Section 3.1.



Copyright ©1998, Hitachi, Ltd.

5.2.3 Check Procedure

NOTICE
This operation is necessary only when a subsystem is newly installed. It is not performed afterward. If it is performed by mistake, a system down or a data loss may be caused.

1. <Execute Power-on CUDG>
   Perform the power-on procedure from the DKC maintenance panel.
   (See INST03-2300)
   Power-on CUDG is automatically executed on the DKC logic circuitry.
   If an error occurs, SIM Log, SSB Log has logging.
   (See SVP02-30)

2. <Execute DKU Path inline test>
   Perform DKU Path inline tests on all DKAs installed during the new installation procedure to check the validity of the drives.
   See DIAGNOSIS SECTION for the test procedure. (DIAG04-180)

   Note: Before carrying out the DKU Path inline test, switch the current application to the program manager and have the SVP initial screen (which is shown in the right figure) displayed.

3. <Check subsystem status and all MPs micro-version>

Copyright ©1997,1998, Hitachi, Ltd.

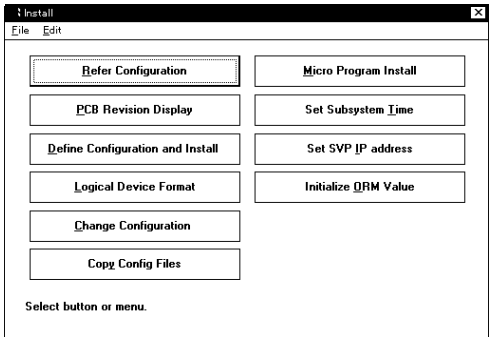
NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss if executed in an occasion other the new subsystem installation, and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

4. <Format L-DEV>

(1) Change the mode to INITIAL SETUP Mode.
Select "Shift" + "Ctrl" + "I".
Enter the password and select (CL) [OK].
Please call Technical Support Center for asking it.
Select (CL) [Install].

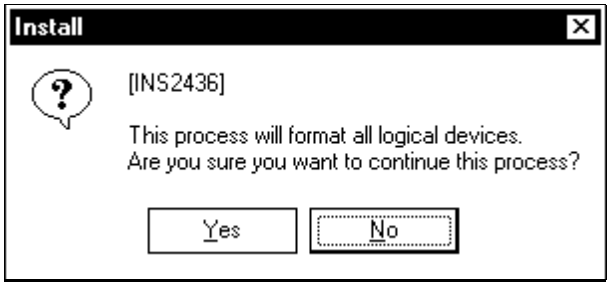
(2) Select (CL) [Logical Device Format].

Note: Execute Format Logical Device after confirming all Logical Device is blocked.



4.1.

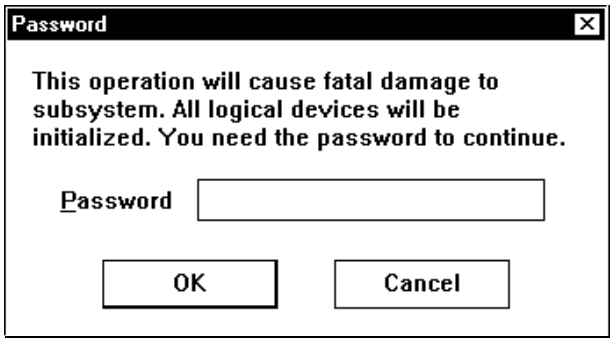
Select (CL) [Yes] in response to "This process will format all logical devices. Are you sure you want to continue this process?"



NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss if executed in an occasion other the new subsystem installation, and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

4.2.

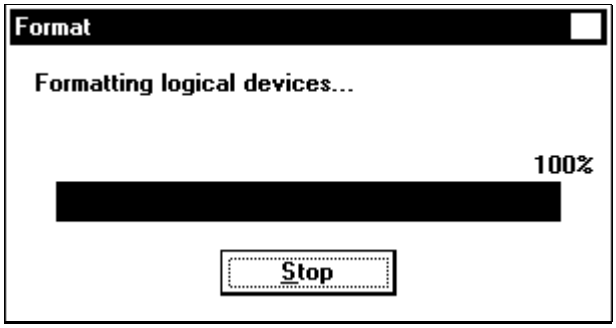
Enter the password and select [OK] (CL).
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.



Copyright ©1997,1998, Hitachi, Ltd.

4.3.

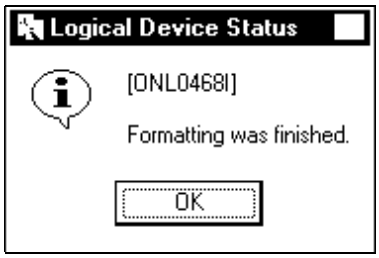
When L-DEV Formatting is complete, 'Formatting logical devices...' shown in the right figure disappears and "Formatting was finished." is displayed.



4.4.

Select (CL) [OK] in response to "Formatting was finished.".

L-DEV formatting is abnormally terminated if the message "Formatting logical devices rejected by DKC." or "Formatting the logical device is failed." is displayed.
Identify the error cause according to the procedure shown in "Section 6 TROUBLE SHOOTING" .



4.5. <Check logical device status>

Check normality of Logical Devices with referring 'Logical Device Status' display.

5. <Check subsystem status>

Check normality of all parts with referring 'Maintenance'.

Copyright ©1997,1998, Hitachi, Ltd.

6. <Check system interlock operation>
   Start the test program from the host to check for normal subsystem's interlocked operation with the host.

7. <Delete error log>
   Power cycle the subsystem to make sure that the subsystem starts normally (neither ALARM nor MESSAGE indicators should light).

   Delete all error log information from the SVP and transfer the subsystem to the user. See page SVP02-150.

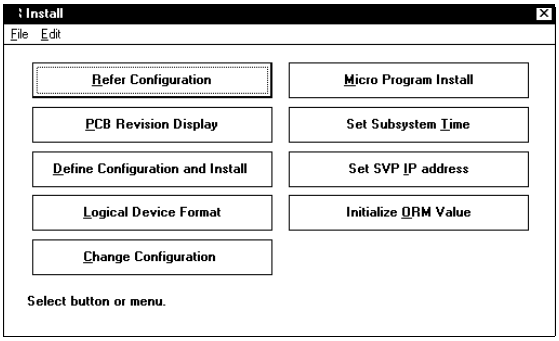
   Go to INST02-12 step (END).

Copyright ©1997,1999, Hitachi, Ltd.

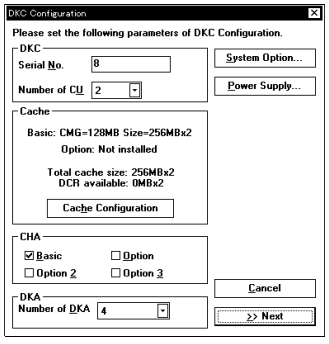
5.2.4 Refer Configuration

1. <Start [Install]>
   Select (CL) [Install] from ‘SVP’.

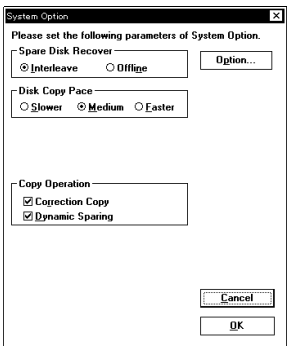
2.
   Select (CL) [Refer Configuration].



3. <DKC configuration information>
   When you select (CL) [>>Next], ‘Host Interface Configuration’ is automatically displayed.
   This procedure finishes when you select (CL) [Cancel].
   If [System Options...] is selected (CL), ‘System Option’ is automatically displayed.
   If [Power Supply...] is selected (CL), ‘Redundant Power Supply’ is automatically displayed.



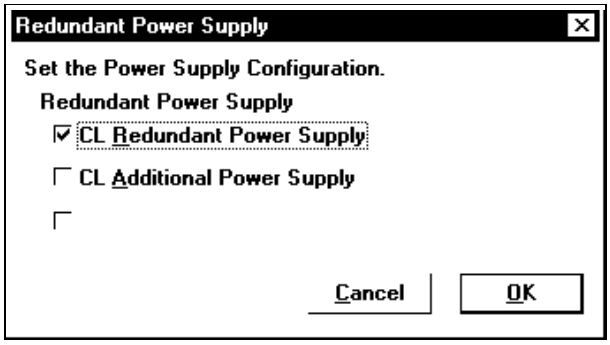
4.
   Selecting (CL) [OK] returns the screen to step 3.



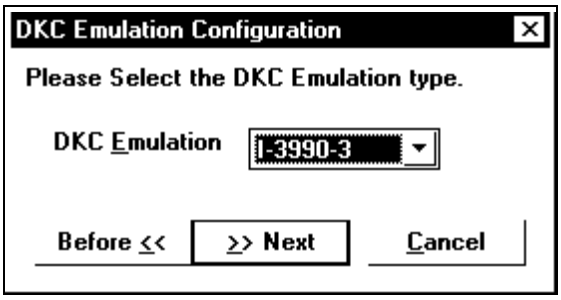
Copyright ©1997,1998, Hitachi, Ltd.

5.

Selecting (CL) [OK] returns the screen to step 3.

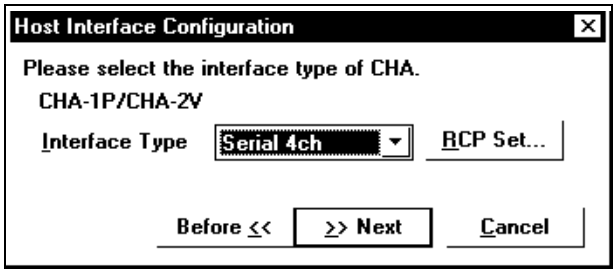


6. <Set DKC Emulation>
DKC Emulation type is displayed.
Select (CL) [>>Next].

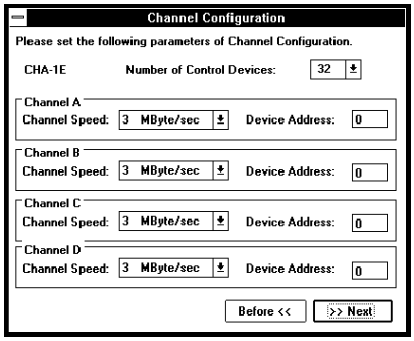


7.

When you select (CL) [Parallel 4ch] from this screen, the next 'Channel Configuration' is displayed. This procedure finishes when you select another item.
The [RCP Set...] button is enabled. Selecting (CL) [RCP Set...] skip the screen to step 9.
Processing skip to step 10 if you select another item.
Selecting (CL) [Before <<] returns the screen to step 3.

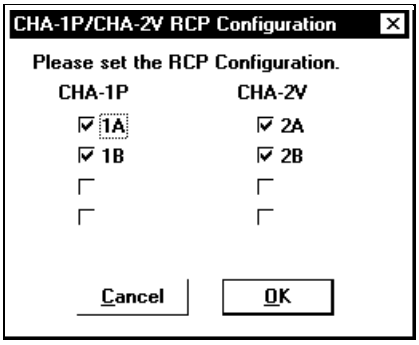


8. <Set Parallel CH>
This procedure finishes when you select (CL) [>> Next].
Go to step 10.
Selecting (CL) [Before <<] returns the screen to step 7.

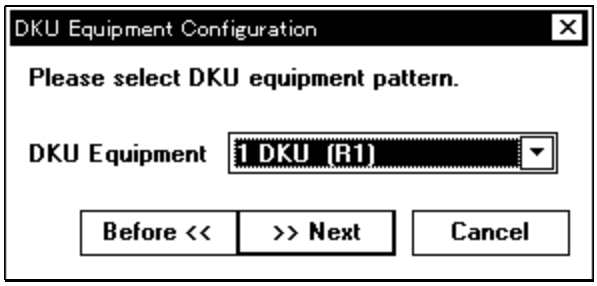


Copyright ©1997,1998, Hitachi, Ltd.

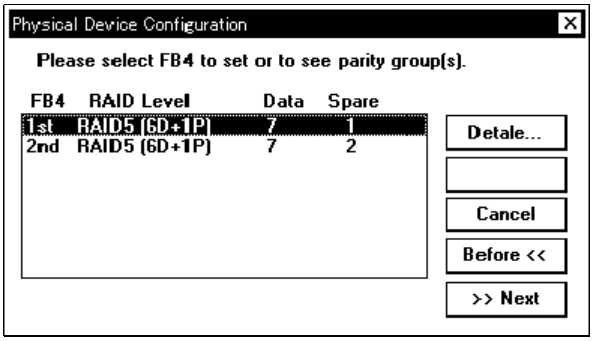
9. <Set RCP port>
RCP port setting is displayed.
Then by selecting (CL) [OK] returns the screen to step 7.



10. <Set DKU Equipment>
DKU Equipment pattern is displayed.
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].



11. <Set Physical Device>
Physical device configuration is displayed.
Select (CL) the FB4 and select (CL) [Detail...].
Go to 11-1
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].



FB4	Location
1st	HDU-R10, 11, 12, 13
2nd	HDU-R14, 15, 16, 17
3rd	HDU-L10, 11, 12, 13
4th	HDU-L14, 15, 16, 17
5th	HDU-R20, 21, 22, 23
6th	HDU-R24, 25, 26, 27
7th	HDU-L20, 21, 22, 23
8th	HDU-L24, 25, 26, 27

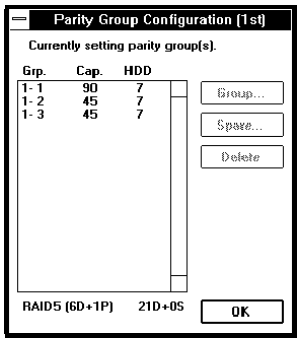
11-1.

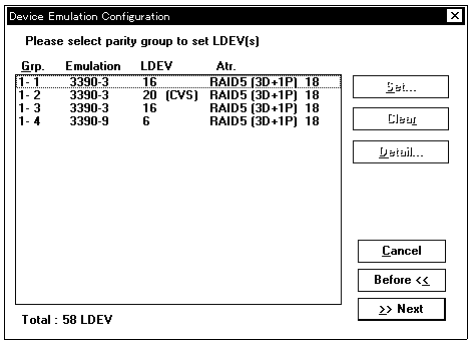
Parity Group Configuration is displayed.
Select (CL) [OK]. Return to step 11



12. <Set Device Emulation>

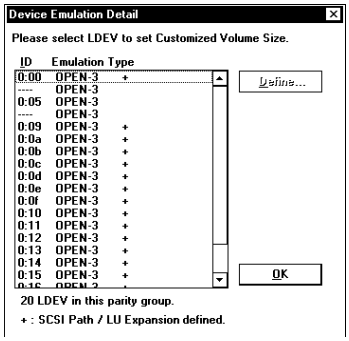
Device Emulation Configuration is displayed.
Select (CL) parity group and select (CL) [Detail...].
Select (CL) [>> Next] .
This procedure is terminated by selecting (CL) [Cancel].

(CVS): The parity group which CVS is installed.



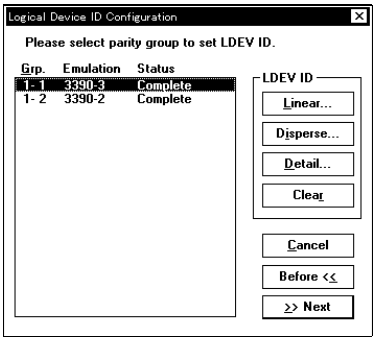
12-1.

Device Emulation Detail is displayed.
Select (CL) [OK]. Return to step 12.



13. <Set Logical Device ID>

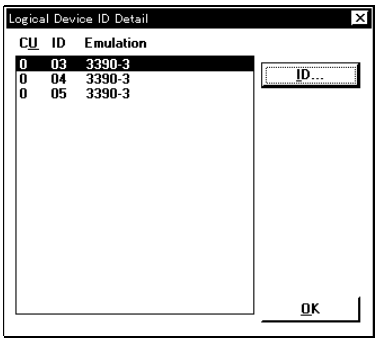
Logical Device ID Configuration is displayed.
Select (CL) parity group and select (CL) [Detail...].
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].



Copyright ©1997,2000, Hitachi, Ltd.

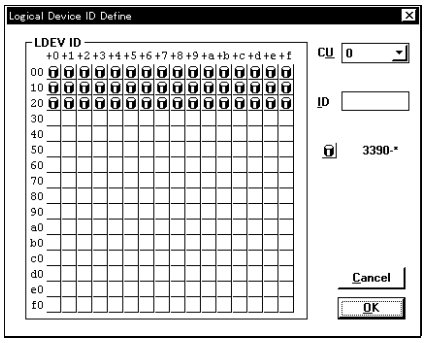
13-1.

Logical Device ID Detail is displayed.
Select (CL) [ID...].
Select (CL) [OK]. Return to step 13.



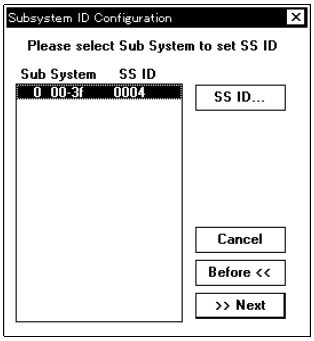
13-2.

Logical Device ID allocation is displayed.
Select (CL) [OK] or [Cancel]. Return to step 13-1.



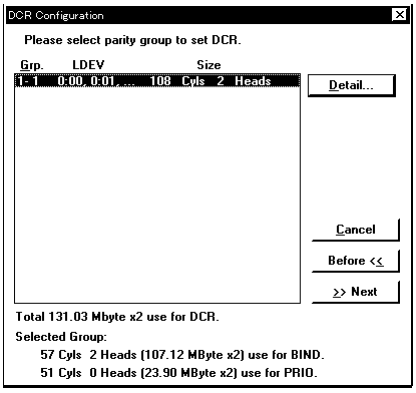
14. <Set Subsystem ID>

Subsystem ID Configuration is displayed.
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].



15. <Set DCR>

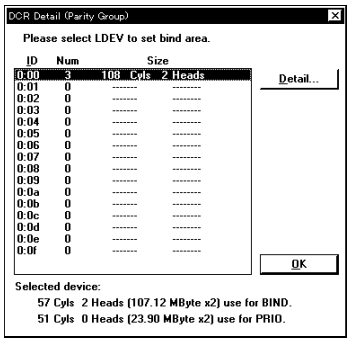
DCR Configuration is displayed.
Select (CL) parity group and select (CL) [Detail...]. Go to step 15-1.
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].



Copyright ©1997,1998, Hitachi, Ltd.

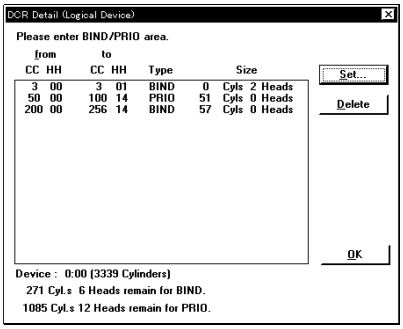
15-1.

DCR detail (Parity group) is displayed.
Select (CL) LDEV and select [Detail...]. Go to step 15-2
Select (CL) [OK] . Return to step 15.



15-2.

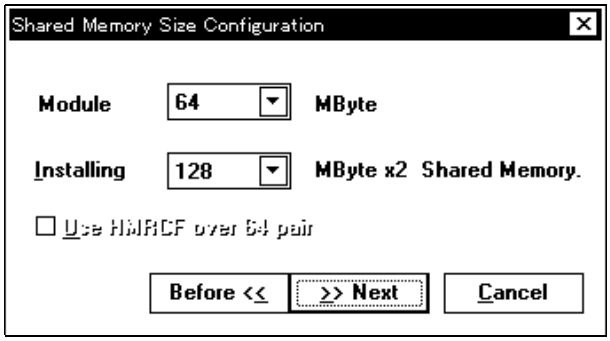
DCR detail (Logical device) is displayed.
Select (CL) [OK]. Return to step 15-1.



16. <Set Shared Memory Size >

Shared Memory Size Configuration is displayed.
Select (CL) [>> Next].
This procedure is terminated by selecting (CL) [Cancel].

If SCSI path information is defined, go to INST05-591.



17.

Select (CL) [OK].
Close the 'Install' window.

Copyright ©1997,1998, Hitachi, Ltd.

5.3 Installation and De-installation SVP procedure

(Note) If you fail to install (or de-install), take back-up file of configuration by executing "Create Configuration Backup" (go to MICRO-FC08-10).

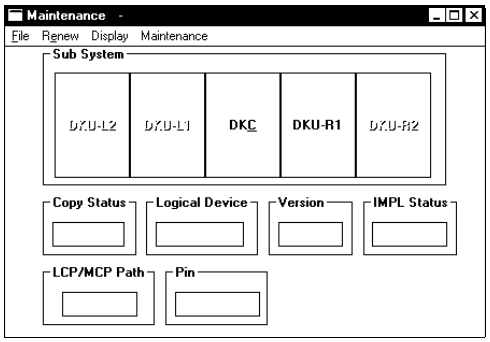
5.3.1 SCSI Cable Connection (Disconnection) Procedures

When installing or de-installing DKU-F305I-B4 options on or from the 2nd and 4th frames, it becomes necessary to connect (or disconnect) SCSI cables between the frames. In this case, it is necessary to temporarily maintenance-block the target DKA. The maintenance block procedure is shown below. If there is no need to install (or de-install) DKU-F305I-B4 options on or from the 2nd and 4th frames, skip to the following step 5.3.2 Setting up the New Device Structure Information on page INST05-320.

1. <Operation mode change]>
   Change the mode to [Modify Mode].

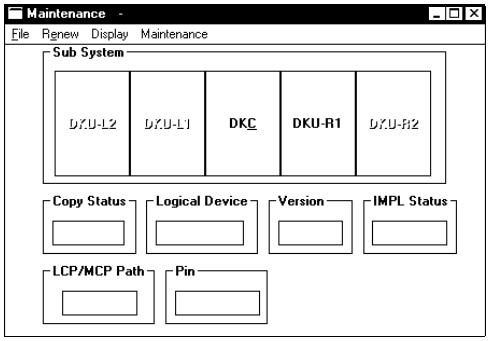
2.
   Select (CL) [Maintenance] from 'SVP'.

3. <'Maintenance' window >
   'Maintenance' window is displayed.



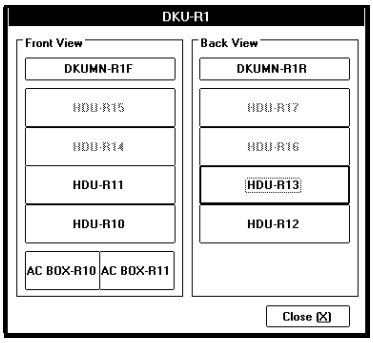
Copyright ©1997,1998, Hitachi, Ltd.

4. <Maintenance>
In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.

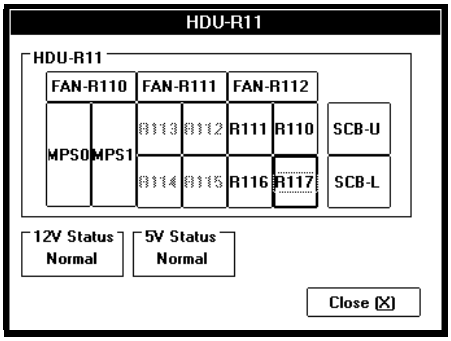


5. <Select HDU-BOX>
Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
Selecting (CL) [Close] returns you to step 5

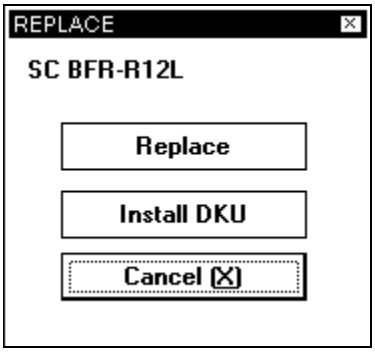
Make sure that all status values on the screen are not flashing. If there is any error, correction of that error must take precedence.
See page TRBL03-20.



6. <Select SCSI Buffer>
Select (CL) [SCB-U] or [SCB-L] to be replaced.
Selecting (CL) [Close] returns you to step 5.



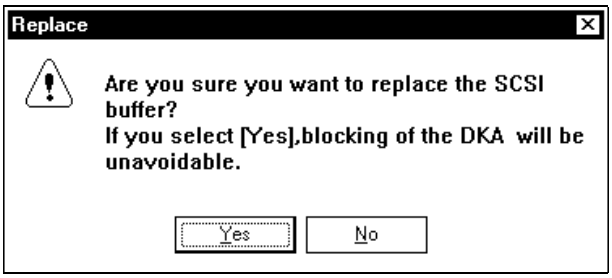
7. <Specify Replacement>
(1) When DKU is installed, select (CL) [Install DKU].
Selecting (CL) [Cancel] returns you to step 6.



Copyright ©1997,1998, Hitachi, Ltd.

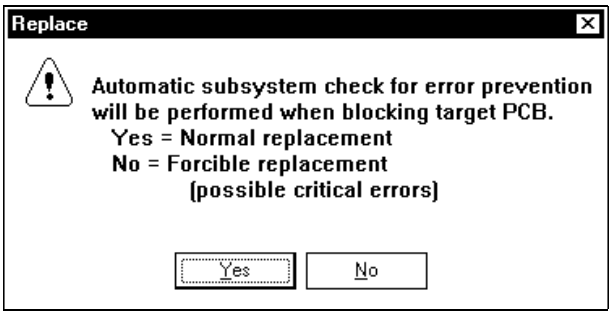
8.

In response to “Are you sure you want to replace the SCSI buffer? If you select [Yes], blocking of the DKA will be unavoidable.”, make sure that the selected DKA is correct and select (CL) [Yes]. If the DKA proves to be incorrect, select (CL) [No] and restart the procedure at step 6.



9.

Select (CL) [Yes] in response to “Automatic subsystem check for error prevention will be performed when blocking target PCB.
Yes = Normal replacement
No = Forcible replacement
(Possible critical errors)”



10.

“The DKA is being blocked...” is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

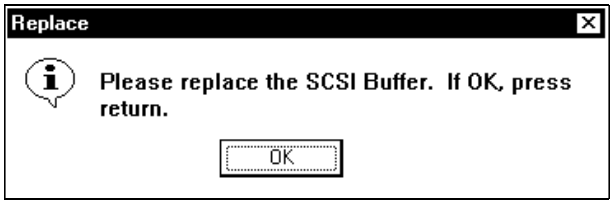
11.

The corresponding SCSI-BUFF shut down LEDs turn on. Perform the SCSI cable hardware procedure.

Hardware	Cluster No.	Flowchart Page
Connection	Cluster 1	INST02-56 step 3
	Cluster 2	INST02-57 step 5
Disconnection	Cluster 1	INST02-58 step 2
	Cluster 2	INST02-58 step 4

12. <Replace SCSI Buffer>

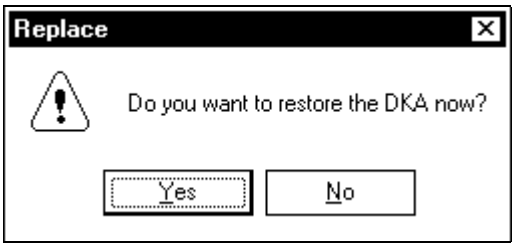
Remove SCSI BUF PCB, and insert it to turn off shut down LED (It is not necessary to replace SCSI BUF PCB.).
(see REP03-260)
Select (CL) [OK] in response to "Please replace the SCSI Buffer. If OK, press return.".



If the SCSI Buffer LED is not turn on, please remove SCSI BUF PCB, and insert it.

13.

"Do you want to restore the DKA now?" is displayed. Select (CL) [Yes].



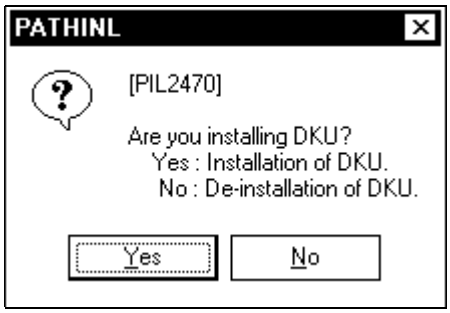
Copyright ©1997,1998, Hitachi, Ltd.

14.

"DKA PATH INLINE is now running..." is displayed.

15.

"Are you installing DKU?" is displayed.
In case of installation for the 2nd or 4th DKU, select (CL) [Yes].
In case of except installation for the 2nd or 4th DKU, select (CL) [No].



16.

"Restoring the DKA..." is displayed.

17.

Blank

Copyright ©1997,1998, Hitachi, Ltd.

18.

"Replace finished." is displayed.
Select (CL) [OK].

19.

Blank

20. <Connect (disconnect) Corresponding SCSI cables on other cluster>
Perform steps 7 to 19 on the corresponding path. After completing all SCSI cable connection (disconnection) steps, close 'Maintenance'.

21. <Check that no other parts are affected by this procedure>
If there is any error, correct the error. Be sure and renew status first.
See page TRBL03-20.

If there is no influence imposed on the other parts, go to the pages listed in the table below.

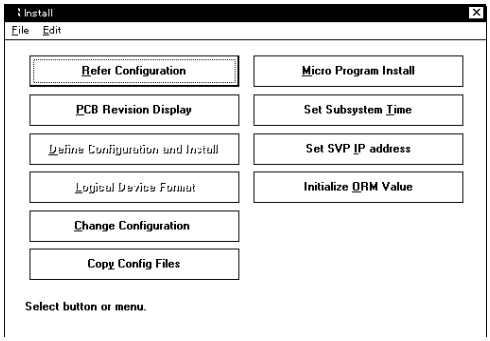
Hardware	Flowchart Page
Installation	INST02-57 step 7
De-installation	INST02-59 step 6

Copyright ©1997,1998, Hitachi, Ltd.

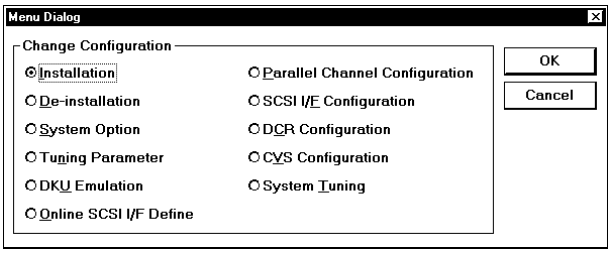
5.3.2 Setting up the New Device Structure Information

1. <Mode Change>
   Change the mode to Modify Mode.
   Select (CL) [Install].

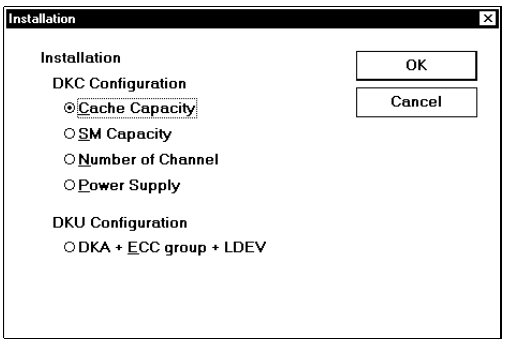
2. <Start 'Menu Dialog' screen>
   Select (CL) [Change Configuration].



3. <Start Device Structure Setup screen>
   Select (CL) the item in the 'Menu Dialog' dialog box and select (CL) [OK].
   Except for the case of installation and de-installation, go to INST05-340.



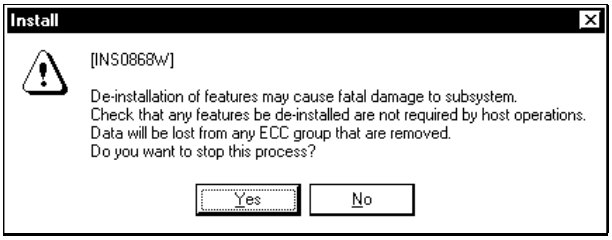
4. <Select a part to be changed>
   Select (CL) a part to be changed.
   When installation is selected on step 3, go to INST05-340.



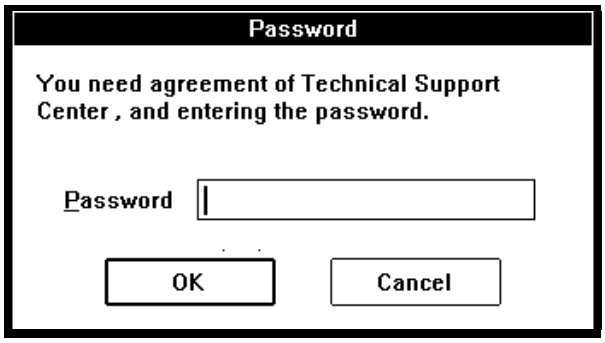
Copyright ©1997,1999, Hitachi, Ltd.

5.

Select (CL) [No] in response to “De-installation of features may cause fatal damage to subsystem. Check that any features be de-installed are not required by host operations. Data will be lost from any ECC group that are removed. Do you want to stop this process?”.



6. <Input password>
Enter the password and select (CL) [OK].



NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss if a wrong part to be removed is selected, and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

Copyright ©1997,1998, Hitachi, Ltd.

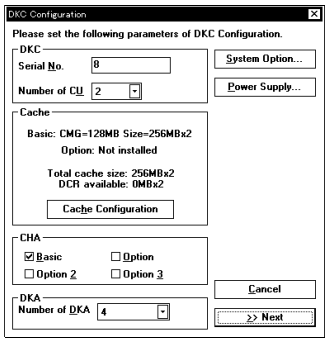
5.3.2.1 Install

1. Cache Capacity

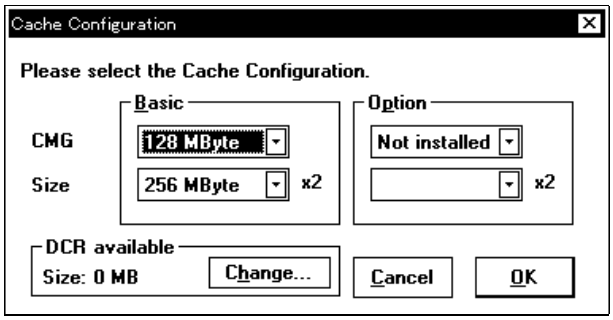
(1) <Update Configuration Information>
Select (CL) [Cache Configuration] in the 'DKC Configuration'.
(Go to step (2).)

Note: It is not possible to install or de-install plural parts at the same time.

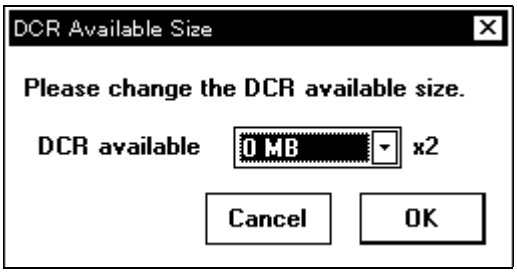
Make sure that all entered items are correct and select (CL) [>>Next].
Go to step (3).



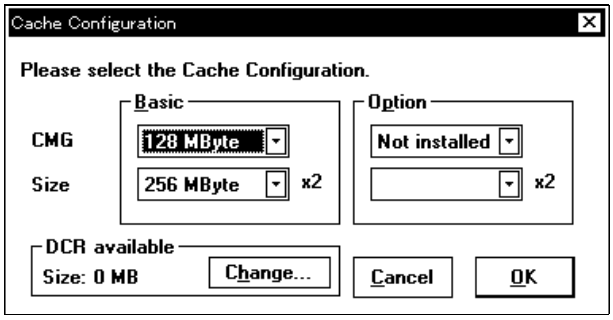
(2) <Define Cache>
Define each item in the 'Cache Configuration'.
If you want to change DCR available size, select (CL) [Change...] to change it.
(See SSD Optional Function Section)



(2-1) <Define DCR Available Size>
Define the DCR available size in the 'DCR Available Size' dialog box.
And select (CL) [OK].

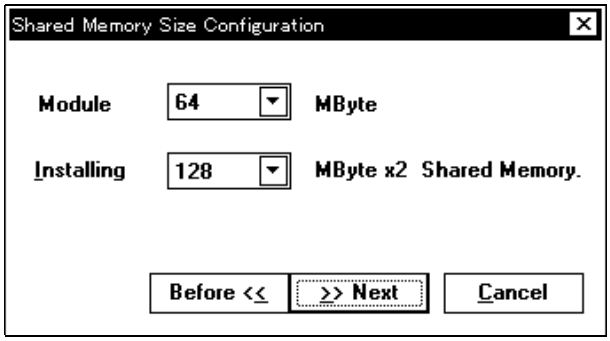


(2-2)
After setting up all items, select (CL) [OK].
Return to step (1).



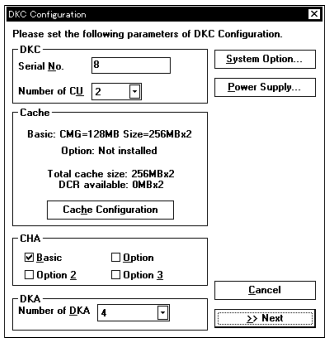
Copyright ©1997,1998, Hitachi, Ltd.

(3) <Display SM size>
'Shared Memory size Configuration' dialog box is displayed.
Select (CL) [>>Next].



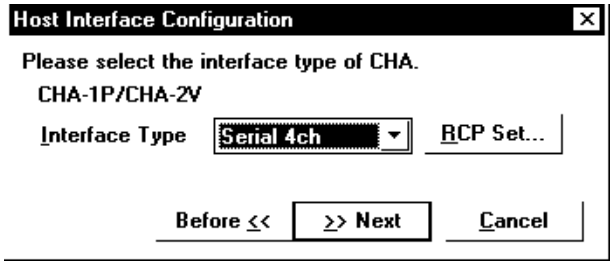
2. Number of Channel

(1) <Update Configuration Information>
Enter the item to CHA in the 'DKC Configuration'.
Make sure that the entered item is correct and select (CL) [>>Next].

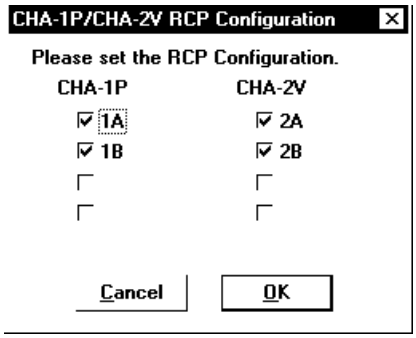


Copyright ©1998, Hitachi, Ltd.

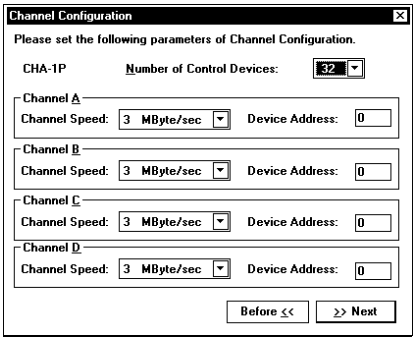
(2) <Defining channel type>
Input each item in the "Host Interface Configuration" window.
Repeat the operation above as many times as the number of channels installed.
When [Serial 2 ch] or [Serial 4 ch] is selected, select (CL) [RCP Set...] and go to step (3).
When [Parallel 4 ch] is selected, "Channel Configuration" is displayed. Go to step (4).
Verify that the inputted item is correct and select (CL) [>>Next].



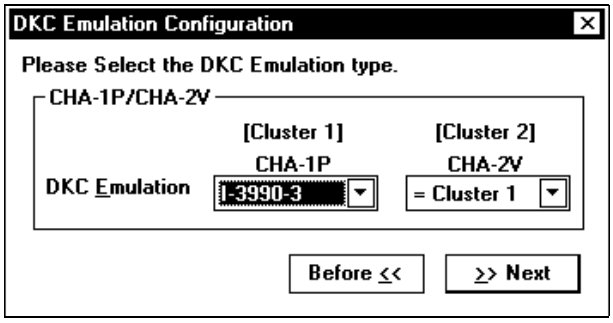
(3) <Defining RCP port>
Select (CL) the item defined as an RCP port and select (CL) [OK].
The routine returns to step (2).
When [Cancel] is selected (CL), the routine returns to step (2).



(4) <Defining parallel CH>
When all the items are set, select (CL) [>>Next].
(Repeat the operation above as many times as the number of channels installed.)



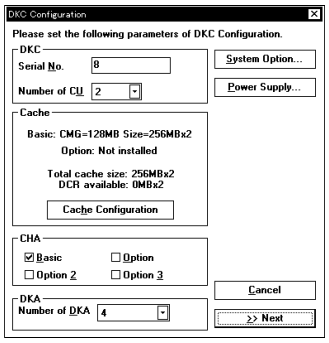
(5) <Defining DKC emulation type>
Define the DKC emulation type in the "DKC Emulation Configuration" window.
After the setting is completed, select (CL) [>>Next].



Copyright ©1997,1998, Hitachi, Ltd.

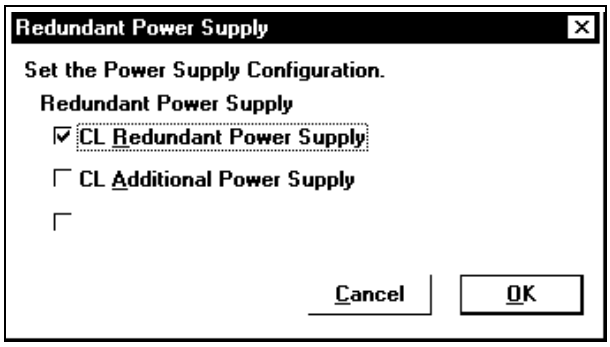
3. Redundant Power Supply

(1) <Update Configuration Information>
Select (CL) [Power Supply] in the 'DKC Configuration'.
Make sure that the entered item is correct and select (CL) [>>Next].



(2) <Define Redundant Power Supply>
Select (CL) redundant power supply to be added in the 'Redundant Power Supply'.
Select (CL) [OK]. Return to step (1).

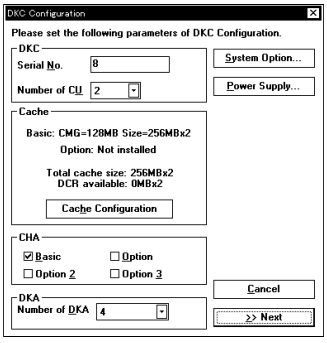
Note: If entered item is wrong, the part not to be installed or de-installed may be blocked.



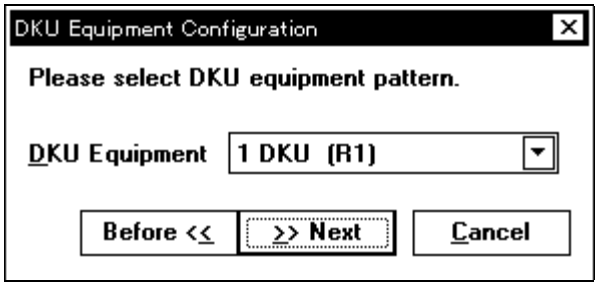
4. DKA + ECC group + LDEV

(1) <Update Configuration Information>
Define the number of CU in DKC and The number of DKA in the 'DKC Configuration'.

Make sure that the entered item is correct and select (CL) [>>Next].



(2) <Set DKU Equipment>
Define the DKU equipment pattern in the 'DKU Equipment'.
After setting up, select (CL) [>>Next].

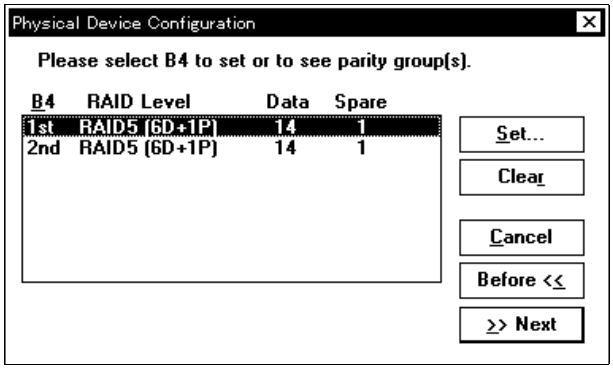


Copyright ©1997,1998, Hitachi, Ltd.

(3) <Change Drive Configuration Information>
Define drive configuration according to the 'Physical Device Configuration' screen displaying the mounted B4 based on the result of setting of DKU mount pattern.
Detailed procedure is shown below.

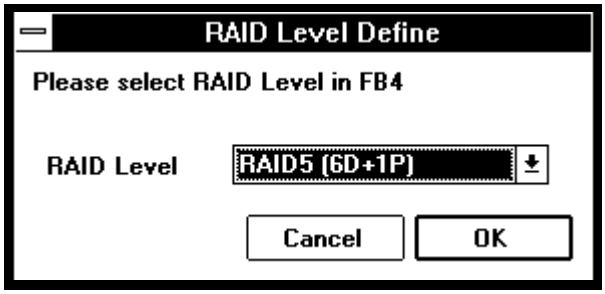
- Select (CL) the item and select (CL) [Set...]. Go to step (4) through (5).
- Selecting (CL) [Clear...] after selecting (CL) the item clears the B4 setting.

After setting up all items, select (CL) [>>Next].
Selecting (CL) [Before<<] returns you to the previous screen.



FB4	Location
1st	HDU-R10, 11, 12, 13
2nd	HDU-R14, 15, 16, 17
3rd	HDU-L10, 11, 12, 13
4th	HDU-L14, 15, 16, 17
5th	HDU-R20, 21, 22, 23
6th	HDU-R24, 25, 26, 27
7th	HDU-L20, 21, 22, 23
8th	HDU-L24, 25, 26, 27

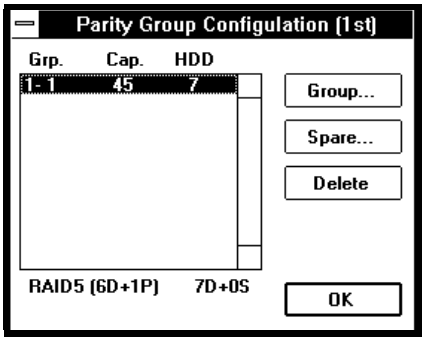
(4) <Define RAID level>
In case of this window is displayed, define RAID level of the B4 in the 'RAID Level Define'.
After setting up, select (CL) [OK].



(5) <Define Parity Group>

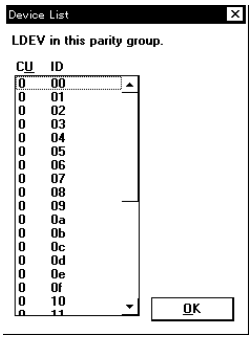
- To define Parity Group, select (CL) [Group...] in the 'Parity Group Configuration' dialog box. See step (6)-1.
- To define Spare, select (CL) [Spare...] in the 'Parity Group Configuration' dialog box. See step (6)-2.
- To delete an item, select an item to be deleted and select (CL) [Delete] in the 'Parity Group Configuration' dialog box.

After setting up all items, select (CL) [OK]. Return to step (3).



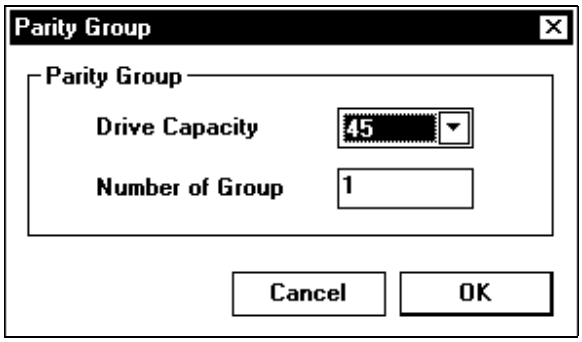
Copyright ©1997,1998, Hitachi, Ltd.

- To display LDEV ID in Parity group, select an item to be displayed and select (DC) this item on list box. 'Device List' dialog box will appear.



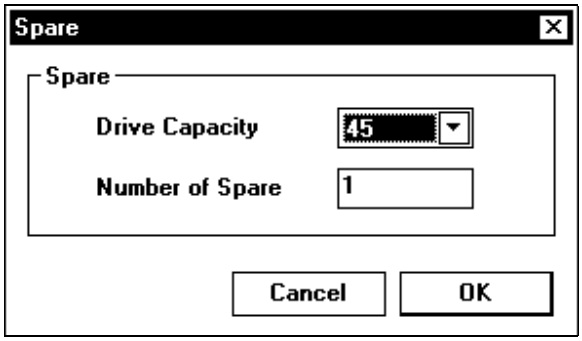
(6)-1

Define the drive capacity and the number of parity groups in the 'Parity Group' dialog box. Then select (CL) [OK]. Return to step (5).



(6)-2

Define the drive capacity and the number of spare drives in the 'Spare' dialog box. Then select (CL) [OK]. Return to step (5).

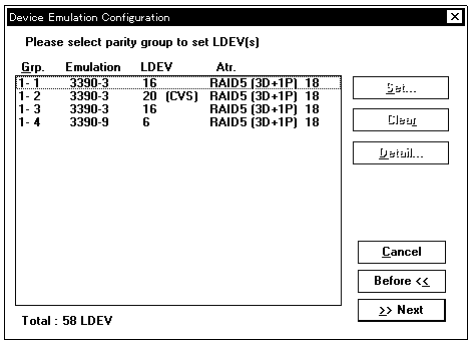


(7) <Define Device Emulation>

After setting up all items for definition of Device Emulation, select (CL) [>>Next]. Selecting (CL) [Before<<] returns you to the previous screen.

(7)-1

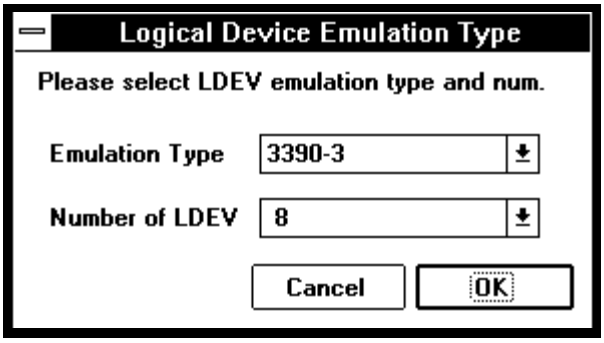
In case of defining Device Emulation:
Select (CL) device and select (CL) [Set...].



Copyright ©1997,1998, Hitachi, Ltd.

(7)-1-1

After setting up all items in the 'Logical Device Emulation Type' dialog box, select (CL) [OK]. Selecting (CL) [Cancel] returns you to step (7)-1.



(7)-2

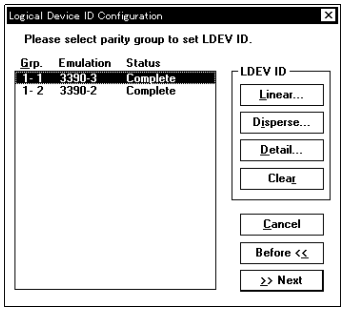
In case of detailed display:
Select (CL) device and select (CL) [Detail...].
The detailed information is displayed.

---

(8) <Define LDEV ID>

(8)-1 Definition Screen for LDEV ID

Select (CL) the parity group to be defined and select (CL) a function from [LDEV ID] list box.
[Linear...]: LDEV ID is assigned to LDEV in the order of parity group. See step (8)-3.
[Disperse...]: LDEV is assigned discretely in the order of parity group. See step (8)-3.
[Detail...]: A screen to define LDEV in detail is displayed.
See step (8)-2. (When plural groups are selected (CL), it is invalid.)
[Clear]: Select (CL) [Clear] to delete.

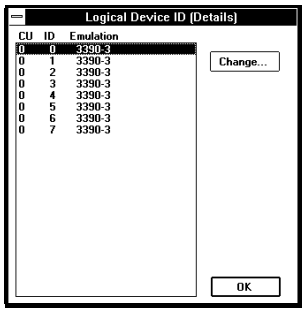


- '-----' is displayed in CU area and ID area for the parity group to which LDEV ID is not assigned.
- 'xxxxx' is displayed in ID area for the parity group to which any LDEV ID is not assigned.

After setting up all items, select (CL) [>>Next]. (Refer to INST05-181)

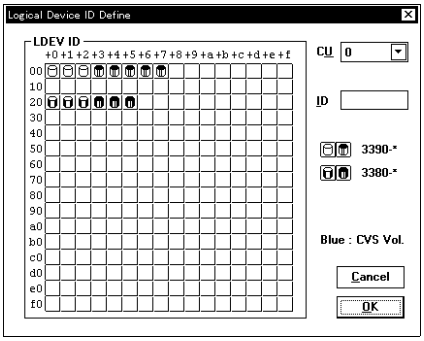
(8)-2 Detailed Definition Screen for LDEV ID

LDEV ID is defined in detail for each LDEV in the parity group.
Select (CL) [LDEV] from the list box and select (CL) [Change...].
The screen for LDEV ID input is displayed.



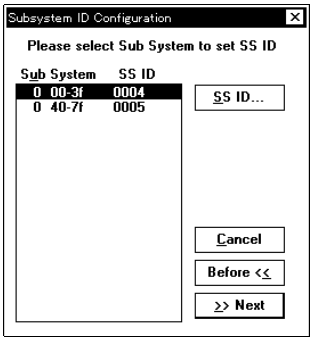
(8)-3 Input LDEV ID

Select CU ID in CU combo box.
The status of usage of ID in the CU is displayed in the LDEV ID panel.
White disk of panel: not used
Patterned disk of panel: using
Input LDEV ID you want to set or head LDEV ID in the ID Edit box.
After setting, select (CL) [OK]. Return to step (8).



Copyright ©1997,1998, Hitachi, Ltd.

(9) <Define Subsystem ID>
To define Subsystem ID, select (CL) the item from the list box and select (CL) [SSID].
After setting, select (CL) [>>Next].



(9)-1 Define Subsystem ID and select (CL) [OK].
Return to step (9).

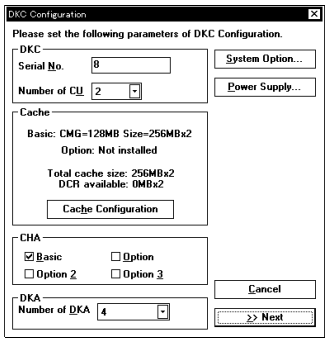
5.3.2.2 De-Install

1. Cache Capacity

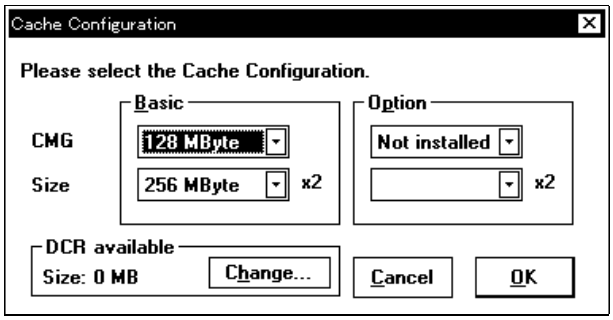
(1) <Update Configuration Information>
Select (CL) [Cache Configuration] in the 'DKC Configuration'.
(Go to step (2).)

Note: It is not possible to install or de-install plural parts at the same time.

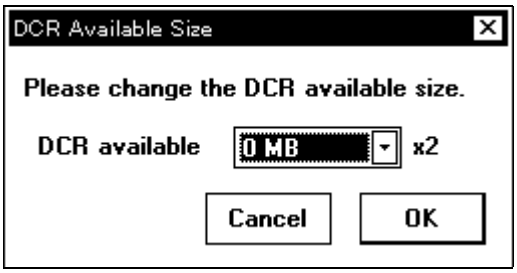
Make sure that all entered items are correct and select (CL) [>>Next].
Go to step (3).



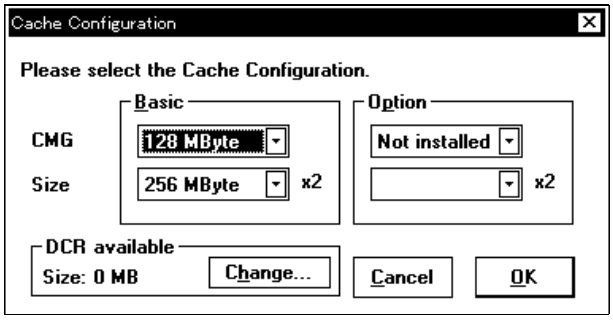
(2) <Define Cache>
Define each item in the 'Cache Configuration'.
If you want to change DCR available size, select (CL) [Change...] to change it.
(See SSD Optional Function Section)



(2-1) <Define DCR Available Size>
Define the DCR available size in the 'DCR Available Size' dialog box.
And select (CL) [OK].

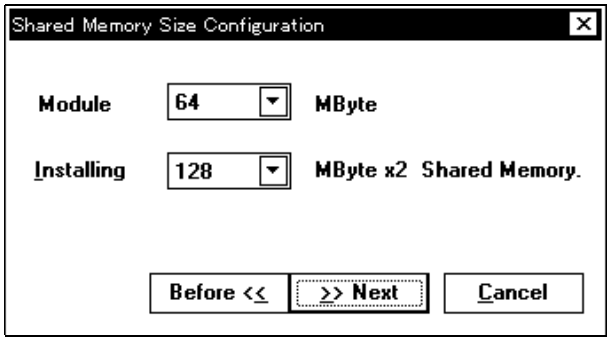


(2-2)
After setting up all items, select (CL) [OK].
Return to step (1).



Copyright ©1997,1998, Hitachi, Ltd.

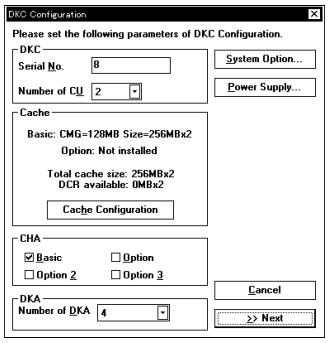
(3) <Display SM size>
'Shared Memory size Configuration' dialog box is displayed.
Select (CL) [>>Next].



Copyright ©1998, Hitachi, Ltd.

2. Number of Channel

(1) <Update Configuration Information>
Define the item to CHA in the 'DKC Configuration'.



Note 1: It is not possible to install or de-install plural parts at the same time.

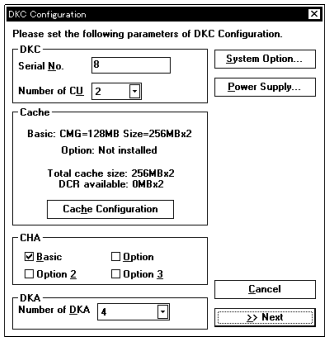
Note 2: In case of Multiplatform configuration,
1. If you want to change Multiplatform into ALL SCSI, after de-installing mainframe volumes, then CHA must be de-installed.
2. If you want to change ALL SCSI into Multiplatform, after de-installing open volumes, then CHS/CHF/CHT must be de-installed.

Make sure that the entered item is correct and select (CL) [>>Next].

---

3. Redundant Power Supply

(1) <Update Configuration Information>
Select (CL) [Power Supply] in the 'DKC Configuration'.

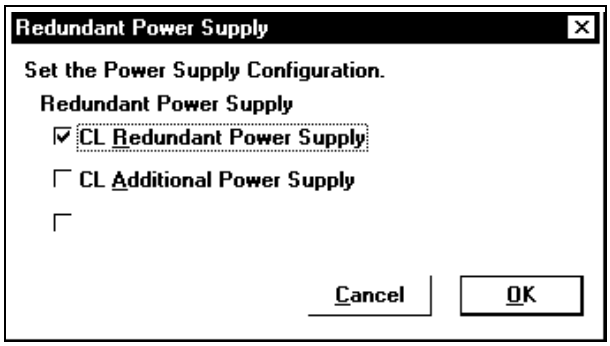


Note: It is not possible to install or de-install plural parts at the same time.

Make sure that the entered item is correct and select (CL) [>>Next].

---

(2) <Define Redundant Power Supply>
Select (CL) redundant power supply to be de-installed in the 'Redundant Power Supply'.
Select (CL) [OK]. Return to step (1).



Note: If entered item is wrong, the part not to be installed or de-installed may be blocked.

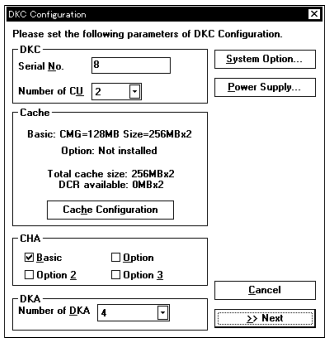
Copyright ©1997,1998, Hitachi, Ltd.

4. DKA + ECC group + LDEV

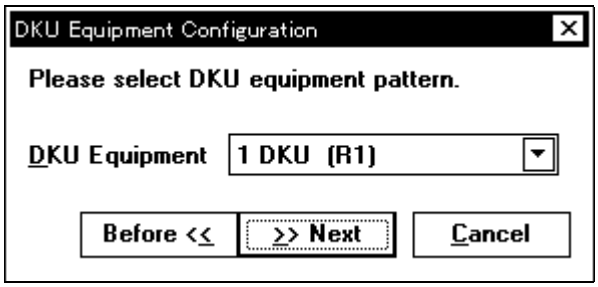
(1) <Update Configuration Information>
Set the item to be de-installed for DKC and DKA in the 'DKC Configuration'.

Note: It is not possible to install or de-install plural parts at the same time.

Make sure that the entered item is correct and select (CL) [>>Next].



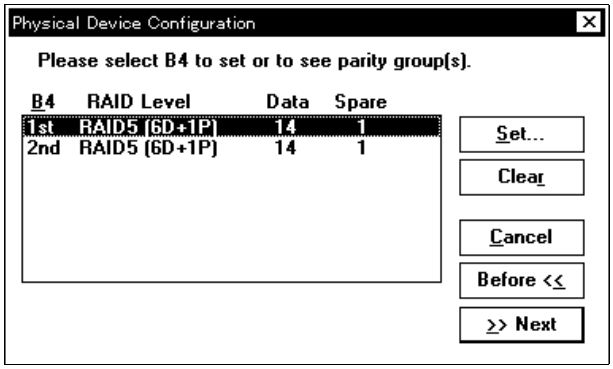
(2) <Set DKU Equipment>
Set the DKU equipment pattern in the 'DKU Equipment'.
After setting up, select (CL) [>>Next].



(3) Change Drive Configuration Information>
Set drive configuration according to the 'Physical Device Configuration' screen displaying the mounted B4 based on the result of setting of DKU mount pattern.
Detailed procedure is shown below.

- Select (CL) the item and select (CL) [Set...]. Go to step (4).
- Selecting (CL) [Clear...] after selecting (CL) the item clears the B4 setting.

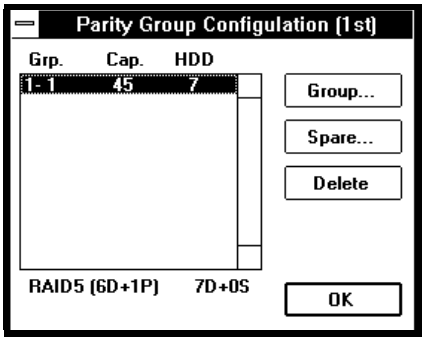
After setting up all items, select (CL) [>>Next].
Selecting (CL) [Before<<] returns you to the previous screen.



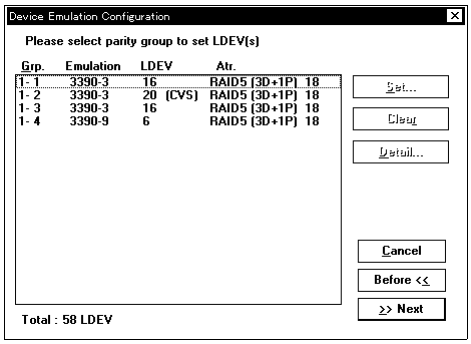
FB4	Location
1st	HDU-R10, 11, 12, 13
2nd	HDU-R14, 15, 16, 17
3rd	HDU-L10, 11, 12, 13
4th	HDU-L14, 15, 16, 17
5th	HDU-R20, 21, 22, 23
6th	HDU-R24, 25, 26, 27
7th	HDU-L20, 21, 22, 23
8th	HDU-L24, 25, 26, 27

Copyright ©1997,1998, Hitachi, Ltd.

(4) <Define Parity Group>
Select (CL) the group to be de-installed and select (CL) [Delete] in the 'Parity Group Configuration' dialog box.
After setting, select (CL) [OK]. Return to step (3).



(5) <Define Device Emulation>
After setting up all items for definition of Device Emulation, select (CL) [>>Next].
Selecting (CL) [Before<<] returns you to the previous screen.

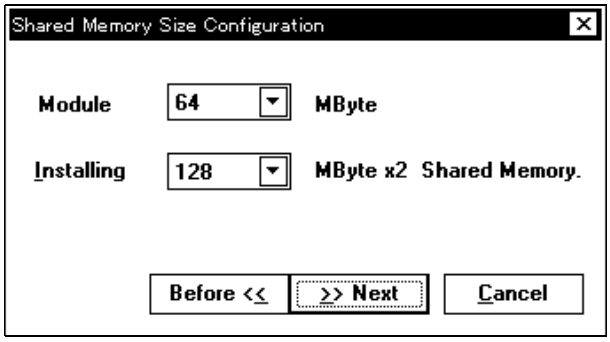


(5)-1 Detailed display:
Select (CL) device and select (CL) [Detail...].
The detailed information is displayed.
Select (CL) [OK] and return to step (5)

Copyright ©1997,1998, Hitachi, Ltd.

5. SM Capacity

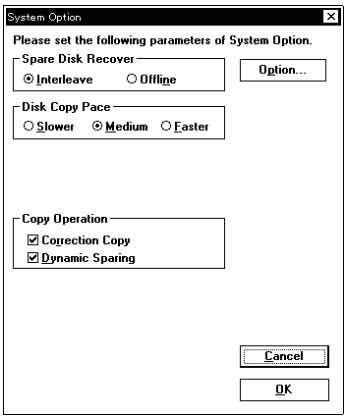
(1) <Define Shared Memory Size>
Define the shared memory size in the 'Shared Memory Size Configuration' dialog box.
Select (CL) [>>Next].



Copyright ©1997,1998, Hitachi, Ltd.

5.3.2.3 System Option

1. <System Option Definition>
   Define system option information in the ‘System Option’.
   After setting up all items, select (CL) [OK].



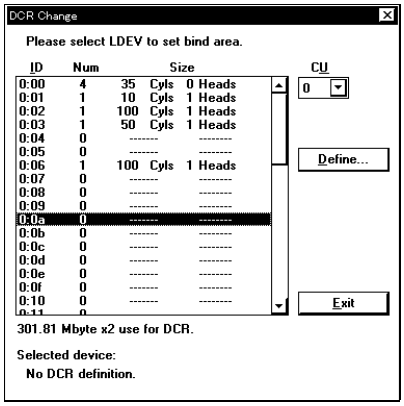
Copyright ©1997,1998, Hitachi, Ltd.

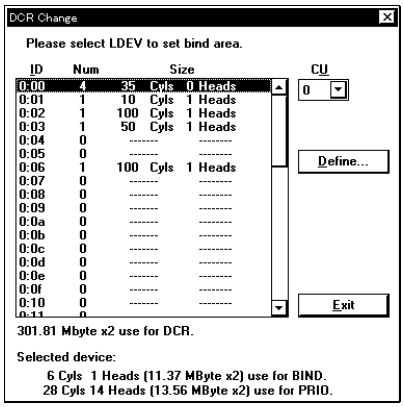
5.3.2.4 DCR Configuration

(1) The “DCR Change” screen opens and the contents of the setting which has been made are displayed. When the CU is selected (DR) is the combo box, installed LDEV(s) and contents of the DCR definition are updated. Select (CL) and LDEV the setting for which is to be changed, then press (CL) the [Define...] button.

Total cache memory size which DCR area use is displayed.

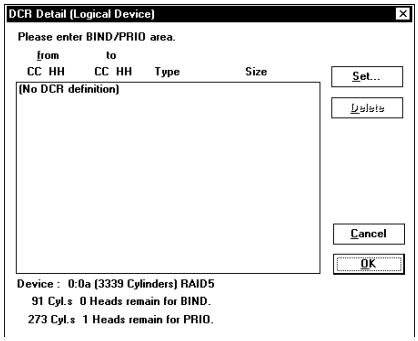
If LDEV which selected have a DCR area, BIND size and PRIO size is displayed under “DCR Change” screen.





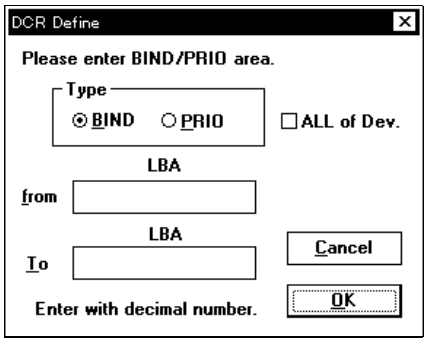
NOTICE
To use DCR function, you should install DCR program product (P-242R-J1641-E) for mainframe volumes or Open DCR program product (P-242R-J1642-E) for open volumes into the DKC.

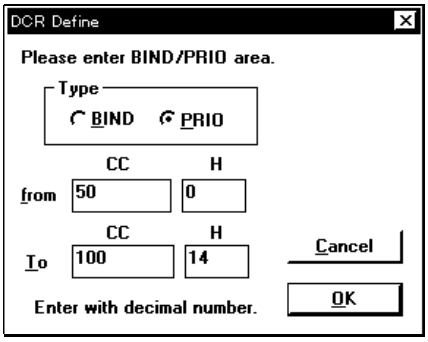
(2) The “DCR Detail (Logical Device)” screen opens and the setting of the DCR in the LDEV is displayed.
To add a new setting, press (CL) the [Set...] button.



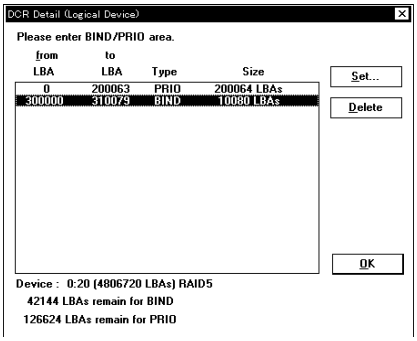
Copyright ©1997,2000, Hitachi, Ltd.

(3) When the [Set...] button is pressed (CL) on the "DCR Detail (Logical Device)" screen, the "DCR Define" screen appears. Enter the type, starting cylinder number, starting head number, ending cylinder number, and ending head number (in the case of Mainframe. Refer to the screen on the right.) or the type, starting LBA, and ending LBA (in the case of the open system. Refer to the screen on the left.) of the DCR area to be newly registered.
When the entry is completed, return the screen to the "DCR Detail (Logical Device)" screen by pressing (CL) the [OK] button.

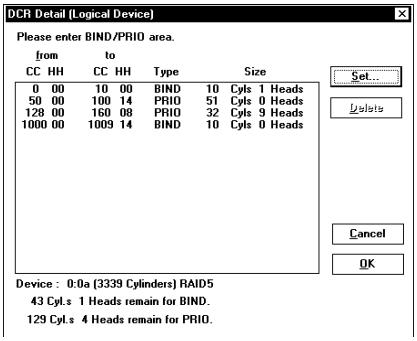




(4) Contents of the setting which has been made are displayed in the list box on the "DCR Detail (Logical Device)" screen.

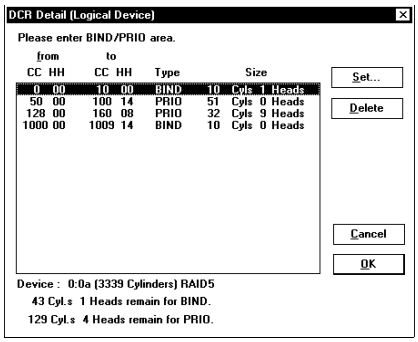


(In the case of open system)



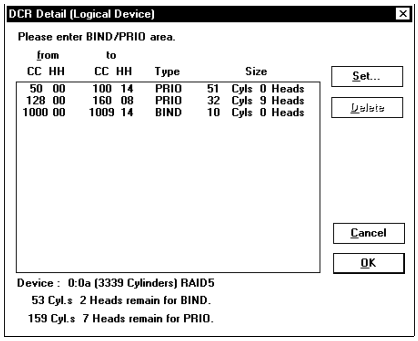
(In the case of Mainframe system)

(5) To delete a set item, select (CL) the DCR setting to be deleted and press (CL) the [Delete] button on the "DCR Detail (Logical Device)" screen.

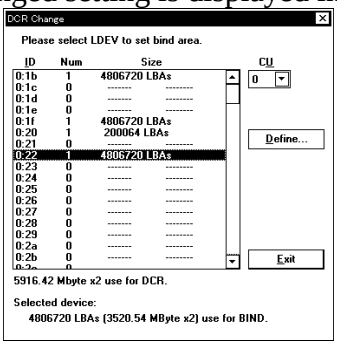


Copyright ©1998,1999, Hitachi, Ltd.

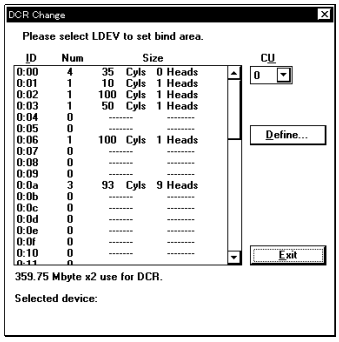
(6) By pressing (CL) the [OK] button on the "DCR Detail (Logical Device)" screen after the setting is decided, a process to change the setting for the LDEV is executed.
When no change is necessary, press (CL) the [Cancel] button.



(7) The screen returns to the "DCR Change" screen after the processing is completed. The changed setting is displayed in the list box.



(In the case of open system)



(In the case of Mainframe system)

(8) Repeat steps (1) to (7) for the LDEV(s) you want to change the setting of it.

(9) When the changing operation is completed, quit the "DCR Change" screen by pressing (CL) the [EXIT] button.

Copyright ©1997,2000, Hitachi, Ltd.

5.3.2.5 CVS Configuration

Only screens for Mainframe system are described here. Refer to the page INST05-110 or later for screens or definition for open system.

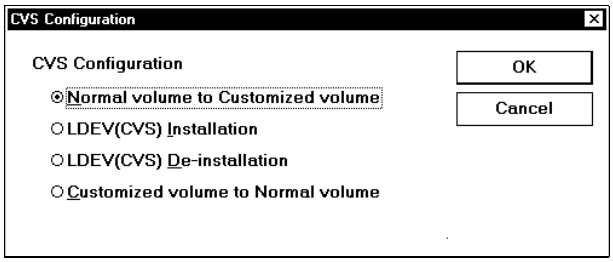
1. <Normal Volume to Customized Volume>

NOTICE
When you set HMDE volumes to customized volumes and reset them to the normal volume again, these volumes could not be set as HMDE volumes. Please refer to the following table.

Emulation Types for HMDE volumes	Emulation types after changing from Customized volume to normal volume
3390-3A	3390-3
3390-3B	
3380-KA	3380-K
3380-KB	

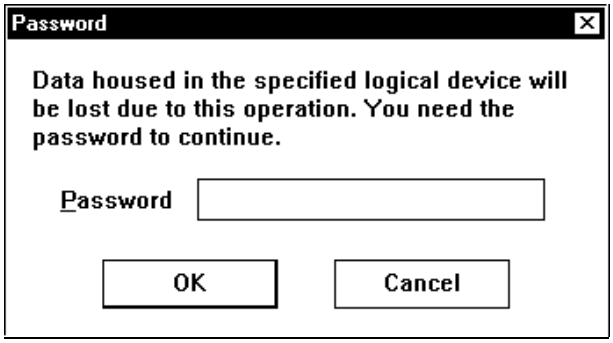
If you want to reset these volumes as HMDE, please call technical support center to set them to HMDE volumes by SVP.

(1) Select (CL) [Normal Volume to Customized Volume] and press (CL) the [OK] button.



NOTICE
To use CVS function, you should install CVS program product (P-242R-J1541-E) for mainframe volumes or Open CVS program product (P-242R-J1542-E) for open volumes into the DKC.

Enter the password and select (CL) [OK].

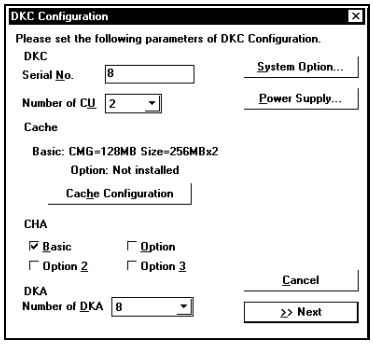


NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

Copyright ©1997,1999, Hitachi, Ltd.

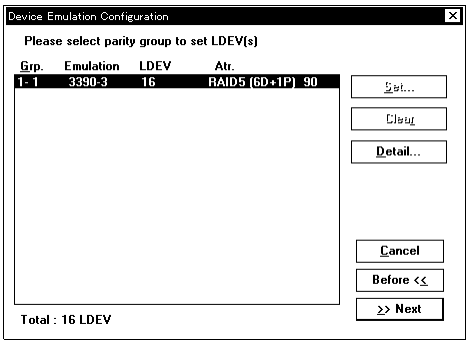
(1-1) Define the number of CU in DKC in the 'DKC Configuration'.

Make sure that the entered item is correct and select (CL) [>>Next].



(2) Select (CL) a parity group having Volume(s) to be changed on the "Device Emulation Configuration" screen and press (CL) the [Detail...] button.

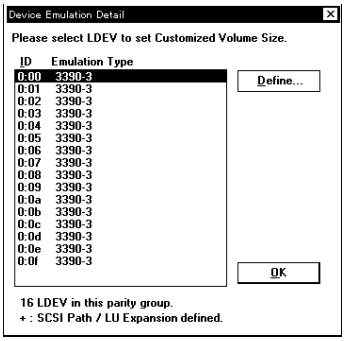
(CVS): The parity group which CVS is installed.



(3) Select (CL) a volume to be changed on the "Device Emulation Detail" screen and press (CL) the [Define...] button.

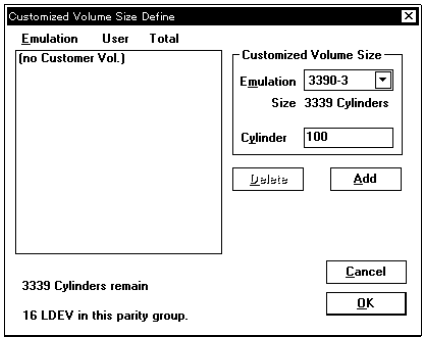
Note: In the following case, [Define...] button is not available.

1) Base volume is selected.
2) CV is selected.
3) Volume with SCSI path(s) ("+" indicated) is selected.
4) LU expanded volume ("+" indicated) is selected.

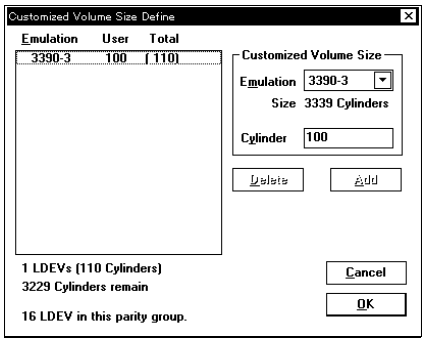


Copyright ©1998,2000, Hitachi, Ltd.

(4) Select (CL) the emulation type on the “Customized Volume Size Define” screen and register only one CV newly.
When an emulation type for open host is selected, the size per cylinder is displayed ([K byte]).

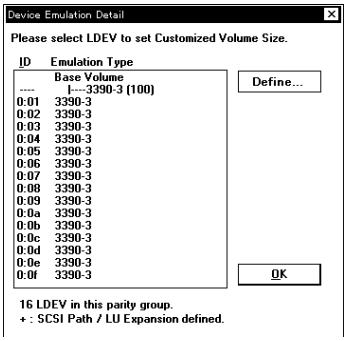


(5) The registration result is displayed in the list box on the left side of the screen. Press (CL) the [OK] button.
When CV for open host is selected, the size is displayed ([M byte]).



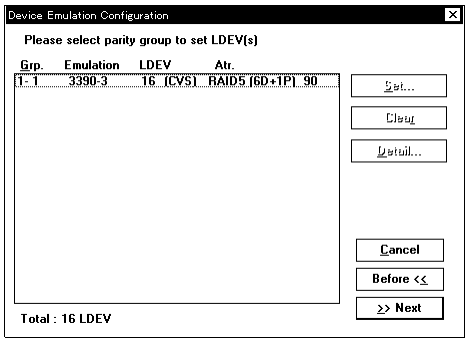
Copyright ©1997,2000, Hitachi, Ltd.

(6) When the screen is returned to the “Device Emulation Detail” screen, the setting result is displayed. Press (CL) the [OK] button.



(7) To change other LDEV(s) in the parity group to the CV(s), repeat steps (3) to (6) for the LDEV(s) concerned.

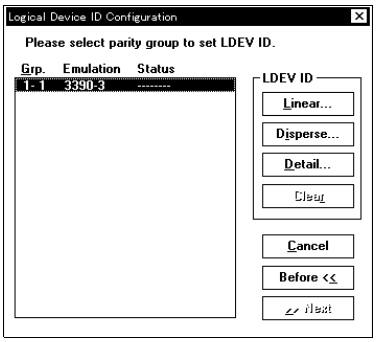
(8) The screen is returned to the “Device Emulation Configuration” screen.
Press (CL) the [>>Next] button.



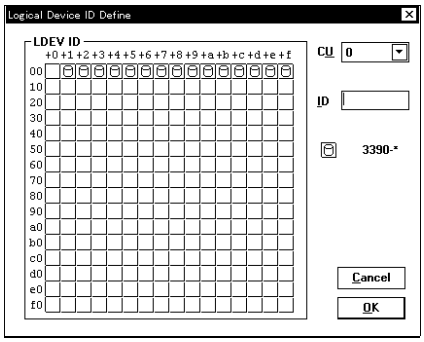
Copyright ©1997,2000, Hitachi, Ltd.

(9) To change the LDEV(s) in other parity group(s) to the CV(s), repeat steps (2) to (8).

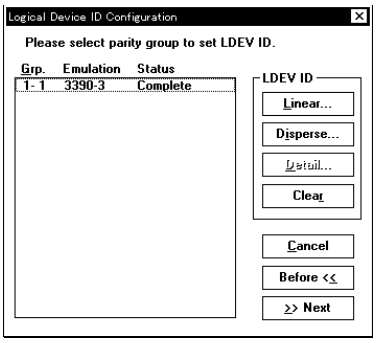
(10) Select (CL) the parity group having the LDEV(s) for which the ID(s) has not been set on the “Logical Device ID Configuration” screen, and press (CL) the [Linear...] button. Two or more parity groups can be selected.



(11) Select CU ID in CU combo box.
Input LDEV ID you want to set in the ID Edit box.
After setting, select (CL) [OK] button.
(Refer to INST05-181)

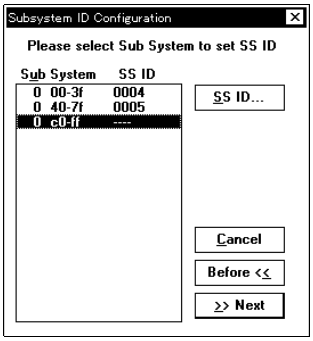


(12) Status of the parity group the setting for which is completed changes to “Complete”.
Press (CL) the [>>Next] button.

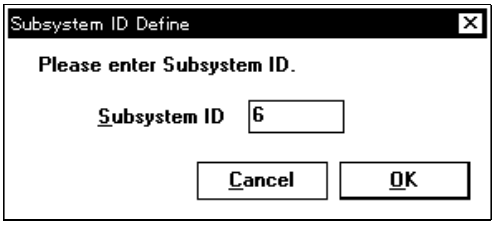


Copyright ©1997,2000, Hitachi, Ltd.

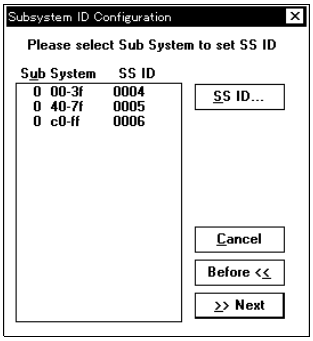
(13) When the screen is changed to the “Subsystem ID Configuration” screen and a new SS ID is required to be set, define the SS ID newly. Select (CL) a subsystem for which SS ID is not defined and press (CL) the [SS ID...] button.



(14) Enter an SS ID on the “Subsystem ID Define” screen. Press (CL) the [OK] button.

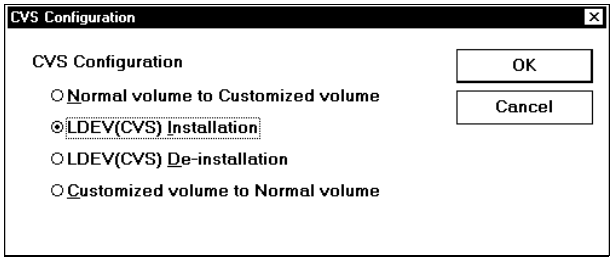


(15) When the screen is returned to the “Subsystem ID Configuration” screen, the registered SS ID is displayed. Press (CL) the [>>Next] button to quit the definition screen.



2. <LDEV(CVS) Installation>

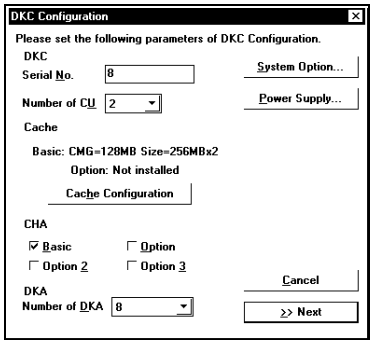
(1) Select (CL) [LDEV(CVS) Installation] and press (CL) the [OK] button.



Copyright ©1998,2000, Hitachi, Ltd.

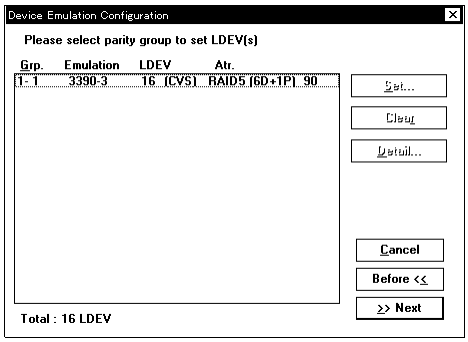
(1-1) Define the number of CU in DKC in the 'DKC Configuration'.

Make sure that the entered item is correct and select (CL) [>>Next].



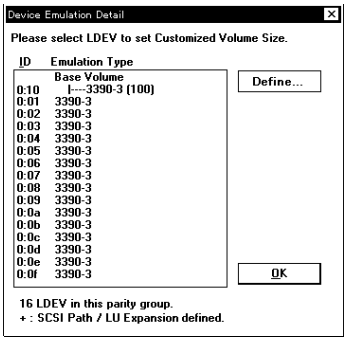
(2) Select (CL) a parity group to which the CV(s) is to be added on the "Device Emulation Configuration" screen and press (CL) the [Detail] button.

(CVS): The parity group which CVS is installed.

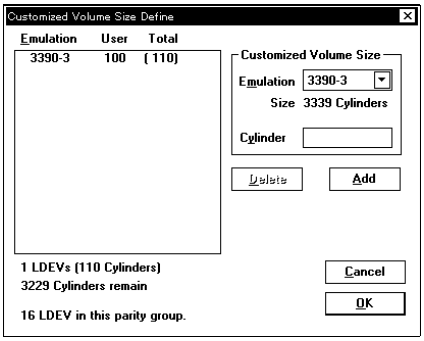


(3) Select (CL) a base volume to which the CV(s) is to be added on the "Device Emulation Detail" screen and press (CL) the [Define...] button.

Note: In the following cases, [Define...] becomes invalid.
1) When a CV is selected
2) When an LDEV which has not been changed to a CV is selected

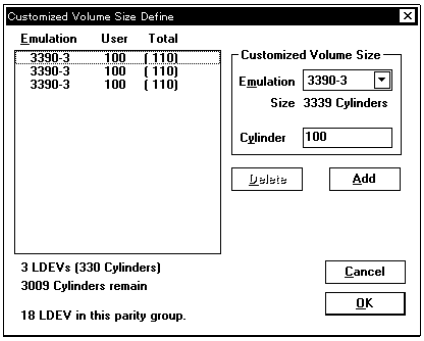


(4) Register the CV to be added by selecting (CL) the emulation type of it, entering the number of cylinders, and selecting (CL) [Add] on the "Customized Volume Size Define" screen.
When an emulation type for open host is selected, the size per cylinder is displayed ([K byte]).

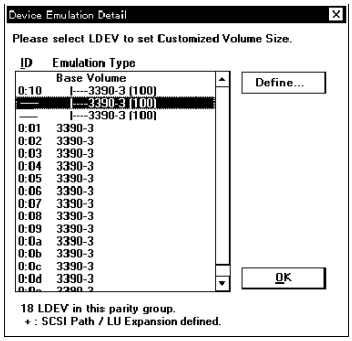


Copyright ©1998,2000, Hitachi, Ltd.

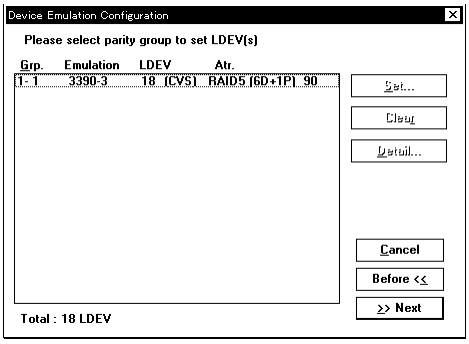
(5) The contents of the registration which has been made are displayed in the list box. The deletion can be made only for the added CV(s). When the addition is made incorrectly, select (CL) [Cancel] to make the setting invalid and perform the setting again.
When CV for open host is selected, the size is displayed ([M byte]).



(6) When the screen is returned to the “Device Emulation Detail” screen by pressing (CL) the [OK] button, the setting result is displayed.

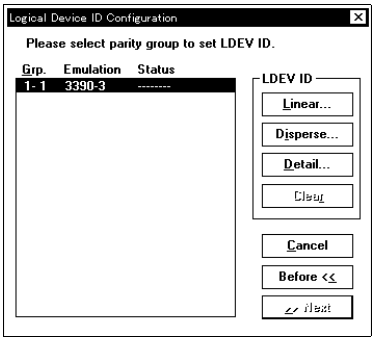


(7) When the screen is returned to the “Device Emulation Configuration” screen by pressing (CL) the [OK] button, the setting result is displayed.

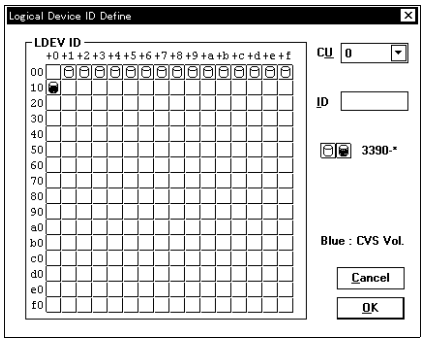


Copyright ©1998,2000, Hitachi, Ltd.

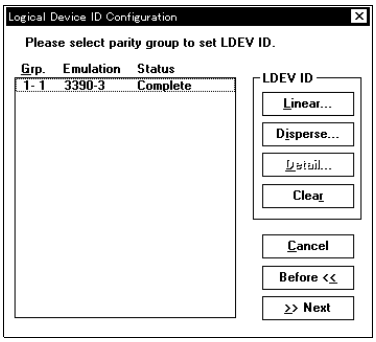
(8) When the [>>Next] button is pressed (CL), the LDEV ID setting screen appears.
Set LDEV ID(s) for the added CV(s). For the parity group having the added CV(s), status which shows the ID allocation is indicated as "---------". Therefore, select (CL) such parity group. (Refer to INST05-181)



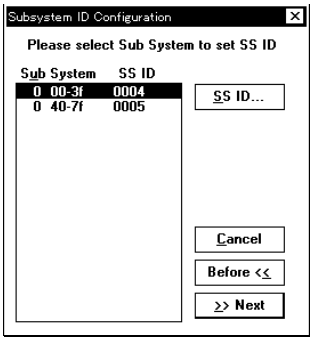
(9) Press (CL) the [Linear...] button and enter an LDEV ID you want to allocate on the "Logical Device ID Define" screen.



(10) When the screen is returned to the "Logical Device ID Configuration" screen by pressing (CL) the [OK] button, the setting result is displayed.

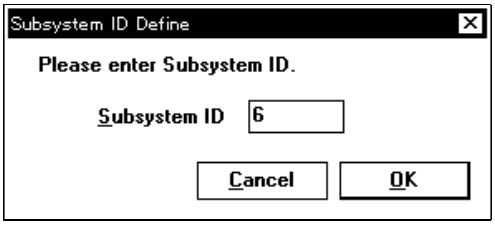


(11) When the [>>Next] button is pressed (CL), the "Subsystem ID Configuration" screen is opened. If a new SS ID is required as a result of defining an LDEV ID, define it. Select (CL) a subsystem for which the SS ID is to be newly defined and press (CL) the [SS ID...] button.

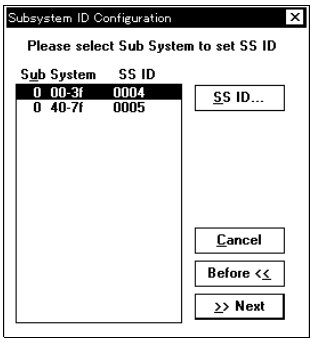


Copyright ©1998,2000, Hitachi, Ltd.

(12) Enter the SS ID on the “Subsystem ID Define” screen and select (CL) [OK].



(13) When the screen is returned to the “Subsystem ID Configuration” screen by pressing (CL) the [OK] button, the contents of the setting which has been made are displayed.

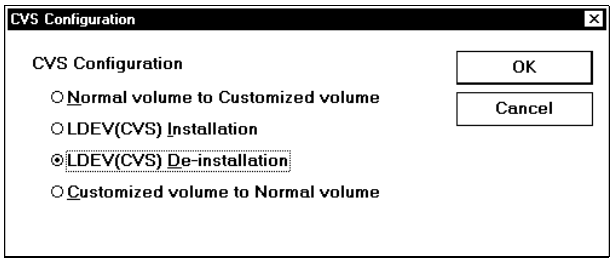


(14) When [>>Next] is selected (CL), the definition of the addition ends. (Adding process starts.)

Copyright ©1998,2000, Hitachi, Ltd.

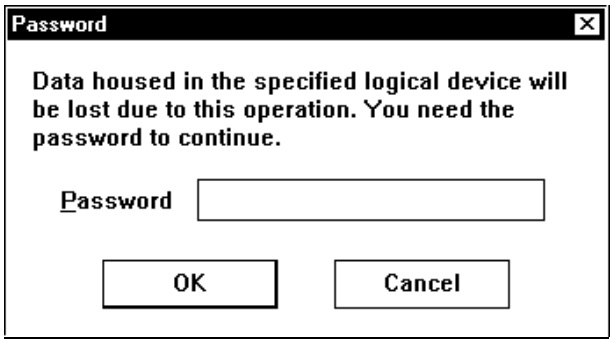
3. <LDEV(CVS) De-installation>

(1) Select (CL) [LDEV(CVS) De-installation] and press (CL) the [OK] button.



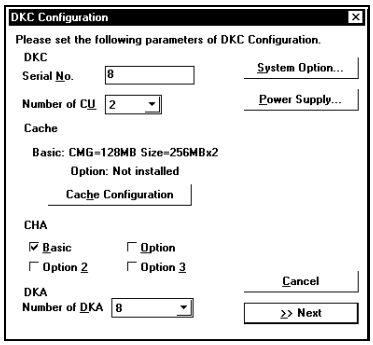
Enter the password and select (CL) [OK].

NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.



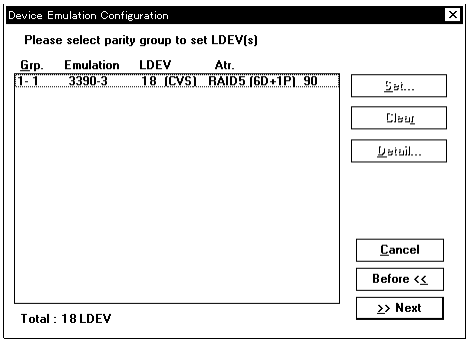
(1-1) Define the number of CU in DKC in the 'DKC Configuration'.

Make sure that the entered item is correct and select (CL) [>>Next].



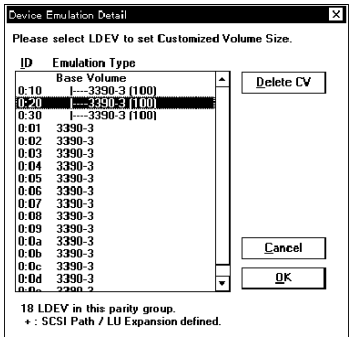
(2) Select (CL) a parity group CVs in which are to be reduced on the "Device Emulation Configuration" screen, then select (CL) [Detail].

(CVS): The parity group which CVS is installed.



Copyright ©1998,2000, Hitachi, Ltd.

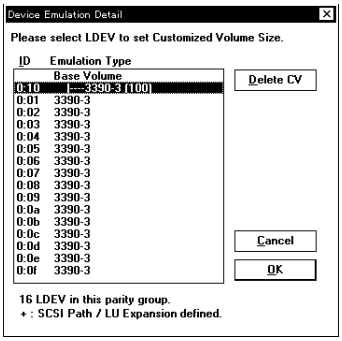
(3) When the CV(s) to be deleted is selected (CL) on the "Customized Volume Detail" screen and the [Delete CV] button is pressed (CL), the CV(s) is deleted. When the operation fails, the screen can be returned to the preceding one by pressing (CL) the [Cancel] button.



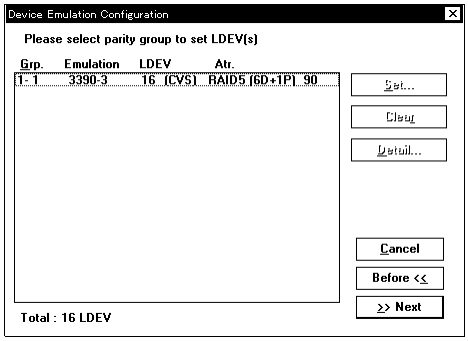
Note: In the following case, [Delete CV] button is not available.

1) The last CV is selected.
2) All CVs in base volume are selected.
3) Volume with SCSI path(s) ("+" indicated) is selected.

(4) Push (CL) [OK] button to get back to [Device Emulation Detail] Screen, you can see the set information in the screen.



(5) When the screen is returned to the "Device Emulation Configuration" screen by pressing (CL) the [OK] button and the[>>Next] button is pressed (CL), the definition of reduction is decided.



Copyright ©1998,2000, Hitachi, Ltd.

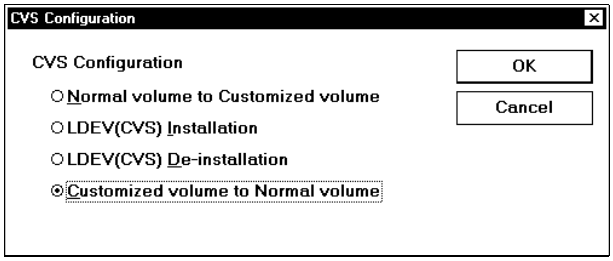
4. <Customized Volume to Normal Volume>

NOTICE
When you set HMDE volumes to customized volumes and reset them to the normal volume again, these volumes could not be set as HMDE volumes. Please refer to the following table.

Emulation Types for HMDE volumes	Emulation types after changing from Customized volume to normal volume
3390-3A	3390-3
3390-3B	
3380-KA	3380-K
3380-KB	

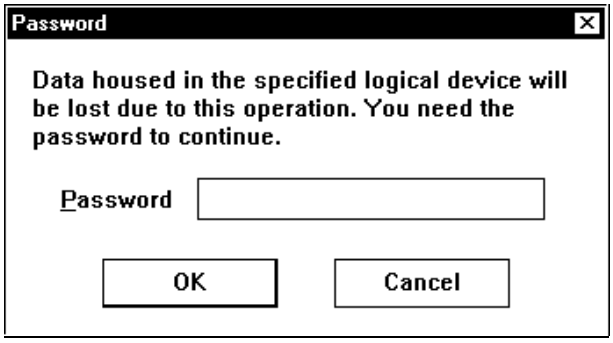
If you want to reset these volumes as HMDE, please call technical support center to set them to HMDE volumes by SVP.

(1) Select (CL) [Customized Volume to Normal Volume], then select (CL) [OK].



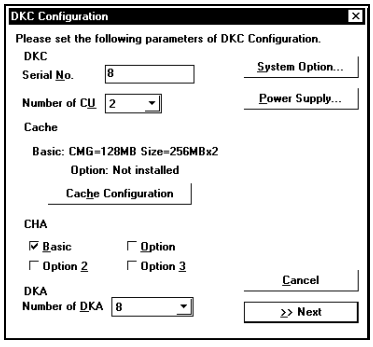
Enter the password and select (CL) [OK].

NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.



(1-1) Define the number of CU in DKC in the 'DKC Configuration'.

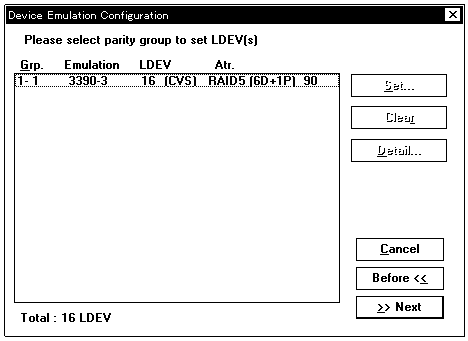
Make sure that the entered item is correct and select (CL) [>>Next].



Copyright ©1997,1998, Hitachi, Ltd.

(2) Select (CL) a parity group having volume(s) to be changed on the "Device Emulation Configuration" screen and select (CL) [Detail...].

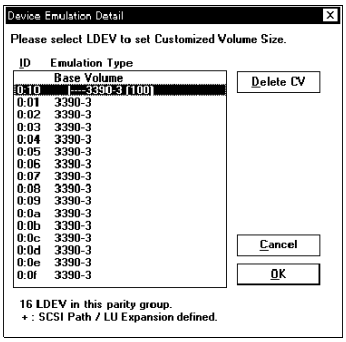
(CVS): The parity group which CVS is installed.



(3) Select (CL) a CV from the list box on the "Customized Volume Detail" screen, press (CL) the [Delete CV] button to delete the CV, and return it to a normal volume. When the operation fails, the screen can be returned to the preceding one by pressing (CL) the [Cancel] button.

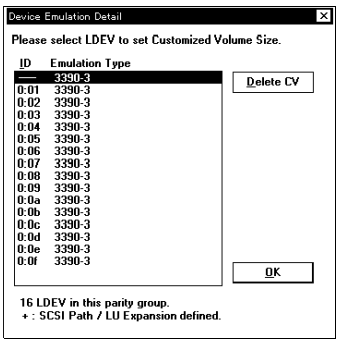
Note: In the following case, [Delete CV] button is not available.

1) The last CV is selected.
2) All CVs in base volume are selected.
3) Volume with SCSI path(s) is selected.



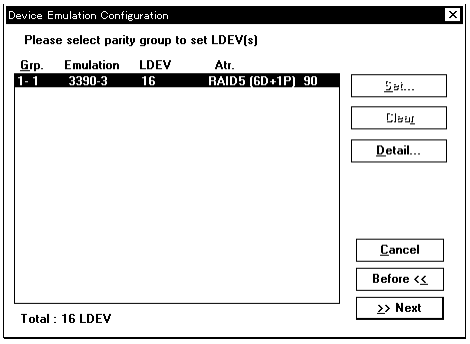
Copyright ©1997,2000, Hitachi, Ltd.

(4) The setting result is displayed. Press (CL) the [OK] button.



(5) To return other base volume(s) in the parity group to the normal LDEV(s), repeat steps (3) to (4) for the LDEV(s) concerned.

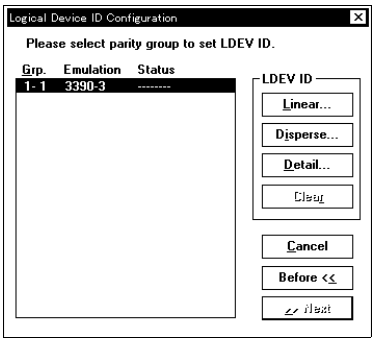
(6) Press (CL) the [OK] button to return to the “Device Emulation Configuration” screen.



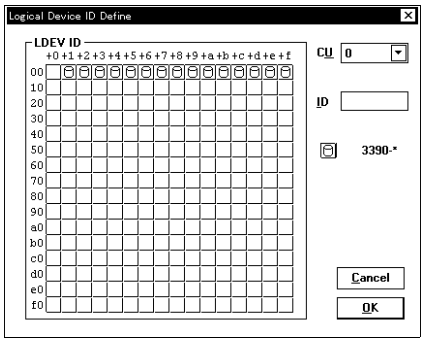
Copyright ©1997,2000, Hitachi, Ltd.

(7) To return the base volume(s) in other parity group(s) to the normal LDEV(s), repeat steps (2) to (6).

(8) Press (CL) the [>>Next] button to change the screen to the "Logical Device ID Configuration" screen. Since the normal LDEV returned from the base volume is an LDEV newly defined, define the ID for it. Select (CL) the parity group having the LDEV(s) for which the ID(s) has not been set, then select (CL) [Linear...]. Two or more parity groups can be selected. (Refer to INST05-181)

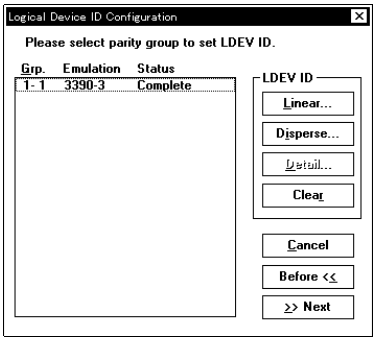


(9) Select CU ID in CU combo box.
Input LDEV ID you want to set in the ID edit box.
After setting, select (CL) [OK] button.

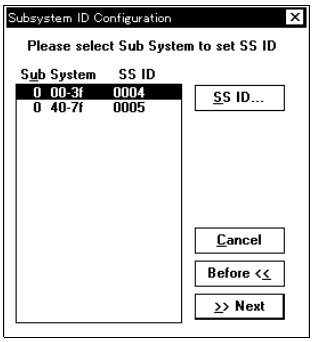


Copyright ©1999,2000, Hitachi, Ltd.

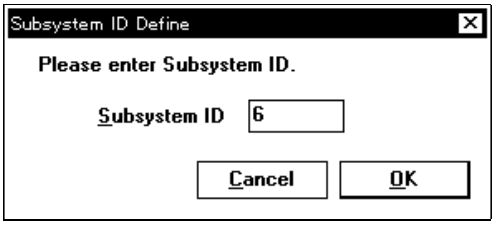
(12) Status of the parity group the setting for which is completed changes to “Complete”.
Press (CL) the [>>Next] button to change the screen to the “Subsystem ID Configuration” screen.



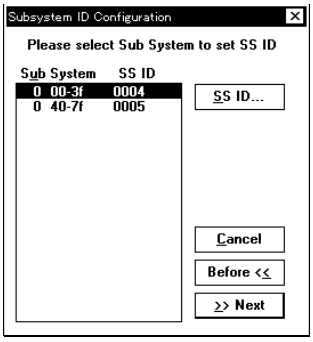
(13) When it is necessary to set a new SS ID, define the SS ID newly.
Select (CL) a subsystem for which SS ID is not defined, then select (CL) [SS ID...].



(14) Enter an SS ID on the “Subsystem ID Define” screen and select (CL) [OK].



(15) When the screen is returned to the “Subsystem ID Configuration” screen, the registered SS ID is displayed.
Press (CL) the [>>Next] button to quit the definition screen.



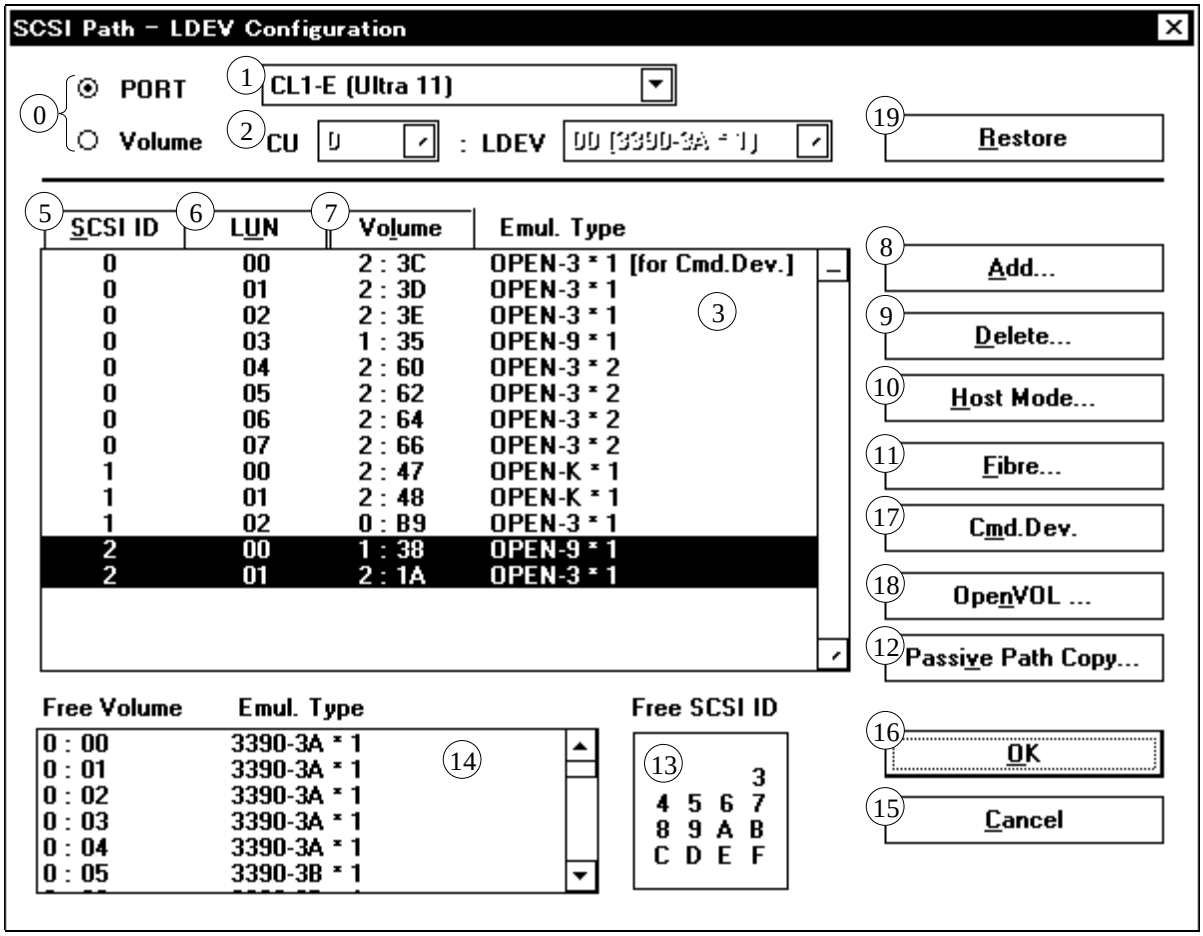
Copyright ©1997,2000, Hitachi, Ltd.

5.3.2.6 SCSI I/F Configuration ('SCSI Path-LDEV Configuration' window)

* In case of "Refer Configuration", there are some buttons which cannot be selected in this window.

1. Summary

1-1 The name of each part ('SCSI Path-LDEV Configuration' window)



1-2 Outline of each part

(0) Display pattern button
- PORT : SCSI paths defined on the selected port are displayed in SCSI path list
- Volume : SCSI paths defined in the selected CU:LDEV ID are displayed in SCSI path list.

(1) Installed port list
Ports of installed CHS/CHF/CHTs (CHS:4ports/CHF, CHT:2ports) are displayed.

(2) Installed Volume list
CU:LDEV IDs of installed OPEN-CU:LDEV are displayed.

Copyright ©1998,1999, Hitachi, Ltd.

(3) SCSI path list
According to (0), displayed the defined SCSI paths.
* If PORT is selected in (0), '+' added to Volume denotes multiple path setting.

(4) PORT button (in the case of Volume in (0))
SCSI paths are sorted increasingly in port number. The precedence of sorting follows: PORT, SCSI ID and LUN.

(5) SCSI ID button
SCSI paths are sorted increasingly in SCSI ID. The precedence of sorting follows: SCSI ID, PORT and LUN (or SCSI ID, LUN and LDEV ID).

(6) LUN button
SCSI paths are sorted increasingly in LUN. The precedence of sorting follows: LUN, PORT and SCSI ID (or LUN, SCSI ID and LDEV ID).

(7) Volume button (in the case of PORT in (0))
SCSI paths are sorted increasingly in CU:LDEV ID. The precedence of sorting follows: CU:LDEV ID, SCSI ID and LUN.

(8) Add button
A new SCSI path definition is added (go to 2-1).

(9) Delete button
Defined SCSI paths are deleted (go to 2-2)

(10) Host Mode button
The window which shows the setting situation of host identification codes for each installed CHS/CHF port is displayed (go to 2-3).

CAUTION

On the CHF, Host Mode must be set to "Mode 00".

(11) Fibre button
The window which activates windows for setting the following information about Fibre channel ports is displayed (go to 2-4).
1. Address Information ("Fibre - Port Address Information" window)
2. Topology Information ("Fibre - Topology Information" window)
3. Security Information (Not supported)

(12) Passive Path Copy button
Alternate SCSI paths on Cluster-2 corresponding to the ones on Cluster-1 are automatically generated (go to 2-5).

(13) Free SCSI ID area
Unused SCSI IDs are displayed.

(14) Free Volume area
Unused CU:LDEV IDs are displayed.

(15) Cancel button
SCSI path definition is canceled (go to 2-7).

Copyright ©1998,1999, Hitachi, Ltd.

(16) OK button
SCSI path definition is ended (go to 2-7).

(17) Command Device button
Command Device is set (go to 2-8).

(18) Open VOL button
Open VOLs can be set (go to 2-9).

(19) Restore button
Backup data for SCSI I/F Configuration is restored (go to 2-10).

---

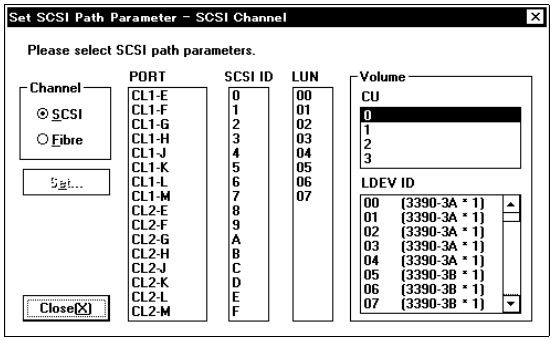
2. Detail

2-1 Add

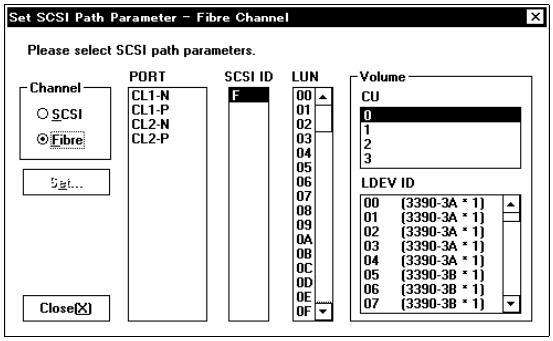
(1) Select (CL) [Add...] button in 'SCSI Path-LDEV Configuration' window.

'Set SCSI Path Parameter' window is displayed. Multiple PORT, SCSI ID, LUN and LDEV ID can be selected (Single CU can be selected).

*For SCSI channel



*For Fibre channel



- Channel area : Installed channel is able to be selected.
- PORT : According to the selection in Channel area, all installed CHS, CHF or CHT ports are displayed.
- SCSI ID : For SCSI channel, 16 SCSI IDs from 0 to F are displayed. For Fibre channel, only 1 SCSI ID F is displayed. *
- LUN : For SCSI channel, 8 LUNs from 00 to 07 are displayed. For Fibre channel, 120 LUNs from 00 to 77 are displayed (SVP Version 51-36-xx: 8LUNs from 0 to 7).
- Volume : CU/LDEV IDs in which the emulation type corresponding to OPEN-LDEV is set are displayed.
  The symbol '+' added to LDEV ID denotes the existence of path setting as follow:
  '+' a path is set
  '++' multiple paths are set
  none no path is set

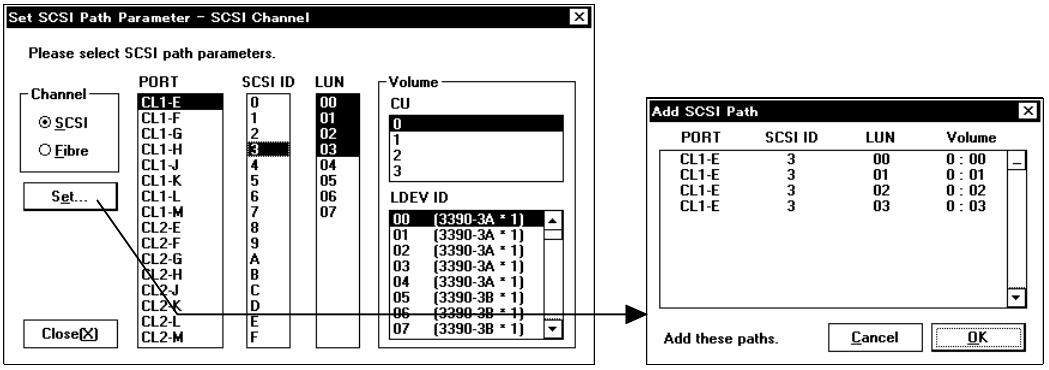
* For Fibre channel, SCSI ID is meaningless. However, SCSI ID "F" is indicated all the times and "F" must be selected as a dummy.

Copyright ©1998,1999, Hitachi, Ltd.

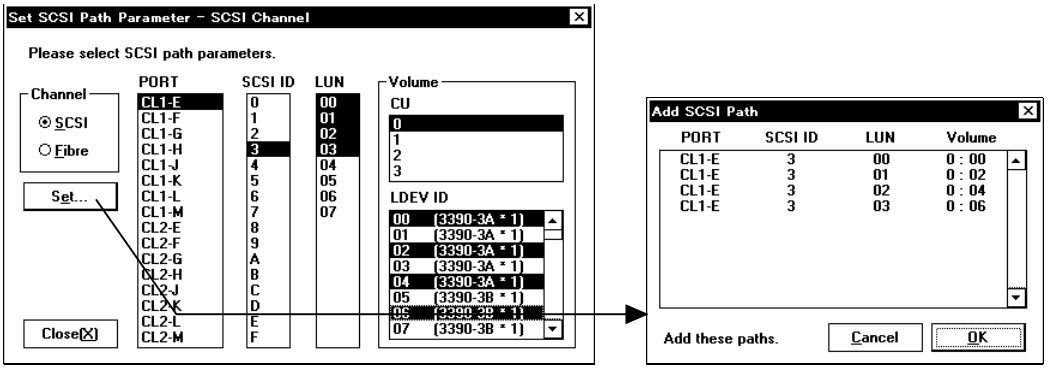
(2) Select (CL) [Set...] in ‘Set SCSI Path Parameter’ window.
SCSI paths are constructed based on the above selection, and the confirmation window is displayed.
* This button comes to be available just after selections from all lists are completed.

According to the number of the selected LDEV ID, “continuous LDEV ID allocation” and “arbitrary LDEV ID allocation” are possible.

Ex.1 Continuous LDEV ID allocation



Ex.2 Arbitrary LDEV ID allocation



(3) Confirm in ‘Add SCSI Path’ window.

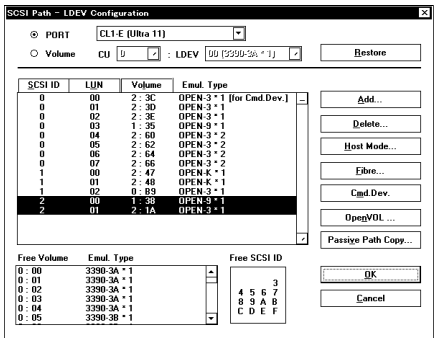
- [OK] : Newly set paths are displayed in the ‘SCSI Path-LDEV Configuration’ window, and go back to ‘Set SCSI Path Parameter’ window.

- [Cancel] : Go back to ‘Set SCSI Path Parameter’ window.

Copyright ©1998,1999, Hitachi, Ltd.

2-2 Delete

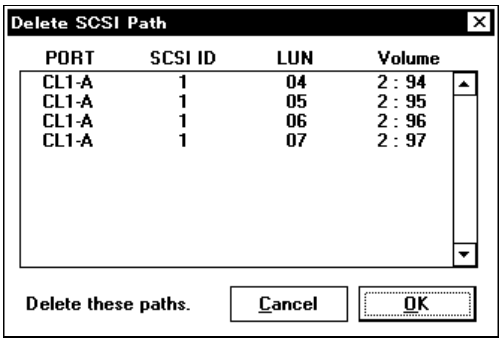
(1) SCSI paths are selected at the SCSI path list in 'SCSI Path-LDEV Configuration' window.



(2) Select (CL) [Delete...] in 'SCSI Path-LDEV Configuration' window.

The confirmation window for the deleted paths is displayed.

* This button comes to be available just after selections from SCSI path list.



(3) Confirm in 'Delete SCSI Path' window.

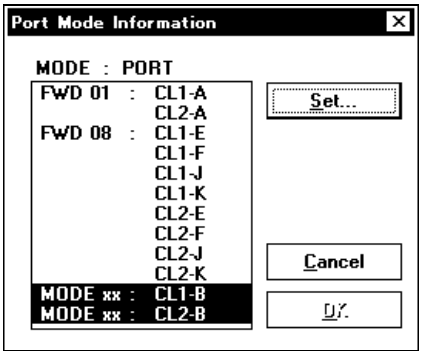
- [OK] : The situation in that selected paths are deleted is displayed in 'SCSI Path-LDEV Configuration' window.
- [Cancel] : Go back to 'SCSI Path-LDEV Configuration' window with nothing done.

2-3 Host Mode

(1) Select (CL) [Host Mode...] button in 'SCSI Path-LDEV Configuration' window.

'Port Mode Information' window is displayed.

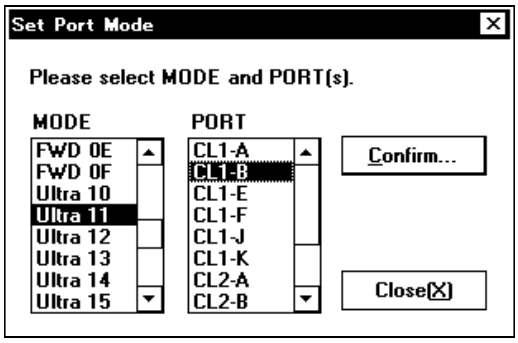
* When invalid value for Host identification information is read, "MODE xx" is reversibly displayed. And [OK] button is not available.



Copyright ©1998,1999, Hitachi, Ltd.

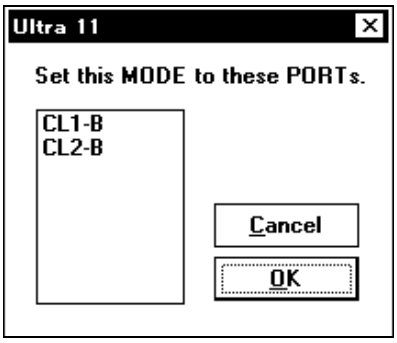
(2) Select (CL) [Set...] in 'Port Mode Information' window.

'Set Port Mode' window is displayed on which parameters needed for host identification codes setting are selected.



(3) Select (CL) [Confirm...] in 'Set Port Mode' window.

The confirmation window is displayed.
* Both Mode and Port are selected, the button can be available.



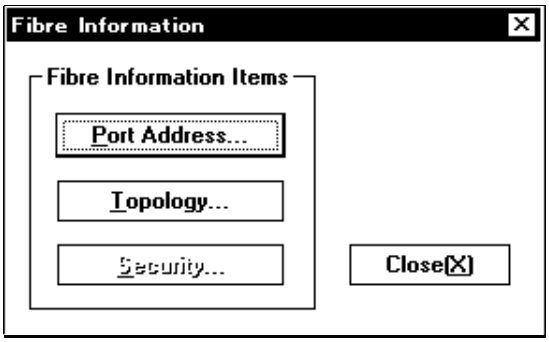
(4) Confirm in 'FWD(Ultra) xx' window.

- [OK] : Mode is updated, which is displayed on 'Port Mode Information' window.
- [Cancel] : Go back to 'Set Port Mode' window with nothing done.

2-4 Fibre

(0) Select (CL) [Fibre...] in 'SCSI Path-LDEV Configuration' window.

'Fibre Information' window is displayed.

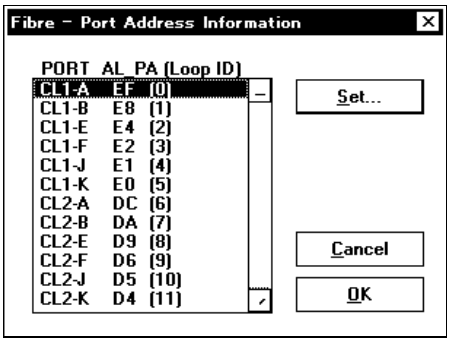


Copyright ©1998,1999, Hitachi, Ltd.

2-4-1 Port Address

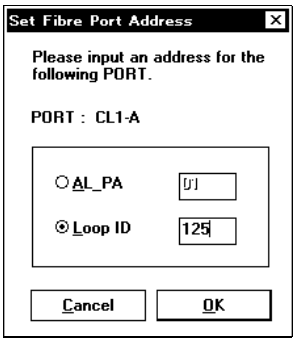
(1) Select (CL) [Port Address...] in 'Fibre Information' window.

'Fibre - Port Address Information' window is displayed.



(2) Select (CL) port of which Address information is changed, and select (CL) [Set...] in 'Fibre - Port Address Information' window.

'Set Fibre Port Address' window is displayed.
* [Set...] button comes to be available just after selections of port.



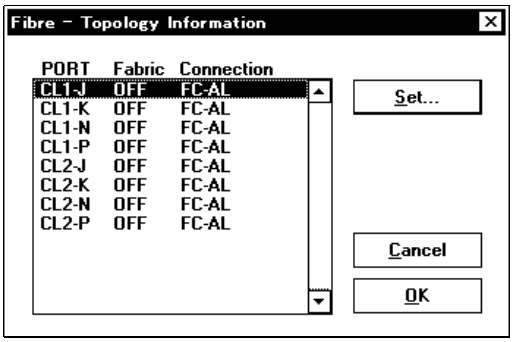
(3) Input address value in 'Set Fibre Port Address' window.
AL_PA : 01 ~ EF (HEXA DECIMAL number)
Loop ID : 0 ~ 125 (DECIMAL number)
AL_PA is an ID based on Fibre standard. It denotes an address of each port on Fibre loop.
Loop ID, whose initial value is 0, is an identifier continuously assigned to each AL_PA in descending order. (see page INST05-599J)

- [OK] : Address is updated, which is displayed on 'Fibre - Port Address Information' window.
  * This button comes to be available just after input of valid address value.
- [Cancel] : Go back to 'Fibre - Port Address Information' window with nothing done.

2-4-2 Topology

(1) Select (CL) [Topology...] in 'Fibre Information' window.

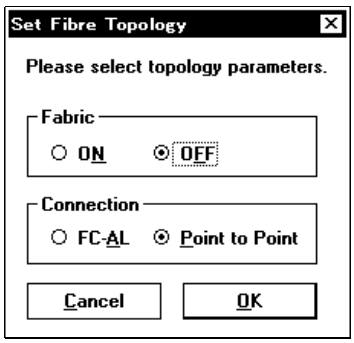
'Fibre - Topology Information' window is displayed.



Copyright ©1998,1999, Hitachi, Ltd.

(2) Select (CL) port of which Topology information is changed, and select (CL) [Set...] in 'Fibre - Topology Information' window.

'Set Fibre Topology' window is displayed.
* [Set...] button comes to be available just after selections of port.



(3) Select (CL) Fabric (On/Off) and FC-AL/Point to Point in 'Set Fibre Topology' window.

- [OK] : Topology is updated, which is displayed on 'Fibre - Topology Information' window.
- [Cancel] : Go back to 'Fibre - Topology Information' window with nothing done.

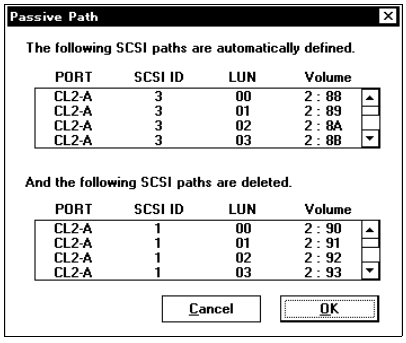
2-4-3 Security

Not supported.

2-5 Passive Path Copy

(1) Select (CL) [Passive Path Copy...] in 'SCSI Path-LDEV Configuration' window.

'Passive Path' window is displayed.
* This button comes to available under the following conditions.
  1. PORT is selected at Display pattern button.
  2. The selected port is in Cluster-1.
  3. The mode of the selected port is 01, 11, 02 or 12.
  4. SCSI path is defined which has even SCSI ID.



(2) Confirm in 'Passive Path' window.

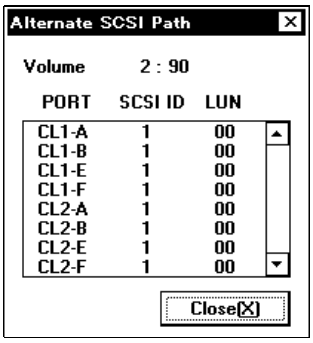
- [OK] : SCSI paths in the upper list are defined, and SCSI paths in the lower list are deleted. And then go back to 'SCSI Path-LDEV Configuration' window.
- [Cancel] : Go back to 'SCSI Path-LDEV Configuration' window with nothing done.

Copyright ©1998, Hitachi, Ltd.

2-6 Alternate Path Display

(1) Select (DC) SCSI path at SCSI path list in 'SCSI Path-LDEV Configuration' window.

'Alternate SCSI Path' window is displayed.



(2) Select (CL) [Close(X)] in 'Alternate SCSI Path' window.

Go back to 'SCSI Path-LDEV Configuration' window.

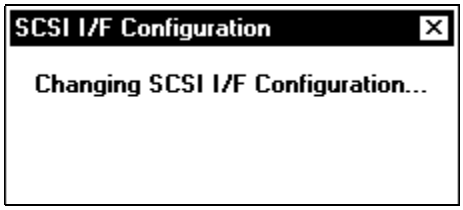
2-7 End of "SCSI Path-LDEV Configuration" window

(1) 'Define Configuration & Install'
(2) 'Refer Configuration'
(3) 'Change Configuration'

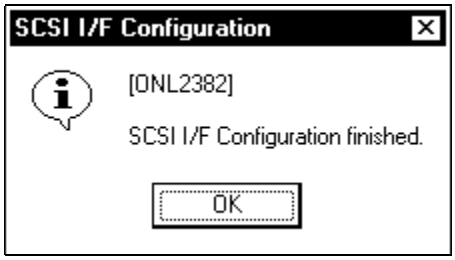
(1) In case of 'Define Configuration & Install'
[OK]: Go back to INST05-170 step 14. Or, go to INST05-599-50.
[Cancel]: Go back to INST05-70 step 4.

(2) In case of 'Refer Configuration'
[OK]: Go back to INST05-230 step 2. Or, go to INST05-599-50.
[Cancel]: Go back to INST05-230 step 2.

(3) In case of 'Change Configuration'
[OK]: 'SCSI I/F Configuration' windows is displayed. Or, go to INST05-599-50.



After "Wait..." message, select (CL) [OK] in response to "SCSI I/F Configuration finished". Go back to INST05-320 step 2.



[Cancel]: Go back to INST05-320 step 2.

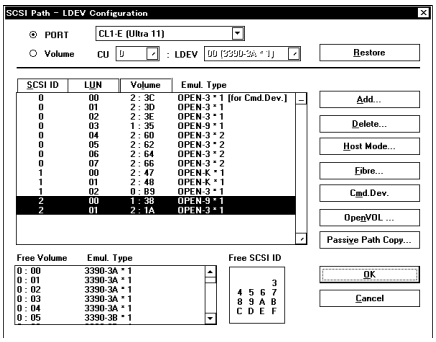
Copyright ©1998,1999, Hitachi, Ltd.

2-8 Command Device

(1) Set or Reset

(1-1) In case display pattern button is PORT
Select (CL) SCSI path(s) in SCSI path list and select (CL) [Cmd.Dev.] button in 'SCSI Path-LDEV Configuration' window.

(1-2) In case display pattern button is Volume
Select (CL) [Cmd.Dev.] button.



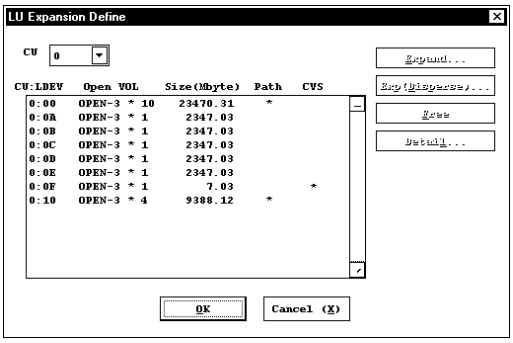
(2) Confirm
The string "[for Cmd.Dev.]" in SCSI path list denotes 'Command Device'.

Copyright ©1998,1999, Hitachi, Ltd.

2-9 LU Expansion

Select (CL) [Open VOL...] button in 'SCSI path-LDEV' Configuration' window.

'LU Expansion Define' window is displayed.



Detail of the list

- The list is displayed line by line in CU (The selection can be done on CU list).
- The number of LDEVs connected sequentially together which formalize LU Expansion (Open VOL)
  ex.) The first line on the right figure indicates that 10 LDEVs whose emulation type is OPEN-3 are connected together sequentially.
- The existence of SCSI path definition to the Open VOL.
  ex.) In the first line, '*' shows that CU:LDEV=0:00 and 0:10 have a SCSI path definition.
- The existence of CVS definition to the Open VOL.
  ex.) In the seventh line '*' shows that CU:LDEV=0:0F has a CVS difinition.

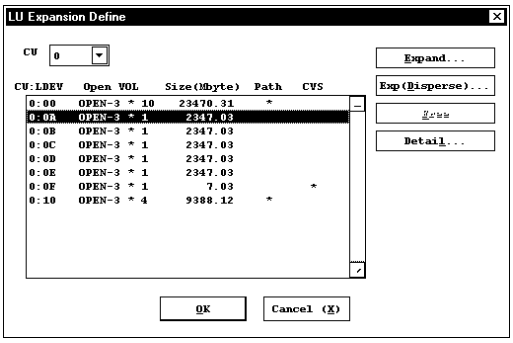
Detail of the buttons

- [OK] button : To register the setting information
- [Cancel] button : Not to register the setting information
- [Expand...] button : To display 'LU Expansion' window (go to (1))
- [Exp(Disperse)...] button : To display 'LU Expansion (Disperse)' window (go to (2))
- [Free] button : To dissolve LU Expansion consisted of two or more LDEVs (go to (3))
- [Detail...] button : To display 'Open VOL Detail' window (go to (4))

Copyright ©1998,1999, Hitachi, Ltd.

(1) The setting of LU Expansion (‘LU Expansion’ window)

Select (CL) [Expand...] button in ‘LU Expansion Define’ window. [Expand...] button comes to be available at the time of selecting connectable CU:LDEV from the list.

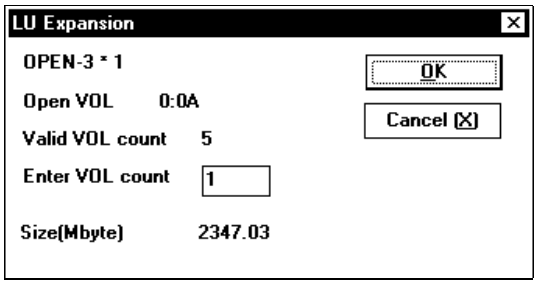


Connectable CU:LDEV denotes the following LDEVs.

- Unconnected CU:LDEVs
- CU:LDEV without SCSI path definition
- CU:LDEV with same emulation type
- CU:LDEV with same capacity
- CU:LDEV with has no CVS definition, if you select CU:LDEV which has no CVS definition.
- CU:LDEV with has CVS definition, if you select CU:LDEV which has CVS definition.

The selected CU:LDEV comes to be the head of Open VOL and also CU:LDEV# comes to be Open VOL#.

‘LU Expansion’ window is displayed.

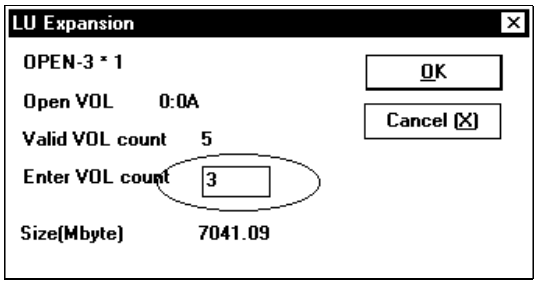


Detail of displayed information

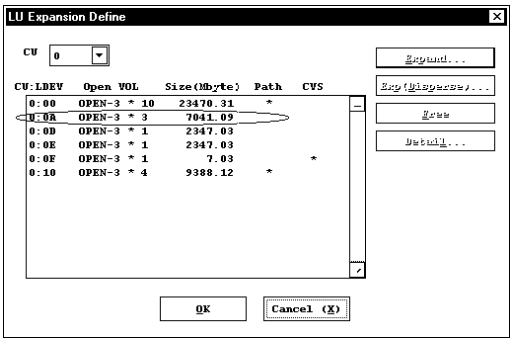
OPEN-XXX : Emulation type
OPEN VOL : Open VOL# (Selected CU:LDEV#)
Valid VOL count : Total number of LDEVs connectable together (maximum: 36)
Enter VOL count : The input field of connection number
Size [Mbyte] : The capacity of Open VOL

Copyright ©1998,1999, Hitachi, Ltd.

After the input of connection number, select (CL) [OK] button.

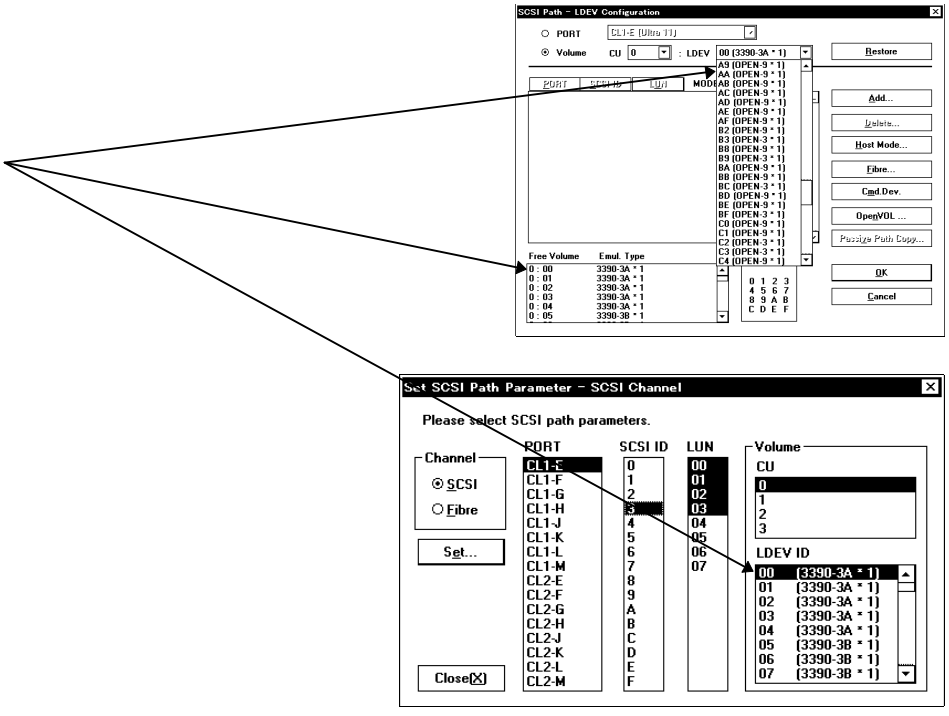


Update the list of 'LU Expansion Define' window.
(The right figure shows the case that 3 LDEVs starting at CU:LDEV=0:0A are connected together.)



Selecting (CL) [OK] button brings you back to 'SCSI Path-LDEV Configuration' window, and the contents of the window automatically updated. At the same time, the contents of 'Set SCSI Path Parameter' window is also updated (in the case that [Add...] button is selected (CL)).

Updated parts

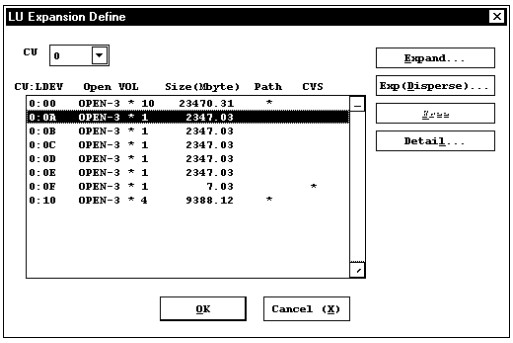


The target of the SCSI path definition after Open VOL formalization is the CU:LDEV# of the head of Open VOL (Open VOL#).

Copyright ©1998,1999, Hitachi, Ltd.

(2) The setting of LU Expansion by dispersive LDEV (‘LU Expansion (Disperse)’ window)

Select (CL) [Exp(Disperse)...] button in ‘LU Expansion Define’ window. [Exp(Disperse)...] button comes to be available at the time of selecting connectable CU:LDEV from the list.

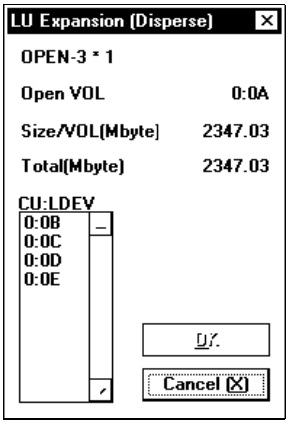


Connectable CU:LDEV denotes the following LDEVs.

- Unconnected CU:LDEVs
- CU:LDEV without SCSI path definition
- CU:LDEV with same emulation type
- CU:LDEV with same capacity
- CU:LDEV with has no CVS definition, if you select CU:LDEV which has no CVS definition.
- CU:LDEV with has CVS definition, if you select CU:LDEV which has CVS definition.

The selected CU:LDEV comes to be the head of Open VOL and also CU:LDEV# comes to be Open VOL#.

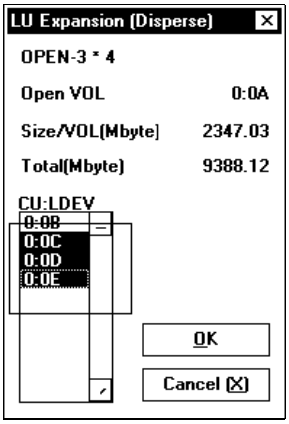
‘LU Expansion (Disperse)’ window is displayed.



Detail of displayed information

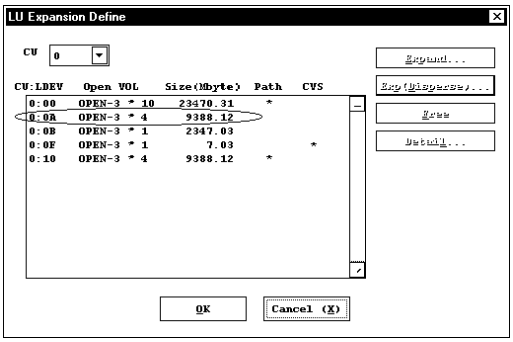
OPEN-XXX : Emulation type
Open VOL : Open VOL# (Selected CU:LDEV#)
Size/VOL(Mbyte) : The capacity per one CU:LDEV
Total(Mbyte) : The capacity of Open VOL
CU:LDEV list : Connectable CU:LDEV#

After the selection (CL) of connection CU:LDEV from the list, select (CL) [OK] button. (You can connect 36 CU:LDEVs include the head at a maximum.)



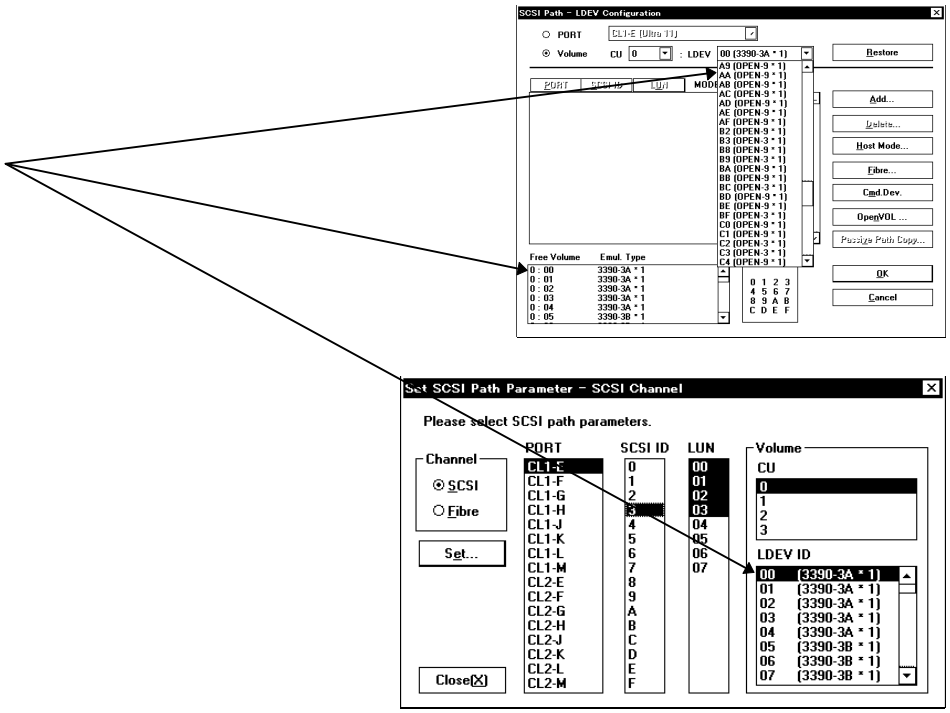
Copyright ©1999, Hitachi, Ltd.

Update the list of ‘LU Expansion Define’ window.
(The right figure shows the case that CU:LDEV=0:0A, 0:0C, 0:0D, 0:0E are connected together.)



Selecting (CL) [OK] button brings you back to ‘SCSI Path-LDEV Configuration’ window, and the contents of the window automatically updated. At the same time, the contents of ‘Set SCSI Path Parameter’ window is also updated (in the case that [Add...] button is selected (CL)).

Updated parts

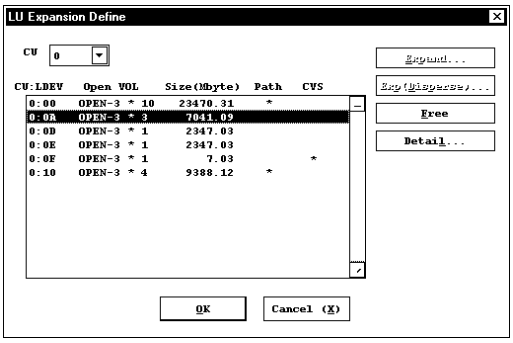


The target of the SCSI path definition after Open VOL formalization is the CU:LDEV# of the head of Open VOL (Open VOL#).

Copyright ©1999, Hitachi, Ltd.

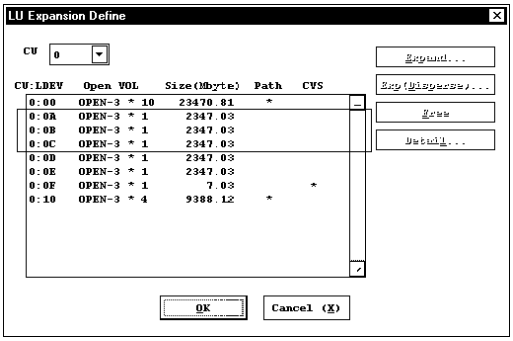
(3) Dissolution of Open VOL ('LU Expansion Define' window)

Select (CL) [Free] button on 'LU Expansion Define' window.
[Free] button comes to be available at the time that the "Dissolvable" Open VOL is selected in the list.



"Dissolvable" Open VOL denotes the Open VOL which satisfies the following conditions:
- Open VOL which has two or more LDEVs connected
- Open VOL which has no SCSI path definition

Update the list in 'LU Expansion Define' window. (The right figure shows the case that Open VOL#=0:0A which consisted of 3 LDEVs has been dissolved.)



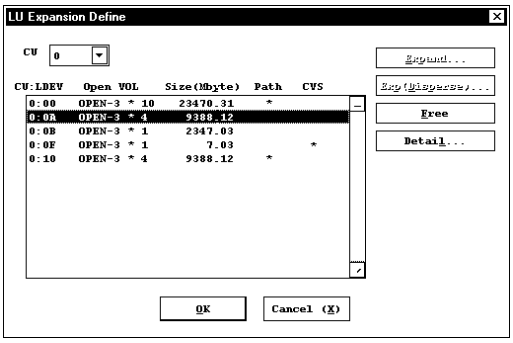
Selecting (CL) [OK] button brings you back to 'SCSI Path-LDEV Configuration' window, and the contents of the window automatically updated. At the same time, the contents of 'Set SCSI Path Parameter' window is also updated (In the case that [Add...] button is selected).

After the Open VOL dissolution, the target of the SCSI path definition operation comes to the LDEV# after the dissolution.

Copyright ©1999, Hitachi, Ltd.

(4) Display detail information of Open VOL (‘Open VOL Detail’ window)

After the selection (CL) of LDEV at ‘LU Expansion Define’ window, select (CL) [Detail...] button.



‘Open VOL Detail’ window is displayed.

Detail of displayed information
CU:LDEV : CU:LDEV# of LDEV compose Open VOL

2-10 Backup/Restore function

(1) Backup function
When finishing SCSI PATH-LDEV Configuration by selecting [OK], SVP will get the backup data of SCSI path definition information, Host mode information, Fibre information and LU size expansion information. You can choose if the data backup is need or not by displayed message.

(2) Restore function
SVP reads the backup data and displays it. The conditions that SVP execute the data restore function are following.

PCB installation/type
Current installed PCBs and their types are same as the backup data (Fibre 2ch and FibreT 2ch are treated as the same type)

Volume installation/type
Current installed volumes, their emulation types, command device setting are same as the backup data.

HORC
There is no HORC volume pair.

HOMRCF
There is no HOMRCF volume pair.

<Notice>
If you delete one of the SCSI path, the program will automatically delete the LUN security information corresponding to that deleted path. But, the Backup function could not get the LUN Security information. After using restore function, SVP will restore the deleted SCSI path information but SVP would not restore the LUN security information. (In this case, you should define the LUN security information again).

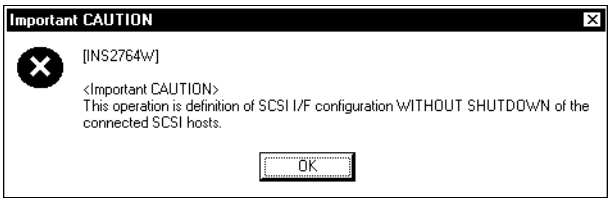
5.3.2.7 Online LUN Definition

NOTICE
Please confirm the OS of the connected SCSI hosts, before this operation.
If your connected OS is wrong, a system down or data lost (The operation may do unrecoverable serious damage to your file system.) may occur.

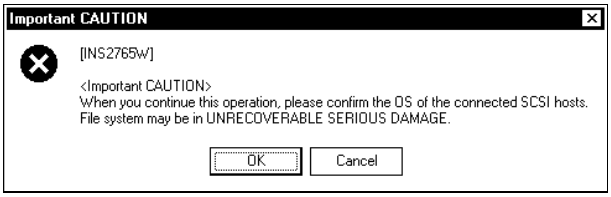
1.

Select (CL) [OK] in response to the confirmation message.
"<Important CAUTION>
This operation is definition of SCSI I/F configuration WITHOUT SHUTDOWN of the connected SCSI hosts."



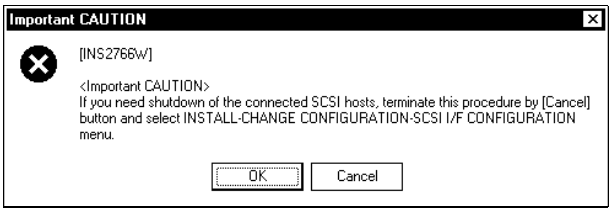
2.

Select (CL) [OK] in response to the confirmation message.
"<Important CAUTION>
When you continue this operation, please confirm the OS of the connected SCSI hosts.
File system may be in UNRECOVERABLE SERIOUS DAMAGE."



3.

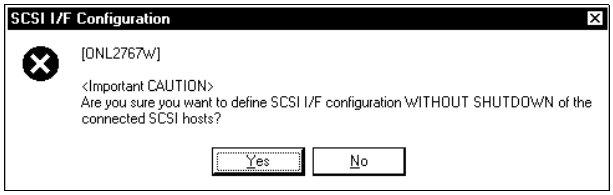
Select (CL) [OK] in response to the confirmation message.
"<Important CAUTION>
If you need shutdown of the connected SCSI hosts, terminate this procedure by [Cancel] button and select INSTALL-CHANGE CONFIGURATION-SCSI I/F CONFIGURATION menu."



Copyright ©1998,1999, Hitachi, Ltd.

4.

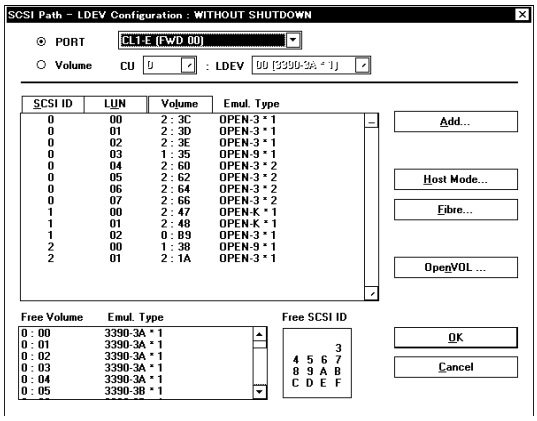
Select (CL) [YES] in response to the confirmation message.
"<Important CAUTION>
Are you sure you want to define SCSI I/F configuration WITHOUT SHUTDOWN of the connected SCSI hosts?"

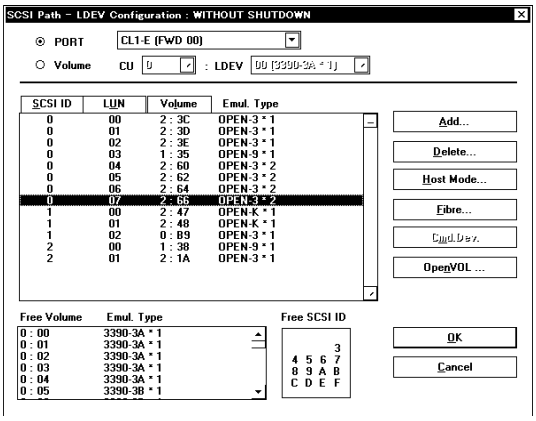


Copyright ©1998,1999, Hitachi, Ltd.

5.

"SCSI Path LDEV Configuration" window is displayed.





(1) Add

Refer to INST05-593.
After this operation, [Delete...] button can't be selected.

(2) Delete

Refer to INST05-595.
After this operation, [Add...] button can't be selected.

(3) Host Mode

Refer to INST05-595.
If you add path(s) to a port with no path, Host Mode of the port can be changed.

(4) Fibre

Refer to INST05-596.
If you add path(s) to a port with no path, Fibre information of the port can be changed.

(5) Open VOL

Refer to INST05-599B.

(6) Command Device

Refer to INST05-599A.
If you add path(s) to a volume with no path, Command Device can be set to the volume.
If you delete all path(s) to a Command Device volume, Command Device can be reset to the volume.

Copyright ©1998,1999, Hitachi, Ltd.

6.

"LUN Security" screen is displayed.

NOTICE

Please confirm that there is no I/O to the LUN of which you will operate LUN Security configuration, before this operation.
If you do a wrong operation, a system down or data lost (The operation may do unrecoverable serious damage to your file system.) may occur.

Go to "LUN Security" (INST05-599-50).

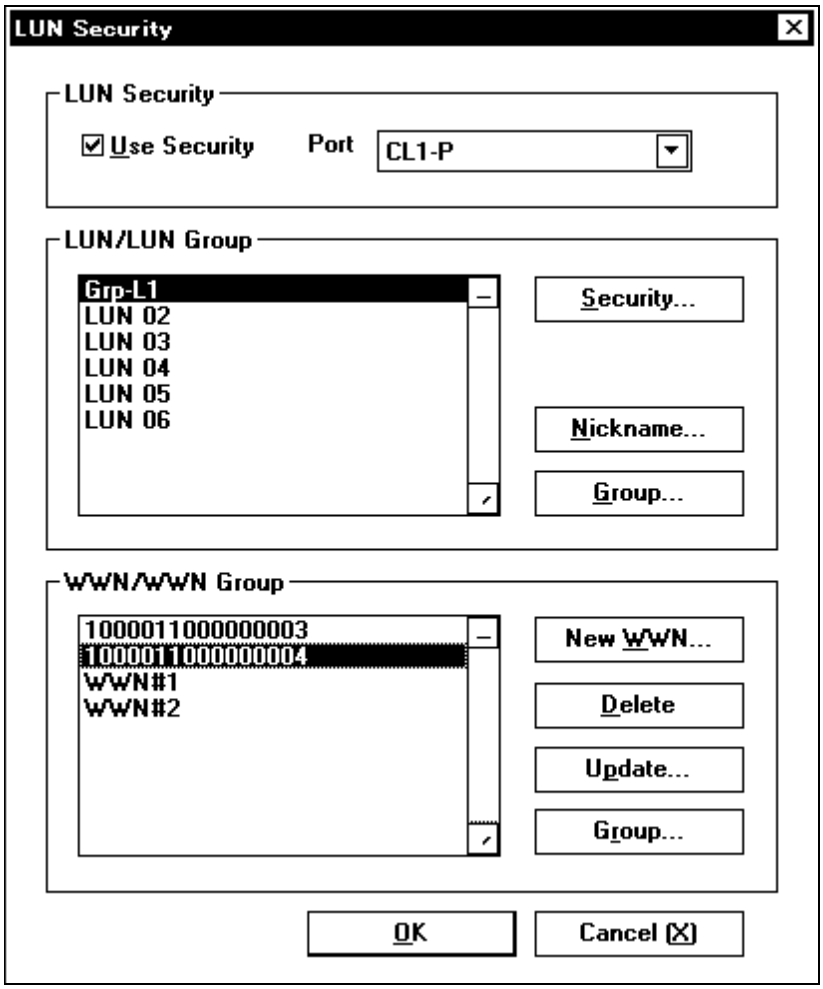
5.3.2.8 LUN Security

1. Name



(1) Use Security check box.
To determine the usage of LUN security function for each port.
(2) Port List
List of installed Fibre ports.
(3) LUN/LUN Group List
List of LUN groups which are set of the ports.
(4) Security button
To display Security Information Setting Screen.
(5) Nickname button
To display Name change Screen to set the LUN group name.
(6) Group button (LUN)
To display LUN group screen.
(7) WWN/WWN Group List
List of WWN/WWN groups which are set of the ports.

Copyright ©1999, Hitachi, Ltd.

(8) New WWN button
To display WWN entry screen.
(9) Delete button
To delete WWN.
(10) Update button
To display a screen to change WWN/WWN groups.
(11) Group button (WWN)
To display WWN group screen.
(12) OK button
Define Configuration & Install : Go back to INST05-170 (14).
Refer Configuration : Go back to INST05-230 (2).
Change Configuration : To display 'SCSI I/F Configuration' screen.
After displaying "Wait..." message, please select [OK] in the 'SCSI I/F Configuration finished." and go back to INST05-320 (2).
(13) Cancel button
Define Configuration & Install : Go back to INST05-70 (4).
Refer Configuration : Go back to INST05-230 (2).
Change Configuration : Go back to INST05-320 (2).

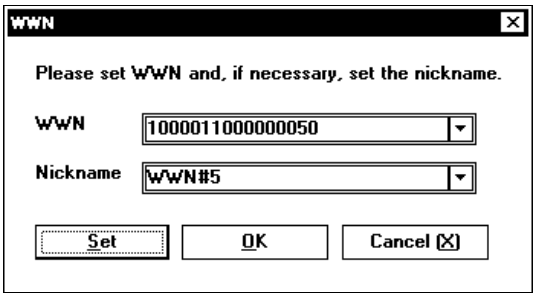
2. Detail

2.1 WWN Screen

This screen is to enter a new WWN (Max 31 WWNs).

(1) Input WWN in the 'WWN' as hexadecimal number (16 figures). If necessary, you can define a nickname to the WWN into 'Nickname'.



* You cannot use the following characters in the Nickname.
\ / : , ; * ? < > |

(2) Select [Set] button. SVP will display a confirmation message.

(3) Next, SVP will display blank in "WWN" and "Nickname" area. Therefore, you can continue entering a next new WWN by repeating the (1) - (2) steps

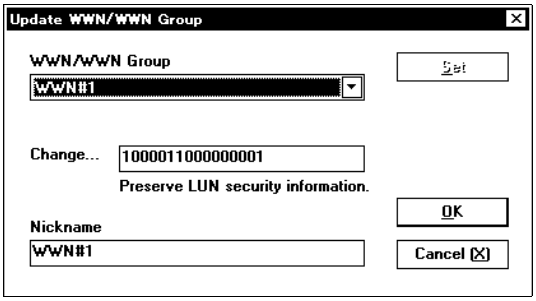
(4) If you select [OK] button, SVP will close this screen with entering the defined data in this screen. If you select [Cancel] button, SVP will close this screen with out entering the data.

Copyright ©1999,2000, Hitachi, Ltd.

2.2 Update WWN/WWN Group Screen

This screen is to change WWN of WWN/WWN group and its group name.

(1) Select WWN or WWN group in WWN/WWN Group List which you want to change.



(2) In the case of changing WWN, input a new WWN in the 'Change...'. In the case of changing a WWN nickname or WWN group name, input a new nickname or group name in the 'Nickname'.

* You cannot use the following characters as a Nickname or a group name.
\ / : , ; * ? < > |

(3) Select [Set] button. SVP will display a confirmation message.

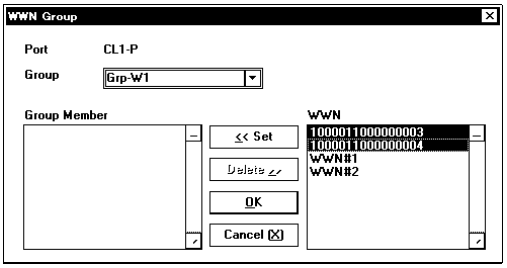
(4) If you select [OK] button, SVP will close this screen with entering the defined data in this screen. If you select [Cancel] button, SVP will close this screen with out entering the data.

Copyright ©1999, Hitachi, Ltd.

2.3 WWN Group Screen

This screen is to make WWN groups or change the member of the group. (Max:16 groups)
If a group has no or only 1 member, the group will be deleted automatically.

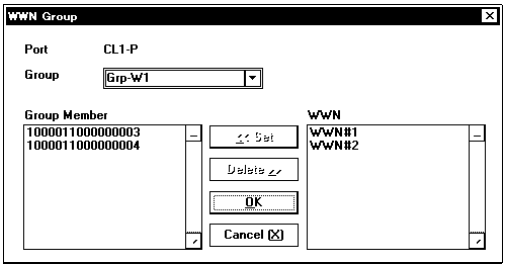
(1) Select a group from the Group List. If you enter a new group, input a new group name.



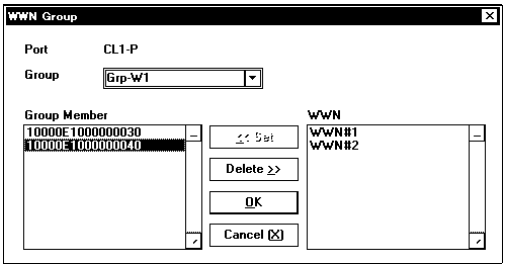
* You cannot use the following characters as a Nickname or a group name.
\ / : , ; * ? < > |

(2) Select several WWNs in the WWN list which you want to enter the member of the group.

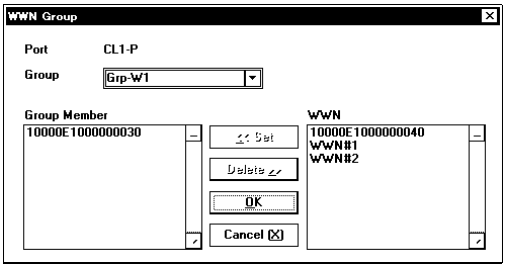
(3) Select [<<Set] button. SVP will move WWNs from the WWN List to Group Member List which you select.



(4) If you want to delete members from the group, select WWNs in the Group Member List.



(5) Select [Delete>>] button. SVP will move the selected WWNs from Group Member List to WWN list.



(6) If you select [OK] button, SVP will close this screen with entering the defined data in this screen.
If you select [Cancel] button, SVP will close this screen with out entering the data.

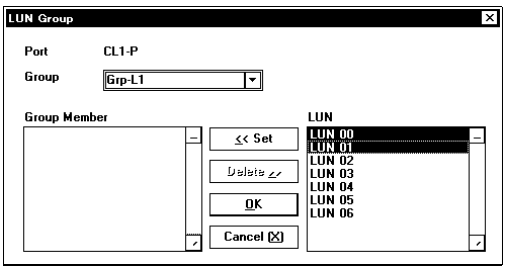
Copyright ©1999,2000, Hitachi, Ltd.

2.4 LUN Group Screen

This screen is to make LUN group or change the member of LUN group. (Max:16 groups)

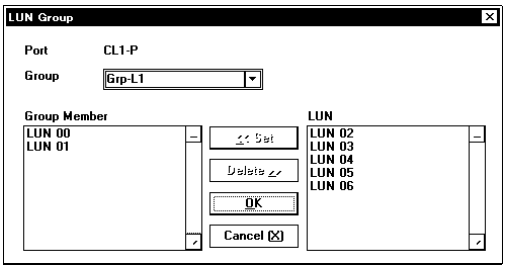
(1) Select a group form the Group List. If you make a new group, input a new group name.

* You cannot use the following characters as a Nickname or a group name.
\ / : , ; * ? < > |

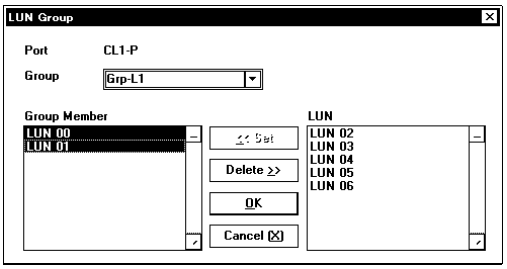


(2) Select several LUNs from the LUN list which you want to make group.

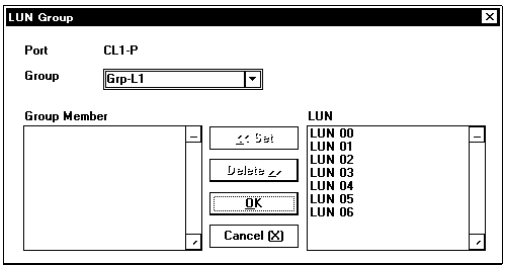
(3) Select [<<Set] button. SVP will move selected LUN from LUN List to Group Member List.



(4) If you want to delete member from the group, select the LUNs from the Group Member List.



(5) Select [Delete>>] button. SVP will move the selected LUNs from the Group Member List to LUN List.



(6) If you select [OK] button, SVP will close this screen with entering the defined data in this screen. If you select [Cancel] button, SVP will close this screen with out entering the data.

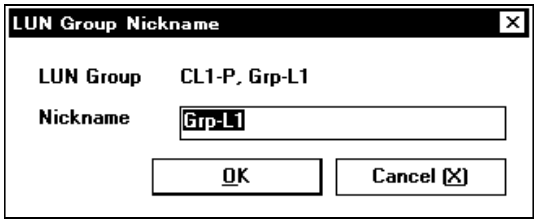
Copyright ©1999,2000, Hitachi, Ltd.

2.5 Nickname Screen

This screen is to change LUN group name.

(1) Input a nickname in the ‘Nickname’.

* You cannot use the following characters as a Nickname or a group name.
  \ / : , ; * ? < > |



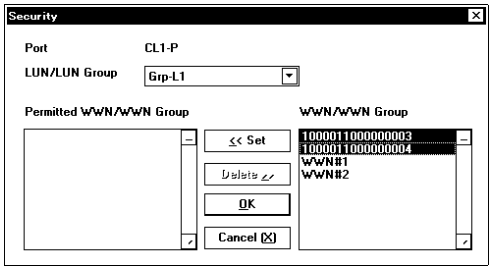
(2) If you select [OK] button, SVP will close this screen with entering the defined data in this screen. If you select [Cancel] button, SVP will close this screen with out entering the data.

Copyright ©1999, Hitachi, Ltd.

2.6 Security Screen

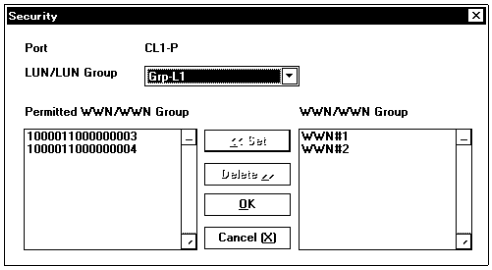
This screen is to set/reset the security information.

(1) Select LUN or LUN group in the LUN/LUN Group List which you want to set/reset.

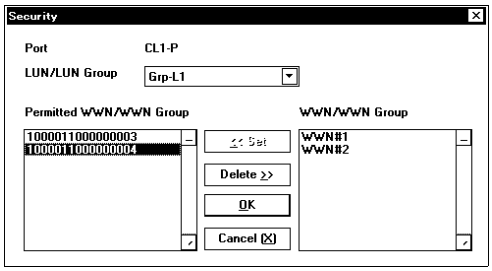


(2) Select WWN or WWN group from the WWN/WWN Group List which you want to permit the access to the selected LUN or LUN group.

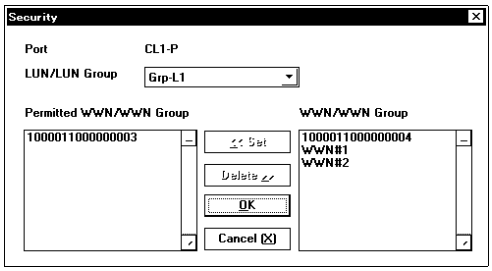
(3) Select [<<Set] button. SVP will move the selected WWN or WWN groups from WWN/WWN Group List to the permitted WWN/WWN Group List.



(4) If you want to delete the permitted list, select WWN or WWN groups from the WWN/WWN Group List.



(5) Select [Delete>>] button. SVP will move the selected WWN or WWN group from the permitted WWN/WWN Group List to WWN/WWN Group List



(6) If you select [OK] button, SVP will close this scrren with entering the defined data in this screen. If you select [Cancel] button, SVP will close this scrren with out entering the data.

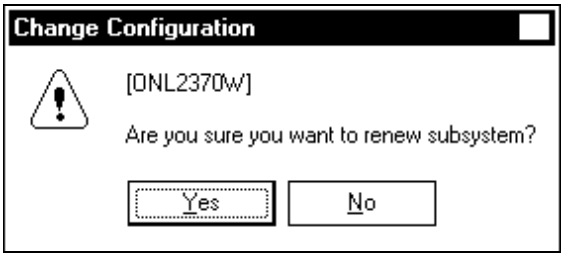
Copyright ©1999, Hitachi, Ltd.

5.3.3 System Update Processing (SVP Procedure)

5.3.3.1 Installation system update processing

(a) Power supply installation

1. <Start installation>
   Select (CL) [Yes] in response to “Are you sure you want to renew subsystem?”.



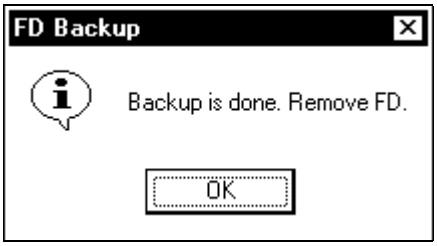
2.
   “Reading the subsystem configuration data...”
   “Checking the physical device status...”
   “Reading the environment monitor...”
   are displayed.

Copyright ©1997,1998, Hitachi, Ltd.

3. <End of system update processing>
"Renewal process has completed. Please check subsystem status." is displayed when recovery processing on all installed components is completed. Select (CL) [OK] in response to this message.

4.
"Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

5.
When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].



6. <Return to General flow page>
[In case of DKC additional power supplies and CL redundant power supplies (DKC-F310I-81/82) Installation]

Non-Disruptive Installation	: Go to INST02-20 step (3)-6.
Disruptive Installation	: Go to INST02-43 step (16)-3.

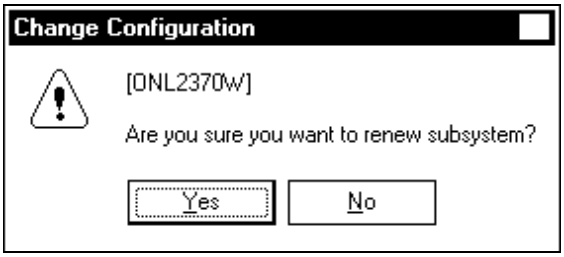
[In case of CL redundant power supplies (DKC-F310I-80) Installation]

Non-Disruptive Installation	: Go to INST02-20 step (2)-5.
Disruptive Installation	: Go to INST02-43 step (16)-3.

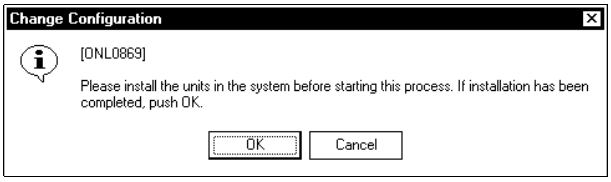
Copyright ©1997,1998, Hitachi, Ltd.

(b) CHA (DKA) installation

1. <Start installation>
   Select (CL) [Yes] in response to “Are you sure you want to renew subsystem?”.



2. <Check that hardware components are installed>
   Select (CL) [OK] after making sure that all hardware components are installed correctly in response to “Please install the units in the system before starting this process. If installation has been completed, push OK.”.



3.
   “Waiting for Power Event... Usually, several minutes (maximum 10 minutes)” is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

4. <Downloading microprogram>
Microprograms are automatically downloaded for each processor.

When CHA was installed, LCP (MCP), LCDG, MAIN, RAM BOOT Micro Programs are downloaded.

5. <CHA/DKA is restored>
CHA/DKA recovery processing is automatically executed.

6. <DKU PATH INLINE>
When DKA is installed, DKU PATH INLINE is run.

Copyright ©1997,1998, Hitachi, Ltd.

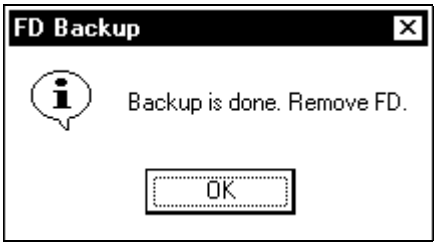
7. <End of system update processing>
"Renewal process has completed. Please check subsystem status." is displayed when recovery processing on all installed components is completed. Select (CL) [OK] in response to this message.

8.

"Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

9.

When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].



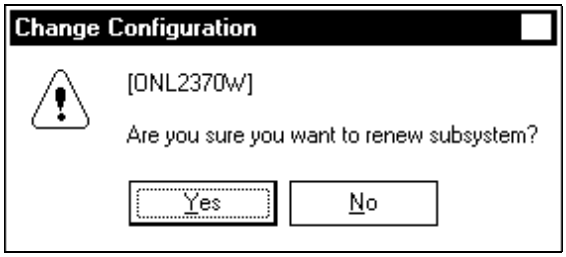
Copyright ©1997,1998, Hitachi, Ltd.

8. <Return to General flow page>
   [In case of CHAs Installation]
   Non-Disruptive Installation : Go to INST02-20 step (4)-4.
   Disruptive Installation : Go to INST02-43 step (17)-3.
   [In case of DKAs Installation]
   Non-Disruptive Installation : Go to INST02-22 step (9)-5.
   Disruptive Installation : Go to INST02-43 step (20)-3.

Copyright ©1997, Hitachi, Ltd.

(c) Cache installation

1. <Start installation>
   Select (CL) [Yes] in response to “Are you sure you want to renew subsystem?”.



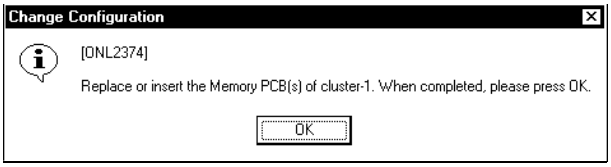
2.
   “The Shared Memory PCB is being blocked...” is displayed.

3. <Include Cache Memory>
   “The Cache Memory PCB is being blocked...” is displayed.

4.
   “Lighting LED of the PCB...” is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

5. <Perform cache hardware installation>
When “Replace or insert the Memory PCBs of cluster-x. When completed, select [OK]” is displayed, install hardware components according to the cache hardware installation procedure.

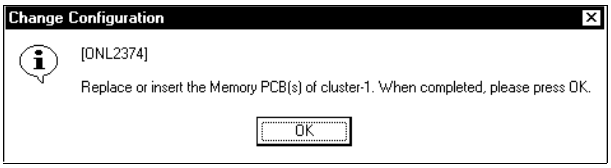


Go to the pages listed in the table below.

Cluster No.	Flowchart Page
Cluster 1	INST02-59A step ③
Cluster 2	INST02-59A step ⑤

6.

After installation of cache memory on one side is completed, select (CL) [OK] in response to “Replace or insert the Memory PCBs of cluster-x. When completed, select [OK].”.



7. <Cache CUDG executes>
“INLINE CUDG is now running...” is displayed.

8.

“Changing the configuration date, for equipment of shared/cache memory...” is displayed

Copyright ©1997,1998, Hitachi, Ltd.

9.

"Restoring the Cache Memory PCB..." is displayed.

10.

"Restoring the Shared Memory PCB..." is displayed.

11. <Recover one side of cache>
When recovery processing is completed,
"The Cache Memory PCB is being blocked..." message appears.
Processing proceeds to blocking of the other side of CACHE Memory.

Subsequently, repeat steps 2 to 10 for the other side of cache.

12. <End of system update processing>
"Renewal process has completed. Please check subsystem status." is displayed when recovery processing on all installed components is completed. Select (CL) [OK] in response to this message.

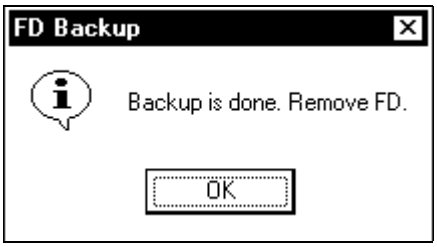
Copyright ©1997,1998, Hitachi, Ltd.

13.

"Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

14.

When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].

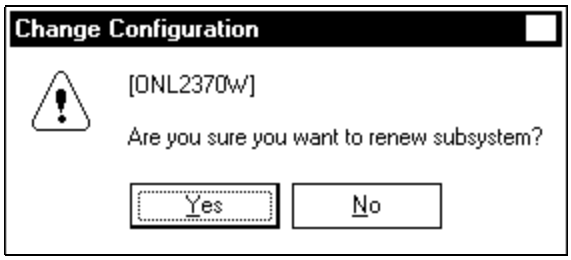


15. <Return to General flow page>
[In case of Cache Memory and Shared Memory Installation]
Go to INST02-59A step ⑦.

Copyright ©1997,1998, Hitachi, Ltd.

(c) SM installation

1. <Start installation>
   Select (CL) [Yes] in response to “Are you sure you want to renew subsystem?”.

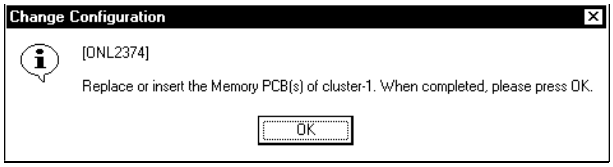


2. “The Shared Memory PCB is being blocked...” is displayed.

3. “Lighting LED of the PCB...” is displayed.

Copyright ©1998, Hitachi, Ltd.

4. <Perform cache hardware installation>
When “Replace or insert the Memory PCBs of cluster-x. When completed, select [OK]” is displayed, install hardware components according to the cache hardware installation procedure.

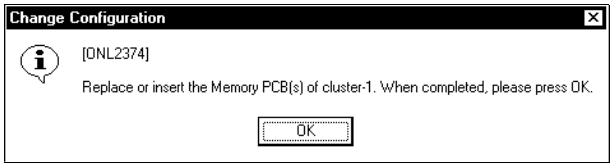


Go to the pages listed in the table below.

Cluster No.	Flowchart Page
Cluster 1	INST02-59B step ⑪
Cluster 2	INST02-59B step ⑫

5.

After installation of shared memory on one side is completed, select (CL) [OK] in response to “Replace or insert the Memory PCBs of cluster-x. When completed, select [OK].”.



6.

“Changing the configuration date, for equipment of shared/cache memory...” is displayed.

7.

“INLINE CUDG is now running...” is displayed.

Copyright ©1998, Hitachi, Ltd.

8.

"Restoring the Cache Memory PCB..." is displayed.

9.

"Restoring the Shared Memory PCB..." is displayed.

10. <Recover one side of cache>
When recovery processing is completed,
"The Shared Memory PCB is being blocked." message appears.
Processing proceeds to blocking of the other side of Shared Memory.

Subsequently, repeat steps 2 to 9 for the other side of cache.

11. <End of system update processing>
"Renewal process has completed. Please check subsystem status." is displayed when recovery processing on all installed components is completed. Select (CL) [OK] in response to this message.

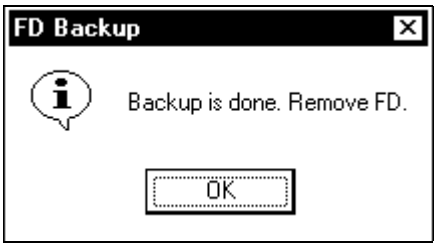
Copyright ©1998, Hitachi, Ltd.

12.

"Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

13.

When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].



14. <Return to General flow page>
[In case of Cache Memory and Shared Memory Installation]
Go to INST02-59B step ⑭.

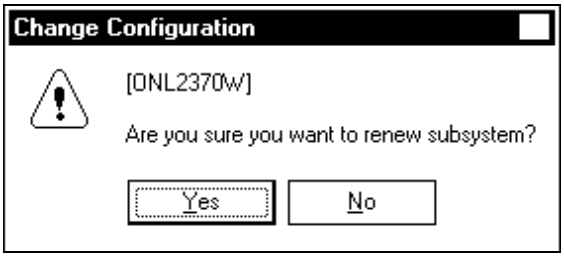
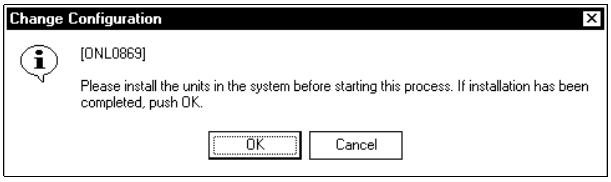
(d) HDD installation

1. <Start installation>
Select (CL) [Yes] in response to “Are you sure you want to renew subsystem?”.



2. <Check that hardware components are installed>
Select (CL) [OK] after making sure that all hardware components are installed correctly in response to “Please install the units in the system before starting this process. If installation has been completed, push OK.”.



Copyright ©1997,1998, Hitachi, Ltd.

3. <Include physical drives>
   “Upgrading the physical device...”
   “The physical device is being blocked...”
   “Changing the subsystem configuration data...”
   “Upgrading the logical device...”
   “Changing the subsystem configuration data...” are displayed.

Copyright ©1997,1998, Hitachi, Ltd.

4.

Blank

5.

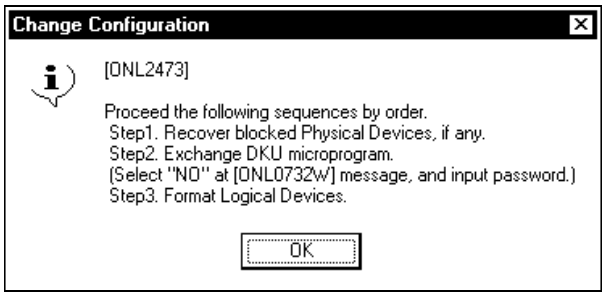
"DKU PATH INLINE is now running..." and
"Spinning up the physical devices..." are displayed.

6. <Execute DKU INLINE test>
"DKU INLINE is now running..." repeat the process for each installed Physical device.

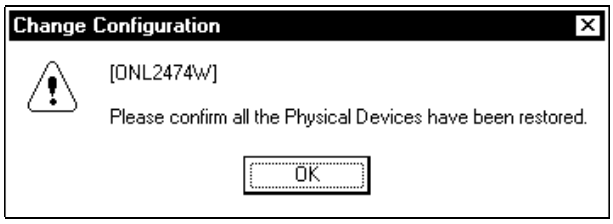
Copyright ©1997,1998, Hitachi, Ltd.

6-1.

Select (CL) [OK] in response to "Proceed the following sequences by order. Step1. Recover blocked Physical device, if any. Step2. Exchange DKU Microprogram. (Select "NO" at [ONL0732W] message, and input the password.) Step3. Format Logical devices."



If the following message is displayed, go to INST05-723.6-7.



6-2. <Check the end of installation procedure>

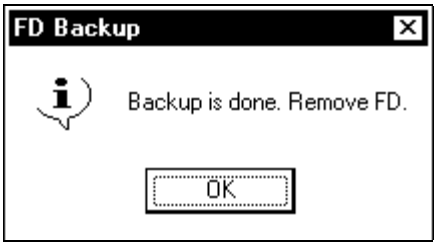
Select (CL) [OK] in response to "Renewal process has completed. Please check subsystem status."
And check subsystem status.

6-3. <FD back up>

Insert the configuration FD into FDD, select (CL) [OK].

6-4.

When this procedure is completed, message "Back up is done. Remove FD." is displayed. Remove the FD, select (CL)[OK].



Copyright ©1998, Hitachi, Ltd.

6-5. <Exchange Microprogram>

Please perform DKU micrprogram exchange.
See MICRO FC section (MICR-FC00-00)
After exchange DKU microprogram, go to 6-6.

6-6. <Logical Device format>

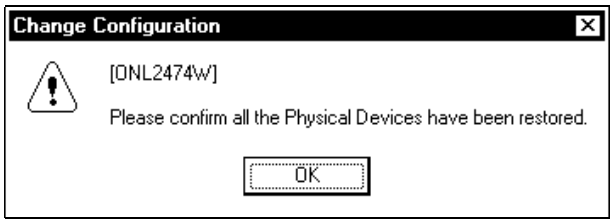
Please perform Logical Device format.
See SVP section (SVP02-610)

Go to INST05-730.

Copyright ©1998, Hitachi, Ltd.

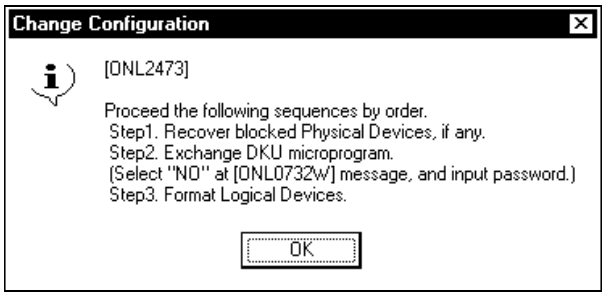
6-7. <Check of restoring physical device>

Select (CL) [OK] in response to "Please confirm all the Physical Devise has been restored."



6-8.

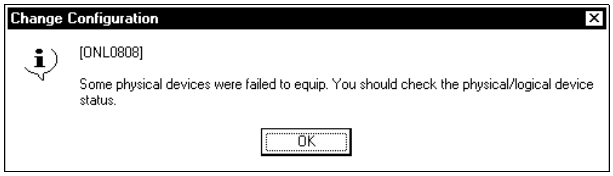
Select (CL) [OK] in response to "Proceed the following sequences by order. Step1. Recover blocked Physical device, if any. Step2. Exchange DKU Microprogram. (Select "NO" at [ONL0732W] message, and input password.) Step3. Format Logical Devices".



6-9. <Check the physical/logical device status>

Select (CL) [OK] in response to "Some physical devices were failed to equip. You should check the physical/logical device status."

And please check the physical device and logical device status.



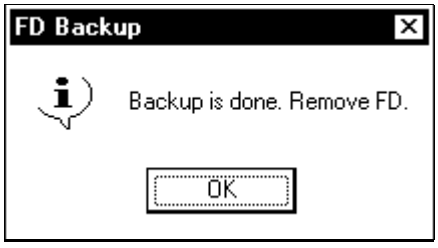
6-10. <FD back up>

Insert the configuration FD into FDD, select (CL) [OK].

Copyright ©1998, Hitachi, Ltd.

6-11.

When this procedure is completed, message “Back up is done. Remove FD.” is displayed. Remove the FD, select (CL) [OK].



6-12. <Replace Physical Device>

Please replace the blockade Physical device.

See Replace section 1.PRE-PROCEDURE B (REP02-30)
2.HARDWARE A (REP03-10)
3.POST-PROCEDURE C (From REP04-150 to REP04-180 .7)

After replacement, go to 6-13.

6-13. <Exchange Microprogram>

Please perform exchange DKU micrprogram.
See MICRO FC section (MICR-FC00-00)

After exchange DKU microprogram, go to 6-14.

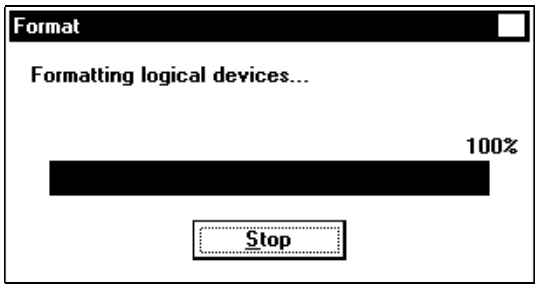
6-14. <Logical Device format>

Please perform Logical Device format.
See SVP section (SVP02-610)

Go to INST05-730.

Copyright ©1998, Hitachi, Ltd.

7. <LDEV FORMAT>
"Formatting the logical device..." is displayed.



8. <End of system update processing>
"Renewal process has completed. Please check subsystem status." is displayed when recovery processing on all installed components is completed. Select (CL) [OK] in response to this message.

9.
"Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

10.
When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].

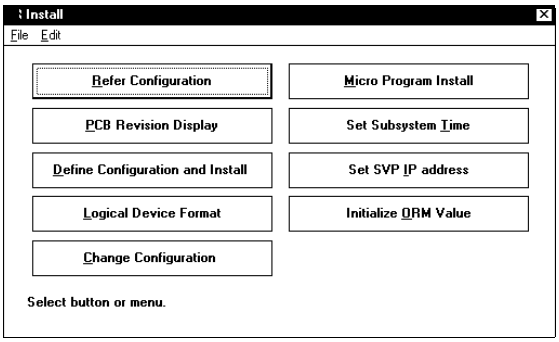
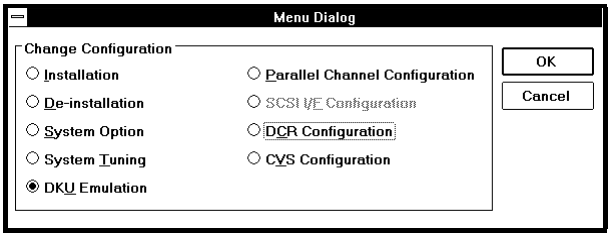
5.3.4 Emulation Type Change

1. <Mode Change>
   Change the mode to Modify Mode.
   Select (CL) [Install].

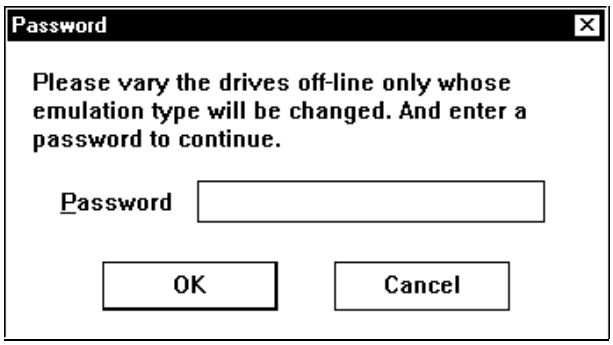
2. <Start 'Menu Dialog' screen>
   Select (CL) [Change Configuration].



3. <Start Device Structure Setup screen>
   Select (CL) [DKU Emulation] in the 'Menu Dialog' dialog box and select (CL) [OK].



4. <Input password>
   Enter the password and select (CL) [OK].



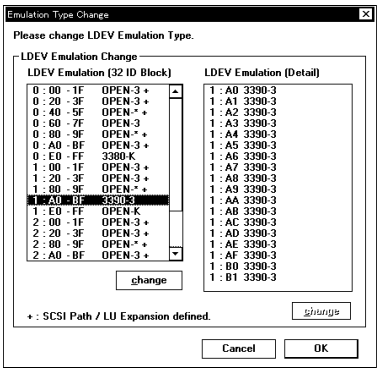
NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss if a wrong drive for which the emulation type is to be changed is selected, and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

Copyright ©1997,1998, Hitachi, Ltd.

5. Emulation Change Procedure

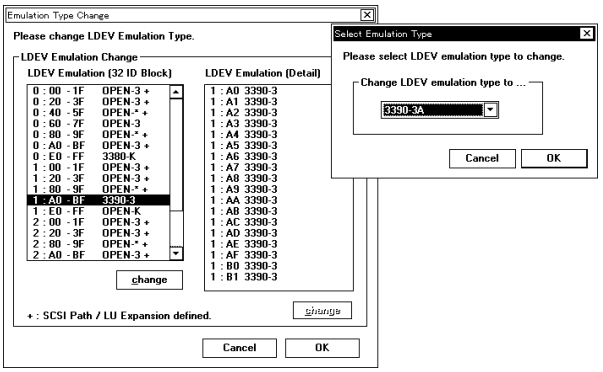
5.1 Emulation Type Change for Single Block

(1) Select (CL) a block including an LDEV for which you want to change an emulation type in the LDEV Emulation (32 ID Block) list box.



---

(2) Select (CL) the [Change] beneath the LDEV Emulation (32 ID Block) list box to open the dialog box for choosing an emulation type to be changed, and select (CL) the changed emulation type.



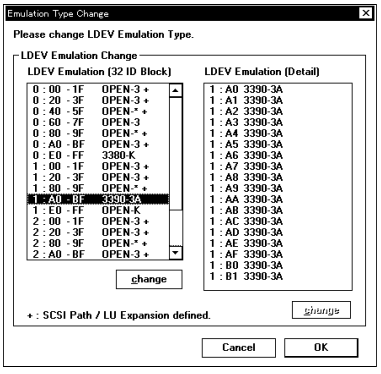
In the following case, [Change] button is not available. (It's concerned with "+" indicated LDEV.)

a) Block including volumes with SCSI path is selected.

b) Block including LU Expanded volumes is selected.

---

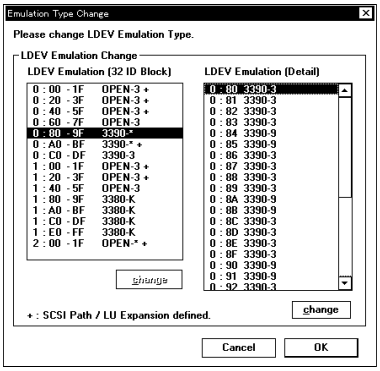
(3) Select (CL) the [OK] to set the changed emulation type. Then, the type of LDEV (selected in step (1)) having the emulation type to be changed varies to the one specified in step (2). When selecting the same LDEV block after setting the change, you can check details of the changes in the LDEV Emulation (Detail) list box.



Copyright ©1998,1999, Hitachi, Ltd.

5.2 Emulation Type Change for Single LDEV

(1) Select (CL) a block including an LDEV for which you want to change an emulation type in the LDEV Emulation (32 ID Block) list box.

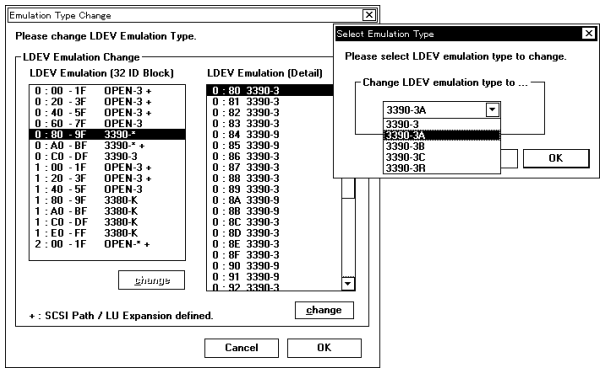


(2) In the LDEV Emulation (Detail) list box, select (CL) an LDEV of which emulation type is to be changed.

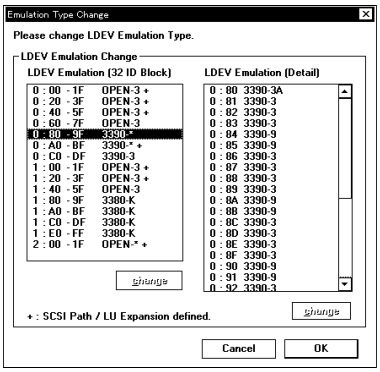
(3) Select (CL) the [Change] beneath the LDEV Emulation (Detail) list box to open the dialog box for choosing an emulation type to be changed, and select (CL) the changed emulation type.

In the following case, [Change] button is not available. (It's concerned with "+" indicated LDEV.)

a) Volume with SCSI path is selected.
b) LU expanded volume is selected.



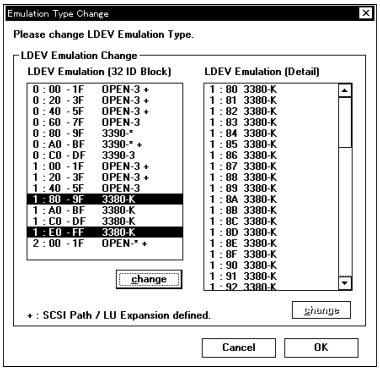
(4) Select (CL) the [OK] to set the changed emulation type.
Then, the type of LDEV (selected in step (2)) varies to the one specified in step (3).



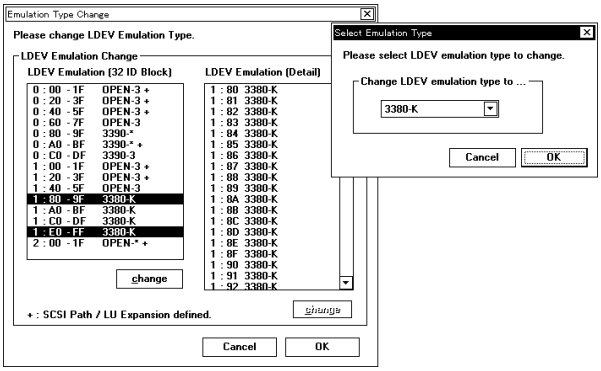
Copyright ©1998,1999, Hitachi, Ltd.

5.3 Emulation Type Change for Multiple Blocks

(1) Select (CL) blocks including an LDEV for which you want to change an emulation type in the LDEV Emulation (32 ID Block) list box.



(2) Select (CL) the [Change] beneath the LDEV Emulation (32 ID Block) list box to open the dialog box for choosing an emulation type to be changed, and select (CL) the changed emulation type.

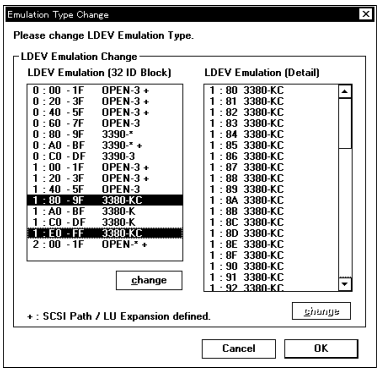


In the following case, [Change] button is not available. (It's concerned with "+" indicated LDEV.)

a) Blocks including volumes with SCSI path are selected.

b) Blocks including LU expanded volumes are selected.

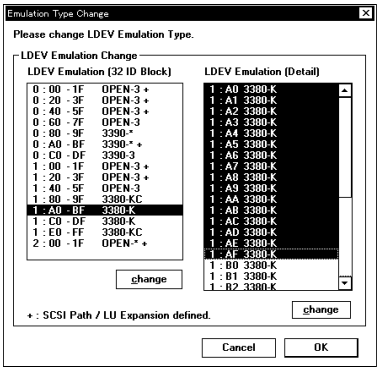
(3) Select (CL) the [OK] to set the changed emulation type. Then, the type of LDEV (selected in step (1)) having the emulation type to be changed varies to the one specified in step (2). When selecting the same LDEV block after setting the change, you can check details of the changes in the emulation LDEV Emulation (Detail) list box.



Copyright ©1998,1999, Hitachi, Ltd.

5.4 Individual Emulation Type Change for Multiple LDEVs

(1) Select (CL) a block including LDEVs for which you want to change an emulation type in the LDEV Emulation (32 ID Block) list box.

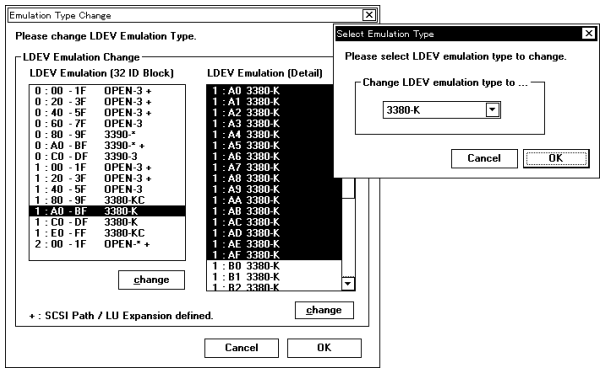


(2) In the LDEV Emulation (Detail) list box, select (CL) LDEVs of which emulation types are to be changed.

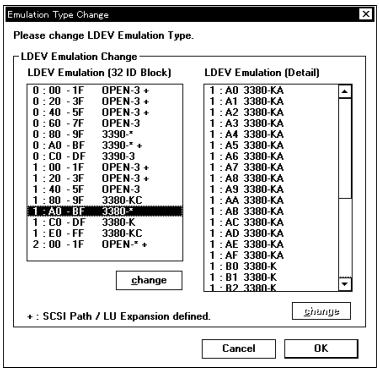
(3) Select (CL) the [Change] beneath the LDEV Emulation (Detail) list box to open the dialog box for choosing an emulation type to be changed, and select (CL) the changed emulation type.

In the following case, [Change] button is not available. (It's concerned with "+" indicated LDEV.)

a) Volumes with SCSI path are selected.
b) LU expanded volumes are selected.



(4) Select (CL) the [OK] to set the changed emulation type.
Then, the type of LDEV (selected in step (2)) varies to the one specified in step (3).



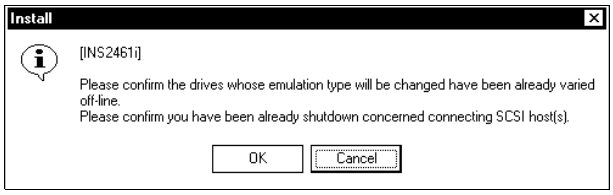
Copyright ©1998,1999, Hitachi, Ltd.

6.

Select (CL) [OK] to decide the emulation type change.
Select (CL) [Cancel] to cancel the operation.

7.

Before changing the emulation type, confirm that the drive has already been set to Vary Off-line and that the SCSI host concerned has been shut down, and then select (CL) [OK].



When [Cancel] is selected (CL), the processing is aborted.

8.

"Changing DKU Emulation" is displayed.

9. <Drive Vary On-line>

When the emulation type change processing terminates normally, the message "Changing emulation type is normal end. Please vary the drives on-line." is displayed.
Vary the drive on-line and select (CL) [OK].

Copyright ©1998, Hitachi, Ltd.

5.4 System Tuning SVP Procedure

5.4.1 System Tuning

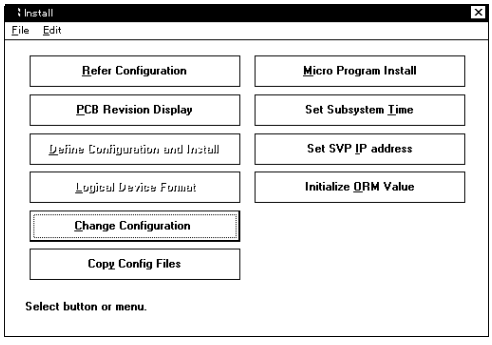
NOTICE
Powering off/on is required owing to the performance of this operation.

Overview
This function modify the part of established subsystem configuration data.
The data to be modified is control data closely related to a host device, so the data can not be modified on on-line.
After modification of the data, power DKC off and on.
The data to be modified is listed below.

'DKC Configuration' ---------- DKC Serial Number/Sub System ID/DKC Emulation Type
'Channel Configuration' -------- Channel Speed/Device Address/LDEV Control Drives
'System Option Setup' ---------- Spare Disk Recovering/Dynamic Sparing

1. <Start [Install]>
   Select [Install] from 'SVP' (CL).

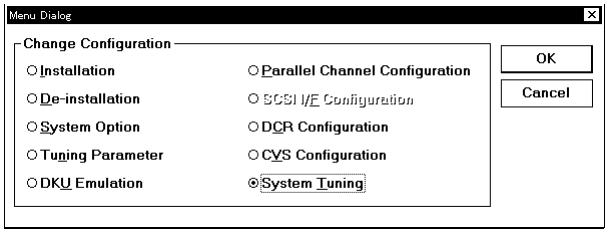
2.
   Select [Change Configuration] (CL) from 'Instal'l'.



Copyright ©1997,1998, Hitachi, Ltd.

3. <Specify beginning of installation>
Select [System Tuning] from 'Menu Dialog' (CL), and select [OK] (CL).

Message "You need agreement of Technical Support Center, and entering the password.".

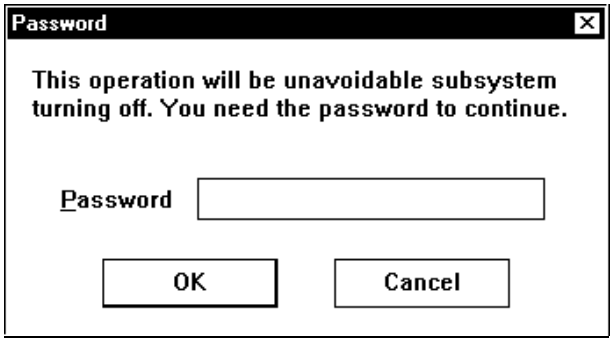


NOTICE
Powering off/on is required owing to the performance of this operation.
Ask the technical support center about the appropriateness of the operation, and input a password after getting an approval of executing the operation.

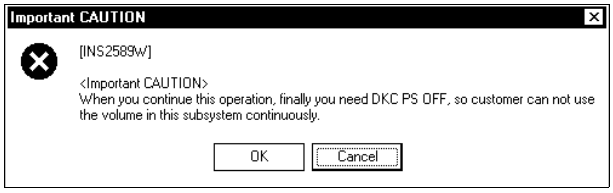
4.

(1) Enter the password and select [OK] (CL).
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.

If [Cancel] is selected (CL), terminate the installation procedure.
'DKC Configuration' is automatically displayed next.

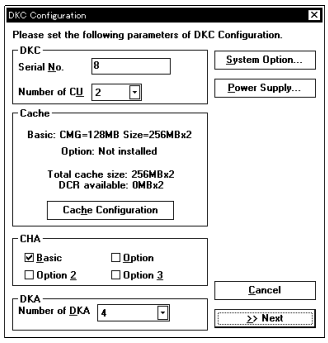


(2) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you continue this operation, finally you need DKC PS OFF, so customer can not use the volume in this subsystem continuously.".



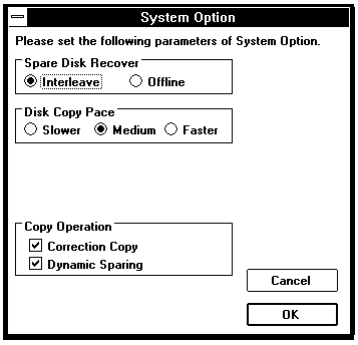
5. <Define configuration information>
Define the device configuration information from 'DKC Configuration' according to the device configuration worksheet.
When you select [>>Next] (CL), 'DKC Emulation Configuration' is automatically displayed.
This procedure finishes when you select [Cancel] (CL).

If [System Options...] is selected (CL), 'System Option' is automatically displayed.
If [Power Supply...] is selected (CL), 'Redundant Power Supply' is displayed.



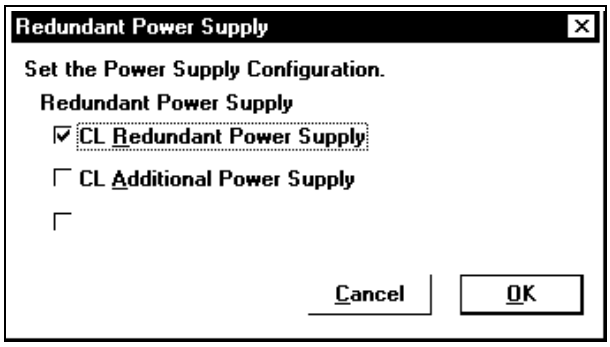
Copyright ©1997,1998, Hitachi, Ltd.

6. <System option setup>
Define the device configuration information from 'System Option' according to the device configuration worksheet.
After setting up all items, select [OK] (CL).
The next message screen is displayed.
When you select [Cancel] (CL), 'System Option' is closed and 'DKC Configuration' appears again.
Return to step 5.

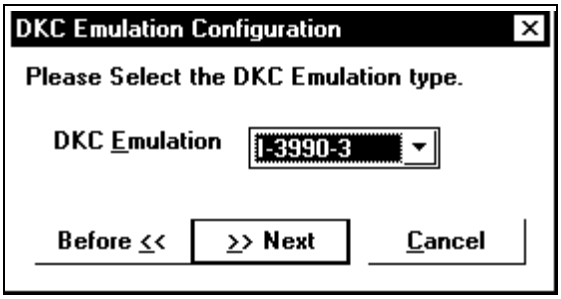


7. <Set Power Supply>
Set the power supply information in the 'Redundant Power Supply' dialog box, and select (CL) [OK].

Return to step 5.



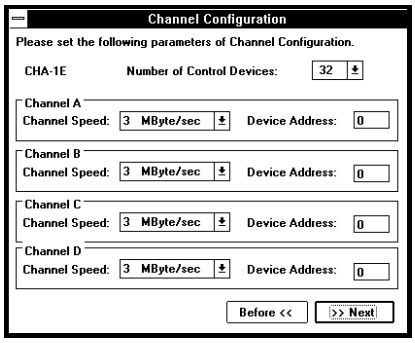
8. <Set DKC emulation type>
Define the device configuration information from 'DKC Emulation' according to the device configuration worksheet.
Selecting (CL) [>>Next] or [Before<<] returns the screen to step 5.



Copyright ©1997,1998, Hitachi, Ltd.

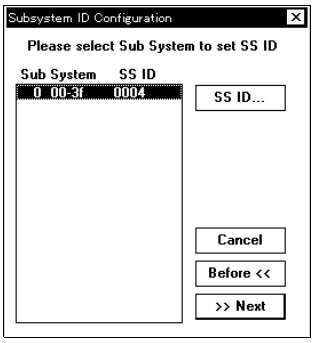
9. <Set Parallel CH>

Define the device configuration information from 'Channel Configuration' according to the device configuration worksheet.
After setting up all items, select (CL) [OK].
The next message screen is displayed.
Selecting (CL) [Cancel] returns the screen to step 8.



10. <Define Subsystem ID>

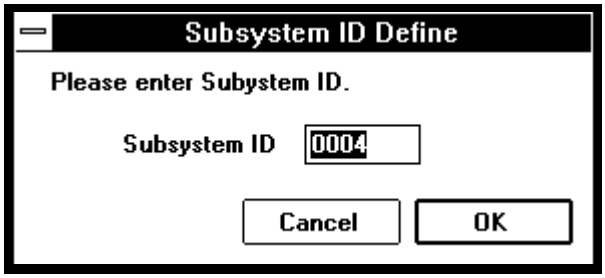
To define Subsystem ID, select (CL) [SSID].
After setting, select (CL) [>>Next].
This procedure is terminated by selecting (CL) [Cancel].



11.

Define Subsystem ID and select (CL) [OK].
Return to step 10.

"Checking subsystem configuration..." is displayed.

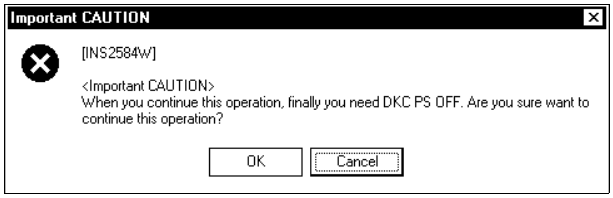


12. <Include configuration information>

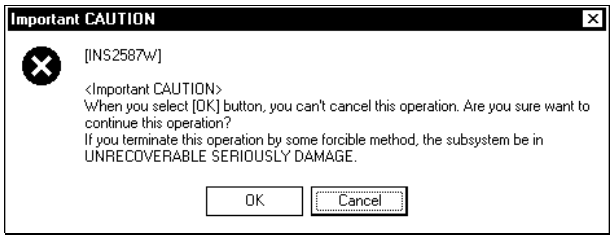
(1) Select (CL) [Yes] in response to the confirmation message "Are you sure you want to install the defined configuration?".
"Wait..." is displayed, then "Turn off the subsystem" is displayed.
Selecting (CL) [No] suppresses the configuration inclusion processing and terminates the installation procedure.

Copyright ©1997,1998, Hitachi, Ltd.

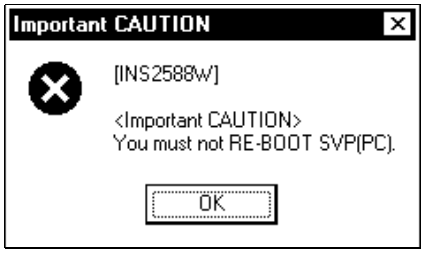
(2) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you continue this operation, finally you need DKC PS OFF. Are you sure want to continue this operation?".



(3) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
When you select [OK] button, you can't cancel this operation. Are you sure want to continue this operation?
If you terminate this operation by some forcible method, the subsystem be in UNRECOVERABLE SERIOUSLY DAMAGE.".



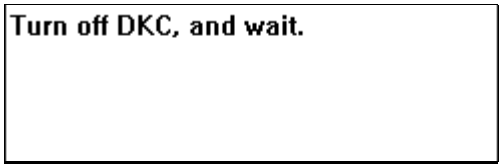
(4) Select (CL) [OK] in response to the confirmation message "<Important CAUTION>
You must not RE-BOOT SVP(PC).".



Copyright ©1998, Hitachi, Ltd.

13.

Make sure that “Turn off DKC, and wait.” is displayed and perform the power-off procedure from the DKC maintenance panel.
After a while “Wait...” is displayed.



14.

This step causes the contents of the SVP HD to be loaded into SM and FM.
When this procedure is completed, message “Please insert config FD in FDD.” is displayed.

15.

Insert the configuration FD into FDD, select [OK].

16.

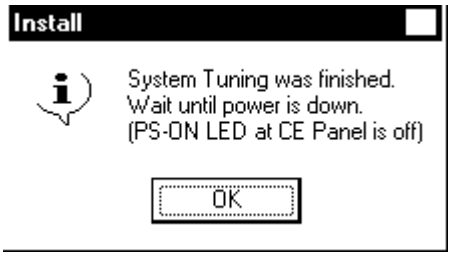
When this procedure is completed, message “Backup is done. Remove FD.” is displayed.
Remove the FD, select [OK].

Copyright ©1997, Hitachi, Ltd.

17.

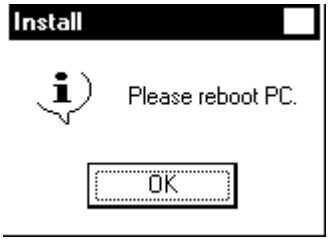
After making sure that DKC power is turned off, select [OK] (CL) in response to “System Tuning was finished.”. The initial INSTALL screen is restored.

Note : SVP power will not turn off even when DKC is powered off.



18.

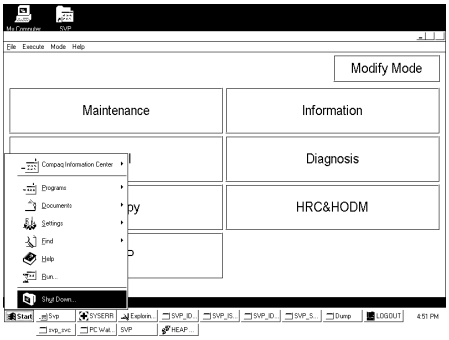
“Please reboot PC” is displayed.
Select [OK] (CL).



19.

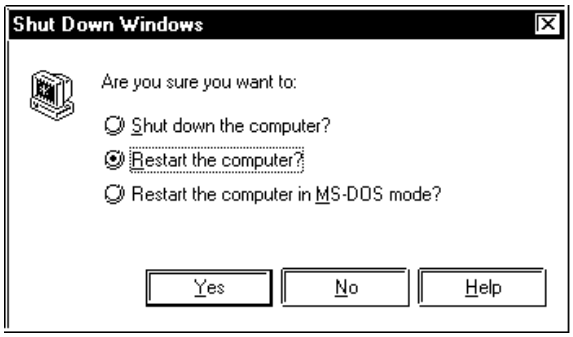
Close ‘Install’.

(1) <Shut Down Windows>
Select (CL) [Start].
Select (CL) [Shut Down].



(2) <Reboot the PC>
Select (CL) “Restart the computer” from Shut Down Windows, and select (CL) [Yes] in response to “Are you sure you want to:”.

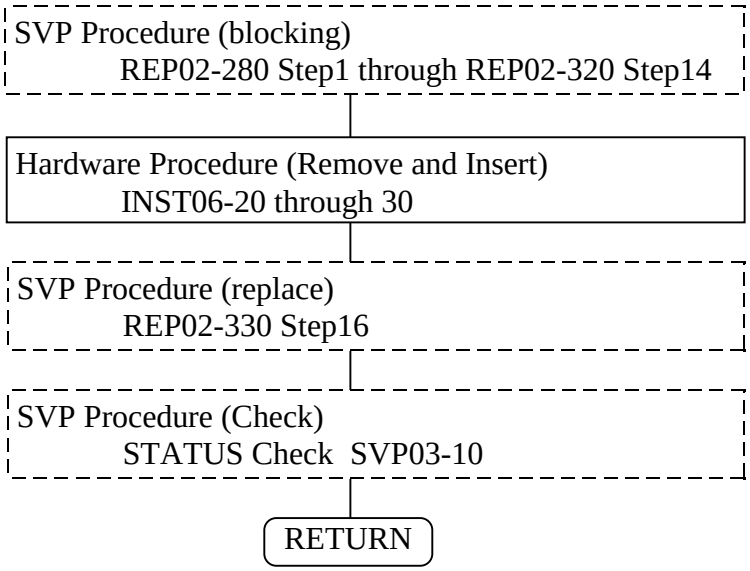
Turn the “POWER ON/OFF” switch on the CE panel PCB to “ON”.



Copyright ©1997,1998, Hitachi, Ltd.

6 Remove and Insert the PCB

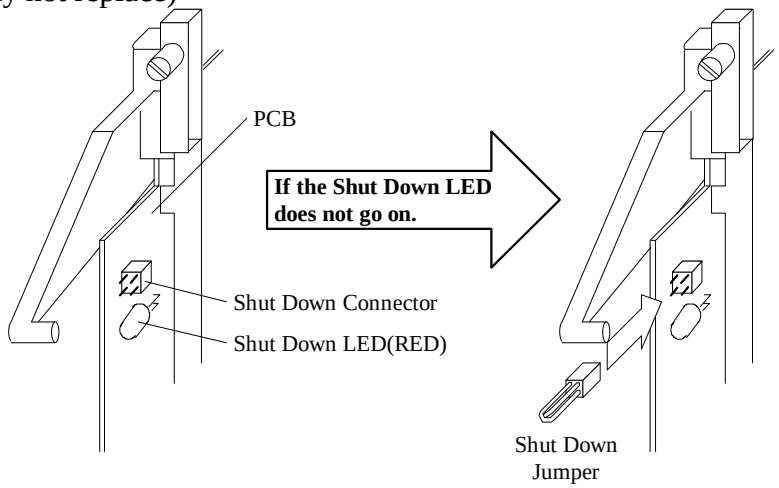
6.1 Procedure to Remove and Insert the PCB



Copyright ©1998, Hitachi, Ltd.

<Hardware Procedure>

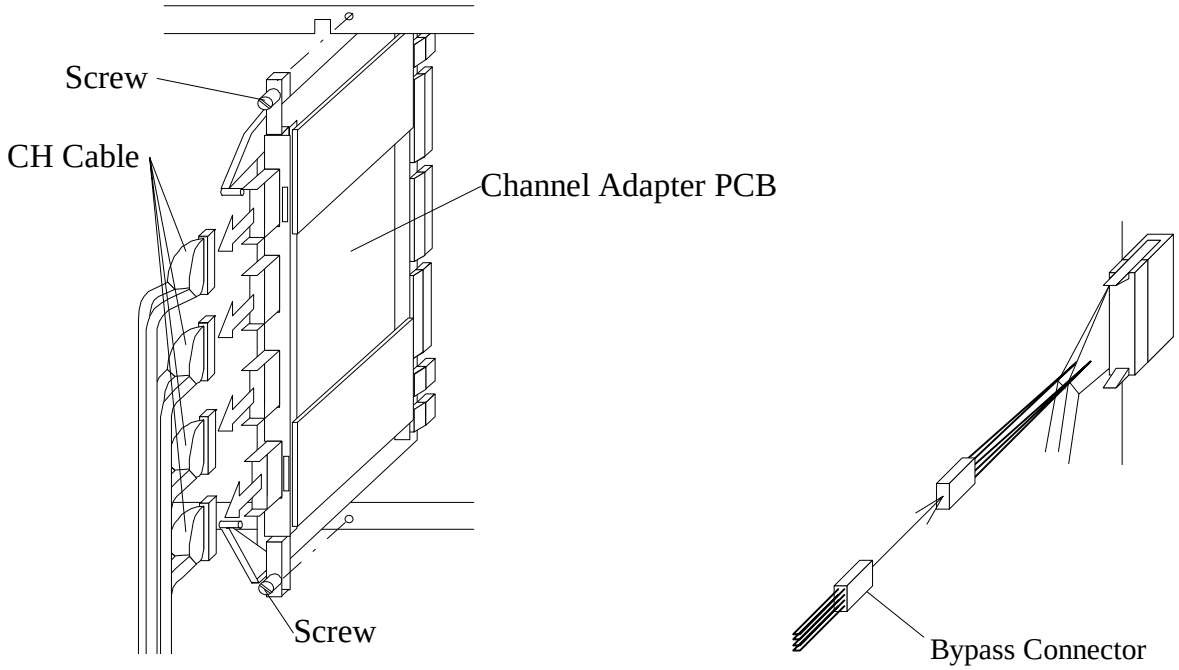
1. Check that the Shut Down LED is on. If not, connect the Shut Down Jumper to the Shut Down Connector. (only hot replace)



2. Remove the PCB.

Note: If the DKC is connecting with the other DKC, the bypass connectors must be inserted to all CH cables that connect to the PCB to be removed.

a. Disconnect the CH cables from the target Channel Adapter PCB.
b. Remove the two screws and remove the target Channel Adapter PCB.
c. If the Shut Down Jumper is used, remove it.



Copyright ©1998, Hitachi, Ltd.

3. Insert the target PCB to the correct location and fasten the two screws.

4. Connect the CH cables to the target PCB.

Note: If the bypass connectors are used, remove them.

5. Return to INST06-10.

Copyright ©1998, Hitachi, Ltd.

7 HRC & HODM

7.1 HRC/HODM Components

(1) HRC Components

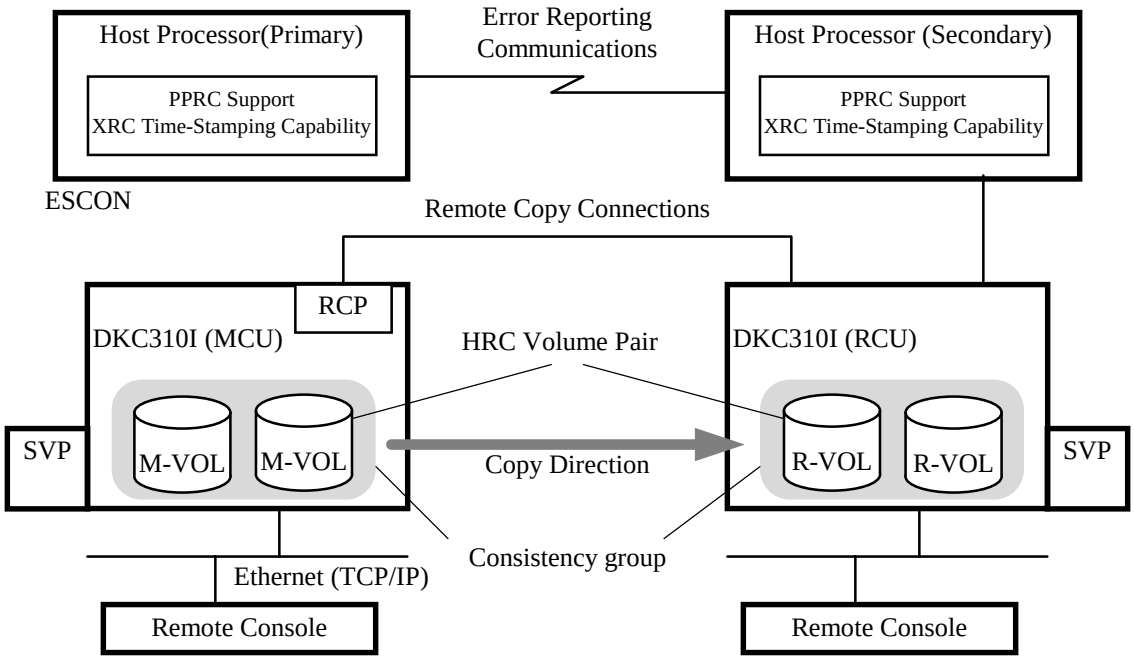


Fig. 7-1 HRC Components

(a) HRC Volume Pair

An **HRC volume pair** consists of two logical volumes, an M-VOL and an R-VOL, in different DKC310I subsystems.

An **M-VOL** (main volume) is a primary volume. It can be read or written by I/O operations from host processors.

An **R-VOL** (remote volume) is a secondary or a mirrored volume. Under control of the DKC310I subsystems, contents of an M-VOL and updates from host processors are copied to an R-VOL. Read or write I/O operations from host processors to R-VOLs are rejected.

The M-VOLs of the HRC volume pairs and the R-VOLs of other HRC volume pairs can be intermixed in one DKC310I subsystem.

Copyright ©1998,1999, Hitachi, Ltd.

(b) MCU and RCU

An **MCU** (main disk control unit) and an **RCU** (remote disk control unit) are disk control units in the DKC310I subsystems to which the M-VOLs and the R-VOLs are connected respectively.

An MCU controls I/O operations from host processors to the M-VOLs and copy activities between the M-VOLs and the R-VOLs. An MCU also provides functions to manage HRC status and configuration.

An RCU executes write operations directed by the MCU. The manner to execute write operations is almost same as that of I/O operations from host processors. An RCU also provides a part of functions to manage HRC status and configuration.

Note that an MCU/RCU is defined on each HRC volume pair basis. One disk control unit can operate as an MCU to control the M-VOLs and an RCU to control the R-VOLs.

(c) Remote Copy Connections

An MCU and an RCU must be connected with serial interface (ESCON) cables. Only multi mode ESCON cables whose length is up to 3km can be connected to the DKC310I subsystems. In order to locate the DKC310I subsystems more than 3km apart, IBM 9032/9033 ESCON directors or 9036 ESCON repeaters are required. Furthermore, the distance between an MCU and an RCU becomes unrestricted by connecting a Channel Extender (CX5000 manufactured by CNT).

At least two independent remote copy connections should be established between an MCU and an RCU.

(d) RCP

An **RCP** (remote control port) is a serial interface port to which an RCU is connected. Any serial interface port of the DKC310I subsystems can be configured as an RCP.

When an MCU communicates with an RCU through ESCON interface protocol, the RCP plays the role of a host processor channel. The RCP supports ESCON dynamic connection. A serial interface port of the RCU to which the MCU is connected can be connected to host processor channels by using dynamic switching capability provided by ESCON directors.

However an RCP can not communicate with host processor channel. Channel interface paths must be connected to other serial interface ports.

Copyright ©1998, Hitachi, Ltd.

(e) SVP and Remote Console

An **SVP** provides functions to set up, modify and display HRC/HODM configuration and status.

A **remote console** is a personal computer compatible with the PC/AT. It should be connected to DKC310I subsystems with an Ethernet network(TCP/IP). A remote console provides same managing HRC/HODM functions as an SVP. Several DKC310I subsystems can be connected with one Ethernet network.

For remote console, Hitachi provides only two software components, an HRC/HODM application program and dynamic link library. Both of them require Microsoft Windows operating system. A personal computer, Ethernet materials and other software products are not provided by Hitachi.

(f) Error Reporting Communications

Error reporting communication is a communication means between host processors. An MCU generates the sense information when it fails in keeping synchronization of HRC volume pair. The sense information causes the corresponding message to be displayed on the host processor console. For the reference during disaster recovery at the secondary (recovery) site, this console message should be transferred to the secondary site through the error reporting communication.

The error reporting communications may be configured by using channel-to-channel communications, Netview technology or other interconnect technologies, depending on installation. Hitachi does not provide any product for error reporting communications.

(g) PPRC Support

HRC provides a host processor interface compatible with IBM PPRC. TSO commands, DSF commands and disaster recovery PTFs provided for PPRC can be used for HRC.

Note. Although HRC asynchronous is not fully compatible to PPRC, it can be controlled and monitored with PPRC host facilities, PPRC TSO commands, ICKDSF PPRC commands and some console messages. For this purpose, MVS/DFP 3.2.0 or higher level and ICKDSF release 16 or upper are available.

Copyright ©1998,1999, Hitachi, Ltd.

(h) XRC Time-Stamping Capability (For HRC Asynchronous)

In case of N-to-1 configuration, the XRC time-stamping capability requires to be installed in the primary host system. MVS/DFP 3.2.0 or higher level is required.

In order to get benefit of time-stamping capability during copy-back process (pair establishment from the secondary to the primary subsystem), the XRC time-stamping capability recommends to be installed in the secondary system.

If the primary system (and the secondary system) consists of several CPU complexes, SYSPLEX timer must be installed for common time reference.

(i) Consistency group

HRC asynchronous ensures update-sequence-consistency across several volume pairs. It also provides some group-based operations. A set of volume pairs treated by such group-based functions is called a consistency group.
HRC asynchronous supports 16 consistency groups at maximum. Every HRC asynchronous volume pair belongs to one consistency group.

HRC/HODM operations from an SVP or a remote console and the corresponding TSO commands are shown in Table 7.1-1. Before using TSO commands or DSF commands for PPRC, the serial interface ports to which the RCU(s) will be connected must be set to the RCP mode. Refer to page INST07-160 for this operation. Table 7.1-2 shows the value of the SAID (system adapter ID) parameters required for CESTPATH command. For full description on TSO commands or DSF commands for PPRC, refer to the appropriate manuals published by IBM corporation.

Copyright ©1999, Hitachi, Ltd.

Table 7.1-1 HRC operations and corresponding TSO commands for PPRC

Function	HRC/HODM operations	TSO commands
Registering an RCU and establishing remote copy connections	Add RCU	CESTPATH (note)
Adding or removing remote copy connection(s)	Edit Path	CESTPATH
Deleting an RCU registration	Delete RCU	CDELPATH
Registering consistency groups	Add Group	—
Deleting consistency group registration	Delete Group	—
Establishing an HRC volume pair	Add Pair	CESTPAIR MODE (COPY)
Suspending an HRC volume pair	Suspend Pair	CSUSPEND
Disestablishing an HRC volume pair	Delete Pair	CDELPAIR
Recovering an HRC volume pair from suspended condition	Resume Pair	CESTPAIR MODE (RESYNC)
Controlling HRC volume groups	—	CGROUP

(2) HODM Components

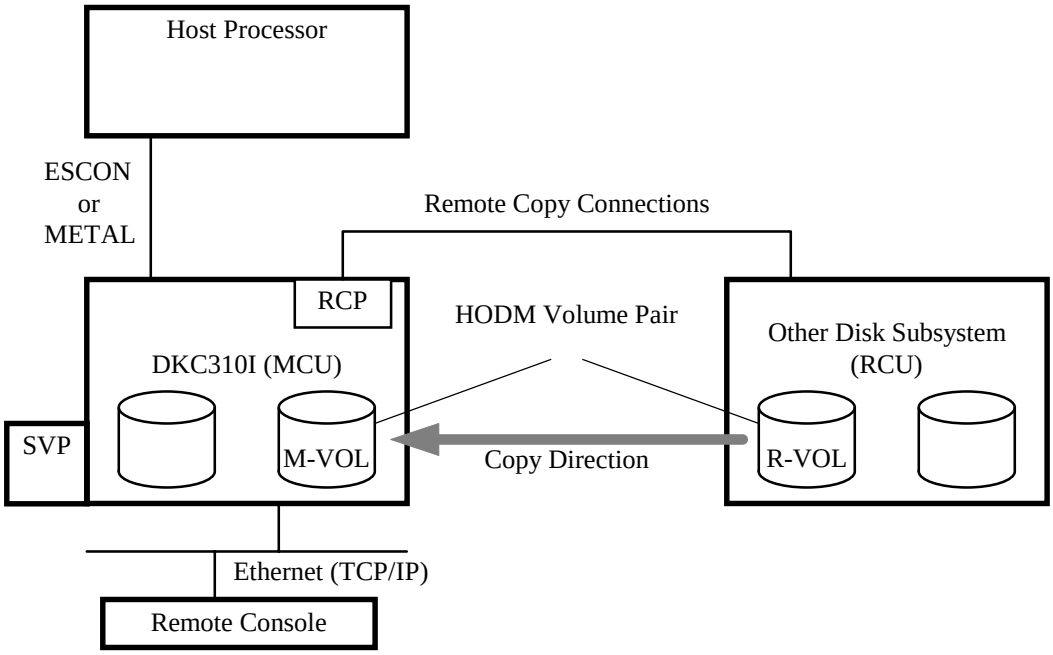

Fig. 7-2 HODM Components

(a) HODM Volume Pair

An **HODM volume pair** consists of one logical volume in a DKC310I subsystem and another disk volume in another disk subsystem, called an **M-VOL** and an **R-VOL** respectively. But you can not establish HODM volume pair on condition that R-VOL is Dual Copy volume.

HODM copies the data written in the R-VOL into the M-VOL. Responding to read I/O operations from host processors to the M-VOL, HODM transfers the data read from the R-VOL if the requested data has not yet copied.

Except for MCU,R-VOL should be protected from being updated during HODM. An operating environment must ensure this requirement because HODM does not protect it.

(b) MCU and RCU

An **MCU** is the disk control unit of a DKC310I subsystem. An **RCU** is the disk control unit of another disk subsystem in the HODM configuration.

Copyright ©1998, Hitachi, Ltd.

(c) Remote Copy Connections

An MCU and an RCU must be connected with serial interface (ESCON) cables. Only multi mode ESCON cables whose length is up to 1km can be connected to the DKC310I subsystems. Although IBM 9032/9033 ESCON directors and 9036 ESCON repeaters are supported, the longer distance is not recommended because of performance reasons.

(d) RCP

An **RCP** is a serial interface port to which an RCU is connected. Any port of DKC310I subsystems can be configured as an RCP.

When an MCU communicates with an RCU through an ESCON interface protocol, an RCP plays the role of a host processor channel. An RCP supports ESCON dynamic connection. A serial interface port of an RCU to which an MCU is connected can be connected to host processor channels by using dynamic switching capability provided by ESCON directors.

However an RCP can not communicate with a host processor channel. Channel interface paths must be connected to other serial interface ports.

(e) SVP and Remote Console

An **SVP** provides functions to set up , modify and display HRC/HODM configuration and status.

A **remote console** is a personal computer compatible with a PC/AT. It should be connected to the DKC310I subsystems with an Ethernet network (TCP/IP). A remote console provides same managing HRC/HODM functions as an SVP. Several DKC310I subsystems can be connected with one Ethernet network.

For a remote console, Hitachi provides only two software components, an HRC/HODM application program and dynamic link library. Both of them require Microsoft Windows operating system. A personal computer, Ethernet materials and other software products are not provided by Hitachi.

Copyright ©1998, Hitachi, Ltd.

7.2 HRC Software Requirements

Minimum level for HRC is MVS/DFP 3.2.0 + PTF or VM/ESA 2.1.0 + PTF.

- Optional error recovery procedure (ERP) functions - MVS/DFP 3.2.0 or above.
- ICKDSF R16 + PTF functions - VM/ESA 2.1.0 or above.

Y: Supported
N: Not supported

- Emulation type of an MCU and RCU can be different.
- Emulation type of an M-VOL and R-VOL must be same.
- CVS/DCR is able to define on the M-VOL and R-VOL.
- The 3990-6E DKC emulation supports only 3390 DKU emulation.
- The M-VOL must have the same track sizes, and the same or larger volume capacities, as the R-VOL. (note (1))
- When T-VOL of HMRCF is established as M-VOL of HRC, the T-VOL must be “Split” state. If not so, an equipment check error will occur in establishing HRC pain.

Note;

(1) When executing an HRC between volumes with different capacities, take notice of the following.
  ① State of the subsystem when executing the HRC
  All M-VOL data including the VTOC is physically copied by executing the HRC. Accordingly, the R-VOL is recognized as having the same capacity as that of the M-VOL in the HRC execution.
  ② Expansion of the VTOC
  It is needed to expand the VTOC to make the R-VOL simplex and be accessed as having the normal capacity by the host. The VTOC is expanded by issuing the ICKDSF REFORMAT (REFVTOC) command.
  * The system environment is required to support the REFVTOC parameter. This parameter can be executed only by the ICKDSF which supports the PPRC function.

Y : Supported

N : Not support (“Not support” means as “Not operative” and “Not certified”.)

Note;

(1) HODM via CNT Converter (CX5000) supports only for HITACHI models and IBM 3990-3/3990-6 models which are described on Table 2-5. The other models is not certified.

(2) In case of HODM from DKC210I/205I, the DKC emulation type (RCU) is only allowed 3990-3/6/6E.

(3) Cache/NVS status (SUBSYSTEM CACHE, NVS, DFW and DEV CACHE) of the RCU must be On.

(4) STK/ICEBERG consists 4 CU Image per 64 Volumes. It is necessary to define each CU Image as one RCU. (Do Add RCU for each CU Image.)

(5) No SC model is supported.

(6) CVS/DCR is able to define on the R-VOL.

(7) When executing an HODM between volumes with different capacities, take notice of the following after a migration is completed.

① State of the subsystem when the migration is completed
All data in the migration source volume including the VTOC is physically copied by executing the HODM. Accordingly, the destination volume is recognized as having the same capacity as that of the source volume when the migration is completed.

② Expansion of the VTOC
It is needed to expand the VTOC to use the destination volume as having the normal capacity. The VTOC is expanded by issuing the ICKDSF REFORMAT (REFVTOC) command.

* The system environment is required to support the REFVTOC parameter. This parameter can be executed only by the ICKDSF which supports the PPRC function.

Copyright ©1998,1999, Hitachi, Ltd.

(3) Remote Console Requirements

An HRC/HODM application software and dynamic link library require Microsoft Windows 95.

(4) Distance between MCU and RCU

An MCU and an RCU must be connected with serial interface (ESCON) cables. Only multi mode ESCON cables whose length is up to 3km can be connected to the DKC310I subsystems. In order to locate disk subsystems more than 3km apart, IBM 9032/9033 ESCON directors (ESCDs) or 9036 ESCON repeaters are required.

IBM 9032/9033 ESCON director supports an extended distance facility (XDF). The XDF uses single mode ESCON cables of which length is up to 20km. IBM 9036 ESCON repeater supports single mode - to - single mode connection or single mode - to - multi mode connection. In order to locate disk control units more than 9km apart, the XDF connections provided by the ESCON directors or ESCON repeaters are required.

Maximum distance between disk subsystems is 43km.

Furthermore, the distance between an MCU and an RCU becomes unrestricted by connecting a Channel Extender (CX5000 or ULTRANET manufactured by CNT). (refer to INST07-150 Appendix B)

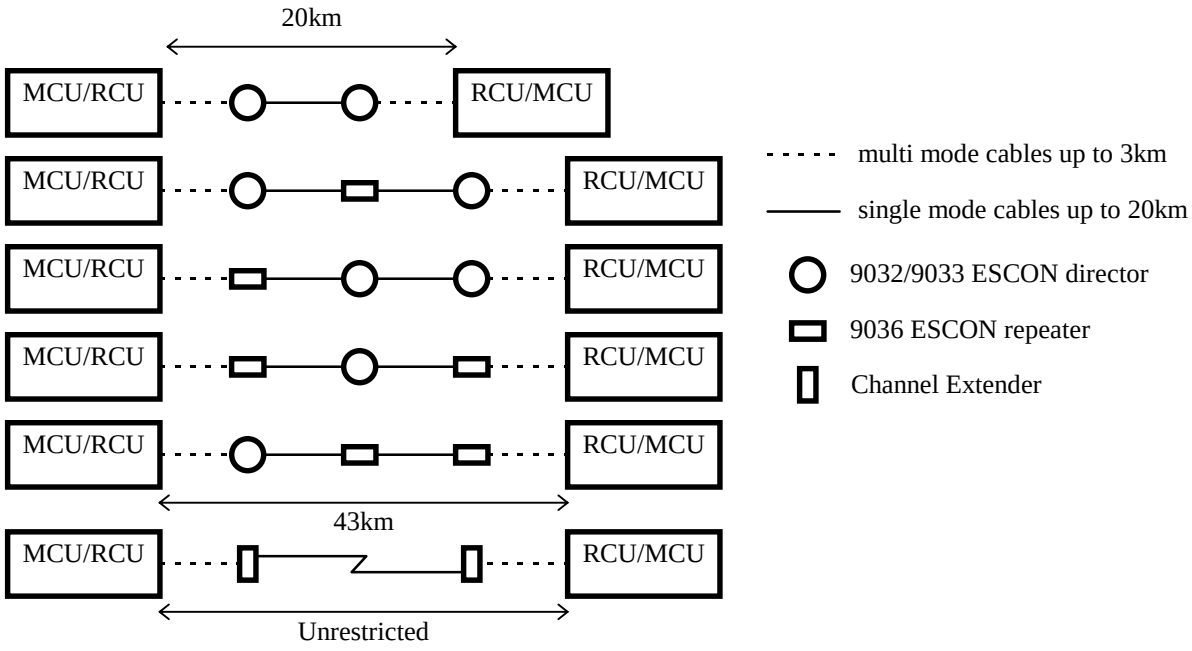

Fig 7.3-1 Distance between Disk subsystems

Copyright ©1998,1999, Hitachi, Ltd.

(5) Recommendation of MIH time and HRC/HODM configuration

Recommendation of MIH time is 60 sec. for HRC, and 120 sec. for HODM. In addition that, MIH time had better be set in consideration of the following factor.

- The number of pair volumes
- Cable length between MCU and RCU
- Volume status (Initial copy status)
- Under maintenance operation

When HRC/HODM configuration is instructed, take notice of as follows.

- The logical paths between MCU and RCU had better be established independent of the logical paths between Host and RCU.
- The logical paths between MCU and RCU had better be established maximum paths.
- RCP port had better be set in consideration of the host I/O rate and remote copy procedure.
- The Only important volumes had better be established HRC pair.
- Under the situation where the number of paths between MCU and RCU is decreased due to path failure, the traffic of the remaining paths is raised. It may cause some time-out I/O operation to RCU, and a lot of the time-out might cause suspension of HRC/HODM pair.

When HRC asynchronous configuration is instructed, take notice of as follows in addition to above.

- The cache amount of MCU had better be set two times of the RCU's

(6) Requirements for Track format, Cache, NVS, DASD Fast Write

Track format Cache, NVS, DASD Fast Write must satisfy following conditions for both of M-VOL and R-VOL of HRC/HODM.

		HRC		HODM	
		M-VOL	R-VOL	M-VOL	R-VOL
Track format	Track format of record zero	Standard format			
	Key length of record zero	Zero			
	Data length of record zero	Eight			
	CCHH of record zero	Identical to physical cylinder address and physical head address of a track			
	CCHH of each user records	Unique in a track			
Cache		Depends on HRC pair option*	Depends on HRC pair option*	No restriction	No restriction
NVS		Depends on HRC pair option*	Depends on HRC pair option*	No restriction	No restriction
DASD Fast Write		Depends on HRC pair option*	Depends on HRC pair option*	No restriction	No restriction

* : Required if "DFW to R-VOL" option is set.

(7) HRC available CU image

CU#0 ~ CU#3

(8) HODM available CU image on MCU

CU#0 ~ CU#3

AppendixA: HRC/HODM Installation check list

Table 7.3-4 HRC/HODM Installation Check List

No.	Item	Check
1	MCU/RCU emulation type must be correct. (See Table 7.3-1 and Table 7.3-2)	
2	M_VOL/R_VOL emulation type must be correct. (See Table 7.3-1 and Table 7.3-2)	
3	OS version must be as followed. • Optional error recovery procedure (ERP) functions - MVS/DFP 3.2.0 or above. • ICKDSF R16 + PTF functions - VM/ESA 2.1.0 or above.	
4	RCP port must be set. (See INST07-170 SECTION)	
5	ESCON cable between MCU and RCU must be connected.	
6	ESCON cable test between MCU and RCU must be executed.	

AppendixB: Guide for HRC via EXTENDER(CHANNELink(CX5000), ULTRANET)

0. Preliminary remarks

This is the guide for HRC operation via Computer Network Technology's (CNT's) CHANNELink and UltraNet Storage Director products. These two CNT products provide channel extension (store and forward functionality) between a Hitachi MCU and RCU used in an HRC configuration. The channel extension provided by the CNT products allows the ESCON connection between the MCU(s) and the RCU(s) to be greater than the ESCON standard 43 km apart but still provide near native data transfer between the MCU and RCU.

Copyright ©1998,1999, Hitachi, Ltd.

1. Summary of Specification

Table 7.3-5 Summary of Specification

		CHANNELink(CX5000)		ULTRANET	
Copy Mode		Sync/Semisync	Asynchronous	Sync/Semisync	Asynchronous
u-code Version	RAID300	52-35-xx or later	52-39-xx or later	52-36-xx or later	52-39-xx or later
	Extender	CHANNELink Release 4.3 with SSDX at version 4.9 or later	CHANNELink Release 4.3 with SSDX at version 4.B or later	UltraNet Release 2.2 with SSDX at version 4.9 or later	UltraNet Release 2.2 with SSDX at version 4.B or later
Link Types(between local and remote Extenders)		T3		ATM T3	
Maximum Number of physical ESCON paths(between RAID300 and EXTENDER)		3 or 4 ESCON Interfaces (*1)		8 ESCON Interfaces(*2)	
Combination of MCU and RCU		The following combination are available. (for example, refer to Fig 7.3-2, 7.3-3, 7.3-4) MCU:CU#n <=> RCU:CU#m (0<=n<=3, 0<=m<=3) [restriction] A CU image of the RCU can not be shared by more than one CU images of the MCU(s) that are connected to the same ESCON port(s) of the local extender.(Fig 7.3-5) If the CU image of the RCU requires to be shared, the CU images of the MCU(s) must be connected to the different ESCON port(s) as shown in Fig 7.3-6.			

*1: if the CHANNELink has 11 slots, the maximum number of ESCON interfaces is 3. If the CHANNELink has 13 slots, then the maximum is 4 ESCON interfaces.

*2: The stated maximum number of ESCON interfaces in an UltraNet Storage Director is 8.

Notes;

- One ESCON port of Extender supports up to 254 volumes. For HRC installations with requirements for greater than 254 pairs, additional ESCON interfaces are required in both the local and remote channel extenders.
- HRC via Extender does not support P/DAS function.

Figures 7.3-2 to 7.3-6 on the following pages describe various valid and invalid HRC with channel extension configurations.

Copyright ©1999, Hitachi, Ltd.

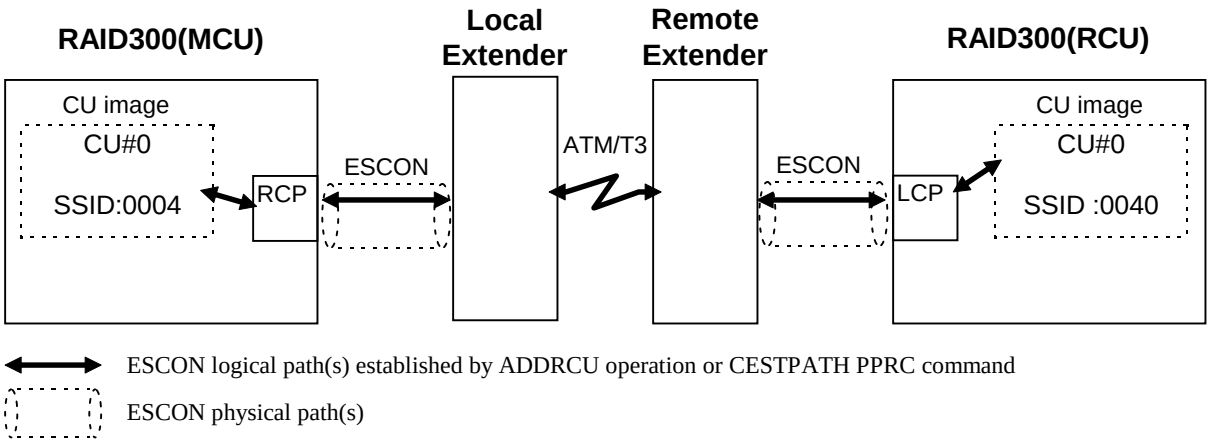

Fig 7.3-2 MCU:CU#0 <--> RCU:CU#0 (valid configuration)

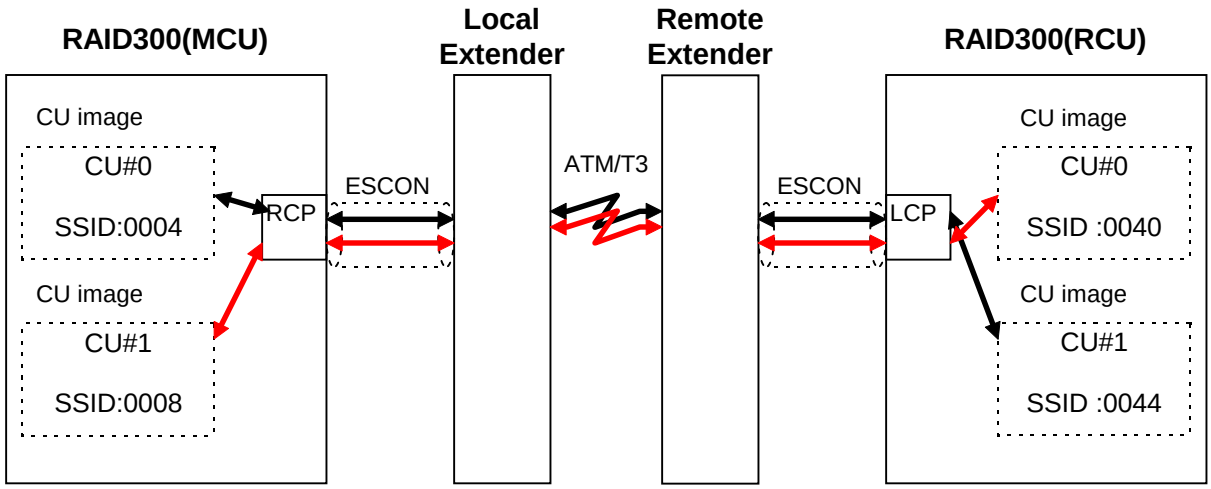

Fig 7.3-3 MCU:CU #0 <--> RCU:CU #1, MCU:CU #1 <--> RCU:CU #0 (valid configuration)

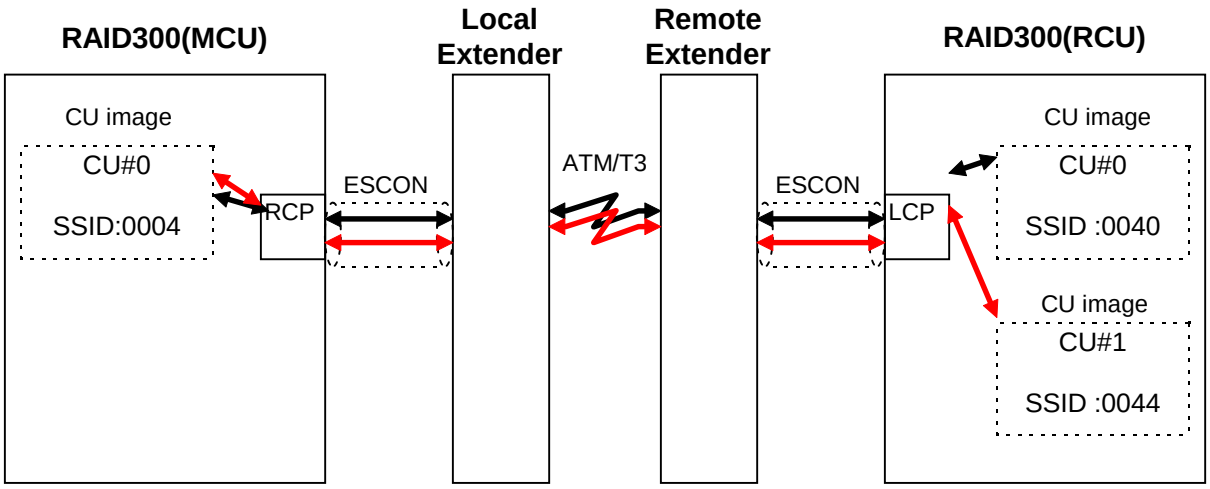

Fig 7.3.-4 MCU:CU #0 <--> RCU:CU #0, MCU:CU #0 <--> RCU:CU #1 (valid configuration)

Copyright ©1999, Hitachi, Ltd.

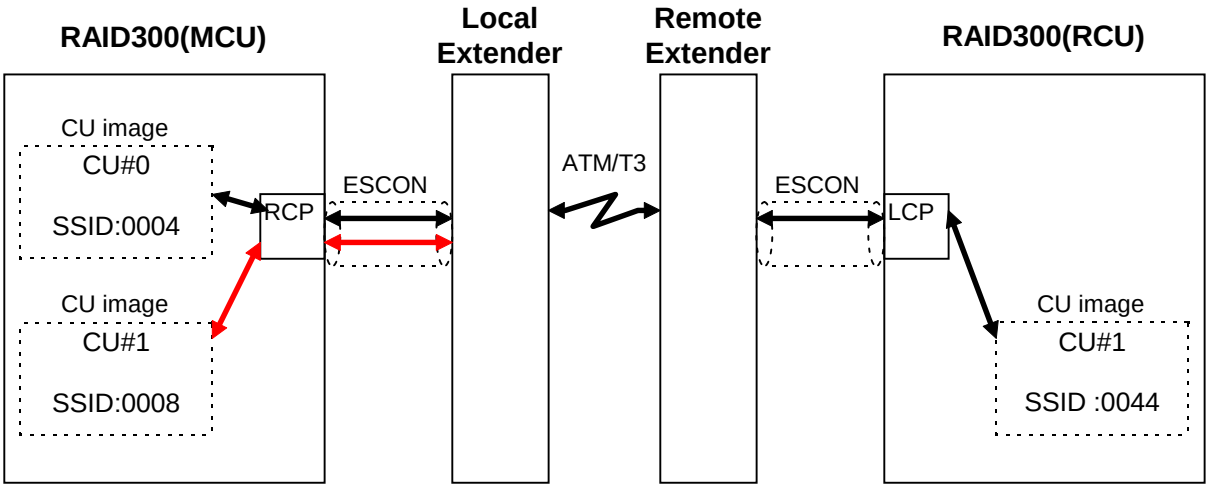

Fig 7.3-5 MCU:CU #0 <--> RCU:CU #1, MCU:CU #1 <--> RCU:CU #1 (invalid configuration)
(2 CU Images of MCU and 1 CU Image of RCU using same ESCON port)

The above diagram is an invalid configuration as 2 CU Images of an MCU are configured to utilize 1 RCU CU Image via the same ESCON port. Unique remote ESCON ports are required to enable concurrent access to a RCU Image.

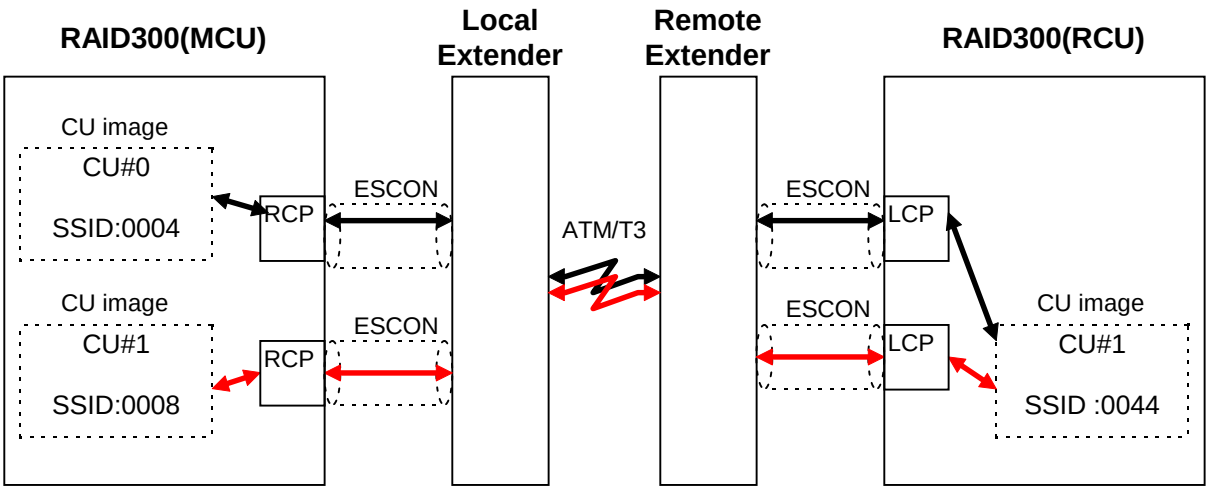

Fig 7.3-6 MCU:CU #0 <--> RCU:CU #1 , MCU:CU #1 <--> RCU:CU #1 (valid configuration)
(2 CU Images of MCU and 1 CU Image of RCU using different ESCON ports)

The above diagram is a valid configuration as 2 CU Images of an MCU are configured to utilize 1 RCU CU Image via different remote Extender ESCON ports.

2. Operation for HRC via Extender

2.0 Planning the configuration of HRC via Extender

Please determine the number of Extenders and the number of ESCON paths from the configuration of HRC.
There are some restrictions in planning the configuration of HRC via Extender.
[restriction]
- One ESCON port of an Extender supports up to 254 volumes. For HRC connections between more than 254 pairs, add the additional physical ports as required.
- Some combination of MCU and RCU are not available. Please refer to page INST07-150 ~ INST07-153.

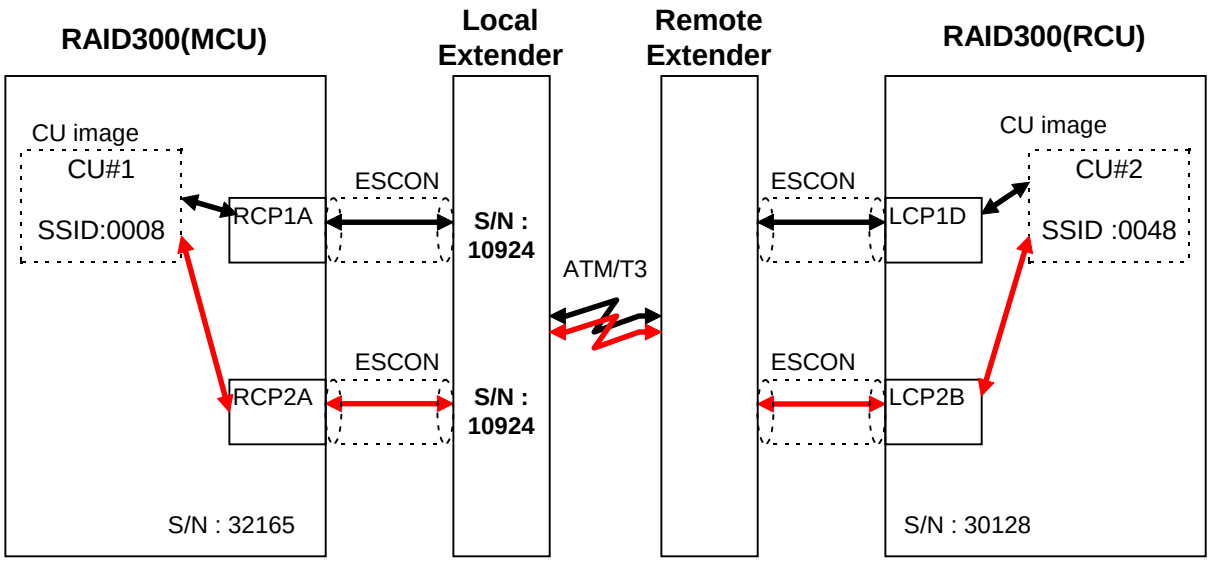
2.1 Preliminary arrangement on Extender.

(1) Change the configuration information in Extender.
There is a necessity that configuration information is set according to the configuration of HRC. Before setting HRC via Extender, please request the modification of configuration information of Extender from CNT. The information that should be given to CNT prior to installation is listed below.
- CU# of RCU
- R-VOL#
- Indication whether or not an ESCD (ESCON director) will be included in the configuration. (*3)
- ESCON link address (if using ESCD)
- A request to set serial number(s) of Local Extender (*4)

Notes:
*3: If an ESCD (ESCON director) is put between an MCU & local Extender, or between an RCU & remote Extender, there occurs a necessity to have Extender configuration information set by CNT specially. (According to CNT's specification, it is allowed to locate one ESCD in master and remote site, respectively, and define all link ports as ‘Dynamic Connection’.)

*4: The Extender can be set any serial numbers to every ESCON ports independently. At ADDRCU (/CESTPATH) operation, the serial number of Local Extender should be set as the serial number of RCU. So, in advance, the same serial number should be set to ESCON physical paths that make the logical paths to same RCU. For an example, refer to Figure 7.3-7. When 2 RCUs are connected via Extender, different serial numbers should be set. But such configurations have not certified yet. Please use a MCU and a RCU.

Copyright ©1999, Hitachi, Ltd.



These parameters are required in ADD RCU operation of RAID300 from SVP.
(cf. DKC310I/DKU305I Maintenance Manual THEORY03-500)

RCU		Path		
Serial number	SSID	PORT#	Link Address	Logical Address
10924	0040	1A	00	02
10924	0040	2A	00	02

Without connecting CNT, this parameter is 30128.

Fig 7.3-7 reference for notice *4

Copyright ©1999, Hitachi, Ltd.

2.2 Operation of RAID300

(1) Setting of Special mode (Mode 21=ON)
There is a necessity that Mode21 is set, which is a special mode for HRC via Extender. In detail, when the MCU restarts the WRFBA (HRC special command) CCW chain, it will be in incomplete domain pattern from the beginning.

(2) ADD RCU
At ADDRCU (/CESTPATH) operation, input the serial number (S#) of Local Extender as the serial number of RCU. The procedure to seek the Local Extender's serial number is as follows.

<Procedure to seek Extender's S#>
To begin with, please connect MCU to RCU via CX5000 directly with no ESCD (ESCON director).

a) Please open the icon "MAINTENANCE" of SVP (MCU).
b) Please click the button "LCP/MCP Path" in General Status Display.
c) Please select "Physical Path Status".
d) Please notice the information of RCP port to connect to local CNT. The last five digits of "SEQNUMBER" correspond to the target manufacturing number to input.

Copyright ©1999, Hitachi, Ltd.

3. Configuration Setup Example

(1) MCU/RCU Example Pair Configuration
Table 7.3-5 Example M-VOL and R-VOL Pair Configuration Matrix

Table 7.3-6 Pair configuration matrix

MCU/ CU Image	M-VOL#	SSID		RCU/ CU Image	R-VOL#	SSID
CU#0	0x00-0x3F	0x0004	------>	CU#0	0x00-0x3F	0x0040
CU#1	0x00-0x3F	0x0008	------>	CU#2	0x00-0x3F	0x0048
	0x40-0x7F	0x0009	------>	CU#3	0x00-0x3F	0x004C
CU#3	0x00-0x3D	0x0010	------>		0x40-0x7D	0x004D

The table above includes the MCU to RCU pairs as included below in Figure 7.3-8.

(2) Configuration of HRC via Extender

The following figure (Figure 7.3-8) includes a configuration that matches the configuration that is described in Table 7.3-6.

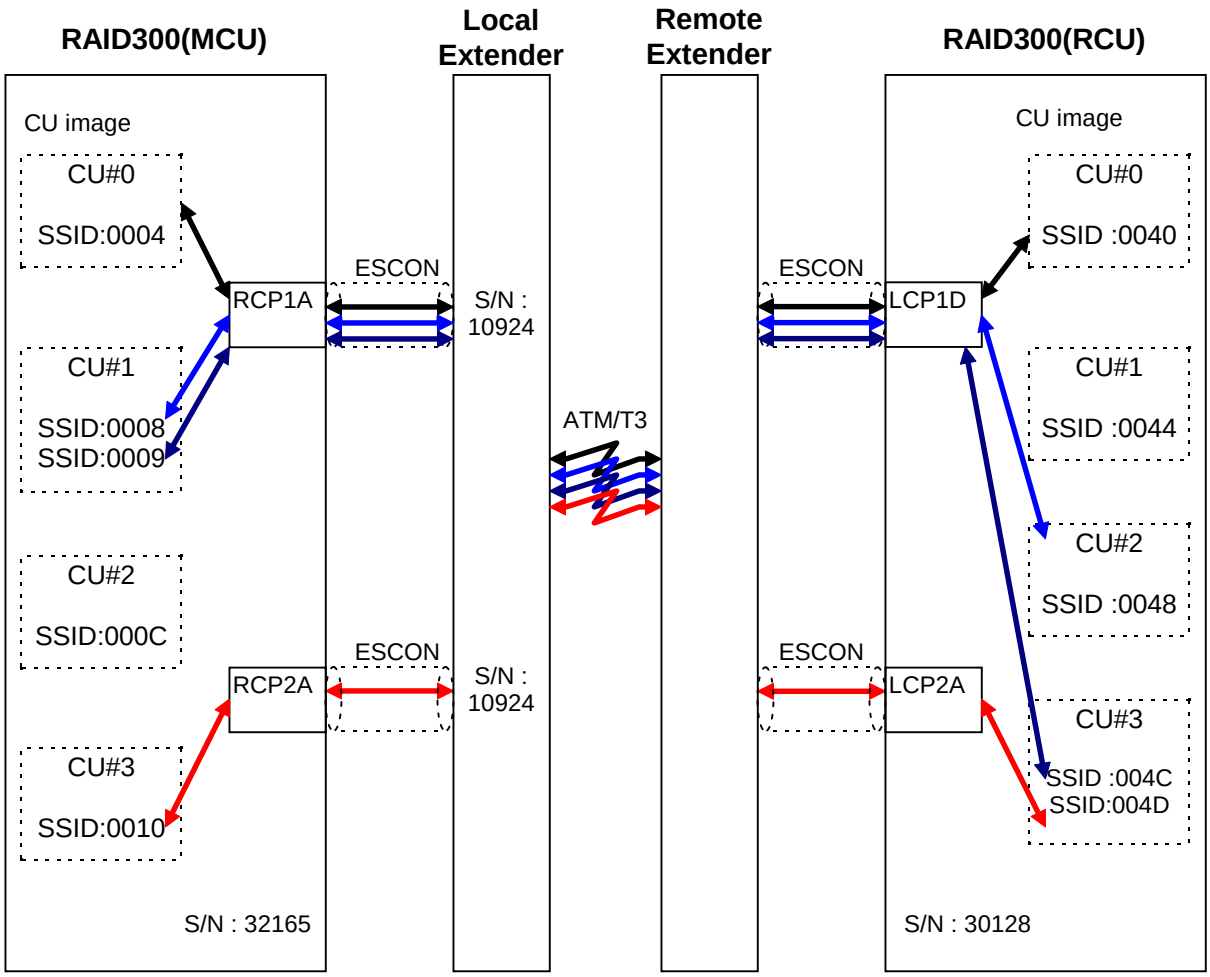


Fig 7.3-8 configuration of HRC via Extender

Copyright ©1999, Hitachi, Ltd.

(3) ADD RCU parameter

These parameters are required in ADD RCU operation of RAID300 from SVP in case of example in this section. (for additional MCU information, please refer to: DKC310I/DKU305I Maintenance Manual THEORY03-500---for additional ADD RCU information, please refer to SVP 04-60 and later about ADD RCU operation).

Table 7.3-7 ADD RCU parameter

RCU		Path		
Serial number	SSID	PORT#	Link Address	Logical Address
10924	0040	1A	00	00
10924	0048	1A	00	02
10924	004C	1A	00	03
10924	004D	2A	00	03

Without connecting EXTENDER, this parameter is 30128.

4. Notes

(1) When one of HRC paths between the remote EXTENDER and the RCU is blocked, the blocked path will not be recovered voluntarily. And then, "PATH STATUS" of this path may be abnormal(-) status, otherwise the HRC will suspend due to any failure of paths(SSB F/M=8F, EC=C8Ax). If C8Ax status is indicated, then the failure path is determined by the information as follows.
- CL1/2 : (it is known by MP# detecting SSB)
- LPN in CL1/2 : (SSB log byte42 means LPN in CL1/2)

In these cases, please confirm the connection of the physical path and do the following procedure to recover the path.

[Recover procedure]

a) Please delete the failed HRC path by way of "EDIT PATH" menu.

b) Please edit the path again to select "EDIT PATH" menu.

(2) When using the procedure of switching the M-VOL and the R-VOL (M.M THEORY03-690) for disaster recovery of HRC via Extender, the configuration of Local/Remote Extender should be set again because the Local Extender and Remote Extender are reversed each other. And, when a CU image of the original MCU and plural CU image of the original RCU are connecting through the same physical path, the above mentioned disaster recover procedure is inapplicable. In this case, please recover the combination of 1 CU Image of the new MCU and 1 CU Image of the new RCU according to the procedure of switching the M-VOL and the R-VOL (M.M THEORY03-690). After that, please try to recover the remaining CU Images one by one.

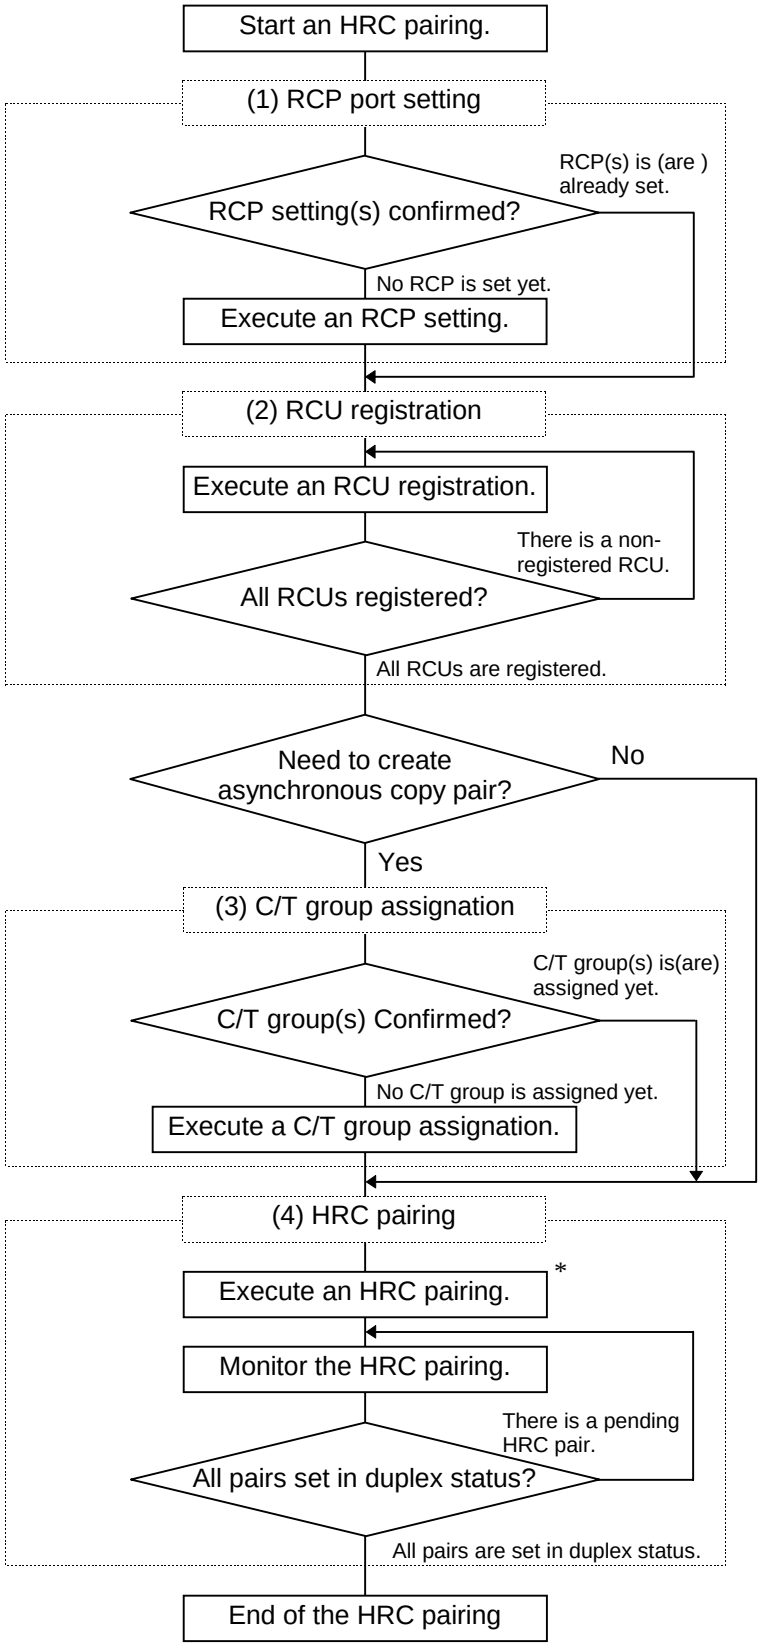
7.4 Creating New HRC Pair(s)

HRC Pairing Flow

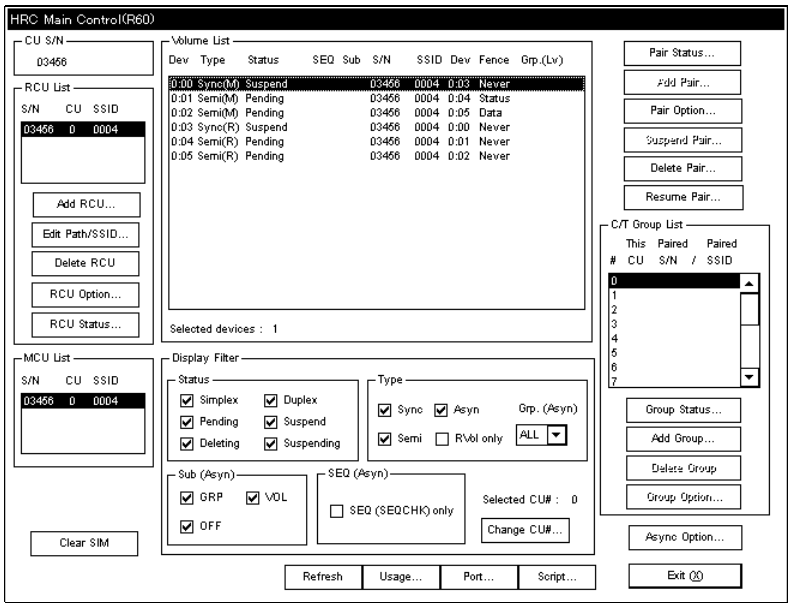


Copyright ©1998,1999, Hitachi, Ltd.

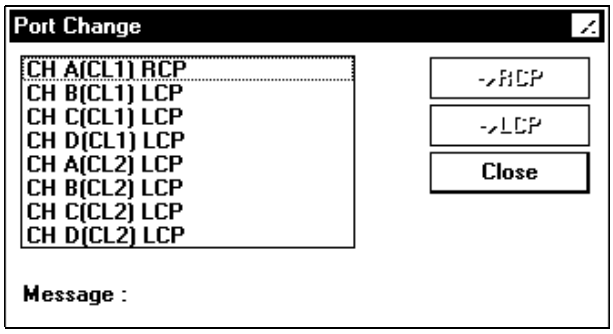
(1) RCP Port Setting

1. Display the HRC screen.
   Select (CL) [HRC] in the 'SVP' window.

2. Open the Port Setting window on the HRC screen.
   Press (CL) the [Port...] button (see the figure) on the HRC screen.



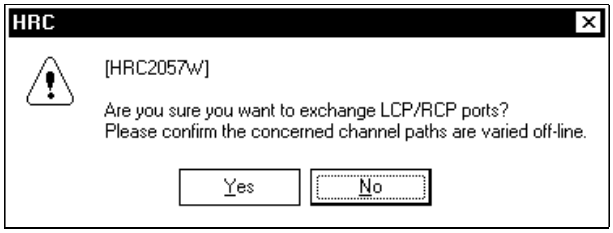
3. Confirming the port type(s)
   Compare the port setting(s) displayed on the screen with that(those) described on the work sheet. If the port setting(s) is(are) confirmed to be the same as that(those) on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".



4. Changing the port type(s)
   Select all the ports desired to be changed to the RCP type, then press (CL) the [-> RCP] button (see the figure).
   - The port(s) to be changed to the RCP type must be disconnected from the host beforehand.
   - When a cable connection change instruction is displayed, connect the cable(s) to the object RCU(s). If the connection is(are) to be made via the ESCD(s), connect the cable to the ESCD(s).

Copyright ©1998,2000, Hitachi, Ltd.

5. Confirm the channel path
Confirm the changed path(s) is(are) varied off-line, and press (CL) [Yes] button.

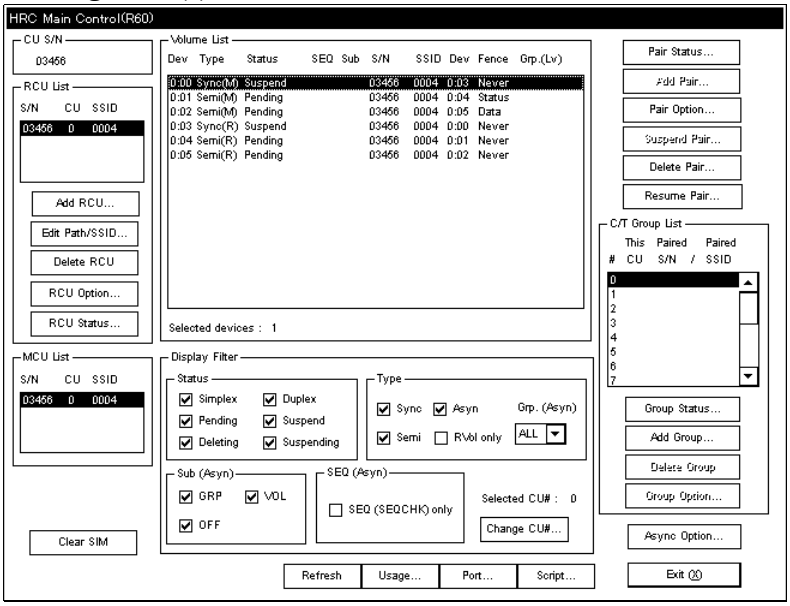


6. Terminating the RCP port setting
Compare again the port setting(s) displayed on the screen with that(those) described on the work sheet.
Make sure that the port setting(s) has(have) been done as described on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".

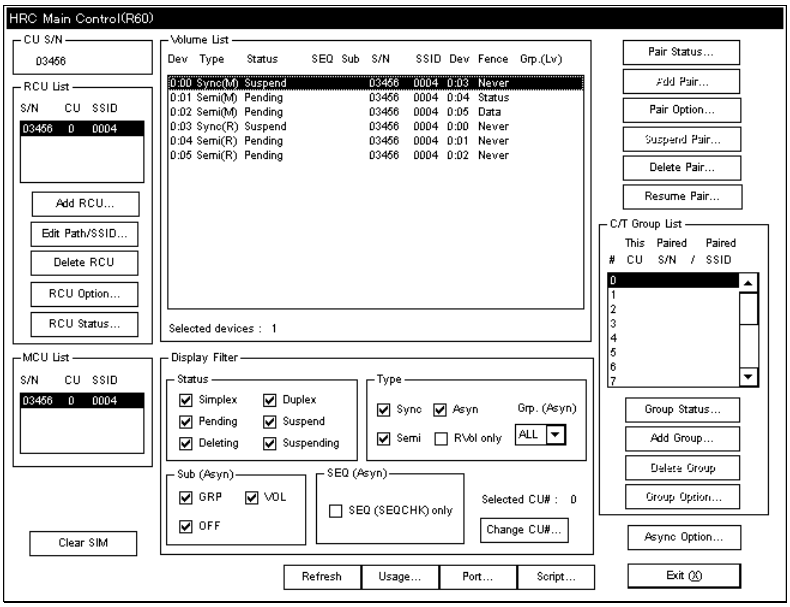
Copyright ©1998, Hitachi, Ltd.

(2) RCU Registration

1. Confirming the registration of the existing RCU(s)
   In the display filter, set the CU# corresponding to the CU image address of the subsystem (To change the CU#, press (CL) the [Change CU#...] button.). Compare the RCU(s) currently registered with the RCU(s) described on the work sheet referring to the RCU list (see the figure) on the HRC screen. When there is no need to register new RCU(s), go to Item (3) "C/T group assignation".

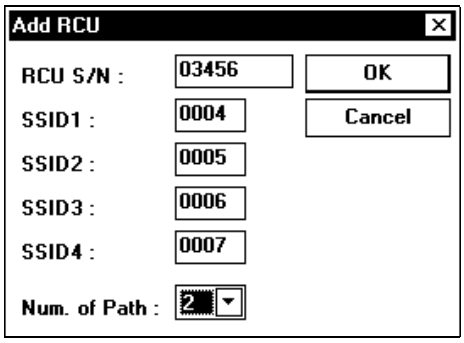


2. RCU registering screen
   Press (CL) the [Add RCU...] button (see the figure) on the HRC screen.



Copyright ©1998,2000, Hitachi, Ltd.

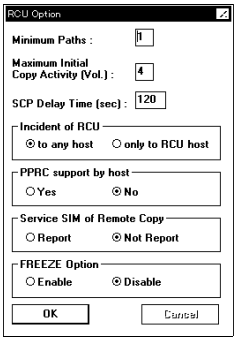
3. Inputting RCU parameters



On the Add RCU screen (see the figure), perform the following.
Input a 5- character RCU serial number in RCU S/N.
Input a 4- digit hexadecimal RCU SSID number in SSID 1 ~ 4.
Input SSID specified at the Define Configration and Install of RCU.
Select a number of the MCU-RCU logical paths from the combo-box at Num. of Path. The number can be either of 1 to 4.
When all the above operations are finished, press (CL) the [OK] button (see the figure).

Copyright ©1999, Hitachi, Ltd.

4. Setting the RCU option



On the RCU Option Setting screen (see the figure), perform the following.
Input the minimum number of paths to be used in succession in Minimum Paths.
Input Maximum Initial Copy Activity (1 through 4).
Set one of the following in Incident of RCU as the incident of the RCU.
- To any host
- Only to RCU host

Set one of the following in PPRC support by host.
- Yes
- No

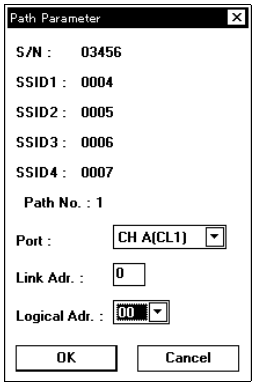
Set one of the following in Service SIM of Remote Copy as handling the Service SIM of Remote Copy.
- Report
- Not Report

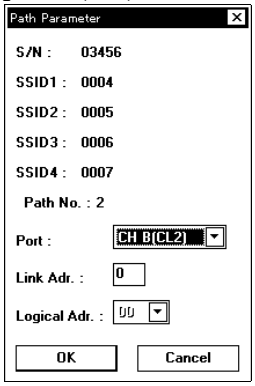
Set one of the following in FREEZE option.
- Enable
- Disable

Input SCP Delay Time (0 through 600). SCP Delay Time is available for HRC only.
When all the above operations are finished, press (CL) the [OK] button (see the figure).

5. Inputting logical path parameters

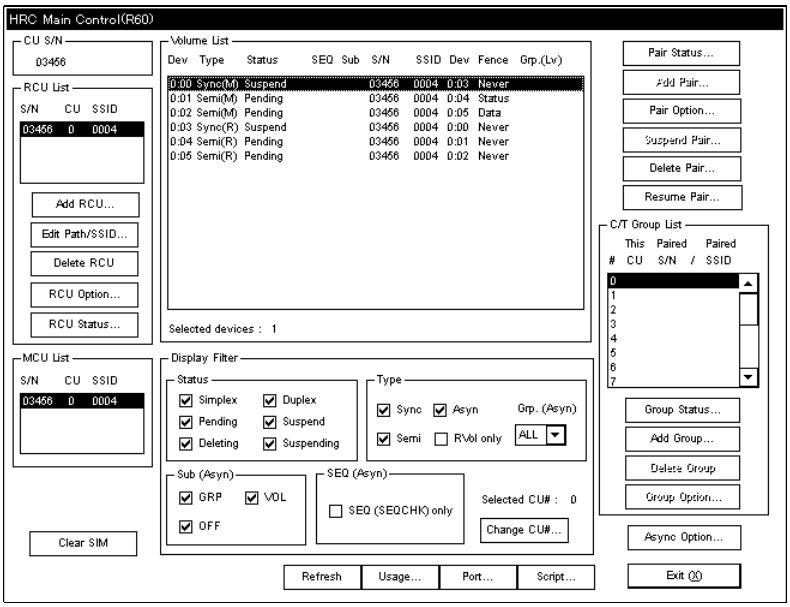
This screen appears for each logical path inputted in step 3.
On each Logic Path Parameter Input screen, perform the following.
Select the RCP port to be connected to the object RCU from the combo-box in Port.
Input a 2-digit hexadecimal number of the link destination address in Link Adr. for the object RCU. When no ESCD is to be used, input '00' in Link Adr.
Select the logical address of the object RCU from the combo-box at Logical Adr.
Please select a logical address which are defined as CU images (00 through 03) in the RCU.
(Notes) DKC210I : It has only #00 as CU image.
DKC80I-3 : When the RCU is MPSD, select “00”. When the RCU is SPSD, select “00” or “01” according to the device position.
Other DKC : There are some DKCs that have four CU images (00 through 03). In this case, please select corresponding logical address according to the device position.
After all the above operations are finished, press (CL) the [OK] button (see the figure).





Copyright ©1998,1999, Hitachi, Ltd.

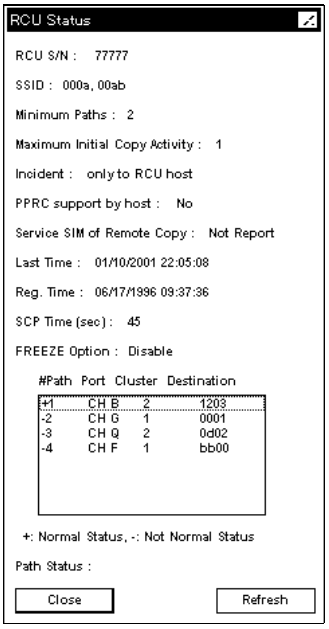
6. Select the RCU(s) currently registered from the RCU list displayed on the HRC screen, then select (CL) the [RCU Status...] screen.



7. Verifying the logical path(s)

Select one of the logical paths from the path list (see the figure) on the RCU Status screen. Make sure "Normal" is displayed in the “Status" field (see the figure).

After verifying the status of all the paths, press (CL) the [Close] button (see the figure).



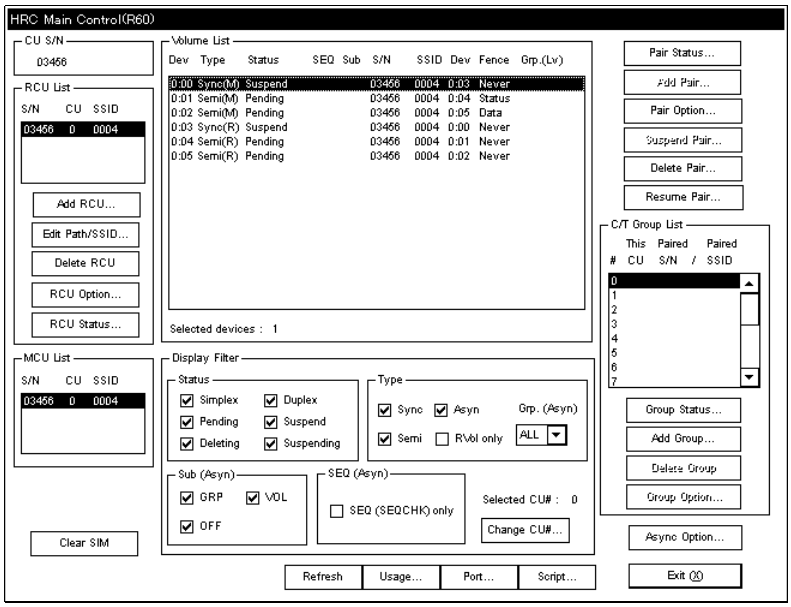
8. Registering the next RCU(s)

After registering the RCU(s), go to Item (3) "C/T group assignation". If there is(are) other RCU(s) to register, go back to step 2 to register it(them).

Copyright ©1998,2000, Hitachi, Ltd.

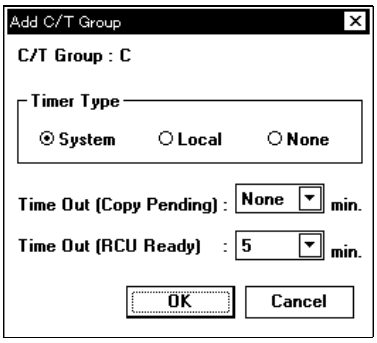
(3) C/T group assignation

1. Selecting a C/T group
   C/T group assignation is necessary before HRC asynchronous pairing.
   So, if there is no need to create HRC asynchronous copy pair(s), go to Item (4).
   If there is no need to assign more C/T group(s), go to Item (4) “HRC Pairing”.
   Select one of the C/T group that never used (shown as blank) from C/T Group List on the HRC screen.
   Press (CL) the [Add Group...] button on the HRC screen.



2. Inputting C/T group parameters
   On the Add C/T Group screen (see the figure), perform the following.
   Set one of the following in Timer Type as the timer type of the C/T.
   - System
   - Local
   - None

   Select maximum delay time of update data from combo-box at Time Out (Copy Pending).
   Select maximum waiting time for the RCU gets ready from combo-box at Time Out (RCU Ready).
   When all the above operations are finished, press (CL) the [OK] button.

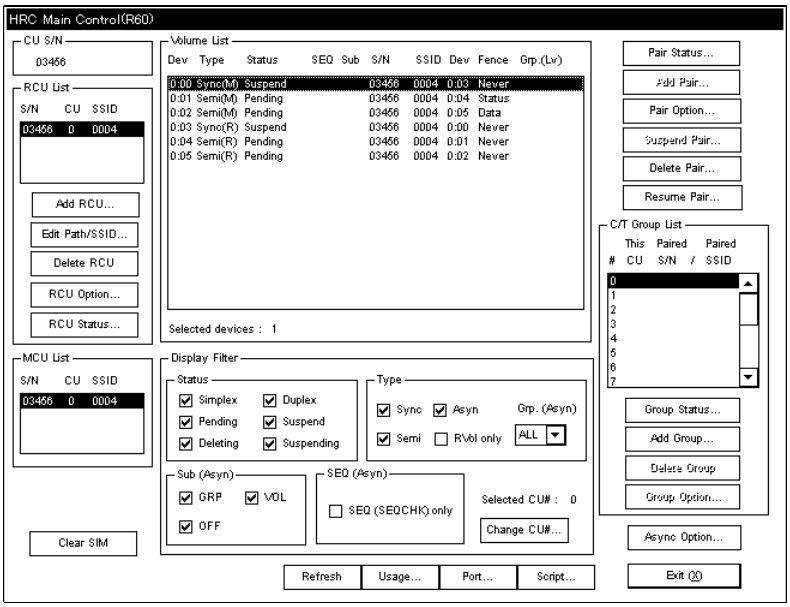


Copyright ©1999,2000, Hitachi, Ltd.

3. Confirming a C/T group assigned

Confirm a C/T group currently assigned is displayed as “Used” in the C/T Group List on the HRC screen.

Select the C/T group from the C/T Group List, then press (CL) [Group Status...] button.



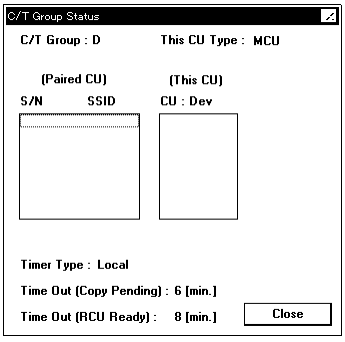
4. Confirm the C/T group parameters

Confirm the C/T group parameters are correctly displayed.

After confirming the parameters, press (CL) [Close] button.

If there is(are) other C/T group(s) to assign, go back to step 1 to assign it(them).

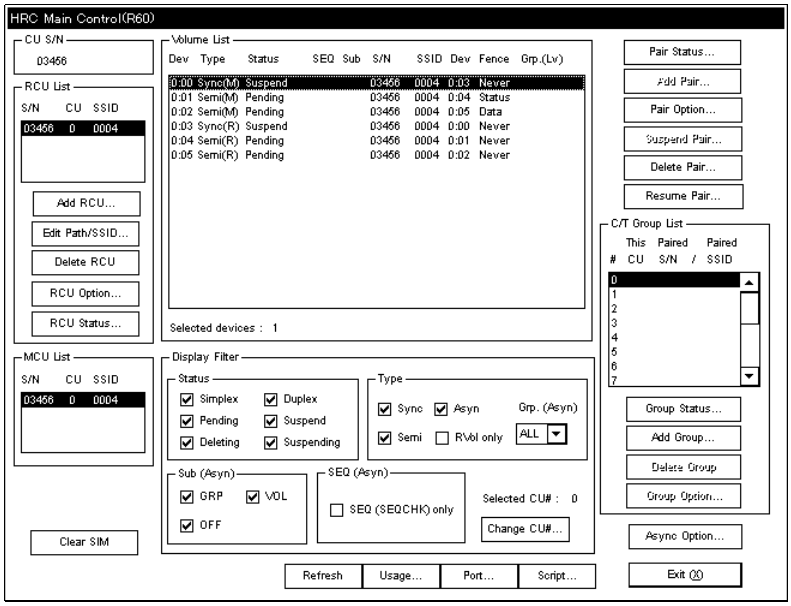
If not, go to Item (4) “HRC Pairing”.



Copyright ©1999,2000, Hitachi, Ltd.

(4) HRC Pairing

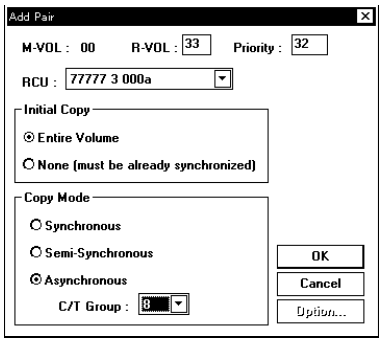
1. Confirming the volume status
Set the CU# corresponding to the CU image address of the subsystem (To change the CU#, press (CL) the [Change CU#...] button). Make sure all the volumes to be paired are in the simplex status referring to the volume list (see the figure) on the HRC screen.



2. Selecting the volume(s) (M-VOL(s))
Select all the volumes to be paired from the volume list (see the figure) on the HRC screen and press (CL) the [Add pair...] button (see the figure) in “HRC Operation”.

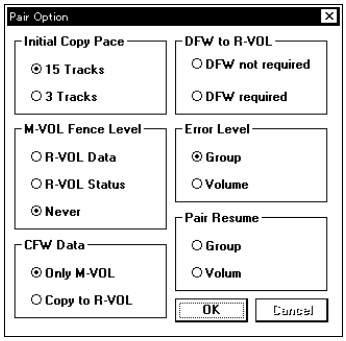
Note : Don’t select HODM R-Vol(s) as the HRC M-Vol(s).

3. Inputting the HRC pairing parameters
On the HRC Pairing Parameter Input screen, perform the following.
Input the volume number of the R-VOL in R-VOL corresponding to the M-VOL.
Input the Initial Copy Priority to the Priority.
Select the RCU from the combo-box at RCU.
Select one of the copy types indicated at Initial Copy.
Select one of the copy mode indicated at Copy Mode.
When all the above operations are finished, press (CL) the [OK] button (see the figure).



Copyright ©1998,2000, Hitachi, Ltd.

4. Setting HRC pair option



On the Pair Option screen, perform the following.
Set one of the following in Initial Copy Pace.
- 15 Tracks
- 3 Tracks

Set one of the following in DFW to R-VOL.
(Ineffective when asynchronous copy pairing)
- DFW not required
- DFW required

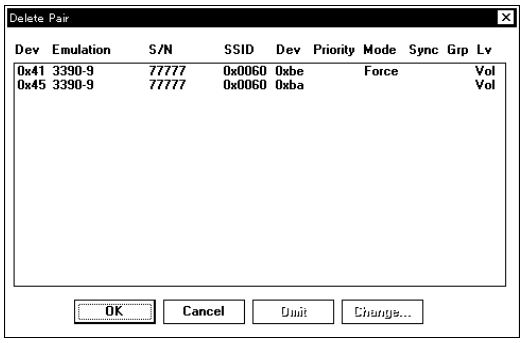
Set one of the following in CFW data
- Copy to R-VOL
- Only M-VOL

Set one of the following in M-VOL Fence Level.
(Fixed “Never” when asynchronous copy pairing)
- R-VOL Data
- R-VOL Status
- Never

Set one of the following in Error Level.
(Effective only asynchronous copy pairing)
- Group
- Volume

When all above operations are finished, press (CL) [OK] button.

5. Confirm the parameter of an HRC paired

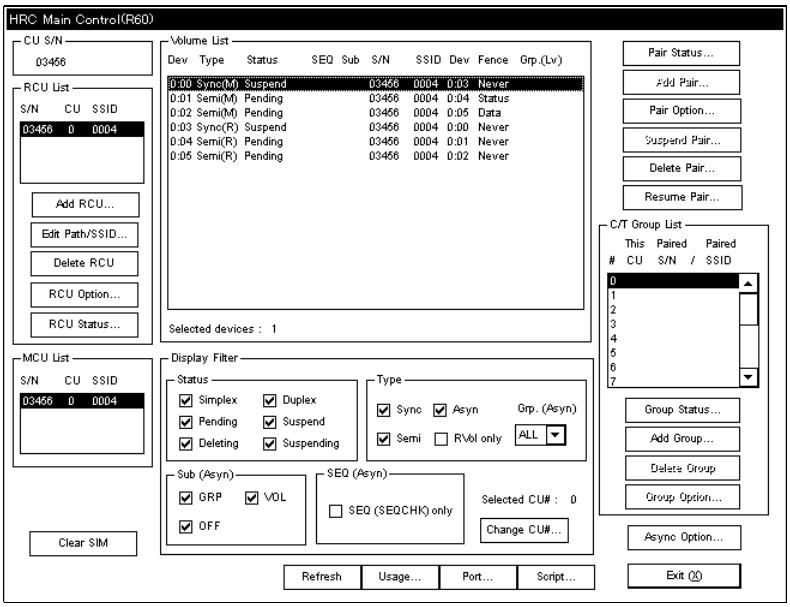


Confirm the volumes to be paired from the volume list (see the figure) on the Add Pair screen and select (CL) [OK] button.
- If you want to change an HRC paired parameters of volumes, select the volumes from Add Pair screen and select (CL) [Change...] button.
- If you want to omit an HRC pair create, select the volumes from Add Pair screen and select (CL) [Omit] button.

Copyright ©1998,1999, Hitachi, Ltd.

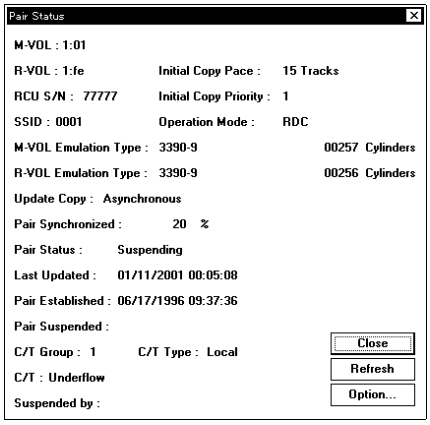
6. Verifying the status of an HRC paired

Select one of the volumes to be paired from the volume list (see the figure) on the HRC screen and press (CL) the [Pair Status...] button (see the figure).

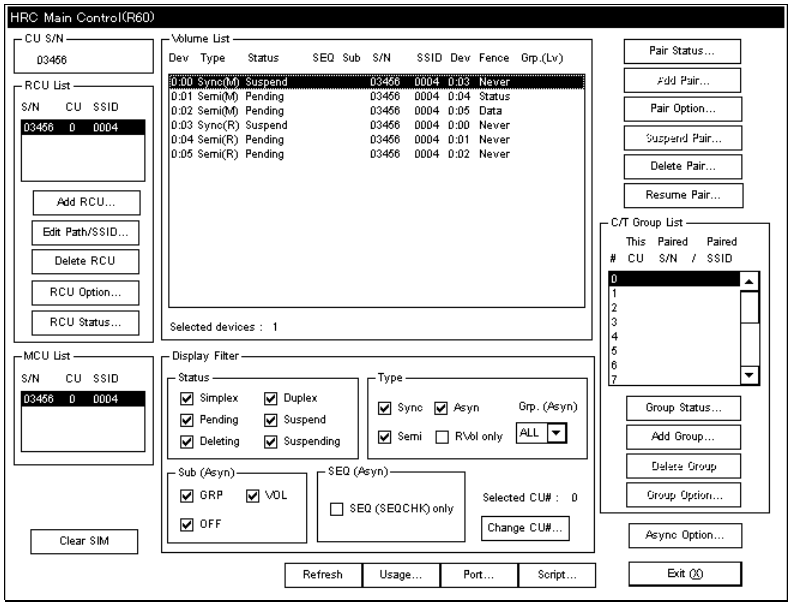


Copyright ©1999,2000, Hitachi, Ltd.

7. Checking the pairing matching rate check
Make sure “100%” is displayed for “Pair Synchronized” on the Pair Status screen. If not, wait for a while and press (CL) the [Refresh] button (see the figure) to update the display. After this, check the matching rate again. To refer to another VOL, press (CL) the [Close] button (see the figure) to go back to step 5. Repeat steps 5 and 6 until the matching rate of every volume to be paired reaches “100%”.



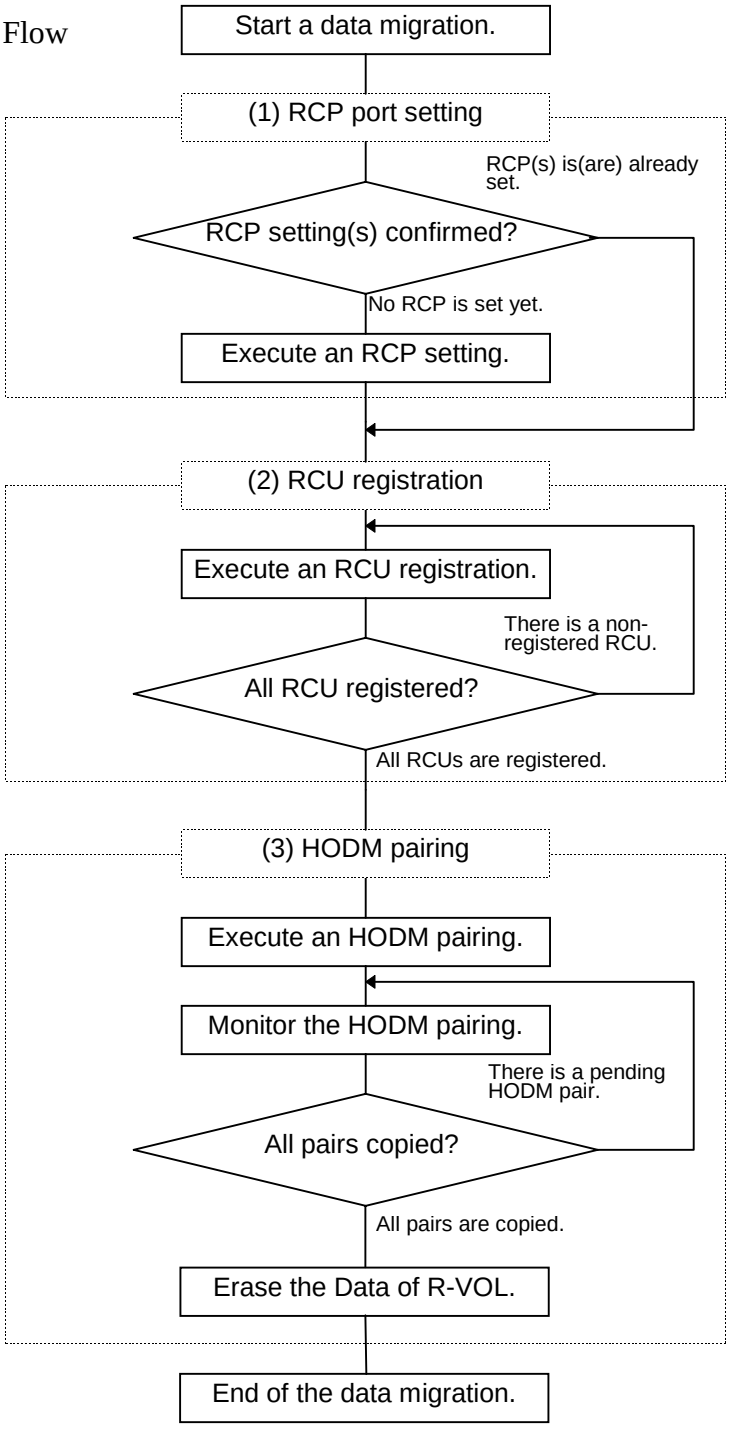
8. Final verification
Press (CL) the [Refresh] button (see the figure) on the HRC screen to update the screen display and make sure all the volumes to be paired and displayed in the volume list (see the figure) are in the duplex status.



Copyright ©1998,2000, Hitachi, Ltd.

7.5 Migrating Data (New HODM Pairing(s))

Data Migrating Flow

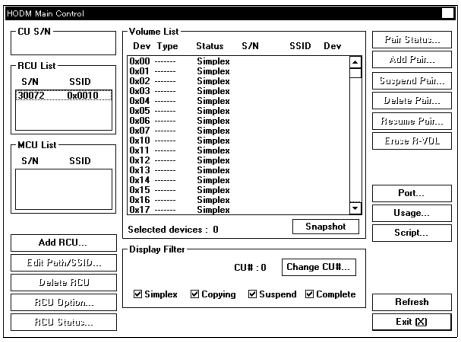


Copyright ©1998, Hitachi, Ltd.

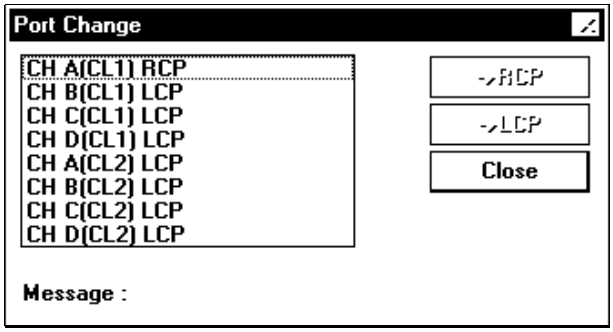
(1) RCP Port Setting

1. Display the HODM screen.
   Select (CL) [HODM] in the 'SVP' window.

2. Open the Port Setting window on the HODM screen.
   Press (CL) the [Port...] button (see the figure) on the HODM screen.



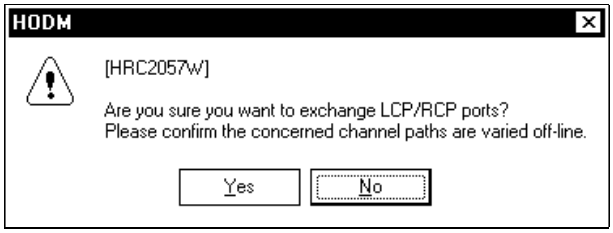
3. Confirming the port type(s)
   Compare the port setting(s) displayed on the screen with that(those) described on the work sheet. If the port setting(s) is(are) confirmed to be the same as that(those) on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".



4. Changing the port type(s)
   Select all the ports desired to be changed to the RCP type, then press (CL) the [-> RCP] button (see the figure).
   - The port(s) to be changed to the RCP type must be disconnected from the host beforehand.
   - When a cable connection change instruction is displayed, connect the cable(s) to the object RCU(s). If the connection is(are) to be made via the ESCD(s), connect the cable to the ESCD(s).

Copyright ©1998,1999, Hitachi, Ltd.

5. Confirm the channel path
Confirm the changed path(s) is(are) varied off-line, and press (CL) [Yes] button.

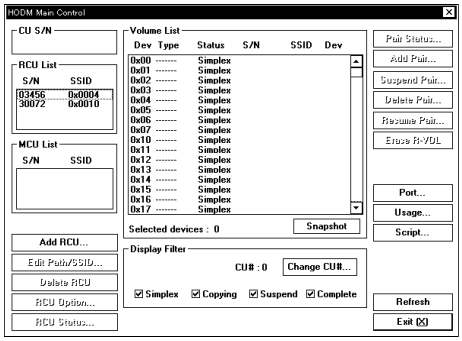


6. Terminating the of RCP port setting
Compare again the port setting(s) displayed on the screen with that(those) described on the work sheet.
Make sure that the port setting(s) has(have) been done as described on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".

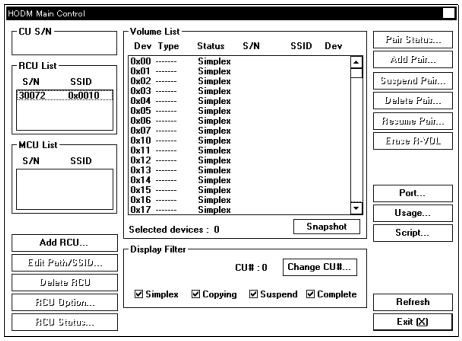
Copyright ©1998, Hitachi, Ltd.

(2) Registering the RCU(s)

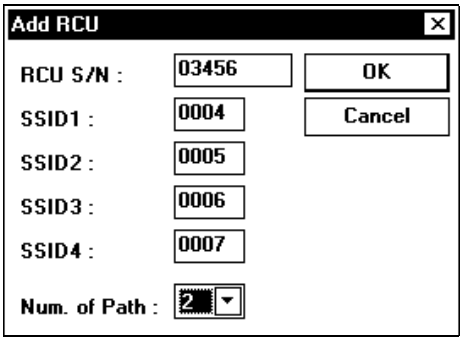
1. Confirming the RCU registration of the existing RCU(s)
In the display filter, set the CU# corresponding to the CU image address of the subsystem (To change the CU#, press (CL) the [Change CU#...] button). Compare the RCU(s) currently registered with the RCU(s) described on the work sheet referring to the RCU list (see the Figure) on the HODM screen. When there is no need to register new RCU(s), go to Item (3) "HODM Pairing".



2. RCU registering screen
Press (CL) the [Add RCU...] button (see the figure) on the HODM screen.



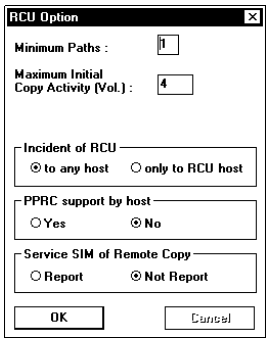
3. Inputting RCU parameters
On the RCU Registering screen (see the figure), perform the following.
Input a 5- character RCU serial number in RCU S/N.
Input a 4- digit hexadecimal RCU SSID number in SSID 1 ~ 4.
Input SSID specified at the Define Configration and Install of RCU.
Select a number of the MCU-RCU logical paths from the combo-box at Num. of Path. The number can be either of 1 to 4.



When all the above operations are finished, press (CL) the [OK] button (see the figure).

Copyright ©1998,1999, Hitachi, Ltd.

4. Setting the RCU option



On the RCU Option Setting screen (see the figure), perform the following.
Input the minimum number of paths to be used in succession in Minimum Paths.
Input Maximum Initial Copy Activity (1 through 4).
Set one of the following in Incident of RCU.
- To any host
- Only to RCU host

Set one of the following in PPRC support by host.
- Yes
- No

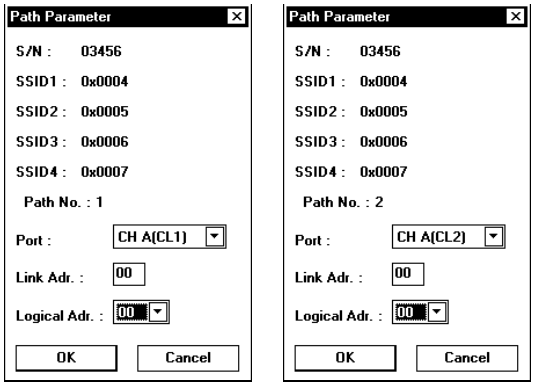
Set one of the following in Service SIM of Remote Copy as handling the Service SIM of Remote Copy.
- Report
- Not Report

When all the above operations are finished, press (CL) the [OK] button (see the figure).

5. Inputting logical path parameters

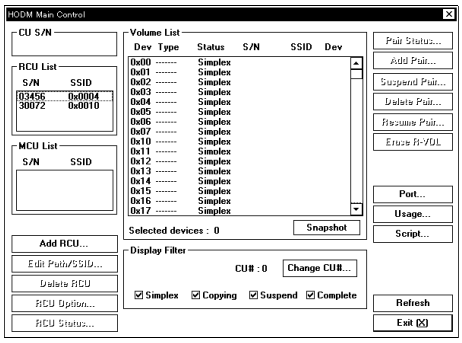
This screen appears for each logical path inputted in step 3.
On each Logic Path Parameter Input screen, perform the following.
Select the RCP port to be connected to the object RCU from the combo-box in Port.
Input a 2-digit hexadecimal number of the link destination address in Link Adr. for the object RCU. When no ESCD is to be used, input '00' in Link Adr.
Select the logical address of the object RCU from the combo-box at Logical Adr.
Please select a logical address which are defined as CU images (00 through 03) in the RCU.
(Notes) DKC210I : It has only #00 as CU image.
DKC80I-3 : When the RCU is MPSD, select “00”. When the RCU is SPSD, select “00” or “01” according to the device position.
Other DKC : There are some DKCs that have four CU images (00 through 03).). In this case, please select corresponding logical address according to the device position.

After all the above operations are finished, press (CL) the [OK] button (see the figure).

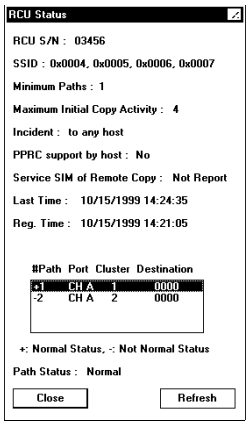


Copyright ©1998, Hitachi, Ltd.

6. Select the RCU(s) currently registered from the RCU list displayed on the HODM screen, then press (CL) the [RCU Status...] button.



7. Verifying the logical path(s)
   Select one of the logical paths from the path list (see the figure) on the RCU Status screen. Make sure "Normal" is displayed in the “Path Status" field (see the figure).
   After verifying the status of all the paths, press (CL) the [Close] button (see the figure).

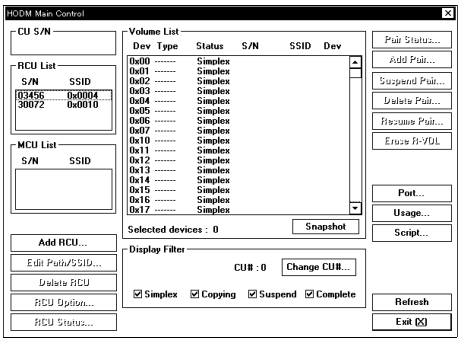


8. Registering the next RCU(s)
   After registering the RCU(s), go to Item (3) "HODM Pairing". If there is(are) other RCU(s) to register, go back to step 2 to register it(them).

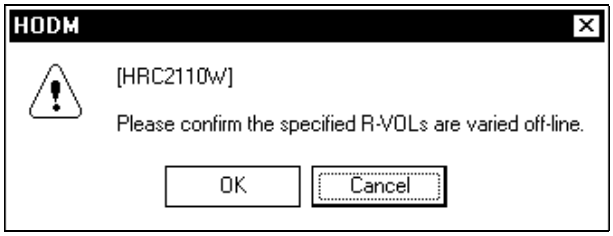
Copyright ©1998,2000, Hitachi, Ltd.

(3) HODM Pairing (Starting Data Migration)

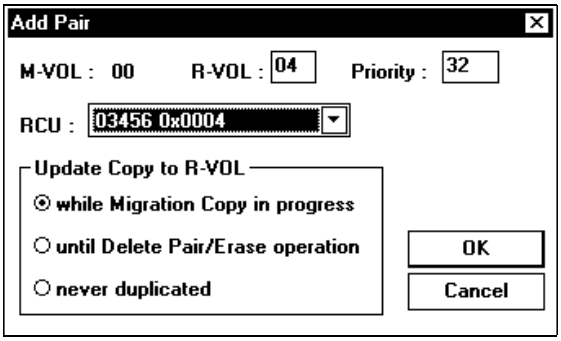
1. Confirming the volume status
Set the CU# corresponding to the CU image address of the subsystem (To change the CU#, press (CL) the [Change CU#...] button). Make sure all volumes to be paired are in the simplex status referring to the volume list (see the figure) on the HODM screen.



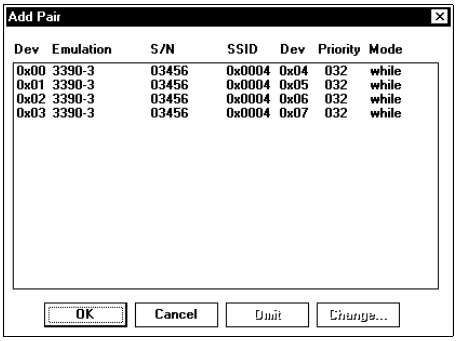
2. Selecting the volume(s) (M-VOL(s))
Select all volumes to be paired from the volume list (see the figure) on the HODM screen and press (CL) the [Add pair...] button (see the figure) in “HODM Operation”.
Then, confirm the R-Vols are varied off-line, press (CL) [OK] button.



3. Inputting the HODM pairing parameters
On the HODM Pairing Parameter Input screen, perform the following.
Input the volume number of the R-VOL in R-VOL corresponding to the M-VOL.
Input the initial copy priority to the Priority.
Select the RCU from the combo-box at RCU.
Select one of the update copy mode indicated at Update Copy to R-VOL.
When all operations above are finished, press (CL) the [OK] button (see the figure).
Note : Don’t use the R-VOL of HODM as the M-VOL of HRC.

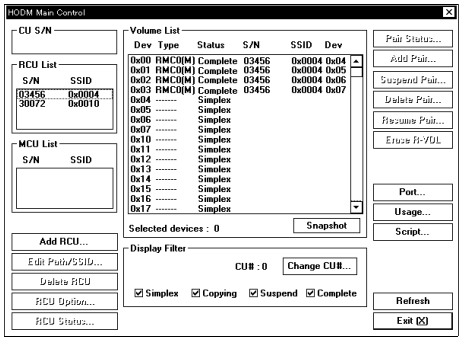


4. Confirm the parameter of an HODM paired
Confirm the volumes to be paired from the volume list (see the figure) on the Add Pair screen and select (CL) [OK] button.
• If you want to change an HODM paired parameters of volumes, select the volumes from Add Pair screen and select (CL) [Change...] button.
• If you want to omit an HODM pair create, select the volumes from Add Pair screen and select (CL) [Omit] button.

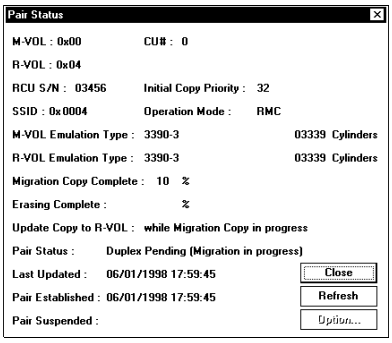


Copyright ©1998,1999, Hitachi, Ltd.

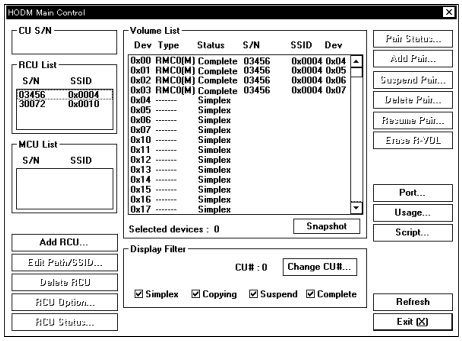
5. Verifying the status of an HODM paired
Select one of the volumes to be paired from the volume list (see the figure) on the HODM screen and press (CL) the [Pair Status...] button (see the figure).



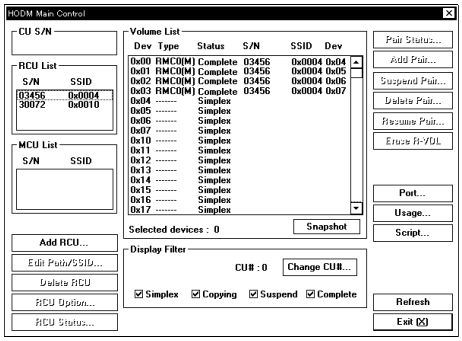
6. Checking the data migration progress rate
Make sure "100%" is displayed for "Migration Copy Complete" on the Pair Status screen. If not, wait for a while and press (CL) the [Refresh] button (see the figure) to update the display. After this, check the matching rate again. To refer to another VOL, press (CL) the [Close] button (see the figure) to go back to step 5. Repeat steps 5 and 6 until the matching rate of every volume to be paired reaches "100%".



7. Verifying completion of the data migration
Press (CL) the [Refresh] button (see the figure) on the HODM screen to update the screen display and make sure all the volumes to be paired and displayed in the volume list (see the figure) are in the simplex(waiting for erasure) status (displayed as "Complete").



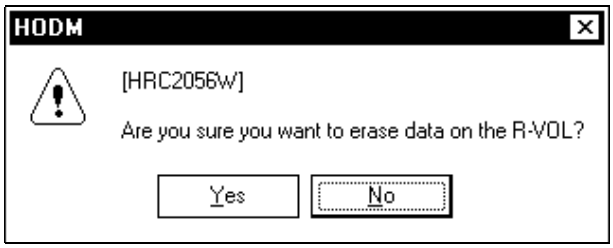
8. Erasing the source data of volume pair(s) completed migration Select all the volume(s) to be erased from the volume list on the HODM screen and press (CL) the [Erase R-VOL] button (see the figure).



Copyright ©1998,1999, Hitachi, Ltd.

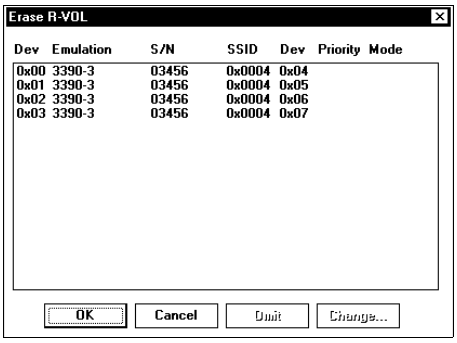
9. Instruction a erasing

Press (CL) the [Erase R-VOL] button on the HODM screen. The confirmation message will appear. To delete the pair(s) really, press (CL) the [Yes] button.



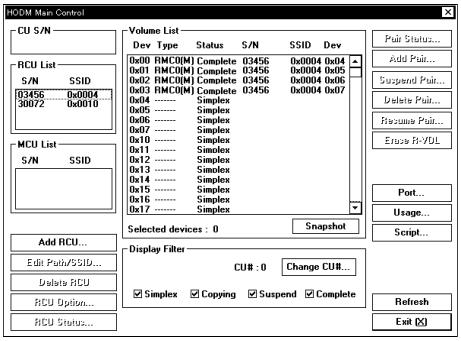
10. Confirm the erasure volumes

Confirm the erasure volumes that are displayed to the Erase R-VOL screen and select (CL) [OK] button.
If you want to omit the volume erasure, select (CL) the volumes from the list and select (CL) [Omit] button.



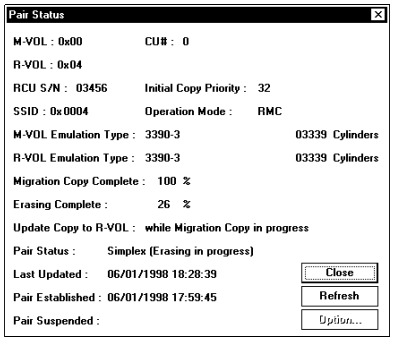
11. Verifying the status of an HODM paired

Select one of the volumes to be erased from the volume list (see the figure) on the HODM screen and press (CL) the [Pair Status...] button (see the figure).



12. Checking the data erasing progress rate

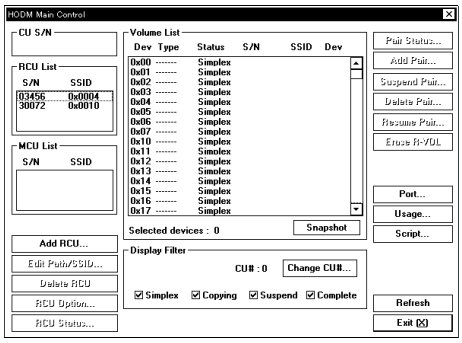
Make sure "100%" is displayed for "Erasing Complete" on the Pair Status screen. If not, wait for a while and press (CL) the [Refresh] button (see the figure) to update the display. After this, check the matching rate again. To refer to another VOL, press (CL) the [Close] button (see the figure) to go back to step 10. Repeat steps 10 and 11 until the matching rate of every volume to be paired reaches "100%".



Copyright ©1998,1999, Hitachi, Ltd.

13. Verifying the data erase.

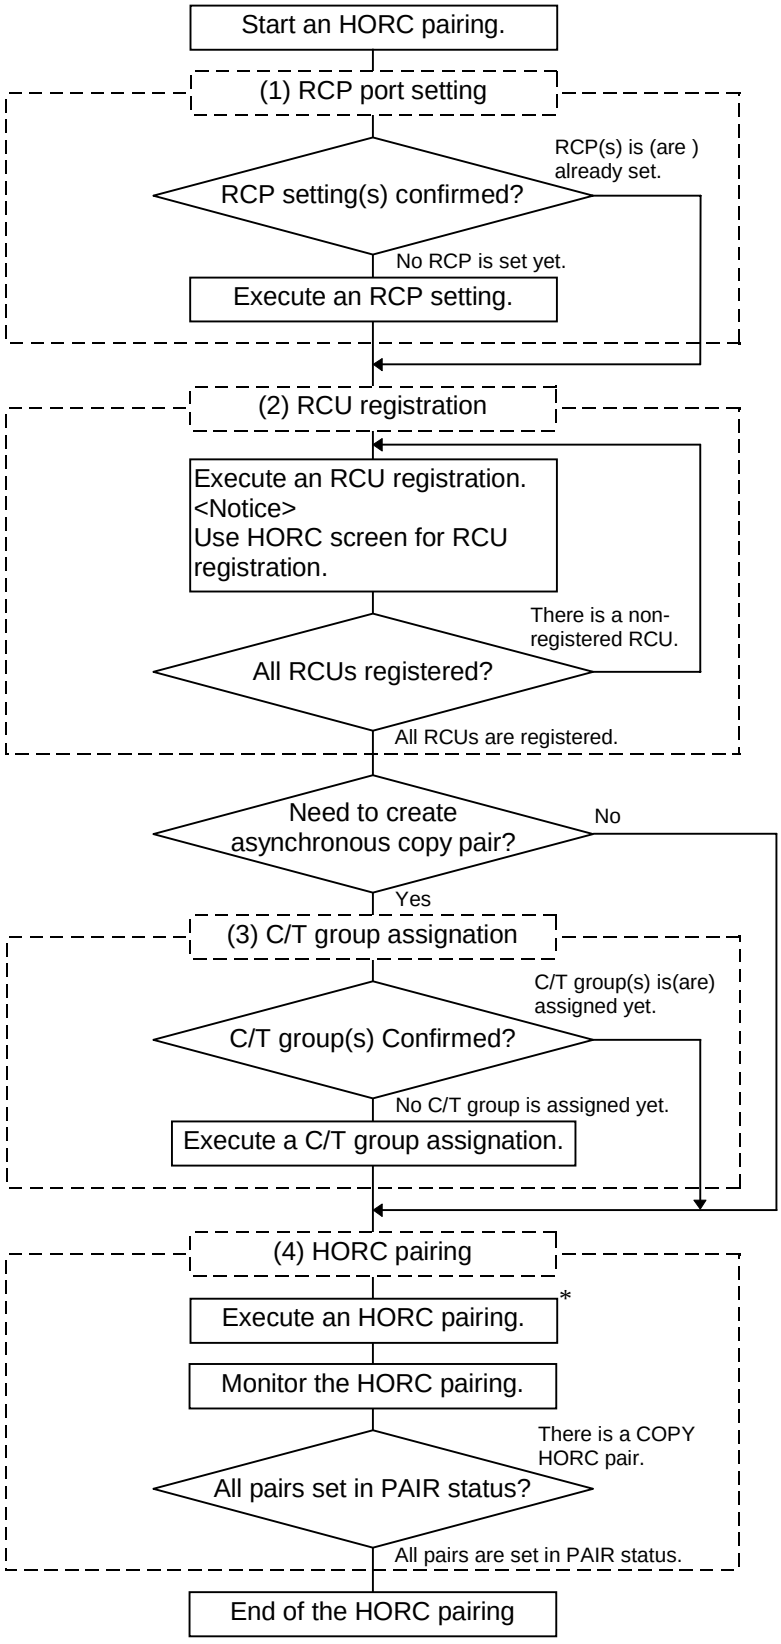
Verify if the volume(s) selected from the volume list (see the figure) is(are) in the simplex status by pressing (CL) the [Refresh] button on the HODM screen.



Copyright ©1998,1999, Hitachi, Ltd.

7.6 Creating New HORC Pair(s) (for OPEN VOL)

HORC Pairing Flow

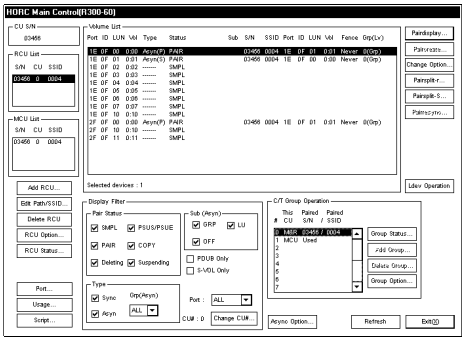


Copyright ©1998,2000, Hitachi, Ltd.

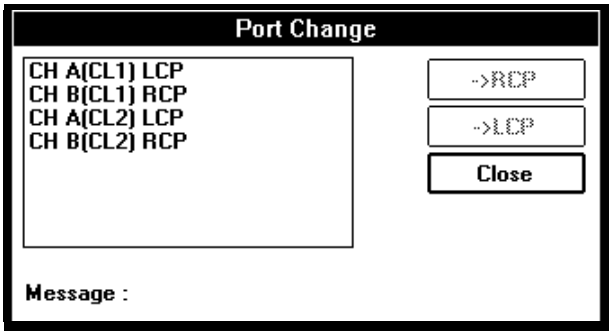
(1) RCP Port Setting

1. Display the HORC screen.
   Select (CL) [HORC] in the 'SVP' window.
   If SVP Micro-program version is not over "51-36-01", refer to the "7.7 Creating New HORC Pair(s) (for LDEV) (INST07-440)".

2. Open the Port Setting window on the HORC screen.
   Press (CL) the [Port...] button (see the figure) on the HORC screen.



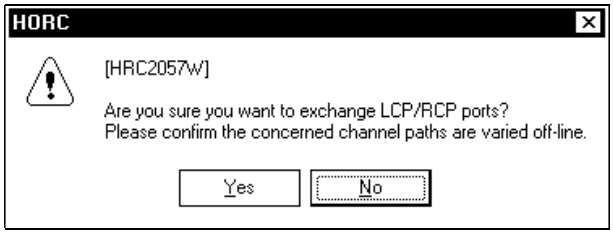
3. Confirming the port type(s)
   Compare the port setting(s) displayed on the screen with that(those) described on the work sheet. If the port setting(s) is(are) confirmed to be the same as that(those) on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".



4. Changing the port type(s)
   Select all the ports desired to be changed to the RCP type, then press (CL) the [-> RCP] button (see the figure).
   - The port(s) to be changed to the RCP type must be disconnected from the host beforehand.
   - When a cable connection change instruction is displayed, connect the cable(s) to the object RCU(s). If the connection is(are) to be made via the ESCD(s), connect the cable to the ESCD(s).

Copyright ©1998,2000, Hitachi, Ltd.

5. Confirm the channel path
   Confirm the changed path(s) is(are) varied off-line, and press (CL) [Yes] button.

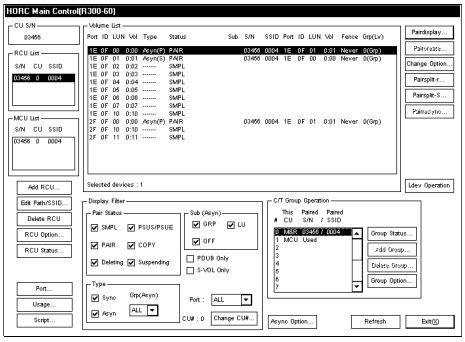


6. Terminating the RCP port setting
   Compare again the port setting(s) displayed on the screen with that(those) described on the work sheet.
   Make sure that the port setting(s) has(have) been done as described on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".

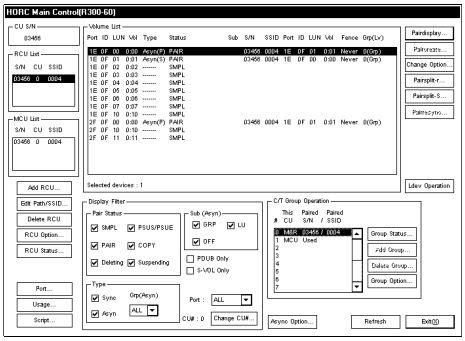
Copyright ©1998, Hitachi, Ltd.

(2) RCU Registration

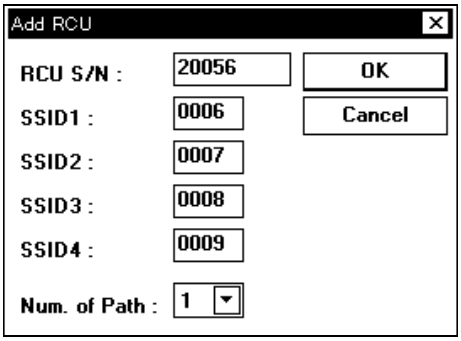
1. Confirming the registration of the existing RCU(s)
In the display filter, set the CU# corresponding to the CU image address of the subsystem (To change the CU#, press (CL) the [Change CU#...] button.). Compare the RCU(s) currently registered with the RCU(s) described on the work sheet referring to the RCU list (see the figure) on the HORC screen. When there is no need to register new RCU(s), go to Item (4) "HORC Pairing".



2. RCU registering screen
Press (CL) the [Add RCU...] button (see the figure) on the HORC screen.



3. Inputting RCU parameters
On the Add RCU screen (see the figure), perform the following.
Input a 5- character RCU serial number in RCU S/N.
Input a 4- digit hexadecimal RCU SSID number in SSID 1 ~ 4.
Input SSID specified at the Define Configration and Install of RCU.
Select a number of the MCU-RCU logical paths from the combo-box at Num. of Path. The number can be either of 1 to 4.

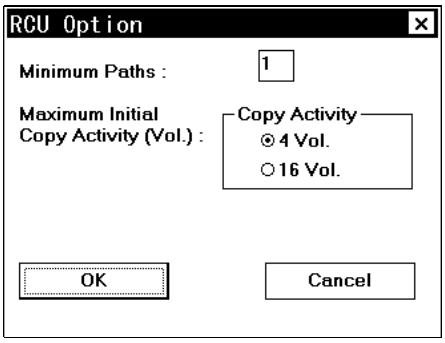


When all the above operations are finished, press (CL) the [OK] button (see the figure).

Copyright ©1998,2000, Hitachi, Ltd.

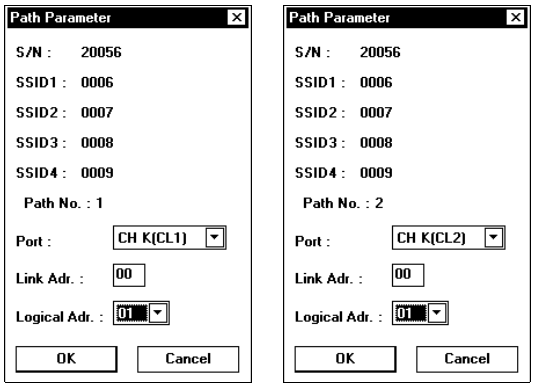
4. Setting the RCU option

On the RCU Option Setting screen (see the figure), perform the following.
Input the minimum number of paths to be used in succession in Minimum Paths.
Specifies the maximum number of Initial Copy execution. Defined 4 or 16.
When all the above operations are finished, press (CL) the [OK] button (see the figure).



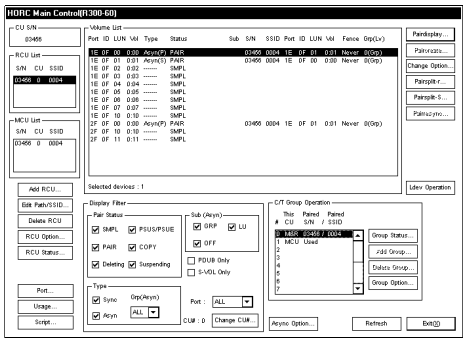
5. Inputting logical path parameters

This screen appears for each logical path inputted in step 3.
On each Logic Path Parameter Input screen, perform the following.
Select the RCP port to be connected to the object RCU from the combo-box in Port.
Input a 2-digit hexadecimal number of the link destination address in Link Adr. for the object RCU. When no ESCD is to be used, input '00' in Link Adr.
Select the logical address of the object RCU from the combo-box at Logical Adr.
Please select a logical address which are defined as CU images (00 through 03) in the RCU.
After all the above operations are finished, press (CL) the [OK] button (see the figure).



Copyright ©1998,1999, Hitachi, Ltd.

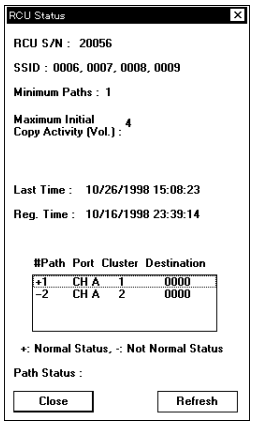
6. Select the RCU(s) currently registered from the RCU list displayed on the HORC screen, then select (CL) the [RCU Status...] screen.



7. Verifying the logical path(s)

Select one of the logical paths from the path list (see the figure) on the RCU Status screen. Make sure "Normal" is displayed in the “Status" field (see the figure).

After verifying the status of all the paths, press (CL) the [Close] button (see the figure).



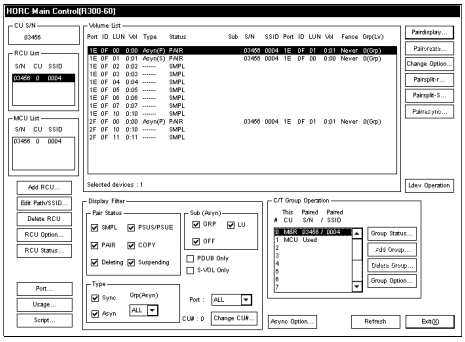
8. Registering the next RCU(s)

After registering the RCU(s), go to Item (3) "HORC Pairing". If there is(are) other RCU(s) to register, go back to step 2 to register it(them).

Copyright ©1998,2000, Hitachi, Ltd.

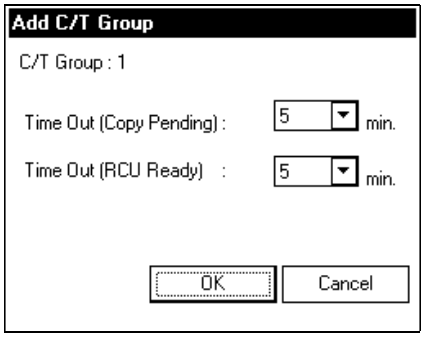
(3) C/T group assignation

1. Selecting a C/T group



C/T group assignation is necessary before HORC asynchronous pairing. So, if there is no need to create HORC asynchronous copy pair(s), go to Item (4).
If there is no need to assign more C/T group(s), go to Item (4) "HORC Pairing". Select one of the C/T group that never used (shown as blank) from C/T Group List on the HORC screen.
(Note: C/T groups which are assigned by HRC are not displayed on the list.)
Press (CL) the [Add Group...] button on the HORC screen.

2. Inputting C/T group parameters

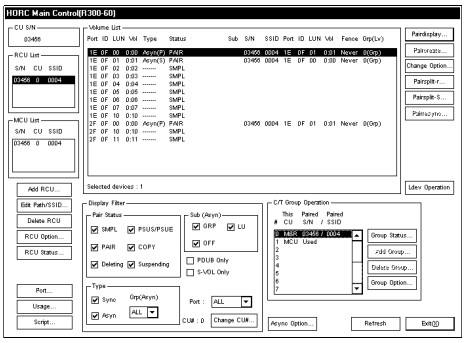


On the Add C/T Group screen (see the figure), perform the following.
Select maximum delay time of update data from combo-box at Time Out (Copy Pending).
Select maximum waiting time for the RCU gets ready form combo-box at Time Out (RCU Ready).
When all the above operations are finished, press (CL) the [OK] button.

Copyright ©2000, Hitachi, Ltd.

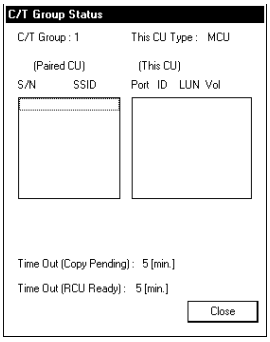
3. Confirming a C/T group assigned

Confirm a C/T group currently assigned is displayed as "Used" in the C/T Group List on the HORC screen.
Select the C/T group form the C/T Group List, then press (CL) [Group Status...] button.



4. Confirm the C/T group parameters

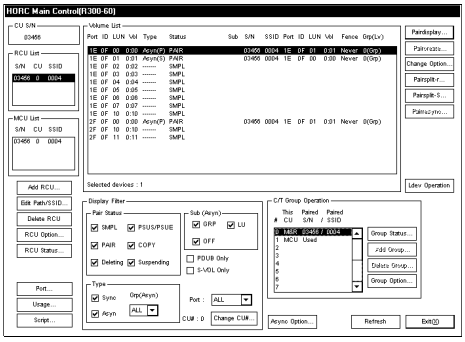
Confirm the C/T group parameters are correctly displayed After confirming the parameters, press (CL) [Close] button.
If there is(are) other C/T group(s) to assign, go back step 1 to assign it(them).
If not, go to Item (4) "HORC Pairing".



Copyright ©2000, Hitachi, Ltd.

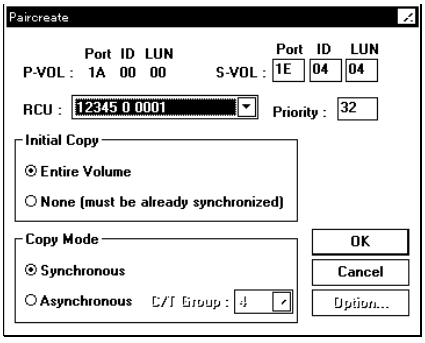
(4) HORC Pairing

1. Confirming the volume status
   Make sure all the volumes to be paired are in the SMPL status referring to the volume list (see the figure) on the HORC screen.



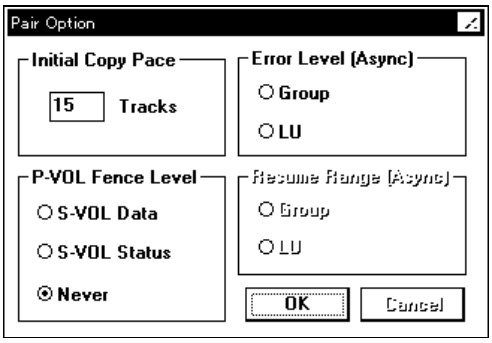
2. Selecting the volume(s) (P-VOL(s))
   Select all the volumes to be paired from the volume list (see the figure) on the HORC screen and press (CL) the [Paircreate...] button (see the figure) in “HORC Operation”.

3. Inputting the HORC pairing parameters
   On the Paircreate screen, perform the following.
   Input the PORT Number, SCSI ID Number and LUN Number of OPEN VOL in S-VOL corresponding to the P-VOL.
   Input the Initial Copy Priority to the Priority.
   Select the RCU from the combo-box at RCU.
   Select one of the copy types indicated at Initial Copy.
   Select one of the copy mode indicated at Copy Mode.
   Select a C/T group number from the combo-box at C/T Group if the copy mode is “Asynchronous”.
   When all the above operations are finished, press (CL) the [OK] button (see the figure).



Copyright ©1998,2000, Hitachi, Ltd.

4. Setting HORC pair option



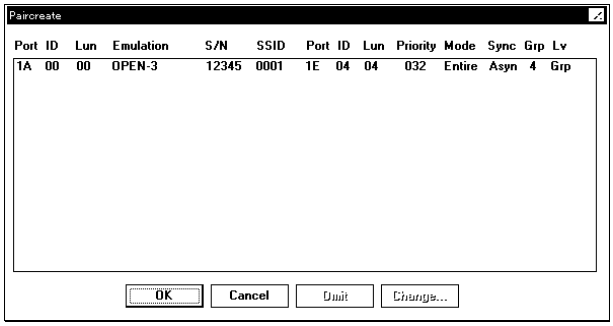
On the Pair Option screen, perform the following.
Set one of the following in Initial Copy Pace.
- 1 ~ 15 Tracks

Set one of the following in P-VOL Fence Level.
(Fixed “Never” when asynchronous copy pairing)
- S-VOL Data
- S-VOL Status
- Never

Set one of the following in Error Level.
(Effective only asynchronous copy pairing)
- Group
- LU

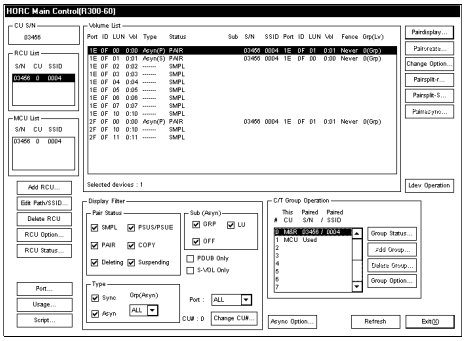
When all above operations are finished, press (CL) [OK] button.

5. Confirm the parameter of an HORC paired



Confirm the volumes to be paired from the volume list (see the figure) on the Paircreate screen and select (CL) [OK] button.
- If you want to change an HORC paired parameters of volumes, select the volumes from Paircreate screen and select (CL) [Change...] button.
- If you want to omit an HORC pair create, select the volumes from Paircreate screen and select (CL) [Omit] button.

6. Verifying the status of an HORC paired

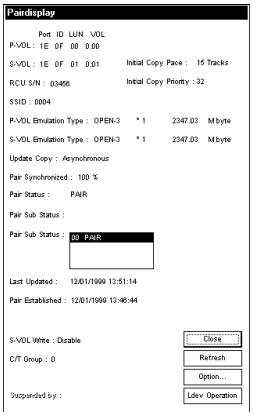


Select one of the volumes to be paired from the volume list (see the figure) on the HORC screen and press (CL) the [Pairdisplay...] button (see the figure).

Copyright ©1998,2000, Hitachi, Ltd.

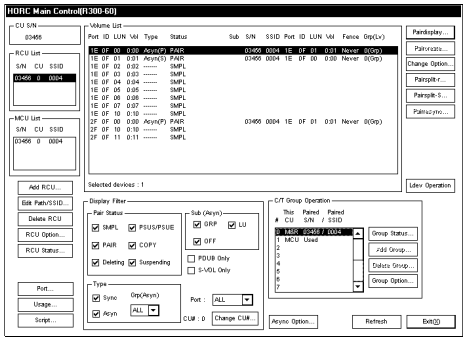
7. Checking the pairing matching rate check

Make sure "100%" is displayed for "Pair Synchronized" on the Pairdisplay screen. If not, wait for a while and press (CL) the [Refresh] button (see the figure) to update the display. After this, check the matching rate again. To refer to another VOL, press (CL) the [Close] button (see the figure) to go back to step 6. Repeat steps 6 and 7 until the matching rate of every volume to be paired reaches "100%".



8. Final verification

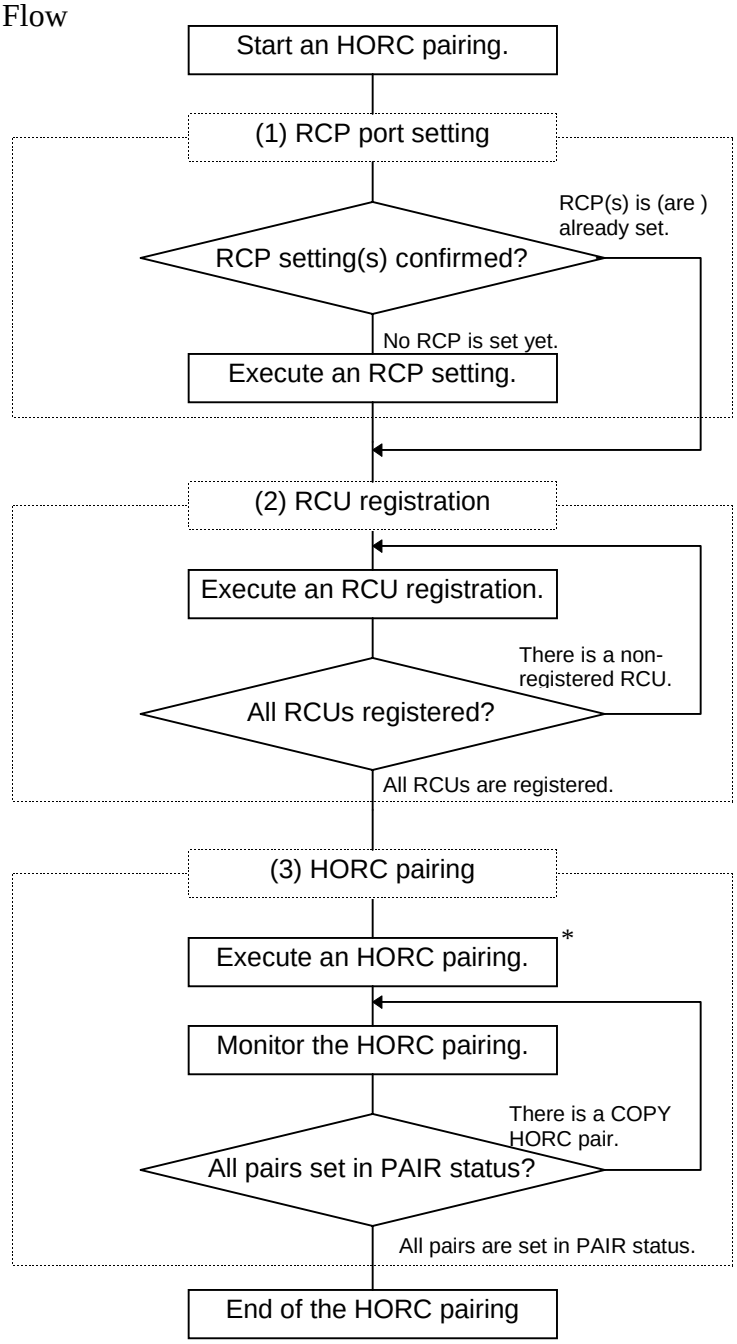
Press (CL) the [Refresh] button (see the figure) on the HORC screen to update the screen display and make sure all the volumes to be paired and displayed in the volume list (see the figure) are in the Pairdisplay.



Copyright ©1998,2000, Hitachi, Ltd.

7.7 Creating New HORC Pair(s) (for LDEV)

HORC Pairing Flow

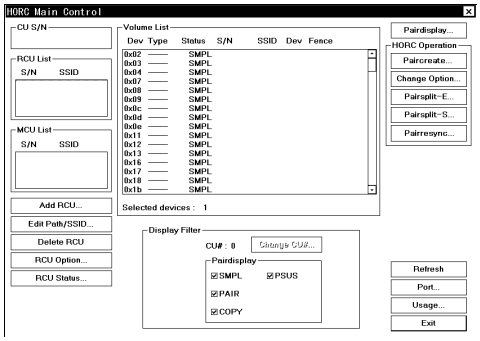


Copyright ©1998,2000, Hitachi, Ltd.

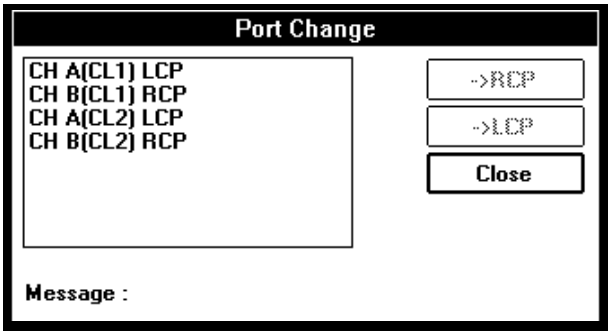
(1) RCP Port Setting

1. Display the HORC screen.
   Select (CL) [HORC] in the 'SVP' window.
   If SVP Micro-program version is over "51-36-01", refer to the "7.6 Creating New HORC Pair(s) (for OPEN VOL) (INST07-350)".

2. Open the Port Setting window on the HORC screen.
   Press (CL) the [Port...] button (see the figure) on the HORC screen.



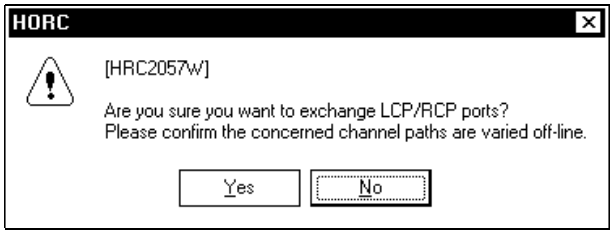
3. Confirming the port type(s)
   Compare the port setting(s) displayed on the screen with that(those) described on the work sheet. If the port setting(s) is(are) confirmed to be the same as that(those) on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".



4. Changing the port type(s)
   Select all the ports desired to be changed to the RCP type, then press (CL) the [-> RCP] button (see the figure).
   - The port(s) to be changed to the RCP type must be disconnected from the host beforehand.
   - When a cable connection change instruction is displayed, connect the cable(s) to the object RCU(s). If the connection is(are) to be made via the ESCD(s), connect the cable to the ESCD(s).

Copyright ©1998,2000, Hitachi, Ltd.

5. Confirm the channel path
   Confirm the changed path(s) is(are) varied off-line, and press (CL) [Yes] button.

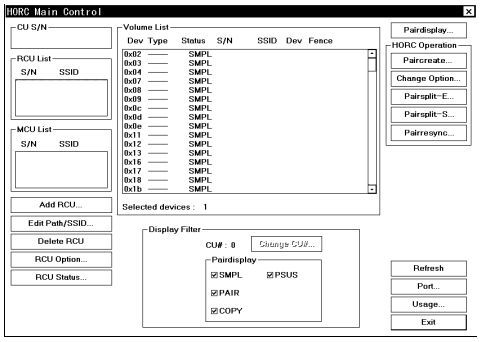


6. Terminating the RCP port setting
   Compare again the port setting(s) displayed on the screen with that(those) described on the work sheet.
   Make sure that the port setting(s) has(have) been done as described on the work sheet, press (CL) the [Close] button (see the figure) and go to Item (2) "Registering the RCU(s)".

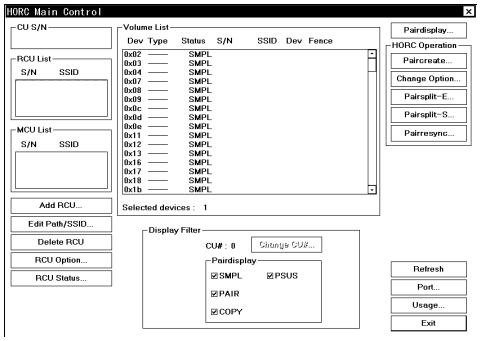
Copyright ©1998, Hitachi, Ltd.

(2) RCU Registration

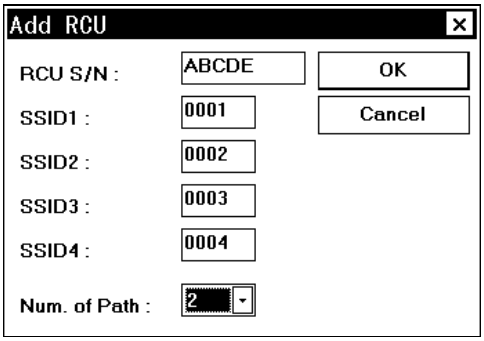
1. Confirming the registration of the existing RCU(s)
Compare the RCU(s) currently registered with the RCU(s) described on the work sheet referring to the RCU list (see the figure) on the HORC screen. When there is no need to register new RCU(s), go to Item (3) "HORC Pairing".



2. RCU registering screen
Press (CL) the [Add RCU...] button (see the figure) on the HORC screen.



3. Inputting RCU parameters
On the Add RCU screen (see the figure), perform the following.
Input a 5- character RCU serial number in RCU S/N.
Input a 4- digit hexadecimal RCU SSID number in SSID 1 ~ 4.
Input SSID specified at the Define Configration and Install of RCU.
Select a number of the MCU-RCU logical paths from the combo-box at Num. of Path. The number can be either of 1 to 4.

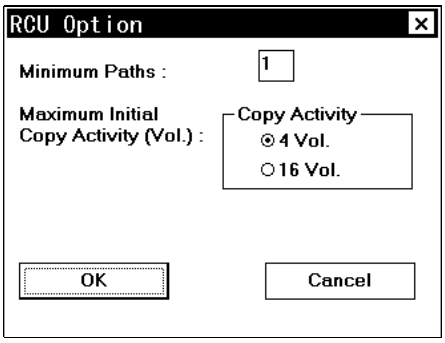


When all the above operations are finished, press (CL) the [OK] button (see the figure).

Copyright ©1998,2000, Hitachi, Ltd.

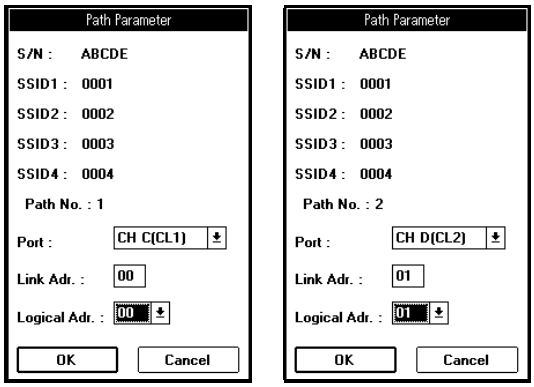
4. Setting the RCU option

On the RCU Option Setting screen (see the figure), perform the following.
Input the minimum number of paths to be used in succession in Minimum Paths.
Specifies the maximum number of Initial Copy execution. Defined 4 or 16.
When all the above operations are finished, press (CL) the [OK] button (see the figure).



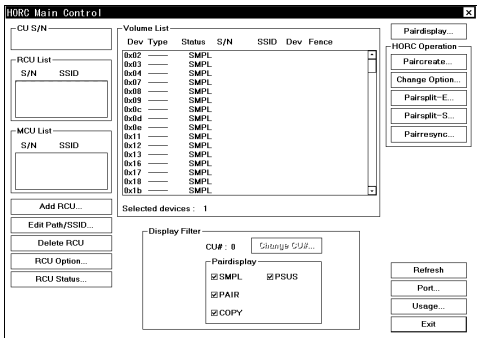
5. Inputting logical path parameters

This screen appears for each logical path inputted in step 3.
On each Logic Path Parameter Input screen, perform the following.
Select the RCP port to be connected to the object RCU from the combo-box in Port.
Input a 2-digit hexadecimal number of the link destination address in Link Adr. for the object RCU. When no ESCD is to be used, input '00' in Link Adr.
Select only 00 as the logical address.
After all the above operations are finished, press (CL) the [OK] button (see the figure).



Copyright ©1998, Hitachi, Ltd.

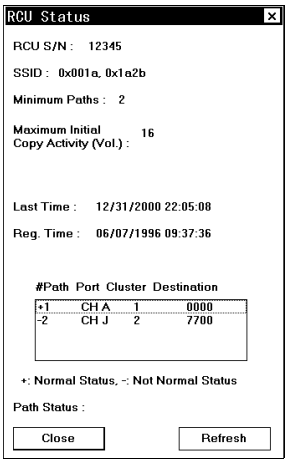
6. Select the RCU(s) currently registered from the RCU list displayed on the HORC screen, then select (CL) the [RCU Status...] screen.



7. Verifying the logical path(s)

Select one of the logical paths from the path list (see the figure) on the RCU Status screen. Make sure "Normal" is displayed in the “Status" field (see the figure).

After verifying the status of all the paths, press (CL) the [Close] button (see the figure).



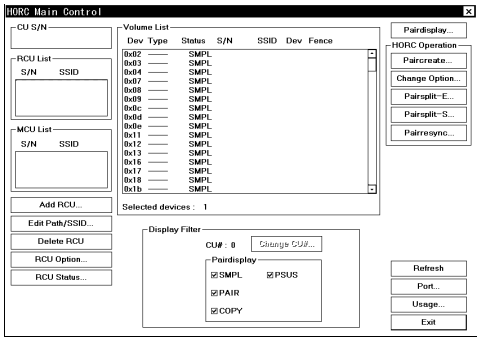
8. Registering the next RCU(s)

After registering the RCU(s), go to Item (3) "HORC Pairing". If there is(are) other RCU(s) to register, go back to step 2 to register it(them).

Copyright ©1998,2000, Hitachi, Ltd.

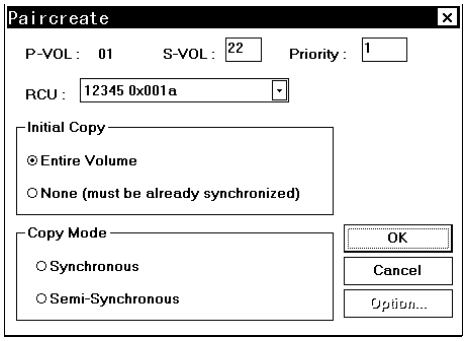
(3) HORC Pairing

1. Confirming the volume status
   Make sure all the volumes to be paired are in the SMPL status referring to the volume list (see the figure) on the HORC screen.



2. Selecting the volume(s) (P-VOL(s))
   Select all the volumes to be paired from the volume list (see the figure) on the HORC screen and press (CL) the [Add pair...] button (see the figure) in “HORC Operation”.

3. Inputting the HORC pairing parameters
   On the HORC Pairing Parameter Input screen, perform the following.
   Input the volume number of the S-VOL in S-VOL corresponding to the P-VOL.
   Input the Initial Copy Priority to the Priority.
   Select the RCU from the combo-box at RCU.
   Select one of the copy types indicated at Initial Copy.
   Select one of the copy mode indicated at Copy Mode.
   When all the above operations are finished, press (CL) the [OK] button (see the figure).



Copyright ©1998,2000, Hitachi, Ltd.

4. Setting HORC pair option

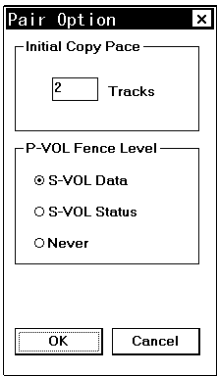
On the Pair Option screen, perform the following.
Set one of the following in Initial Copy Pace.

- 1 ~ 15 Tracks

Set one of the following in P-VOL Fence Level.

- S-VOL Data
- S-VOL Status
- Never

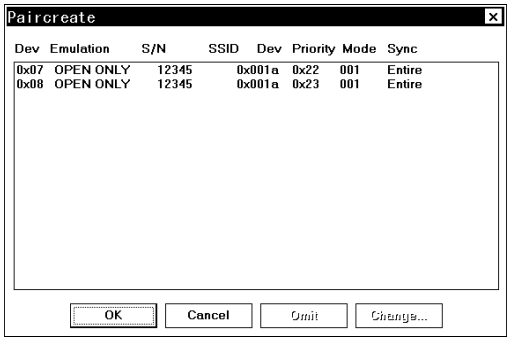
When all above operations are finished, press (CL) [OK] button.



5. Confirm the parameter of an HORC paired

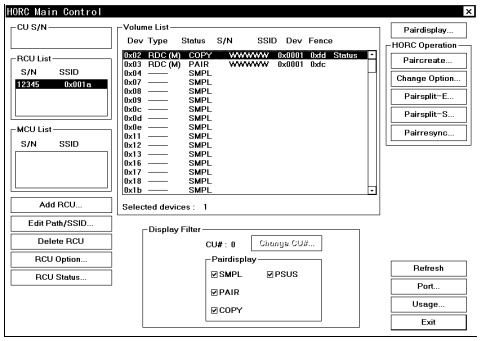
Confirm the volumes to be paired from the volume list (see the figure) on the Add HORC Pair screen and select (CL) [OK] button.

- If you want to change an HORC paired parameters of volumes, select the volumes from Add HORC Pair screen and select (CL)[Change...] button.
- If you want to omit an HORC pair create, select the volumes from Add HORC Pair screen and select (CL) [Omit] button.



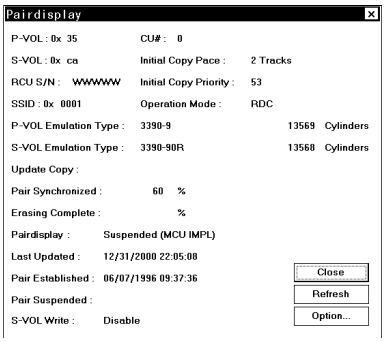
6. Verifying the status of an HORC paired

Select one of the volumes to be paired from the volume list (see the figure) on the HORC screen and press (CL) the [Pairdisplay...] button (see the figure).

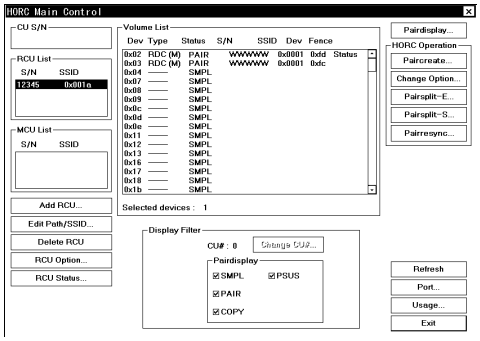


Copyright ©1998,2000, Hitachi, Ltd.

7. Checking the pairing matching rate check
Make sure "100%" is displayed for "Pair Synchronized" on the Pairdisplay screen. If not, wait for a while and press (CL) the [Refresh] button (see the figure) to update the display. After this, check the matching rate again. To refer to another VOL, press (CL) the [Close] button (see the figure) to go back to step 5. Repeat steps 5 and 6 until the matching rate of every volume to be paired reaches "100%".



8. Final verification
Press (CL) the [Refresh] button (see the figure) on the HORC screen to update the screen display and make sure all the volumes to be paired and displayed in the volume list (see the figure) are in the Pairdisplay.



Copyright ©1998,2000, Hitachi, Ltd.

8 TPF installation procedures

8.1 Preparations

(a) To get one additional SM parts (SH100-B (only 64Mbit DRAM)) according to INST01-40.
(b) To get 7700E Floppy Disks which support MPLF/RC function from T.S.C.

8.2 Operations

(a) To add additional SM parts.
- Power off 7700E and drop breakers.
- To add the SM (Shared Memory) in 7700E box.
  (Refer to INST01-40 for the number of SM parts.)
- Turn on breakers, and power switch on.

(b) To execute config.
- Set “Configuration” floppy disk.
- Execute “ini_conf.bat” in floppy disk. (Refer to MICRO-FC08-10 (Config Exchange Procedure))

(c) To switch “TPF-mode” on
- Set the Modify mode.
- Select the [Install] (CL) in the ‘SVP’ window.
- Select the [Define configuration and Install] (CL), and set each configuration item (i.e. Cache capacity/Drive type/Emulation... etc.) to meet the expected configuration of the box.
- Select [>Next](CL) button if you require “Configuration FD”.(Don’t insert FD)
  FD reading is made to fail. And, push [Cancel]button if retry is required.
- Select [>Next](CL) buttons until “Turn off” message comes out.
- 7700E power switch off as the directions of SVP.
- Unplug the battery jumpers and wait 5 minutes. (volatile CACHE, SM)
- Plug in battery jumpers and 7700E power switch on.

(d) To exchange micros from MVS to TPF.
Refer to MICRO-FC04-10 (Micro-program Exchange Procedure(On-line)).
But [Debug-mode]*1 should be used for this operation, instead of [Modify-mode].

(e) To start TPF microcode.
- 7700E power switch off.
- Unplug the battery jumpers and wait 5 minutes. (Volatile CACHE & SM)
- Plug in battery jumpers and 7700E power switch on.

Copyright ©1998, Hitachi, Ltd.

9 HMRCF

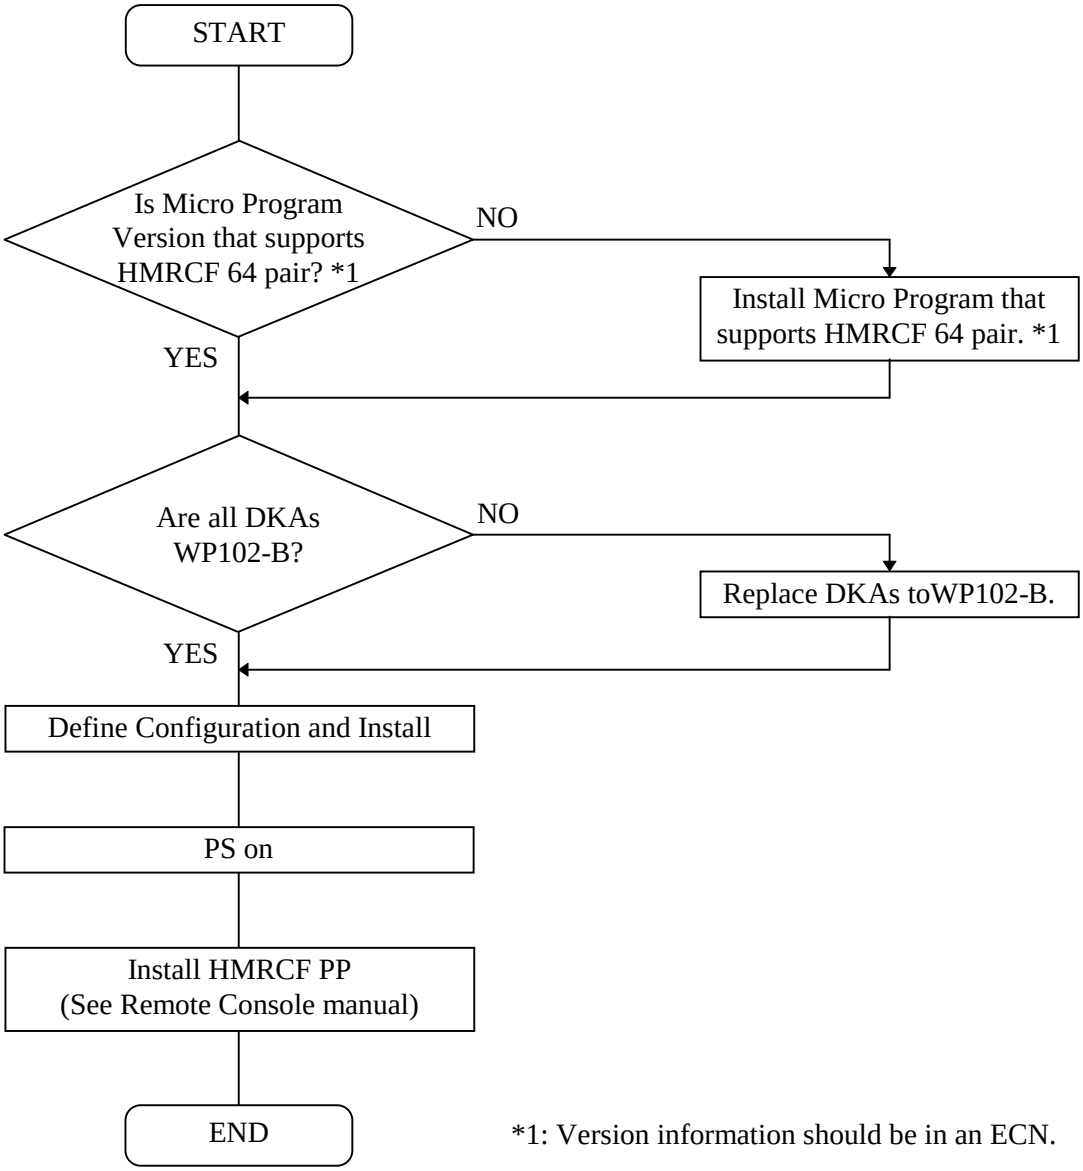
9.1 Installation of HMRCF

1. New installation of HMRCF

(1) In case of a new system

There is no change for installation procedure. But DKAs should be WP102-B instead of usual DKAs.

DKA (WP102-B) is registered as a option (DKC-F310I-50E). WP132-B is available instead of WP102-B.



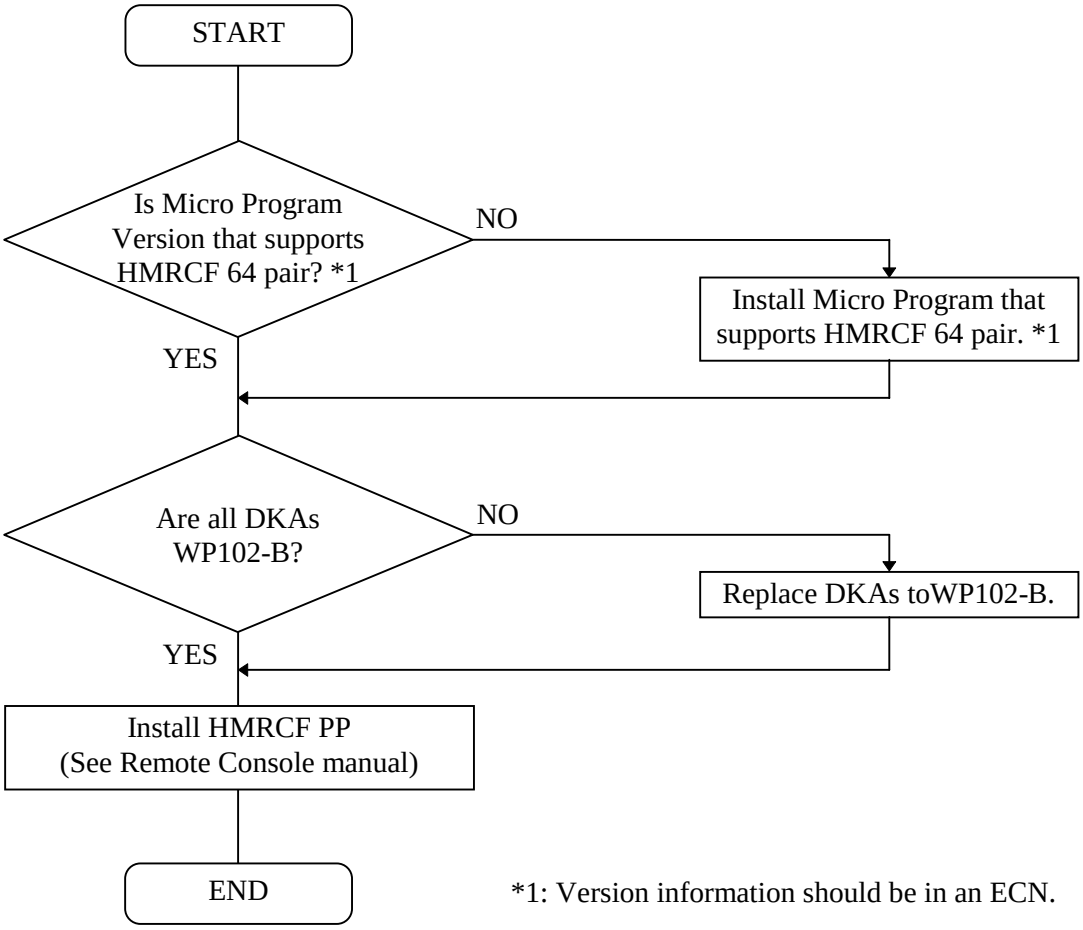
*1: Version information should be in an ECN.

Copyright ©1998, Hitachi, Ltd.

(2) In case of a system already using.
These procedure have to be done before user use HMRCF function.

NO	Item	Contents
1	Micro Program exchange	Micro program have to be upgraded first.
2	Replacement of DKAs	ALL DKAs in the Subsystem have to be replaced to DKA (**WP102B** *a). Use PCB Replace procedure to replace DKA.
3	PP installation	HMRCF is a option product. So it is necessary to install PP before using HMRCF. It is able to install PP, if all DKAs are WP102-B. See Remote Console manual.

*a: DKA (WP102-B) is registered as a option (DKC-F310I-50E). WP132-B is available instead of WP102-B.

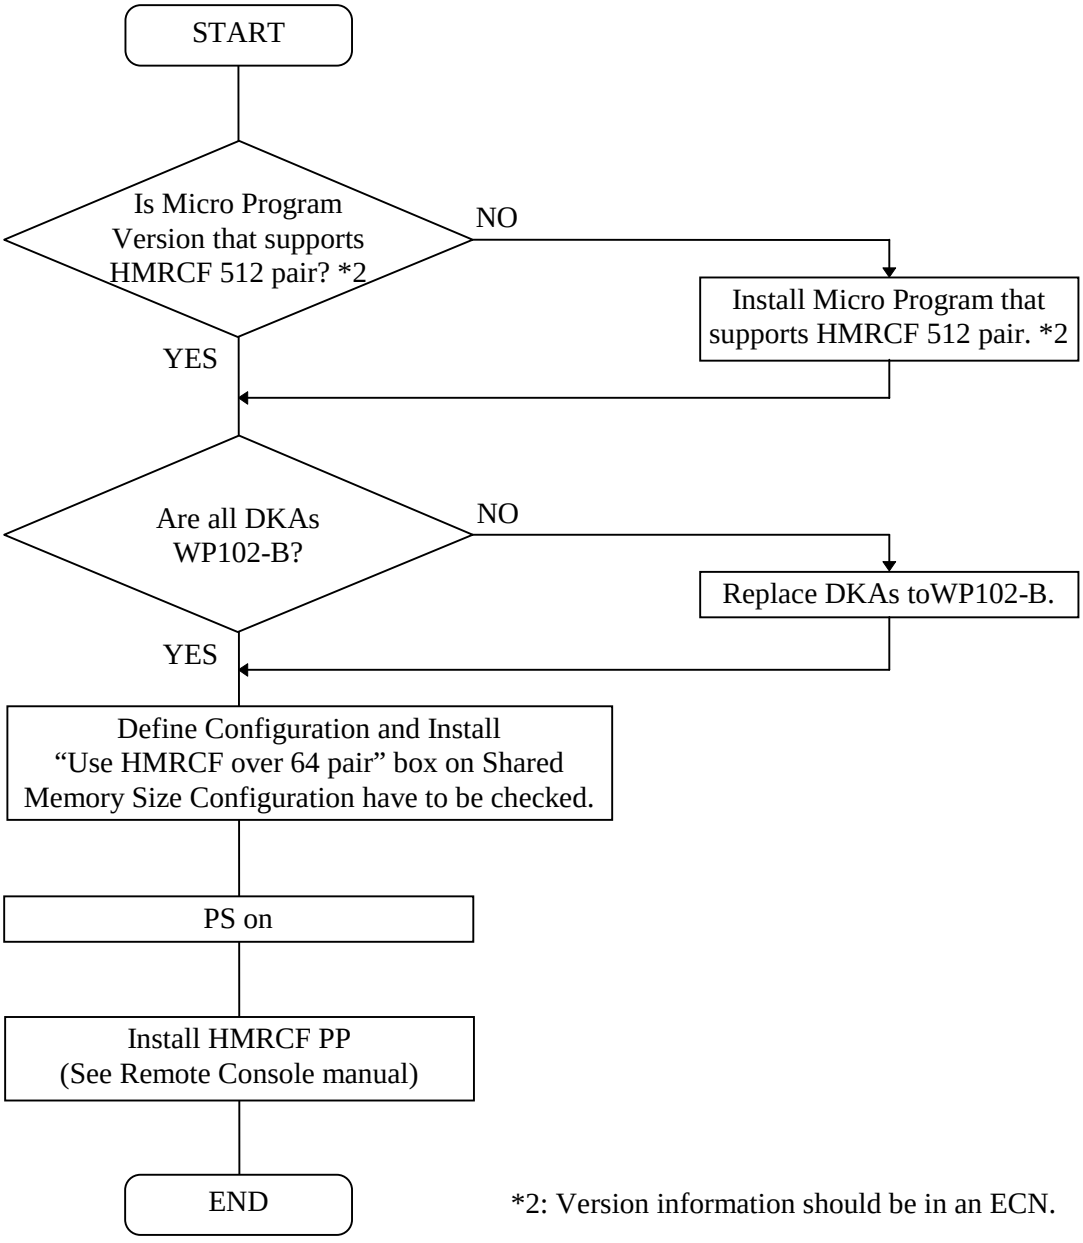


*1: Version information should be in an ECN.

Copyright ©1998,1999, Hitachi, Ltd.

2. Procedure for increment of max. pair number

(1) In case of a new system
It is needed that DKAs should be WP102-B instead of usual DKAs.
And check “Use HMRCF over 64 pair” box on the Shared Memory Size Configuration panel at the end of Define Configuration and Install procedure.
Be sure to check the shared memory capacity that showed at the Shared Memory Size Configuration panel and shared memory hardware that is on the DKC are the same.



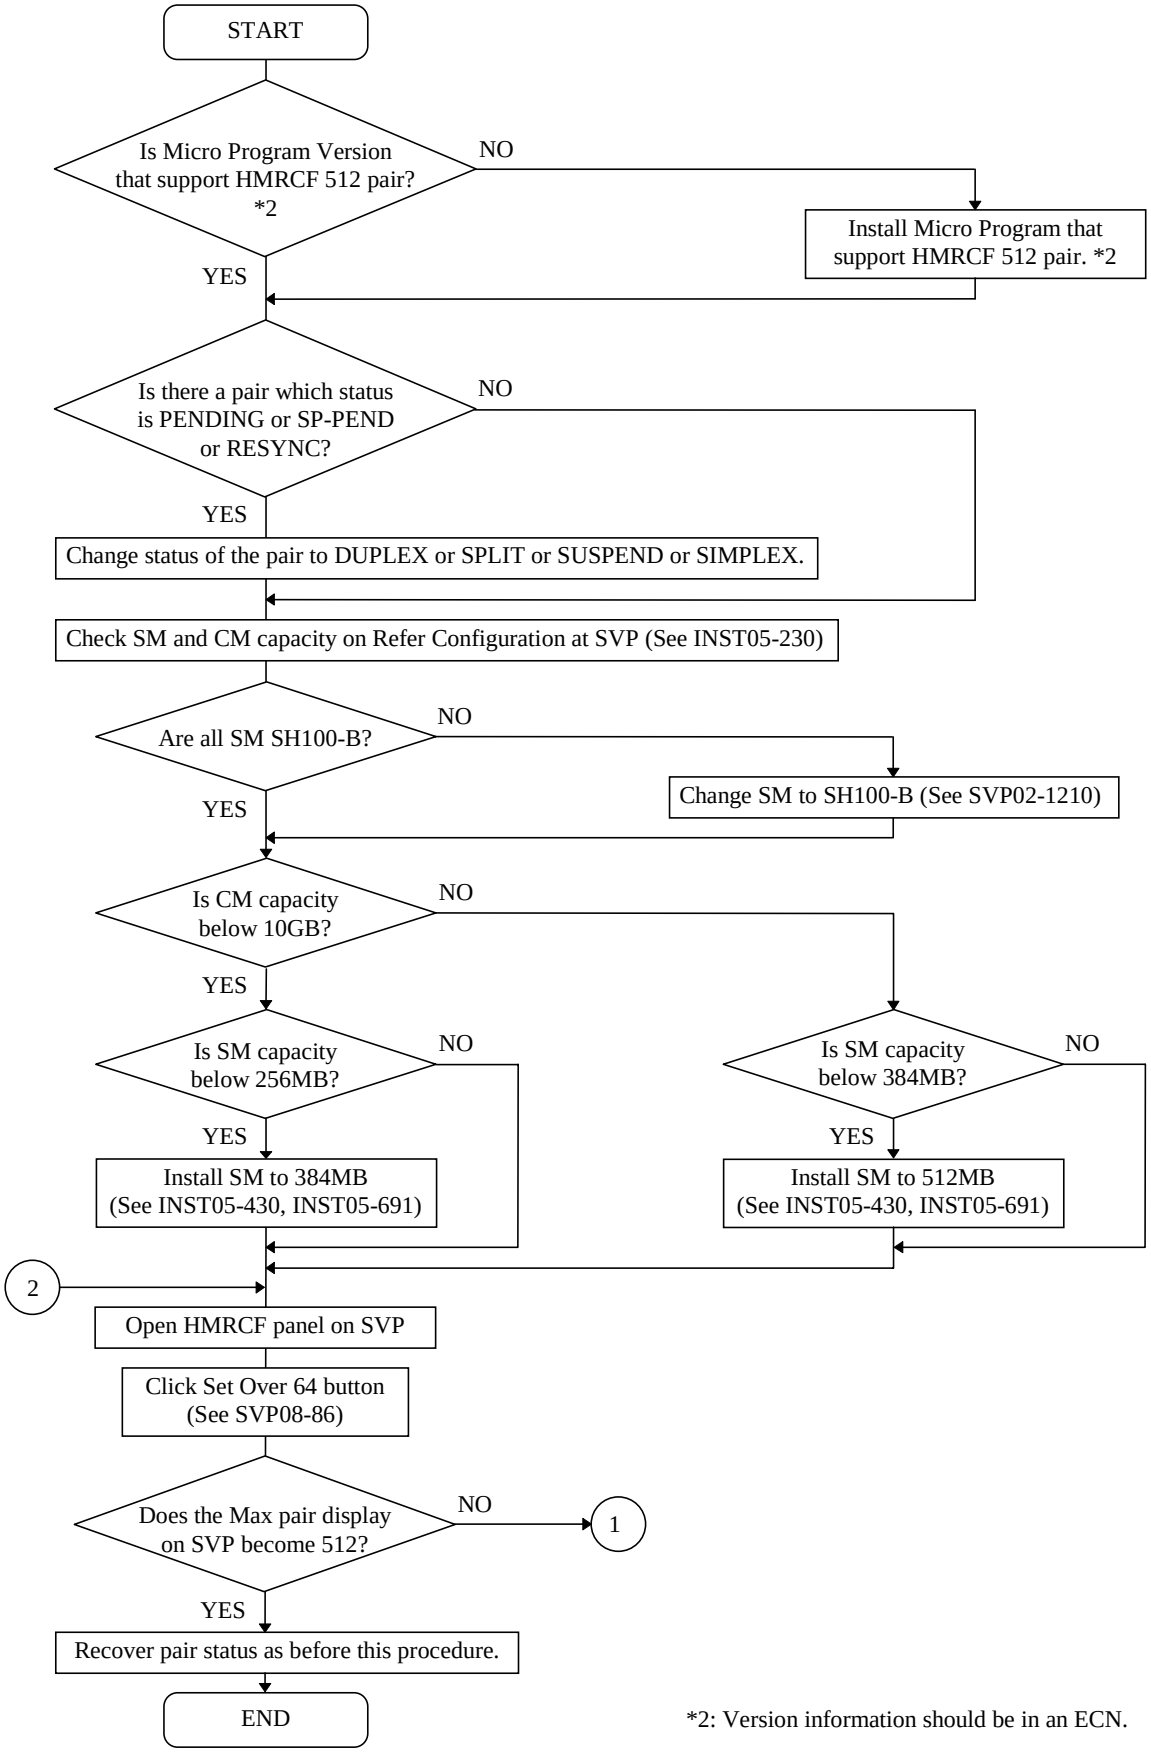
*2: Version information should be in an ECN.

Copyright ©1998, Hitachi, Ltd.

(2) In case of a system already using HMRCF
In this case SM incrementation is needed. Follow the flowchart on the next page.
Shared memory capacity have to be increased to store HMRCF control information for 512 pairs.
<<Caution>> Shared Memory have to be SH100-B(64MB).
Because capacity of SM is over 192 MB X 2 after installation.

NO	Item	Contents
1	Micro Program exchange	Micro program have to be upgraded first.
2	Installation of Shared Memory	Increment Shared Memory capacity. If there is SH024(16MB), it have to be exchange to SH100-B (64MB) before SM installation.
3	Create additional control table	Push the “Set over 64” button of HMRCF screen on SVP.

Copyright ©1998, Hitachi, Ltd.



*2: Version information should be in an ECN.

MICRO-FC

Two types of MICRO-FCs are provided with micro-program exchange and on-line patch. Micro-program exchange is explained in chapter 1 to 5.4, and on-line patch in chapter 5.

1 Overview

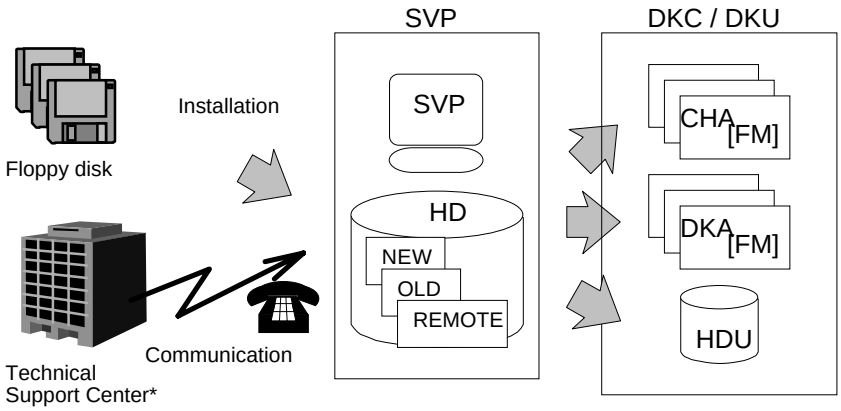
1.1 Micro-program Types

The micro-programs listed below can be exchanged via the SVP. Therefore, the exchange of micro-programs requires operational knowledge of the SVP.

Micro-program	Written to
Setup installer	—
DKCMAIN	FM
MAIN DIFF	FM
SVP	Hard disk in the SVP
LCP/MCP/LCDG	FM
CUDG4	Hard disk in the SVP
FOP	FM
DKU (308/309/3F1/3F2/30A)	HDU
SSVP	Hard disk in the SVP
RAM BOOT	FM
CONFIG	Hard disk in the SVP

Copyright ©1997,1999, Hitachi, Ltd.

1.2 Micro-program Exchange Flow



The SVP keeps two generations (new and old versions) of micro-programs.

* Technical Support Center : A base of maintenance service and technical support

Micro-programs can be exchanged in four ways.
(1) Downloading after storing the micro-programs from floppy disk to the hard disk
(2) Downloading of the most versions on the hard disk in the SVP
(3) Remote (downloading of the micro-programs transferred from the maintenance center)
(4) Version Down (downloading of old versions on the hard disk)

1.3 Micro-program Exchange

Micro-programs can be exchanged off-line or on-line.
(1) Off-line
All processors are blocked for maintenance. → Micro-programs are rewritten. → All processors are recovered. → The DKC is turned off then on again.
(2) On-line
The processor is blocked for maintenance. → Micro-programs are rewritten. → The processor is recovered.

This is performed for each exchanging unit.

NOTE: • The SVP checks the version of the micro-program to be substituted before rewriting it. When the SVP determines that the micro-program cannot be rewritten, it displays an error message and cancels the exchange of the micro-program.
• The SVP terminates the exchange of micro-programs when the error status is displayed (i.e. when a message " ..... error ..... " or "..... failed ....." is displayed) or when the [Cancel] button is selected.
If you want to retry the exchange, please start from the first step of the MICRO-FC procedure.
However, when the error status is displayed in downloading from SVP to DKC (FM) or DKU by 3.3 Transferring micro-program to the DKC or by 5.4.3 Transferring micro-program, you can retry by 3.4 Hard Disk Download or by 4.4 Hard Disk Download.

Copyright ©1997,1998, Hitachi, Ltd.

⚠ CAUTION

In case of HMRCF/HOMRCF, Differential bit map data on shared memory of DKC is lost by offline micro exchange operation.

To avoid loss of differential bit map, online micro exchange should be used.

1.4 Remote Console Program Download from SVP

This function is to correspond with the SVP version and Remote Console version. SVP can install the appropriate Remote Console programs. When the Remote Console connects to this SVP, the Remote Console will check the installed program version in this SVP and the current executing version in the Remote Console. If the version in the Remote Console is not appropriate, the Remote Console will transfer the installed programs in the SVP and execute setup automatically.

When you want to exchange the SVP micro programs, please do the following operations. If your customer does not use the Remote Console, you does not need to do these operations except SVP exchange.

(1) Exchange the SVP micro programs.
(2) De-install the old Remote Console programs if they have already installed.
    -> Refer to 9.2 Program De-installation.
(3) Install the new appropriate Remote Console programs.
    -> Refer to 9.1 Program Installation.

Copyright ©1999,2000, Hitachi, Ltd.

2 Micro-program substitution in the SVP

We remove replace procedure of PC from SVP section to Replace section, Because the procedure is held right after replacing PC.

Copyright ©1997, Hitachi, Ltd.

3 Micro-program Exchange Procedure (Off-line)

If an error occurs during a micro-program exchange, retry the exchanging procedure from the beginning.

3.1 Processing before exchange

- Check the subsystem status through the entire status display. (Check the versions of the all programs through the version display.
- Make sure that collection copy and other processing are not in progress.)
- Perform postprocessing for PIN data.
- Check that all processors are normal.
- Check that all CHL pass to the subsystem are off-line (to block all micro-programs).
- LCP, MCP, LCDG, FOP, DKCMAIN, MAIN DIFF, RAMBOOT micro-programs can be exchanged on off-line.
- In the case of HRC Asynchronous components, Suspending all volume pairs is required prior to the **RCU's** off-line micro-program exchange. Refer 3.17.8.1 Managing HRC Asynchronous Subsystems (5) Micro-program Exchange:THEORY03-1395.

Off-line Micro-program Exchange time (approximate)

(unit : minutes)

	FD → HDD		Downloading
LCP	10	CHA	2
MCP			
LCDG			
FOP			
DKCMAIN		DKA	2
MAIN DIFF			
RAMBOOT		Reboot	3
TOTAL	10	Total	7

NOTE: After you execute this operation, DKC will clear the condition that DKC reports SIM to the host. Therefore, DKC will report the next SIM to the host when the host accesses 16K I/O, and after you will wait for an hour if P/S on is executed.

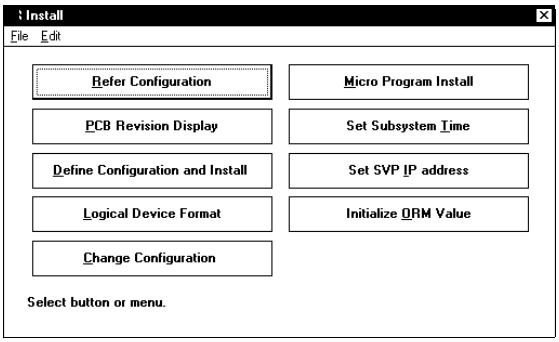
3.2 Storing the micro-programs to be substituted in the SVP

(1) <Initial screen>

(2)
Change the mode to [Modify Mode] (CL).
Select (CL) [Install].

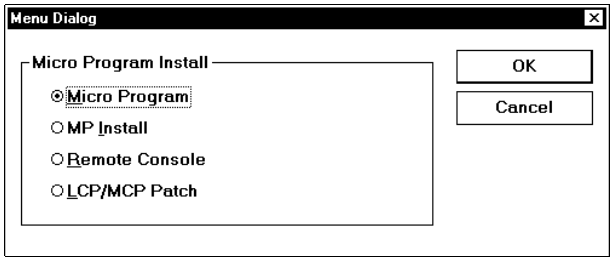
(3) In the 'Install' window, select (CL) [Micro Program Install].



Copyright ©1997,1998, Hitachi, Ltd.

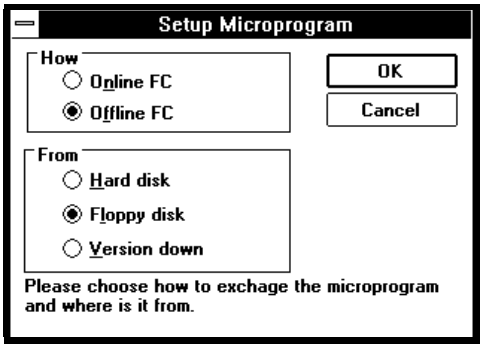
(4)

Select (CL) [Micro Program] and select (CL) [OK].



(5)

In the 'Setup Microprogram' dialog bax,
[From]: select (CL) the source from which to store the micro-programs.



Hard Disk: The latest versions on the SVP hard disk are downloaded.--- Go to 3.4 (1). (MICRO-FC03-120)

Floppy Disk: After being stored on the hard disk from floppy disks, the micro-programs are downloaded. --- Select(CL) [OK] and Go to (6).

Version Down: Old versions on the hard disk are downloaded. --- Go to 3.5 (1). (MICRO-FC03-140)

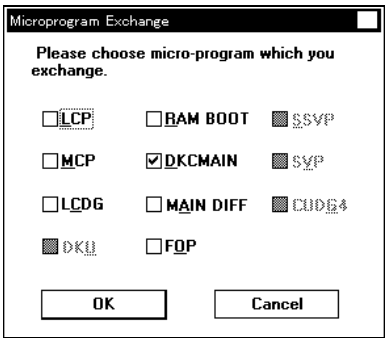
Selecting (CL) [Cancel] returns you to be step (4).

<<Error>>
When the target file is not found, processing is terminated with the error message "Old files erase failed, copy stop."

Copyright ©1997,2000, Hitachi, Ltd.

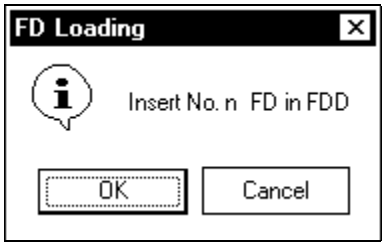
(6) The 'Micro-program Exchange' dialog box appears. Select (CL) one or more items from the list of the type of micro-programs, and select (CL) [OK].

☒ : Micro-programs to be substituted.



After you confirm that you have already varied the all CHL paths to off-line, select (CL) [OK].

(7) In response to the message "Insert No.n FD in FDD", remove the inserted floppy disk and insert the appropriate floppy disk and select (CL) [OK].
(n = 2,3, ... ,N N: Number of floppy disks)

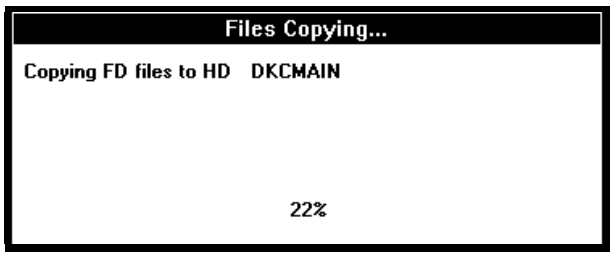


<<Error>>
No floppy disk and uncorrect floppy disk in the floppy disk drive:
The same message is displayed again, returning you to (6).
Internal error:

- "Old files erase failed, copy stop."
- "Memory error has occurred."
- "File I/O error has occurred."
- "Logical error has occurred."
- "The directory create error and copy stop."
- "The file size is Wrong and copy stop."

Copyright ©1997,1999, Hitachi, Ltd.

(8) The message “Copying FD files to HD DKCMAIN” appears.



Execute the steps (7) to (8) once for each floppy disk.

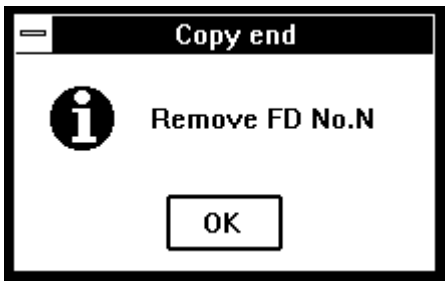
<<Error>>
Internal error:

- “The file size is Wrong and copy stop.”
- “The directory create error and copy stop.”
- “Micro-program version disagreement and copy stop.”
- “Logical error has occurred.”
- “File I/O error has occurred.”
- “Memory error has occurred.”

Note : When the error message “File I/O error has occurred.” or “Memory error has occurred.” is displayed, power SVP off and on again if the same message appears after reexecuting the micro-program exchange (see SVP01-50 in the SVP SECTION).
Then execute the same micro-program exchange again. If the same error occurs (the same error message is displayed), replace SVP hardware (see REP01-150 in the REPLACE SECTION).

Copyright ©1997, Hitachi, Ltd.

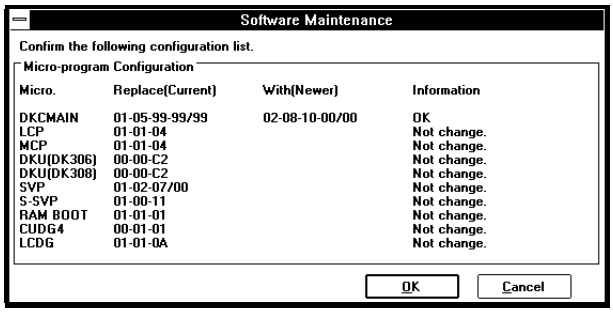
(9) Upon completion of reading from all floppy disks, the message“Remove No.N FD” appears. In response to this message, remove the floppy disk and select (CL) [OK]. (N : Number of floppy disks)



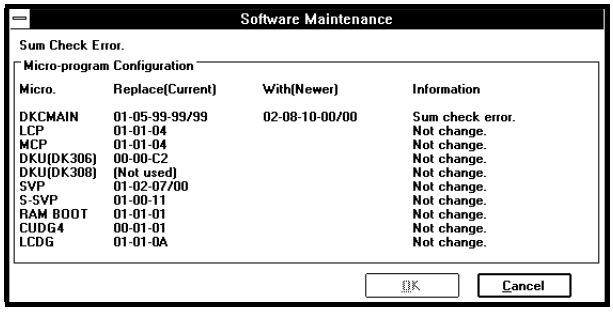
After copy end, sum checker starts.
While checking, the message appears.

(10) On the 'Software Maintenance' dialog box, the micro-program types, current versions, new versions, and message are displayed.

<Display with no error>
The message “Confirm the following configuration list.” is displayed below the title bar. The micro-program can be replaced only when all rows in the information column show “OK”.
To make processing progress, select (CL) [OK].
To terminate micro-program replacement, select (CL) [Cancel].



<Display with an error>
A sample display at occurrence of an error is shown on the right. An error message is displayed below the title bar. At the same time, error information is displayed in the information column.
Select (CL) [Cancel] to terminate micro-program replacement. (Note: The [OK] button is not displayed.)



Before making an attempt to rerun, be sure to correct the cause of the error by referring to the entire status
(SVP SECTION), action code (ACC SECTION), and other information.

Below are messages and information that may be displayed in the Information column.

Version Check Message Table.

	Message :	Contents and Maintenance
1	Confirm the following configuration list.	Check the version (Normal or Warning). If Warning, it is necessary to be approved by TSC (Technical Support Center).
2	Version error.	Incorrect version. Confirm the micro-program version.
3	Can't read the configuration of the micro-program.	Error caused while the micro-program configuration is being read. Blockade processor exists, recover it.
4	Internal error. (On SVP Logic)	Inconsistent logic. (SVP logic) Retry exchange. If same message is displayed, power SVP off and on.
5	Internal error. (On SVP Memory)	Inconsistent logic. (SVP memory) Retry exchange. If same message is displayed, power SVP off and on.
6	Internal error. (On Temporary Files)	Inconsistent logic. (temporary file) Retry exchange. If same message is displayed, power SVP off and on.
7	Version error. (Previous maintenance needed)	Incorrect version. (partial replacement) Confirm the micro-program version.
8	Version error. (Incompatible MP exists)	Incorrect version. (partial replacement) Confirm the micro-program version.
9	Sum Check error.	Sum check code is incorrect. Micro-program data in FD isn't correct, exchange FD.
10	Revision error	Incorrect revision. Confirm the micro-program revision.
11	The micro-program is incompatible with the system.	Incorrect micro-program. Confirm the micro-program version and system. Contact TSC (Technical Support Center).
12	Combination error	Incorrect micro-program exchange process. Confirm the combination of micro-program version and exchange process.

Copyright ©1997, Hitachi, Ltd.

	Information	Contents
1	OK	The micro-program is replaceable.
2	Version error [#xxxx]	MP has an incorrect micro-program version. [processor number]
3	FC Condition [#xxxx]	MP has an incorrect micro-program version with partial replacement. [processor number]
4	Internal error [#xxxx]	Inconsistent logic error has occurred. [internal error code]
5	Not change	The micro-program will not be replaced.
6	Read error	Error has occurred while reading the current configuration.
7	Sum Check error	Sum check code is incorrect.
8	Warning	It is necessary to contact TSC (Technical support center) for approval.
9	Revision error	MP has incorrect micro-program revision.
10	Package condition	The combination error of micro-program and package has occurred.
11	Facility condition [#xxxx]	MP has incorrect micro-program version with function of system. [Facility condition error code]
12	Combination error [#xxxx]	The combination error of more than two micro-program has occurred. [Combination error code]

	Internal error code	Contents
1	0001	Parameter error.
2	0002, 0003	Memory allocation error.
3	0005	File I/O error.

	Combination error code	Contents
1	8000	High Speed Adapter error
2	8001	Compressed LCDG error

	Facility condition error code	Contents
1	C000 ~ C011	Reserve
2	C012	Compressed DKCMAIN error

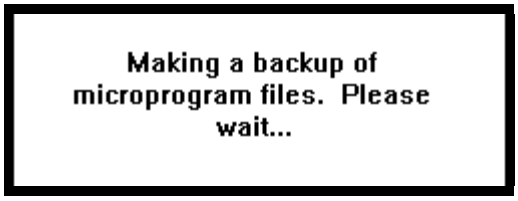
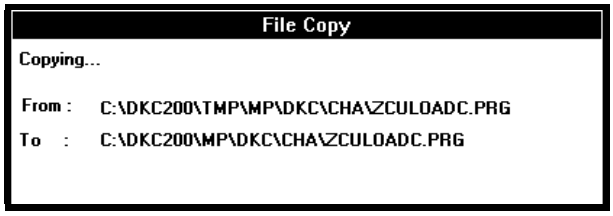
(11) The message “Making a backup of micro-program files. Please Wait...” appears.



(12) File copy in SVP

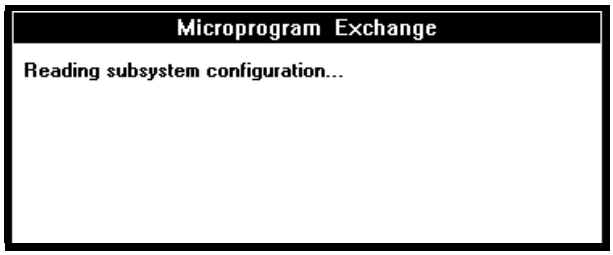
Go to 3.3 (1).



Copyright ©1999,2000, Hitachi, Ltd.

3.3 Transferring micro-programs to the DKC

(1) The message “Reading subsystem configuration...” appears.



<<Error>>

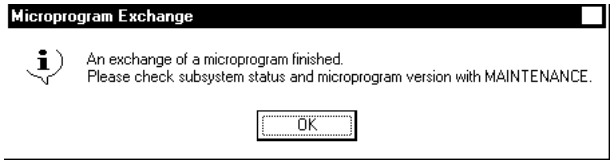
- “On exchanging a micro-program, An error has occurred. XX processing is stopped”
- “The processor of an obstacle blockade exits. XX processing is stopped”
- “The processor that failed in an exchange of micro-program exists”
- “An error had occurred in XX blockade processing”
- “File size check error”
- “Invalid file contents”

(2) The message “Downloading *** micro-program...” (***: MAIN, ...) appears.

Copyright ©1997,1998, Hitachi, Ltd.

(3) The message “Now MP Rebooting... Group# n/N” appears.
All processors are recovered.

(4) After downloading the micro-programs, SVP makes the sub-system to be enable and displays the following message “An exchange of a microprogram finished. Please check subsystem status and microprogram version with MAINTENANCE.”, select (CL) [OK].
Go to 3.6 (MICRO-FC03-150).

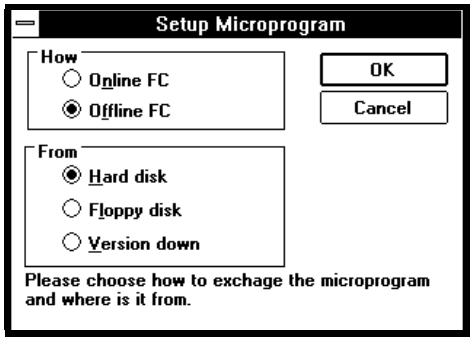


Copyright ©1997,1998, Hitachi, Ltd.

3.4 Hard Disk Download

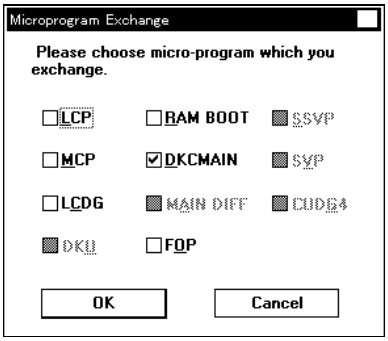
The latest version of the DKCMAIN micro-program on the SVP hard disk is downloaded to the DKC.

(1) Select (CL) [Hard Disk] in the 'Setup Microprogram' dialog box.
And select (CL) [OK].



The 'Micro-program Exchange' dialog box appears.
Select (CL) one or more items from the list of the type of micro-programs, and select (CL) [OK].

☒ : Micro-programs to be substituted.



After you confirm that you have already varied the all CHL paths to off-line, select (CL) [OK].

Go to 3.2 (11). (MICRO-FC03-90)

If an error occurs in downloading micro-programs to DKC, remove the cause of an error using Maintenance Display (SVP section), Action Code (Action Code section), and other information to execute the exchange again. Then start from the first step of MICRO-FC procedure. At this time, you can select [Hard Disk] at 3.4 (MICRO-FC03-120) or [Floppy Disk] at 3.2 (5) (MICRO-FC-03-30).

Copyright ©1997,1999, Hitachi, Ltd.

(2)

Go to 3.3 (1) (MICRO-FC03-100).

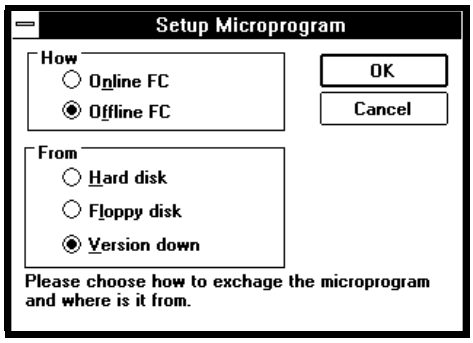
Copyright ©1997, Hitachi, Ltd.

3.5 Version Down

NOTICE
Please ask your TSC if you can operate this.

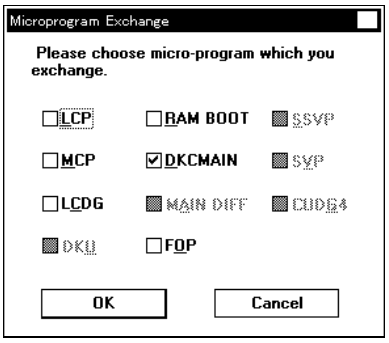
If you want to restore the DKCMAIN micro-program to the previous version of the micro-program after the exchange (by Floppy Disk or Remote function) , execute the Version Down function.

(1) Select (CL) [Version Down] in the 'Setup Microprogram' dialog box.
And select (CL) [OK].



The 'Micro-program Exchange' dialog box appears.
Select (CL) one or more items from the list of the type of micro-programs, and select (CL) [OK].

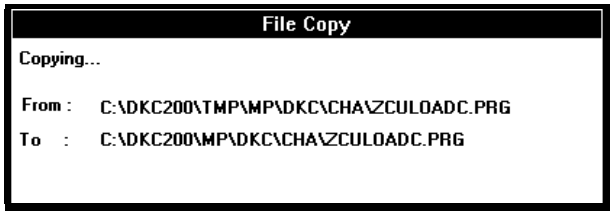
☒ : Micro-programs to be substituted.



After you confirm that you have already varied the all CHL paths to off-line, select (CL) [OK].

Go to 3.2 (11). (MICRO-FC03-90)

(2) Copy source and copy destination are displayed.



Copyright ©1997,1999, Hitachi, Ltd.

3.6 Checking the functions after exchange

Check that the version of the recently installed micro-program is the same as that of the replaced micro-program by using version display in the MAINTENANCE function.
(See SVP SECTION.)

Note: If you find "??-??···" or incompatibility version, recover at the section 7.2.

Copyright ©1997,1999, Hitachi, Ltd.

4 Micro-program Exchange Procedure (On-line)

If an error occurs during a micro-program exchange, retry the exchanging procedure from the beginning or execute the procedure explained in Chapter 7 “Trouble Recovery Procedure in Exchanging Micro-programs”.

Note : In case an error occurs during an exchange of the DKU micro-programs, make a note on the number of the DKU in which the error occurred when the error is recovered.

4.1 Processing before exchange

- Check the subsystem status through the entire status display. (Check the versions of all the programs through the version display. Make sure that, (collection copy) and other processing are not in progress.)
- Perform postprocessing for PIN data.
- Check that all processors are normal.

On-line Micro-Program Exchange time (approximate)

(unit : minutes)

	FD → HDD	Download HDD → SM/(HDD → FM)	MP Reboot
LCP	10	1/(3)	6
MCP		1/(3)	
LCDG		1/(3)	
FOP		1/(3)	
DKCMAIN		4	
MAIN DIFF		4	
RAM BOOT		1	
DKU		60	—
SSVP	5	15	—
SVP		3	—
CUDG4		0	—
Total	15	86/(92)	6

(Processors : 16, Drive capacity : 180GB)

Copyright ©1997,1999, Hitachi, Ltd.

4.2 Storing the micro-programs to be substituted in the SVP

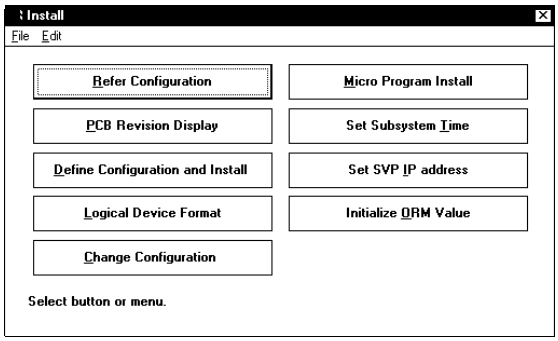
(1) <Initial screen>

(2)

Change the mode to [Modify Mode] (CL).
Select (CL) [Install].

(3)

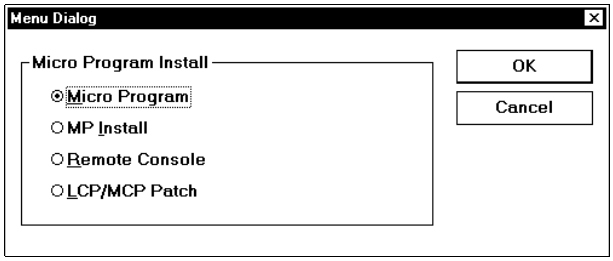
In the 'Install Subsystem' window, select (CL) [Micro Program Install].



Copyright ©1997,1998, Hitachi, Ltd.

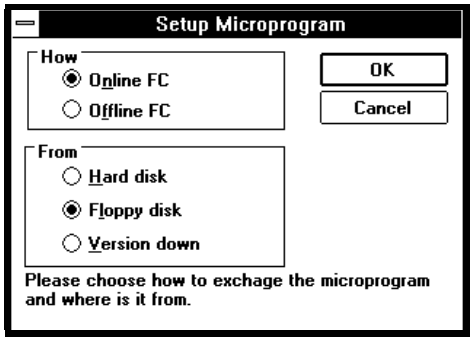
(4)

Select (CL) [Micro Program].
Select (CL) [OK].
Selecting (CL) [Cancel] returns you to step (3).



(5)

In the 'Setup Microprogram' dialog box,
[How] : select (CL) [Online].
[From]: select (CL) the source from which to store the micro-programs.

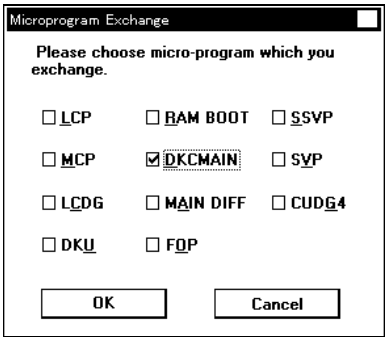


Hard Disk: The latest versions on the SVP hard disk aredownloaded. --- Go to 4.4 (1). (MICRO-FC04-140)
Floppy Disk: After being stored on the hard disk from floppy disks, the micro-programs are downloaded. --- Select (CL) [OK] and Go to (6).
Version Down: Old versions on the hard disk are downloaded. --- Go to 4.5 (1). (MICRO-FC04-150)
Selecting (CL) [Cancel] returns you to be step (4).

<<Error>>
When the target file is not found, processing is terminated with the error message "Old files erase failed, copy stop."

(6) The 'Micro-program Exchange' dialog box appears.
Select (CL) one or more items from the list of the type of micro-programs, and select (CL) [OK].

☒ : Micro-programs to be substituted.

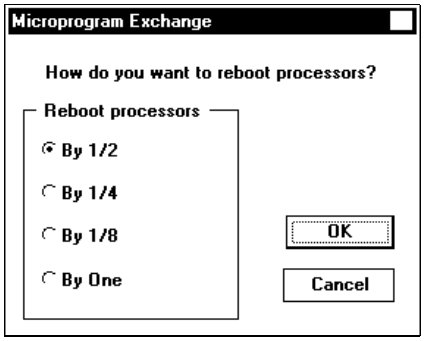


Note : SVP changed the message in FM download process. If an operator selected "LCP", "MCP" or "LCDG", SVP displayed a message as "LCP/LCDG" or "MCP/LCDG" during the download.

Copyright ©1997,2000, Hitachi, Ltd.

(7)

When DKCMAIN, MAIN DIFF, FOP or RAMBOOT were selected, You can select the reboot pattern from the list. Please select (CL) one of these patterns and select (CL) [OK].
If the SVP version is earlier than 51-34-XX, go to (10).



By 1/2 : Reboot by half MPs in the DKC sub system.
By 1/4 : Reboot by quarter MPs in the DKC sub system.
By 1/8 : Reboot by 1/8 MPs in the DKC sub system.
By One : Reboot by minimum reboot unit MPs in the DKC sub system.

NOTICE

Please select a reboot pattern by taking the following table into account.

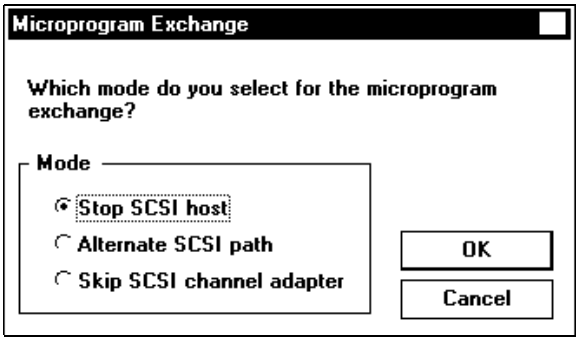
Reboot Pattern		By 1/2	By 1/4	By 1/8	By One
Exchange Time	Standard value(*) [minute](approx.)	14	19	37	78
		Short ◄——————► Long			
Effect on performance of DKC		Big ◄——————► Small			

(*)measure condition : 24MP (CHA(serial) × 4, DKA × 4), no I/O.

NOTICE

Sometimes “error” message is displayed temporarily in [Reboot status display].
But, there is no problem if the reboot is finished without error.

(8) <If SCSI channel adapter is equipped>
Select (CL) one of the exchange mode of DKCMAIN micro-program as follows, and select (CL) [OK].



- “Stop SCSI host” : exchange micro-programs by varying off-line the SCSI host paths.

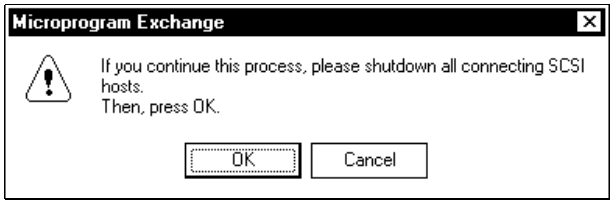
  NOTICE
  You should request your custmer to shut down the SCSI host.

- “Alternate SCSI path” : exchange micro-programs by changing the SCSI host path to the alternative path.
- “Skip SCSI channel adapter” : exchange micro-programs without SCSI channel adapter.

Copyright ©1998,1999, Hitachi, Ltd.

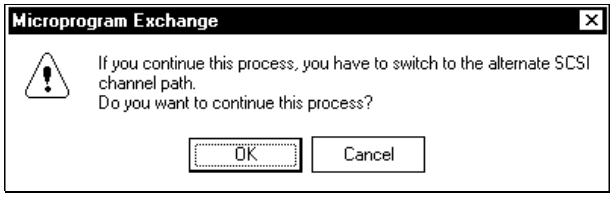
(8-1) <If "Stop SCSI host" is selected>

Shut down all the SCSI hosts and Select (CL) [OK]. Go to step (9).
When [Cancel] is selected (CL), the processing step is returned to (8).



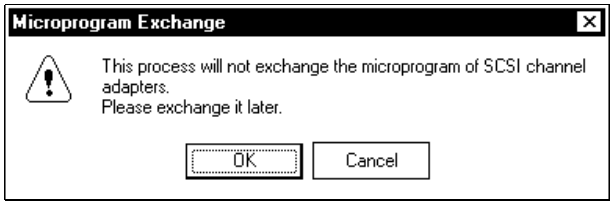
(8-2) <If "Alternate SCSI path" is selected>

It is necessary to switch the SCSI path to the alternate path before executing the microprogram FC for the CHA (SCSI) PCB.
To continue the processing, select (CL) [OK]. Go to step (10).
When [Cancel] is selected (CL), the processing step is returned to (8).



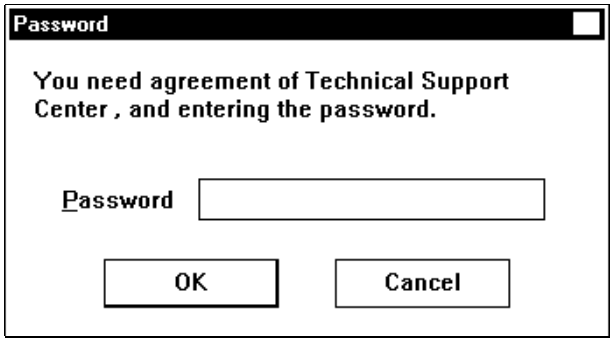
(8-3) <If "Skip SCSI channel adapter" is selected>

The microprogram FC for the CHA (SCSI) PCB will not be executed. Execute it in the future in the Stop SCSI host mode or the Alternate SCSI path mode.



NOTICE
Ask the technical support center about the appropriateness of the operation, and input a password after getting an approval of executing the operation.

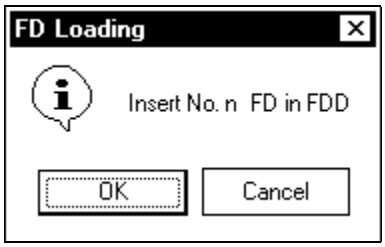
If you want to continue this process, select (CL) [OK] and enter the password, and select (CL) [OK].



(9) <If SCSI channel adapter is installed, when DKCMAIN or RAMBOOT were selected.>
After you confirm that you have stopped all SCSI channel paths, select (CL) [OK].

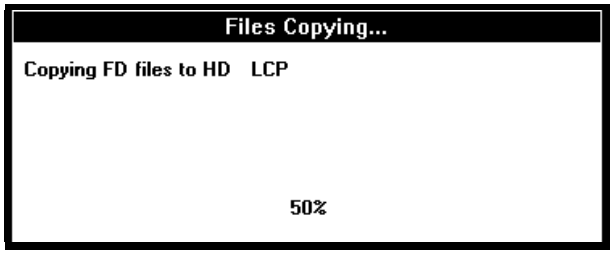
Copyright ©1998, Hitachi, Ltd.

(10) In response to the message “Insert No.n FD in FDD”, remove the inserted floppy disk and insert the appropriate floppy disk and select (CL) [OK].
(n = 2,3, ... ,N, N : Number of floppy disks)



<<Error>>
No floppy disk and uncorrect floppy disk in the floppy disk drive:
The same message is displayed again, returning you to (10).
Internal error:
- “Old files erase failed, copy stop.”
- “Memory error has occurred.”
- “File I/O error has occurred.”
- “Logical error has occurred.”
- “The directory create error and copy stop.”
- “The file size is Wrong and copy stop.”

(11) The message “Copying FD files to HD” appears.
Execute the steps (10) to (11) once for each floppy disk.



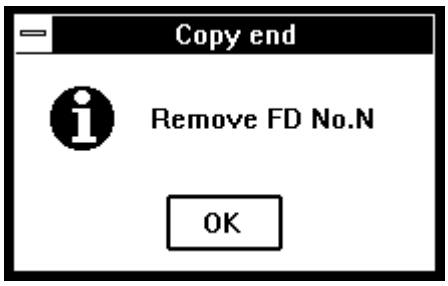
<<Error>>
Internal error:
- “The file size is Wrong and copy stop.”
- “The directory create error and copy stop.”
- “Micro-program version disagreement and copy stop.”
- “Logical error has occurred.”
- “File I/O error has occurred.”
- “Memory error has occurred.”

Note : When the error message “File I/O error has occurred.” or “Memory error has occurred.” is displayed, power SVP off and on again if the same message appears after reexecuting the micro-program exchange (see SVP01-50 in the SVP SECTION).
Then execute the same micro-program exchange again. If the same error occurs (the same error message is displayed), replace SVP hardware (see REP01-150 in the REPLACE SECTION.).

Copyright ©1997,1998, Hitachi, Ltd.

(12) Upon completion of reading from all floppy disks, the message“Remove No.N FD” appears.
In response to this message, remove the floppy disk and select (CL) [OK].

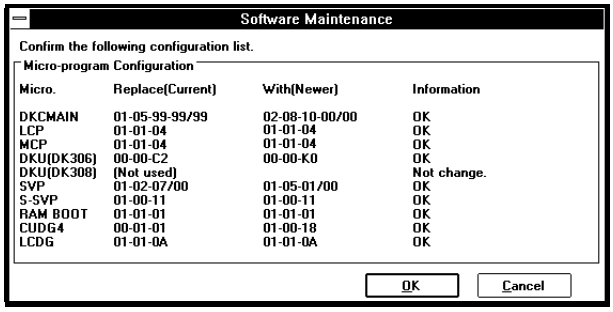
N : Number of floppy disks.



After copy end, sum checker starts.
While checking, the message appears.

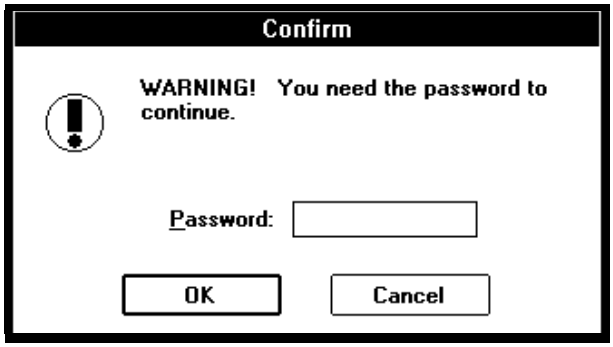
(13) On the ‘Software Maintenance’ dialog box, the micro-program types, current versions, new versions, and message are displayed.

<Display with no error>
The message “Confirm the following configuration list.” is displayed below the title bar. The micro-program can be replaced only when all rows in the information column show “OK” or “Warning”.
To continue processing, select (CL) [OK].
To terminate micro-program replacement, select (CL) [Cancel].



<<NOTICE>> If “Warning” is displayed.

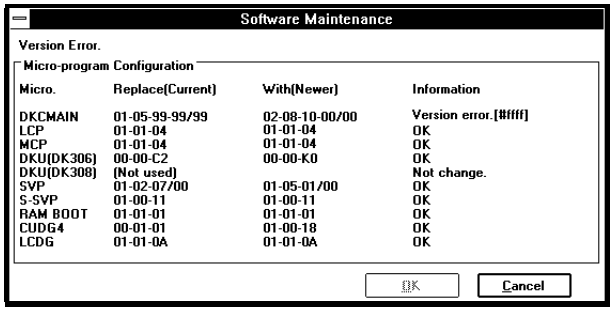
NOTICE
Refrain from selecting (CL) "OK" or "Cancel". Take a note of the display contents and ask the technical support center for a decision for selecting "OK" or "Cancel" according to the contents.



To make processing progress, input the password and select (CL) [OK].
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.

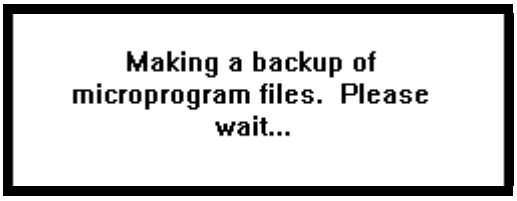
Copyright ©1997,1998, Hitachi, Ltd.

<Display with an error>
A sample error display is shown at the right. An error message is displayed below the title bar. At the same time, error information is displayed in the information column.
Select (CL) [Cancel] to terminate the micro-program replacement. (Note: The [OK] button is not displayed.)
Before attempting to rerun, be sure to correct the cause of the error. Refer to the entire status (SVP SECTION), action code (ACC SECTION), and other information.



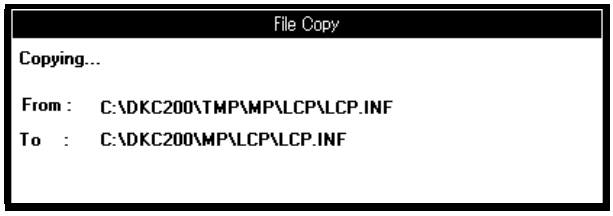
See Version Check Message Table (MICRO-FC03-70).

(14) The message "Making a backup of micro-program files. Please Wait..." appears.



(15) File copy in SVP

Go to 4.3.1 (1) (MICRO-FC04-70) or
4.3.2 (1) (MICRO-FC04-110) or
4.3.2 (5) (MICRO-FC04-120).



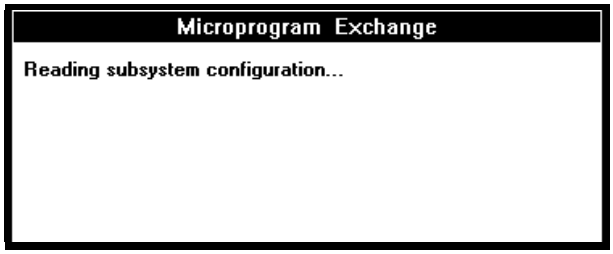
Copyright ©1997, 1998, Hitachi, Ltd.

4.3 Transferring micro-programs

4.3.1 Transferring micro-programs to the DKC/DKU

(1) The message “Reading subsystem configuration...” appears.

Read the current DKC configuration.



Note : When a match is not found in the version and revision between the micro-program in the DKC and that on the SVP hard disk, the micro-program cannot be exchanged on on-line. In this case, the message “Is the device off-line?” appears, and the exchange is canceled. When a processor is blocked due to a failure, the message “Processing cannot be continued because of a processor blocked due to a failure” appears, and the exchange is canceled.

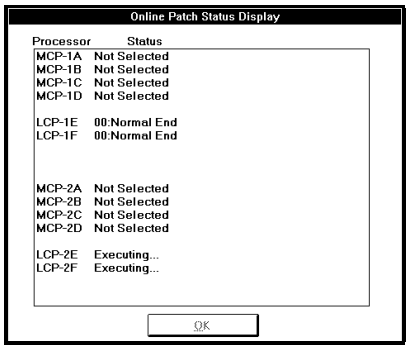
If an error occurs in downloading micro-programs, resolve the cause of an error using Maintenance Display (SVP section), Action Code (Action Code section), and other information to execute the exchange again. Then start from the beginning of the MICRO-FC procedure. At this time, you can select [Hard Disk] at 4.4 (MICRO-FC04-140) or [Floppy Disk] at 4.2 (5) (MICRO-FC04-30).

Copyright ©1997,1998, Hitachi, Ltd.

<MCP/LCP Micro code Exchange>

If MCP/LCP Micro code Exchange, the following message appears.

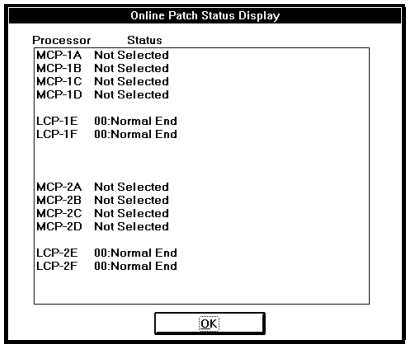
(a) The message displays the execution status of the online patch in the installed MCP or LCP.



<Explanation of status>

Not selected	Not selected as the target.
Waiting for Execution	Execution is awaited.
Executing...	Execution is in progress.
XXXX Blockade Error	Processor XXXX is blockaded.

(b) When execution is competed for all targets, you will go to step (2). If some errors occur, you can now select the [OK] button.
Select (CL) [OK].
You will return to 4.2 (3).

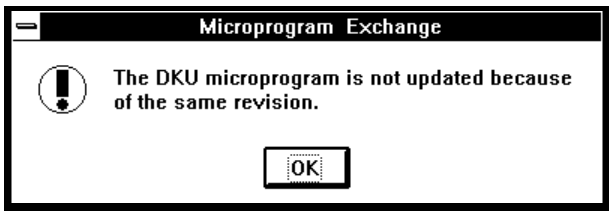


Copyright ©1997,1998, Hitachi, Ltd.

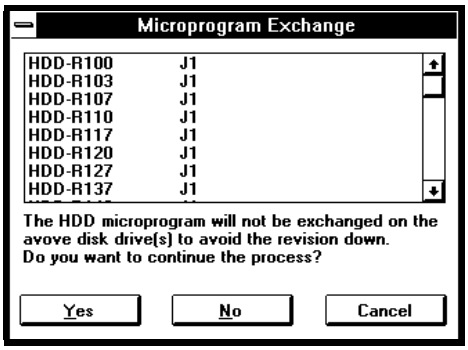
(2) The message “Downloading *** micro- program...” (***: MAIN, LCP, ...) appears.

<Replacement of the DKU micro-program>

(a) When the SVP hard disk and the HDU have DKU micro-programs of the same revision, the replacement of the DKU micro-program ends with the following message on the screen:
“The DKU microprogram is not updated because of the same revision.”



(b) When the revision of the DKU micro-program in the HDU is older than that in the SVP hard disk, the HDD location number and the revision are displayed in the Revision Down HDU list.
When you select (CL) [Yes], the DKU micro-program in the revised HDU only is updated.

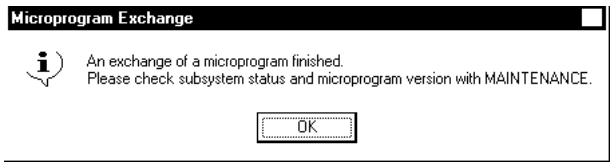


When you select (CL) [No], the message shown on the right is displayed.
When you select (CL) [Yes] in response to the message, DKU micro-programs of the HDUs having micro-programs of different versions are updated.

Copyright ©1997,1998, Hitachi, Ltd.

(3) The message “Now MP Rebooting... Group# n/N” appears.
The processor is recovered.
SVP executes steps (2) and (3) for each exchanging unit.

(4) In response to the message “An exchange of a microprogram finished. Please check subsystem status and microprogram version with MAINTENANCE”, select (CL) [OK].

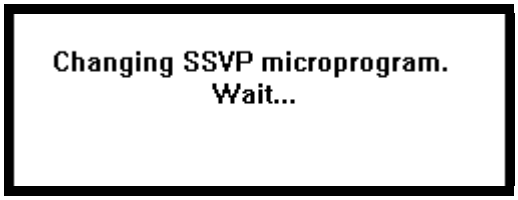


Go to 4.6. (MICRO-FC04-170)

Copyright ©1997,1998, Hitachi, Ltd.

4.3.2 Transferring micro-programs to SVP/SSVP

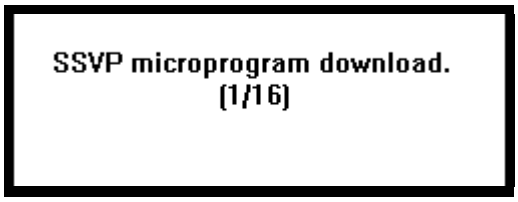
(1) Start of the exchange (SSVP).
The message “Changing SSVP microprogram. Wait...” is displayed.



<<Error>>
Internal error :

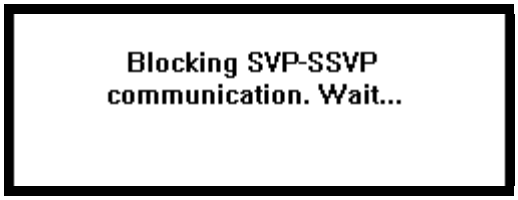
- “Read/Write error has occurred !”
- “Information file doesn’t exist or open error has occurred!”
- “SSVP RESET switch on.”
- “Communication Initialize error!”
- “Cannot change SSVP micro-program while following process is in action. SSVP micro-program download. SSVP memory dump. SVP-SSVP communication error.”
- “Information file doesn’t exist or open error has occurred!”

(2) The message “SSVP microprogram download.” is displayed.



Copyright ©1997, Hitachi, Ltd.

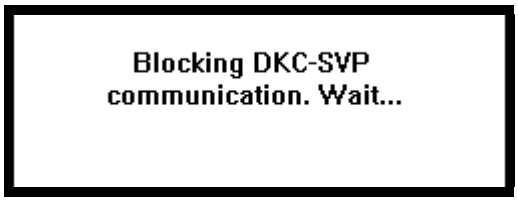
(3) Start of the exchange (SVP).
The message “Blocking SVP-SSVP communication Wait...” is displayed.



<<Error>>
Internal error :
- “Information file doesn’t exist or open error has occurred!”
- “SVP-SSVP communication blockade error has occurred.”

---

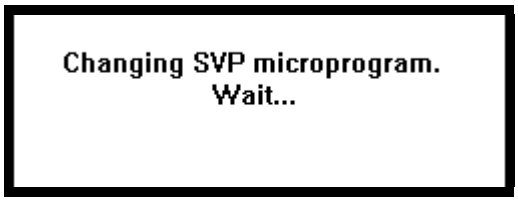
(4) The message “Blocking DKC-SVP communication. Wait...” is displayed.



<<Error>>
Internal error :
- “DKC-SVP communication blockade error has occurred.”
- “DKC-SVP communication restore error has occurred. Confirm the cables are connected correctly.”

---

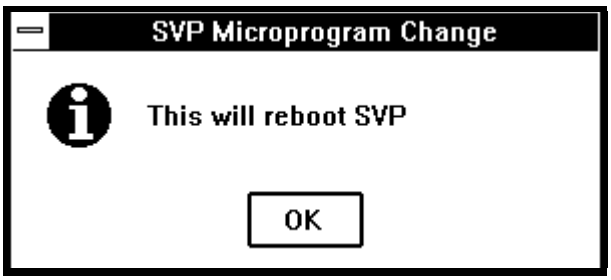
(5) The message “Changing SVP microprogram. Wait...” is displayed.



<<Error>>
Internal error :
- “Read/Write error has occurred !”
- “Information file doesn’t exist or open error has occurred!”
- “Can’t find a file (BKTASK.DAT)!”

Copyright ©1997,1998, Hitachi, Ltd.

(6) End of the exchange (SVP).
Select (CL) [OK].
Terminate some application programs, so SVP is rebooted automatically.



Go to 4.6. (MICRO-FC04-170)

<<Error>>

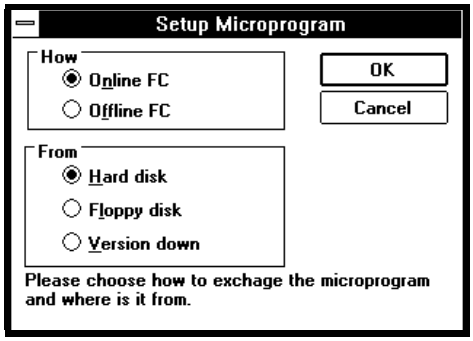
- "The change of SVP microprogram has failed."
  <<Action>>
  - Stop SVP and Power off PC.
  - Power on PC again.

Copyright ©1997, Hitachi, Ltd.

4.4 Hard Disk Download

The latest version of micro-programs on the SVP hard disk are downloaded to DKC.

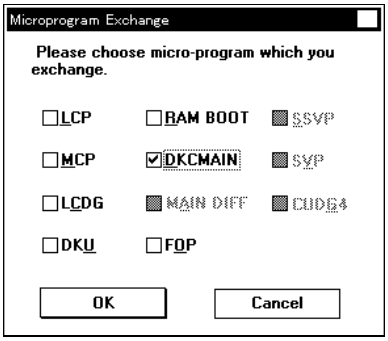
(1) Select (CL) [Hard Disk] in the 'Setup Microprogram' dialog box.
And select (CL) [OK].



---

(2) Select (CL) one or more items from the list of the type of micro-programs.
And select (CL) [OK].

☒ : Micro-programs to be substituted.



---

(3)
Go to 4.2 (7) (MICRO-FC04-33).

---

(4) Execute from 4.3.1 (1).
Go to 4.3.1 (1) (MICRO-FC04-70).

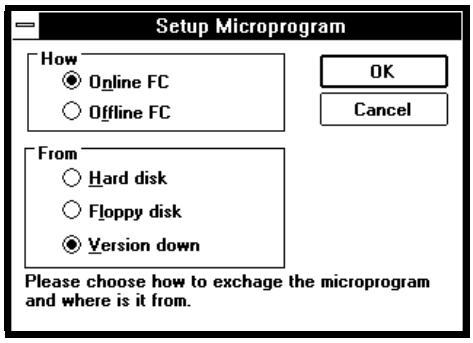
Copyright ©1997,1999, Hitachi, Ltd.

4.5 Version Down

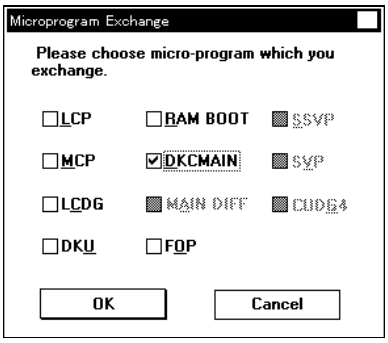
NOTICE
Please ask your TSC if you can operate this.

If you want to restore micro-programs to the previous versions of the micro-programs after the exchange (by Floppy Disk or Remote function), execute the Version Down function.

(1) Select (CL) [Version Down] in the 'Setup Microprogram' dialog box.
And select (CL) [OK].



(2) Micro-programs to be restored are displayed in the 'Micro-program Exchange' dialog box.



(3)
Go to 4.2 (7) (MICRO-FC04-33).

(4) Copy source and copy destination are displayed.

Execute 4.3 (1).
Go to 4.3.1 (1) (MICRO-FC04-70)

Copyright ©1997,1999, Hitachi, Ltd.

Note : • The Version Down function can restore only micro-programs that have been exchanged by Floppy Disk or Remote function of the MICRO-FC.
When the MICRO-FC (Floppy Disk or Remote function) has not been executed the Version Down function cannot be executed until the next MICRO-FC is done.
• After LCP or MCP Version Down, replace the PCB.

Copyright ©1997,1999, Hitachi, Ltd.

4.6 Checking the functions after exchange

Conduct the same testing performed installation.
Check that the version of the recently installed micro-program is the same as that of the replaced micro-program by using the version display in the MAINTENANCE function.
(See SVP SECTION.)

Note: If you find "??-??···" or incompatibility version, recover at the section 7.1.

Copyright ©1997,1999, Hitachi, Ltd.

5 MP Install

5.1 Over view

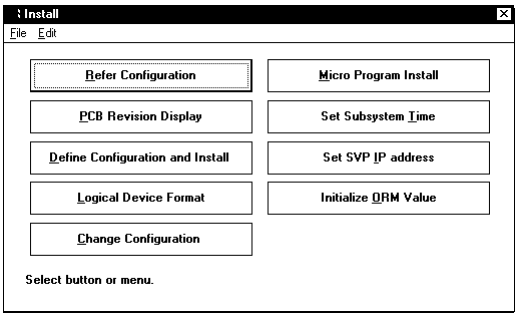
This facility is used to restore a processor that failed to complete the rewrite of the micro-programs in FM (Flash Memory) due to an error occurring during the micro-program download.
Since a processor that encountered such a problem started without loading micro-programs successfully, it is loaded with FM write only programs. Whenever FM write only program are loaded, an SIM with reference code = 7900X0 is reported. The user must examine this SIM and perform MP Install on the processor that issued the SIM.
If MP Install has failed, please replace the PCB. (see REPLACE SECTION)

Copyright ©1997, Hitachi, Ltd.

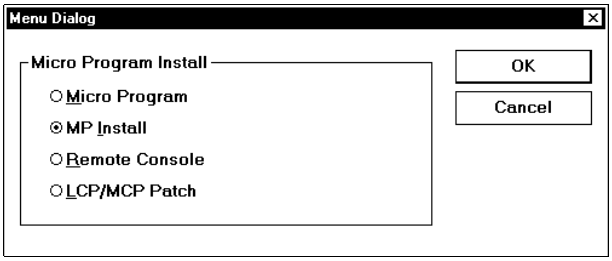
5.2 MP Install

(1) Select (CL) the [Install] icon in the ‘SVP’ window.

(2) Select (CL) [Micro Program Install] in the ‘Install. Subsystem’ window box

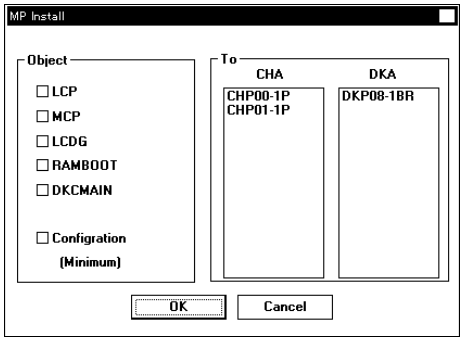


(3) Select (CL) the [Install] menu in the ‘Menu Dialog’ window and select (CL) [MP Install].



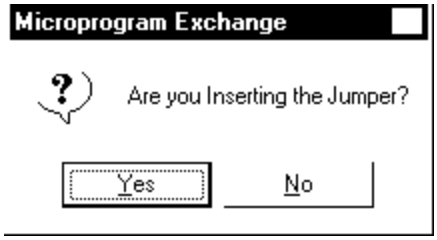
Copyright ©1997,2000, Hitachi, Ltd.

(4) Select (CL) processor in the 'Object' and select (CL) [OK].



(5) Make one of the following responses to message "Are you inserting the jumper?".

- When starting up DKC by connecting JP to TM-1N J9 and TM-2M J9:
  Select (CL) [Yes]. Then processor recovery processing is skipped and branches to (8).
- When starting up DKC as usual:
  Select (CL) [No].



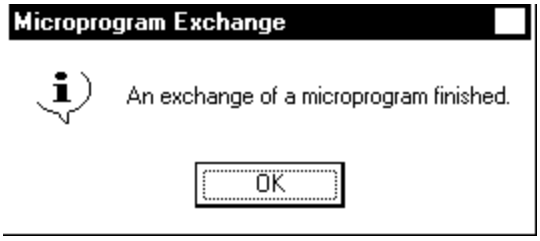
(6) The message "Downloading Main micro-program..." appears.

(7) The message "Processor in now recovering..." appears.
The processor is recovered.

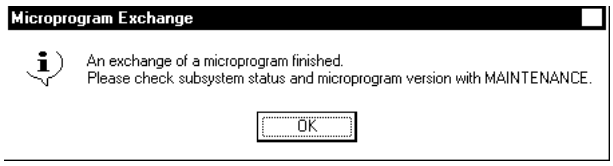
Copyright ©1997,1998, Hitachi, Ltd.

(8)

- When select (CL) [Yes] on step (5):
  In response to the message “An exchange of a microprogram finished.”, select (CL) [OK].



- When select (CL) [No] on step (5):
  In response to the message “An exchange of a microprogram finished. Please check subsystem status and microprogram version with MAINTENANCE.”, select (CL) [OK].



(10) You will return ‘Install’ screen.

Copyright ©1997,1998, Hitachi, Ltd.

6 LCP/MCP Patch

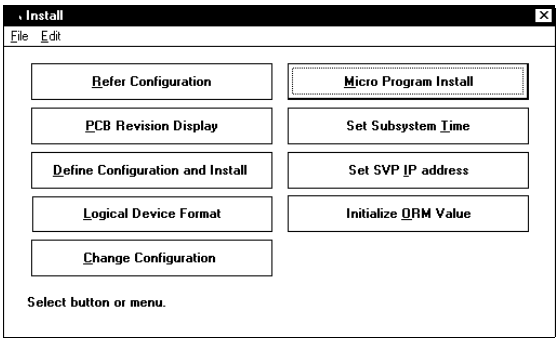
6.1 Methods of entering a patch file

6.1.1 Entering the patch file from the SVP by using a patch editor

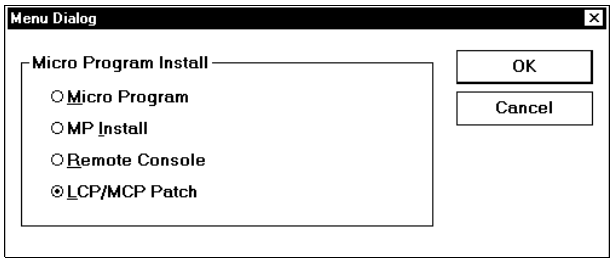
(1) <Mode Change>
Change the mode to [Modify Mode] (CL).

(2) Select (CL) [Install].

(3) Select (CL) [Micro Program Install].

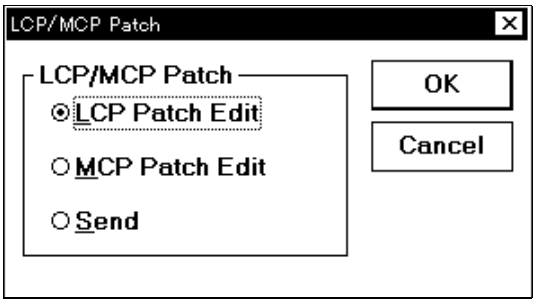


(4) Select (CL) [LCP/MCP Patch] and select (CL) [OK].



(5) Select (CL) [LCP Patch] and select (CL) [OK].

When you want to edit MCP patch file, select (CL) [MCP Patch] and select (CL) [OK].



Copyright ©1997,2000, Hitachi, Ltd.

(6) Editing patch data

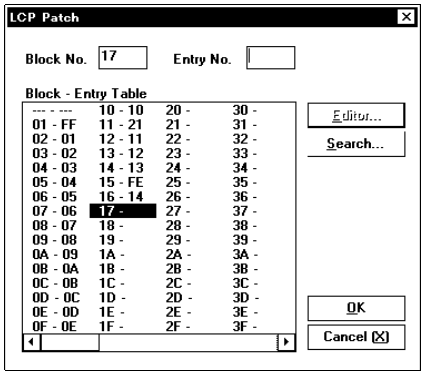
A procedure to edit the LCP patch data is shown below as an example. MCP patch data is the same as the LCP patch data.

(6-0) Entry No. selection screen
(6-1) Changing patch data
(6-2) Adding patch data
(6-3) Deleting patch data
(6-4) Inserting patch data
(6-5) Clearing patch data
(6-6) Copying patch data
(6-7) Cutting patch data
(6-8) Pasting patch data
(6-9) Printing patch data
(6-10) Stopping editing
(6-11) Searching patch data

(6-0) Entry No. selection screen

Execute “New addition (or insertion is allowed) of entry No.” or “Selection of entry No. of registered data” on the entry No. selection screen.

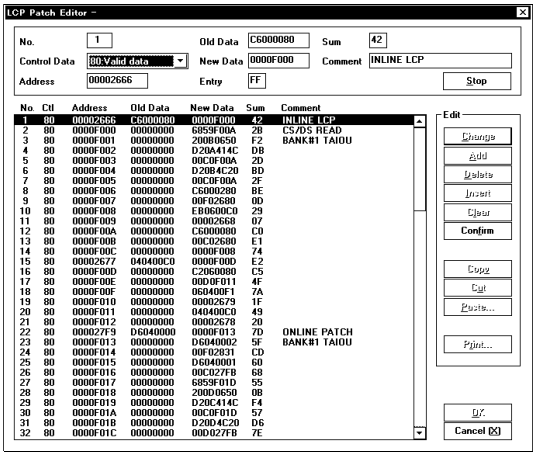
When the [Editor...] button is selected (CL), the ‘LCP Patch Editor -’ screen appears.



(6-1) Changing patch data

(1) Select (CL) the patch data to be edited from the patch data list in the lower part of the screen and select (CL) [Change] button. Edit it in the upper part of the screen.

(2) After editing, select (CL) the [Confirm] button and registered the patch data.



Copyright ©1997,1998, Hitachi, Ltd.

(6-2) Adding patch data

(1) When the [Add] button is selected (CL), data all digits of it are "0" is added to the end of the data list. Edit the data in the upper part of the screen.

(2) After editing, select (CL) the [Confirm] button and registered the patch data.

(6-3) Deleting patch data

(1) Select (CL) the patch data (multiple patch data can be selected) and select (CL) [Delete] button.

(2) Selected patch data can be deleted.

(6-4) Inserting patch data

(1) Select (CL) an insert line in the patch list and select (CL) [Insert] button. All digits are "0" is inserted to the selected line. Edit the data in the upper part of the screen.

(2) After editing, select (CL) the [Confirm] button and registered the patch data.

(6-5) Clearing patch data

(1) Select (CL) [Clear] button.

(2) Deletion of patch data is done for each entry No.

(6-6) Copying patch data

(1) Select (CL) the patch data (multiple patch data can be selected) and select (CL) [Copy] button.

(2) Selected patch data can be copied.

(6-7) Cutting patch data

(1) Select (CL) the patch data (multiple patch data can be selected) and select (CL) [Cut] button.

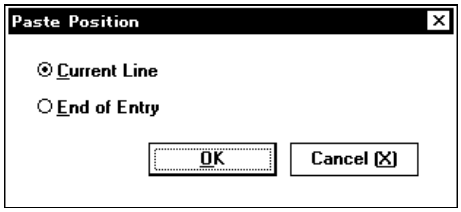
(2) Selected patch data can be cut (copied and deleted).

Copyright ©1997,1998, Hitachi, Ltd.

(6-8) Pasting patch data

(1) Select (CL) an one line to paste copied or cut patch data and select (CL) [Paste...] button. 'Paste Position' screen appears.

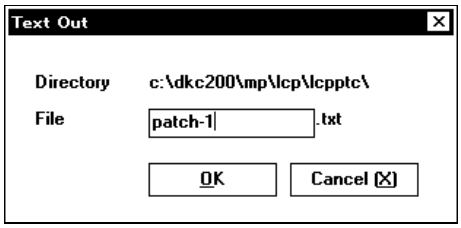
(2) [Current Line] : To paste patch data at the selected line.
[End of Entry] : To paste patch data at the end of the entry.



(6-9) Printing patch data

(1) Select (CL) the patch data (multiple patch data can be selected) and select (CL) [Print...] button. 'Text Out' screen appears.

(2) Input a file name of "*.txt" file and select (CL) [OK] button.



(6-10) Stopping editing

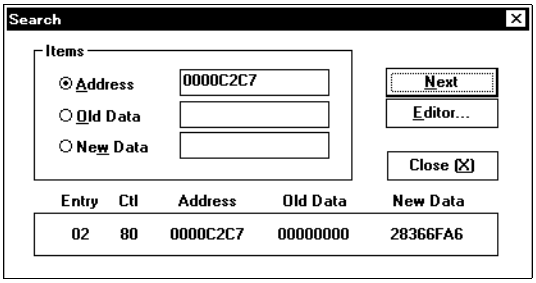
(1) Select (CL) [Stop] button to stop editing (changing, adding, or inserting) patch data.

(6-11) Searching patch data

(1) Select (CL) [Search...] button in entry No. selection screen. 'Search' screen appears. Address, Old Data or New Data searching can be done.

(2) Input an Address, an Old Data or a New Data, and select (CL) [Next] button. The found data is displayed at the bottom of this screen.

(3) If you need to edit the found patch data, select (CL) [Editor...] button. 'LCP Patch Editor -' screen appears. And (6-1)-(6-10) operation will be available.



Copyright ©1998, Hitachi, Ltd.

6.2 Methods of sending a patch file

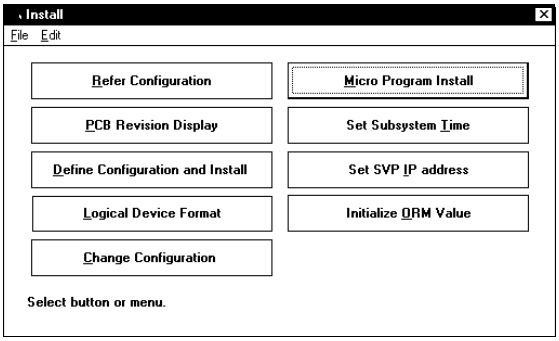
6.2.1 Rewriting LCP or MCP itself

Let's send the online-patch record specified by Execute Entry NO. to the processor specified by TARGET.

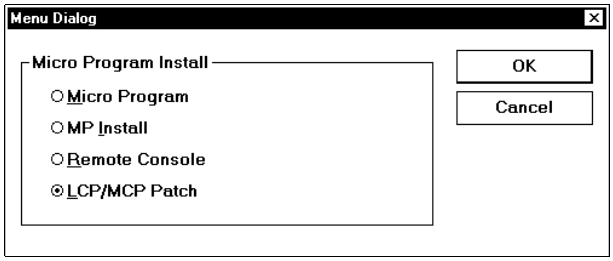
(1) <Mode Change>
Change the mode to [Modify Mode] (CL).

(2) Select (CL) [Install].

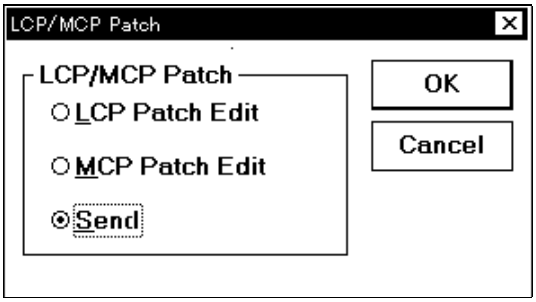
(3) Select (CL) [Micro Program Install].



(4) Select (CL) [LCP/MCP Patch] and select (CL) [OK].

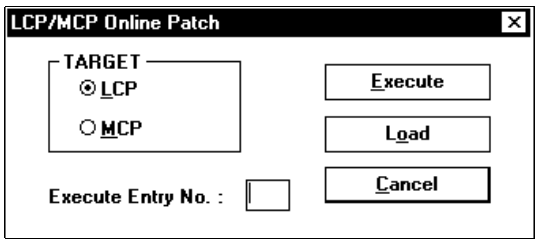


(5) Select (CL) [Send] and select (CL) [OK].



Copyright ©1997,2000, Hitachi, Ltd.

(6) Select (CL) the processor (LCP or MCP) to which to send the patch with TARGET on LCP/MCP Online Patch. Enter an execute entry number then select (CL) Execute.



Execute entry number : Specify the registration number (two-digit hexadecimal number) of the online-patch record.

---

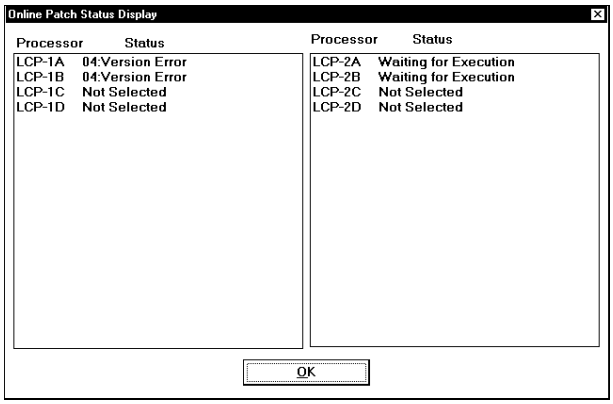
(7) The execution status of the online patch in the installed MCP or LCP is displayed.

<Explanation of status>

Not selected	Not selected as the target.
Waiting for Execution	Execution is awaited.
Executing...	Execution is in progress.
XXXX Blockade Error	Processor XXXX is blockaded.

---

(8) When execution is completed for all targets, you can now select the [OK] button.
Select (CL) [OK].
You will return to step (6).



<Explanation of status>
Sumcheck Error
Version Error
Data Error
Bank Error
Address Error
Level Error
Record Count Over Error
ID Error
Access Mode Error
CBF CHK2 Error
Busy Time Out Error *1
Not Ready Error
Time Out Error before Patch Transfer

Copyright ©1997,1998, Hitachi, Ltd.

Time Out Error during Patch Transfer
Time Out Error after Patch Transfer
Status = “Dead”
Status = “HOLD”
Abnormal Error Check
Busy Retry Error *1
Other Frame Receive Error
Time Out Error
Abnormal Error
DMA Abnormal Error
Parameter Error
Asynchronous Error

*1 : When “Execute” is performed in the processor which is going along I/O, it turns into this error.
Then, till it becomes Normal End, “Execute” is performed.

Copyright ©1997,1998, Hitachi, Ltd.

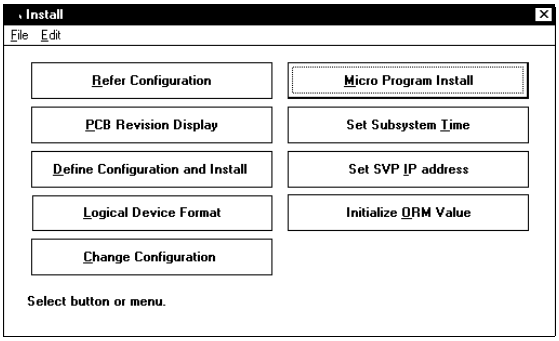
6.2.2 Including the patch into a load module and update FM

Let's download the load module contain all records in the online-patch file FM of the processor for which Execute has been executed. If Execute is not yet executed for processor, the load module is downloaded to the processor currently specified by TARGET.

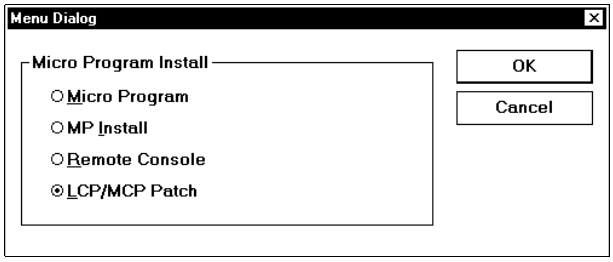
(1) <Mode Change>
Change the mode to [Modify Mode] (CL).

(2) Select (CL) [Install].

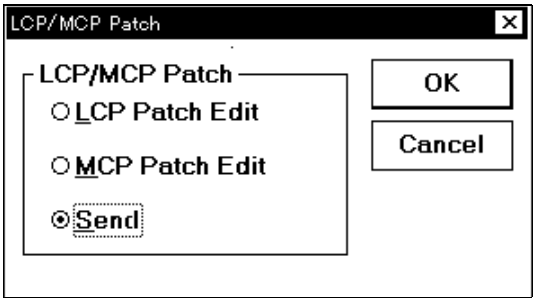
(3) Select (CL) [Micro Program Install].



(4) Select (CL) [LCP/MCP Patch] and select (CL) [OK].

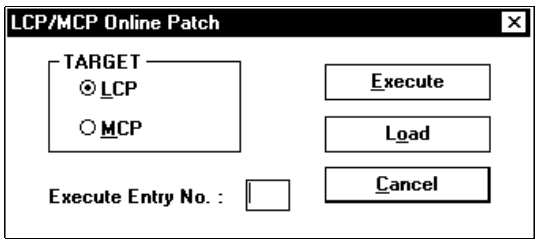


(5) Select (CL) [Send] and select (CL) [OK].

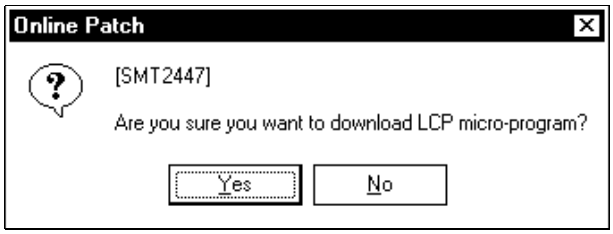


Copyright ©1997,2000, Hitachi, Ltd.

(6) When you have executed Execute on LCP/MCP Online Patch, select (CL) [Load]. Otherwise, select (CL) the processor to which to download the patch with TARGET then select (CL) [Load].



(7) The message "Are you sure you want to download XXX micro-program?" is displayed for the processor for which Execute has been executed or the processor specified by TARGET for which Execute is not yet executed.
In response to this message, select (CL) [Yes].



(8) SM is being updated.
"Now Down Loading..." is displayed.

(9) FM is being updated.
"Now Down Loading... [XXX]" (XXX : PCB location) is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

(10) Upon completion of downloading, the message "An exchange of a microprogram finished" is displayed.
In response to this message, select (CL) [OK].

7 Trouble Recovery Procedure in Exchanging Micro-programs

7.1 Recovery procedure in on-line menu was selected

If trouble occurs while the micro-programs are being exchanged, symptoms (1) to (6) below can be observed apparently. In these cases, use the recovery procedures shown in flowcharts [A] to [D]. And if you want to return the version of micro-program to the previous version, use the procedure shown in (7) and flowchart [E].

(1) A power failure occurs.
→Go to [A] (MICRO-FC07-20)
(2) The time-out message is displayed on the SVP screen.
(a) Trouble in downloading the micro-program (the message "Downloading Main micro-program" is displayed).
→Go to [B] (MICRO-FC07-30)
(b) Trouble in blocking the processor (the message "Processor in now blocking" is displayed).
→Go to [C] (MICRO-FC07-40)
(c) Trouble in recovering the processor (the message "Processor in now recovering" is displayed).
→Go to [C] (MICRO-FC07-40)
(d) Trouble in downloading the micro-program (the message "Downloading DKU micro-program" is displayed).
→Go to [F] (MICRO-FC07-80).
(3) An error occurs in data transferred to the DKC.
(The message "It failed in the writing to the flash memory" is displayed.)
→Go to [B] (MICRO-FC07-30)
(4) An I/O error occurs on the SVP hard disk.
(The message "File I/O error has occurred" is displayed)
(The message "Memory error has occurred" is displayed)
→Go to [D] (MICRO-FC07-50)
(5) An AP error occurs, resulting in PC trouble (Key-in operations are disabled and the screen disappears).
→Go to [B] (MICRO-FC07-30)
(6) Recovery of a cache failure during the micro-program exchange of DKCMAIN Action.
→Go to MICRO-FC07-150
(7) Procedure for returning the micro-program version to the previous version.
→Go to [E] (MICRO-FC07-60)
(8) In case of uncorrect version display ("??-??···" or incompatibility).
→Go to [B] (MICRO-FC07-30)

[Sections to be referenced for recovery procedure]
(i) Status display : 3.4 Main screen on SVP section
(ii) Version display : 3.9 Micro-program version on SVP section
(iii) MP installation : 5 MP Install
(iv) Package exchange : 1 Hot Replace on REPLACE section
(v) PC exchange : 1 Hot Replace on REPLACE section

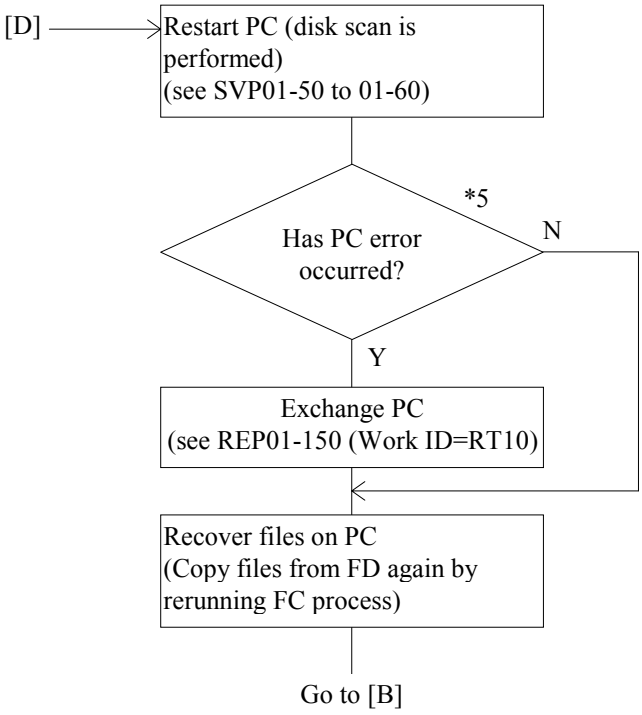
[Recovery Procedure for I/O Error on SVP Hard Disk]

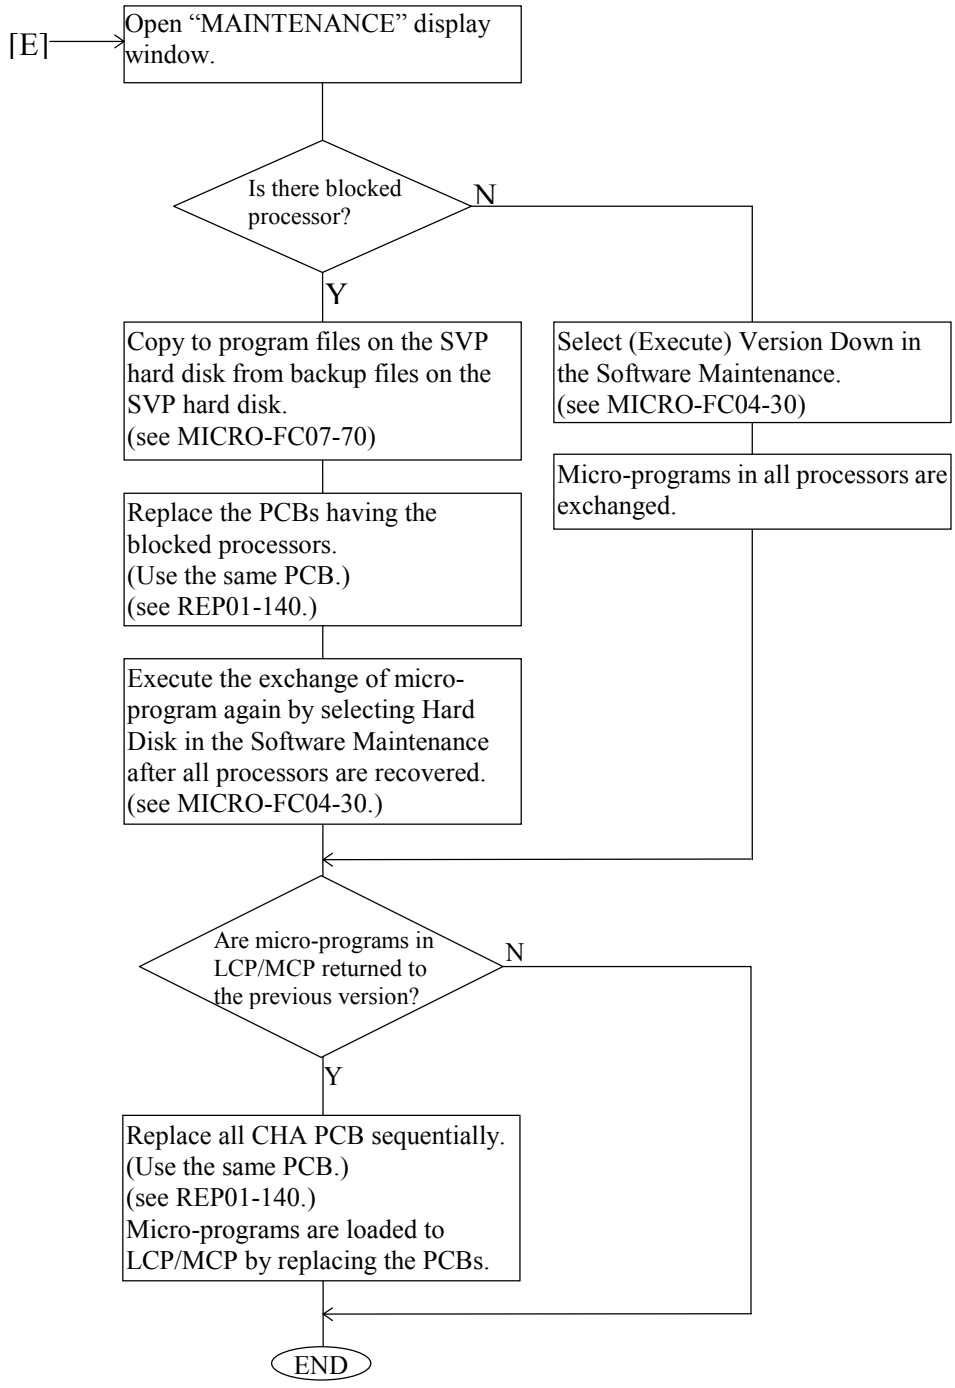


*1) Reference code "7900X0" or "7901X0"
X: Shows processor id. (see SIM-RC02-150)
For details of the trouble, refer to the explanation about BOOT detected error at SSB (Byte27 =8C).
(see SSBLOG05-2370)
*2) The message "connection error occurred SVP-DKC" is displayed.
*3) "-" is displayed for each processor version.
*4) Reference code
3080x0:Indicates that a WCHK1 dump has occurred.
3081x0:Indicates that an ABEND dump has occurred.
x: Shows processor id.
*5) The message "Please turn off SVP and replace it" is displayed.
*6) Refer to "SSBLOG05-2370" for the SSB with the error code 3309.
Also, the error code of initialzation function is shown in 5C-5Fth byte of the SSB. The procedures corresponding to the error code of initialization function are as follows.

Error code of initialization function	Procedures	Note
56000041	① SVP Replace ② MP Install ③ Package Replace	Use the same package in ③. Refer to "REP01-150 (Work ID : RT10)" for SVP Replace.
others	① MP Install ② Package Replace	Use the same package in ②.

Copyright ©1998,1999, Hitachi, Ltd.

[Procedure for returning the micro-program version to the previous version]



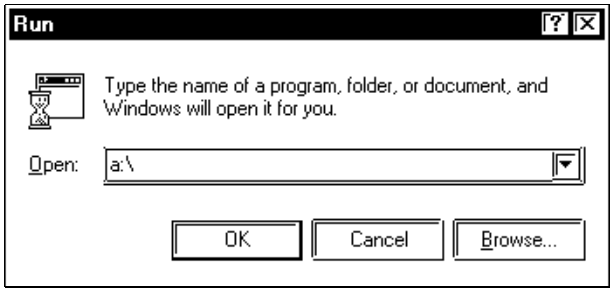
Copyright ©1998, Hitachi, Ltd.

[Copy to program files from backup files on the SVP hard disk]

(1) Select (CL) the [Run...] from [Start] button.

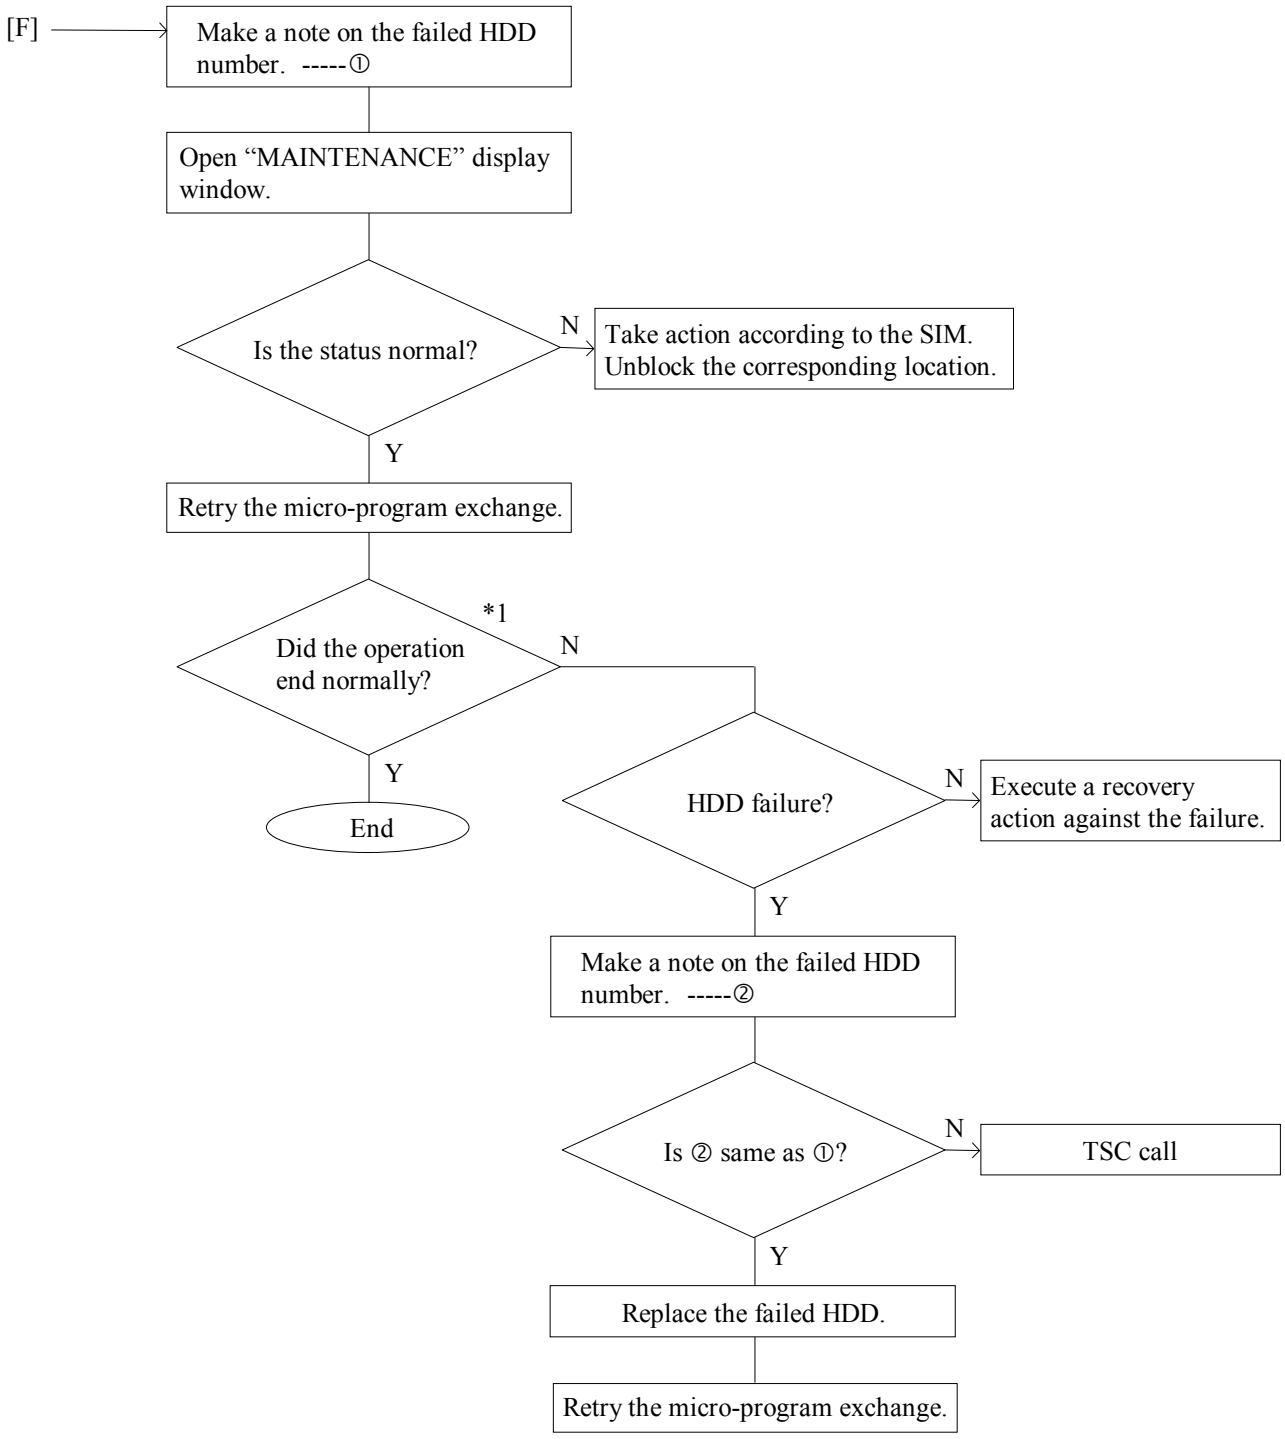
(2) Insert Setup Installer (1/14) FD in FDD.

(3) Input file name “a=\mainbk.bat” in ‘Open’ and select (CL) [OK].



Copyright ©1998, Hitachi, Ltd.

[Recovery procedure when a DKU error occurs during a downloading of the micro-program (DKU micro-program)]



Copyright ©1998, Hitachi, Ltd.

7.2 Recovery procedure in off-line menu was selected

If trouble occurs while the micro-programs are being exchanged, symptoms (1) to (8) below can be observed apparently. In these cases, use the recovery procedures shown in flowcharts [A] to [F].

(1) A power failure occurs.
→Go to [A] (MICRO-FC07-100)

(2) Time-out display appears on SVP screen. ("On exchanging a microprogram. An error has occurred. Processing is stopped. Confirm the status and Version of subsystem. Phase: xxxx" message is displayed.)
  (a) System block processing (phase: preprocedure display) error.
→Go to [B] (MICRO-FC07-110)
  (b) Micro-program downloading (phase: download display) error.
→Go to [C] (MICRO-FC07-110)
  (c) System recovery processing (phase: recover display) error.
→Go to [D] (MICRO-FC07-120)

(3) An error occurs in data transferred to the DKC.
(The message "It failed in the writing to the flash memory" is displayed.)
→Go to [E] (MICRO-FC07-130)

(4) An I/O error occurs on the SVP hard disk.
(The message "File I/O error has occurred" is displayed)
(The message "Memory error has occurred" is displayed)
→Go to [F] (MICRO-FC07-140)

(5) An AP error occurs, resulting in PC trouble (Key-in operations are disabled and the screen disappears).
→Go to [E] (MICRO-FC07-130)

(6) Interruption of micro-program exchange.
("File copy processing was interrupted. DKC subsystem will be recovered." message is displayed.)
Micro-program exchange processing was interrupted because a response to SVP was designated. DKC is automatically rebooted to return to the original status.

(7) Off-line micro-program exchange function not supported.
("The version of Main microprogram is inconsistent with the SVP." message is displayed.)

(8) Recovery of a cache failure during the micro-program exchange of DKCMAIN Action.
→Go to MICRO-FC07-150

(9) In case of uncorrect version display ("??-??···" or incompatibility).
→Go to [B] (MICRO-FC07-110)

[Sections to be referenced for recovery procedure]
  (i) Status display : 3.4 Main screen on SVP section
  (ii) Version display : 3.9 Micro-program version on SVP section

<Recovery of a cache failure during the micro-program exchange of DKCMAIN Action>

1. Retry micro-program exchange of DKCMAIN program.
   - For Version up by Offline FC : Refer to MICRO-FC03-120.
   - For Version up by Online FC : Refer to MICRO-FC04-140.
   - For Version down by Offline FC : Refer to MICRO-FC03-140.
   - For Version down by Online FC : Refer to MICRO-FC04-150.

   <Note>
   - The processors which had finished the micro-program exchange to new version will be skipped.
   - Password is necessary.

2. Then, replace the failure parts according to SIM message and M.M..

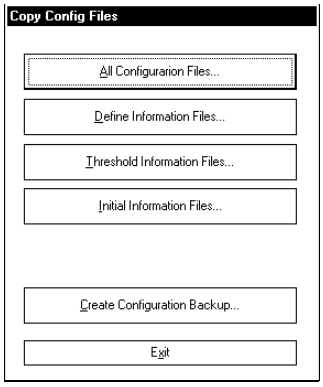
Copyright ©2000, Hitachi, Ltd.

8 Config Exchange Procedure

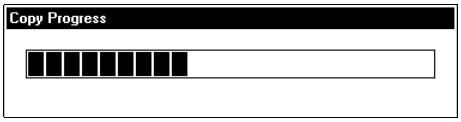
(1) Select (CL) the [Install] in the 'SVP' window and select (CL) [Copy Config Files] in the 'Install'.

---

(2) Select (CL) a button in 'Copy Config Files' (For detail, go to (3)).
Select (CL) [OK] in response to "Please insert config FD in FDD.".



'Copy Progress' window is displayed (This window may not be displayed.).



Select (CL) [OK] in response to "Please remove config FD.".

Select(CL) [Exit] to finish this operation.

---

(3)

(3-1) 'Config Version Up'

① Select (CL) [Initial Information Files...].
Please remove config FD.
② Please reboot SVP PC.
③ Select (CL) [Define Information Files...].
Please remove config FD.
④ Select (CL) [Threshold Information Files...].
⑤ Select (CL) [Install] in 'SVP'.
Select (CL) [Change Configuration] in the 'Install Subsystem' window.
Select (CL) [Tuning Parameter] in the 'Menu Dialog' window and select (CL) [OK] (See SVP02-1200).
⑥ Select (CL) [MAINTENANCE] in the 'SVP' windows (See SVP03-10).

(3-2) 'Config Backup'
Select (CL) [Create Configuration Backup...].

(3-3) 'Define Configuration & Install'
Select (CL) [All Configuration Files...] and execute 'Define Configuration & Install' (go to INST05-60).

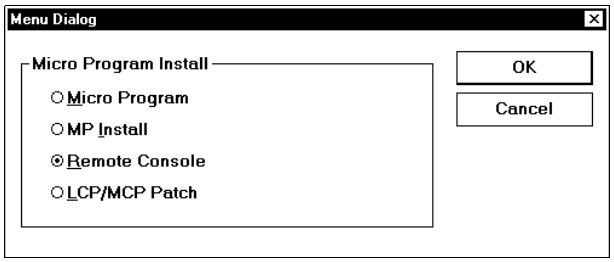
Copyright ©1998, Hitachi, Ltd.

9 Remote Console Program Install from SVP

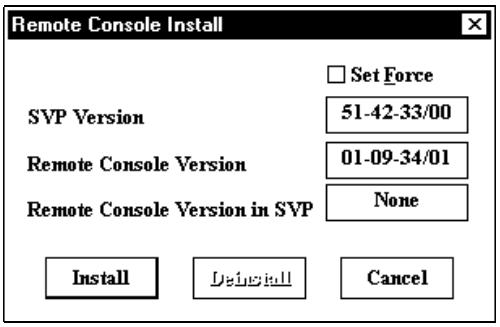
9.1 Program Installation

(1) Start the program install
Change the SVP mode to [Modify Mode] and start [Install].
Select (CL) [Micro Program Install] in the Install Screen.

(2) Select “Remote Console”
From the Micro Program Install, Select (CL) “Remote Console” and select (CL) [OK] button.



(3) Remote Console Install Screen
SVP will display Remote Console Install Screen.

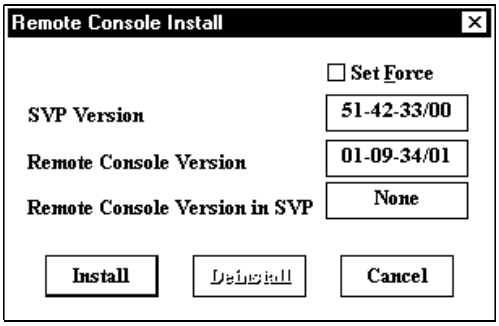


In this screen, there are three versions.
(a) SVP Version
Current SVP Version
(b) Remote Console Version
Remote Console version which is the most appropriate version against the current SVP version.
(c) Remote Console Version in SVP
Remote Console version which has already been installed in the SVP. If the Remote Console program does not installed yet, SVP will display the column as “None”.

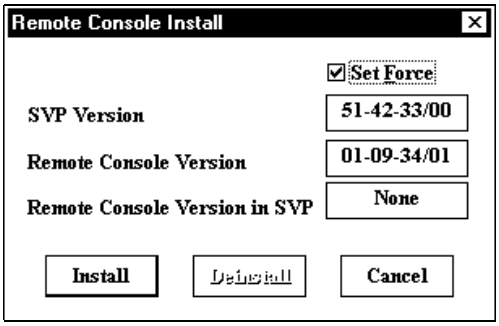
(4) Check the version
Check the Remote Console version to compare the appropriate version with the version which you want to install. If they are different, you could not install your remote console program. If your remote console program is the same as the appropriate version, go to (5), if others, go to (6) to install your program forcibly.

Copyright ©2000, Hitachi, Ltd.

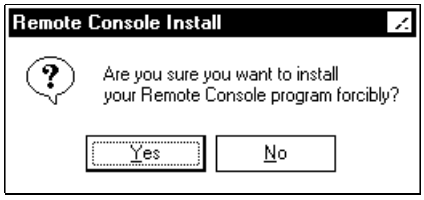
(5) Select Install
Select (CL) [Install] button. SVP will start the program installation. Go to (7).



(6) Installation by forcibly
Select (CL) "Set Force" option flag and select (CL) [Install] button. SVP will start the program installation forcibly.

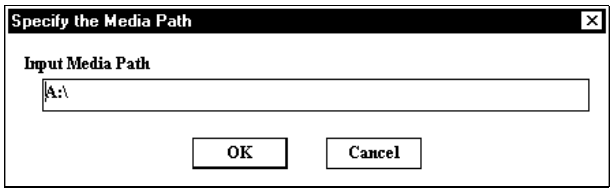


After, SVP will display the confirmation message so that you should check the contents and select (CL) [Yes].



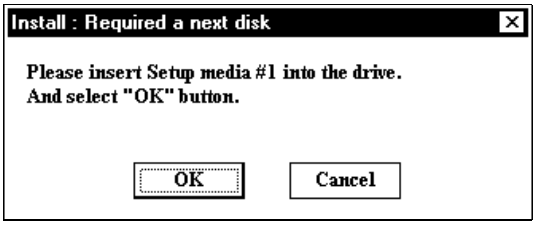
Go to (7).

(7) Input the Remote Console FD path
Input the Remote Console FD path. SVP has already inputted the path by default value, "A:". If you want to change, input the appropriate path. After checking the input value, select (CL) [OK] button.

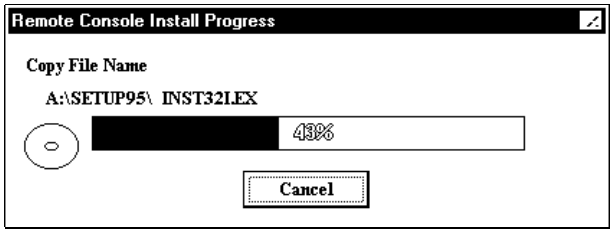


Copyright ©2000, Hitachi, Ltd.

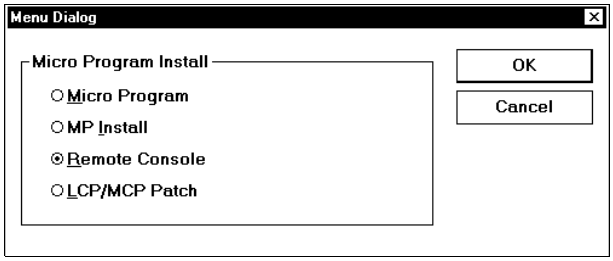
(8) Input the FD
SVP displays the FD Number to insert the FD drive. Insert the corresponding media into your inputted path at the (7) step and select (CL) [OK].



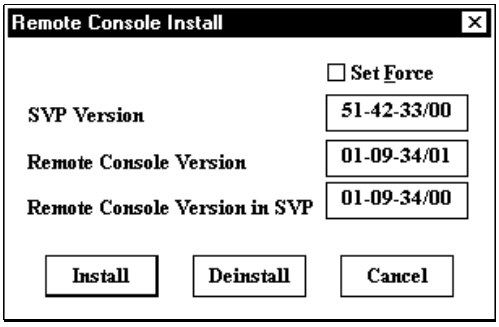
(9) Start installation
SVP starts coping the program from the FD to PC HDD. After finishing the copy for one media, SVP will display the message to change to the next FD. In this case, go back to (8) and insert the corresponding media, and repeat (8) (9). If all FDs are complete, SVP will finish this program.



(10) Restart the install program to check
Select (CL) [Install] button and select (CL) [Micro Program Install]. In the "Micro Program Install", select (CL) "Remote Console".



(11) Confirm the installed version
SVP will display installed Remote Console version. Check the version in "Remote Console Version in SVP" column.
If the version is wrong, go to the next "Remote Console program de-install form SVP" to de-install the program, and retry the same install operations.

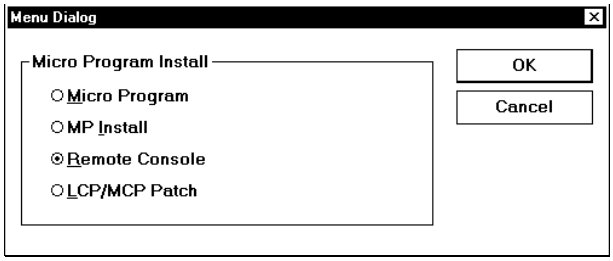


Copyright ©2000, Hitachi, Ltd.

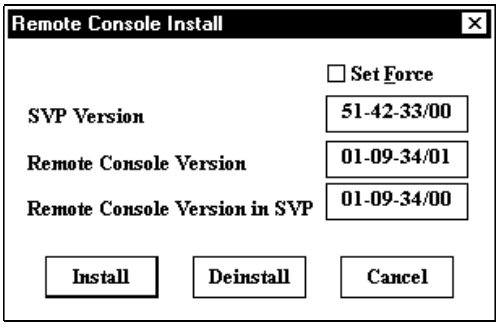
9.2 Program de-installation

(1) Start the program install
Change the SVP mode to [Modify Mode] and start [Install].
Select (CL) [Micro Program Install] in the Install Screen.

(2) Select “Remote Console”
From the Micro Program Install, Select (CL) “Remote Console” and select (CL) [OK] button.



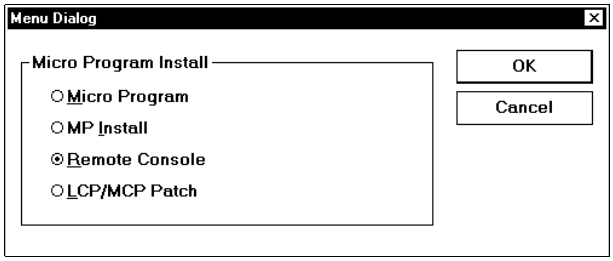
(3) Remote Console Install Screen
SVP displays the installed Remote Console version in the Remote Console Install Screen.
Select (CL) [Deinstall] button.



(4) Complete message
After de-installing the remote console program, SVP will display the complete message.
Select (CL) [OK].

Copyright ©2000, Hitachi, Ltd.

(5) Re-start the function to check your operations
Select (CL) [Install] and select (CL) [Micro Program Install] in the Install Screen. From the Micro Program Install, Select (CL) "Remote Console" and select (CL) [OK] button.



(6) Confirm the de-installed result
SVP will display Remote Console Install Screen. Check the "Remote Console Version in SVP" as "None". If the result is not "None", retry these de-install operations again.

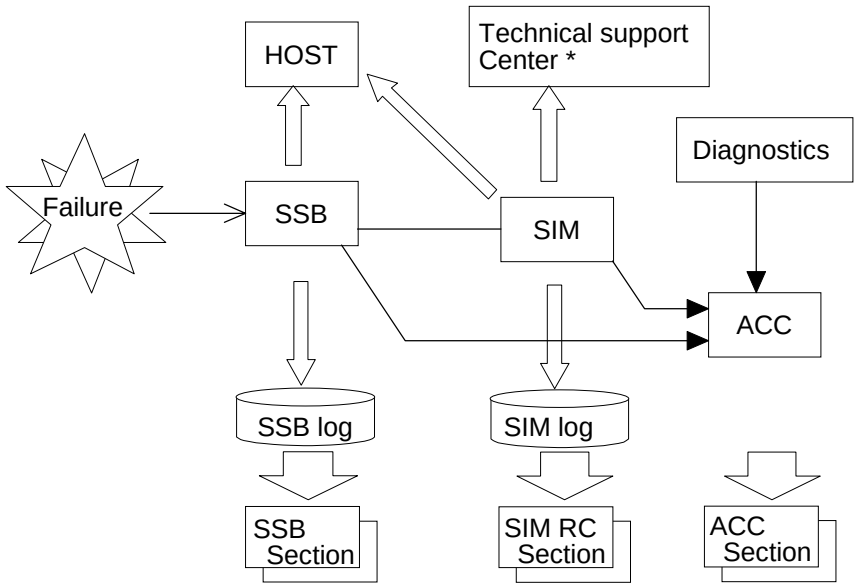
1 Overview of TRBL

The figure below shows the flowchart of creating and reporting the SIM and SSB after the DKC microprogram has detected a failure. It also shows the section of maintenance manual which should be referred to.



Since the subsystem starts its maintenance work based on the SIM and ACC, if a failure occurs check the ACC first and start troubleshooting.
For the failure which does not produce the ACC, isolate the failed part depending on its phenomenon.

* Technical Support Center: Responsible section of maintenance service and technical support.

Copyright ©1997, Hitachi, Ltd.

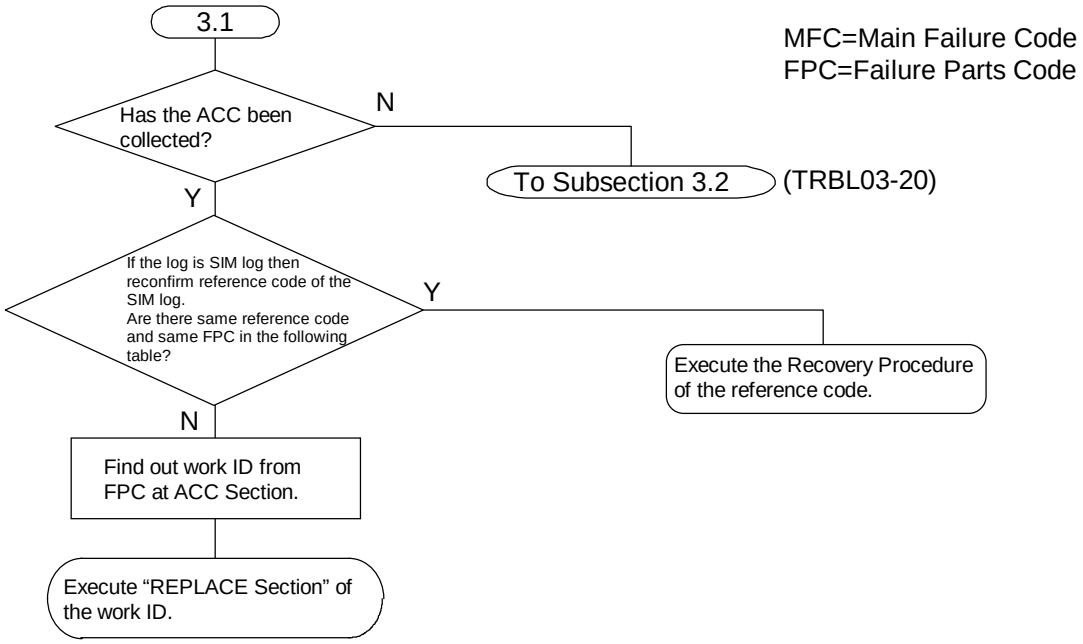
2 Point out a Failed Part

[1] The ACC has been collected ----------See TRBL03-10
[2] The ACC has not been collected----------See TRBL03-20

Copyright ©1997, Hitachi, Ltd.

3 Isolating a Failed Part

3.1 Analyze the SIM log, SSB log or Remote Diagnostic Data



Reference Code	FPC	Recovery Procedure
DF7XYZ	80000000	5.2 Isolation and Recovery Procedures for Common SCSI Bus Error (TRBL05-30)
DF8XYZ	80000000	
FFEA0X	80000000	5.1 Error Recovery Procedure for Bus Blocking (TRBL05-20)
FFFA0X	80000000	
BF2XYY	80000000	5.12 Voltage alarm (TRBL05-340)
BF4XXX	80000000	5.14 PS warning error (TRBL05-420)

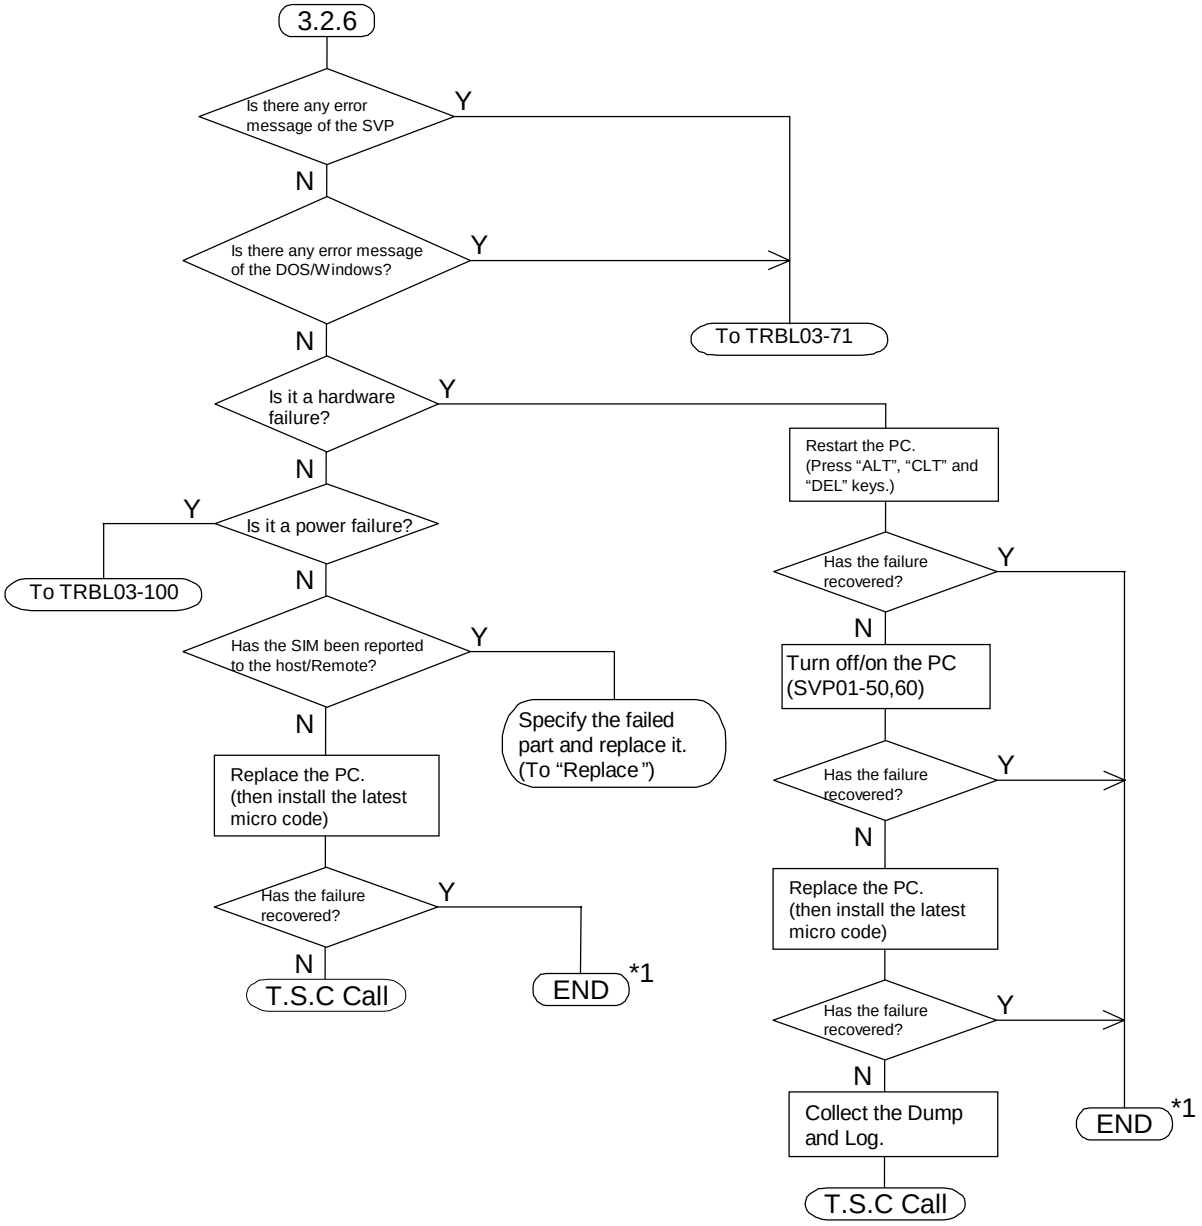
3.2.6 PC (SVP) failure recovery procedure



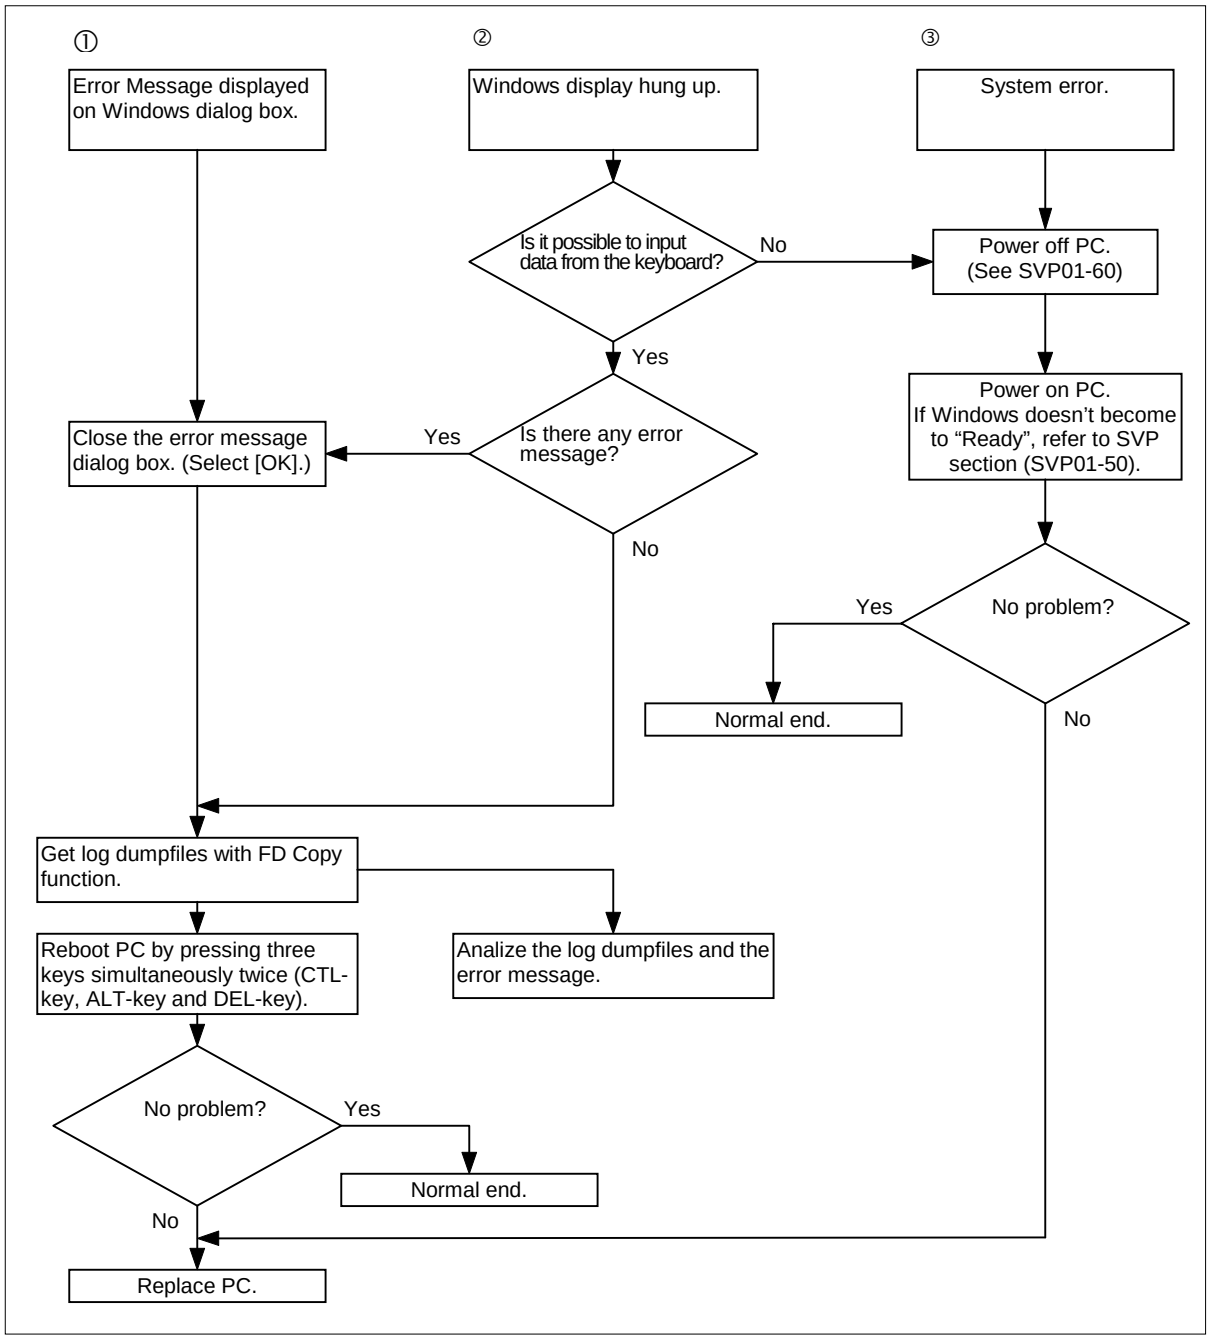
*1 : If you finished the Maintenance, delete the log and SIM complete. (Refer to SVP02-150, 500)

Copyright ©1997, Hitachi, Ltd.

(1) Types of SVP failures

① Display of “Syserr’s Clues” windows dialog box.
② Windows display hang up.
  (i) Keyboard operation possible.
  (ii) Keyboard operation not possible.
③ Display of non windows error. (System error)

(2) Recovery procedure based on type of failure.



Note T.S.C: A base of maintenance server and technical support.

Copyright ©1997,1998, Hitachi, Ltd.

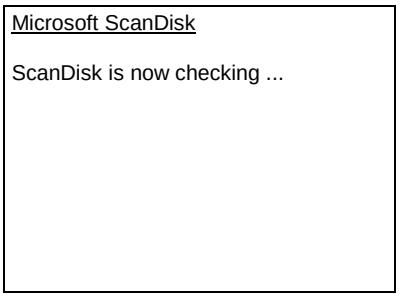
(3) SVP HD Diagnosis

If SVP HD (Hard Drive) may be failed, do as following procedures.

(i) What is running?
a. See what is displayed.
   If Windows is displayed, Go to (ii).
   If DOS prompt like “C:\” is displayed, Go to (iii).

(ii) Exit Windows (Stop SVP)
a. Select (CL) “Start button”.
b. Select (CL) “Shut Down”.
c. Select (CL) “Restart the computer in MS-DOS mode?”, and select (CL) [Yes].
d. Go to (iii).

(iii) SVP HD Diagnosis
a. Type the under-lined command and press Enter-key as following.
   C:\>\DKC200\OTHERS\SVPHDDG
b. Watch the diagnosis messages displayed on the screen.
   After the diagnosis, read messages, and do following action.



Diagnosis messages

Copyright ©1997,1998, Hitachi, Ltd.

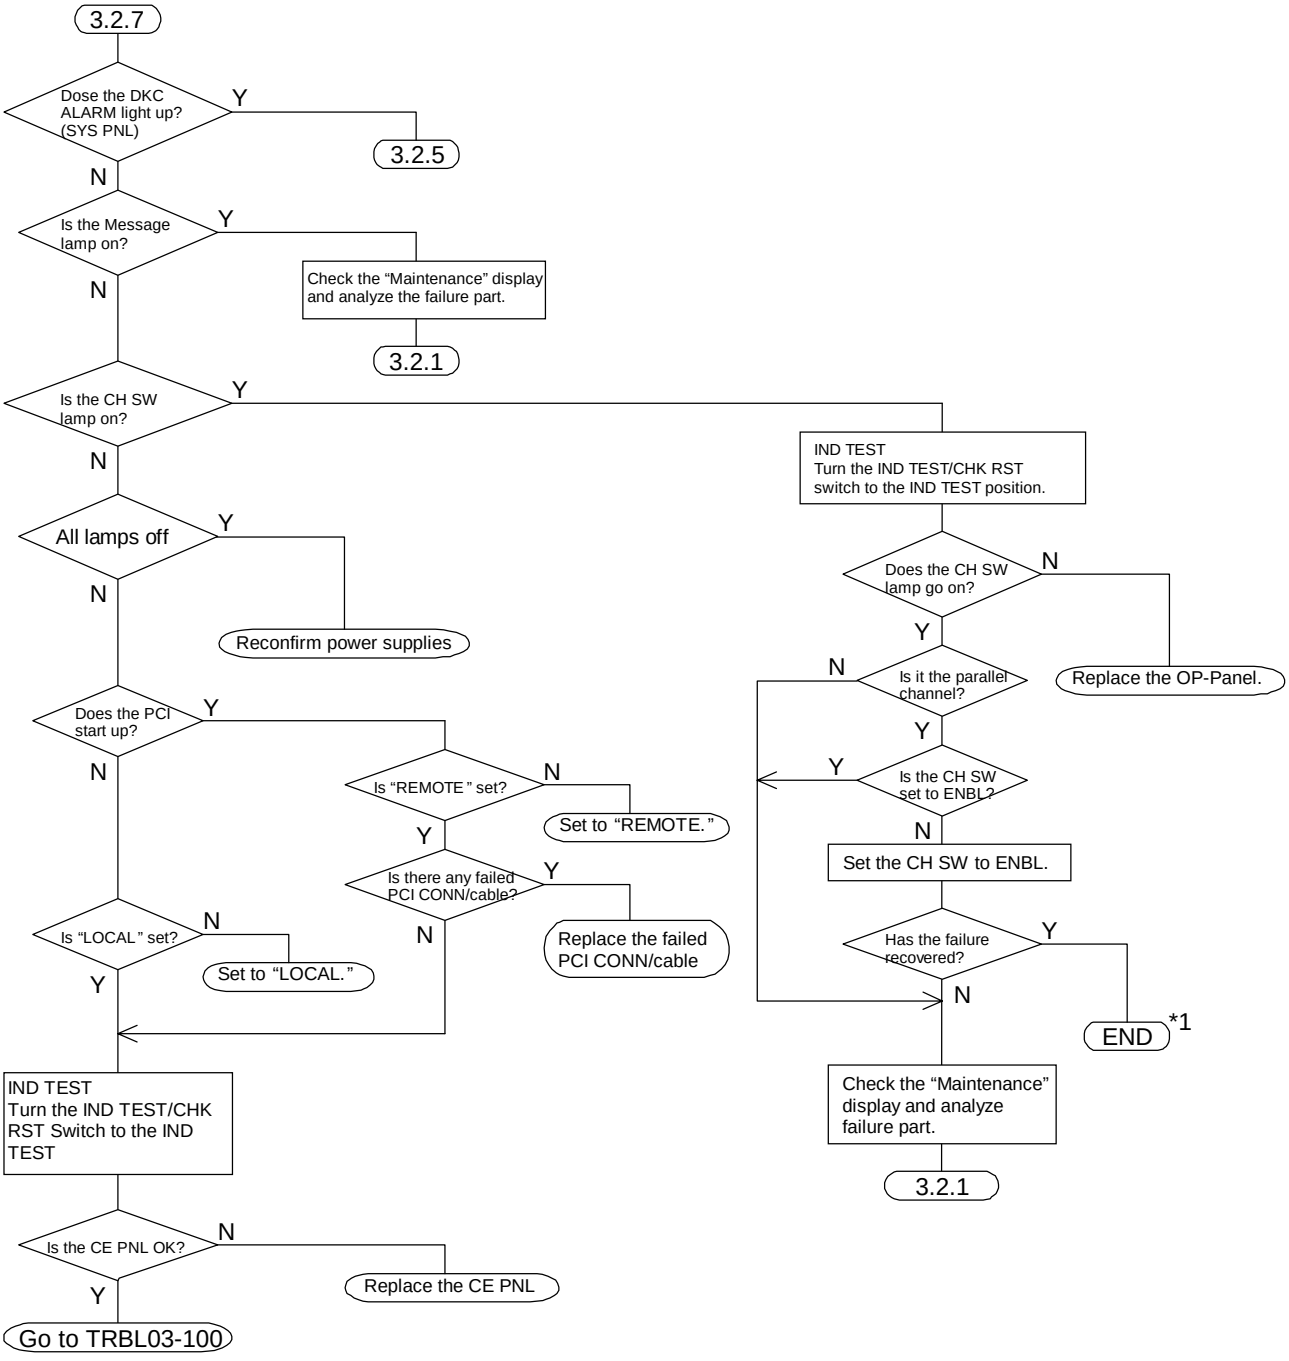
Message	Explanation	Action
SVP HD TEST:NORMAL END	Diagnosis has completed.	Go to (v).
SVP HD TEST:PROBLEM HAS DETECTED	There are some problems in SVP HD.	Read following message.
SVP HD TEST:ABNORMAL END	Diagnosis has incompleted.	Read following message.
SVP HD TEST:SYNTAX ERROR	Diagnosis program may be destroyed.	Read following message.
SVP HD TEST:PROBLEM HAS FIXED	Diagnosis has repaired SVP HD.	Go to (v).
SVP HD TEST:ABORTED	Diagnosis has aborted by operator.	Read following message.
SVP HD TEST:FIX START	Diagnosis has launched to repair SVP HD.	Go to (iv) b.
Do you want to try to fix SVP HD.[y,n]	Confirm your operation.	Press ‘y’ key to fix SVP HD. Press ‘n’ key not to fix SVP HD and to abort diagnosis.
Please turn off SVP and replace it.	SVP should be replaced.	Power off SVP. Replace SVP.

(v) Reboot SVP

a. Press 3 keys simultaneously —— Ctrl-key, Alt-key and Del-key —— to reboot SVP.
[End of SVP HD Diagnosis]

Copyright ©1997, Hitachi, Ltd.

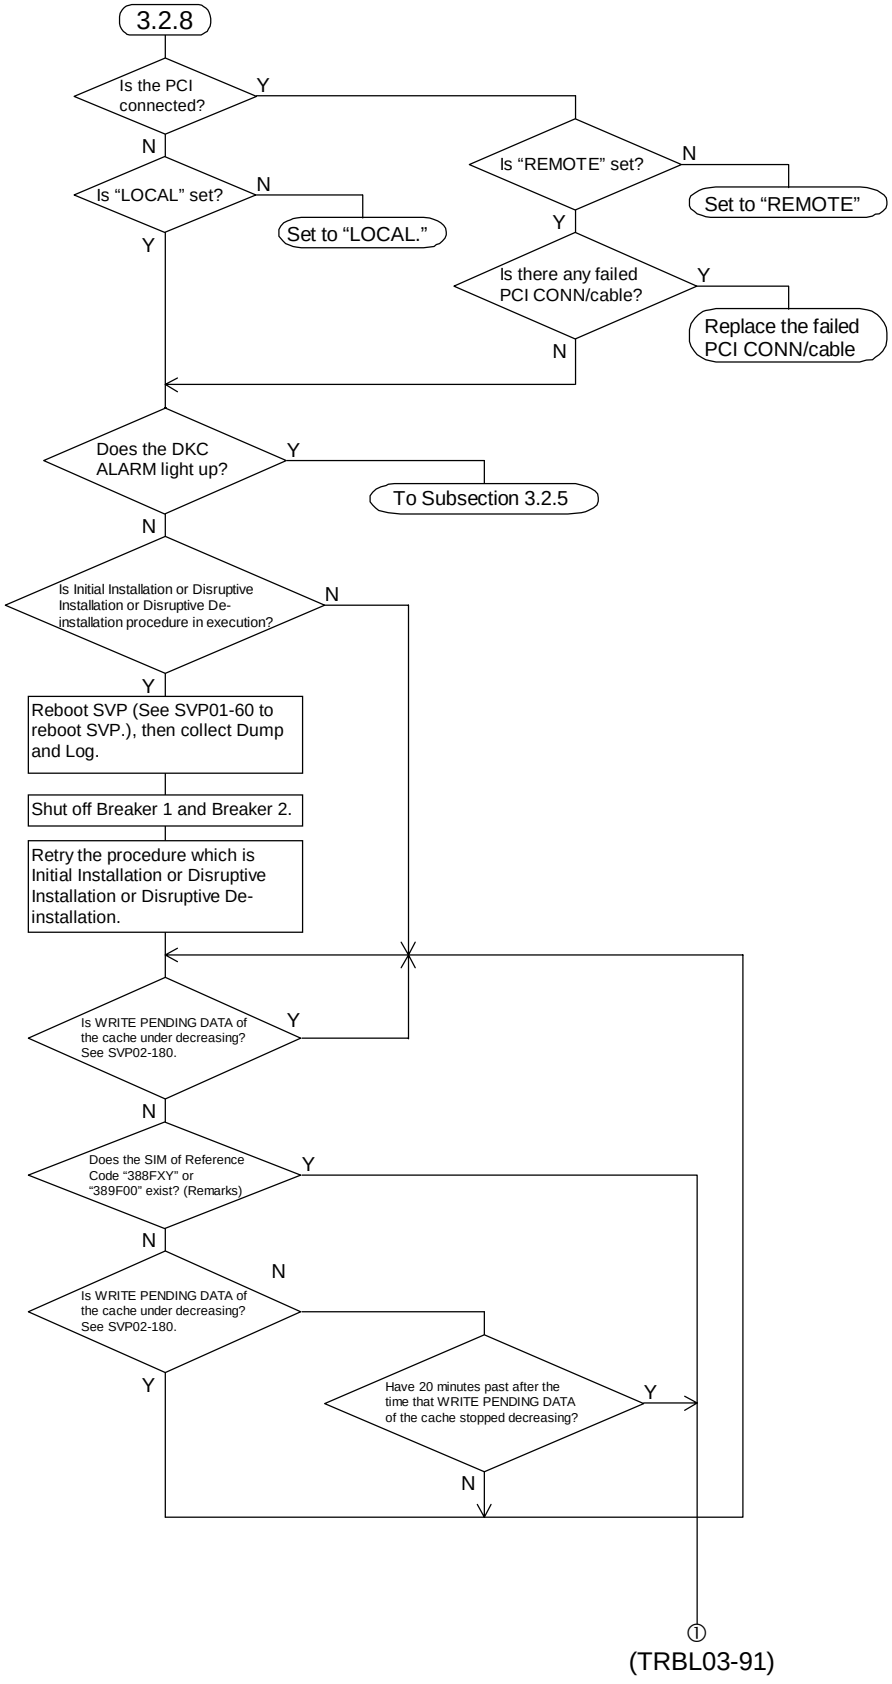
3.2.7 A failure has occurred when turning the power on



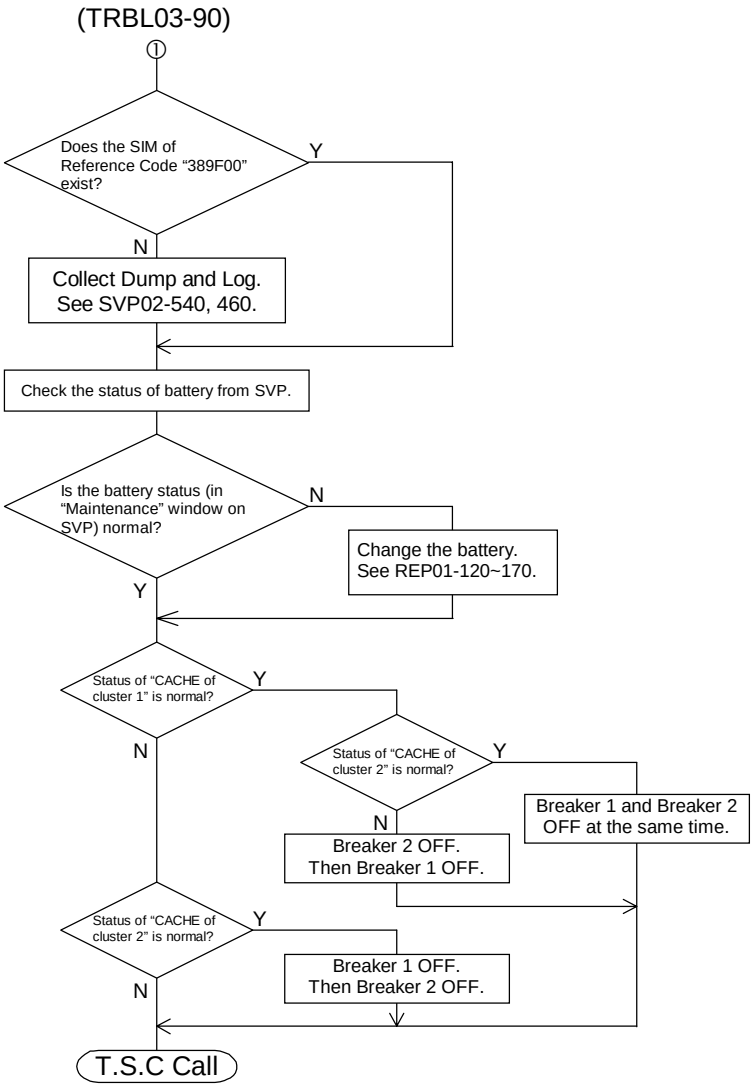
*1 : If you finished the Maintenance, delete the log and SIM complete. (Refer to SVP02-150, 500)

Copyright ©1997, Hitachi, Ltd.

3.2.8 The power cannot be turned off



Copyright ©1997,1998, Hitachi, Ltd.



Remarks

- There is a case that it takes more than 10 minutes to report SIM of Reference Code “388FXY” or “389F00”, and that especially it takes about 1 hour in case that emergency destage does not complete.
- There is a case that p/s off procedure is normally finished, even after SIM of Reference Code “388FXY” or “389F00” is reported.

Copyright ©1997, Hitachi, Ltd.

3.2.9 Multiple parts have failed

Maintenance Priority

If there are many parts to maintenance in the system, you should plan the maintenance schedule under the priority which mentioned in this page.

If you have to maintenance two parts, first you should maintenance a part which priority is higher than the other.

A part has a higher priority which has a smaller priority number than others in the Table 1.

Table 1 Priority Table

Priority	Parts name	Maintenance method
1	DKA	Replace
2	CHA	Replace
3	Cache Memory	Replace
4	Shared Memory	Replace
5	Terminator	Replace
6	SCSI-buffer	Replace
7	HDD	Replace
8	LDEV	Format or Restore
9	Hardware etc.	Replace
10	Software	Exchange

Copyright ©1997, Hitachi, Ltd.

4 Recovery for Pinned Tracks

Hardware errors will sometimes cause a pinned track.
This document explains what causes pinned tracks and how to recover from them.
The following reports indicate that a pinned track has occurred:
• Permanent Data Check.
• Repeated report of Host Adapter CHK2 on the same track
• SIM report of a pinned track.

SIM REF. CODE	Meaning	Comment
EF4X-XX	Unable to write a track to a PDEV	XXX=LDEV number
FF4X-XX	Unable to process a track to or from Cache	XXX=LDEV number

To recover pinned tracks the following information about the pinned track is necessary:
• Address in LDEV (LDEV number, Cylinder & Head address)
• First and last Cylinder & Head addresses of the stripe containing the pinned track
• The error type of the pinned track (Write or ECC/LRC)
• The PDEV number of the drive containing the pinned track
This information can be obtained from the “Pinned Data Display Function” (SVP02-710) of the SVP

There are 2 types of pinned track error:

Display on SVP	Meaning	Recovery
Write Error	Unable to write a track to a PDEV	Replacement of PDEV
ECC/LRC Error	Unable to process a track to or from Cache	Data recovery

Pages TRBL04-XX explain the error types of pinned track and have flowcharts for recovery.
In case of HRC or HODM volumes, the flowcharts for recovery are shown in TRBL06-160 through TRBL06-180.

In case of HMRCF volumes, the flowcharts for recovery are shown in TRBL09-10.
In case of OPEN volumes, the flowcharts for recovery are shown in TRBL07-70D.

Copyright ©1997,1999, Hitachi, Ltd.

ECC/LRC Error

Causes:

(1) During a write operation new data is written into Cache. If less than a full stripe (6 or 3 data tracks & their parity track) are written, the corresponding old data and old parity tracks are staged into Cache to create a new parity track. When the new parity track is created, it and the new data tracks are ready to be destaged to the DKUs. These tracks are called "Dirty Data". An ECC/LRC pinned track will occur:
   (a) Dirty Data cannot be read from Cache by the host. This will result in Permanent Data Check and the data is lost. The data will have to be reconstructed by the host from back-up files, etc.
   (b) Dirty Data cannot be destaged to DKU (CHK2 errors). This type of pinned data can usually be read by the host.

(2) An ECC/LRC type of pinned track occurs when a new parity track cannot be properly reconstructed. If during the parity track creation any of the old data or old parity tracks cannot be staged to Cache to construct the new parity track, or a new parity track cannot destage due to a drive failure, the parity track will be pinned. Data can still be read by host.

(3) An ECC/LRC type of pinned track occurs when a track cannot be correctly reconstructed during Correction Copy. This will result in a Permanent Data Check and the original data is lost.

(4) An ECC/LRC type of pinned track occurs if; There is a write type pinned track due to drive failure, the DKC is powered down by manual operation of the P/S OFF switch, the batteries fail or are unplugged, then the Write pinned track will become an ECC/LRC pinned track.

Result of host I/O operation:

(1) When a track with an ECC/LRC error is accessed by a host I/O and the data can be read, the result will be a normal end.

(2) If the data cannot be read, there will be a failure reported of Permanent Data Check In this case the data is lost.

(3) Repeated Host Adapter CHK2 errors reported. Data is usually still readable but is not being destaged from cache.

Recovering ECC/LRC pinned tracks:

(1) Execute ICKDSF ANALYZE SCAN using LDEV, CC, HH information from SVP PINNED TRACK display to determine whether No Failure, or Failure is reported.
   (a) No Failure. Data can be read. Read data and save to tape, another volume, or memory, etc.
   (b) Failure. Data cannot be read. It must be reconstructed by host from backup files, etc.

(2) Run ICKDSF INSPECT NOPRESRVE (NOCHECK if 3390-3R) to the affected track. This will write all zeros to the track and will clear the pinned track indication.

(3) Restore the track with the saved data from step 1a or the reconstructed data 1b.

(4) If Pinned Track reoccurs, resolve hardware problem and repeat steps 1-3.

Copyright ©1997, Hitachi, Ltd.

Pinned Track disappearance:
Under certain circumstances, pinned tracks may disappear with no recovery action having been taken. This can occur from.

(1) The entire stripe is written. This discards all the old data & parity in the stripe.
(2) A Format Write from R1 was issued to the pinned track. This rewrites the entire stripe and all old data in the stripe is discarded.
(3) If dirty data that could not be destaged due to CHK2 error is read successfully by the host, pinned track is turned off.
(4) If a parity track is unable to destage due to a drive failure and the drive is replaced using Correction Copy (drive replacement by copying to spare and back will not clear Pinned Track).

Write Error

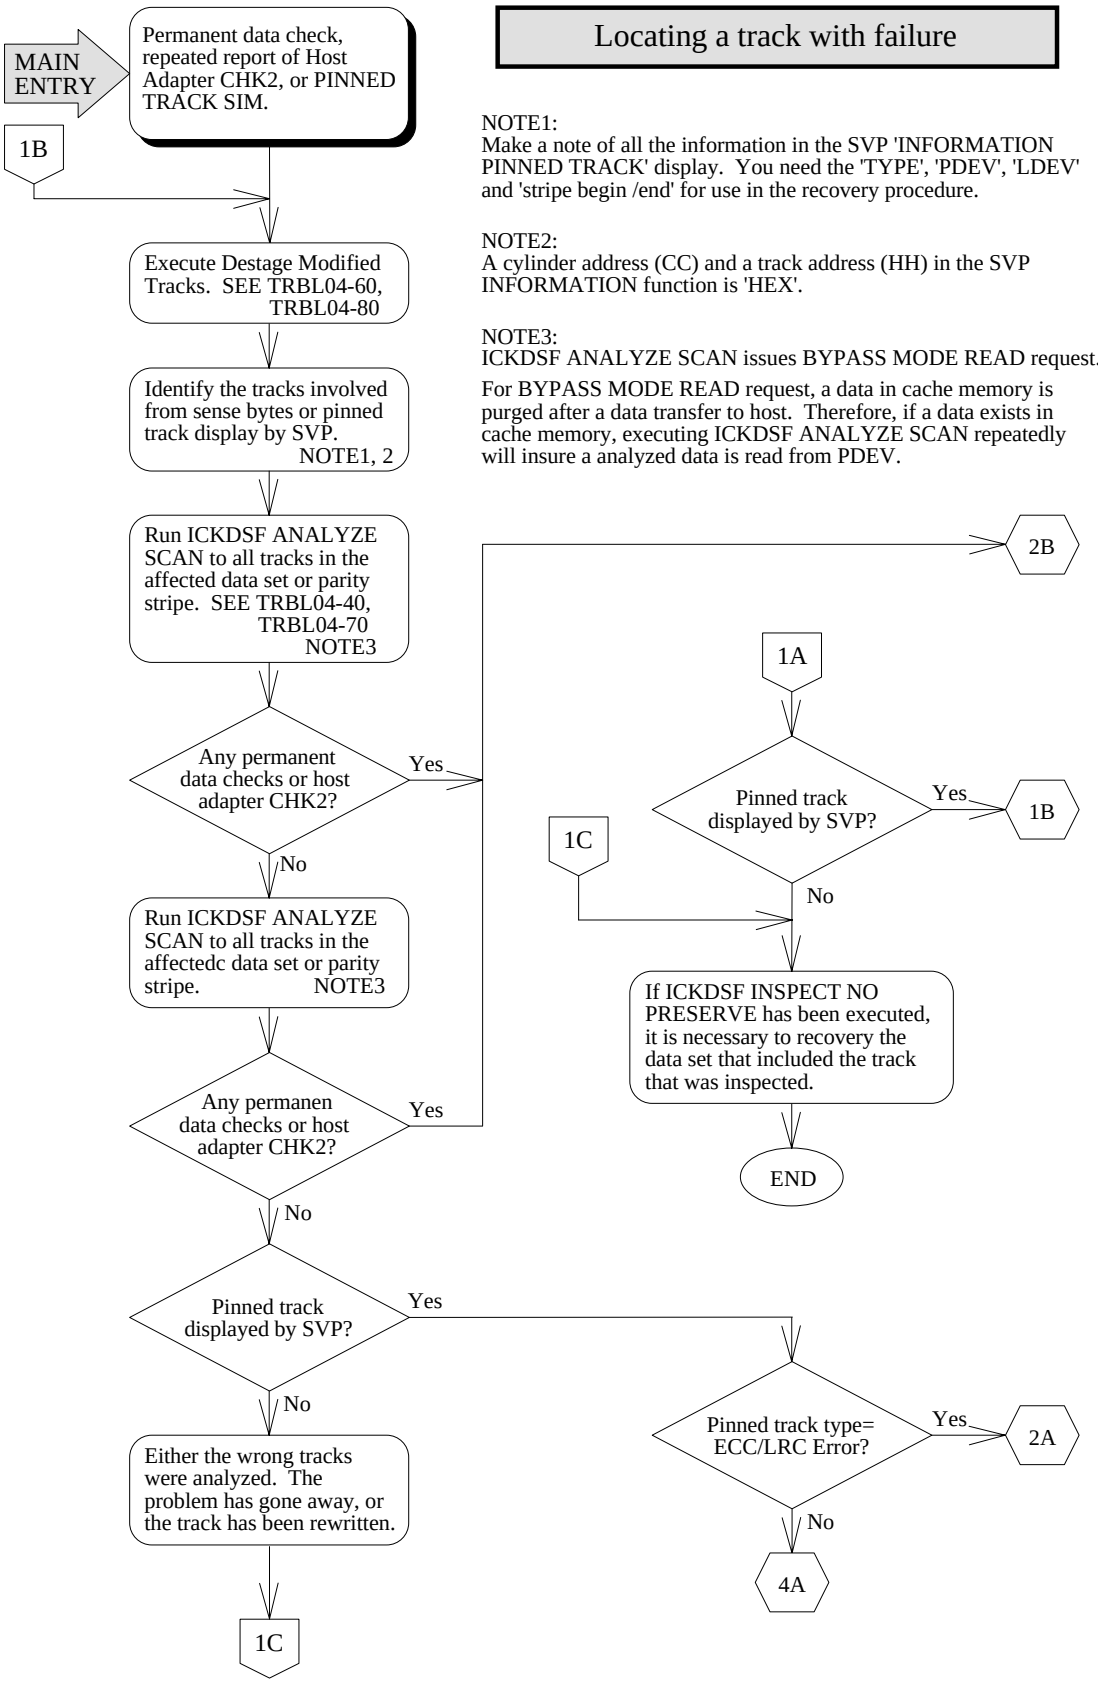
Cause:
A write error type of pinned track is caused when the data destaging process to a PDEV is unsuccessful due to a drive failure. When a drive failure occurs, the drive and the DKC both attempt to recover. If the recovery attempts are unsuccessful, a Write type pinned track is posted. The recovery attempts are:
(1) Media failure : Automatic reallocation of data to an alternate sector.
(2) Other failure : Alternate path retry.
Write error count for each PDEV is stored in the DKC. If the write error count for a PDEV exceeds the threshold value, the PDEV is blocked. Only one PDEV per parity group will be blocked. One blocked PDEV in a parity group will not stop DKC operation to that parity group. However, the parity group will be in correction access mode. If a write type pinned track is accessed by the host after its PDEV has been blocked, the pinned track status will reset.

Result of host I/O operation:
All access to write type pinned tracks will be successful and return a normal end.

Recovering Write Error pinned tracks:
Replace the PDEV with the pinned track. At this time if there is already a blocked PDEV in the same parity group, replace the blocked PDEV first. Then replace the PDEV with the pinned track. If more than one PDEV in a parity group has write error pinned tracks, check the ORM display on SVP Panel. Replace the PDEV with the highest error rate first, then second highest, etc. The pinned track(s) will be recovered by correction copy.

Copyright ©1997,1999, Hitachi, Ltd.

4.1 Recovery Procedure for Pinned Tracks



Locating a track with failure

NOTE1:
Make a note of all the information in the SVP 'INFORMATION PINNED TRACK' display. You need the 'TYPE', 'PDEV', 'LDEV' and 'stripe begin /end' for use in the recovery procedure.

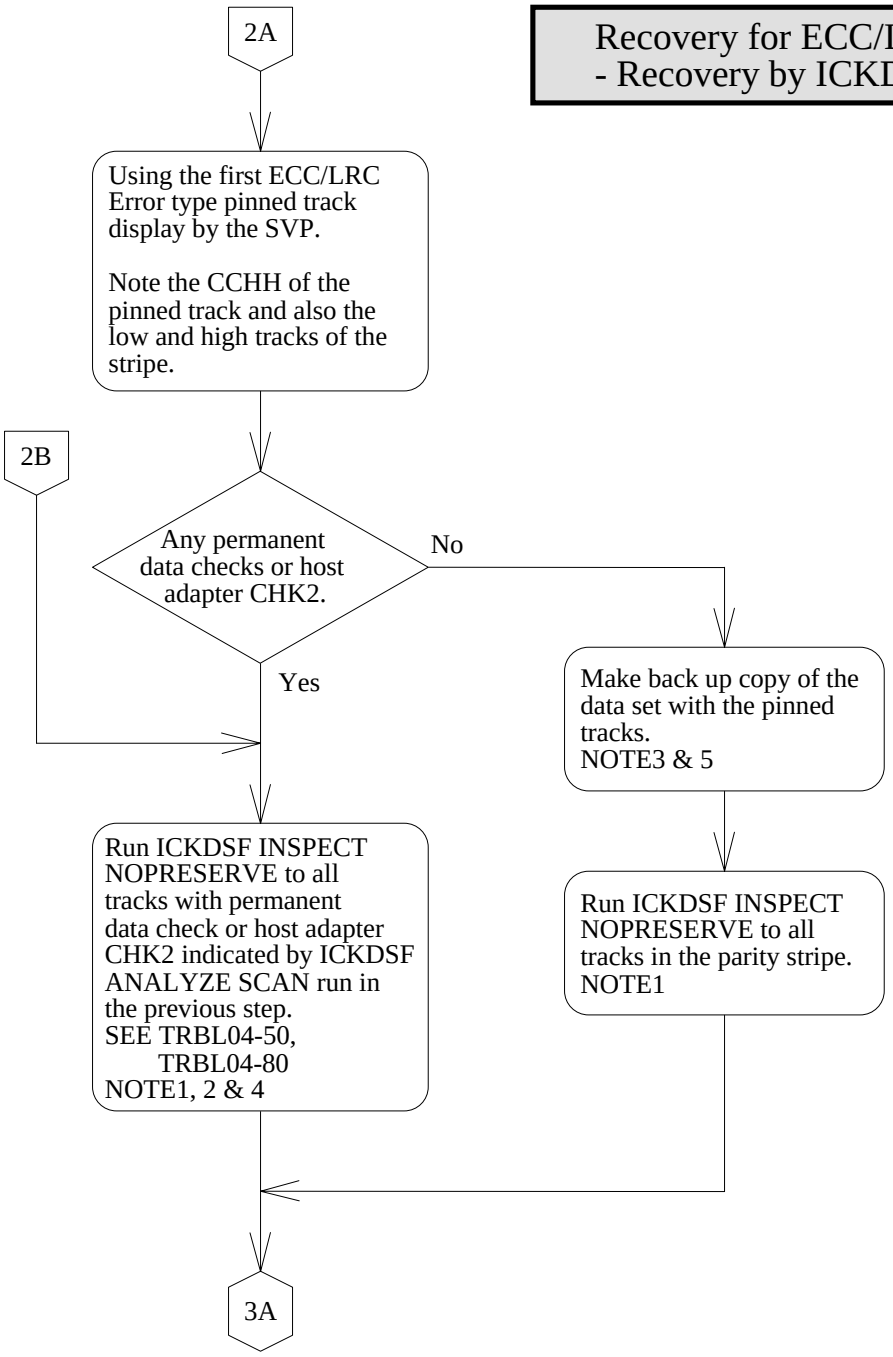
NOTE2:
A cylinder address (CC) and a track address (HH) in the SVP INFORMATION function is 'HEX'.

NOTE3:
ICKDSF ANALYZE SCAN issues BYPASS MODE READ request.

For BYPASS MODE READ request, a data in cache memory is purged after a data transfer to host. Therefore, if a data exists in cache memory, executing ICKDSF ANALYZE SCAN repeatedly will insure a analyzed data is read from PDEV.

Copyright ©1997,1999, Hitachi, Ltd.

Recovery for ECC/LRC Error tracks - Recovery by ICKDSF INSPECT -



NOTE1 Remember all tracks on the which ICKDSF INSPECT NO PRESERVE is run as costomer data has been lost. Customer will have to do file recovery for each data set involved which may be more than one data set.

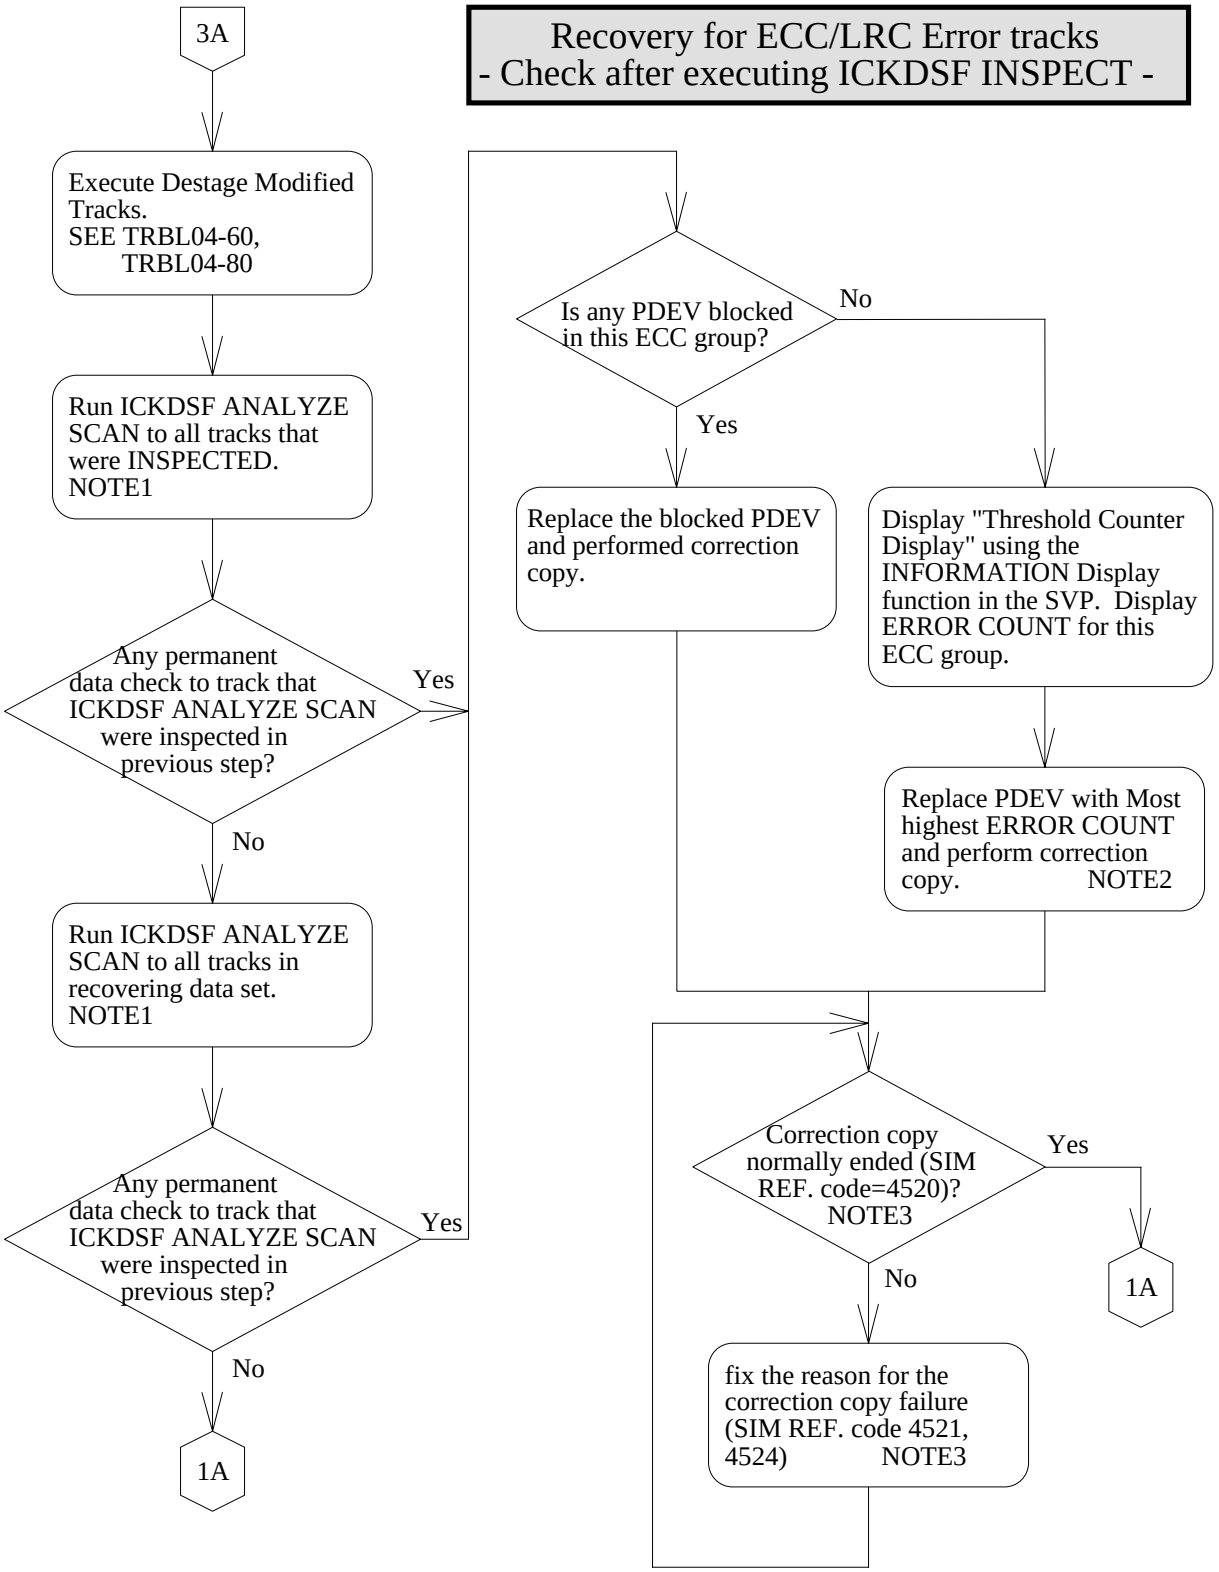
NOTE2 If one of the tracks that needs to be inspected is in the VTOC ICKDSF will only work if the volume is varied offline. In this case the entire volume will have to be restored.

NOTE3
- During a file recovery from the backup procedure to the restore procedure of the data set, the data set can not be accessed until recovery is complete.
- If a file recovery for PDS data set, execute the backup/restore procedure to the data set (all members).

NOTE4 When the drive emulation type is 3390-3R, add NOCHECK to ICKDSF INSPECT parameter.

NOTE5
① Execute File Back up for dataset including pinned track. Store backed-up file to another media (tape or another dasd).
② After Inspect with NO PRESERVE has been done, restore backed-up file to original location.

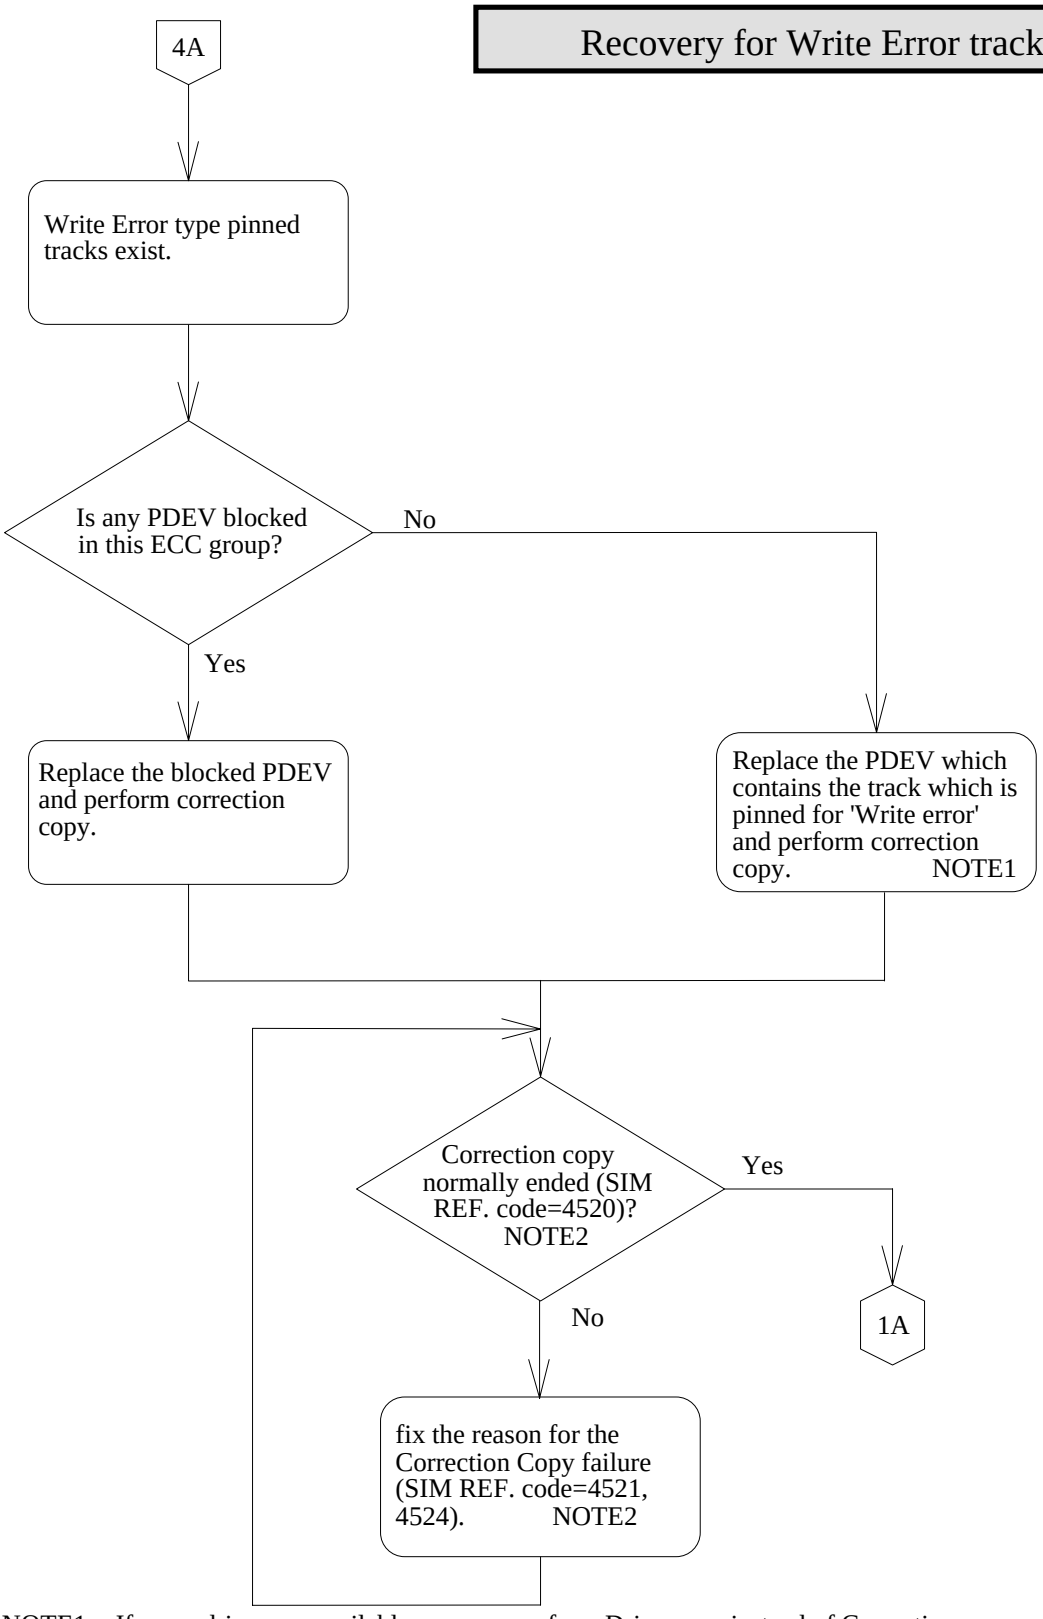
Copyright ©1997, Hitachi, Ltd.



NOTE1 Repeat ICKDSF ANALYZE SCAN twice for the purpose verifying the data written on the physical device actually.
NOTE2 If Spare drives are available, you can perform Drive Copy instead of Correction copy.
NOTE3 In case of Drive copy abnormally ended, SIM REF. code is “4621” or “4624”.

Copyright ©1997, Hitachi, Ltd.

Recovery for Write Error tracks



NOTE1 If spare drives are available, you can perform Drive copy instead of Correction copy.
NOTE2 In case of Drive copy abnormally ended, SIM REF. code is “4621” or “4624”.

JCL example (under MVS)

A. Check if any pinned track by using DSF (ANALYZE).

[in case target LDEV to be recovered is ONLINE state]

```
//ANALYZE  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//DASD      DD  UNIT=DASD,VOL=SER=xxxxxx,DISP=SHR
//SYSIN     DD  *
 ANALYZE DDNAME(DASD) SCAN
/*
//
```

[in case target LDEV to be recovered is OFFLINE state]

```
//ANALYZE  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//SYSIN     DD  *
 ANALYZE UNIT(cuu) SCAN
/*
//
```

Copyright ©1997, Hitachi, Ltd.

B. Recover pinned tracks by using DSF (INSPECT).

(1) When the drive emuration type is other than 3390-3R.

[in case target LDEV to be recovered is ONLINE state]

```
//INSPECT  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//DASD      DD  UNIT=DASD,VOL=SER=xxxxxx,DISP=SHR
//SYSIN     DD  *
 INSPECT DDNAME(DASD) NOVERIFY NOPRESERVE -
 FROM(X'ccc',X'h') TO(X'ccc',X'h')
/*
//
```

[in case target LDEV to be recovered is OFFLINE state]

```
//INSPECT  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//SYSIN     DD  *
 INSPECT UNIT(cuu) NOVERIFY NOPRESERVE -
 FROM(X'ccc',X'h') TO(X'ccc',X'h')
/*
//
```

(2) When the drive emuration type is 3390-3R.

[in case target LDEV to be recovered is ONLINE state]

```
//INSPECT  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//DASD      DD  UNIT=DASD,VOL=SER=xxxxxx,DISP=SHR
//SYSIN     DD  *
 INSPECT DDNAME(DASD) NOVERIFY NOPRESERVE NOCHECK -
 TRACKS(X'ccc',X'h')
/*
//
```

[in case target LDEV to be recovered is OFFLINE state]

```
//INSPECT  JOB  MSGCLASS=x,MSGLEVEL=(1,1)
//STEP    EXEC  PGM=ICKDSF
//SYSPRINT  DD  SYSOUT=*
//SYSIN     DD  *
 INSPECT UNIT(cuu) NOVERIFY NOPRESERVE NOCHKCK -
 TRACKS(X'ccc',X'h')
/*
//
```

Copyright ©1997, Hitachi, Ltd.

C. Execute Destage Modified Tracks

```
//DESTDATA JOB
MSGCLASS=x,MSGLEVEL=(1,1),REGION=nnnnK
//STEP1   EXEC  PGM=IDCAMS
//SYSPRINT  DD  SYSOUT=*
//SYSIN     DD  *
 SETCACHE VOLUME(xxxxxx) unit(DASD) DESTAGE
/*
//
```

Copyright ©1997, Hitachi, Ltd.

Operation example (under VM)

Note : This recovery procedure is executable only under VM/ESA 1.1 or higher release with DEVMAINT authority.

A. Check if any pinned track by using DSF (ANALYZE).

```
ickdsf
ICK030E DEFINE INPUT...
console
CONSOLE
ICK031E DEFINE OUTPUT...
console
CONSOLE
ICKDSF - CMS DEVICE SUPPORT FACILITY...

ENTER INPUT COMMAND:
analyze unit(cuu) scan
    .
    .
end
 END
```

Copyright ©1997, Hitachi, Ltd.

B. Recover pinned tracks by using DSF(INSPECT).

(1) When the drive emuration type is other than 3390-3R.

```
ickdsf
ICK030E DEFINE INPUT...
console
CONSOLE
ICK031E DEFINE OUTPUT...
console
CONSOLE
ICKDSF - CMS DEVICE SUPPORT FACILITY...

ENTER INPUT COMMAND:
inspect unit(cuu) norecovery nopriserve from(x'ccc',x'h'
to(x'ccc',x'h')
    .
    .
end
 END
```

(2) When the drive emuration type is 3390-3R.

```
ickdsf
ICK030E DEFINE INPUT...
console
CONSOLE
ICK031E DEFINE OUTPUT...
console
CONSOLE
ICKDSF - CMS DEVICE SUPPORT FACILITY...

ENTER INPUT COMMAND:
inspect unit(cuu) norecovery nopriserve nocheck tracks(x'ccc',x'h')
    .
    .
end
 END
```

C. Execute Destage Modified Tracks

```
destage rdev
```

5 Error Recovery

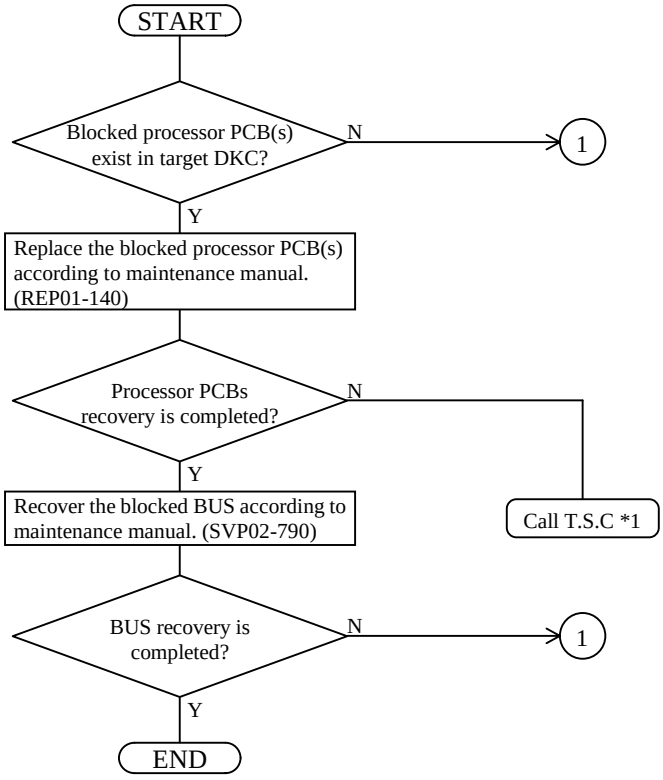
Copyright ©1997, Hitachi, Ltd.

5.1 Error Recovery Procedure for Bus Blocking (SIM = FFEA0X, FFFA0X)

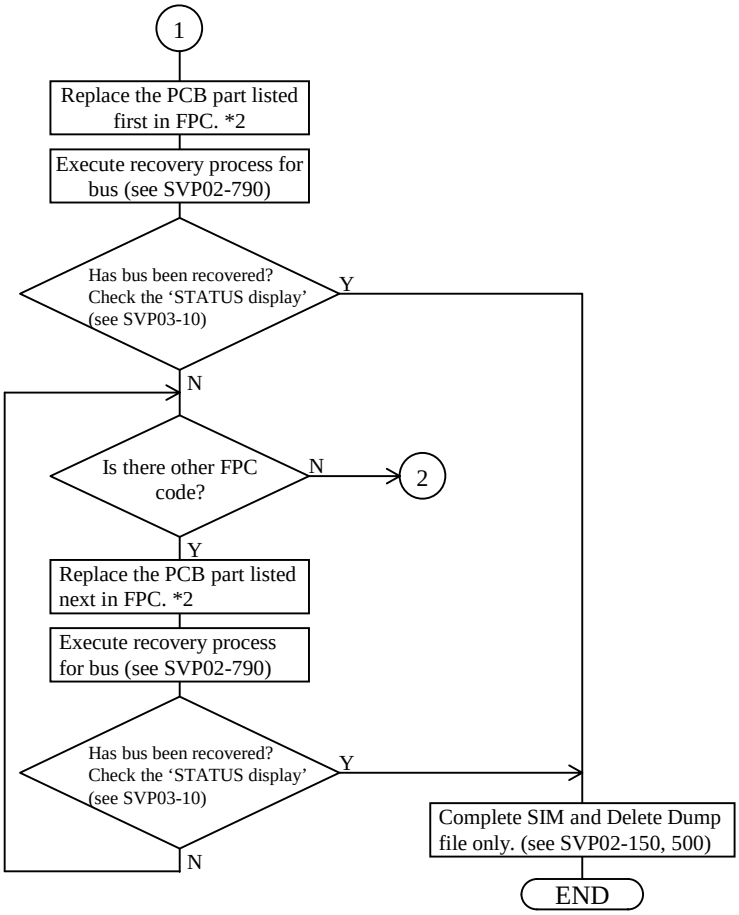
When bus is blockaded (SIM-REF CODE = FFEA0x or FFFA0x), perform following error recovery procedures.

- ON-LINE PROCEDURE

(1) Preparation parts:
As many spare PCBs (CHA, DKA, Cache, Terminator) as possible. Make sure the latest field change has been applied to the spare PCBs (check PCB revision).
(2) The way of checking the bus:
Bus recovered and not occurred CHK2, CHK3.
(3) Procedure

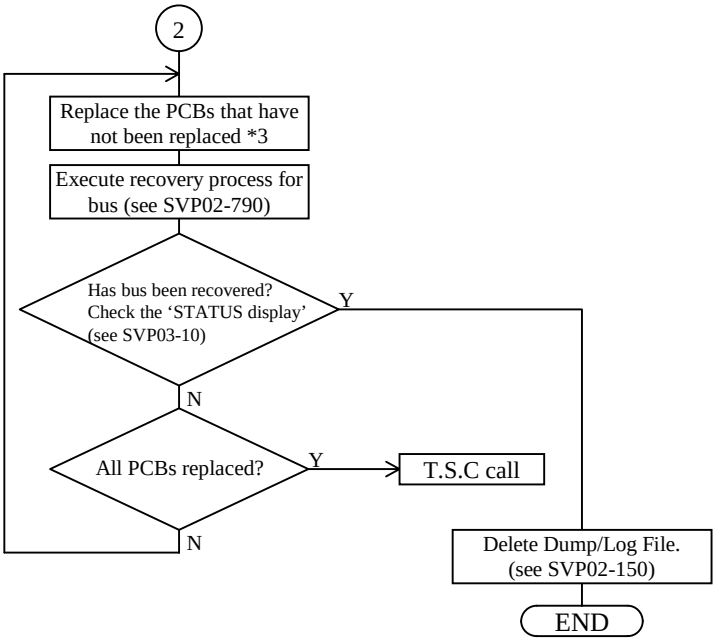


Copyright ©1997,1999, Hitachi, Ltd.

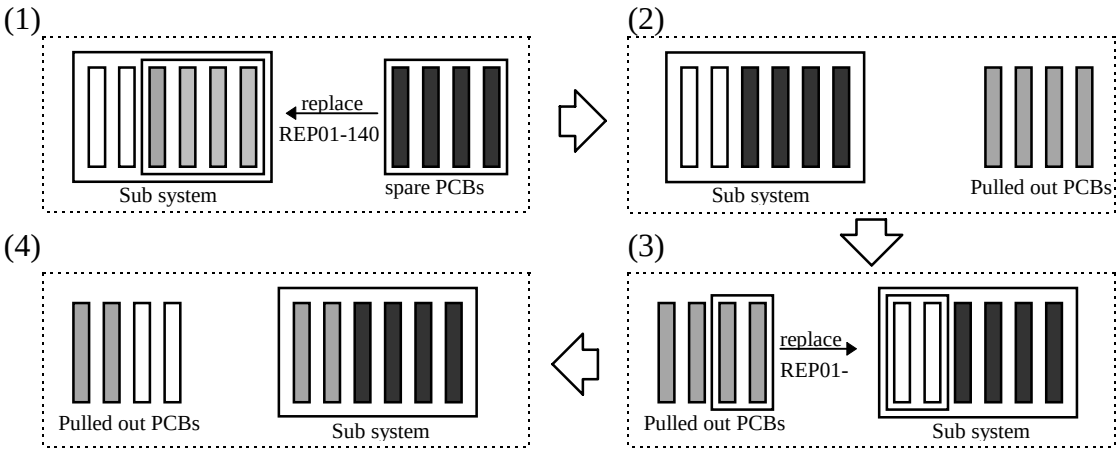


*1 : Technical support center.
*2 : Refer to the replace procedure “REP01-140”.

Copyright ©1997,1998, Hitachi, Ltd.



*3 : This is an example to isolate the field part by replacing PCBs at once, then executing BUS ACCESS TEST. In the figure shown below, we suppose that you have four spare PCBs at hand that you have used for replacement in (1), without success (result of replacement shown in (2)). Since the bus failure is not recovered the original PCBs are used in (3) to replace the remaining PCBs (not replaced PCBs). The result of replacement is shown in (4).

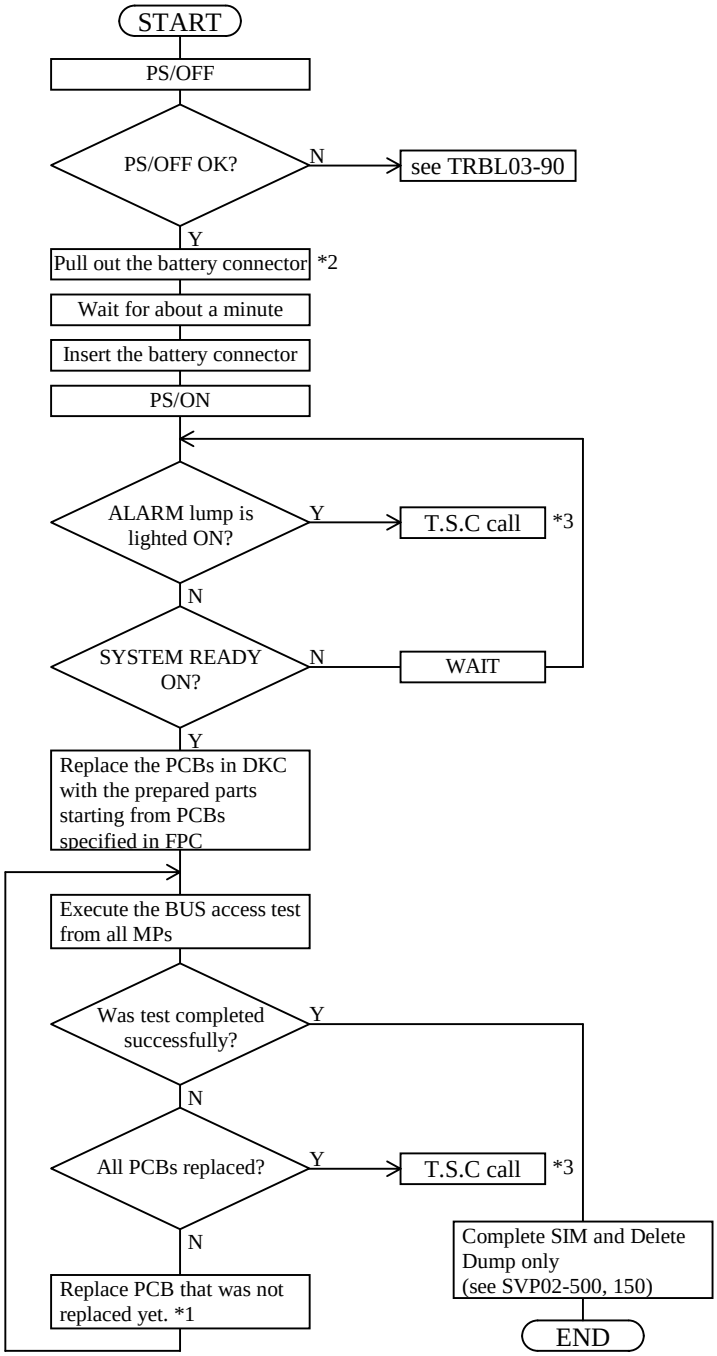


- Refer to the replace procedure "REP01-140".

Copyright ©1997,1998, Hitachi, Ltd.

● OFF-LINE PROCEDURE

(1) Preparation parts:
Prepare the same numbers of parts as “CHA, DKA” already installed for failure DKC as possible.
(2) The way of checking the recovered BUS:
All of BUSs are not blocked after IMPL and no error occurs as a result of BUS access test.



Copyright ©1997, Hitachi, Ltd.

*1 : • Pulled out parts in failure DKC are normal. So these parts can be used for spare.
• Refer to the replace procedure “REP01-140”.
*2 : Refer to LOCATION 06-60.
*3 : Technical Support Center.

Copyright ©1997,1998, Hitachi, Ltd.

5.2 Isolation and Recovery Procedures for Common SCSI Bus Error (SIM = DF7XYZ, DF8XYZ)

When a SCSI port error SIM for a drive (PDEV) is reported, this section provides the procedures for deciding whether the error is caused by the pertinent drive error or common SCSI bus error, and how to recover the error.

As a SCSI port error SIM is managed for each PDEV, a SCSI temporary error (REF code = DF7xyz) is reported when a warning is issued, and SCSI blocking (REF code = DF8xyz) is reported when the equipment is blocked (x: drive path#, yz: PDEV# (C#, R#)).

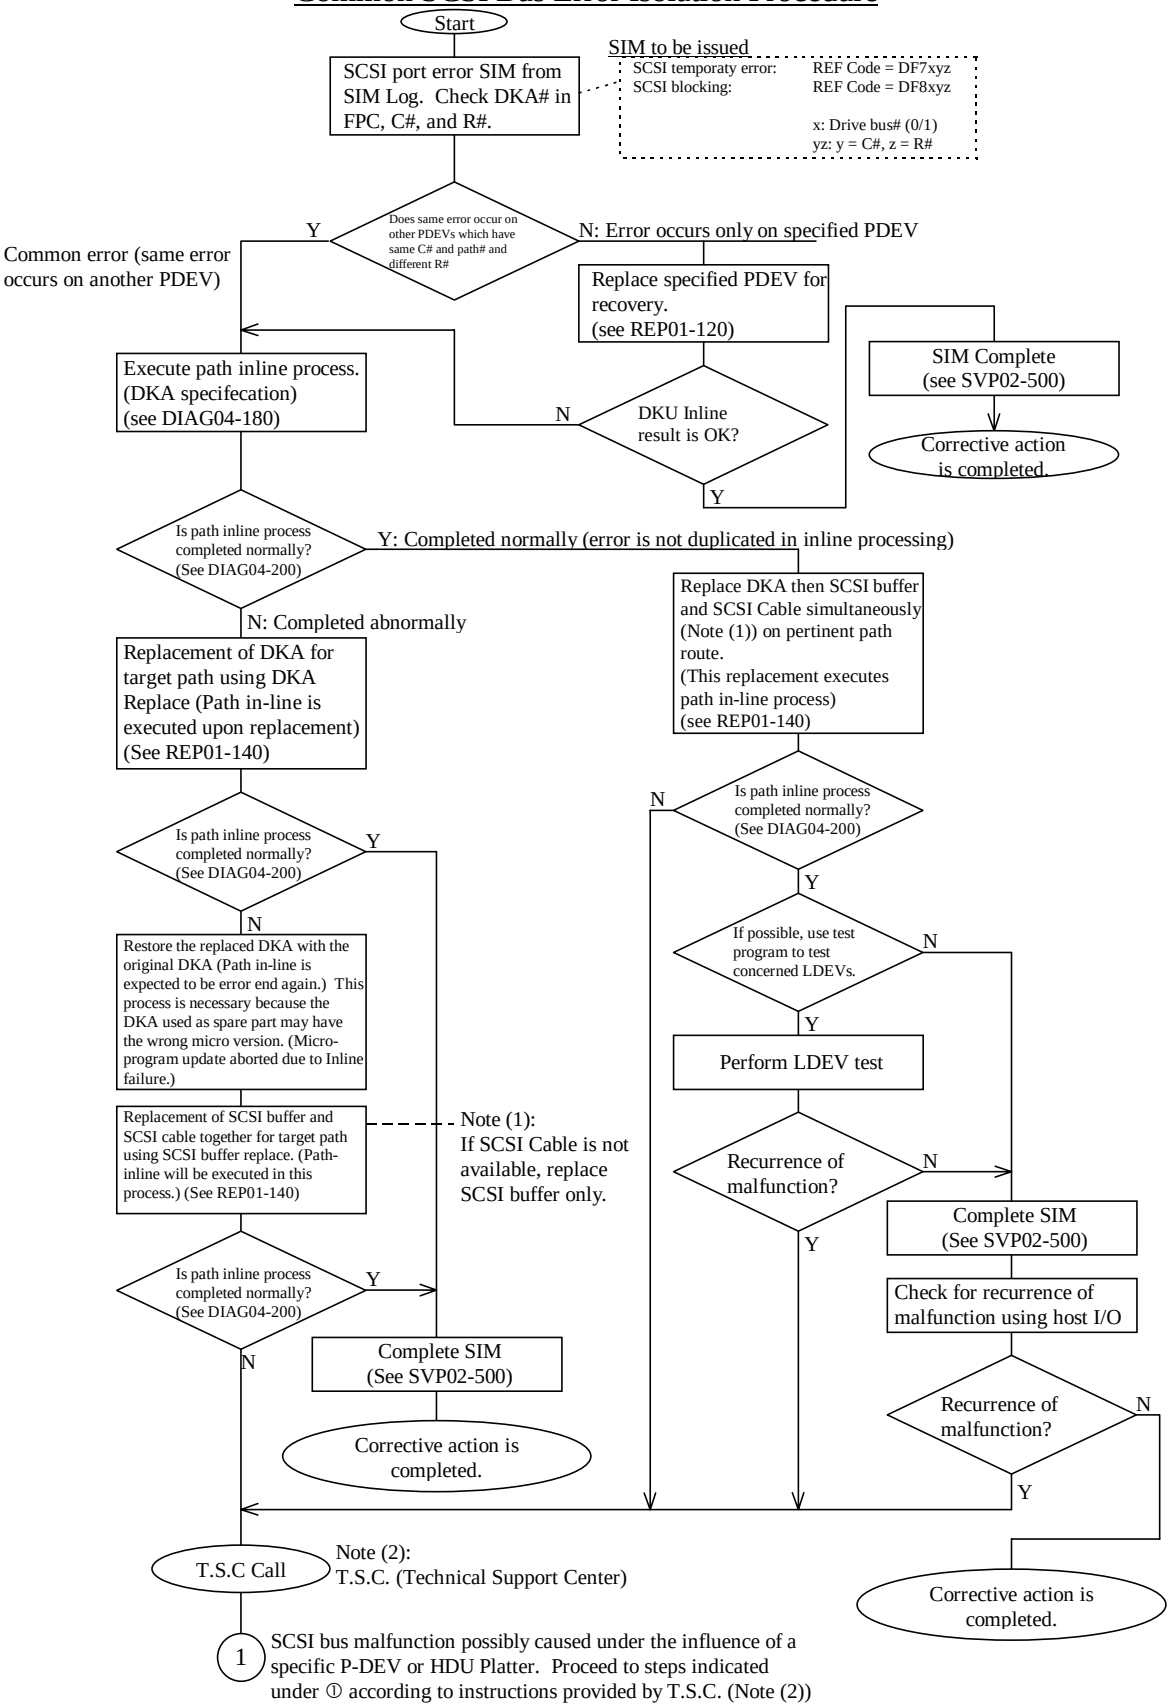
Possible causes for the malfunction are:

(1) Failure of drive specified in FPC
(2) Defects in SPC (SCSI controller) for DKA
(3) Defects in SCSI BUS (cable, SCSI buffer)
(4) Other drive failure
(5) HDU platter failure

Before performing the maintenance and replacement only for the failing drive, follow these isolation and recovery procedures to check that a common SCSI port error occurs on other PDEVs on the same SCSI path. If the common error exists, perform the appropriate recovery for the common error parts.

Copyright ©1997, Hitachi, Ltd.

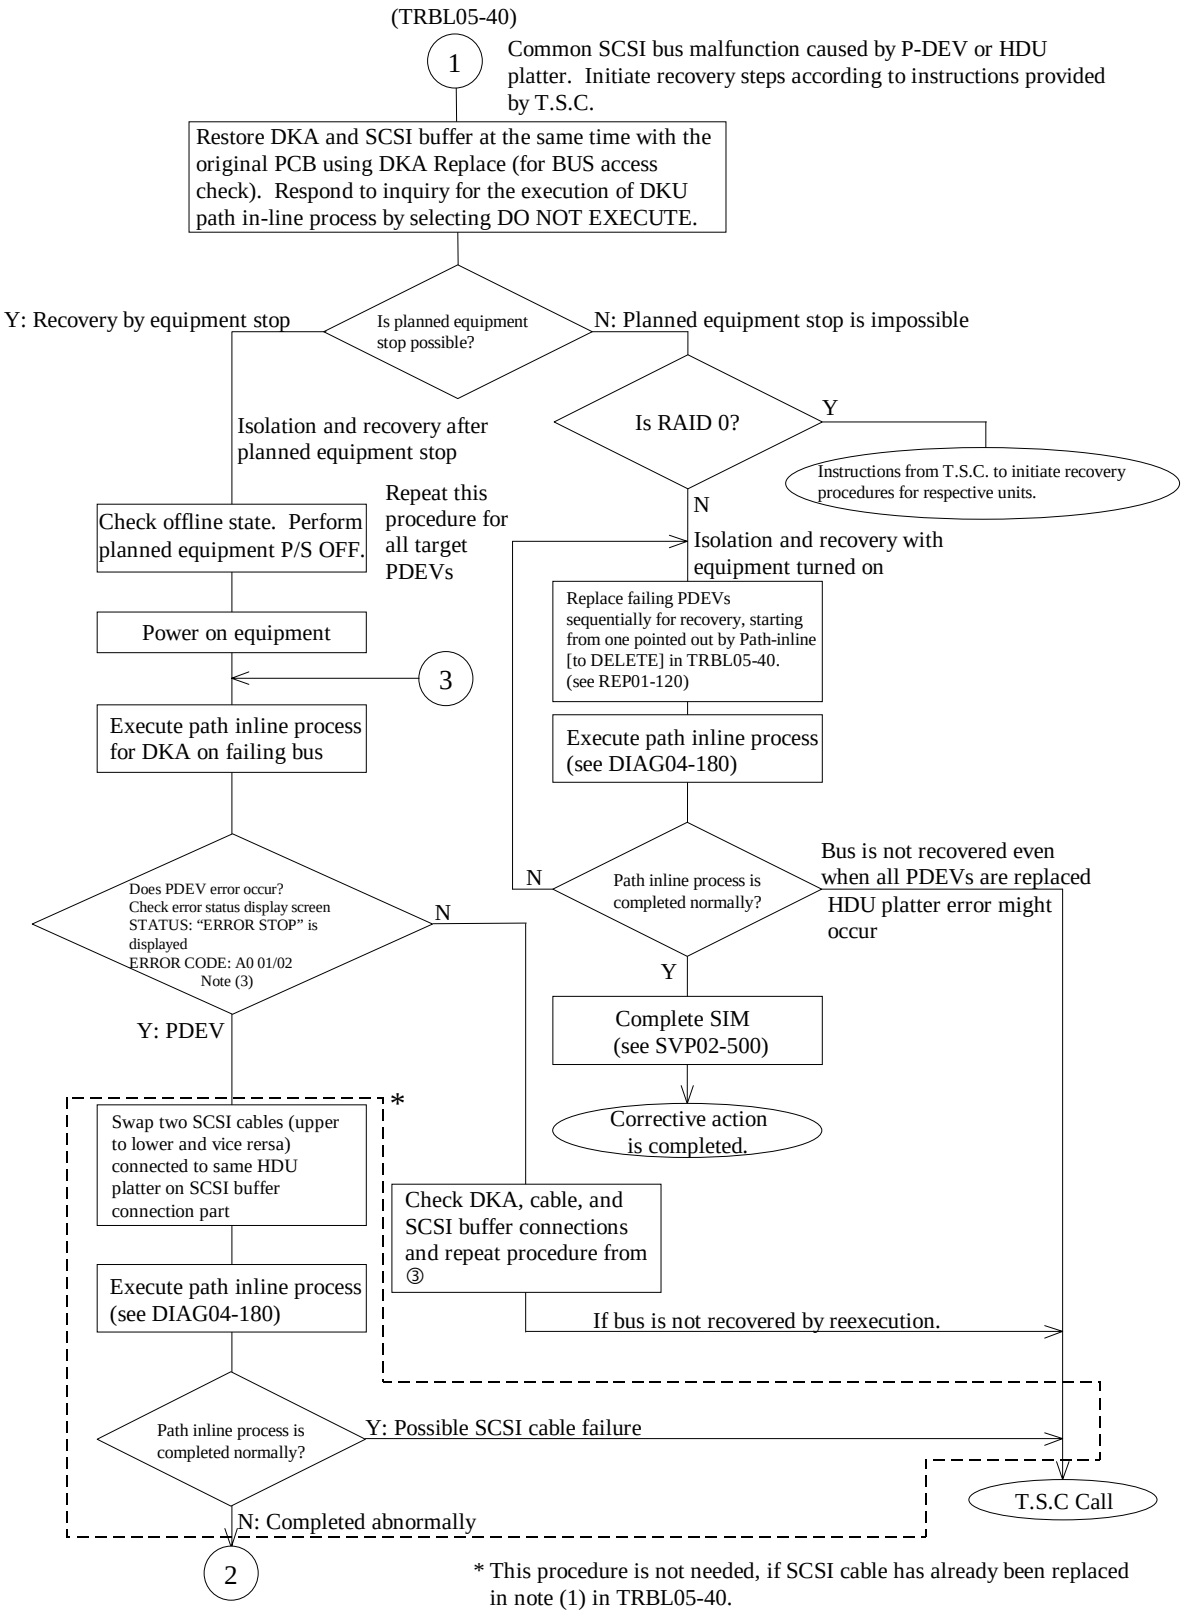
Common SCSI Bus Error Isolation Procedure



Copyright ©1997,1999, Hitachi, Ltd.

Common SCSI Bus Error due to PDEV or HDU Platter Error

(TRBL05-40)

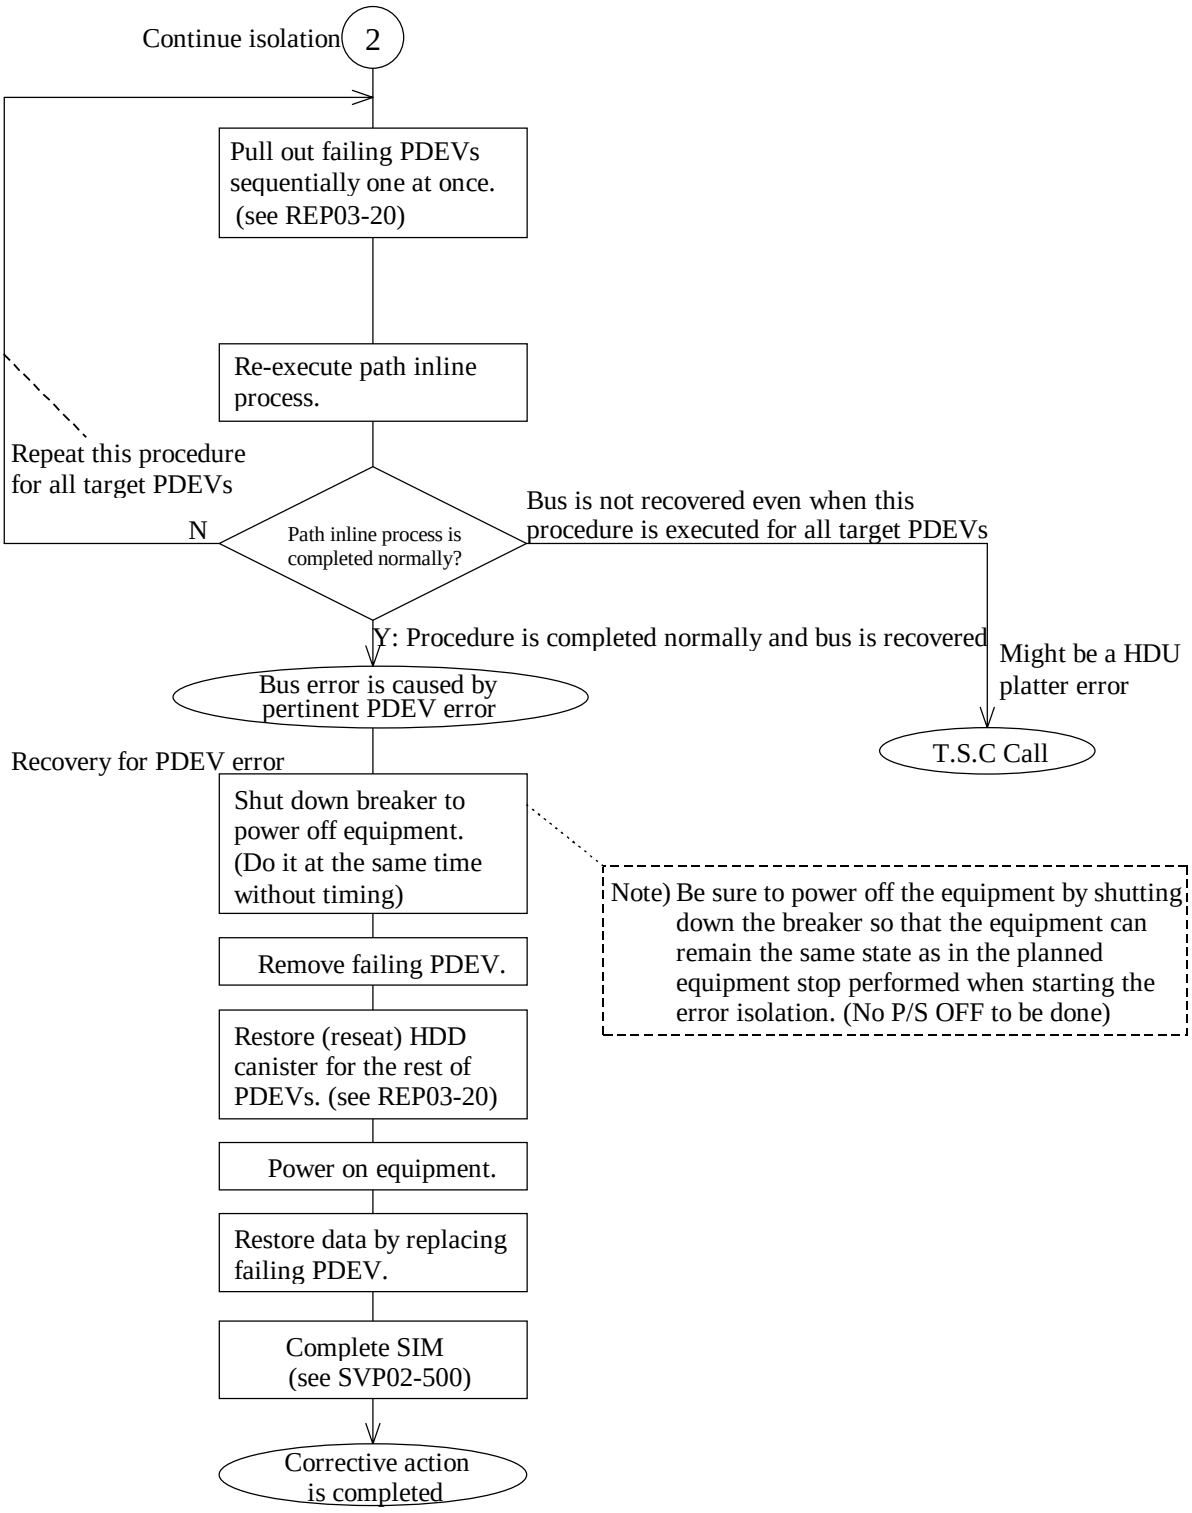


* This procedure is not needed, if SCSI cable has already been replaced in note (1) in TRBL05-40.

Continue isolation

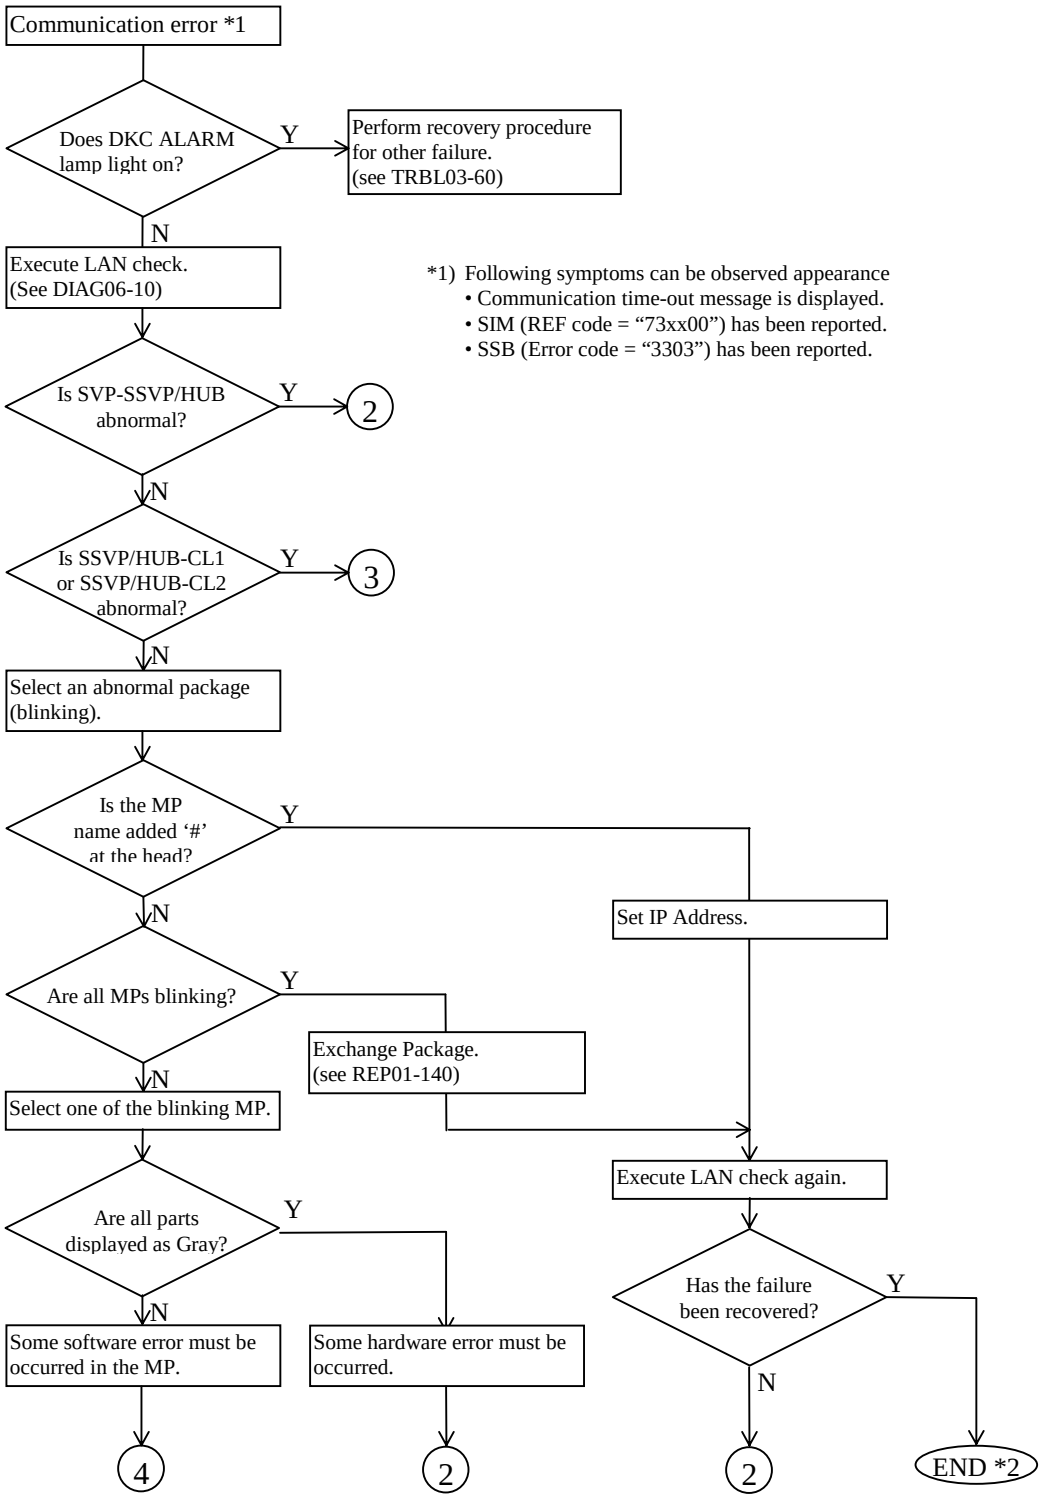
Note (3): Inline result message display.

Copyright ©1997,1998, Hitachi, Ltd.



Copyright ©1997, Hitachi, Ltd.

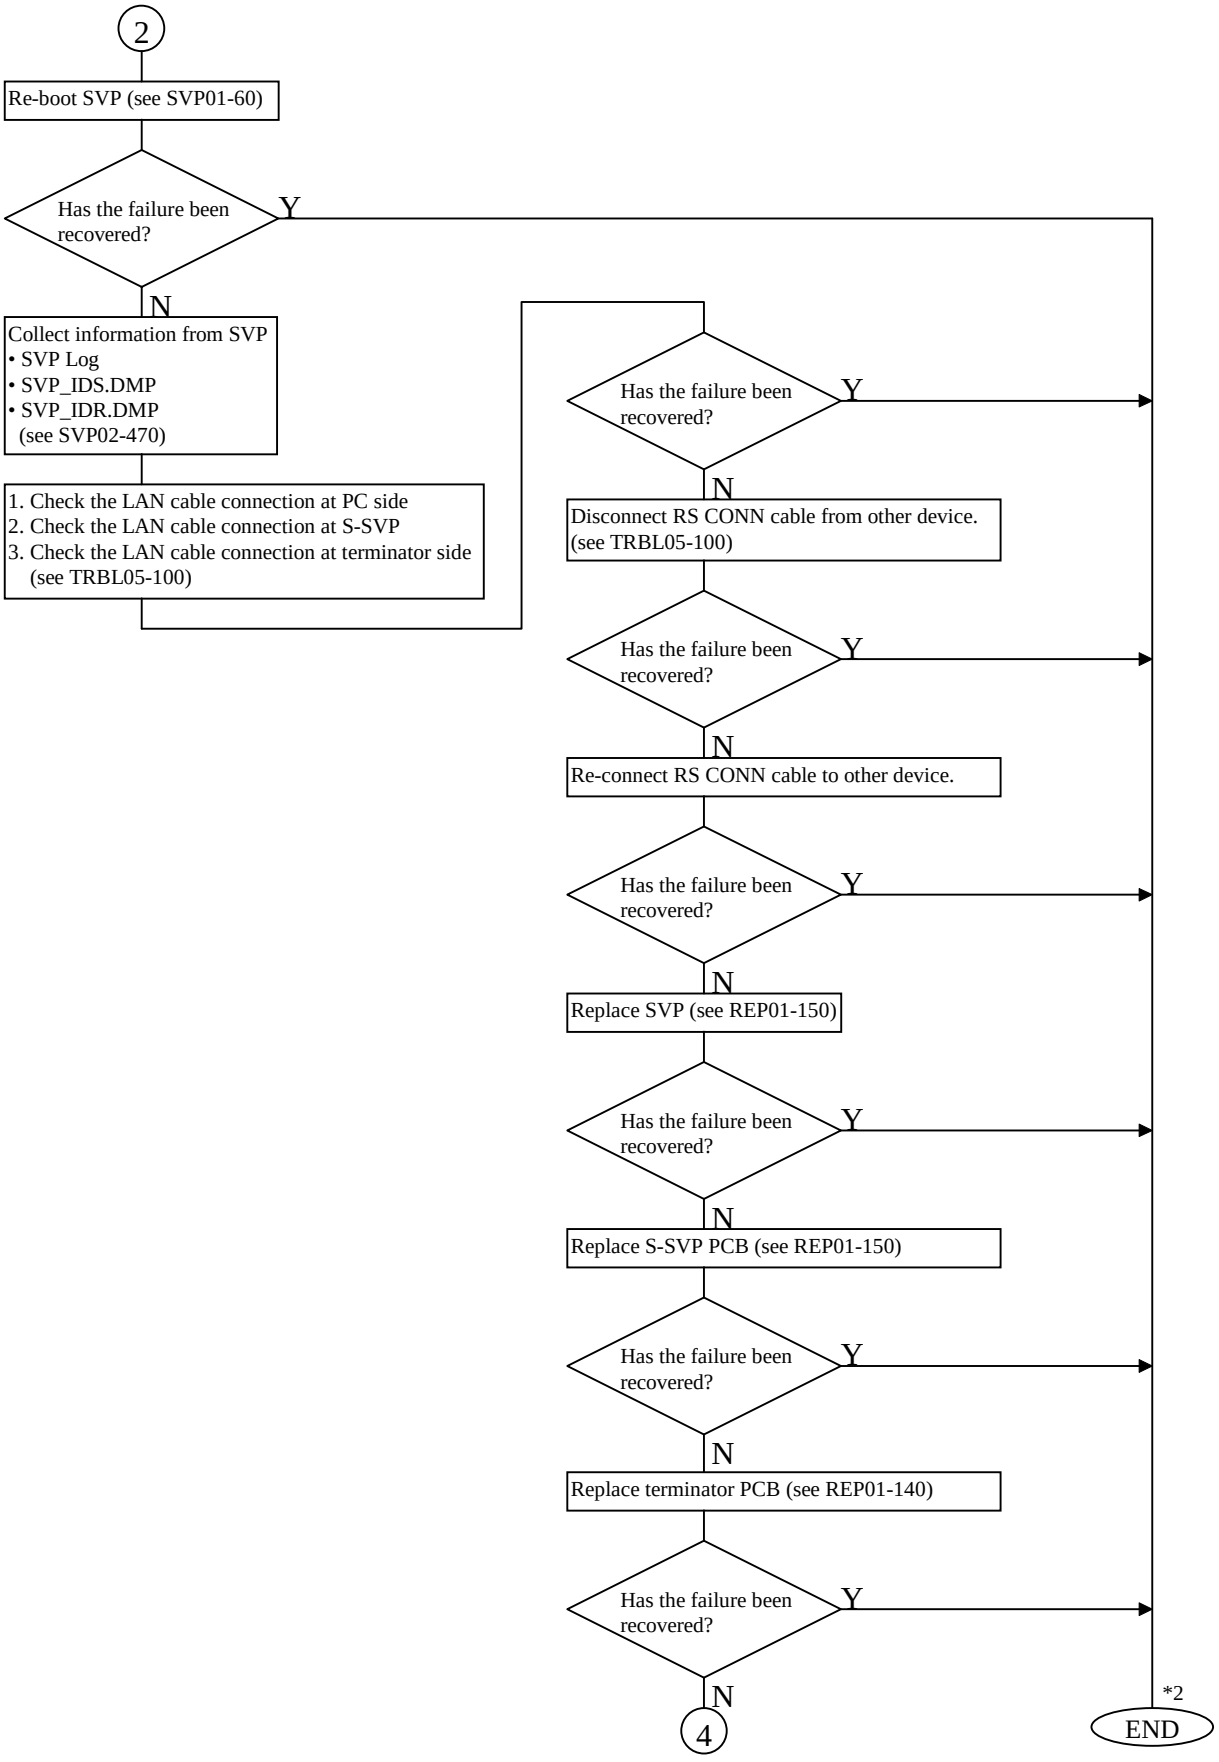
5.3 Recovery Procedure for LAN Error (SIM = 1400X0, 73XX00)



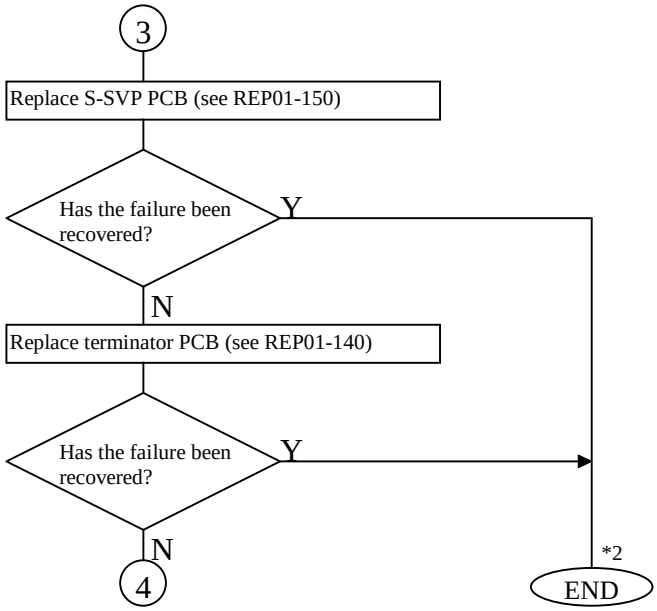
*1) Following symptoms can be observed appearance
- Communication time-out message is displayed.
- SIM (REF code = "73xx00") has been reported.
- SSB (Error code = "3303") has been reported.

*2) After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

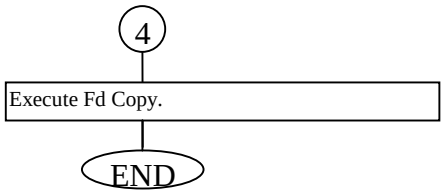
Copyright ©1997,1999, Hitachi, Ltd.



Copyright ©1997, Hitachi, Ltd.



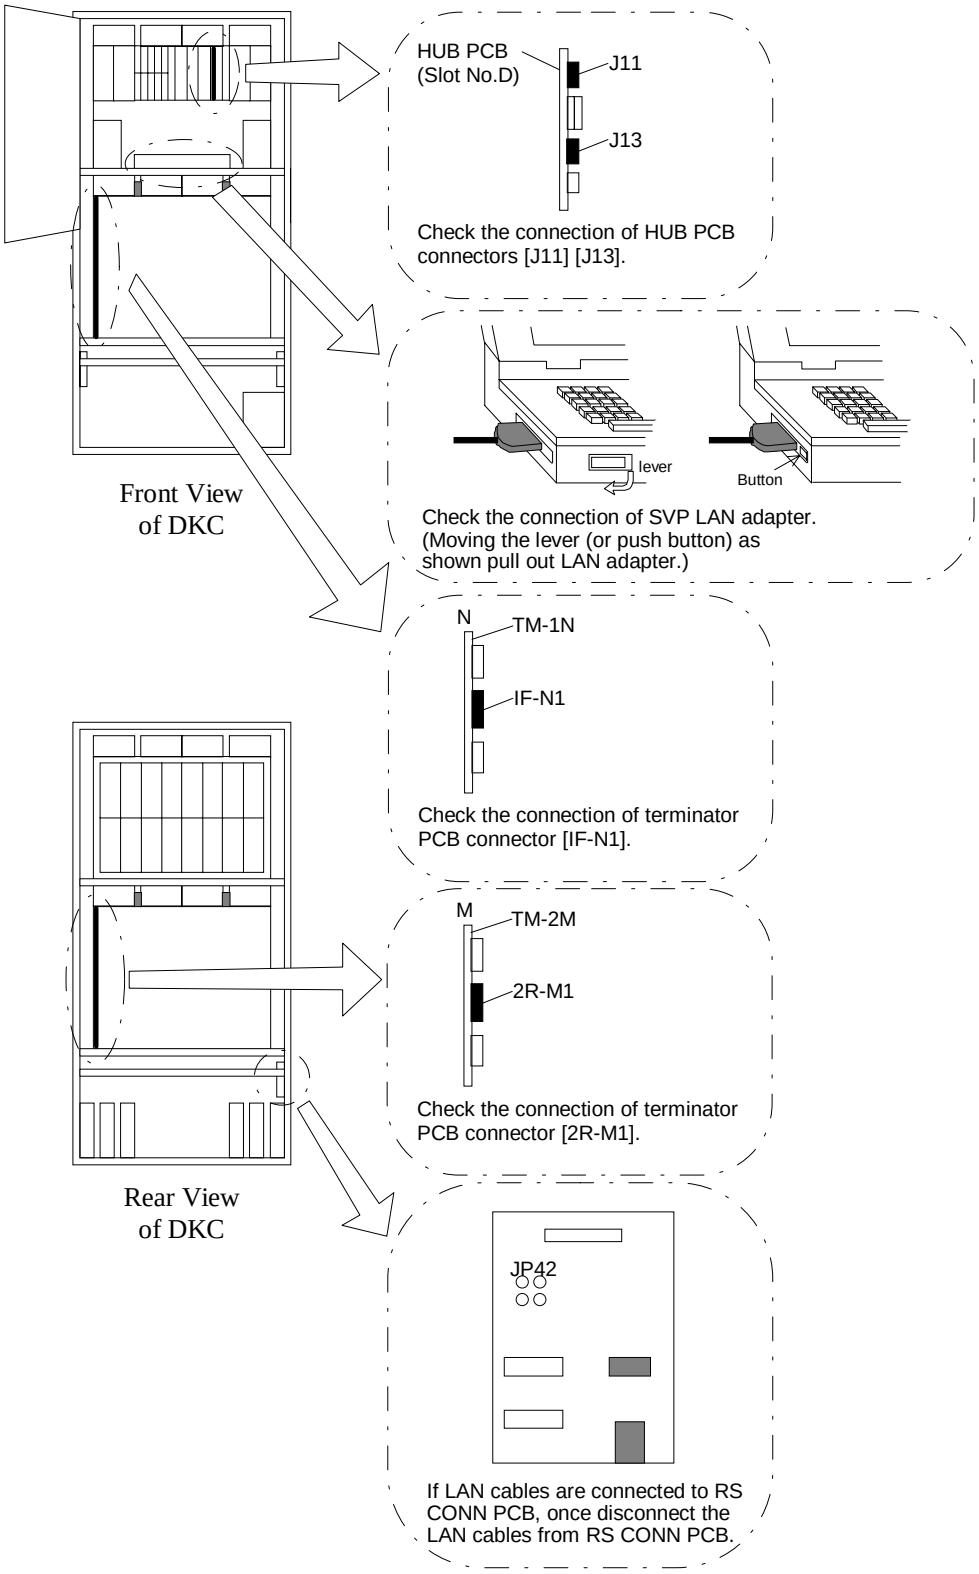
*2: After finishing the error recovery, do SIM complete and delete logs. (see SVP02-150)



Copyright ©1997,1999, Hitachi, Ltd.

Check the connection of LAN cables

* If all MPs LAN is blocked, disconnect and connect LAN connectors.
  Do not connect/disconnect LAN connectors when LAN is working.



Copyright ©1997,1998, Hitachi, Ltd.

5.4 Error Recovery Procedure during CHA/DKA replacement

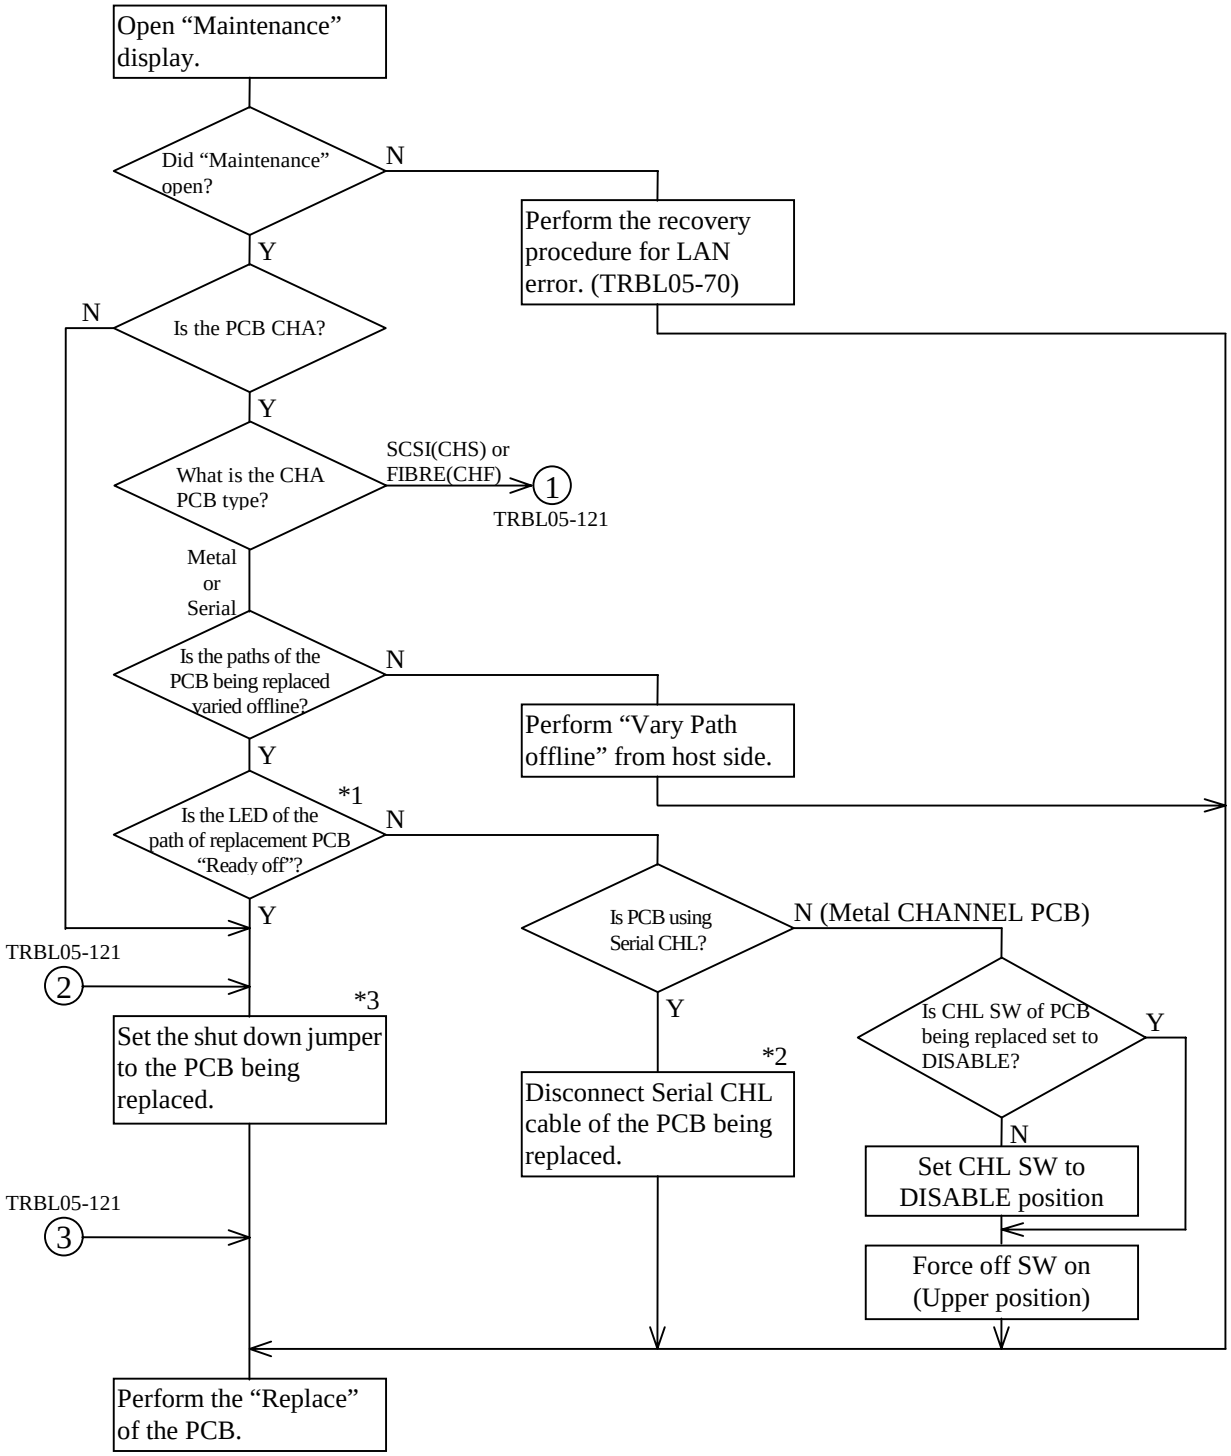
Perform the appropriate recovery procedure according to case (1) or (2).

Copyright ©1997, Hitachi, Ltd.

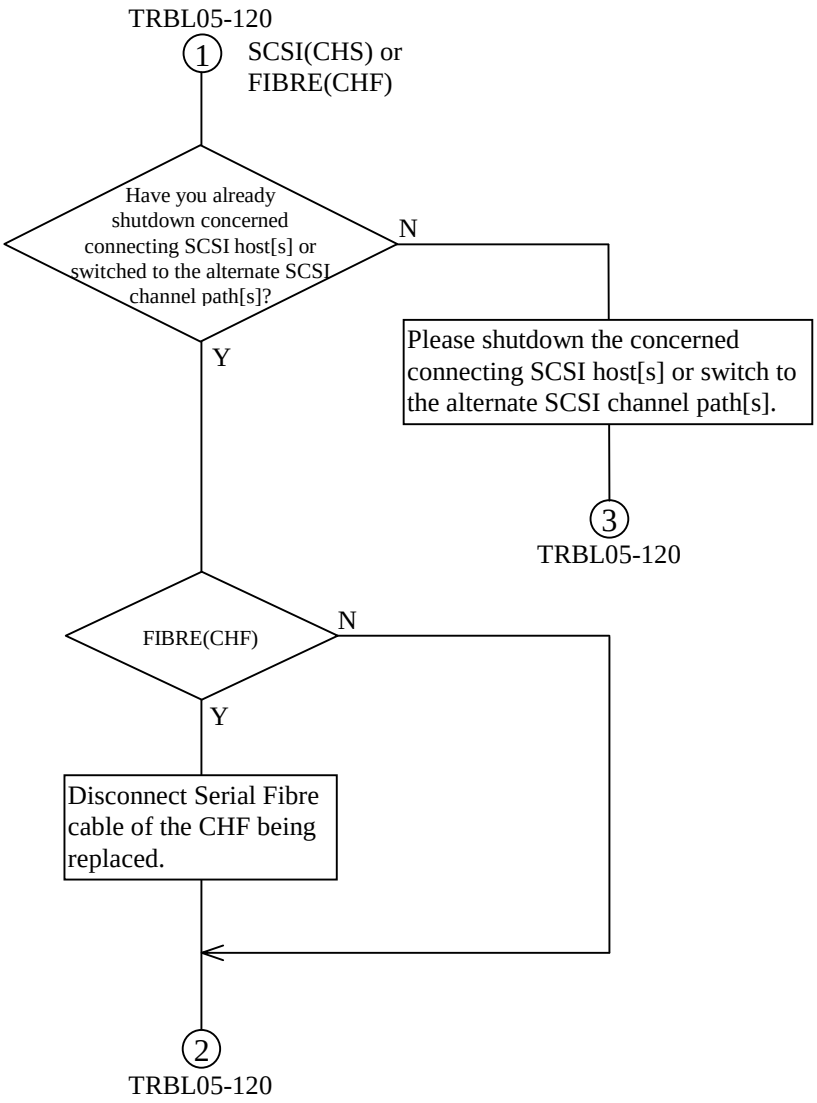
(1) Blocking error occurrence

If the following message is displayed when CHA/DKA is being blocked (when the message “The CHA is being blocked...” or “The DKA is being blocked...” is being displayed), perform the following recovery procedures.

“There is no response from DKC within the time limit.”



Copyright ©1997,1998, Hitachi, Ltd.

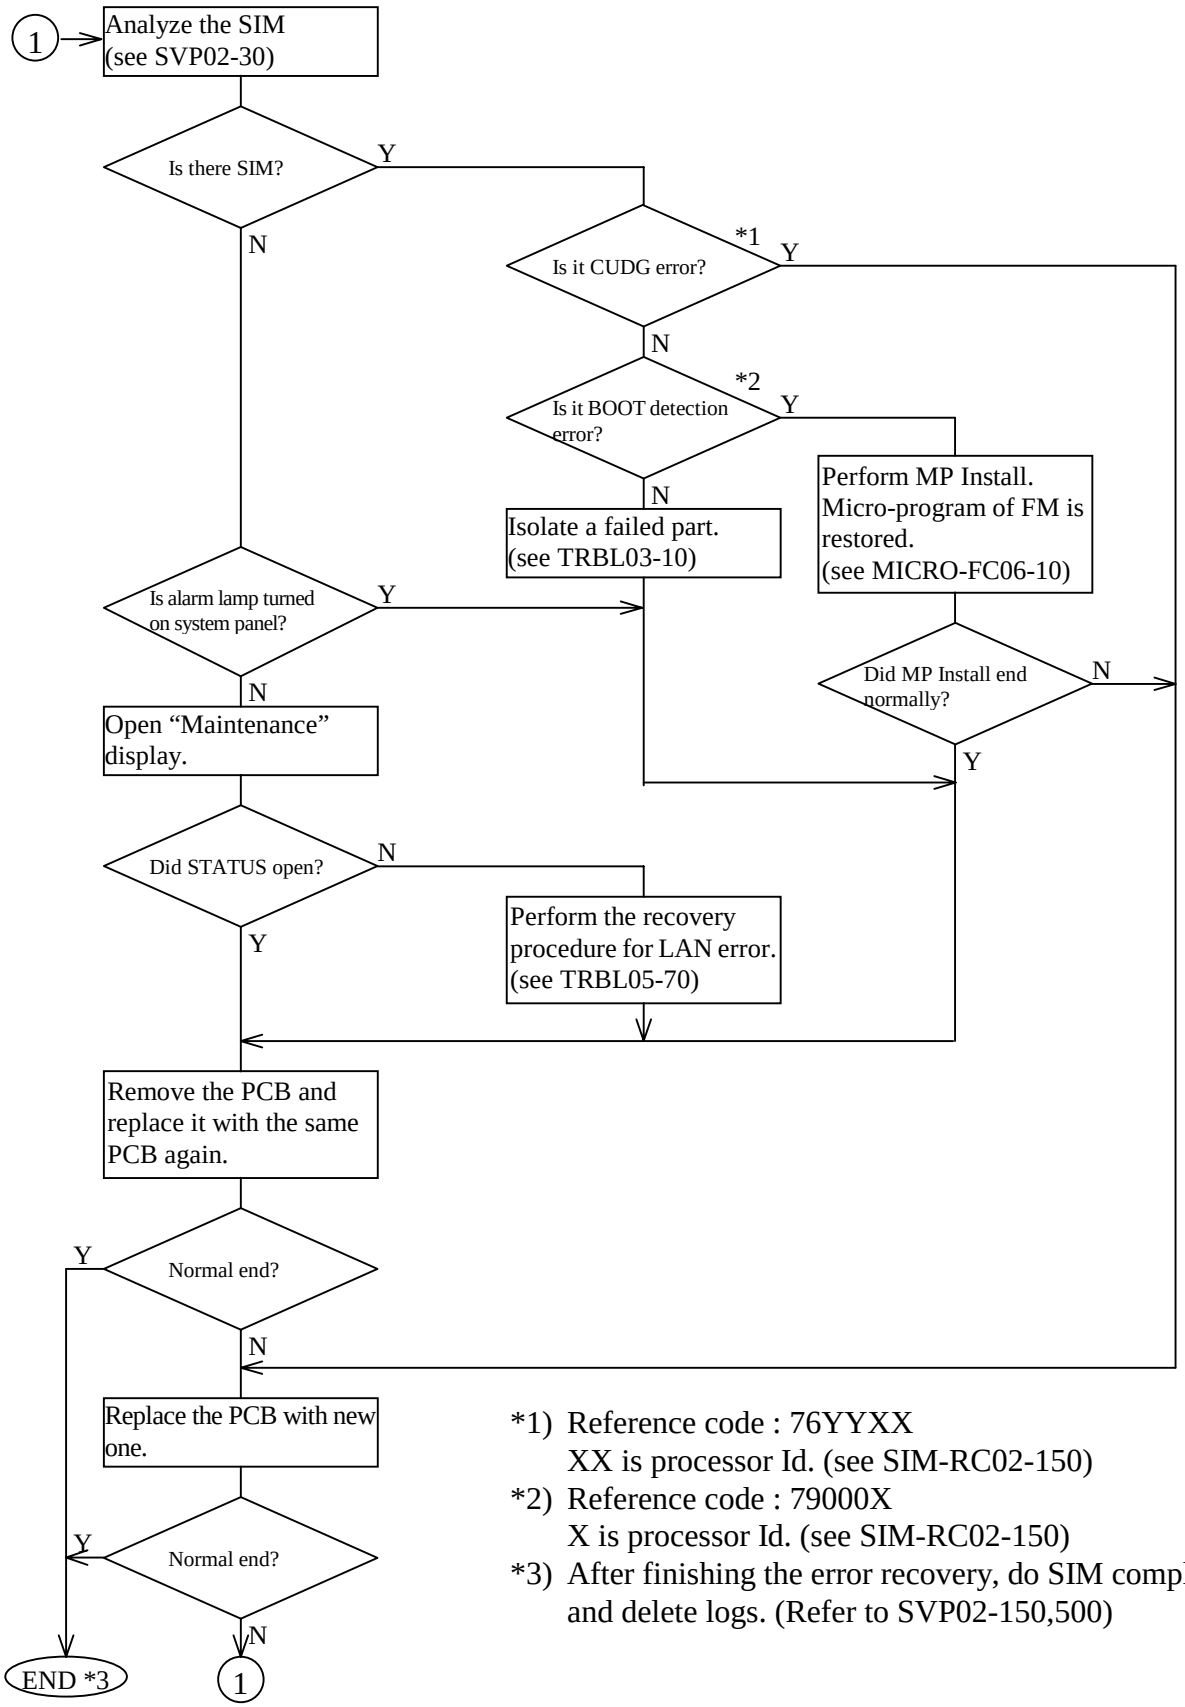


Copyright ©1998, Hitachi, Ltd.

*1) Verify that channel lamp of operating panel is turned off.
*2) After this operating, error message may be displayed at host side.
*3) After this operation, error SIM and SSB may occur. Refer to the following pages for shut down jumper insertion method depending on the type of PCB.
- Serial Channel CHA : see #1 in REP03-80
- Parallel Channel CHA : see #1 in REP03-110
- SCSI Channel CHA : see #1 in REP03-140
- Fibre Channel CHA : see #1 in REP03-170
- DKA : see #1 in REP03-200

Copyright ©1997,1998, Hitachi, Ltd.

(2) Other cases



*1) Reference code : 76YYXX
XX is processor Id. (see SIM-RC02-150)

*2) Reference code : 79000X
X is processor Id. (see SIM-RC02-150)

*3) After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150,500)

Copyright ©1997,1999, Hitachi, Ltd.

5.5 Recovery Procedure for Cache Replace Failure (SIM = 3993XX, FFE40X)

This recovery procedure is for during cache replacement, when replace failure SIM is reported.

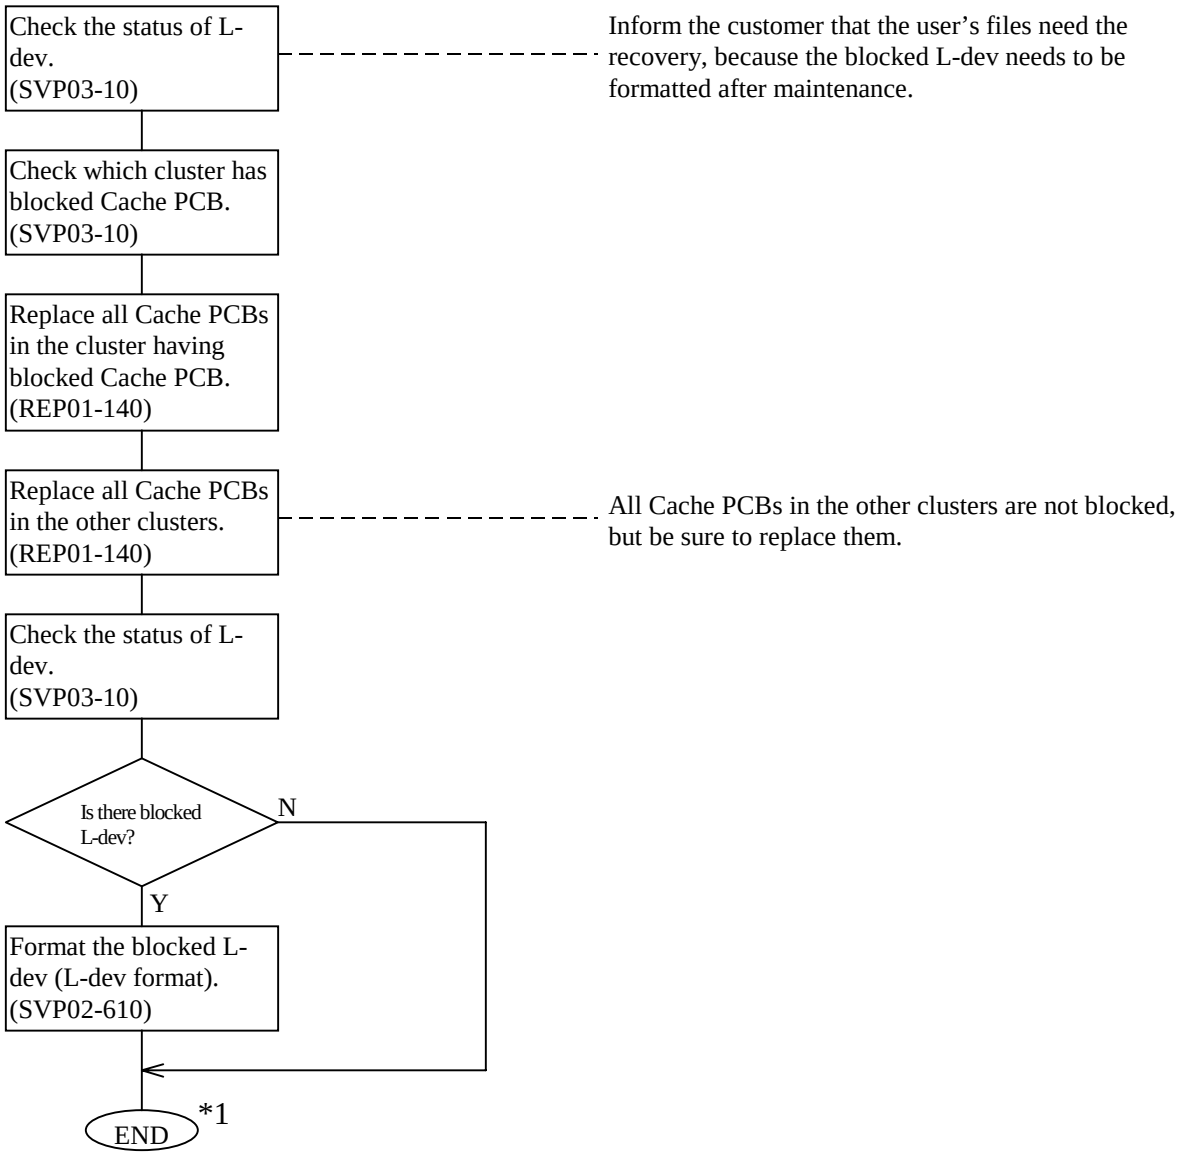
- Cache replace failure caused by processor error
  (REF code = 3993XY : X = PK ID, Y = MP ID in PK)
  ① Insert the shut down jumper into the processor PCB shown in SIM REF code.
  (Serial channel CHA see #1 REP03-80).
  (Parallel channel CHA see #1 REP03-110).
  (SCSI channel CHA see #1 REP03-140).
  (Fibre channel CHA see #1 REP03-170).
  (DKA see #1 REP03-200).
  In this case, CHK3 or other equipment error are reported because no processing is performed. However, you should ignore these errors.
  ② Retry the suspended cache replacement.
  ③ Replace the PCB into which the shut down jumper inserted in Step ①.

- Cache replace failure caused by Shared Memory error
  (REF code = FFE40X : X:(0) = side A, (1) = side B)
  When this SIM occurs, SM failure is probable. But, when SM failure occurred without INLINE CUDG error, this error maybe caused by intermittent error. Therefore,
  ① Conduct cache replacement again.
  ② When normal end, cache replacement is completed.
  ③ When SM failure SIM is reported again, replace other cache P/K which was not replaced.

Copyright ©1997,1998, Hitachi, Ltd.

5.6 Recovery Procedure for Cache Error (Both sides) (SIM = FFF50X)

This procedure is to recover errors of the both sides of cache (SIM = FFF5) at powering on the subsystem.
At this time, it is necessary to format the drive (L-dev format).
Because if there is pending data (non-written data to the drive) on cache the drive is blocked.



*1) Delete Log after the end of this procedure. (SVP02-150)

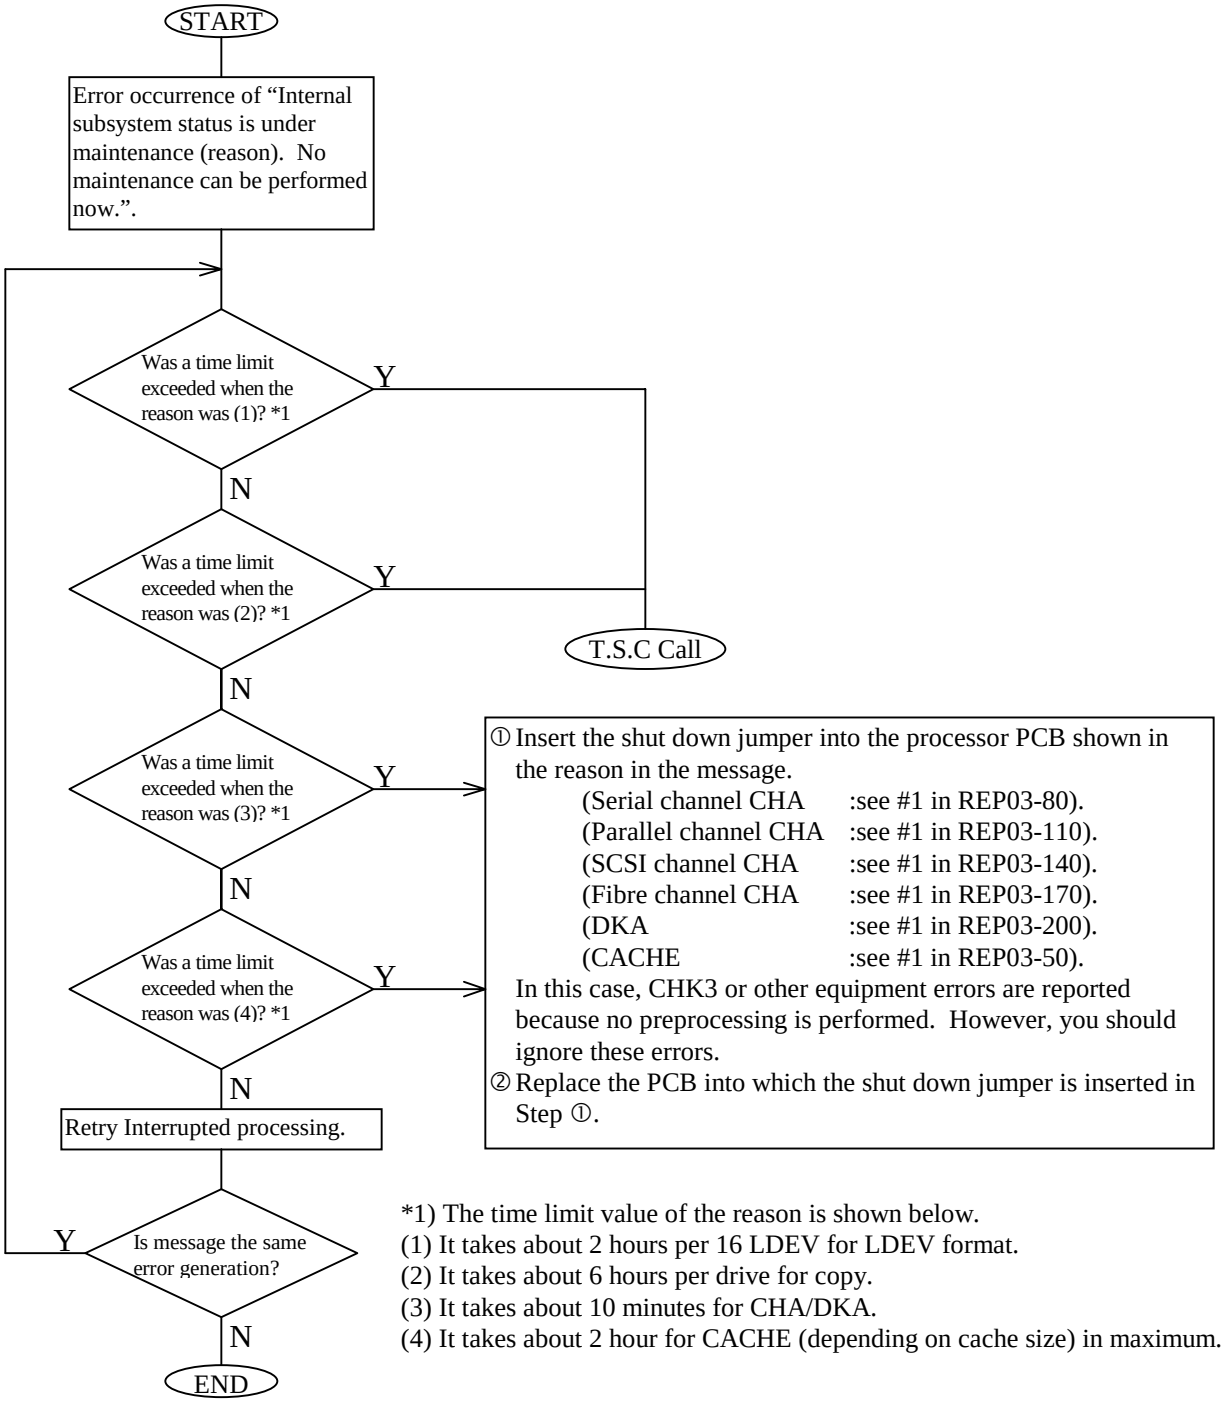
Copyright ©1997,1998, Hitachi, Ltd.

5.7 Recovery Procedures for Status in changing is not released

The SVP protects maintenance operation while the DKC is changing its status. If the SVP detects such condition before executing maintenance process, displays the messages as “Internal subsystem status is under maintenance (reason). No maintenance can be performed now.”. The reason is one of the following messages.

(1) LDEV format in progress.
(2) Copy in progress.
(3) CHA-xx (or DKA-xx) changing the status.
(4) Cache-xx changing the status.
xx:package number

If one of the above message appears, try the following recovery procedure.



*1) The time limit value of the reason is shown below.
(1) It takes about 2 hours per 16 LDEV for LDEV format.
(2) It takes about 6 hours per drive for copy.
(3) It takes about 10 minutes for CHA/DKA.
(4) It takes about 2 hour for CACHE (depending on cache size) in maximum.

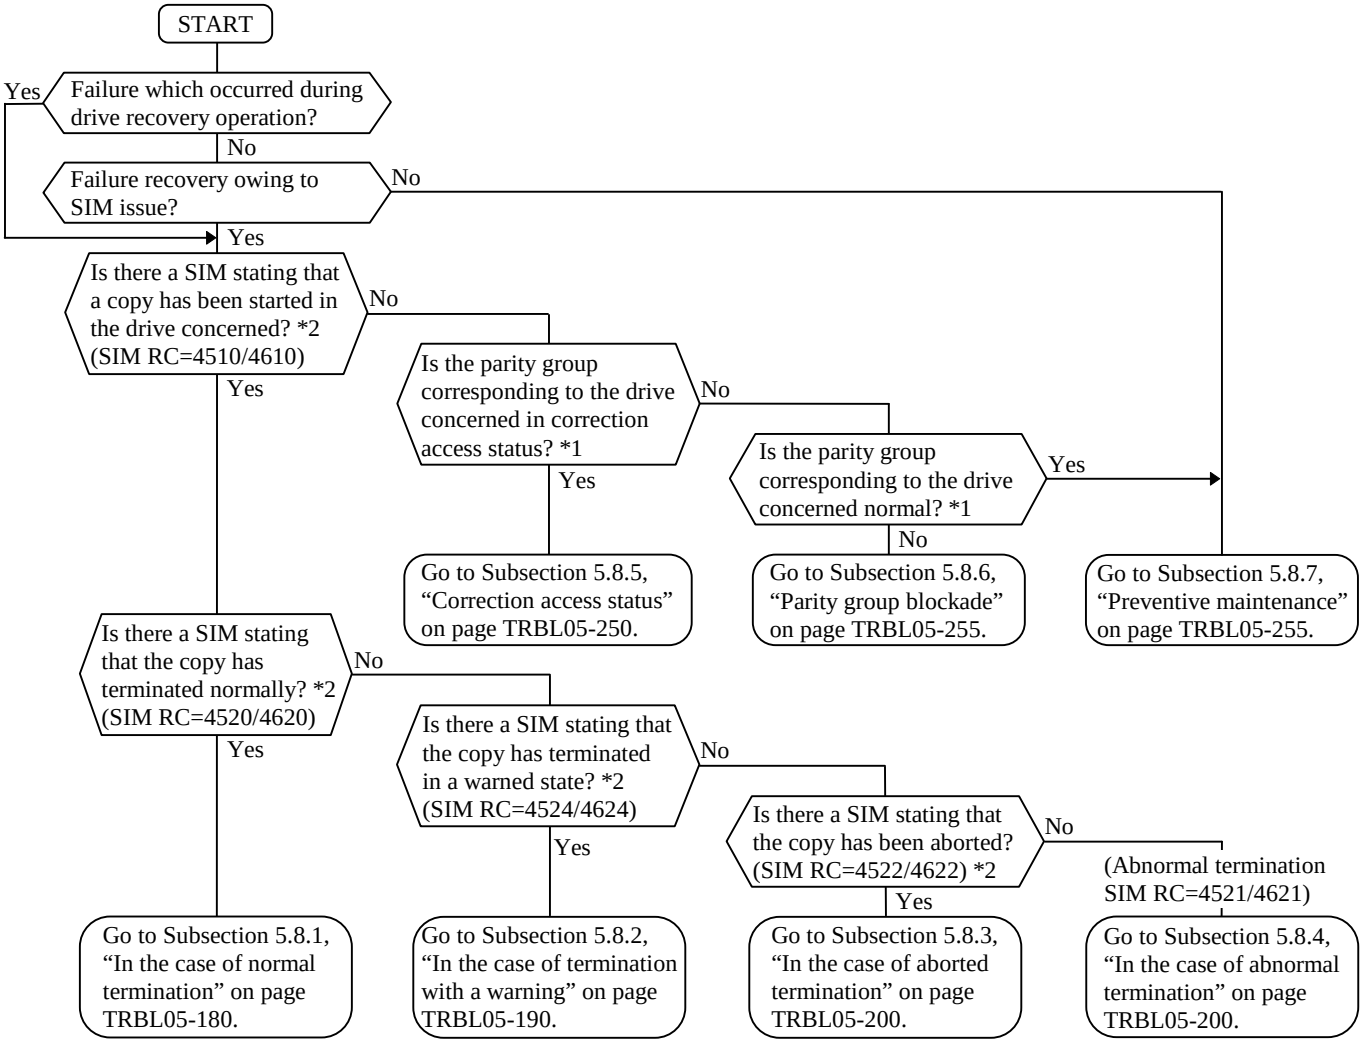
Copyright ©1997,1999, Hitachi, Ltd.

5.8 Drive failure recovery procedure

Explanation:

Types of the drive copy are shown below. Confirm the copy type and execute the drive recovery procedure.

Copy type	Description	Operation occasion
Correction copy	This is an operation to restore and copy, the data of the blocked drive using the data of another drive and parity data when the data drive is blocked. • A correction copy to the spare drive is referred to as another drive correction copy. • A correction copy to the replacement drive which has been installed instead of the blocked drive is referred to as a self-drive correction copy. * In the RAID0 configuration, no correction copy will be performed.	• Automatic operation owing to a failure • Operation instructed by the maintenance personnel
Drive copy	This is an operation to copy data to the spare drive from the data drive. A copy automatically performed owing to a warning level failure is referred to as dynamic sparing.	• Automatic operation owing to a failure • Operation instructed by the maintenance personnel
Copy back	This is a copy for returning data which has been copied to the spare drive by another drive correction copy or drive copy to the original data drive.	• Operation instructed by the maintenance personnel



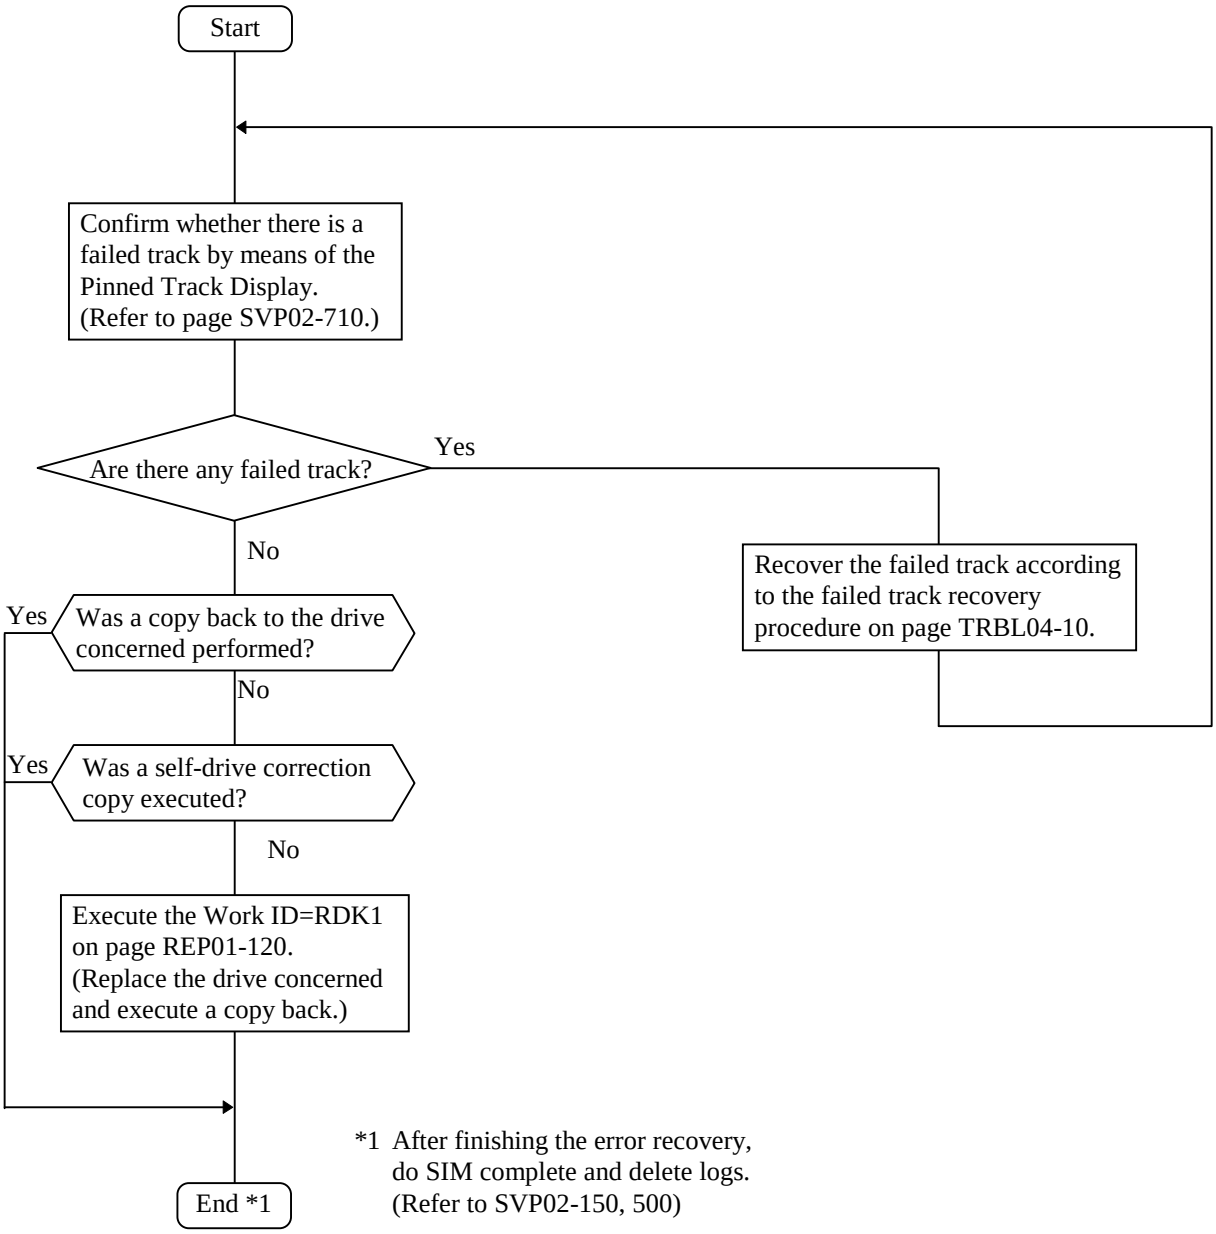
*1: Confirm the status of the parity group corresponding to the drive concerned by means of the SVP status.
For the procedure for referring to the SVP status, refer to Section 3.8, "Logical device" on page SVP03-120.

*2: The term "copy" means drive copy, copy back, or correction copy.

Copyright ©1997,1998, Hitachi, Ltd.

5.8.1 In the case of normal termination (SIM RC=4520/4620)

The procedure below is that used after a drive copy, copy back, or correction copy terminates normally.



*1 After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

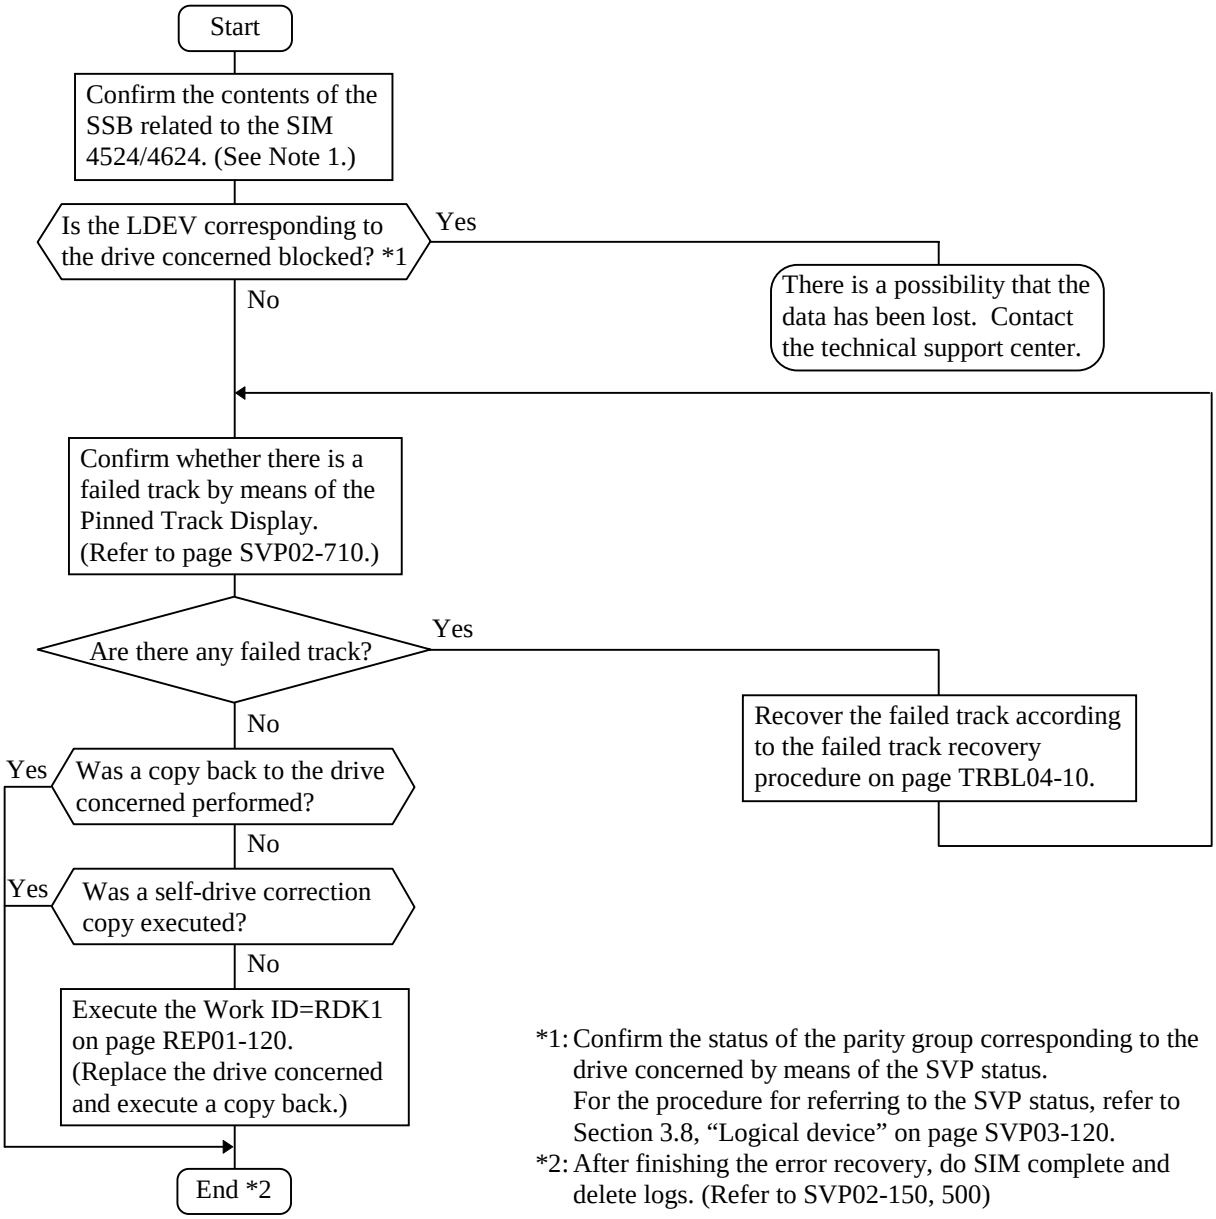
Copyright ©1997,1999, Hitachi, Ltd.

5.8.2 In the case of termination with a warning (SIM RC=4524/4624)

The procedure explains below is that used when the drive copy, copy back, or correction copy terminates but one of the following is detected:

(1) A failed track was detected, but the copy was continued.

(2) One or more blocked LDEVs were detected in the same parity group. Copy of data of the blocked LDEVs was skipped.



*1: Confirm the status of the parity group corresponding to the drive concerned by means of the SVP status.
For the procedure for referring to the SVP status, refer to Section 3.8, “Logical device” on page SVP03-120.

*2: After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

Note 1: Meaning of bytes 41 to 52 of SSB F/M=9F EC=9355 related to SIM RC=4524/4624

Byte (Hex.)	Item	Meaning
41	Number of blocked LDEVs	Number of blocked LDEVs
42 : 50	Blocked LDEV #0 : Blocked LDEV #16	Blocked LDEV No. (Up to 16 LDEVs can be inputted from the top.) However, 0Xff is inputted in the unused part.
51	Number of failed tracks	Number of failed tracks
52	E.O.D	Means the end of data

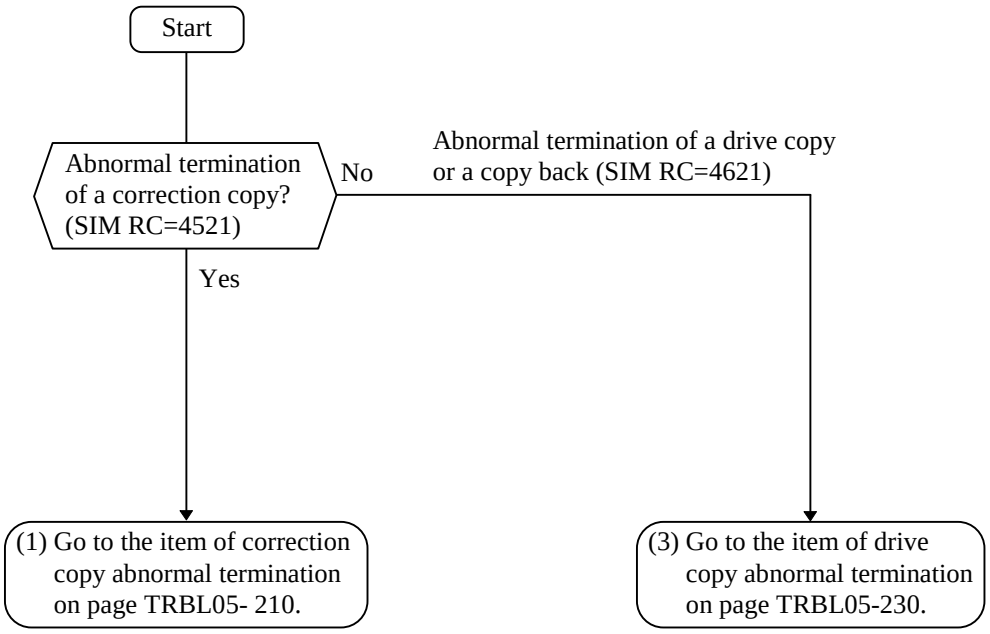
Copyright ©1997,1999, Hitachi, Ltd.

5.8.3 In the case of termination owing to abortion (SIM RC=4522/4622)

The procedure below is that used when a drive copy, copy back, or correction copy is aborted owing to the SVP operation by the service personnel. Since status of the drive concerned is that before starting copy, execute the recovery operation for the same drive once again.

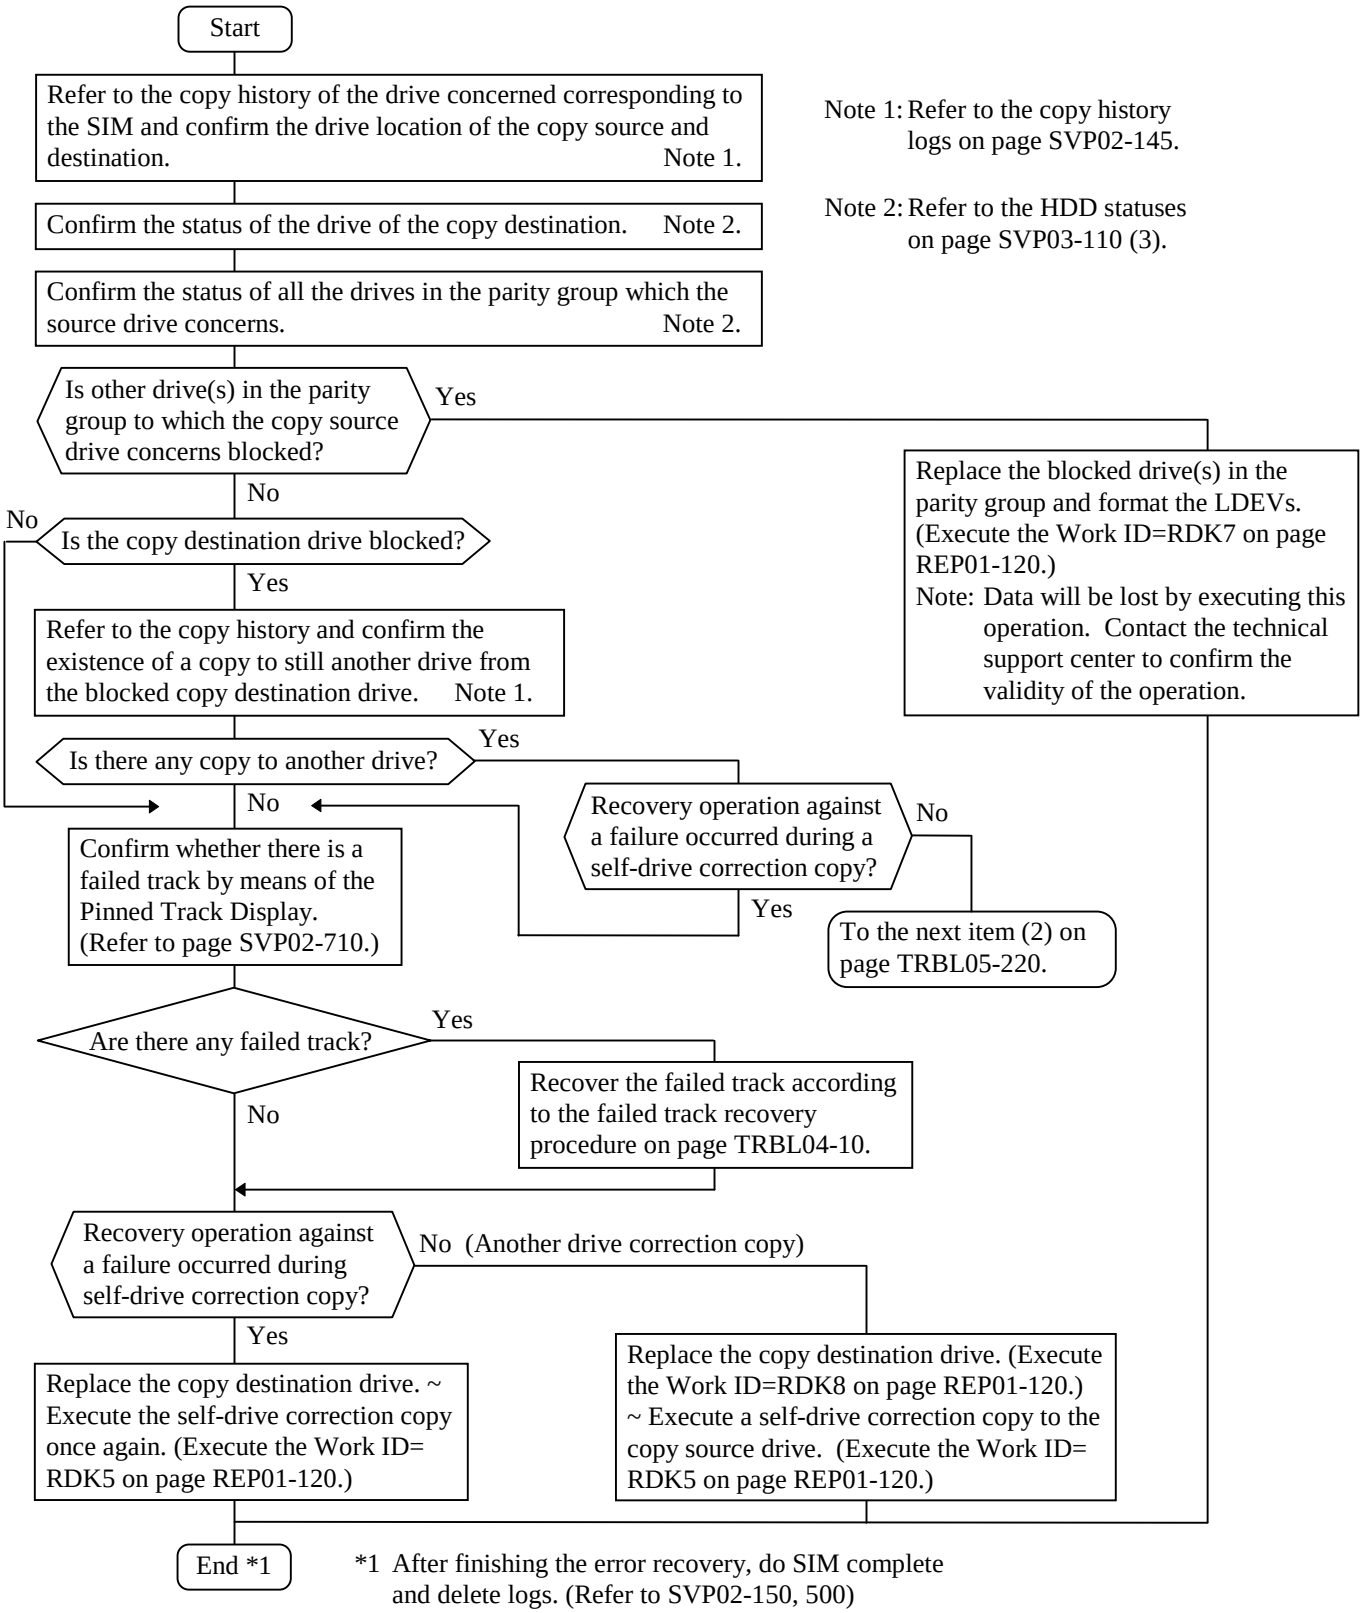
5.8.4 In the case of abnormal termination (SIM RC=4521/4621)

The procedure below is that used when a drive copy, copy back, or correction copy terminates abnormally.
Since the recovery procedure may differ depending on the copy type, confirm the explanation on page TRBL05-170 and execute the following procedure.



Copyright ©1997,1998, Hitachi, Ltd.

(1) In the case of correction copy abnormal termination
The procedure below is that used when a correction copy terminates abnormally.



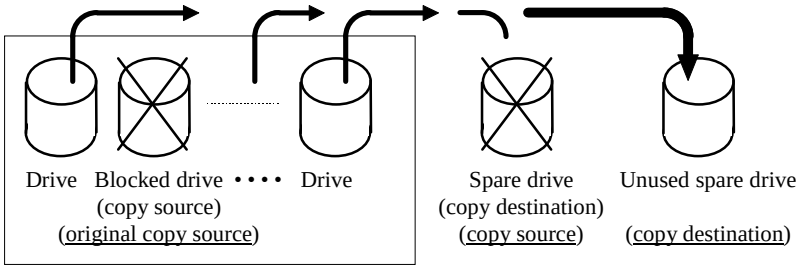
Note 1: Refer to the copy history logs on page SVP02-145.

Note 2: Refer to the HDD statuses on page SVP03-110 (3).

*1 After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

Copyright ©1997,1999, Hitachi, Ltd.

(2) In the case of correction copy abnormal termination (in which an unused spare drive is available)
This is a case in which a correction copy terminates abnormally owing to a failure in the copy destination drive. However, if an unused spare drive exists, the correction copy is automatically performed to the unused spare drive.
In the following procedure, the copy source is referred to as a original copy source, the copy destination is referred to as a copy source, and the unused spare drive is referred to as a copy destination.



Start

Is there a SIM stating that a copy terminated abnormally in the copy source drive? (SIM RC=4521)

No

Is there a SIM stating that a copy terminated normally in the copy source drive? (SIM RC=4520)

No

Is there a SIM stating that a copy terminated in a warned state in the copy source drive? (SIM RC=4524)

No

Yes

Go to Subsection 5.8.2, "In the case of termination with a warning" on page TRBL05-190.

Go to Subsection 5.8.3, "In the case of termination owing to abortion" on page TRBL05-200.

Yes

Confirm the drive status. Note 1.

Is other drive(s) in the parity group to which the original copy source drive concerns blocked?

Yes

No

(The copy destination drive is blocked.)

Confirm whether there is a failed track by means of the Pinned Track Display. (Refer to page SVP02-710.)

Is there any failed track?

No

Yes

Recover the failed track according to the failed track recovery procedure on page TRBL04-10.

Replace the original copy source drive and execute a self-drive correction copy. Execute the Work ID=RDK5 on page REP01-120.

Replace the blocked drive(s) in the parity group and format the LDEVs. (Execute the Work ID=RDK7 on page REP01-120.)
Note: Data will be lost by executing this operation. Contact the technical support center to confirm the validity of the operation.

Replace the original copy source drive and execute a copy back. Execute the Work ID= RDK2 on page REP01-120.

Replace the blocked spare drives (copy source and copy destination drives). Execute the Work ID= RDK8 on page REP01-120.

End *1

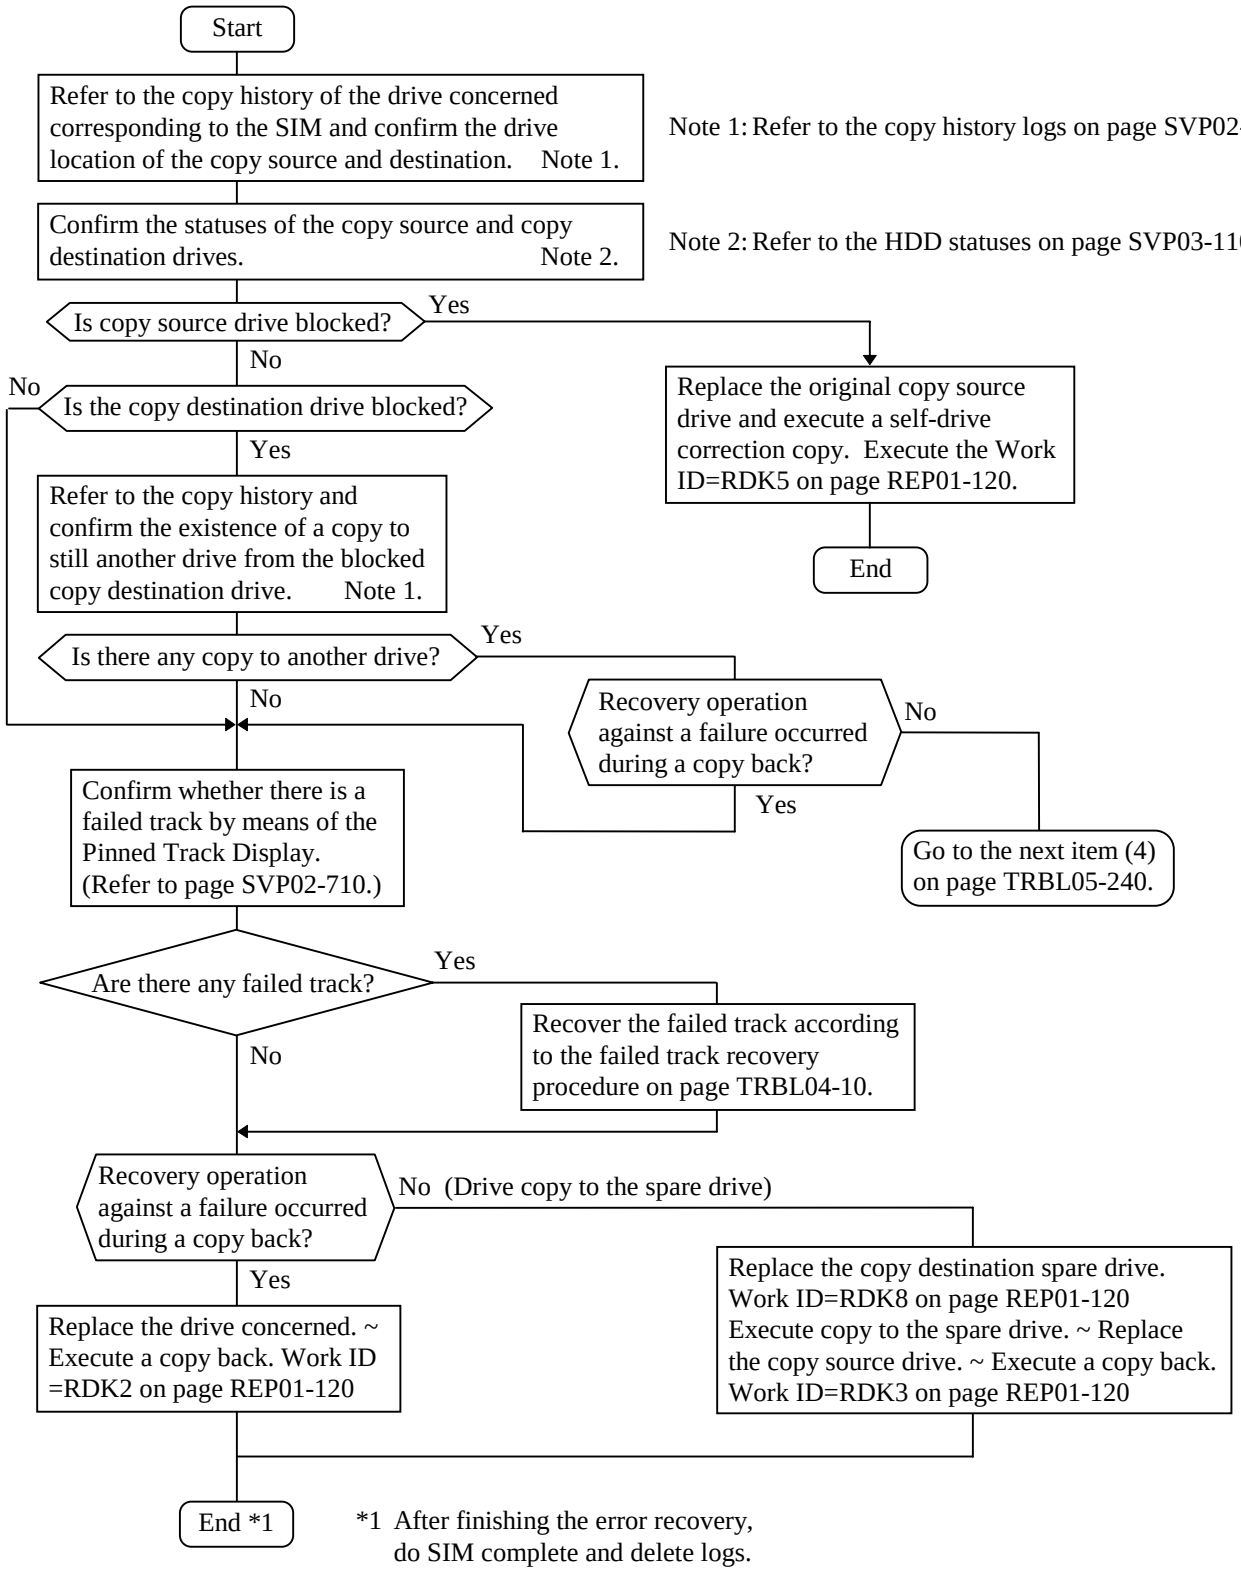
Note 1 : Confirm the following items.
- Confirm the location of the copy source and copy destination drives referring to the copy history. Refer to the copy history log on page SVP02-145.
- Confirm the status of the copy destination drive and the status of all the drives in the parity group which the original copy source drive concerns. Refer to Item (3), HDD status on page SVP03-110.

*1 After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

Copyright ©1997,1999, Hitachi, Ltd.

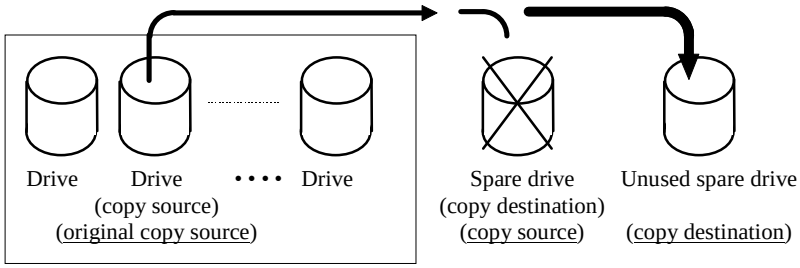
(3) In the case of drive copy abnormal termination

The procedure below is that used when a drive copy or a copy back terminates abnormally.



Copyright ©1997,1999, Hitachi, Ltd.

(4) In the case of drive copy abnormal termination (in which an unused spare drive is available)
This is a case in which a drive copy terminates abnormally owing to a failure in the copy destination drive. However, if an unused spare drive exists, the drive copy is automatically performed to the unused spare drive.
In the following procedure, the copy source is referred to as an original copy source, the copy destination is referred to as a copy source, and the unused spare drive is referred to as a copy destination.



Start

Is there a SIM stating that a copy terminated abnormally in the copy source drive? (SIM RC=4621)

No

Is there a SIM stating that a copy terminated normally in the copy source drive? (SIM RC=4620)

No

Is there a SIM stating that a copy terminated in a warned state in the copy source drive? (SIM RC=4624)

No

Yes

Go to Subsection 5.8.2, "In the case of termination with a warning" on page TRBL05-190.

Go to Subsection 5.8.3, "In the case of termination owing to abortion" on page TRBL05-200.

Yes

Yes

Confirm the drive status. Note 1.

Is the original copy source drive blocked?

Yes

No

No

Is the copy destination drive blocked?

Yes

Confirm whether there is a failed track by means of the Pinned Track Display. (Refer to page SVP02-710.)

Is there any failed track?

No

Yes

Recover the failed track according to the failed track recovery procedure on page TRBL04-10.

An automatic correction copy is performed to the copy destination spare drive.

(Since this is an automatic operation, no maintenance operation is required.)

Go to "start" on page TRBL05-170.

Replace the blocked spare drives (copy source and copy destination drives). Execute the Work ID= RDK8 on page REP01-120.

Execute a copy to the spare drive.
~ Replace the copy source drive.
~ Execute a copy back. Execute the Work ID=RDK3 on page REP01-120.

Replace the blocked spare drives (copy source and copy destination drives). Execute the Work ID= RDK8 on page REP01-120.

Replace the original copy source drive and execute a copy back. Execute the Work ID=RDK2 on page REP01-120.

End *1

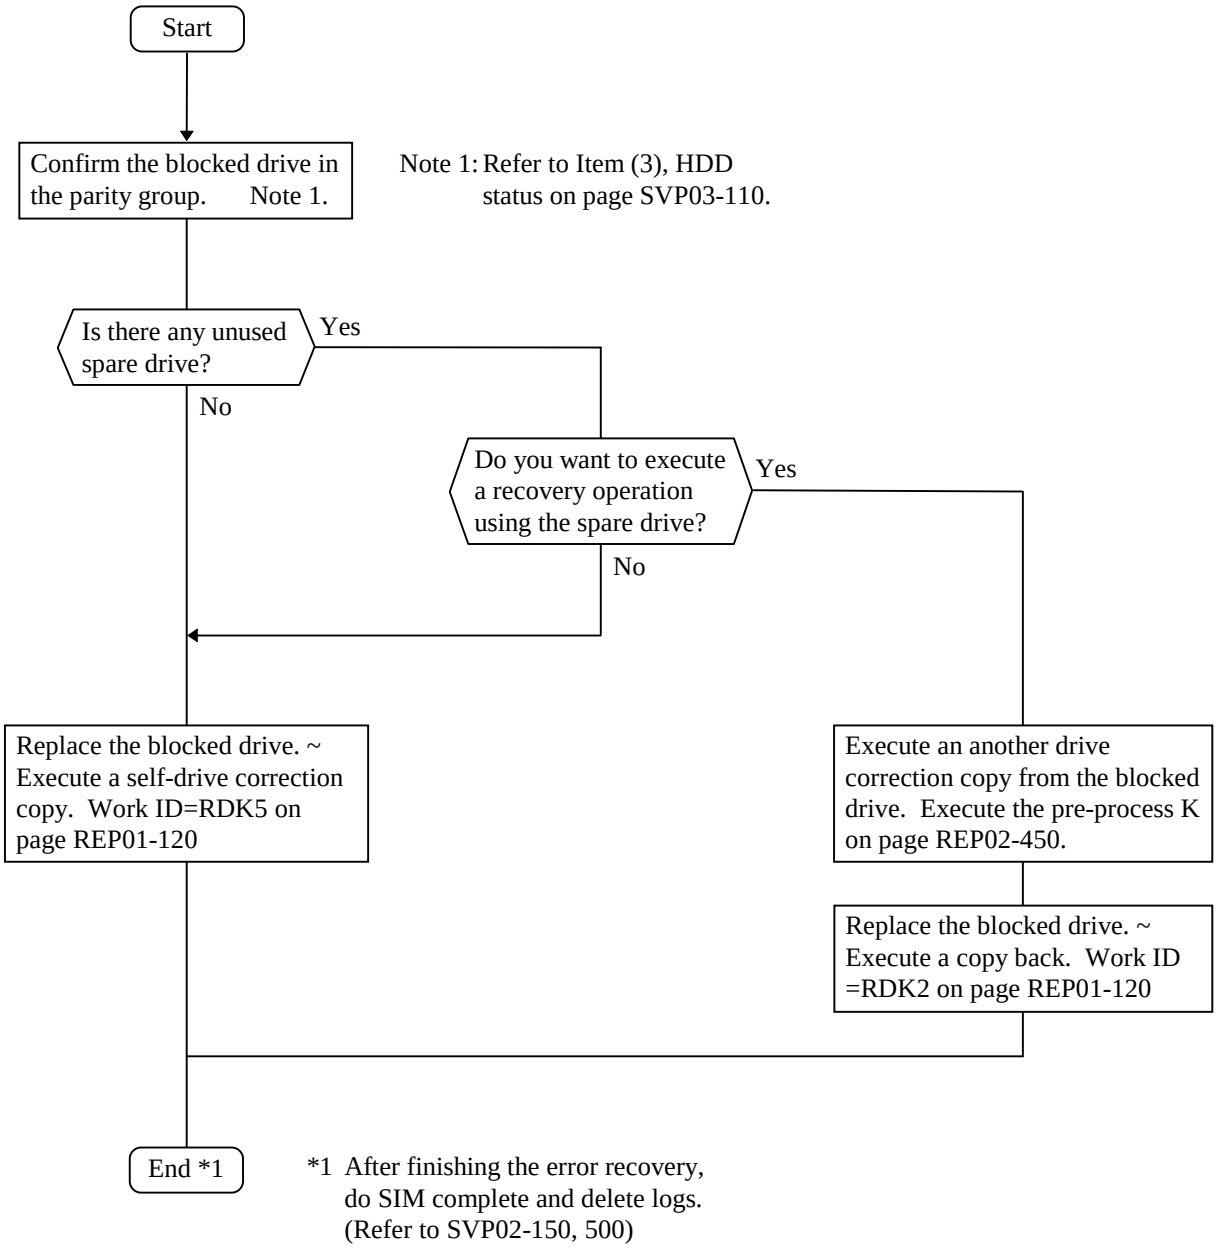
Note 1
: Confirm the following items.
- Confirm the location of the copy source and copy destination drives referring to the copy history. Refer to the copy history log on page SVP02-145.
- Confirm the statuses of the copy destination and the original copy source drives. Refer to Item (3), HDD status on page SVP03-110.

*1 After finishing the error recovery, do SIM complete and delete logs. (Refer to SVP02-150, 500)

Copyright ©1997,1999, Hitachi, Ltd.

5.8.5 Correction access status

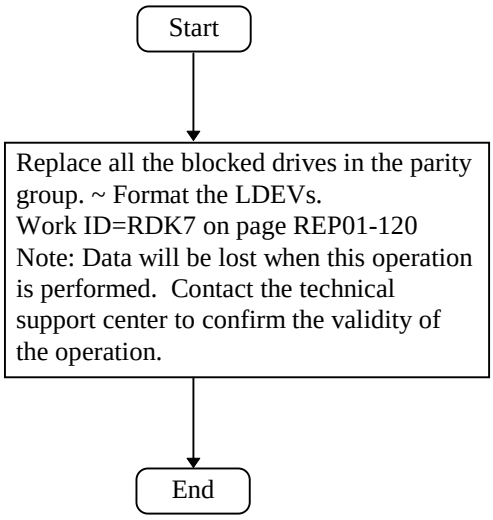
The procedure below is that used when one drive in the parity group is blocked.



Copyright ©1997,1999, Hitachi, Ltd.

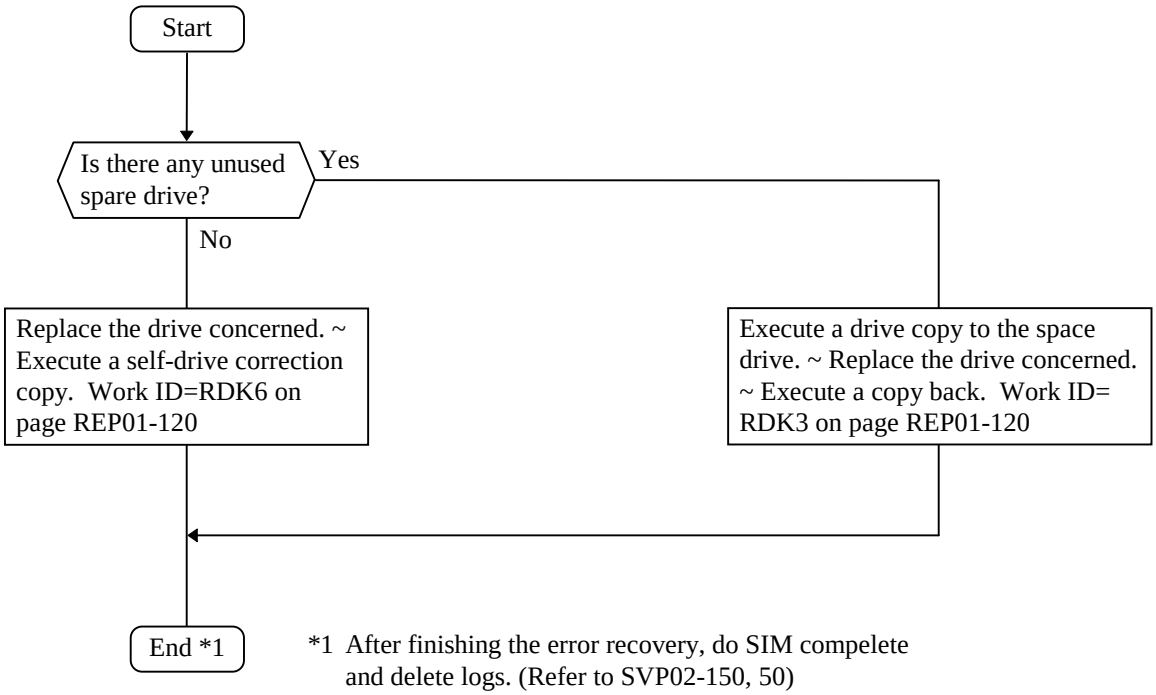
5.8.6 Parity group blockade

The procedure below is that used when the two or more drives are blocked in the parity group.



5.8.7 Preventive maintenance

The procedure below is that used when the drive is not blocked but it must be replaced.



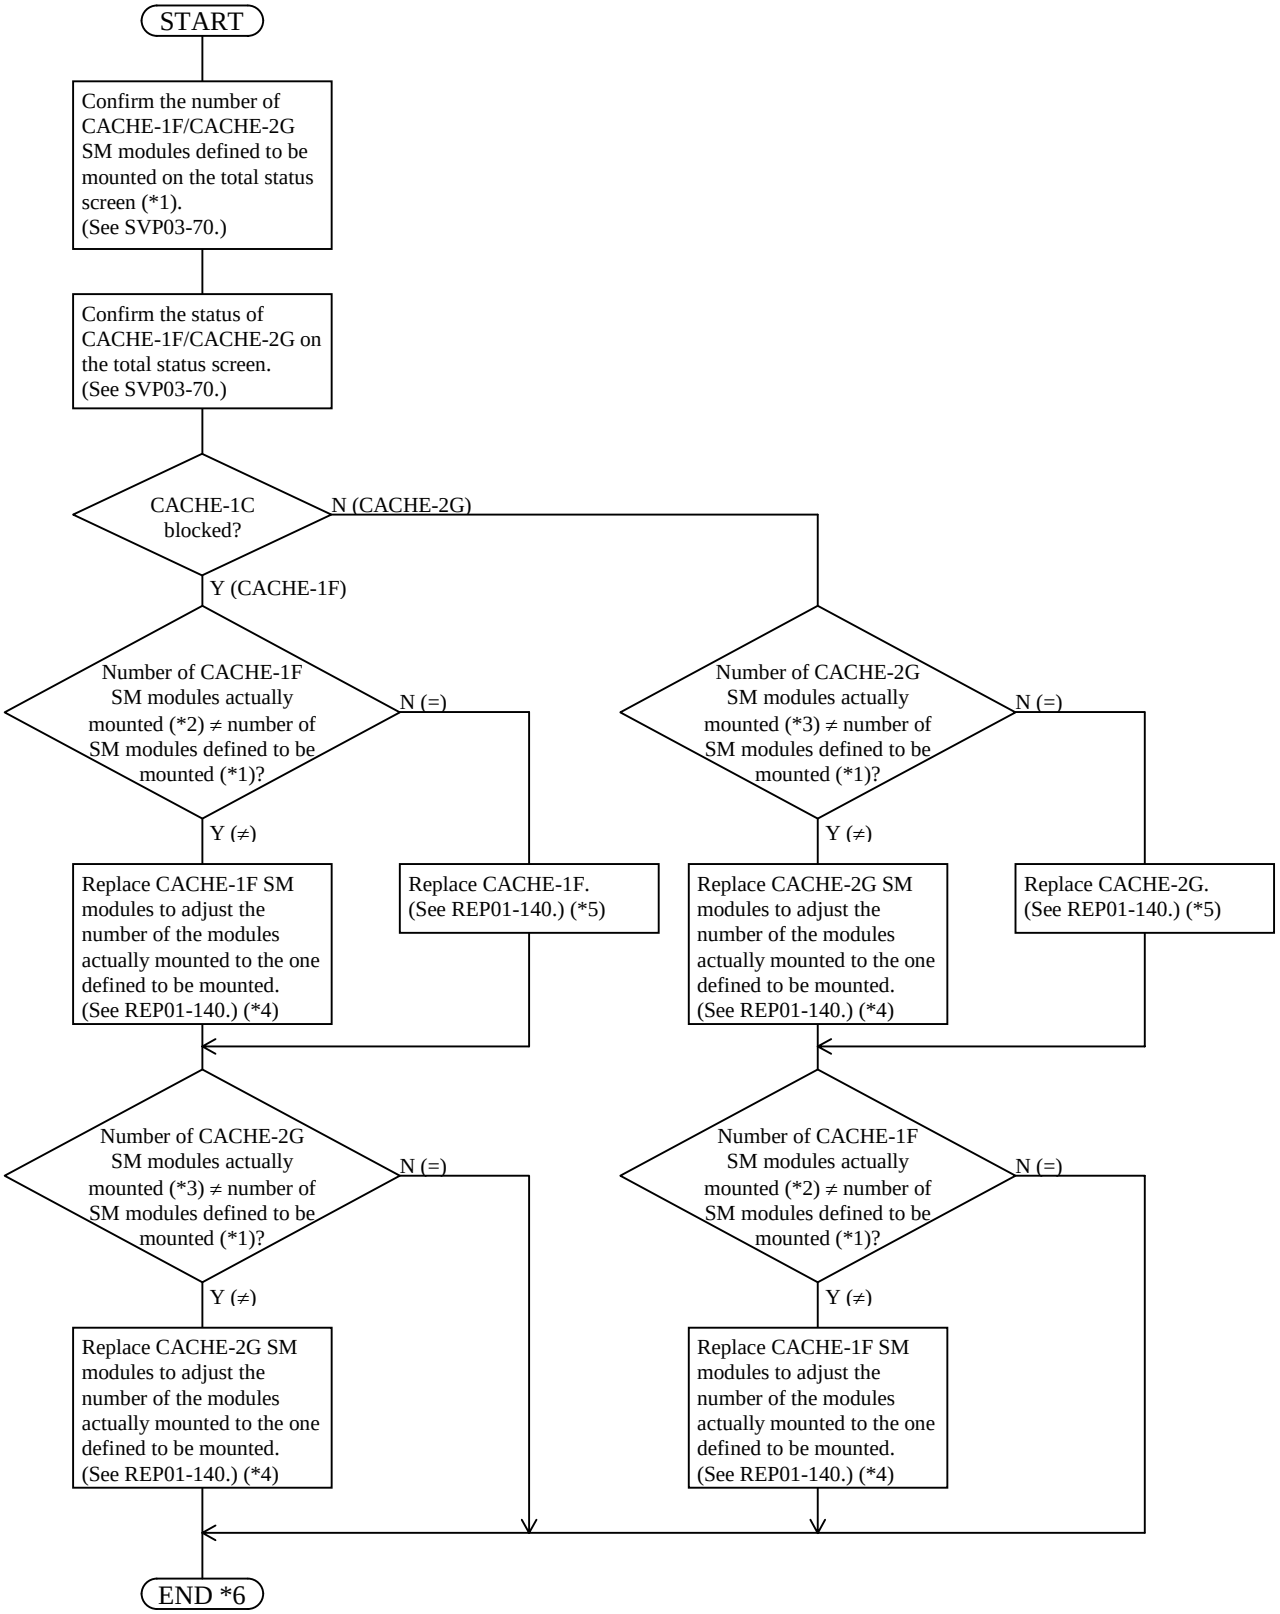
*1 After finishing the error recovery, do SIM compelete and delete logs. (Refer to SVP02-150, 50)

Copyright ©1998,1999, Hitachi, Ltd.

5.9 Recovery Procedure for SM Capacities Inequality (SIM = FFE3XY)

The mounted SM capacities inequality error (ffe3 xy/FPC = 80000000) should be recovered following the procedure below.
The number of CACHE-1F/CACHE-2G SM modules mounted is set in x/y respectively.
This error occurs if an SM is blocked because the mounted SM capacity differs between CACHE-1F and CACHE-2G (PCBs mounting SM modules). Therefore, the number of SM modules mounted must be adjusted correctly to recover this error.

Copyright ©1997, Hitachi, Ltd.



Copyright ©1997,1999, Hitachi, Ltd.

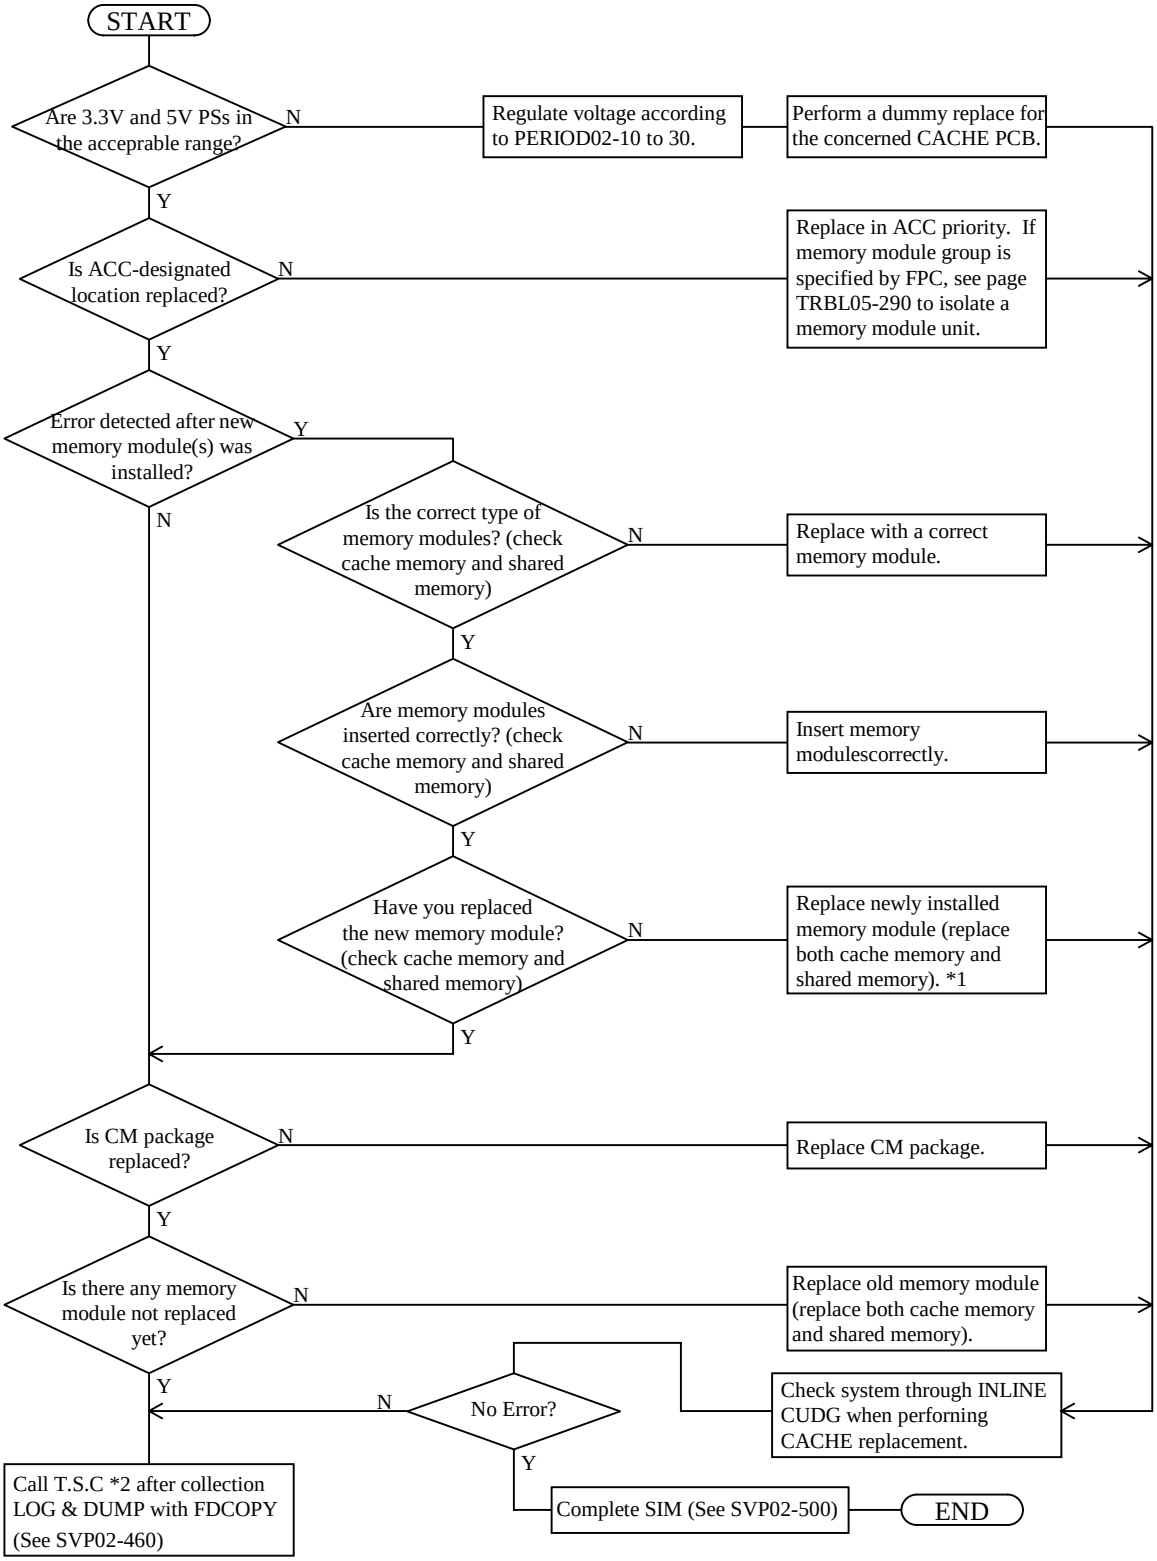
*1: Number of SM modules indicated not to be “not-mounted” on the status screen.
*2: Value x (number of SM modules) in REF-CD = FFE3xy
*3: Value y (number of SM modules) in REF-CD = FFE3xy
*4: Confirm the number of mounted SM modules to adjust it.
*5: No need to adjust the number of SM modules mounted nor replace any of them.
*6: After finishing the error recovery, do SIM complete and delete logs.
(Refer to SVP02-150, 500)

Copyright ©1997,1999, Hitachi, Ltd.

5.10 Cache Memory Error Isolation Procedure (SIM = FFF0XX, FFF1XX, FFF2XX)

(1) Error isolation

Isolate a cache memory or shared memory error according to the procedure given below.



Copyright ©1997, Hitachi, Ltd.

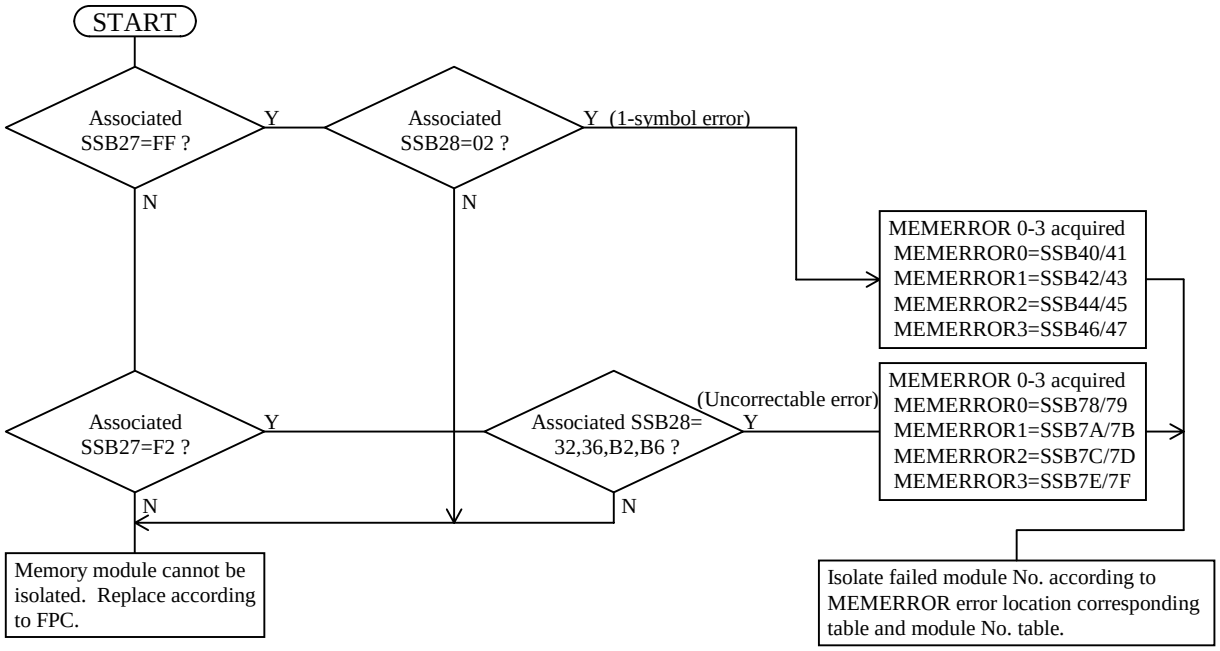
*1: If there are multiple module groups, replace one by one.
If the symptom is not cleared even after replacement, de-install newly installed memory modules to return to the original configuration.

*2: T.S.C : Technical Support Center

Copyright ©1997, Hitachi, Ltd.

(2) Failed memory isolation procedure

Given below is the procedure for isolating a failed memory module from the associated SSBs in case of a memory error.



Each of MEMERROR 0 to 3 is a piece of information whose size is 2 bytes. For the meaning of each bit of MEMERROR 0 to 3, see the following table which shows relations between MEMERROR 0 to 3 and failed parts.

MEMERROR error location corresponding table

00	01	02	03	04	05	06	07	08	09	10	11	12	13	14	15
Module group No			*1	*2	Error byte No. (1) (When uncorrectable error: '11111')					Not used					

*1 Module side No.

*2 0 : Indicates that subsequent error byte No. is invalid.
1 : Indicates that subsequent error byte No. is valid.

Module No. table

Module side No. (Bit 03)	0		1	
Value of Error byte No (Bit05-09) / Module group No. (Bit00-02)	00 ~ 07, 10 (HEX)	08 ~ 0F 11 (HEX)	00 ~ 07,10 (HEX)	08 ~ 0F,11 (HEX)
000	CM00	CM01	CM02	CM03
001	CM10	CM11	CM12	CM13
010	CM20	CM21	CM22	CM23
011	CM30	CM31	CM32	CM33
100	CM40	CM41	CM42	CM43
101	CM50	CM51	CM52	CM53
110	CM60	CM61	CM62	CM63
111	CM70	CM71	CM72	CM73

Copyright ©1997,1998, Hitachi, Ltd.

Notes:
- Use module group No., module side No., and error byte No. to isolate 1-symbol errors (minimum unit of one module).
- When uncorrectable error, use module group No. and module side No. for isolation (minimum unit of two modules).
- MEMERROR records only 4 words. The system may not recover only by replacing an isolated module. In such a case, replace by unit of module group.

5.11 Recovery Procedure for LDEV Blocking (SIM = CF90XY, DF9YXX, EF90XX)

When LDEVs are blocked in the case of blocking several PDEVs (SIM RC=EF90xx, DF90xx, DF91xx), or in the case of blocking SCA (SIM RC=CF90XY), perform following recovery procedures.
Be sure to call T.S.C. before you perform PDEV replace. It causes a DATA-LOSS in some cases.
Notice : When you execute a Recovery Procedure for LDEV Blocking, you must delete the HRC/HODM pair.
After recovering it, if necessary, you execute establish pair.

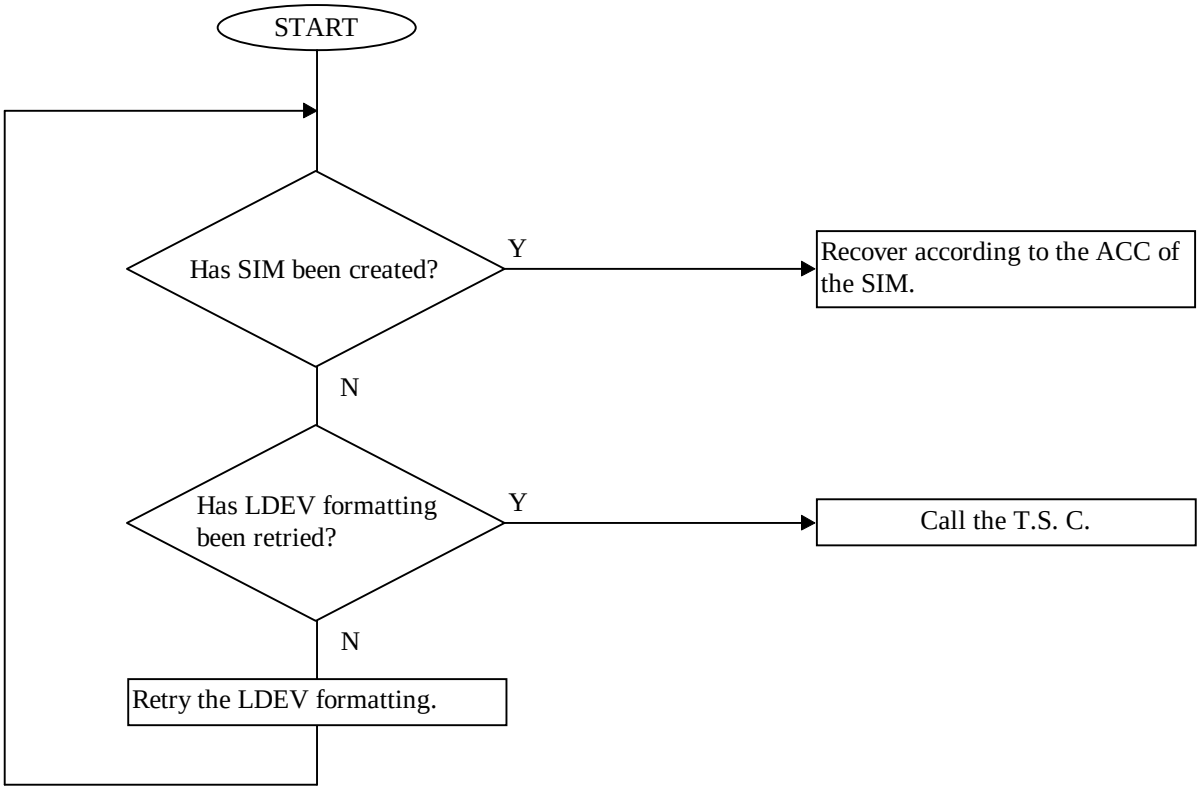
5.15 Recovery procedure when LDEV formatting failed

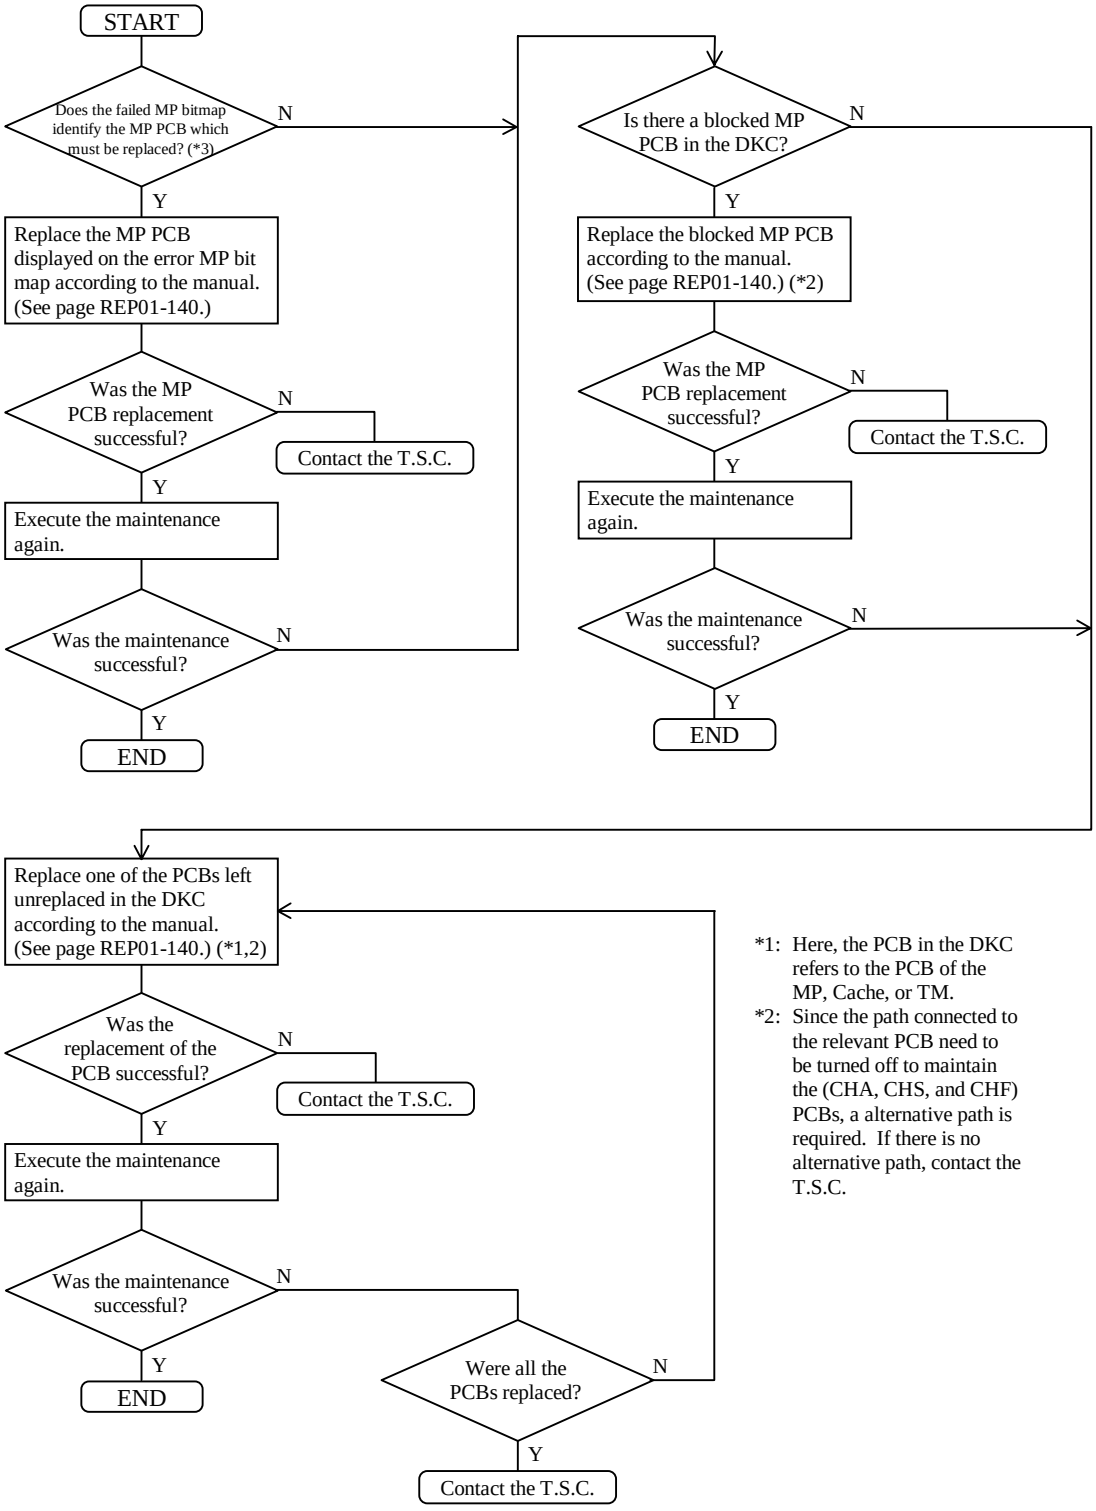
When “Formatting logical devices rejected by DKC.” or “Formatting the logical device is failed.” is displayed at the end of the LDEV formatting and when “Blocked” is displayed for the LDEV formatted by “Logical Device Status”, make a recovery according to the following procedure.



Copyright ©1998, Hitachi, Ltd.

5.16 Recovery procedure when an error code is reported during bus maintenance

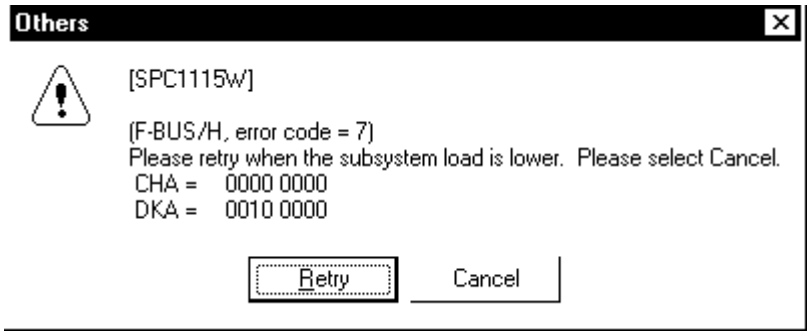
The recovery procedure when an error codes 7, 8, 9, A, B, or C is reported during bus maintenance is shown below.



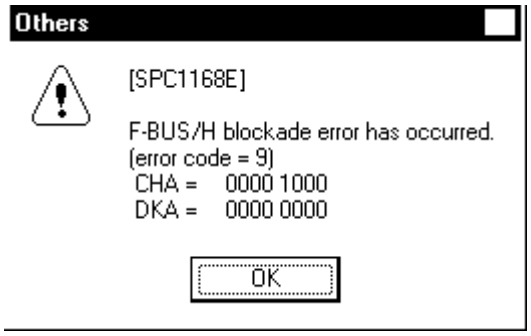
Copyright ©1998, Hitachi, Ltd.

*3: When the failed MP bitmap is supported, the indications to report the error code 7, 8, 9, A, B, or C in the maintenance of the bus system are as follows.

(1) When the error code is 7 or 8



(2) When the error code is 9, A, B, or C



A guide to refer to the failed MP bitmap is shown below.

CHA =	CHA-1P	CHA-1Q	CHA-1R	CHA-1S	CHA-2V	CHA-2W	CHA-2X	CHA-2Y
DKA =	DKA-1B	DKA-1C	DKA-1D	DKA-1E	DKA-2H	DKA-2J	DKA-2K	DKA-2L

In the area corresponding to each MP PCB, “1” or “0” is displayed. When “1” is displayed, it shows that the MP PCB concerned must be replaced.

How to identify the MP PCB which must be replaced
When the error code is 7 or 8: If the appointed failed part is unchanged after performing retries three times, the requirement is needed.
When the error code is 9, A, B, or C: The MP PCB appointed in the bitmap must be replaced.
When not more than two MP PCBs must be replaced, they are considered to be identifiable.

5.17 Recovery procedure when WDCP information is lost

(1) When only this SIM is reported
When this SIM is reported at the time of the subsystem powering on 192 hours or more after the previous breaker turning off, no maintenance is required.
When this SIM is reported at the time of the subsystem powering on less than 192 hours after the previous breaker turning off, (a) failure(s) may occur in the cache PCB, cache memory, battery, or battery charge. Replace the failed part(s).

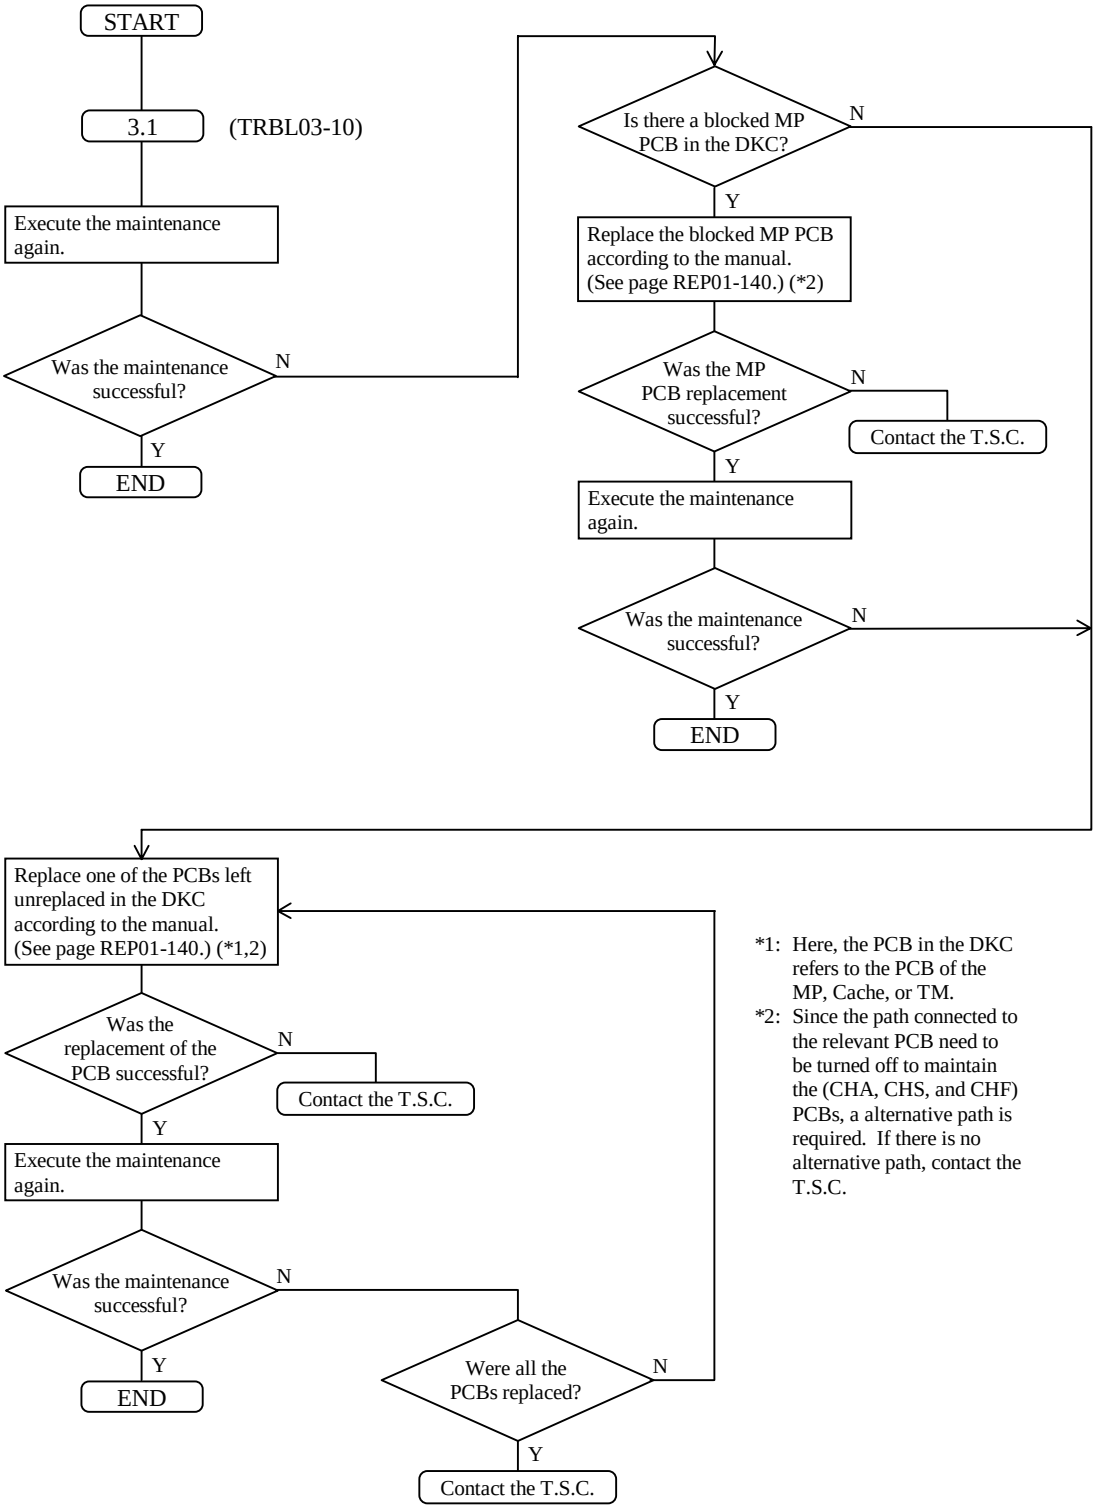
(2) When another SIM is reported together with this SIM
When the SIM concerning the cache, shared memory, or battery, perform the maintenance of the failed part(s).
When the SIM not concerning the above is reported at the same time, perform the maintenance of the failed part(s) and see "(1) When only this SIM is reported".

(3) WDCP system recovery procedure
For the procedure for recovering the WDCP system, see the instruction manual of the OS concerned.

Copyright ©1998, Hitachi, Ltd.

5.18 Recovery procedure when recovering SM is impossible

The recovery procedure when recovering SM is imposible during Cache PCB replacement, SM/CM installation/de-installation, or cluster recovery procedure is shown below.



*1: Here, the PCB in the DKC refers to the PCB of the MP, Cache, or TM.
*2: Since the path connected to the relevant PCB need to be turned off to maintain the (CHA, CHS, and CHF) PCBs, a alternative path is required. If there is no alternative path, contact the T.S.C.

Copyright ©1998, Hitachi, Ltd.

5.19 Recovery procedure when installation/de-installation Cache and DCR is impossible

The recovery procedure when installation/de-installation Cache and DCR available size simultaneously is impossible.

6 HRC/HODM/HORC Error Recovery

6.1 Recovery Procedure for HRC/HODM Error

Hardware error sometimes causes HRC/HODM error which is a pair suspend or a path disable. This document explain the HRC/HODM Error and how to recover it.
Following reports indicate HRC/HODM error occurrence.

- SIM report of HRC/HODM path disable occurrence
- SIM report of HRC/HODM pair suspend occurrence
- SIM report of HODM Erase Error occurrence
- SIM report of RCU Acute or Serious Level SIM detection
- SIM report of RCU Moderate Level SIM detection

Table 6.1-1 HRC/HODM SIM REF.CODE

SIM REF. CODE	meaning	comment
D4XY-YY	HRC/HODM pair is suspended	X:0~5 or F YYY:LDEV number
DCXY-YY	HRC Semisynchronous pair is suspended	X:0~5 or F YYY:LDEV number
DBXY-YY	HRC Asynchronous pair is suspended	X:0~8 or F YYY:LDEV number
D48Y-YY	HODM Erase Error occurred	YYY:LDEV number
D4EY-YY	RCU Acute or Serious Level SIM reported	YYY:LDEV number
DBEY-YY	RCU (Asynchronous pair) Acute or Serious Level SIM reported.	YYY:LDEV number
D4DY-YY	RCU Moderate Level SIM reported	YYY:LDEV number
DBDY-YY	RCU (Asynchronous pair) Moderate Level SIM reported.	YYY:LDEV number
2180-XY	HRC/HODM path is disabled	X:Prosessor No. Y:LCP No.

Following pages explain each error type of HRC/HODM Error and recovery flow chart for the HRC/HODM Error is showed. Concerning to the Disaster Recovery Procedures, please refer to THEORY SECTION (THEORY03-660~720).

The delete pair operation with Delete Pair by Force option is supported for HRC asynchronous recovery procedure. If hung-up conditions may occur at HRC asynchronous, this operation can be executed from SVP or Remote Console. Refer to Forcible Delete Operation(TRBL06-152).

Copyright ©1997,1999, Hitachi, Ltd.

Note: Please check a fence Level Parameter for the suspended pair by SVP Pair Option. And if M-VOL Fence Level is ‘R-VOL Data’ or M-VOL Fence Level is ‘R-VOL Status’ and suspended SIM is ‘D4FYYY/DCFYYY’, write I/O operations to the M-VOL will be rejected(Refer HRC&HODM01-190). So you must execute Delete Pair for the suspended pair, before execution of the recovery flow chart.
If you find out the F/M = ‘8F’ SSB log which have following error code (C870, C871, C872), it is not the original cause of the suspended pair. It means that the SSB log is created by the pair status change timing. So you have no need to execute a recovery action.

Copyright ©1999, Hitachi, Ltd.

6.2 HORC Error Recovery Procedure

A HORC pair suspension or a HORC pass blockade may occur owing to hardware errors.
This section explains the recovery procedure against them.
Occurrences of HORC errors can be known through the following.

- HORC error message on the Syslog outputted by the RAID manager/HORC (Note 1)
- Report of a HORC pass blockade occurrence by the SIM
- Report of a HORC pair suspension occurrence by the SIM

Table 6.2-1 HORC SIM REF.CODE

SIM REF. CODE	Meaning	Remarks
D4XY-YY	HORC pair suspend	X: 0 ~ 2, 4 ~ 5 or F YYY: LDEV number
DBXY-YY	HORC Asynchronous pair suspend	X: 0 ~ 8, F YYY: LDEV number
2180-XY	HORC pass blockade	X: Processor # Y: LCP#

SIM outputted when the HORC is suspended or the HORC pass is blocked has the same REF. CODE and meaning as those outputted when the HRC/HODM pair is suspended or the HRC/HODM pass is blocked.
Furthermore, the error recovery procedure is the same as that against an HRC/HODM error.
Therefore, follow the procedures shown in the flowcharts on page TRBL06-20 and succeeding pages to recover from a HORC pair error.

When a message indicating that a HORC pair error has occurred is displayed on the Syslog, check the SIM log of the connected DKC and confirm the conformance of the message on the Syslog with the SIM logged on the DKC side before starting the recovery using the above flow chart.

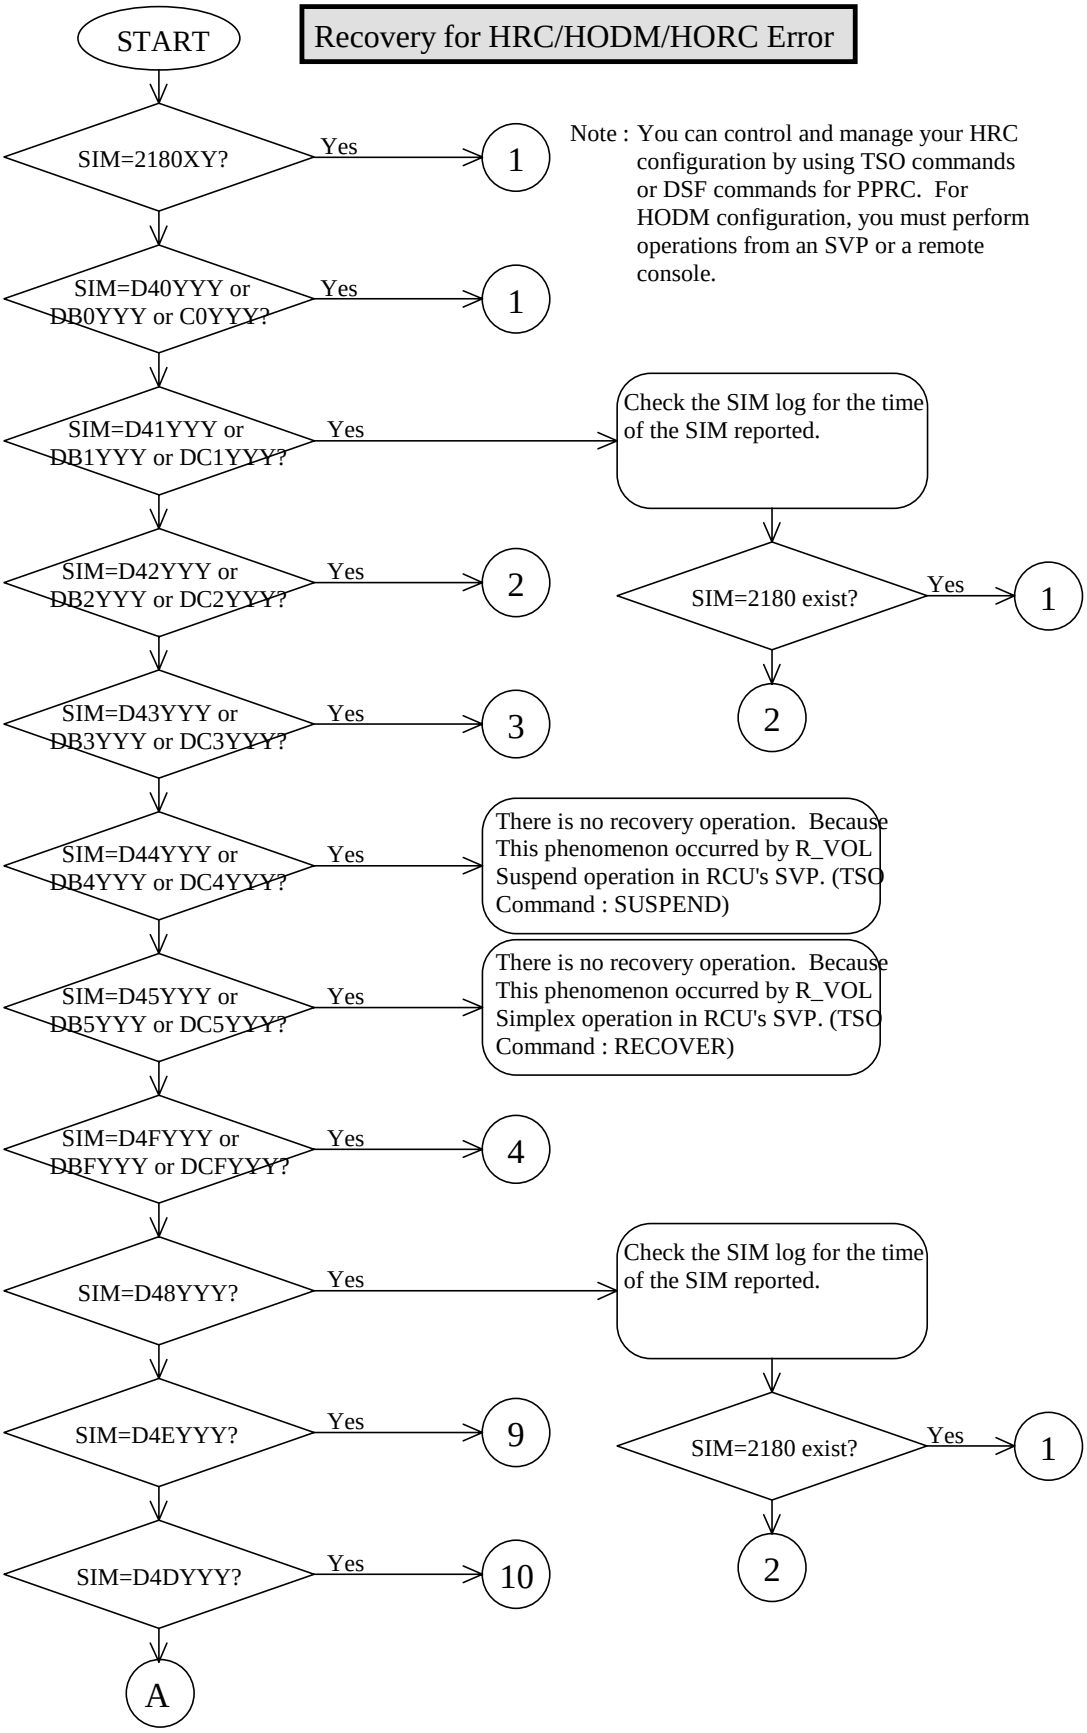
Note 1; When the HORC pair is suspended, the RAID manager/HORC displays the following message on the Syslog.

[HORCM_102] Detected a suspending status on this paired volume
(Volume: ○○○○, code: XXXX).
○○○○: Volume name
XXXX: Factor code

The delete pair operation with Delete Pair by Force option is supported for HORC asynchronous recovery procedure. If hung-up conditions may occur at HORC asynchronous, this operation can be executed from SVP or Remote Console. Refer to Forcible Delete Operation (TRBL06-152).

Copyright ©1998,2000, Hitachi, Ltd.

Recovery for HRC/HODM/HORC Error



Note : You can control and manage your HRC configuration by using TSO commands or DSF commands for PPRC. For HODM configuration, you must perform operations from an SVP or a remote console.

Table 6.2-2 HRC/HODM Recovery Procedure for F/M = '8F'

No.	F/M	error code	mean	Recovery Procedure
1	8F	C969	Detect a nonstandard R0 track in R_VOL. (HODM operation)	Change the track format to standard R0 track for the following track. CCHD is as follows.* SSB log byte43:R_VOL# byte72/73:CYL# byte74/75:HD#
2	8F	C96F	(F/M) 8F (error code) C96F (mean) Detect a over run track in R-VOL. (HODM operation) (Recovery Procedure)	Recovery the following (over run) track. CCHD is as follows. SSB log byte43:R_VOL# byte72/73:CYL# byte74/75:HD#
3	8F	C4CE	Detect a nonstandard R0 track in M_VOL. (HRC or PPRC operation)	Change the track format to standard R0 track for the following track. CCHD is as follows.* (Note 1) LDEV in the 'SSB log' window : M_VOL# SSB log byte44/45:CYL# byte46:HD#
4	8F	C883	Detect time-over during retial for RCU detected error. (HODM operation)	*(Note 2)
5	8F	C884	An SCP reported from RCU. (HODM operation)	*(Note 2)
6	8F	C88E	Detect an I/O error for R-VOL not recoverable with retrial. (HODM operation)	*(Note 2)

* use DSF INSPECT NOPRESERVE

Note 1 If you canceled HODM Pair Operation before this phenomenon has occurred, you must execute format the blocked LDEVs (See SVP02-610) or DSF (Medial initialization) or DSF (INSTALL) for the Suspended Vol. Because this Volume data is incomplete. If the volume type is RAMAC, you can not change the track format to standard R0 track by DSF.

Note 2 Erase operation after migration copy from IBM RAMAC after migration copy may fail with SSB EC = C883, C884 or C88E due to SCP reported from RAMAC. In this case, reduce the concurrency of erase operation to 1 or 2 and retry the operation.

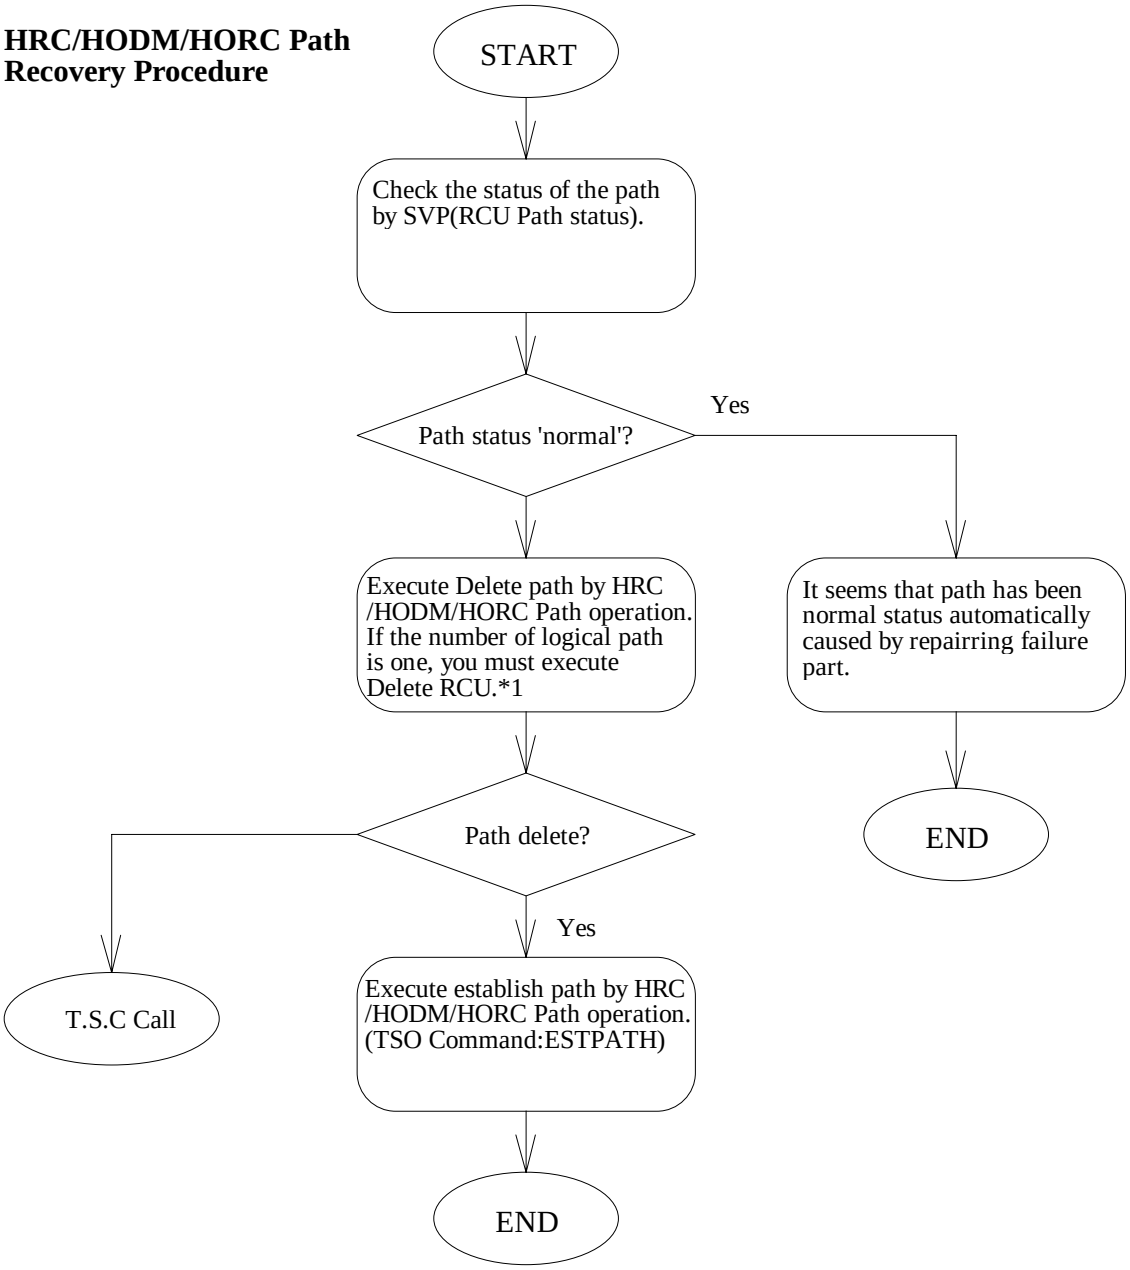
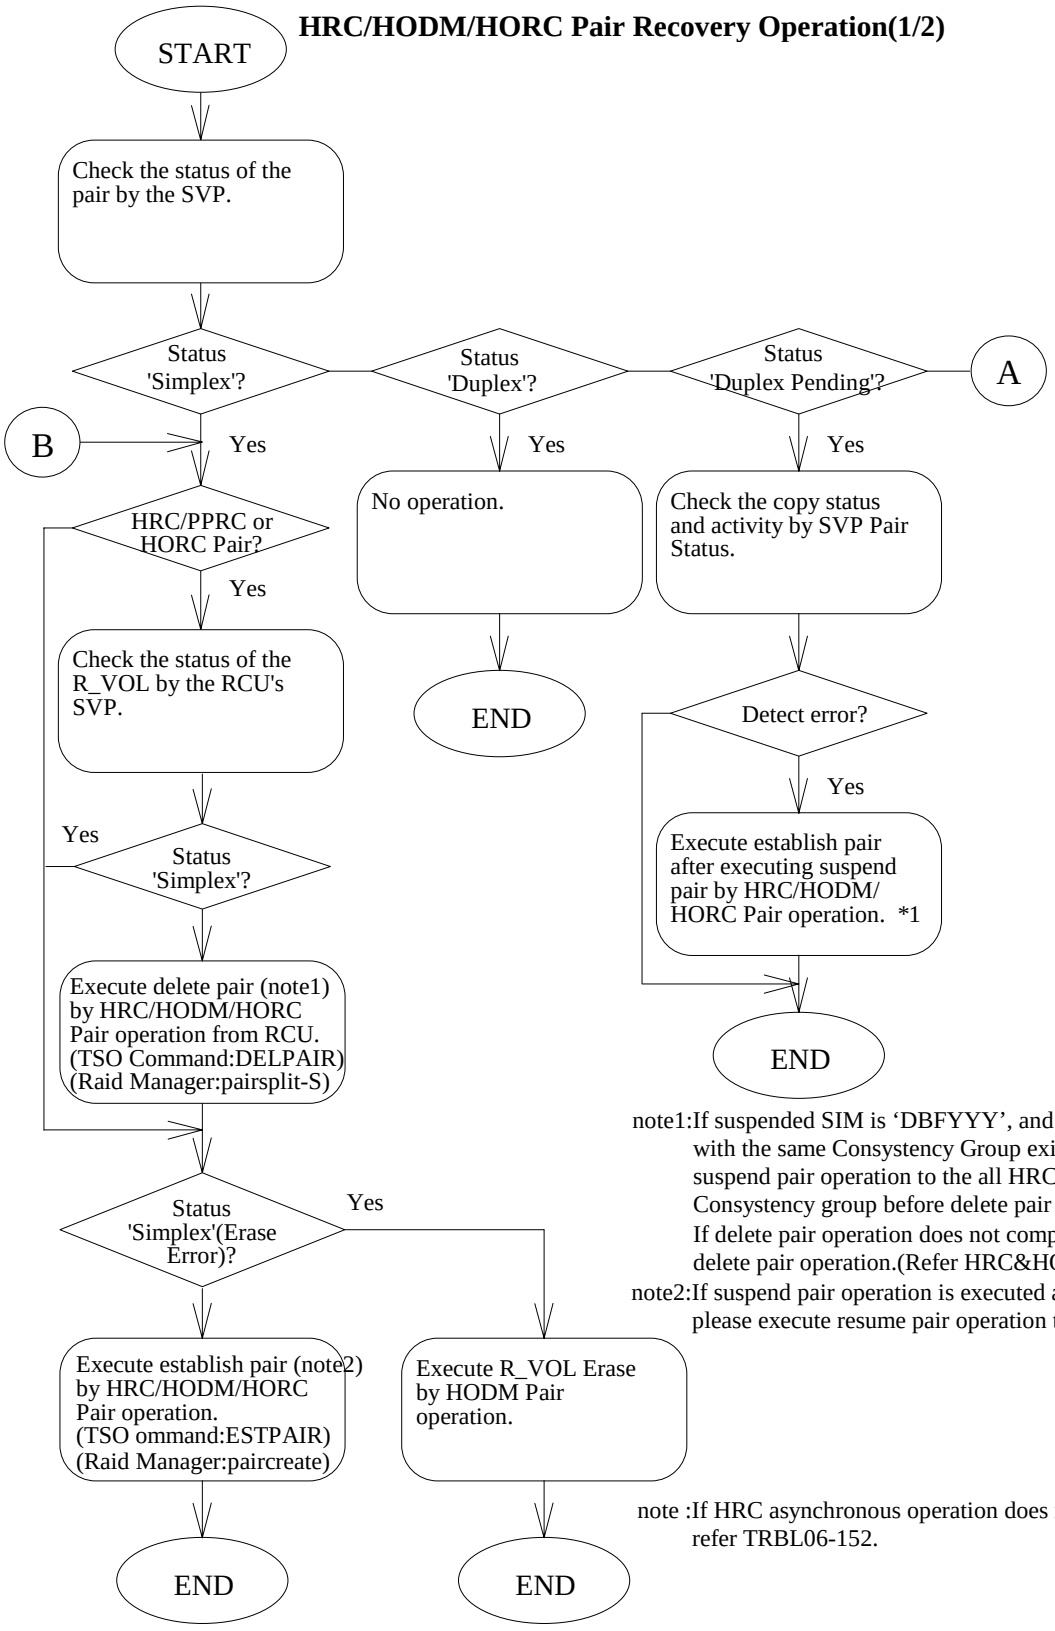
HRC/HODM/HORC Path Recovery Procedure



*1 For TSO Command operation, you issue ESTPATH Command, specified the path that established by the last ESTPATH Command issued except failed path. If the number of logical path is one, you must issue DELPATH Command. (Refer IBM PPRCOPY Commands Manual)

Copyright ©1997,1998, Hitachi, Ltd.

HRC/HODM/HORC Pair Recovery Operation(1/2)



note1:If suspended SIM is 'DBFYYY', and another HRC pair with the same Consystency Group existed, please execute suspend pair operation to the all HRC pair with the same Consystency group before delete pair operation.
If delete pair operation does not complete, please try force delete pair operation.(Refer HRC&HODM03-80)

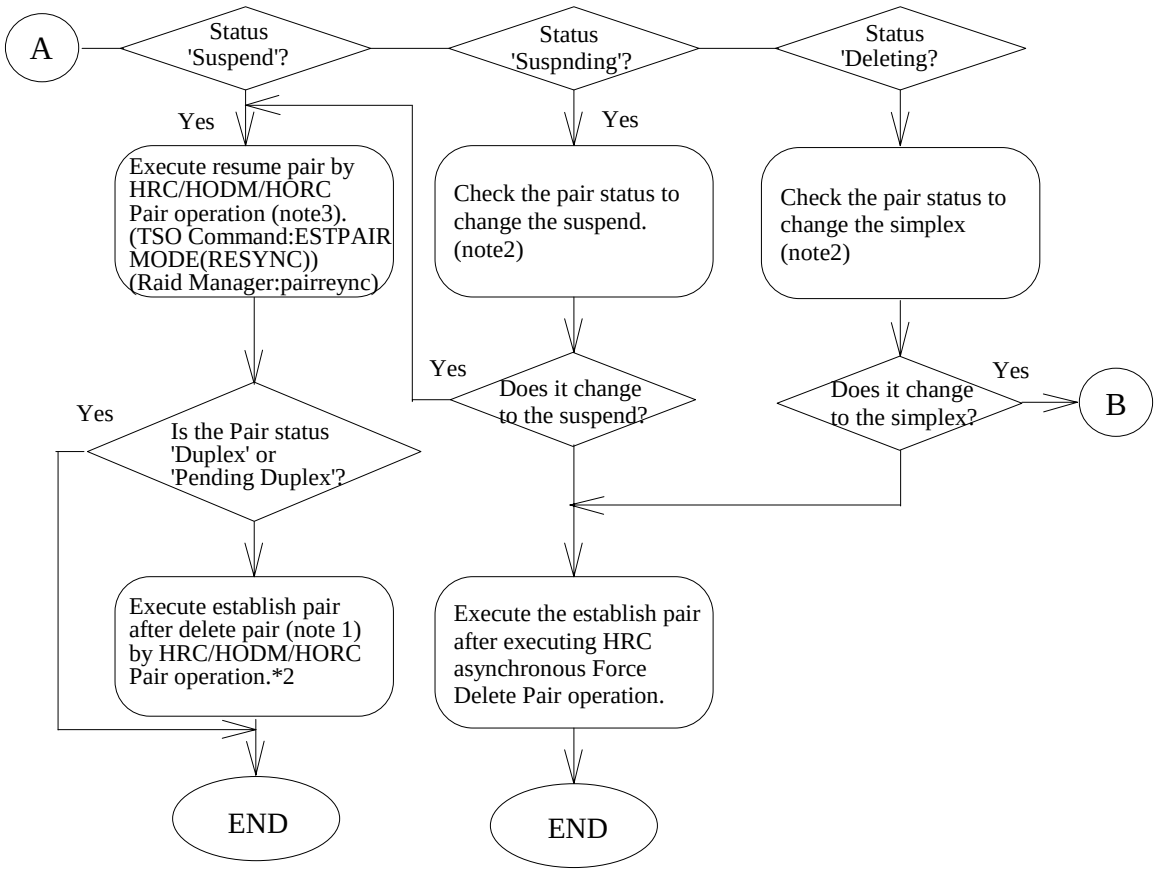
note2:If suspend pair operation is executed according to note1, please execute resume pair operation to these HRC pairs.

note :If HRC asynchronous operation does not complete, please refer TRBL06-152.

*1 For TSO Commnad operation, you issue ESTPAIR Command after SUSPEND Command issued.
In the case of the Raid Manager, issue the Pairresync command after the Pairsplit command is issued.
*2 For TSO Command operation, you issue ESTPAIR Command after DELPAIR Command issued.
In the case of the Raid Manager, issue the Paircreate command after the Pairsplit-S command is issued.

Copyright ©1997,1999, Hitachi, Ltd.

HRC/HODM/HORC Pair Recovery Operation(2/2)



note1:If delete pair operation does not complete, please try force delete pair operation.(Refer HRC&HODM03-80)
note2:Please waite a long time at least longer than specified by Mazimum Copy Delay Time parameter.
note3:If suspended SIM is 'DBFYYY', and another HRC pair with the same Consystency Group existed, please execute suspend pair operation to the all HRC pair with the same Consystency Group before resume pair operation.
After that, please execute resume pair operation with the Group option to these pairs.

note :If HRC asynchronous operation does not complete,
Please refer TRBL06-152.

*1 For TSO Commnad operation, you issue ESTPAIR Command after SUSPEND Command issued.
In the case of the Raid Manager, issue the Pairresync command after the Pairsplit command is issued.
*2 For TSO Command operation, you issue ESTPAIR Command after DELPAIR Command issued.
In the case of the Raid Manager, issue the Paircreate command after the Pairsplit-S command is issued.

Copyright ©1999, Hitachi, Ltd.

HRC/HORC asynchronous Pair Recovery Operation

HRC/HORC asynchronous pair recovery operation is the same as it of the HRC synchronous and HRC semi-synchronous pair basically. Please pay attention to the following.

(1) Extent of the suspend pair volume

When the volume pair which error level is Group is suspended due to the failure, all volume pairs in the same consistency group will be suspended together. In this case, All volume pairs in the same consistency group are in need of Resume Pair operation.
On condition that failure volume pair status is the Duplex pending(volume failure occur during Initial Copy), suspend is only this volume.

(2) Resume pair Operation

It specifies whether all suspended volume pairs, which belong to the same consistency group and whose M-VOLs are behind this MCU, should be resumed together or not.

(3) Force Delete Operation

This section describes the error recovery procedures to recover from the following hung-up conditions:

- The volume pairs were suspended due to some kind of failure. However the pair status of the affected volume pairs remained **unchanged from Suspending** for a long time (at least longer than specified by Maximum Copy Delay Time parameter).
- **Delete Pair** or **Suspend Pair** operation completed without error message. However the pair status of the volume pairs to be deleted or suspended remained **unchanged from Deleting or Suspending** for a long time (at least longer than specified by Maximum Copy Delay Time parameter).
- Add Pair operation failed with RMC messages **2742I** or **2769I** and the operation could not complete after several times of reties.
- **Suspend Pair, Delete Pair** or **Delete Group** operation failed with RMC messages **2749I, 2751I** or **2761I** respectively and the operation could not complete after several times of retries.

The recovery procedure is described in the next figure on TRBL06-154.

Copyright ©1999,2000, Hitachi, Ltd.

(3-1) Operating Delete Pair with Delete Pair by Force option

Delete pair operation with Delete Pair by Force option is effective to recover from such hung-up conditions. Being specified with this option, the specified control unit (MCU or RCU) performs the forcible delete process as follows:

- Changes the volume status of all the volumes that are behind the specified control unit and belong to the consistency group to simplex.
- Discard all the record sets that are pending (not sent to the RCU or not settled yet) in the specified control unit.

Note that the specified control unit performs the forcible delete without communicating with the paired control unit. Since both the MCU and RCU manages volume pair status and can have the pending record set within, this operation **must be done at both the MCU and RCU**.

(3-2) Re-establishing Volume Pair

After completing delete pair operation at both the MCU and RCU, establish volume pair(s) again to check that hung-up conditions are recovered. Be sure that **the same consistency group number** must be specified as before. If the different consistency group number is specified, the result is unpredictable.

(3-3) Performing Dummy-Replacement of Cache PCB

If the delete pair operation can not recover from hung-up conditions (establishing volume pair results in failure with message 2742I or 2769I), some inconsistent condition may remain in the sidefile structure. To recover from this situation, dummy-replacement of cache PCB requires to be performed for **both A and B sides**. The operated control unit discards all the inconsistent sidefiles during replacement procedure.

Only the sidefiles of the deleted consistency group is discarded. Therefore dummy-replacement can be performed while other consistency groups are working at the control unit.

Recovery Operation of the Suspended HORC Pair

This document which is addition of the HRC/HODM/HORC Pair Recovery Operation (TRBL06-150) explain the recovery operation for the suspended HORC pair in the extended LU.

After repairing the failure part, execute a resume (pair resync) operation for the suspended pair. HORC resume operation can be executed from SVP, Remote Console, and Raid Manager. A means, an object and a procedure of the resume operation are shown in a following table. Refer SVP SECTION 7 References for HORC Operation Screen (SVP07-10).

Table HORC Resume Operation Procedure in the extended LU

means	object	procedure
SVP (Remote Console)	Volume	(1) Check the volume number of the suspend pair from the F/M="FB" SSB. (2) Check the LU pair status which comprises the suspended pair volume is a "Suspend", "Duplex (W)", or "Pending Duplex (W)". (3) Execute a resume pair operation to the suspended volume pair. (4) Check the pair status is a "Duplex" or a "Pending Duplex".
	Logical Unit	(1) Check the volume number of the suspend pair from the F/M="FB" SSB. (2) Check the LU pair status which comprises the suspended pair volume is a "Suspend", "Duplex (W)", or "Pending Duplex (W)". (3) Execute a resume pair operation to the suspended LU pair. (4) Check the pair status is a "Duplex" or a "Pending Duplex".
Raid Manager	Logical Unit	(1) Check the volume number of the suspend pair from the F/M="FB" SSB. (2) Check the LU pair status which comprises the suspended pair volume is a "PDUB". (3) A pairresync command issues to the suspended LU pair. (4) Check the pair status is a "Pair" ("Duplex") or a "Copy" ("Pending Duplex").

If pair status does not change "Duplex" or "Pending Duplex" after executing a resume operation, please try delete pair operation (pairsplit-s command for Raid Manager), and execute Add pair operation (paircreate command for Raid Manager) again.

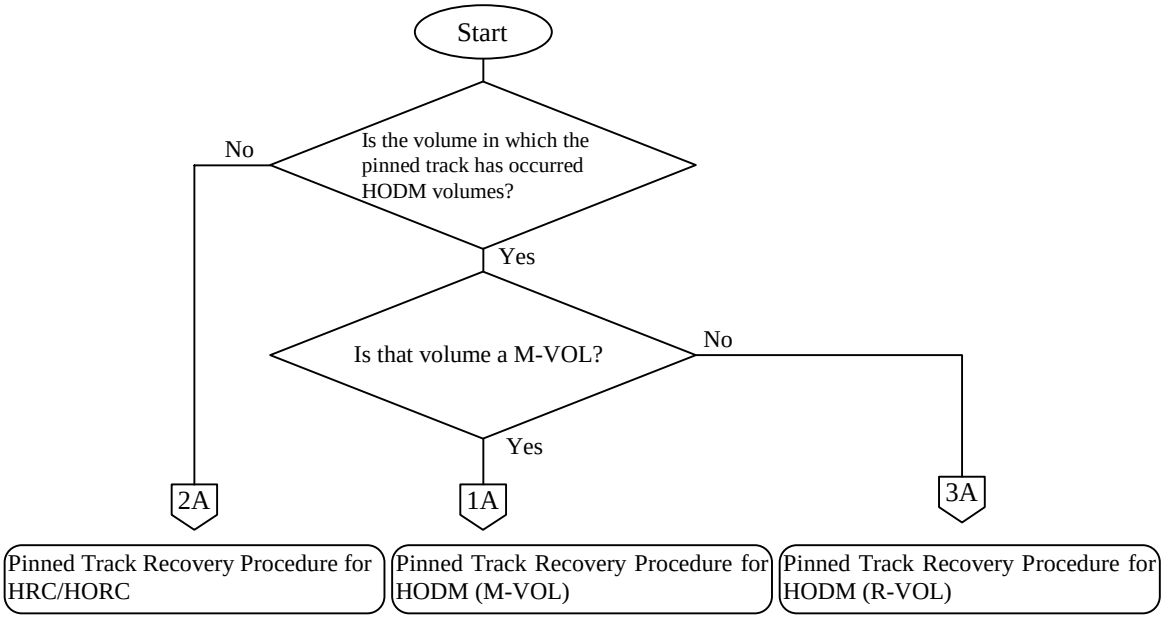
6.3 Pinned Track Recovery Procedure for HRC/HODM/HORC

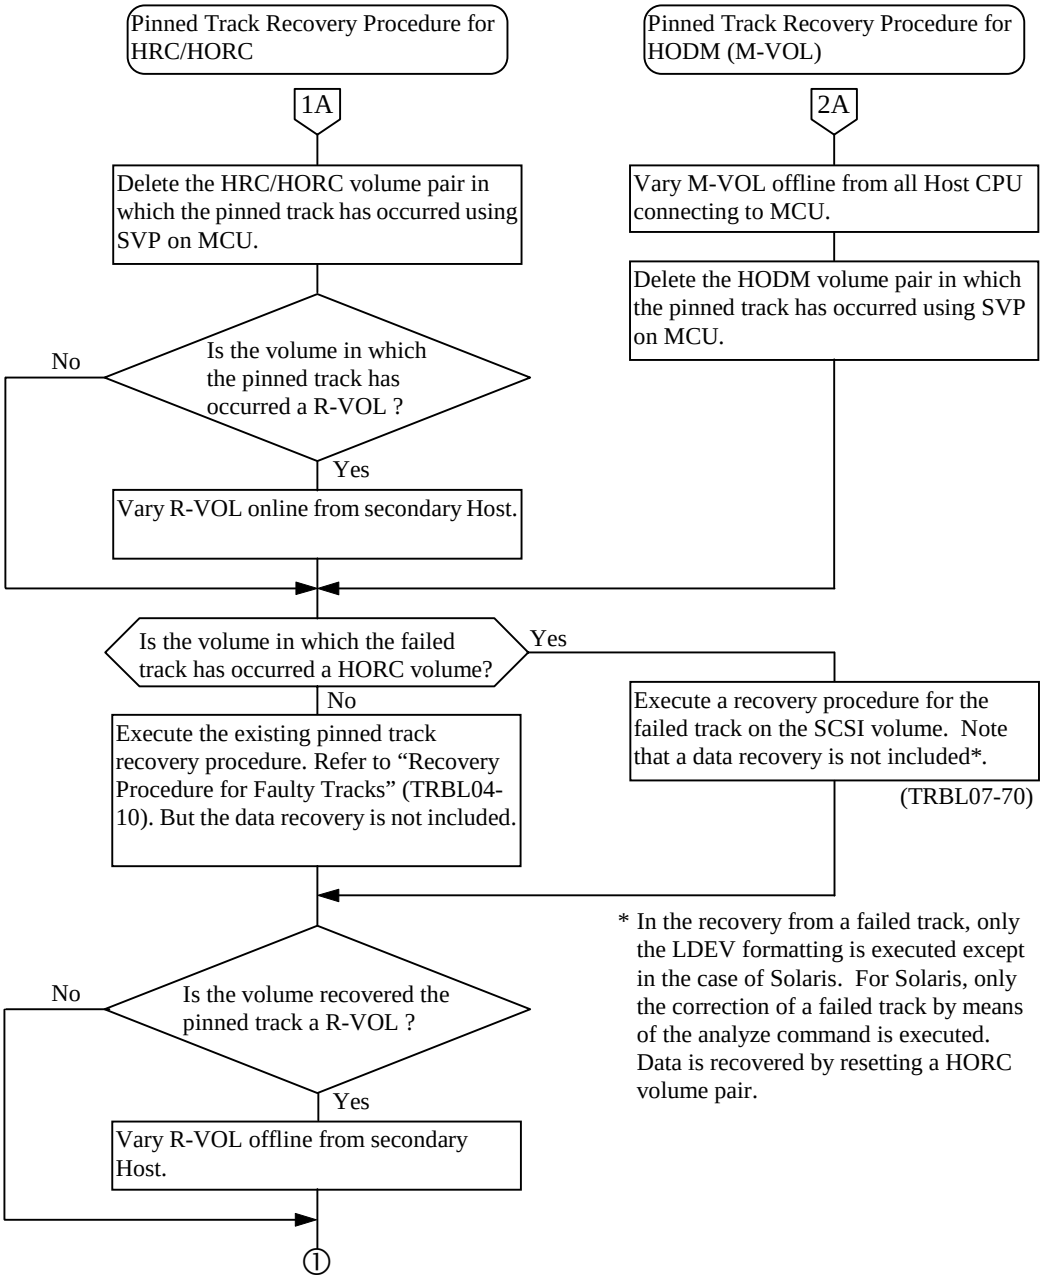
Pinned track recovery procedure for HRC/HODM/HORC is as follows.



(Note)
If the pinned track has occurred in both M-VOL and R-VOL, recover the volumes according to the following sequence.

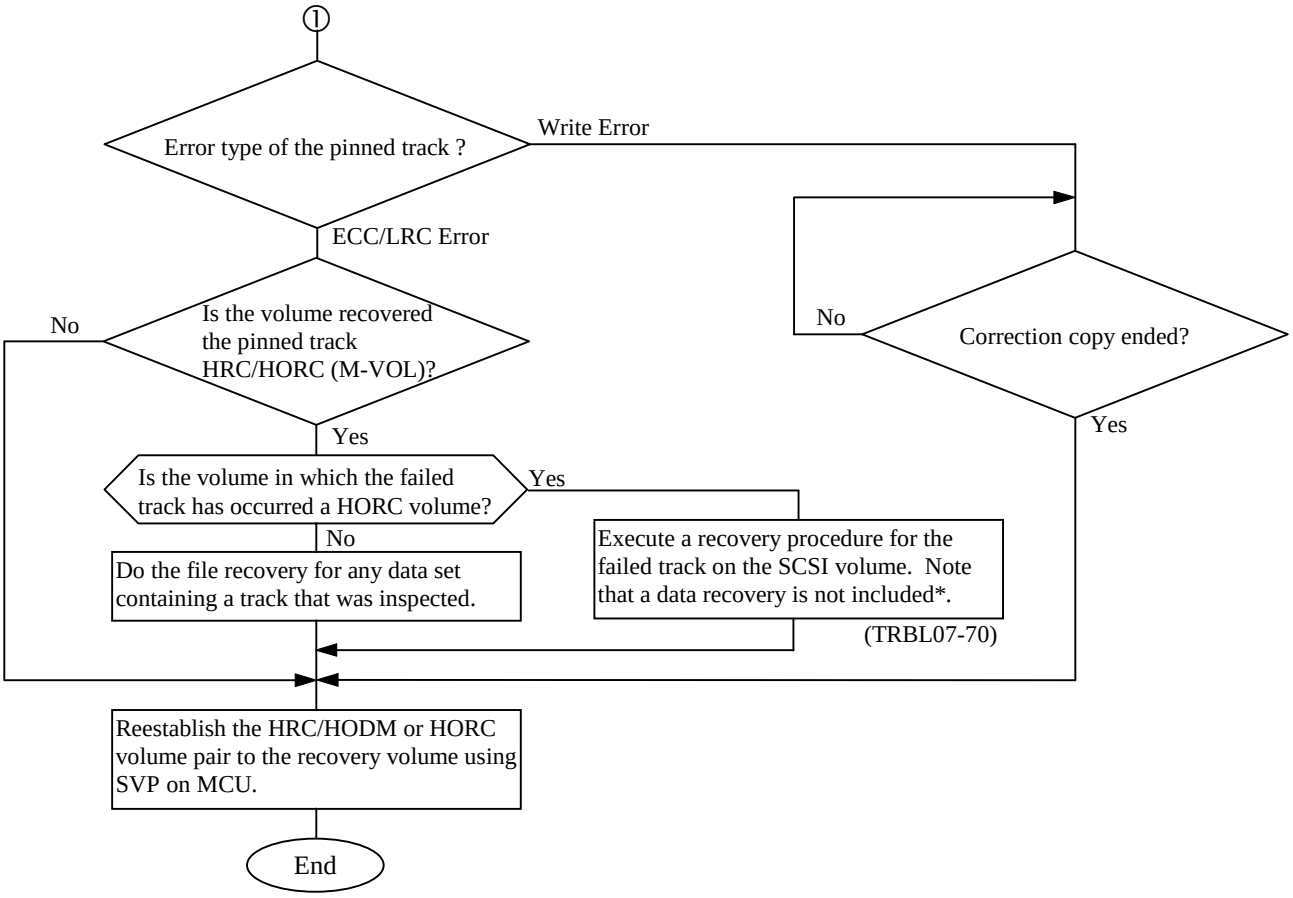
HRC/HORC : ① M-VOL → ② R-VOL
HODM : ① R-VOL → ② M-VOL

Copyright ©1997,1998, Hitachi, Ltd.

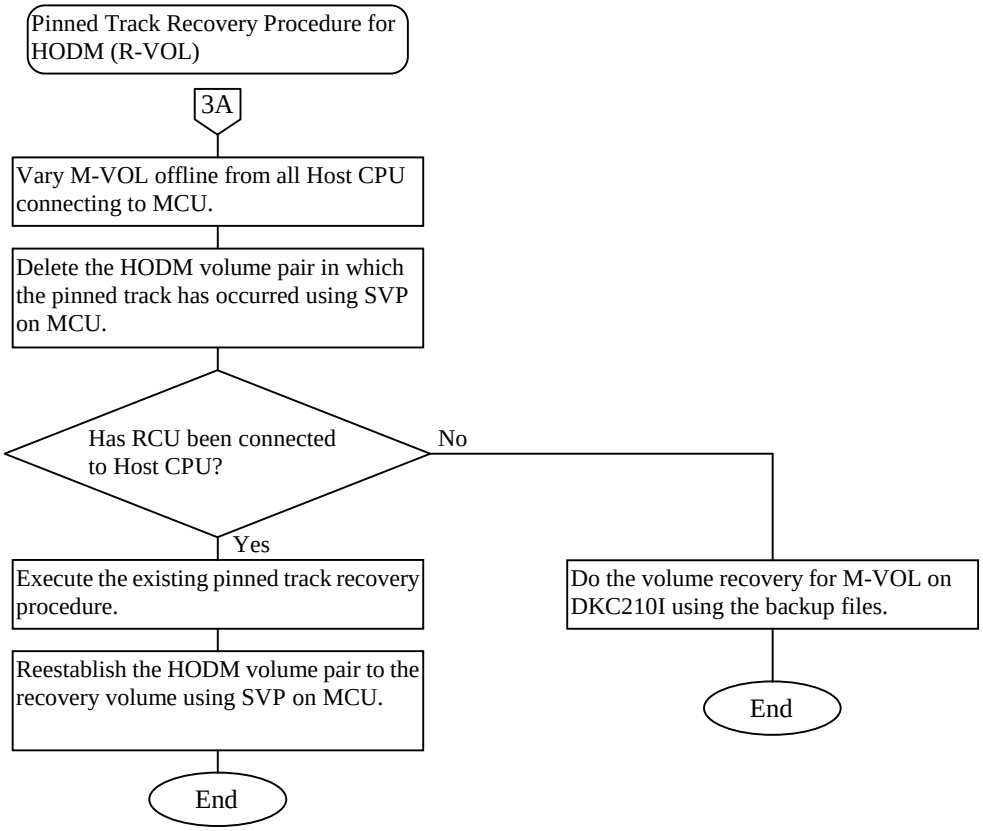


* In the recovery from a failed track, only the LDEV formatting is executed except in the case of Solaris. For Solaris, only the correction of a failed track by means of the analyze command is executed. Data is recovered by resetting a HORC volume pair.

Copyright ©1997,1998, Hitachi, Ltd.



Copyright ©1998, Hitachi, Ltd.



Copyright ©1997,1998, Hitachi, Ltd.

6.4 Recovery Action of Path Status Error

Path Status	Recovery Action
"Nothing"	Delete the path with "Edit Path" or "Delete RCU", and add a new path with "Edit Path" or "Add RCU" again. (Refer to SVP04-30 "Path Operation".)
"Initialization Failed"	Refer to TRBL06-30 "HRC/HODM/HORC Path Recovery Section".
"Communication Time Out"	
"Resource Shortage (MCU)"	There are too many HRC/HODM/HORC paths on the MCU (RCU) side. Delete the path and the other useless paths with "Edit Path" or "Delete RCU", and add a new path with "Edit Path" or "Add RCU" again. (Refer to SVP04-30 "Path Operation".)
"Resource Shortage (RCU)"	
"Serial Number Mismatch"	Confirm the RCU serial number and the path connection, and delete the RCU with "Delete RCU". So add a new RCU with the correct serial number. (Refer to SVP02-1080 "Deleting an RCU Resistered".)
"Invalid Port"	This Status is occurred by the following two causes. (1) There are the same paths in the RCU. Then confirm the Port, the Link Address, and the Logical Address. And delete the path with "Edit Path". (Refer to SVP02-1110 "Reducing the Path(s) from the RCU".) (2) The Port isn't an RCP. Then confirm the Port, and delete the path with "Edit Path". Set the port to RCP, and add a new path with "Edit Path" again. (Refer to INST07-170 "RCP Port Setting" and SVP04-20 "Path Operation".)

7 Trouble Shooting of Multiplatform

7.1 Trouble Shooting of error on host SCSI interface

This section describes trouble shooting of error on host SCSI interface.

7.1.1 Structure

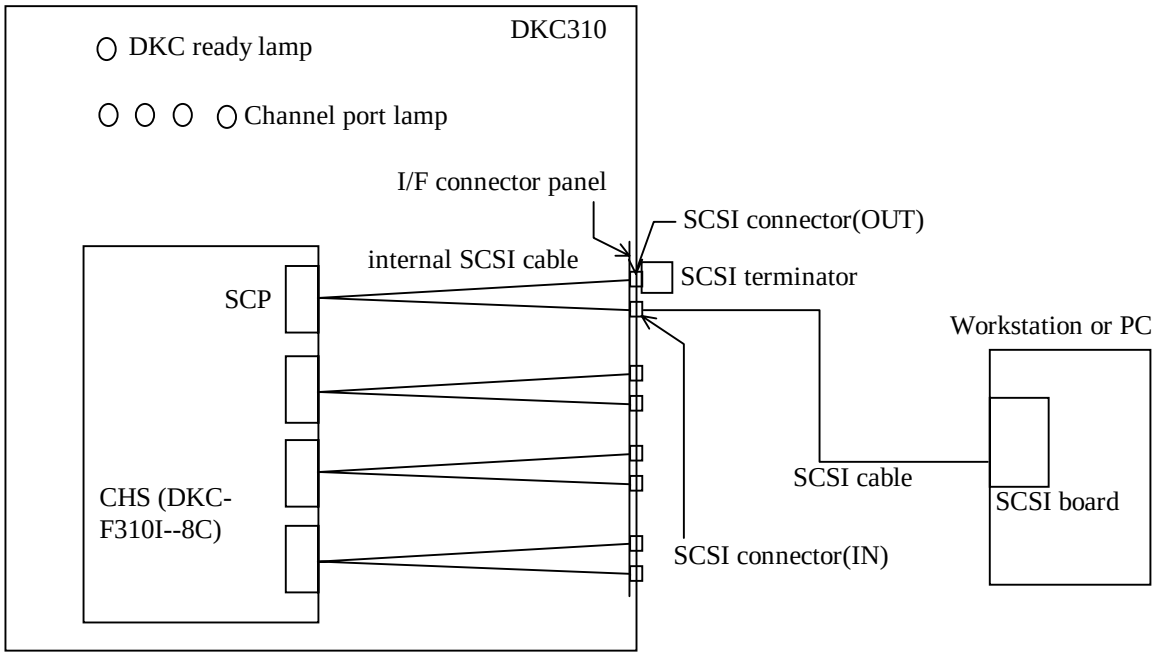

Fig. 7-1 Structure of SCSI path

Copyright ©1998, Hitachi, Ltd.

7.1.2 Possible error and cause

Table 7-1 Possible error and cause

No.	Possible error	Cause
1	DKC310 LDEV is not recognized by SCSI initiator	(1) SCSI installation, i.e. recognition and connecting procecure from SCSI initiator is not executed correctlry (2) Problem of SCSI cable or SCSI terminator or thier connection (3) Problem of SCSI initiator. SCSI board, device driver version, parameters (4) SCSI path definition from SVP (5) Problem of CHS or internal SCSI cable or connection of CHS and internal SCSI cable (6) Other
2	Parity error detected by SCSI initiator	(1) Unmatch of Wide/Sync negotiation (2) Problem of SCSI cable or SCSI terminator or their connection or environment
3	Parity error detected by DKC310	(1) Unmatch of Wide/Sync negotiation (2) Problem of SCSI cable or SCSI terminator or their connection or environment

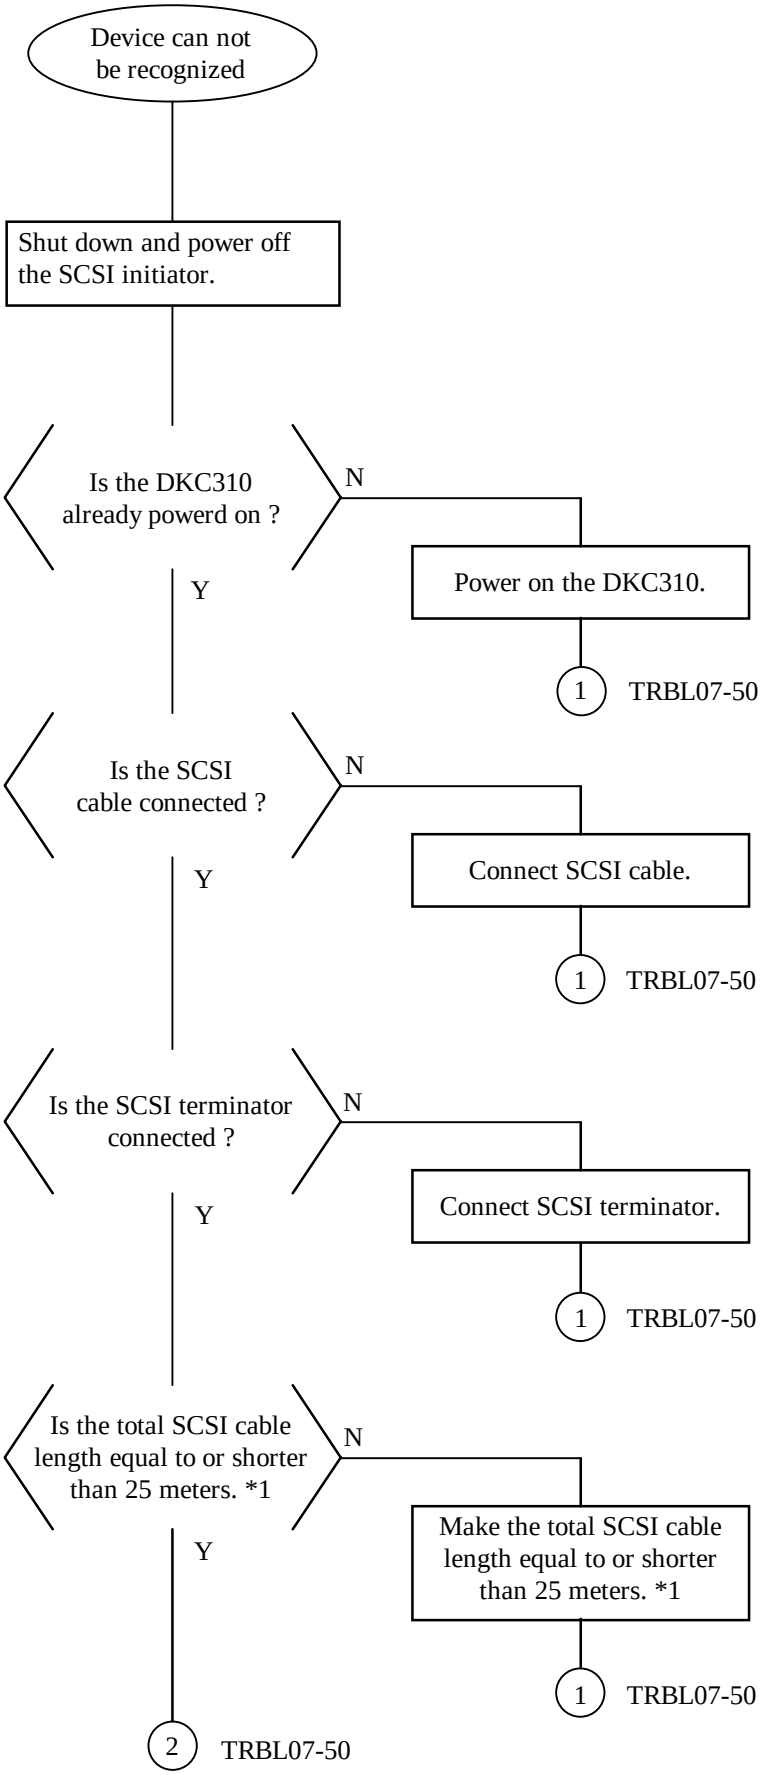
Copyright ©1998, Hitachi, Ltd.

7.1.3 Checking item when some error occur on host SCSI path

Check item (correct value)

(1) Is the DKC ready lamp lit ? (ready lamp should be lit.)
(2) Is the concerned channel port lamp lit ? (concerned channel port lamp should be lit.)
(3) Is the concerned LDEV status normal ? (LDEV status should be normal or correction access.)
(4) Is the concerned SCP status normal ? (SCP status should be normal.)
(5) Is the concerned CHS status normal ? (CHS status should be normal.)
(6) Are the internal SCSI cable connected to the SCSI ports of CHS in right way ?
(7) Are the location of Basic/Additional 1/Additional 2/Additional 3 and Cluster 1/Cluster 2 of CHS and I/F connector panel location understood precisely?
Refer to pages LOCATION04-40, LOCATION04-70, LOCATION05-70 and INST03-970 through INST03-1030 on DKC310I Maintenance Manual for correct information.
(8) Is the concerned SCSI cable the one used without any problem ?
Do the concerned SCSI cable work well with other SCSI devices ?
Do another SCSI cable work well if it is replaced with the concerned SCSI cable ?
(9) Don‘t the SCSI connectors of SCSI cable have any problem ?
(10) Is the concerned SCSI cable connected to the I/F connector panel stably ?
(11) Is the concerned SCSI cable connected to the host SCSI board connector ?
(12) Is the concerned SCSI cable for 68-pin wide one ?
(13) Is the concerned SCSI terminator for Differential SCSI ?
(14) Are the two end of SCSI bus correctly terminated ?
(15) Isn’t the single-end type SCSI device connected to the concerned SCSI bus ?
(16) Isn’t there any duplication of SCSI ID ?
(17) Is the SVP SCSI path definition correct ?
(18) SCSI installation work from SCSI host done correctly ?

Copyright ©1998, Hitachi, Ltd.



*1) 25 meters is maximum SCSI cable length of Differential type SCSI. DKC310 takes 5 meters for its internal SCSI cable for each SCSI port.

7.2 Trouble Shooting of error on host Fibre channel interface

This section describes trouble shooting of error on host Fibre channel interface.

7.2.1 Possible error and cause

Table 7-2 Possible error and cause

No.	Possible error	Cause
1	DKC310 LDEV is not recognized by Fibre initiator	(1) SCSI installation, i.e. recognition and connecting procecure from SCSI initiator is not executed correctlry (2) Problem of Fibre cable or thier connection (3) Problem of Fibre initiator. Fibre board, device driver version, parameters (4) SCSI path definition from SVP (5) Other

Copyright ©1999, Hitachi, Ltd.

7.2.2 Checking item when some error occur on host SCSI path

Check item (correct value)

(1) Is the DKC ready lamp lit? (ready lamp should be lit.)
(2) Is the concerned channel port lamp lit? (concerned channel port lamp should be lit.)
(3) Is the concerned LDEV status normal? (LDEV status should be normal or correction access.)
(4) Is the concerned FCP/FOP status normal? (SCP status should be normal.)
(5) Is the concerned CHF/CHT status normal? (CHS status should be normal.)
(6) Are the location of Basic/Additional 1/Additional 2/Additional 3 and Cluster 1/Cluster 2 of CHF/CHT and I/F connector panel location understood precisely?
Refer to pages LOCATION04-40, LOCATION04-70, LOCATION05-70 and INST03-970 through INST03-1030 on DKC310I Maintenance Manual for correct information.
(7) Is the concerned Fibre cable the one used without any problem?
Do the concerned Fibre cable work well with other Fibre devices?
Do another Fibre cable work well if it is replaced with the concerned Fibre cable?
(8) Is the concerned Fibre cable connected to the I/F connector panel stably?
(9) Is the concerned Fibre cable connected to the host Fibre board connector?
(10) Isn’t there any duplication of AL-PA(port ID)?
(11) Is the SVP SCSI path definition correct?
(12) SCSI/Fibre installation work from Fibre host done correctly?

7.3 Pinned track recovery of SCSI LDEV

This chapter shows about the explanation and the recovery procedure for faulty tracks in the OPEN-VOL.

7.3.1 Faulty Tracks

Hardware error sometimes causes pinned track occurrence.
Following reports indicate pinned track occurrence.

- The read-error report or the time-out error report from Application occurs..
- SIM report of pinned track occurrence.

SIM REF.CODE	Meaning	Comment
EF04-XX	Unable to write to PDEV on a track.	XX:LDEV number
FF04-XX	Unable to read from cache on a track.	XX:LDEV number

To recover pinned tracks, following information about the pinned track to be recovered are necessary.

- Address in LDEV(LDEV number)
- First and last LBA of stripe including the pinned track.
  * LBA : Logical Block Address
- Error type of the pinned track.
- PDEV number including the pinned track.

These information can be obtained by “Pinned Data Display Function”(SVP02-740) in SVP.

7.3.2 Error Types

Pinned track has 2 error types as follows.

Display on SVP	**Meaning**	**Cause**	**Recovery method**
Write Error	Unable to write to PDEV.	Drive error	Replacement of PDEV
ECC/LRC Error	Unable to read from Cache.	Cache error	File recovery

Following document explains each error type of pinned track and recovery flow chart for the ECC/LRC Error in the OPEN-VOL is showed. As for the pinned track except the ECC/LRC error condition in the OPEN-VOL, refer to TRBL04-10 section.

Copyright ©1998,1999, Hitachi, Ltd.

7.3.2.1 ECC/LRC Error

Cause:

(1) An ECC/LRC type of pinned track is caused when a dirty data stored in both Cache side A/B can not be accessed correctly Also, during a dirty data de-stage process a data read from Cache side A/B is failed, an ECC/LRC Error is set. In this case, there exist a case in which the host I/O operation is processed normally. However, in case of host I/O access to Cache side A/B is failed, the original data for the track is lost.

(2) An ECC/LRC type of pinned track is caused when failed de-staging track occurs due to a drive failure etc, during a P/S Off and then P/S On without batteries. In this case, the original data for the track is lost.

(3) An ECC/LRC type of pinned track is caused when a track cannot be correctly reconstructed during a correction copy. In this case as stated above in (2), the original data for the track is lost.

(4) An ECC/LRC type of pinned track is caused when a parity track cannot be correctly reconstructed during a parity construction process. This means that all data tracks in the stripe does not match up with a parity track.
A factor involving a parity construction failure are as follows,

(a) When all necessary data required for a party reconstruction process not gathered correctly due to a failure drive etc. In a detail, when one or more data tracks(old data) within the stripe having a failed staging tracks due to a drive failure.

(b) When a parity data de-staging failed due to a drive failure.

Result of host I/O operation:

When a track with a ECC/LRC Error is accessed, result of host I/O operation is as the following.

(a) If the read in the track is possible, result of host I/O operation is normal end.

(b) If it isn't possible to read a track, it reports "(03)h: Medium Error" or "(0b)h: Abort" to I/O operation of the host. At this case, data is lost.

Copyright ©1999, Hitachi, Ltd.

The outline of the recovery procedure:

A track with ECC/LRC Error means that the original data for the track may be lost. Therefore, we will request to a customer that a recovery of the data for the track with ECC/LRC Error in the OPEN-VOL will be performed from a back-up file etc.
A recovery method for the track with ECC/LRC Error in the OPEN-VOL is as follows.

(1) It confirms CU-LDEV number which the pinned track occurred to by "Pinned Data Display Function"(SVP02-740) in SVP and LBA of the head and the last of the pinned track.
(2) Execute the "showrel" tool and examine relation in fault occurrence LDEV and the device which the file system recognizes.
(3) It judges a volume on the file system which is composed of the device and it checks data in the volume. (Using the command like **sum**)
(4) It requests the recovery of the data which "I/O error" or "read error" occurs to of the customer from a back-up file etc.
(5) It confirms pinned track information by "Pinned Data Display Function" (SVP02-740) in SVP.
If there is not a display of the pinned track and system tests result is normal, the recovery is ending.
If a new pinned track occurs, back to the process of hard error recovery.
(6) If a old pinned track display is left, execute the pin recovery tool.
(7) In case of "slot:PRTY" display, to input to the pin recovery tool isn't necessary.
It is automatically recovered when the pinned track of the "slot:DATA" display is recovered.

The cancellation of the faulty tracks

When data is written to the whole stripe, whole stripe data is fixed and a fault track is canceled.

Copyright ©1999, Hitachi, Ltd.

7.3.2.2 Write Error

Cause:

A Write Error type of pinned track is caused when the data de-staging process to the PDEV is failed due to a drive failure. When a drive failure occurs, the drive itself and the DKC perform a following recovery procedure. A write Error occurs when a following recovery procedure is failed.

(1) Medium failure : Automatic reallocation of alternate sector.
(2) Other failure : Alternate path retry.

A Write Error count information per PDEV is stored in DKC. When a Write Error count exceeds the threshold value, the PDEV is blocked. One PDEV blocked per parity Group will not stop the DKC operation to the parity group. When a track with Write Error is accessed by the host after the PDEV is blocked, the Write Error status will reset.

Result of host I/O operation:

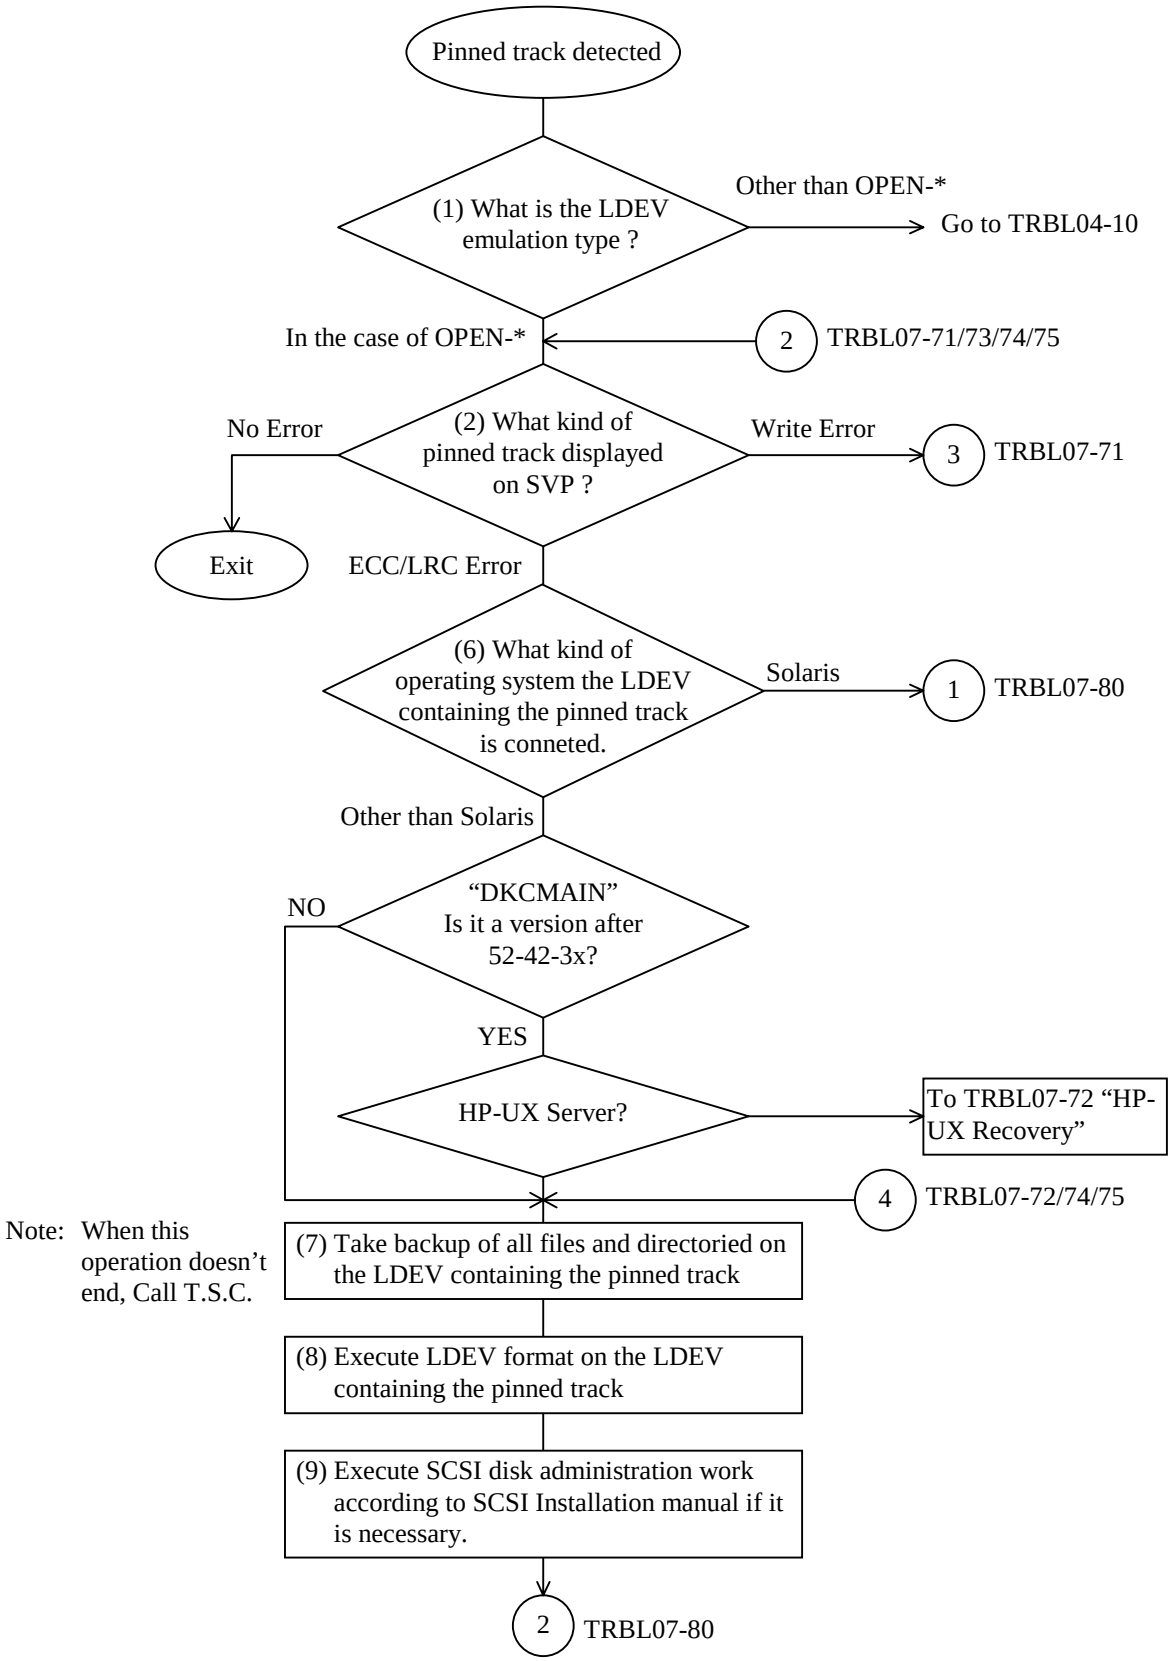
Any access to a track with Write Error will be successful.

Recovery Method:

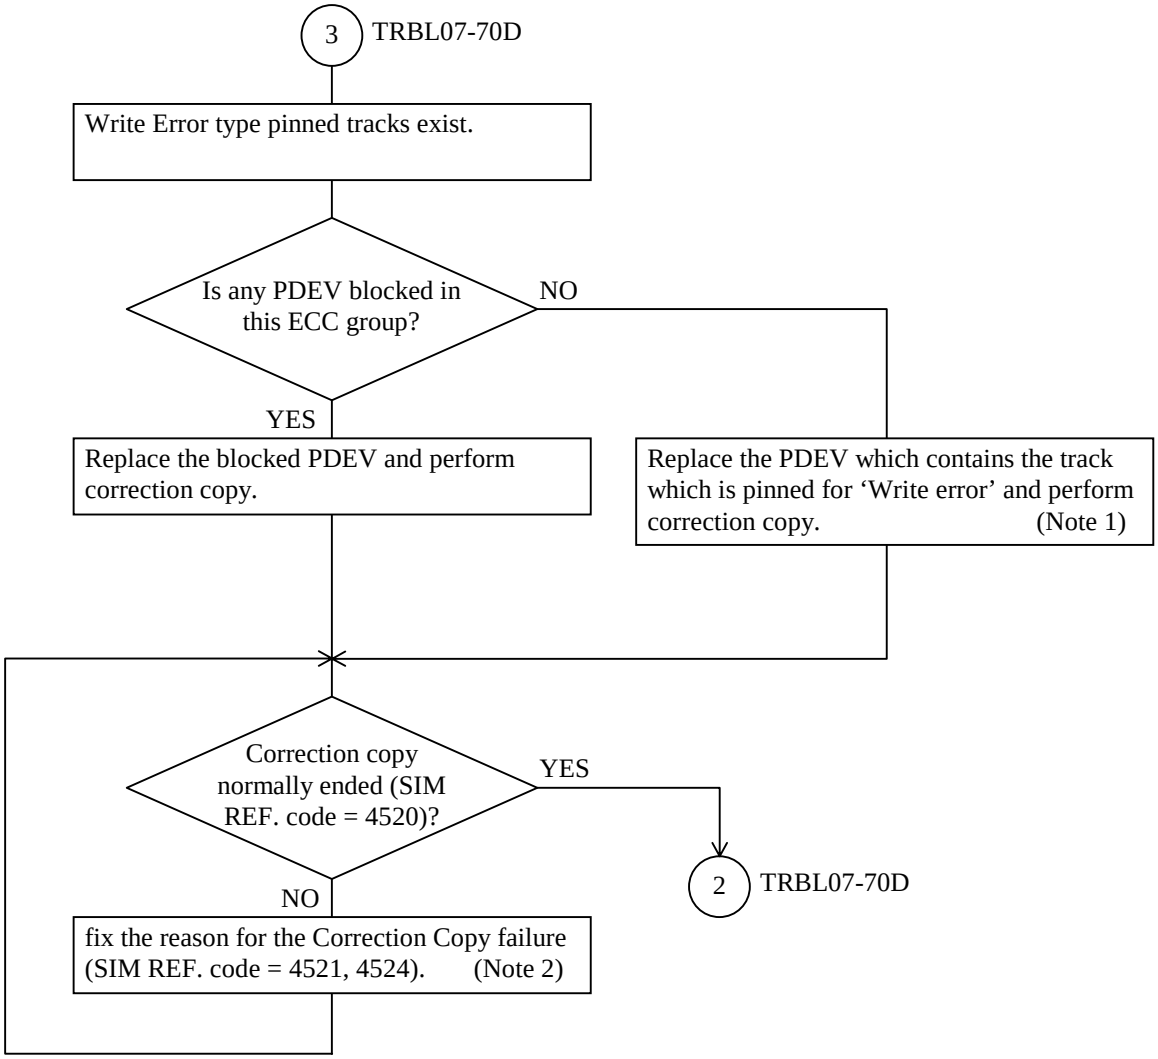
The PDEV containing a track with Write Error is replaced. At this time, if the blocked PDEV already exist within the parity group, first replace the blocked PDEV already exist. Next, replace the PDEV containing a track with Write Error. Also, if there are many PDEVs containing a track with Write Error check ORM Display on SVP Panel, then replace the PDEV with Highest Error Rate. A track with Write Error is recovered by a correction copy.

Copyright ©1999, Hitachi, Ltd.

(1) Pinned track recovery procedure



Copyright ©1999, Hitachi, Ltd.

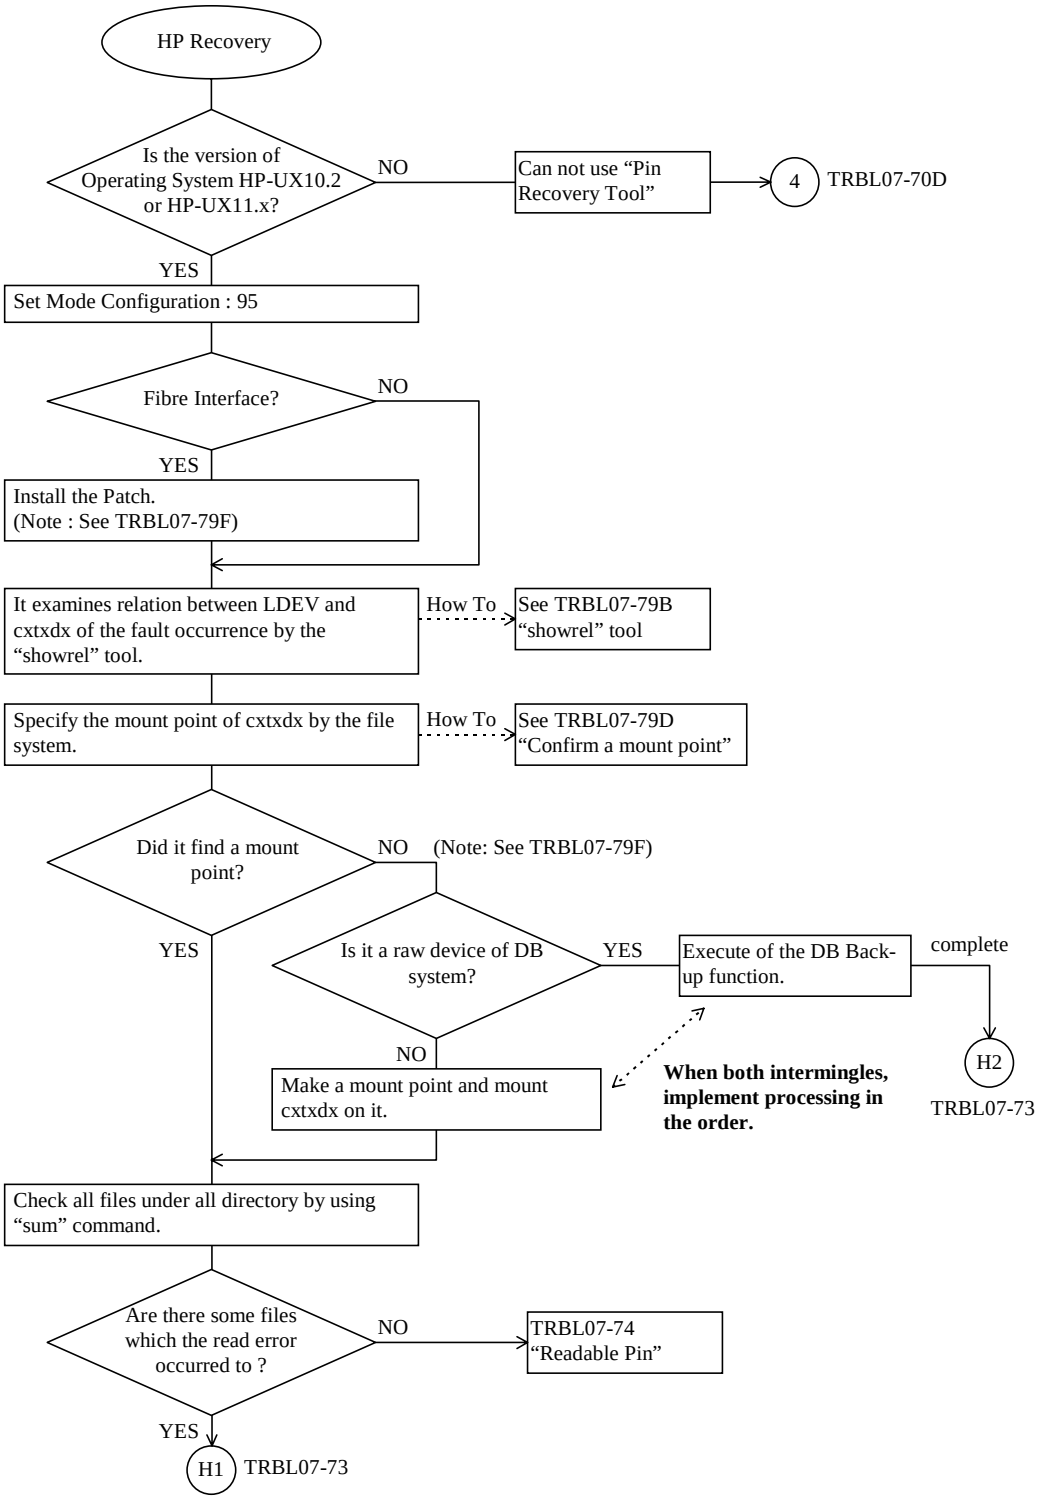


Note 1 If spare drives are available, you can perform Drive copy instead of Correction copy.
Note 2 In case of Drive copy abnormally ended, SIM REF. code is "4621" or "4624".

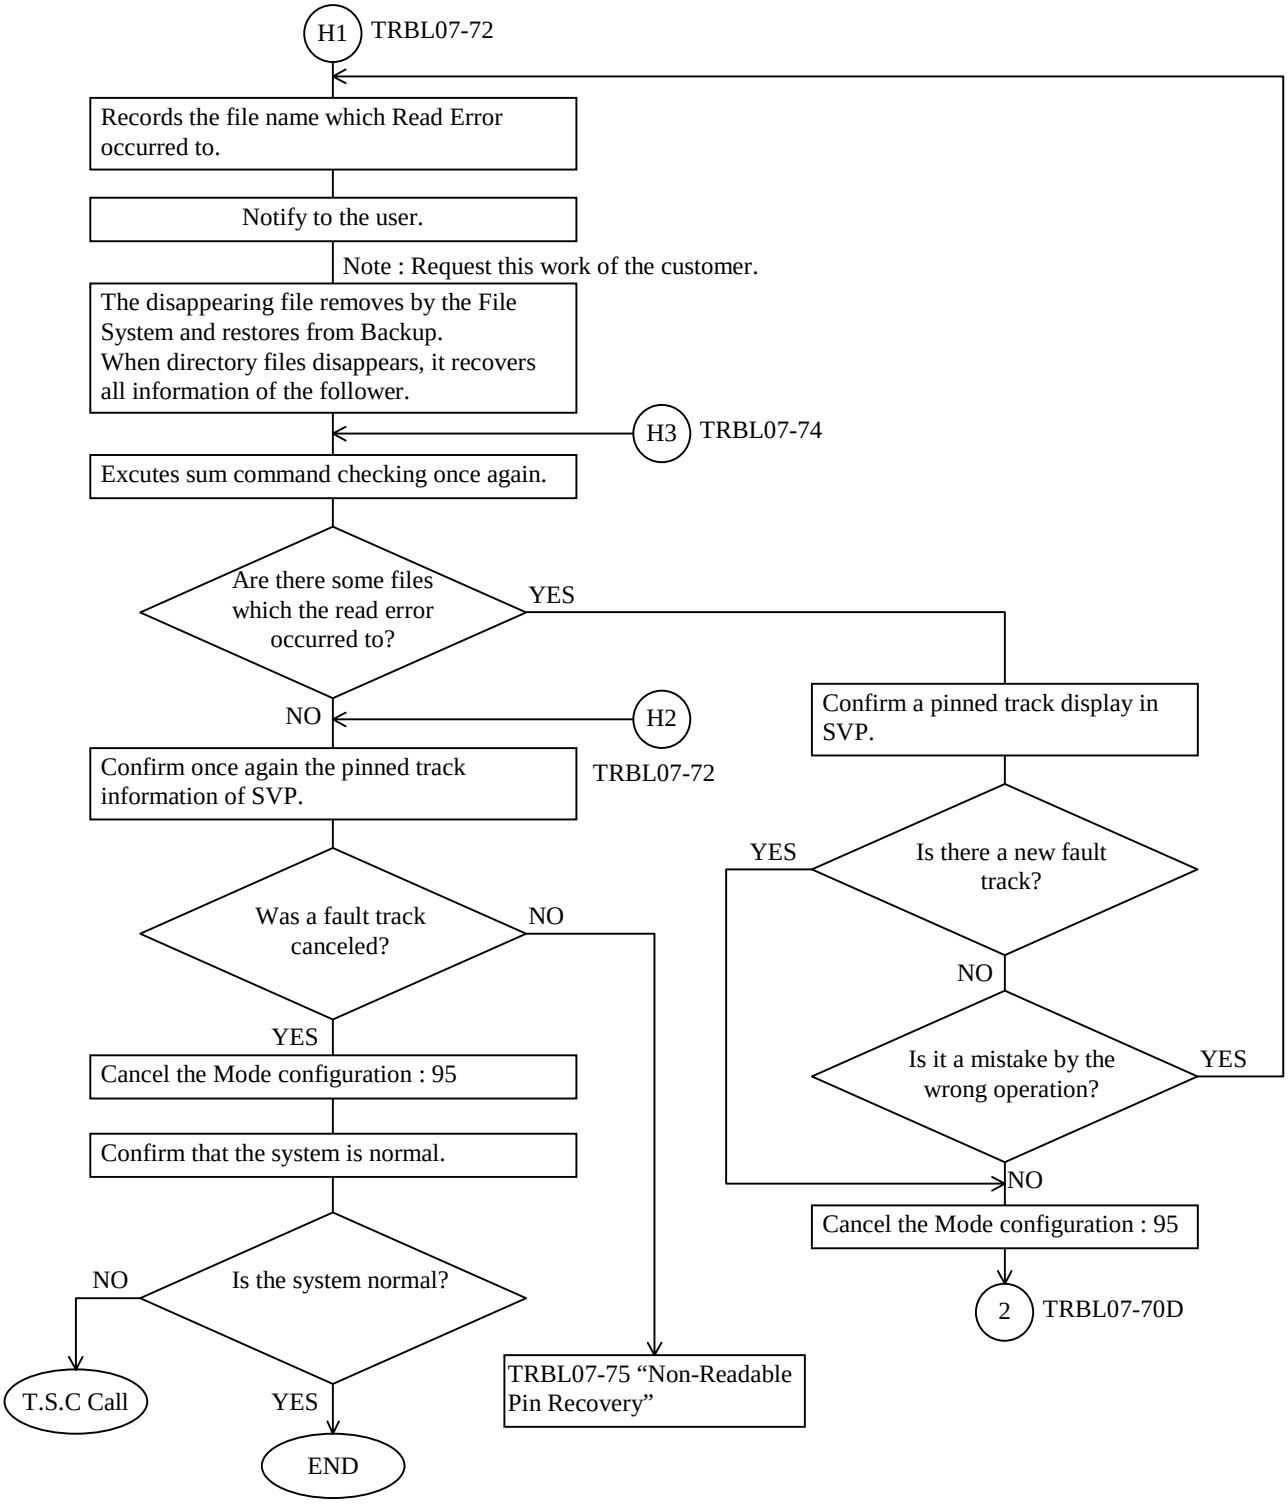
Copyright ©1999, Hitachi, Ltd.

HP-UX Recovry

This chapter shows the pinned track recovery flow about the HP-UX10.2/11.x system.
Recovery FLOW



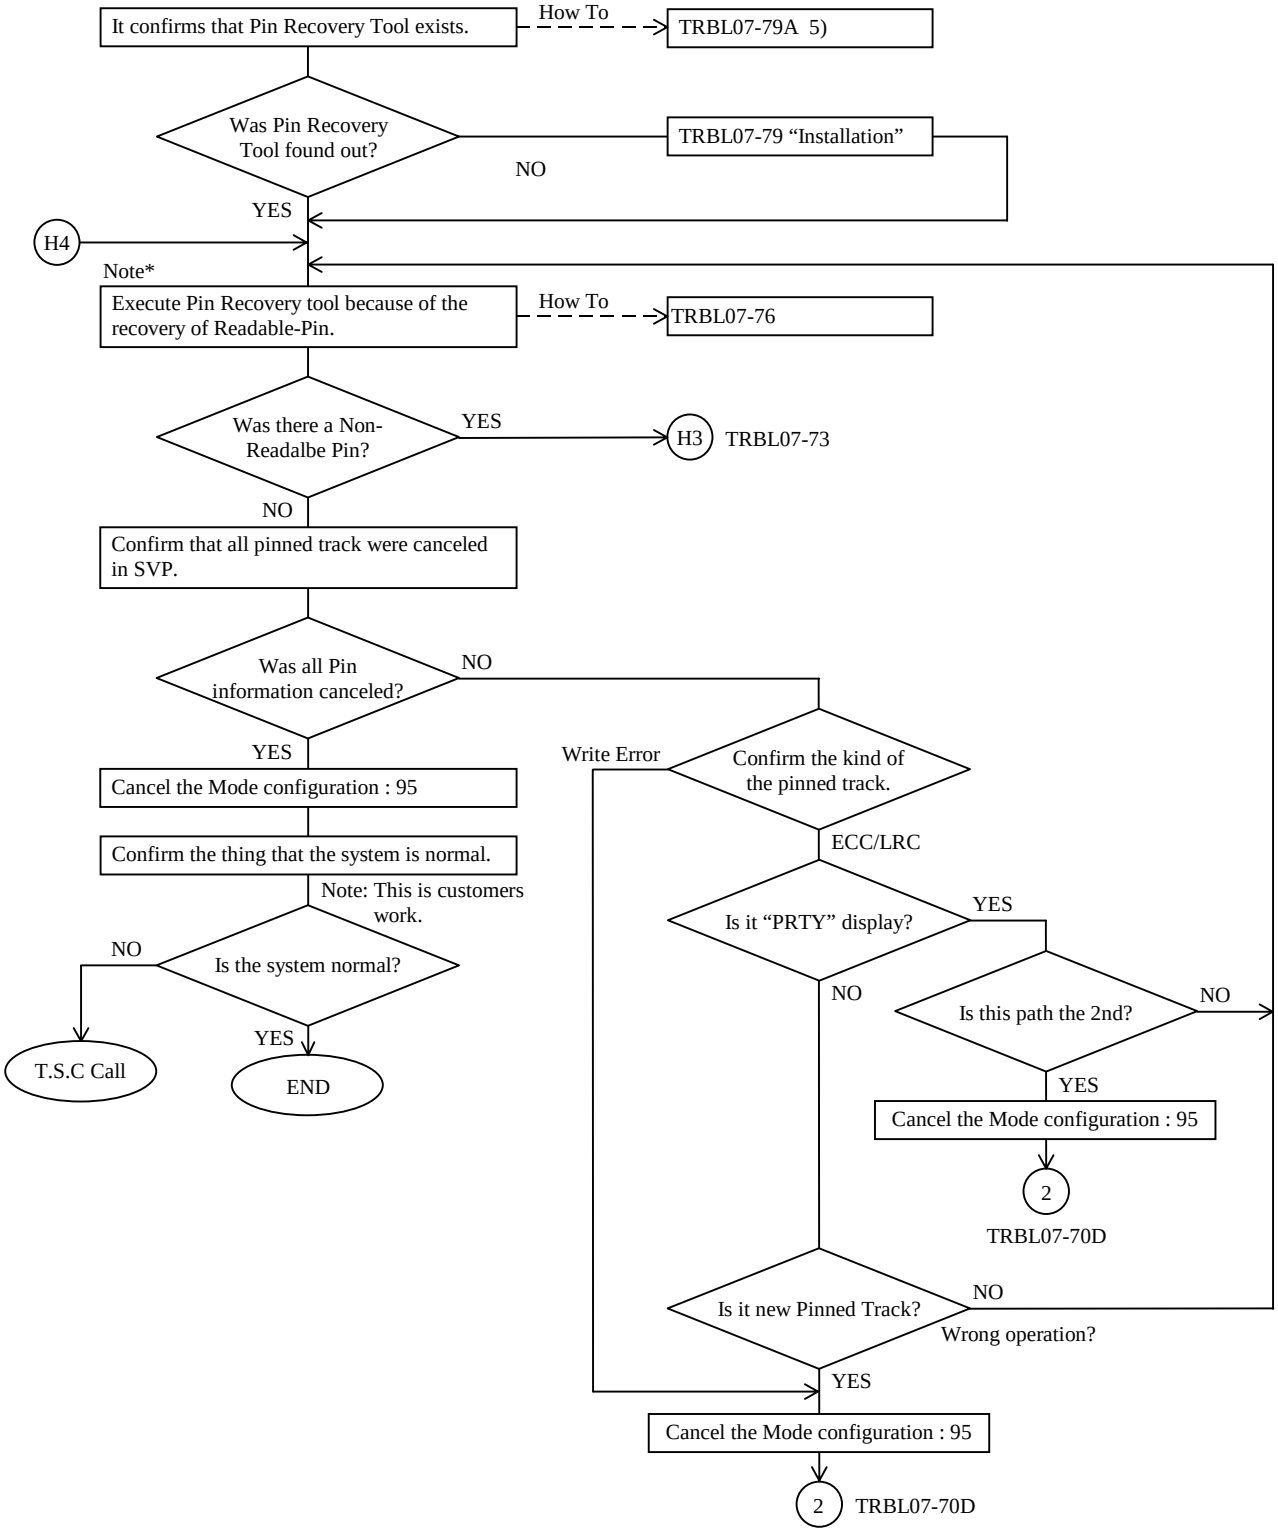
Copyright ©1999, Hitachi, Ltd.



Copyright ©1999, Hitachi, Ltd.

Readable Pin Recovery

The recovery flow in the readable pinned track by Pin Recovery Tool is as the following.

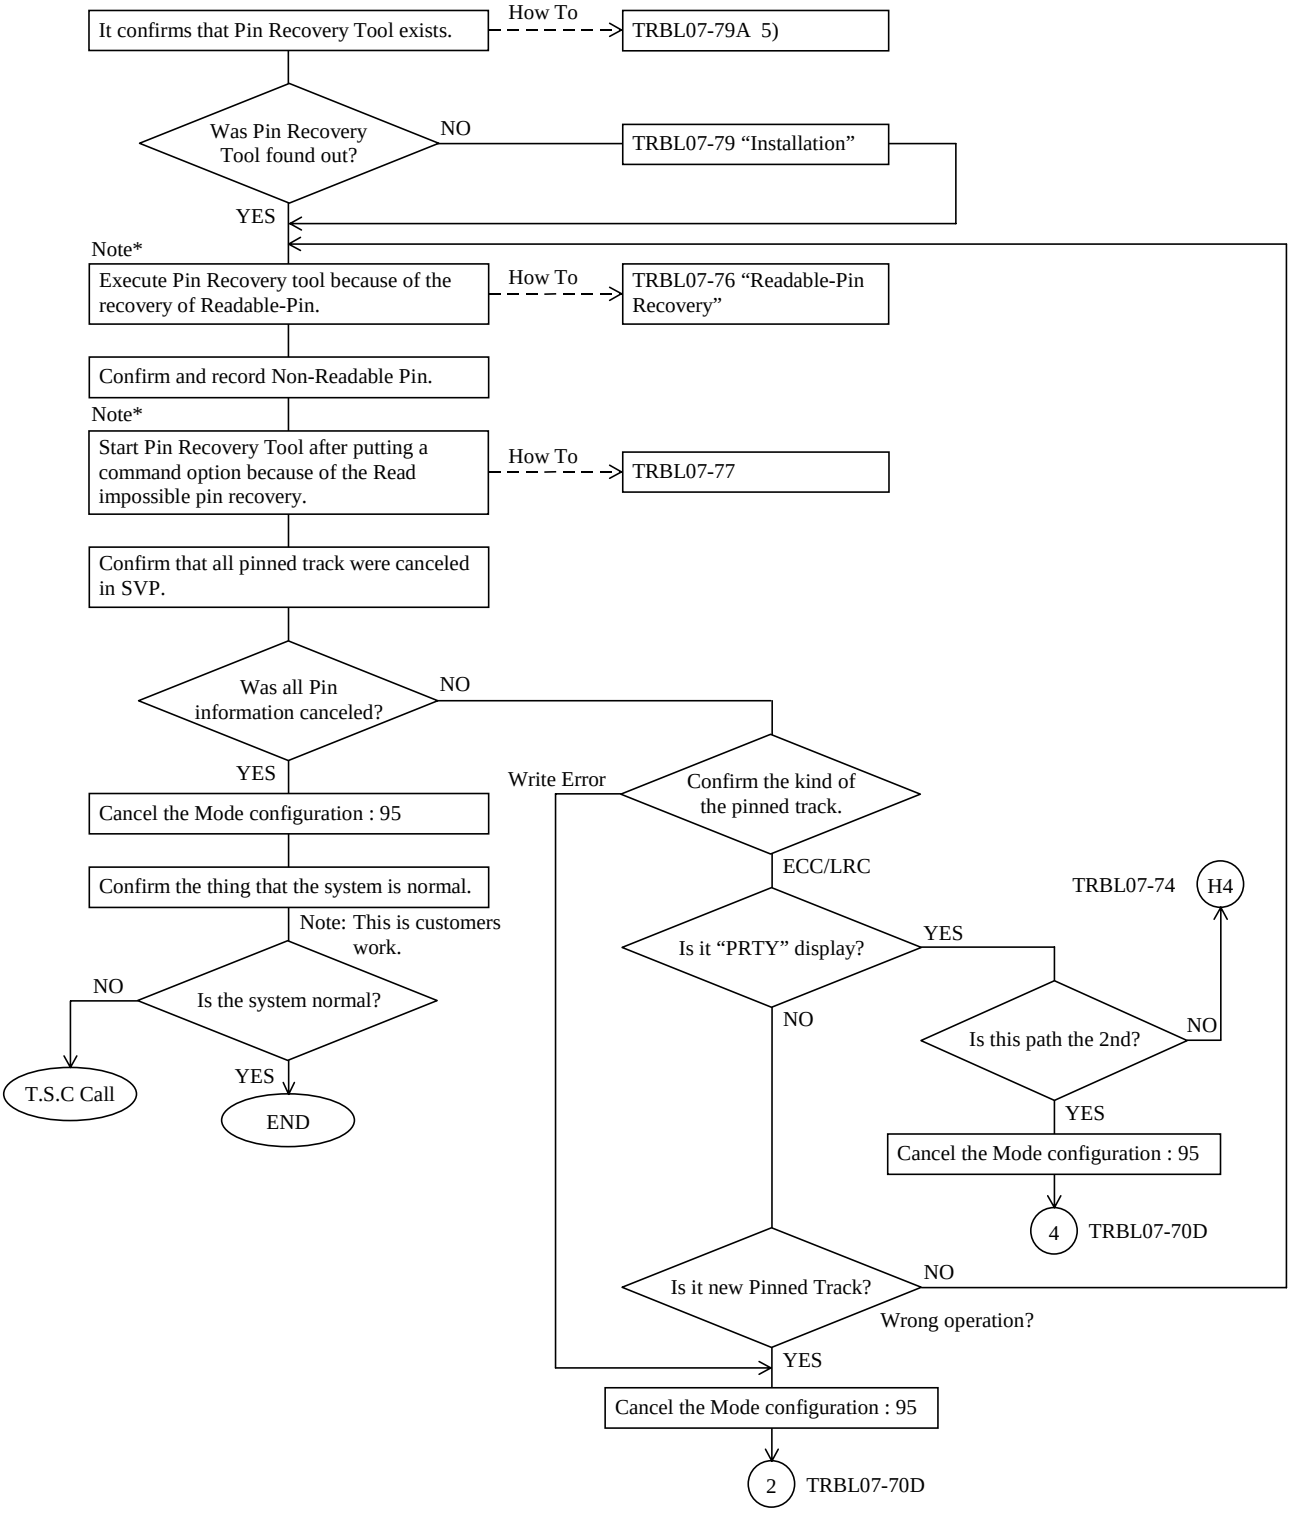


Note*: During Pin Recovery Tool execution, new Pin sometimes occurs to calculate a parity.
However, this Pin disappears when the recovery processing ends.
But, because SIM is left, complete SIM after all recovery is ended.

Copyright ©1999, Hitachi, Ltd.

Non-Readable Pin recovery

The recovery flow in the non-readable pinned track by Pin Recovery Tool is as the following.



Note*: During Pin Recovery Tool execution, new Pin sometimes occurs to calculate a parity.
However, this Pin disappears when the recovery processing ends.
But, because SIM is left, complete SIM after all recovery is ended.

Copyright ©1999, Hitachi, Ltd.

Operation of Pin Recovery Tool for the Readable-Pin recovery.

This clause explains a way of operating Pin Recovery Tool to recover Readable-Pin.
<Operation>

1) Move to directory of the pin recovery tool.
   # cd /usr/raidopen/pintools/exe

2) Execute PinRecoveryTool without the command option.
   # ./pintool -log **(Put pass "./")**
   Note: This option "-log" gathers detailed log.
   It recommends to specify this option.
   However, when processing LBA with (60)h length, the log becomes about 400KB.
   Be careful of the available capacity of the disk.
   For the details of log, refer to TRBL07-79C.

3) According to the question, input information.
   # ./pintool -log
   Input Device Name -> **/dev/rdsk/c3t0d0**
   Input Start LBA Data -> **180**
   Input End LBA Data -> **1df**
   (**Input the LBA number which was acquired from SVP. Do not input the LBA of the "slot:PRTY" display.**)
   Input Next LBA ?(Y/N) -> **n** **(When there still is a fault track in the same Device, it inputs "y".)**
   Input Next Device ?(Y/N) -> **n** **(When recovering different Device at the same time, it inputs "y".)**

4) Because an input data list is displayed, check input information.

Device Name	Start LBA	End LBA
/dev/rdsk/c3t0d0	**00000180**	**000001DF**

Before you try to recovery the readable pin,
please check the pin information on SVP.
If the pin data have been recoveried, please do not try to recovery the pin data again.
Do you want to do the recovery of the readable Pin?
Please input[y/n(default n)] : **y**

   When mistaking by the input, it inputs "n" [Return] and then it redoes from (2).
   Confirm whether or not a pinned track is canceled from the display of SVP.
   When it cancels already, input "n" [return]. When not canceled, input "y".

5) When judged Non-Readable Pin, the following message is displayed.
   Non-Readable Pin:

Device Name	Start LBA	End LBA
/dev/rdsk/c3t0d0	00000180	000001DF

   Note: This tool recognizes an inputted range as the 1 processing unit.
   Therefore, the range where Non-Readable pin exists is displayed in the inputted range.

6) When Pin Recovery Tool ends, a log file (month -day -hour -minute -second .log) is made on the same directory. (ex:0614200552.log)

Copyright ©1999, Hitachi, Ltd.

Operation of Pin Recovery Tool for the Non-Readable Pin recovery.

This clause explains a way of operating Pin Recovery Tool to recover Non-Readable Pin.

<Operation>

1) Move to directory of the Pin Recovery Tool.
   # cd /usr/raidopen/exe

2) Put a command option and execute a pin recovery tool.
   # ./pintool -f -log **(Put command option "-f")**
   Note: This option "-log" gathers detailed log.
   It recommends to specify this option.
   However, when processing LBA with (60)h length, the log becomes about 400KB.
   Be careful of the available capacity of the disk.
   For the details of log, refer to TRBL07-79C.

3) According to the question, input information.
   # ./pintool -f -log
   Input Device Name -> **/dev/rdsk/c3t0d0**
   Input Start LBA Data-> **180**
   Input End LBA Data -> **1df**
   Input the LBA number which was acquired from SVP. Do not input the LBA of the "slot:PRTY" display.
   Input Next LBA ?(Y/N) -> **n** **(when there still is a fault track in the same device, it input "y".)**
   Input Next Device ?(Y/N) -> **n** **(When recovering different device at the same time, it inputs "y".)**

4) Because an input data list is displayed, check input information.

Device Name	Start LBA	End LBA
/dev/rdsk/c3t0d0	**00000180**	**000001DF**

Before you try to recovery the readable pin,
please check the pin information on SVP.
If the pin data have been recoveried, please do not try to recovery the pin data again.
Do you want to do the recovery of the readable Pin?
Please input[y/n(default n)]: **y**

When mistaking by the Input, it Input "n"[Return] and then it redoes From (2).
Confirm whether or not a pinned track is canceled from the display of SVP.
When it cancels already, input "n"[return]. When not canceled, input "y".

Copyright ©1999, Hitachi, Ltd.

5) When judged Non-Readable Pin, the following message is displayed.

```
Non-Readable Pin:
Device Name                Start LBA          End LBA
/dev/rdsk/c3t0d0           00000180           000001DF
Do you want to do the recovery of the non-readable Pin?
WARNING! if you input 'y', Pin Blocks will be over written by '0'.
Please input[y/n(default n)]: y
```

When recovering by the "0" writing to Non-Readable Pin, input "y"[Return].

Note: This tool recognizes an inputted range as the 1 processing unit.
Therefore, the range where Non-Readable pin exists is displayed in the inputted range.

6) When Pin Recovery Tool ends, a log file (month -day -hour -minute -second .log) is made on the same directory. (ex:0614200552.log)

Copyright ©1999, Hitachi, Ltd.

Installation of Pin Recovery Tool.

This clause explains the installation of Pin Recovery Tool.

The preliminary preparation

In directory that Pin Recovery Tool is done by the installation, confirm that there is a room area for the gathering in the work log.
An installation procedure from the tape device (ex: 4mmDDS-DAT) is shown in the following.

Installation

1) Log-in to the host as “root”.
2) Move to the install area by the “cd” command and make a directory “raidopen”.
   # cd /usr (ex: Move to the “/usr”)
   # mkdir raidopen (ex: Make the directory “raidopen”)
3) Move to made directory and copy a file from the tape by the "tar" command.
   # cd raidopen (ex: Move to the “raidopen”)
   # mt -t /dev/rmt/0m rew (ex: Rewing a tape. “0m”depend on each host.)
   # tar -xvf /dev/rmt/0m (ex: copy a file from the tape.)
4) Thaw a compressed file “pintools.tar.Z” by “zcat” command.
   # zcat pintools.tar.Z | tar -xvf

Copyright ©1999, Hitachi, Ltd.

5) After the thawing is complete, confirm a file name.

 # cd ./pintools/exe (ex: Move to directory which was made by the thawing.)
 # ls -l (ex: Display a file list.)

* Confirm foure files. **p83h(20531bytes), Cpintool(45240bytes), Cshowrel(1163bytes), pinformattool(45241bytes)**

File preservation and the way of removing Pin Recovery Tool.

Log-File preservation

1) Compress the log file which was made by the pin recovery.

 # cd /usr/raidopen/pintools/exe (ex: Move to the working directory.)
 # mkdir ./logdir (ex: Make to the directory for Log-file.)
 # mv *.log ./logdir (ex: Move logfiles to the directory for Log-file.)
 # tar -cvf pinlog.tar ./logdir (ex: Make tar file from logdir.)
 # compress pinlog.tar (ex: Compress “pinlog.tar” file.)

2) Preserve log file at the tape and rewind it..

 # tar -cvf /dev/rmt/0m pinlog.tar.Z (ex: Preserve log file)
 # mt -t /dev/rmt/0m rew (ex: rewind the tape)

The way of removing Pin Recovery Tool

The removal of the Pin Recovery Tool deletes all bottoms of install directory.

 # cd / (ex: Move to the root directory.)
 # \rm -r /usr/raidopen/pintools* (ex: deletes all bottoms of install directory)

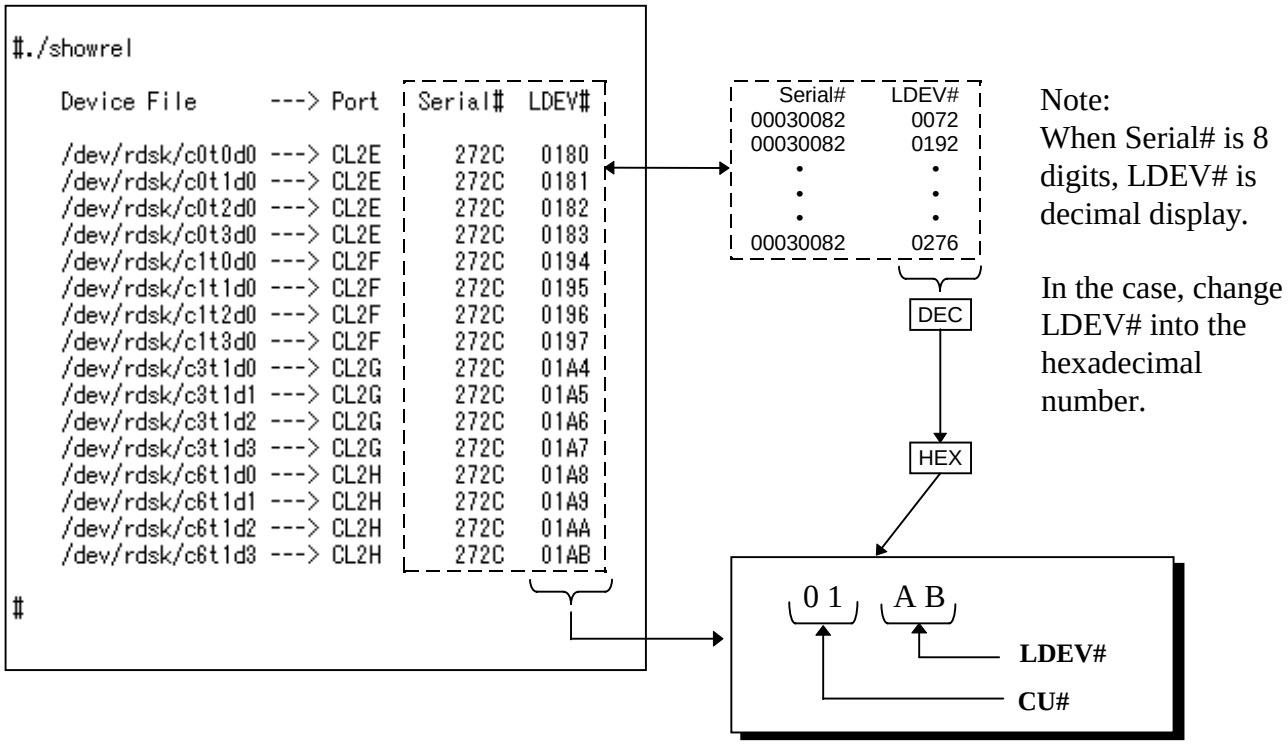
Copyright ©1999, Hitachi, Ltd.

The acquisition of the device information

This chapter is the explanation of the tool “showrel” to acquire device information.

1) Move to the install directory.
   # cd /usr/raidopen/pintools/exe
2) Input command as follows.
   # ./showrel (Put the path “./”)

<Display Example>



Note:
When Serial# is 8 digits, LDEV# is decimal display.

In the case, change LDEV# into the hexadecimal number.

“LDEV#” is composed of CU number and LDEV number. Confirm CU# and LDEV# of the pinned track occurrence which is displayed in SVP and specify a recovering device file.
Device File name is input information to Pin Recovery Tool.

(Example)
LDEV# = **01AB** → Device File = **/dev/rdsk/c6t1d3**

Copyright ©1999, Hitachi, Ltd.

The way of gathering detailed information.

It is possible to do the gathering of the detailed information of the recovery when putting a command option to Pin recovery Tool and starting it.

 # ./ pintool (-f) -log

Like the following, it outputs read data and write data in the log file.
<Display Example>

LBA which could not be read is displayed by "*".

```
Input Device Name = /dev/rdsk/c1t0d0
Input Start LBA = 00000180
Input End LBA = 000001DF        Non-Readable data!
/dev/rdsk/c1t0d0, Start LBA = 00000180, End LBA = 000001df readable PIN Recovery read error
Read Data:  Top Pin No = 00000180 <-- Execute LBA!

The way of examining Mount Point which has a Pinned Track

Note : As for the following work, request a system administrator to operate.

1) Input the "vgdisplay" command and displaying a Volume Group list.

   # vgdisplay -v

2) Specify “lvol(/dev/vgx/lvolx)” which is composed of Physical Volume(cxtxdx) which the Pinned Track occurs to.

<Display Example>

```
--- Volume groups ---
VG Name                     /dev/vg11
VG Write Access             read/write
VG Status                   available
Max LV                      255
Cur LV                      1
Open LV                     1
Max PV                      16
Cur PV                      4
Act PV                      4
Max PE per PV               1016
VGDA                        8
PE Size (Mbytes)            4
Total PE                    2344
Alloc PE                    2000
Free PE                     344
Total PVG                   0
Total Spare PVs             0
Total Spare PVs in use      0

--- Logical volumes ---
LV Name                     /dev/vg11/lvol1
LV Status                   available/syncd
LV Size (Mbytes)            8000
Current LE                  2000
Allocated PE                2000
Used PV                     4

--- Physical volumes ---
PV Name                     /dev/dsk/c9t1d0
PV Status                   available
Total PE                    586
Free PE                     0

PV Name                     /dev/dsk/c9t1d1
PV Status                   available
Total PE                    586
Free PE                     0

PV Name                     /dev/dsk/c9t1d2
PV Status                   available
Total PE                    586
Free PE                     0

PV Name                     /dev/dsk/c9t1d3
PV Status                   available
Total PE                    586
Free PE                     344
```

Volume Group Name

"/dev/vgl1/lvol1" is a Volume Group("/dev/vgl1") made in.

PV(cxtxdx) which composes volume group "/dev/vgl1" is displayed.

Copyright ©1999, Hitachi, Ltd.

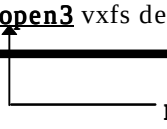
3) It displays "./etc/fstab".

#cat /etc/fstab

4) It specifies mount point for PV which was confirmed in "vgdisplay".

<Display Exsample>

```
# System /etc/fstab file.  Static information about the file systems
# See fstab(4) and sam(1M) for further details on configuring devices.
/dev/vg00/lvol3 / vxfs delaylog 0 1
/dev/vg00/lvol1 /stand hfs defaults 0 1
/dev/vg00/lvol4 /tmp vxfs delaylog 0 2
/dev/vg00/lvol5 /home vxfs delaylog 0 2
/dev/vg00/lvol6 /opt vxfs delaylog 0 2
/dev/vg00/lvol7 /usr vxfs delaylog 0 2
/dev/vg00/lvol8 /var vxfs delaylog 0 2
/dev/vg00/lvol10 /home1 vxfs rw,suid,nolargefiles,delaylog,datainlog 0 2
/dev/vg11/lvol1 /open3 vxfs delaylog 0 4
```



mount point

5) Input the "bdf" command and confirm the mount point.

#bdf

<Display Example>

```
Filesystem          kbytes    used   avail %used Mounted on
/dev/vg00/lvol3      86016   26109   56212   32% /
/dev/vg00/lvol1      67733   31932   29027   52% /stand
/dev/vg00/lvol8     512000  159876  331072   33% /var
/dev/vg00/lvol7     614400  428475  174362   71% /usr
/dev/vg00/lvol4      32768    1131   29663    4% /tmp
/dev/vg00/lvol6     258048  102174  146171   41% /opt
/dev/vg00/lvol1 01544192    2858 1445062    0% /home1
/dev/vg00/lvol5      20480    6078   13595   31% /home
/dev/vg11/lvol1    8192000 3149893 4726982   40% /open3
```

6) Mount Point to check by the "sum" command is decided.

Copyright ©1999, Hitachi, Ltd.

The attention item.

This clause explains the attention item when using Pin Recovery Tool.

The attention item about the Pin Recovery Tool use.

1) The pinned track LBA to input to Pin Recovery Tool put the value of the 1 slot unit which was displayed in SVP. 1 slot is composed of 96 LBA ((60)h LBA). At less than 96 values, the fault can not be canceled.
2) Pin Recovery Tool is not the tool to make data recover. Therefore, when Un-readable Pin occurs, it is necessary to be restored using the back-up data of the customer.
3) There is a case that O/S patch is prepared which has an influence to the fault track reed operation. In case of HP Server which has Fibre Interface, the following patch is necessary.
   - PHSS_18326 Fibre Channel Mass Storage Driver Patch. (HP-UX10.2/11.0)
   - PHCO_18217 Cumulative SAM/ObAM Patch. (HP-UX10.2)
   - PHKL_16751 SIG_IGN/SIGCLD,LVM,JFS,PCI/SCSI cumulative patch. (HP-UX10.2)

   These patch information is the Jun/99 present.
   The patch information of OS changes in the time. Confirm the latest information.
   Request the work to install patch in of the system administrator.
   When the system administrator judges an evil influence in the system, cancel the Mode Configuration:95 and return to TRBL07-70D ④.
4) When it isn't possible to use Pin Recovery Tool, it is recovery by LDEV Format.

The recovery of the DB

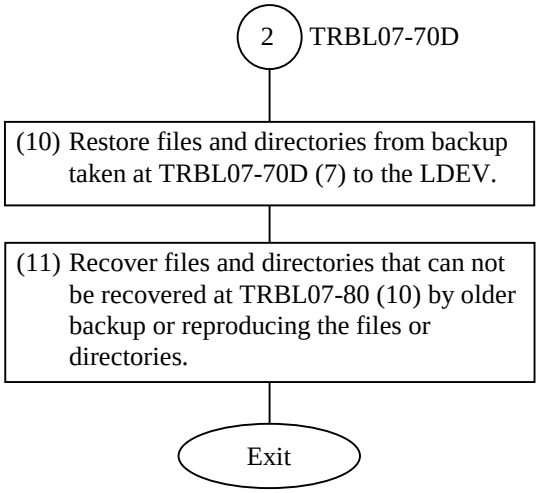
DB has two types of the following.

1) Raw device-based Data Base type :
   Without passing O/S, by the physical level, the data base soft wear is managing a disk. (It shows to be managing by the LBA unit with the physical level.)
   The device of local type isn't mounted on File System. Then, it has a powerful back-up function.
2) File system-based Data Base type :
   Therefore, it is recognized as the file which was made with file system.

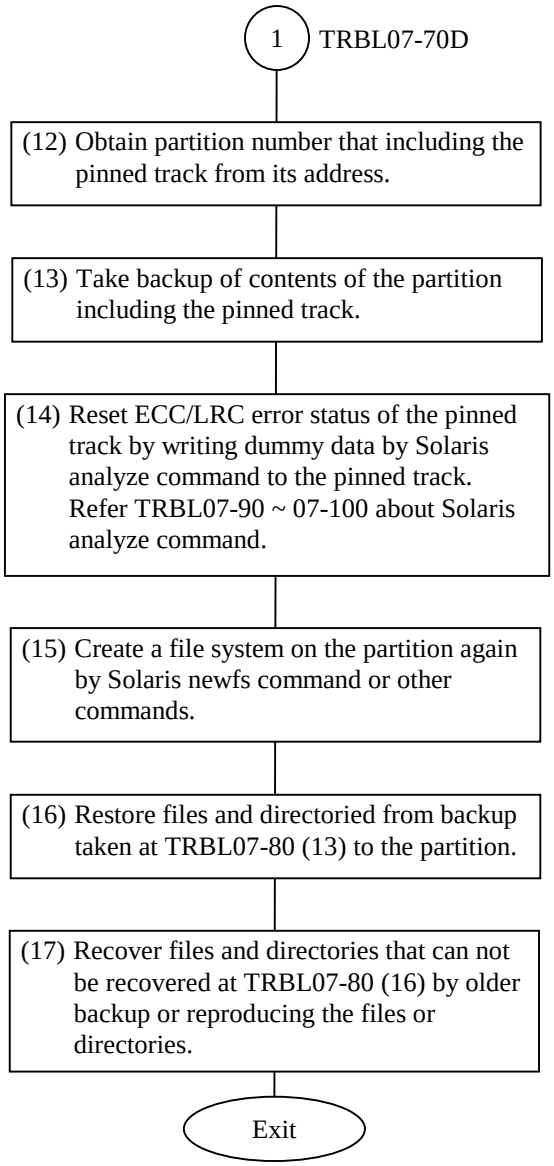
In case of (2), because it is possible to be seen through File System, the "sum" checking can be executed but at (1), it must depend on the function of DB in all of the back-up work..

If a fault track is still left after back-up work is ended, recover by Pin Recovery Tool.
The work of the most priority is the execution of the DB back-up function.

Copyright ©1999, Hitachi, Ltd.



In case of Solaris



Copyright ©1998,1999, Hitachi, Ltd.

(2) In case of Solaris : reset ECC/LRC error status of pinned track by Solaris analyze command

ECC/LRC error status of pinned track can be resetted by writing dummy data by analyze command in case of the LDEV containing the pinned track is connected to Solaris.
The procedure is described below. Input commands are shown by boldface characters.

1) Login to the Solaris as supseruser
Example

```
host console login: root↵
password: sorry↵
```

2) Writing dummy data to the pinned track by analyze command
Analyze command is subcommand of format command
Example

```
# format↵
Searching for disks...done

AVAILABLE DISK SELECTIONS:
  (recognized SCSI disks are listed here.)
Specify disk (enter its number):n↵              ...device number of the LDEV
                                                   including the pinned track.
selecting  n
[disk formatted]

FORMAT MENU:
  (format command menu is listed here.)
format> analyze↵
  (analyze subcommand menu is listed here.)
analyze> setup↵
Analyze entire disk[no]? no↵
Enter starting block number[0, 0/0/0]: starting LBA of the pinned track
Enter ending block number[5806479, 3336/14/115]: ending LBA of the track
Loop countinuously[no] no↵
Repair defective blocks[yes] ↵
Stop after first error[no] ↵
Use random bit parrerns[no] ↵
```

Copyright ©1998, Hitachi, Ltd.

```
Enter number of blocks per transfer[126, 0/1/10]: 1↵
Verify media after formatting [yes]? no↵
Enable extended messages[no]? yes↵
Restore defect list[yes]? ↵
Restore disk label[yes]? ↵

analyze> write↵
Ready to analyze (will corrupt data). This takes a long time,
but is interruptable with CTRL-C. Continue? y↵

    PASS 0 - pattern = c6dec6de
  cylinder number/head number/block counts

Total of 0 defective blocks repaired.
analyze> quit↵
```

(Note)

1) Above procedure and messages may be differ by Solaris versions.
2) Device number cxtxdx used for Solaris is different from DKC310 LDEV number.
   Device number cxtxdx should be obtained by DKC310 SCSI path configuration.
   (a) Isolate LDEV number of the LDEV containing the pinned track by SVP.
   (b) Obtain the SCSI port number (CL1A through CL2R) and SCSI target ID and LUN that constructing the SCSI path from Solaris to the LDEV.
   (c) Login to Solaris as superuser and execute format command.
   Determine device number cxtxdx by SCSI port number and SCSI target ID and LUN and the SCSI board installed into SUN to which the DKC310 SCSI port is connected.
3) Whole track range must be specified by starting LBA and ending LBA.
   1 track has 96 blocks in case of OPEN-3 and OPEN-9.
   It happens that pinned track is not correctly resetted if whole track range is not specified.
4) Data written on pinned track must be recovered by backup file because analyze command writes dummy data on pinned track.
5) The files or directories written with dummy data can not be determined because of structure of UNIX file systems.
   The whole files and directories on the partition containing pinned track must be recovered from backup file.

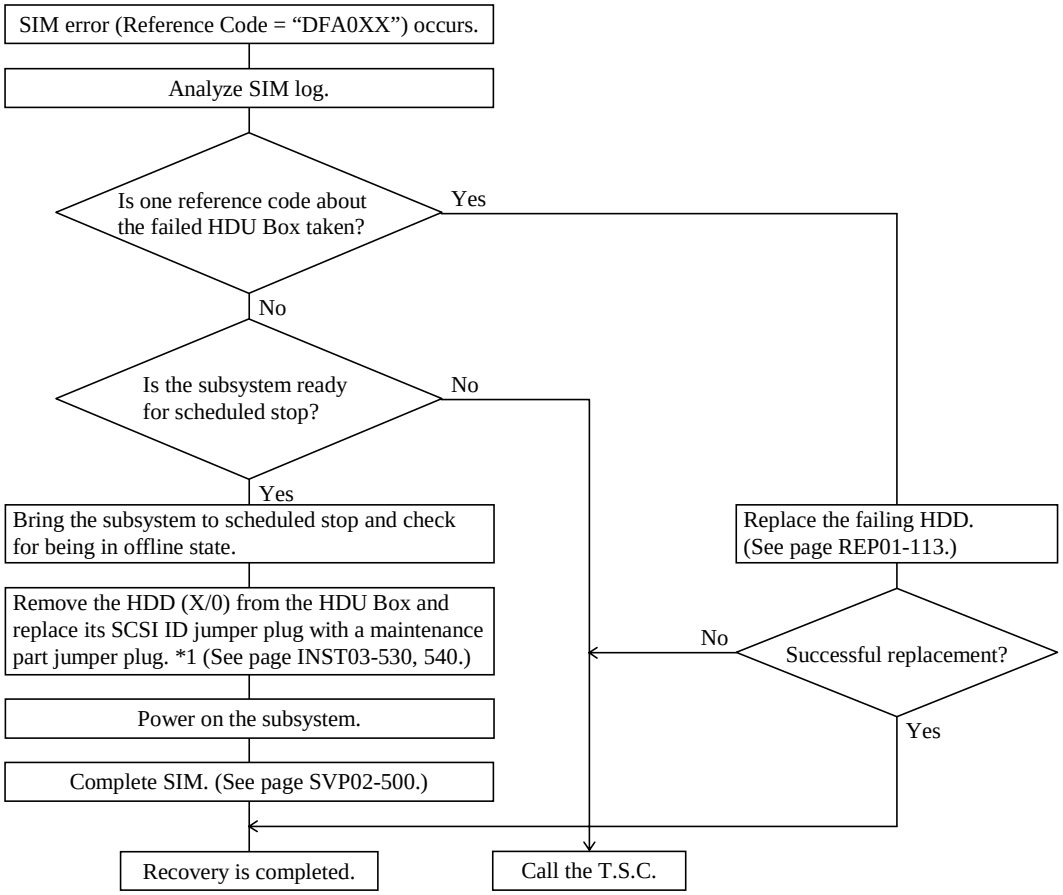
10 SCSI ID Error Isolation and Recovery Procedure (SIM = DFA0XX)

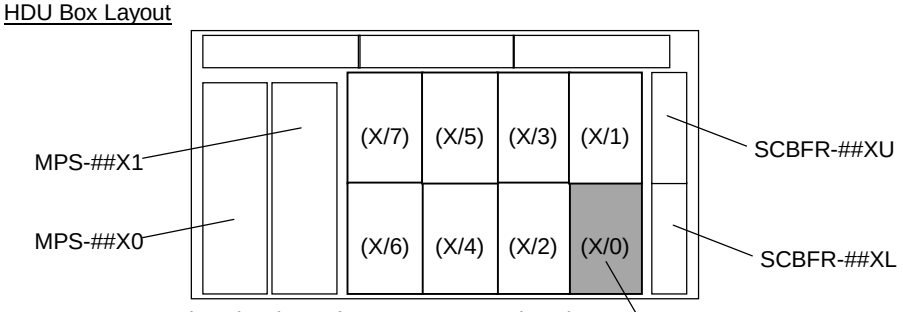
When a SCSI ID error occurs, isolate and recover the error according to the following flow chart.



*1: Before replacing a SCSI ID jumper plug, remove the HDD at the HDD canister location (X/0) in HDU Box. In addition, be sure to reinstall a removed HDD at the original canister location.

Caution: The jumper setting positions vary with the DKU location. A wrong setting can cause a serious problem. Take much care not to set the jumpers incorrectly.

HDU Box Layout

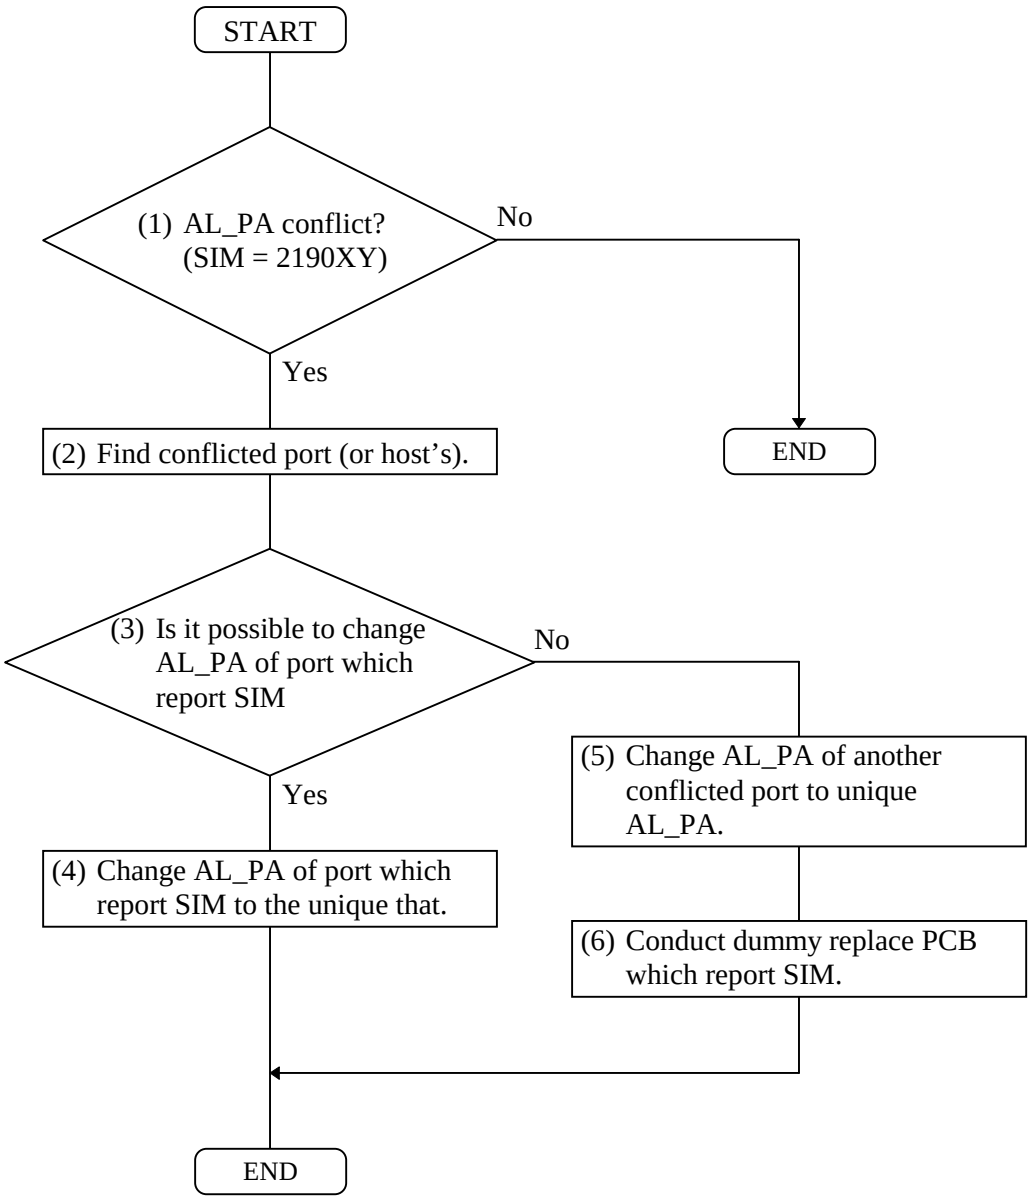


Note 1: ##X = HDU Box location (any of R01, R11, ..., and L27)
Note 2: The HDD canister location is represented in the "Column/Row" form in the SSB and SIM logs.
Column No.: Lower one digit of HDU Box locations
Row No.: 0, 1, 2, ..., or 7

Copyright ©1999, Hitachi, Ltd.

11 Recovery procedure of AL_PA conflict (SIM = 2190XY)

The recovery procedure is shown, when AL_PA of the node (CHT port, Host's Fibre channel port) which exists on the same loop overlaps. Before recovery procedure, AL_PA of port which reported SIM is automatically changed into the other AL_PA from previously given AL_PA. But AL_PA doesn't change on SVP.



The change AL_PA of *(3) propriety is the judgment in the use.

Copyright ©2000, Hitachi, Ltd.

12 CHT PCB type inconsistency [4GL ↔ 4GS] (SIM = 399FX0)

The following procedure shows the way of recovery when the SIM which means the PCB replacement impossible is reported.

- CHT PCB exchange impossible [4GL ↔ 4GS] (REF code = 0x399FX0:X = PCB#)
  ① Distinguish the type of CHT(4GL/4GS) from PCB product name for PCB# in REF code of SIM.
  [Product Name] WP256-A/x: Short Wave (for 4GS)
  [Product Name] WP256-B/x: Long Wave (for 4GL)
  ② When the PCB is 4GS → Following replacement procedure to 4GL
  When the PCB is 4GL → Following replacement procedure to 4GS

  * [Abbreviation] 4GS ---- DKC-F310I-4GS (for ShortWave)
  4GL --- DKC-F310I-4GL (for LongWave)

REPLACE SECTION

⚠ SAFETY SUMMARY

Notes on the operation on the password inputting screen.
The password inputting screen is displayed on the SVP screen to arouse maintenance person's attention when the operation concerned can cause a serious failure such as a system down or a data loss.

- When the password inputting screen is displayed, be sure to observe the cautions given in the procedure concerned in the maintenance manual.
- When a confirmation by the technical support center is required in the maintenance manual, be sure to get it before executing the maintenance procedure concerned.
- Each PCB is operated by the microprogram owned by it individually.
  If the PCB is replaced in the procedure that makes the version of the microprogram disagree with that of the PCB, the subsystem cannot operate normally. Be sure to make the revisions consistent each other.

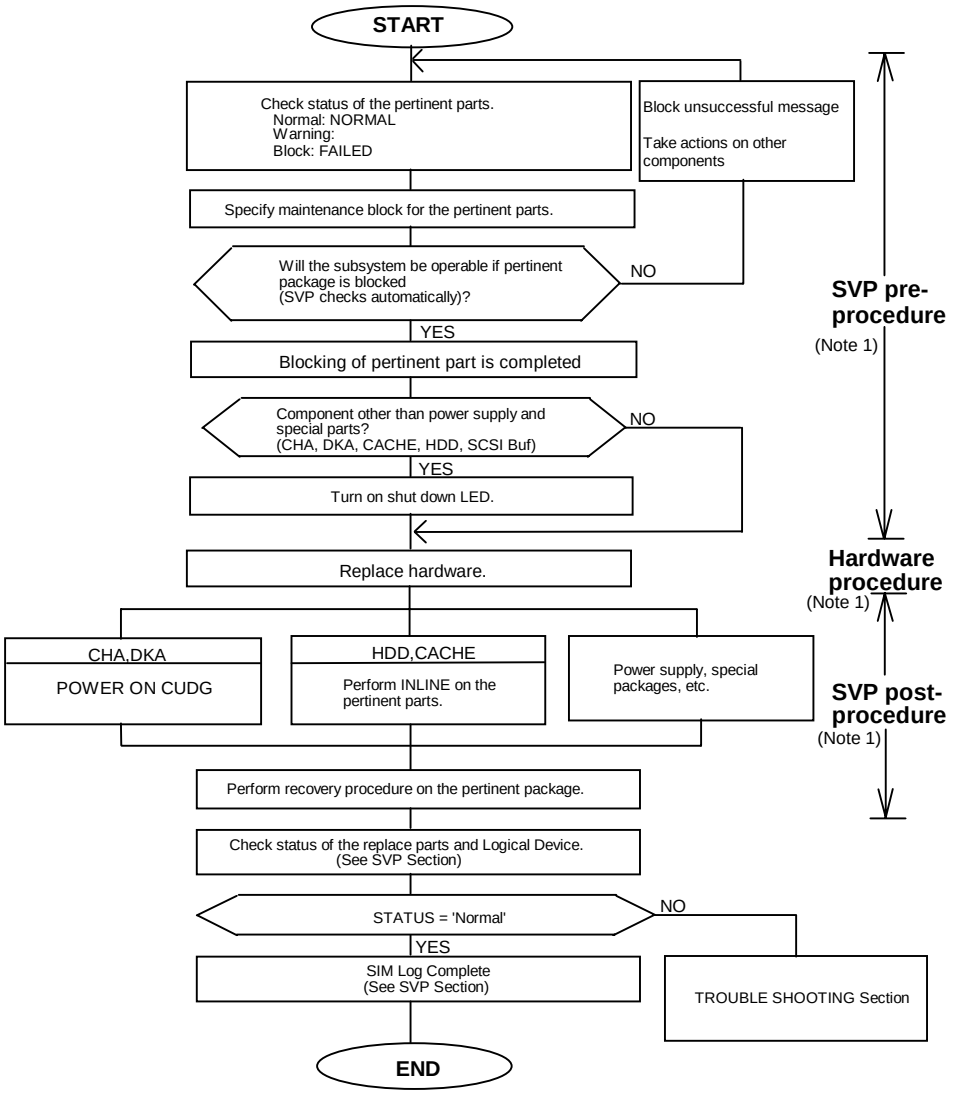
1 Hot Replace

1.1 Hot Replace Flowchart



Note 1:

SVP pre-procedure: An SVP (PC) process of issuing a maintenance block instruction after checking the status of the parts to be replaced so that the live parts can be removed and replaced.

Hard ware procedure: A process of removing a parts to be replaced (shut down LED on) and installing a maintenance package.

Be sure to wear your wrist strap, and attach to ground, prior to performing the following work.
This will insure that the IC and LSI on the PCB, are protected from static electricity.

SVP post-procedure: An SVP (PC) process of making functional checks (CUDG and INLINE) on the replacement package and building it into the subsystem.

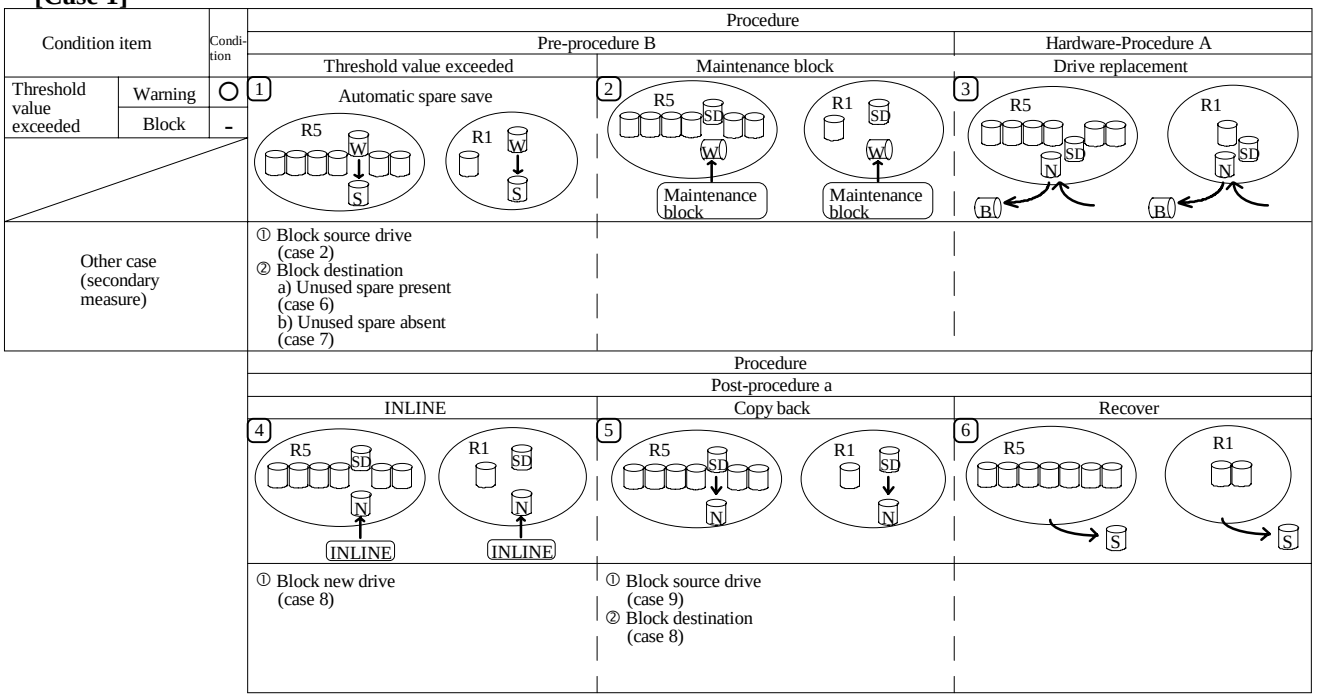
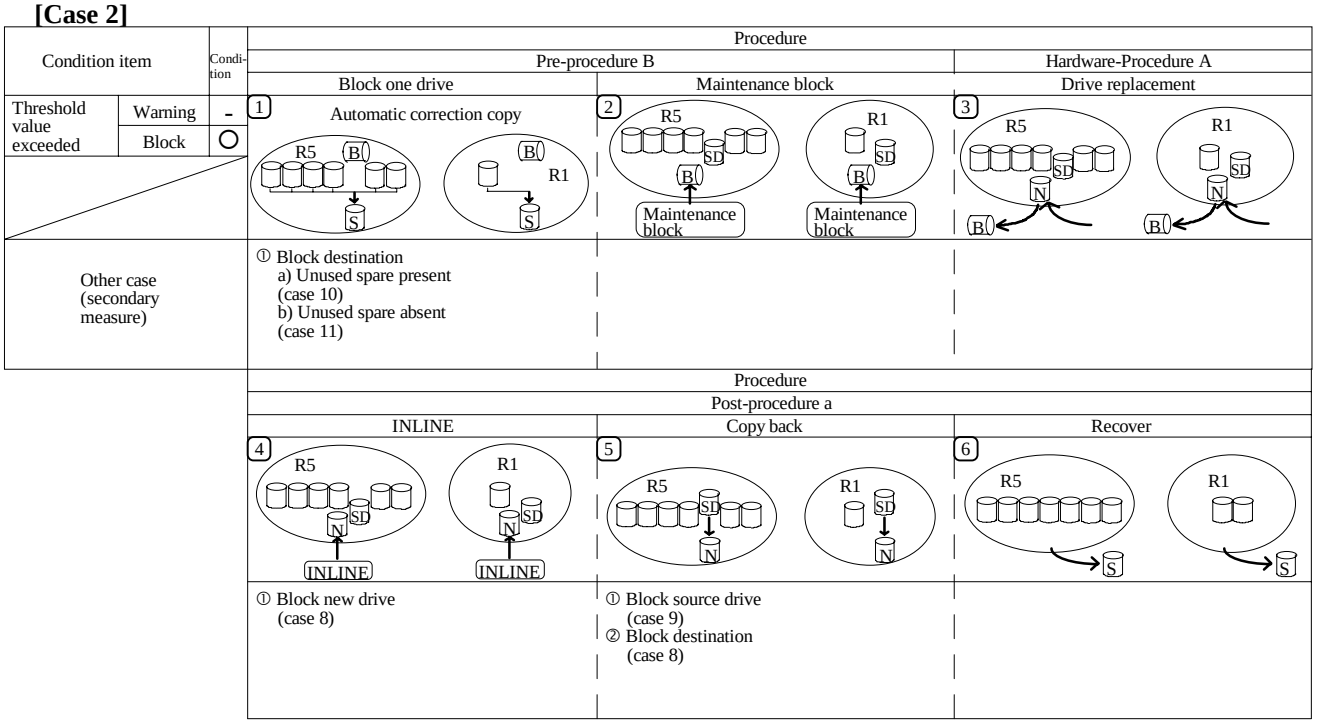
1.2 Concept of Drive Maintenance

[Spare drive present]

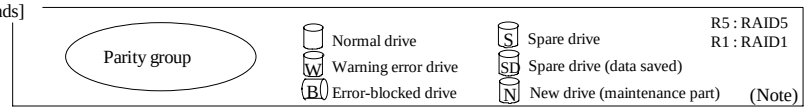
[Case 1]



[Case 2]



[Legends]

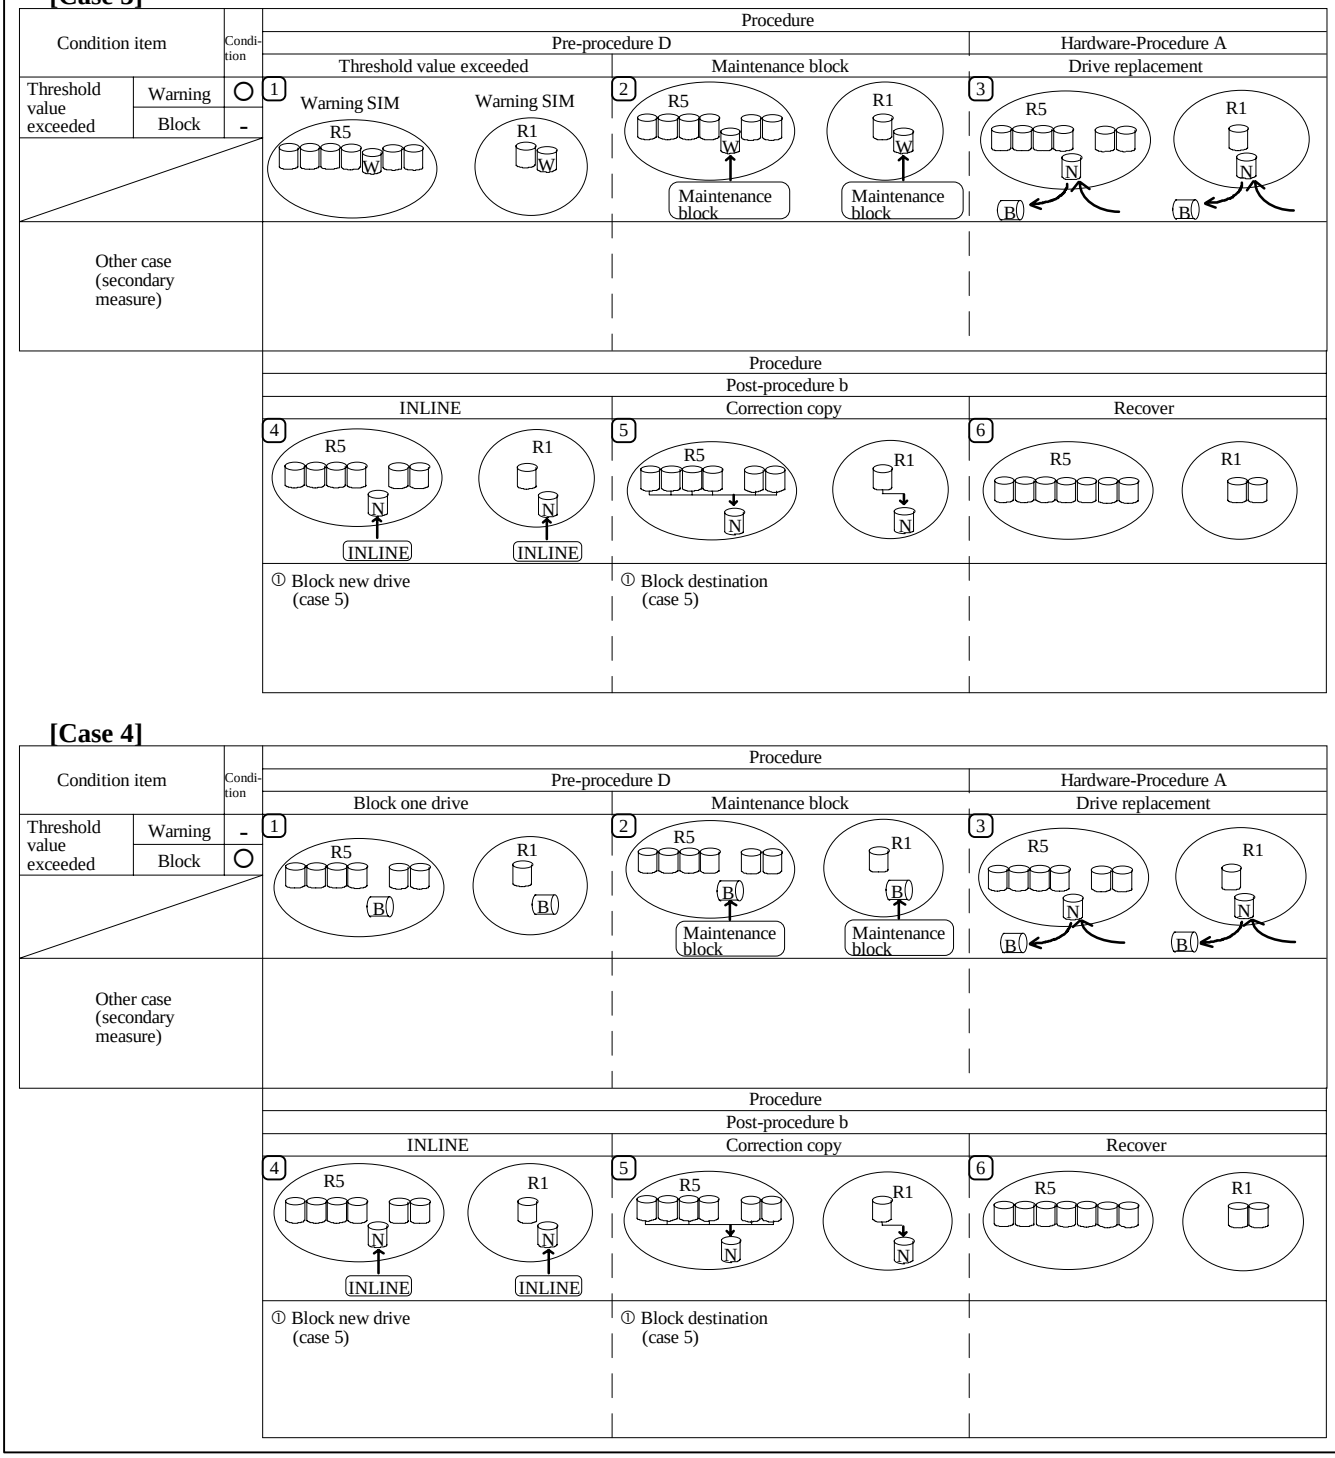


(Note) In RAID 1 method, Parity group consists of two drives.

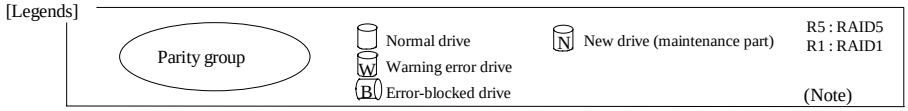
Copyright ©1997, Hitachi, Ltd.

[Spare drive absent]

[Case 3]



[Case 4]



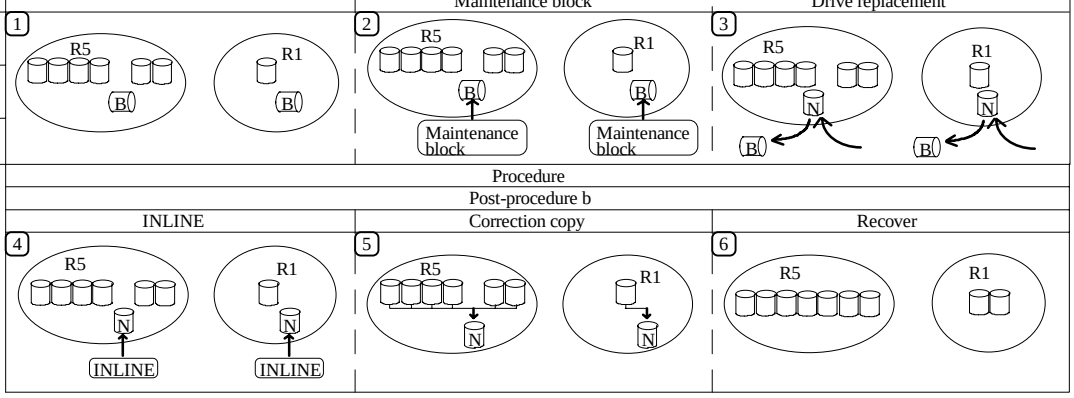
(Note) In RAID 1 method, Parity group consists of two drives.

Copyright ©1997, Hitachi, Ltd.

[Case in which a secondary error occurred during error]

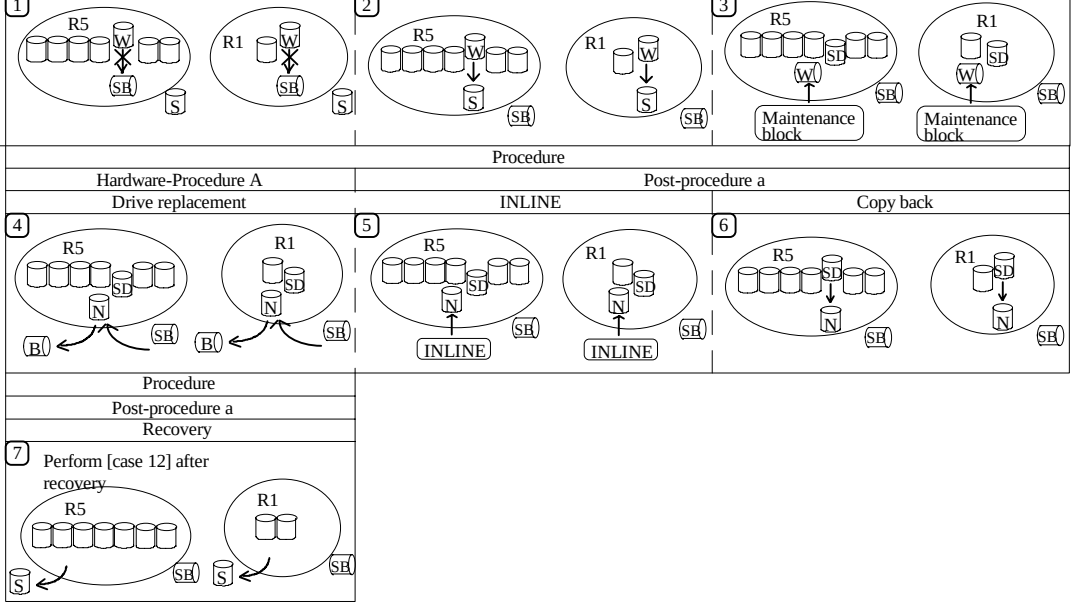
[Case 5]

Condition item	Procedure		
	Pre-procedure D	Maintenance block	Hardware-Procedure A / Drive replacement
Blocked during INLINE Destination blocked during correction copy	1	2	3
	Procedure		
	Post-procedure b		
	INLINE	Correction copy	Recover
	4	5	6

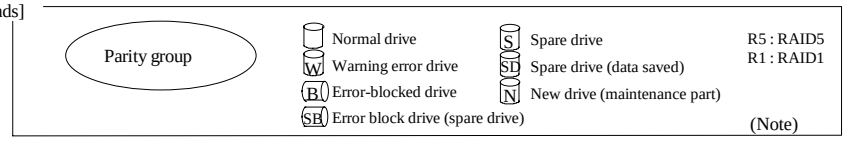


[Case 6]

Condition item	Procedure		
	Pre-procedure B	Re-automatic spare save	Maintenance block
Destination blocked during automatic spare save (unused spare present)	1	2	3
	Procedure		
	Hardware-Procedure A / Drive replacement	Post-procedure a / INLINE	Copy back
	4	5	6
	Procedure		
	Post-procedure a		
	Recovery		
	7 Perform [case 12] after recovery		



[Legends]



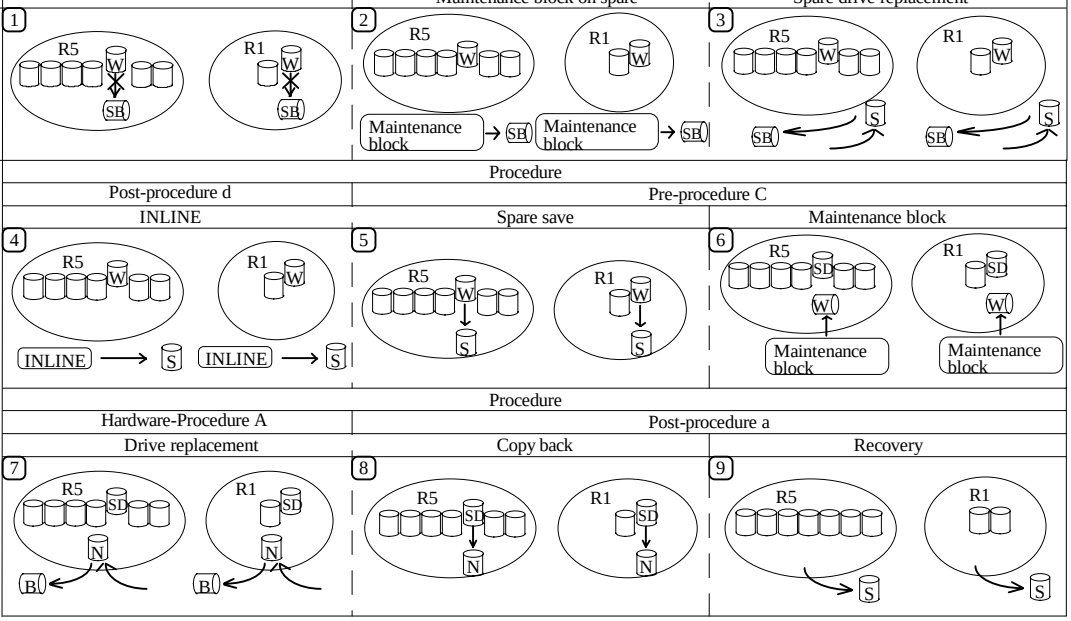
(Note) In RAID 1 method, Parity group consists of two drives.

Copyright ©1997, Hitachi, Ltd.

[Case in which a secondary error occurred during error recovery]

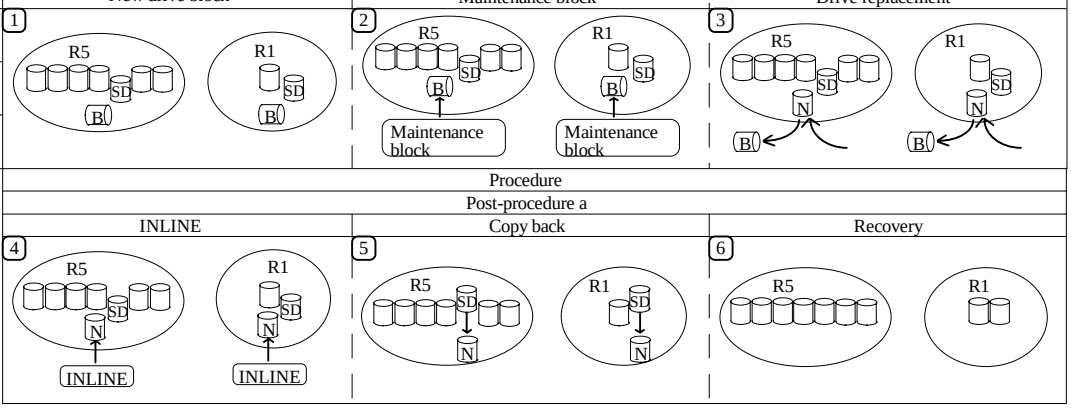
[Case 7]

Condition item	Procedure		
	Pre-procedure D		Hardware-Procedure A
	Maintenance block on spare		Spare drive replacement
Destination blocked during automatic spare save (unused spare absent)	1	2	3
	Procedure		
	Post-procedure d	Pre-procedure C	
	INLINE	Spare save	Maintenance block
	4	5	6
	Procedure		
	Hardware-Procedure A	Post-procedure a	
	Drive replacement	Copy back	Recovery
	7	8	9

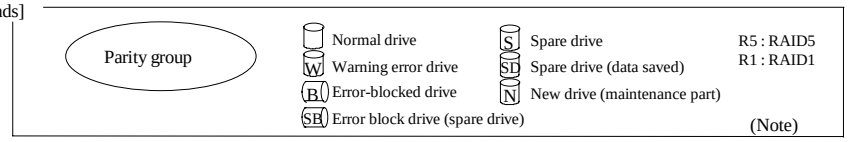


[Case 8]

Condition item	Procedure		
	Pre-procedure D		Hardware-Procedure A
	New drive block	Maintenance block	Drive replacement
New drive blocked (spare saved)	1	2	3
New drive blocked (correction copy performed)			
Destination blocked during copy back			
	Procedure		
	Post-procedure a		
	INLINE	Copy back	Recovery
	4	5	6



[Legends]



(Note) In RAID 1 method, Parity group consists of two drives.

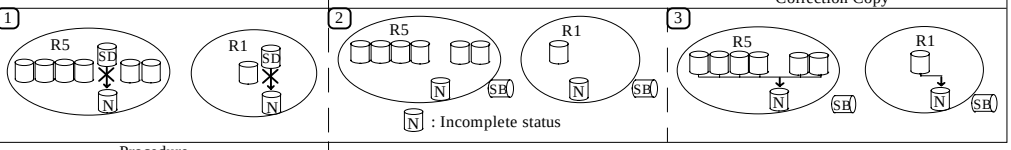
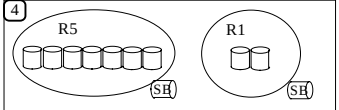
[Case in which a secondary error occurred during error recovery]

[Case 9]

Condition item	Procedure		
	Pre-procedure D		Post-procedure b
			Correction Copy
Source blocked during copyback	1	2	3



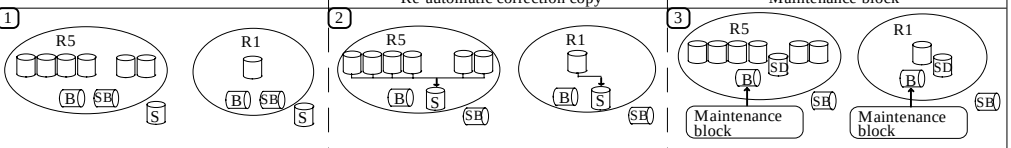
Procedure
Post-procedure b
Correction Copy
4



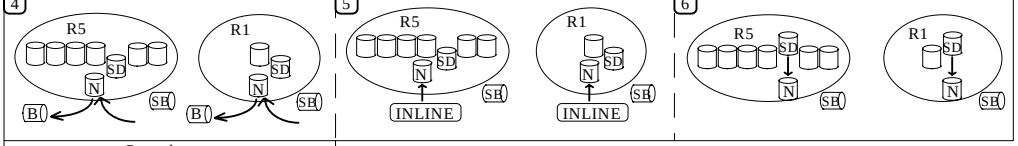
After recovering execute [Case 12].

[Case 10]

Condition item	Procedure		
	Pre-procedure B		
		Re-automatic correction copy	Maintenance block
Destination blocked during automatic correction copy (unused spare present)	1	2	3

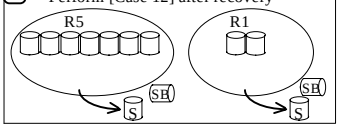


Procedure		
Hardware-Procedure A	Post-procedure a	
Drive replacement	INLINE	Copy back
4	5	6



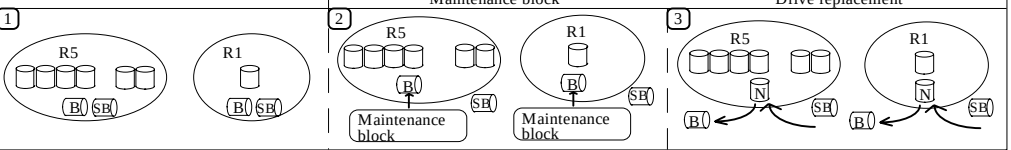
Procedure
Post-procedure g
Recovery
7

Perform [Case 12] after recovery



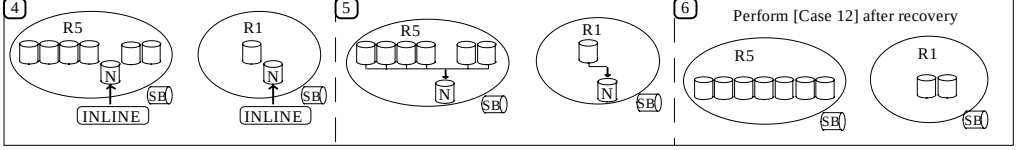
[Case 11]

Condition item	Procedure	
	Pre-procedure D	Hardware-Procedure A
	Maintenance block	Drive replacement
Destination blocked during automatic correction copy (unused spare absent)	1	2	3



Procedure		
	Post-procedure b	
INLINE	Correction copy	Recovery
4	5	6

Perform [Case 12] after recovery



[Legends]

[Other cases]

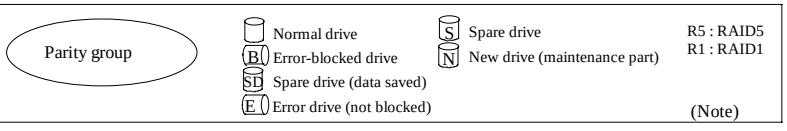
[Case 14] (Preventive drive replacement 1)

Condition item		Condition	Procedure		
			Pre-procedure C		
			Replacement	Spare save	Maintenance block
Threshold value exceeded	Warning	-	1 Unusual noise, etc. (R5) Unusual noise, etc. (R1)	2 R5 → S, R1 → S	3 R5 (SD, B) Maintenance block; R1 (SD, B) Maintenance block
	Block	-			
Others (unusual noise, etc.)		○			
Spare drive		○			
Other case (secondary measure)				① Block source drive (case 2) ② Block destination drive a) Unused spare present (case 6) b) Unused spare absent (case 7)	
			Procedure		
			Hardware-Procedure A	Post-procedure a	
			Drive replacement	INLINE	Copy back
			4 R5 (SD, N, B) R1 (SD, N, B)	5 R5 (SD, N) INLINE; R1 (SD, N) INLINE	6 R5 (SD, N) R1 (SD, N)
Other case (secondary measure)				① Block new drive (case 8)	① Block source drive (case 9) ② Block destination drive (case 8)
			Procedure		
			Post-procedure a		
			Recovery		
			7 R5 (S) R1 (S)		

[Case 15] (Preventive drive replacement 2)

Condition item		Condition	Procedure		
			Pre-procedure D		Hardware Procedure A
			Replacement	Maintenance block	Drive replacement
Threshold value exceeded	Warning	-	1 Unusual noise, etc. (R5) Unusual noise, etc. (R1)	2 R5 Maintenance block; R1 Maintenance block	3 R5 (N, B) R1 (N, B)
	Block	-			
Others (unusual noise, etc)		○			
Spare drive		-			
Other case (secondary measure)					
			Procedure		
			Post-procedure b		
			INLINE	Correction copy	Recovery
			4 R5 (N) INLINE; R1 (N) INLINE	5 R5 (N) R1 (N)	6 R5 R1
Other case (secondary measure)			① Block new drive (case 5)	① Block destination drive (case 5)	

[Legends]



(Note) In RAID 1 method, Parity group consists of two drives.

1.4 How to Interpret the Hot Replace Procedure

[In case of replacement when SIM was reported]

① Search a work ID which coincides with the work ID corresponding to SIM ACC(FPC) (refer to FPC list on page ACC04-10) from Parts Replacement Process Table on page REP01-120. Search a work ID corresponding to the pertinent condition if "Condition Item" is described in Parts Replacement Process Table.

② If the work ID is found,

- Take actions according to the SVP pre-procedure, hardware procedure, SVP post-procedure number that match the work ID.

If no work ID is found,

- Search a work ID corresponding to SIM ACC(FPC, and error details) from Parts Replacement Process Table on page REP01-120.
- Take actions according to the SVP pre-procedure, hardware procedure, SVP post-procedure number that match the work ID.

Note : See page REP01-113 for the procedure for searching a work ID to replace a drive. When replacing a drive, be sure to see page REP01-111 and REP01-112.

[In case of replacement when SIM was not reported]

① Search a work ID corresponding to the part to be replaced from Parts Replacement Process Table on page REP01-120.

② Take actions according to the SVP pre-procedure, hardware procedure, SVP post-procedure number that match the work ID.

Note : See page REP01-113 for the procedure for searching the work ID to replace a drive. When replacing a drive, be sure to see page REP01-111 and REP01-112.

---------- ----------<Example>----------

Condition to replace

SIM was reported

Work ID corresponding to SIM ACC FPC is RCA1

* Search an applicable Work ID identified by shaded area in the following sample of Parts Replacement Process Table under the above conditions.

<CACHE>

Work ID	Part name	Procedure			Replacing time
		SVP re-procedure	Hardware procedure	SVP post-procedure	
RCA1	CACHE with SM (WP108-A)	Pre A, pre F	Hardware B	Post e	15 minutes
RCA2

PROCEDURE BEFORE PDEV EXCHANGE AND CORRECTION COPY

Instructions before blocking and exchanging PDEV with a drive failure error is listed below.

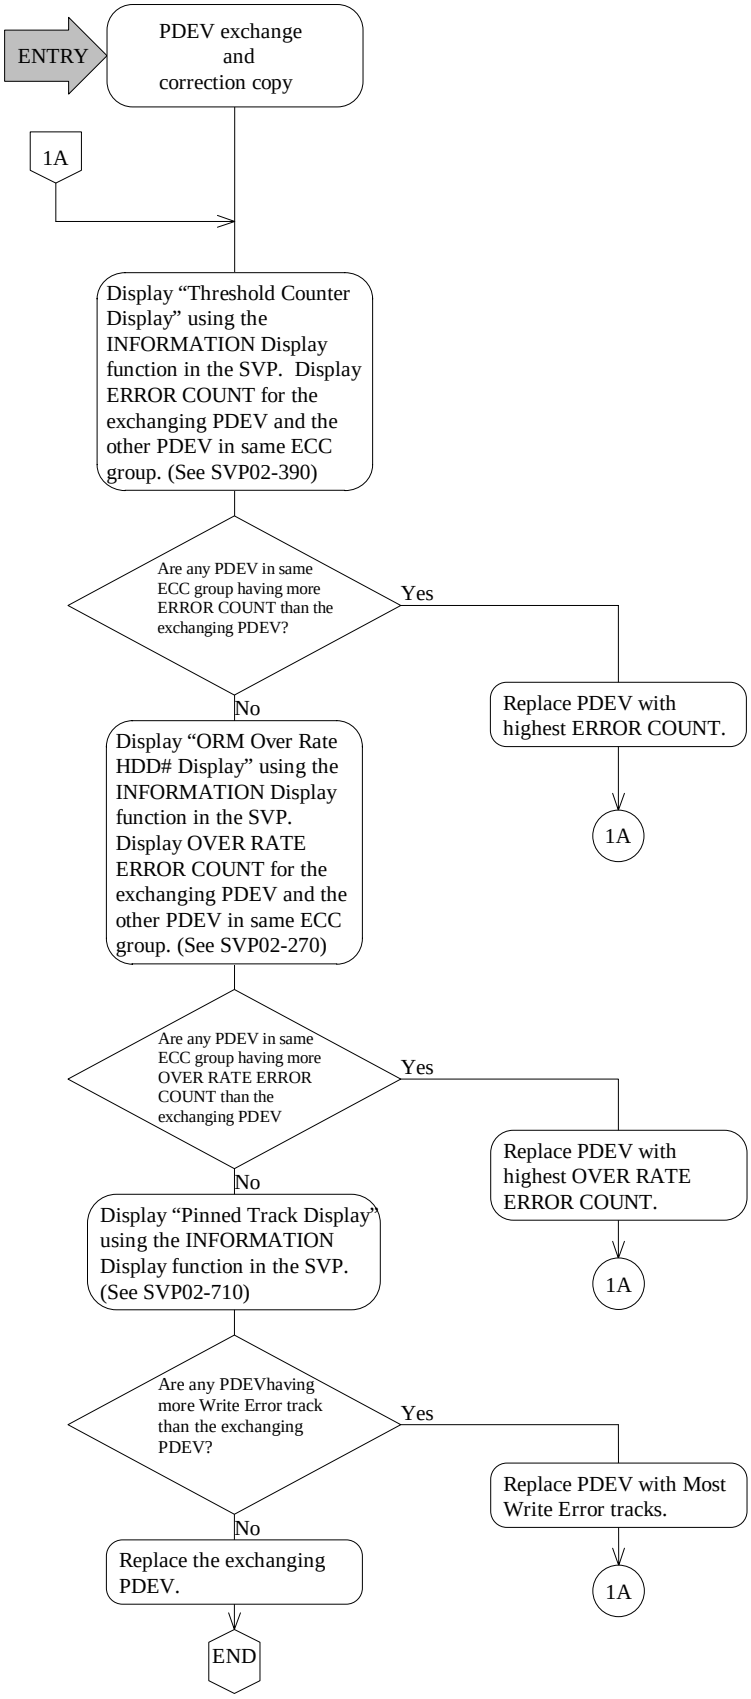
When exchanging unblocked PDEV, redundancy in the ECC group is lost. Therefor, during PDEV exchange, the other PDEV in the same ECC group is fenced by a drive failure error, all the LDEV in the ECC group is fenced. Accordingly, to prevent the above problem from occurring, the status of PDEV. When there is a PDEV in the same ECC group having more drive failure errors than the exchanging PDEV exists, replace the PDEV with highest drive failure errors.

Before PDEV exchange, following items are checked.

#	Items checked	Procedure
1	Error Count	“Threshold Counter Display” (See SVP02-390)
2	ORM Over Rate	“ORM Over Rate HDD# Display” (See SVP02-270)
3	Write Error	“Pinned Track Display” (See SVP02-710)

Copyright ©1997,1998, Hitachi, Ltd.

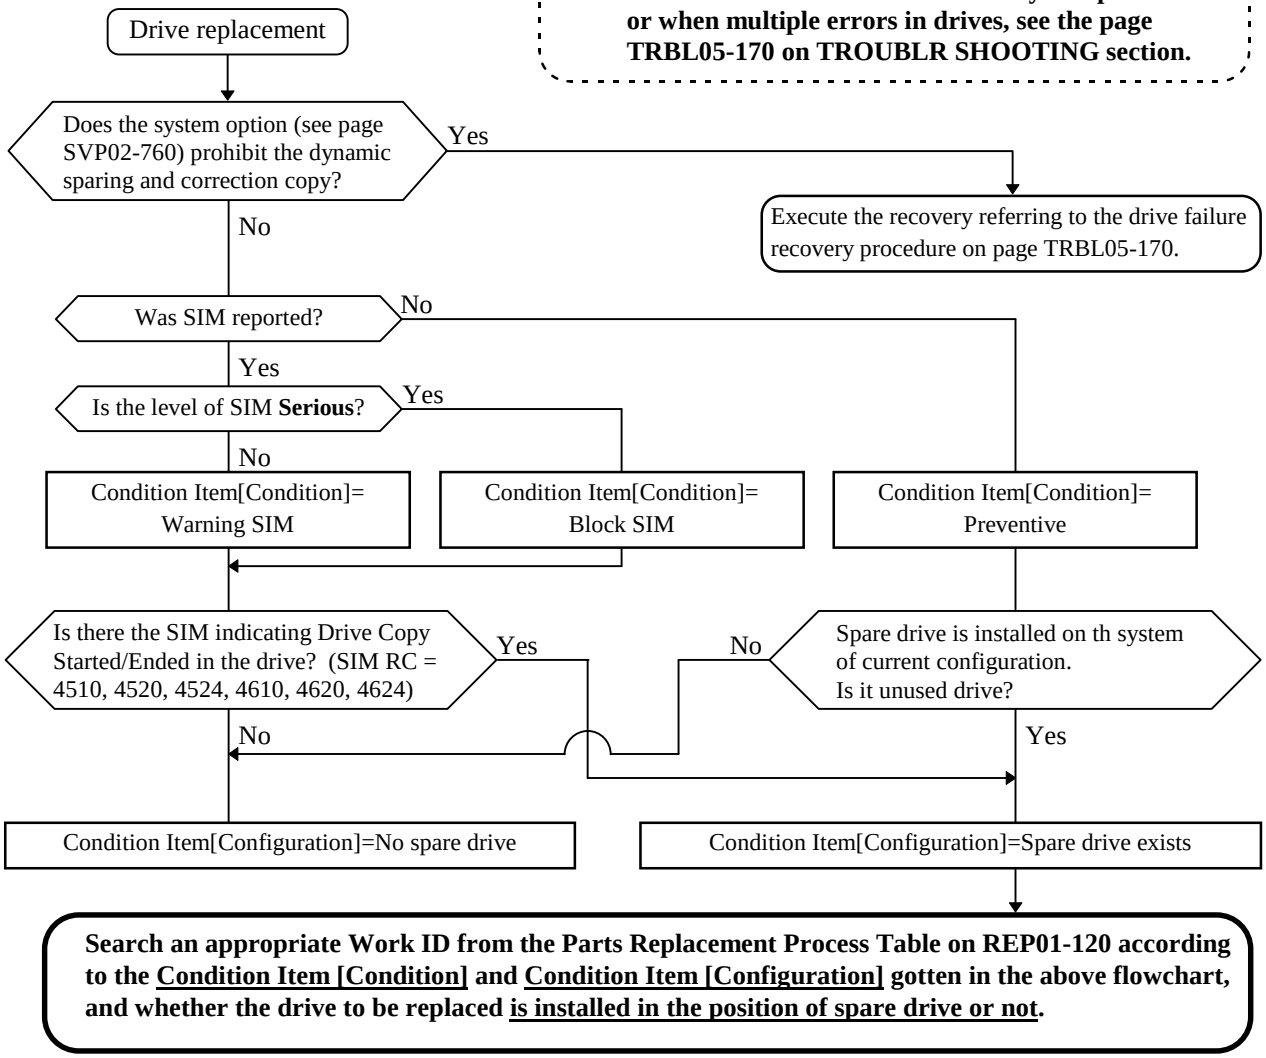
PROCEDURE BEFORE PDEV EXCHANGE and CORRECTION COPY.



Copyright ©1997,1998, Hitachi, Ltd.

How to search a work ID to replace a drive

Note: When a work ID cannot be found by this procedure or when multiple errors in drives, see the page TRBL05-170 on TROUBLR SHOOTING section.



Search an appropriate Work ID from the Parts Replacement Process Table on REP01-120 according to the Condition Item [Condition] and Condition Item [Configuration] gotten in the above flowchart, and whether the drive to be replaced is installed in the position of spare drive or not.

Copyright ©1998,1999, Hitachi, Ltd.

——————————————————<<Example>>——————————————————

- SIM was reported.
- Level of the SIM is not "Serious". = Condition Item[Condition] is "Warning SIM".
- There is the SIM that RC is 4510 in the drive. = Condition Item[Configuration] is "Unused spare drive exists".
- The drive to be replaced is not a spare drive. = “Data Drive”

* Under the above conditions, the shaded area is searched from Parts Replacement Process Table. Therefore, in this example Work ID should be RDK1.

<Data Drive, Spare Drive>

Work ID	Parts Name	Condition Item				Procedure			Reference information Image of replacement	
		Condition			Configu-ration	SVP pre-procedure	Hardware procedure	SVP post-procedure	Outline	Case
		Failure		Preven-tive	Unused spare drive					Refer to "1.2 Concept of Drive Maintenance" on REP01-20.
		Warning SIM	Block SIM							
RDK1	Data Drive	×	-	-	Yes	Pre A, Pre B *1	Hard A *1	Post a *1	Drive replacement ~ Copy back	Case 1
RDK2	Data Drive	-	×	-	Yes

1.5 Parts Replacement Process Table

<Data Drive, Spare Drive>

Work ID	Parts Name	Condition Item				Procedure *1			Reference information		
		Condition			Configu-ration	SVP pre-procedure	Hardware procedure	SVP post-procedure	Replacing time *3	Outline	Case *2
		Failure									
		Warning SIM	Block SIM	Preven-tive	Unused Spare drive						
RDK1	Data Drive Note 1	×	-	-	Yes	Pre A, pre B *1	Hardware A *1	Post a *1	20 min	Drive replace ~ Copy back	Case1
RDK2	Data Drive Note 1	-	×	-	Yes	Pre A, pre B *1	Hardware A *1	Post a *1	20 min	Drive replace ~ Copy back	Case 2
RDK3	Data Drive Note 1	-	-	×	Yes	Pre A, pre C, pre B *1	Hardware A *1	Post a *1	—	Copy to Spare drive ~ Drive replace ~ Copy back	Case 14
RDK4	Data Drive Note 1	×	-	-	No	Pre A, pre D *1	Hardware A *1	Post b *1	20 min	Drive replace ~ Correction copy	Case 3
RDK5	Data Drive Note 1	-	×	-	No	Pre A, pre D *1	Hardware A *1	Post b *1	20 min	Drive replace ~ Correction copy	Case 4
RDK6	Data Drive Note 1	-	-	×	No	Pre A, pre D *1	Hardware A *1	Post b *1	20 min	Drive replace ~ Correction copy	Case 15
RDK7 Note 2 Note 3	Data Drive Note 1	Note 2				Pre A, pre E *1	Hardware A *1	Post c *1	—	LDEV formrtting after replacing all the HDDs blocked in a parity group Note 3	Case 13
RDK8	Spare Drive Note 1	-				Pre A, pre D *1	Hardware A *1	Post d *1	20 min	Spare drive replace	Case 12

*1: Refer to REP01-170

*2: Refer to REP01-20

*3: This time does not include copy back time of data in HDD.

Note 1) Parts Name is indicates attribute of a drive.
Data Drive : The drive is installed in the position for a drive except spare drive (Data Drive).
Spare Drive : The drive is installed in the position for a spare drive.

Note 2) RDK7 is a Work ID for a work which is applicable to a case that two or more drives in a same parity group are blocked.
When the procedures instructed by RDK7 are executed,data will be lost. Ask the technical support center about the appropriateness of the operation.

Note 3) Confirm the parity group and the LDEV No. corresponding to the HDD through the SVP STATUS. See page SVP03-100 for the procedure for referring to SVP STATUS

Note : If a Work ID cannot be found or if multiple drive error is occurring, see page TRBL05-170 on TROUBLE SHOOTING section.

× : Maintenance is available
SVPXXXXW : Maintenance is not available based on the specification. Refer to SVP-MSG SECTION.

Note.1 About replacement of CHA in the RCU side
If the CHA that will be replaced is connected to a path, from MCU please confirm that the Path is deleted from MCU.
After replacement, please add the Path.

The pair will be suspended if the ESTPAIR or paircreate(pairresync) command issues during the HDD Canister or the Cache PCB replacement. Please ask for the consent of a customer before the online maintenance operation.
Refer to “8.4 Procedures for online microprogram exchange and CHS/CHF replacement using alternate path” (MULTI08-50).

* : If the maintenance operation must be done while HRC asynchronous is using, you must confirm that the usage of Sidefile monitor less than 20% of total Cache capacity before you start the maintenance operation. Only when the usage of Sidefile monitor is less than 20% of total Cache capacity, you can proceed the maintenance operation.
Refer to “Monitoring” in the SVP SECTION about sidefile monitor.

	Verify	x	x	x	x	x	x
HDD canister	Replace	x	x	x	x	x	x
Cache PCB	Replace	*	x	*	x	*	x
CHA	Replace	x	x	x	x	x	x
DKA	Replace	x	x	x	x	x	x
LTM PCB	Replace	x	x	x	x	x	x

x: Maintenance is available

*: When a maintenance operation is needed while CC/HXRC is using, I/O's for CC/HXRC pair volumes or CC/HXRC itself should be stopped before the maintenance operation.
If the maintenance operation must be done while CC/HXRC is using, you must confirm that the usage of Sidefile monitor less than 20% of total Cache capacity before you start the maintenance operation. Only when the usage of Sidefile monitor is less than 20% of total Cache capacity, you can proceed the maintenance operation.
Refer to "Monitoring" in the SVP SECTION about Sidefile monitor.
Select the [Information] icon in the 'SVP' window.
Next select the [Monitor] menu in the 'Information' window and select [start....].
Next select the 'Sideflie' box in the 'Item' menu in the 'Monitoring' window and select [OK].

**: When a maintenance operation is needed while CC/HXRC is using, CC/HXRC should be stopped before the maintenance operation.

[PRE-PROCEDURE A]

— OUTLINE —

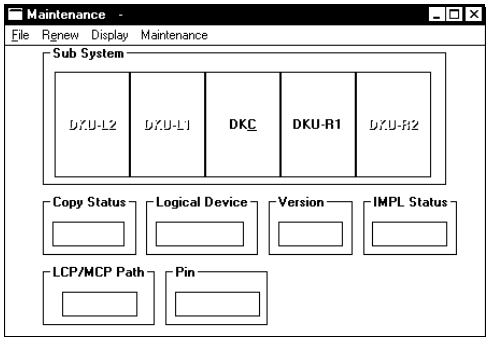
① Initial Screen.
② Change SVP operation mode.
③ Open Maintenance window.

Copyright ©1997,1998, Hitachi, Ltd.

1. <Initial screen>

2. <Operation mode change>
   Change the mode to [Modify Mode].
   Select [Maintenance] (CL).

3. <Maintenance window>
   'Maintenance' window is displayed.



Copyright ©1997,1999, Hitachi, Ltd.

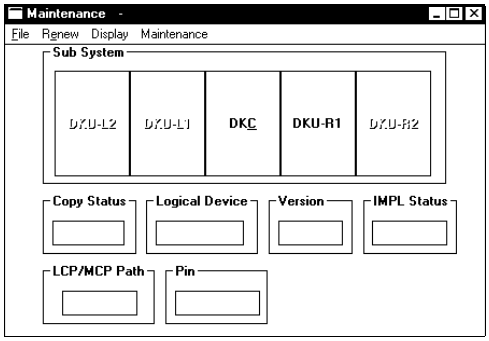
[PRE-PROCEDURE B]

— OUTLINE —

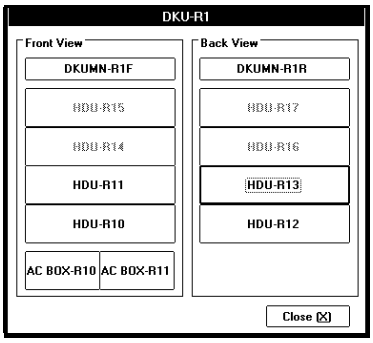
① Select drive (status check).
② Check progress of copy processing
③ Specify Replacement.
④ Place HDD into unpluggable state.

Copyright ©1997,1998, Hitachi, Ltd.

1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.

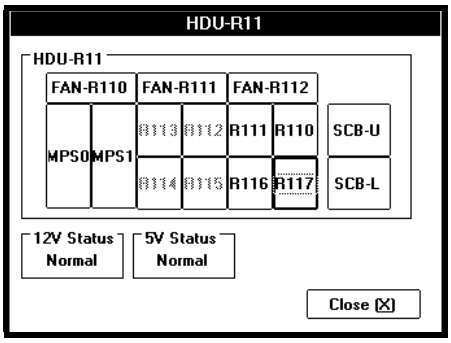


2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting [Close] (CL) returns you to step 1.



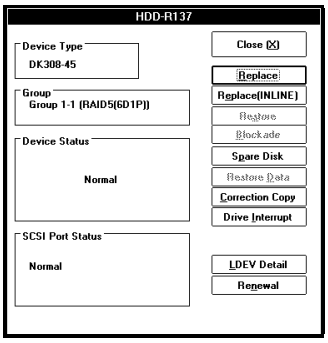
Copyright ©1997,1998, Hitachi, Ltd.

3. <Select HDD>
Check and select [Rnnn] or [Lnnn] to be replaced.
Selecting [Close] (CL) returns you to step 2.



4. <Specify replacement on HDD>
Check status display.
◆ In the case of a warning SIM, “NORMAL” is displayed.
◆ In the case of a blocking SIM, “FAILED” is displayed.

Select (CL) [Replace].



5. <Check progress of copy processing>
Check the status (other than preventive) of [HDD-Rnnn] or [HDD-Lnnn] to be replaced from [HDU-Rnn] or [HDU-Lnn].
[Warning threshold value]
* [RECOVERING] : Copy processing is in progress.
  [FAILED] (S/D set to S) : End of copy processing.

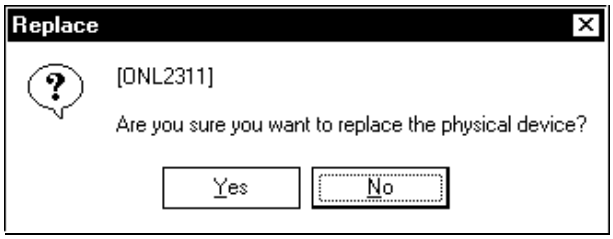
[Block threshold value]
* [FAILED] (S/D set to D) : Copy processing is in progress.
  [FAILED] (S/D set to S) : End of copy processing.

6. <Check progress of copy processing>
See SVP section. (SVP03-120)
After copy processing is complete, perform replacement procedure.

Copyright ©1997,1998, Hitachi, Ltd.

7. <Checking the P-DEV status>
   "Checking..." is displayed.

8. <P-DEV blocking>
   Select (CL) [Yes] in response to "Are you sure you want to replace the physical device?".



NOTICE
When the screen appears prompting the operator to input a password to prevent a multiple maintenance or for executing a pin check, contact the technical support center to ask for an instructions.

9. <Blocking the Physical device>
   "Blocking..." is displayed.

10. <Spin down the Physical device>
    "Spinning down..." is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

11.

BLANK

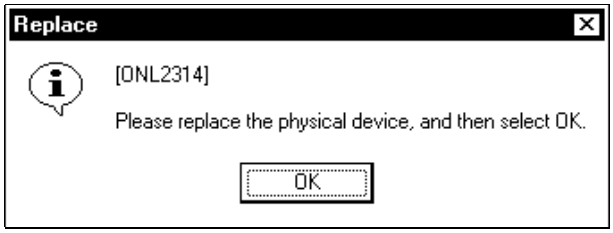
12. <Check shut down LED>

Check the shut down LED on the HDD to be replaced.
If LED is off, reconfirm the location of the HDD to be replaced with LOCATION SECTION before replacing hardware.

NOTICE
If a wrong HDD is removed, a data loss or a system down may be caused.

Copyright ©1997,1998, Hitachi, Ltd.

13. <Confirm Replacement.>
Select (CL) [OK] in response to “Please replace the physical device, and then select OK.” after replace the unit.



14. <Replace HDU>
Replace HDU .
See HARDWARE A (REP03-10).

Copyright ©1997,1998 Hitachi, Ltd.

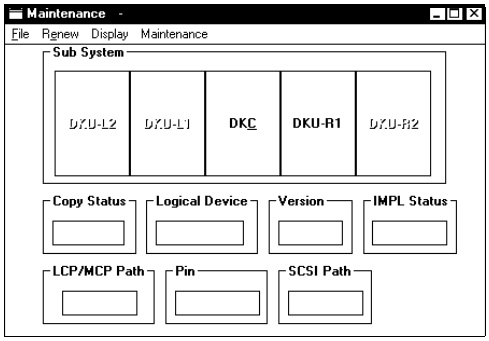
[PRE-PROCEDURE C]

— OUTLINE —

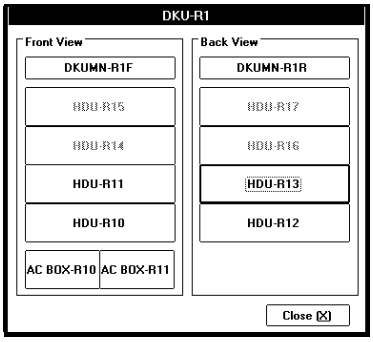
① Select drive (status check).
② Specify Replacement.
③ Save Spare.

Copyright ©1997, Hitachi, Ltd.

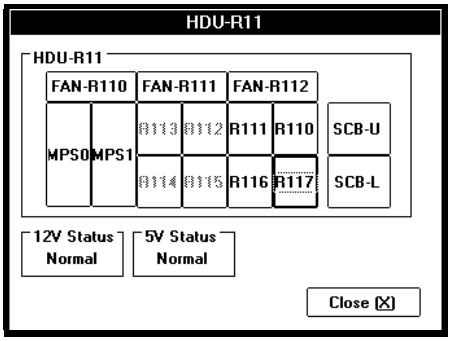
1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.



2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting (CL) [Close] returns you to step 1.

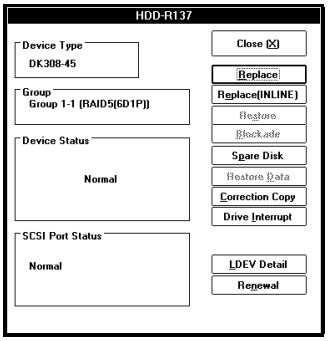


3. <Select HDD>
   Check and select [Rnnn] or [Lnnn] to be replaced.
   Selecting (CL) [Close] returns you to step 2.



4. <Specify replacement on HDD>
   Check status display.
   - ◆ In the case of a warning SIM, "NORMAL" is displayed.
   - ◆ In the case of a blocking SIM, "FAILED" is displayed.

   Select (CL) [Spare Disk].

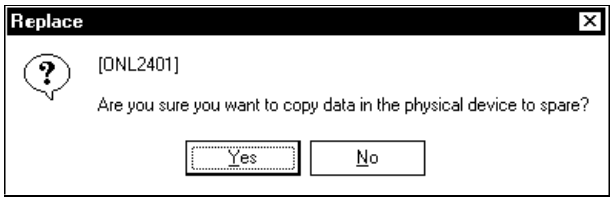


Copyright ©1997,1998, Hitachi, Ltd.

5. <Checking the P-DEV status>
   "Checking..." is displayed.

NOTICE
When the screen appears prompting the operator to input a password to prevent a multiple maintenance or for executing a pin check, contact the technical support center to ask for an instructions.

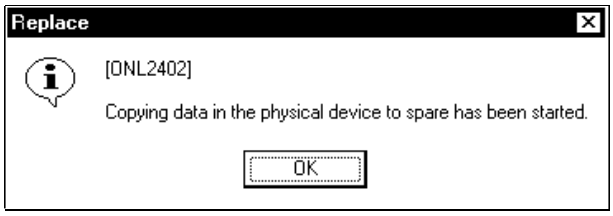
6. <Saving the spare>
   Select (CL) [Yes] in response to "Are you sure you want to copy data in the physical device to spare?".



Copyright ©1997,1998, Hitachi, Ltd.

7. <Saving in process>
   "Copying..." is displayed.

8. <End of spare saving>
   Select (CL) [OK] in response to "Copying data in the physical device to spare has been started.".



9.
   Please do Pre B after finishing copy.

Copyright ©1997,1998, Hitachi, Ltd.

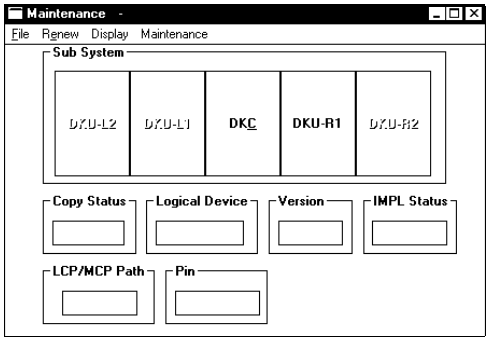
[PRE-PROCEDURE D]

— OUTLINE —

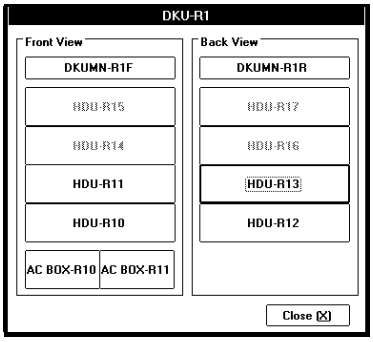
① Select P-DEV (status check).
② Specify Replacement.
③ Place HDD into unpluggable state.

Copyright ©1997, Hitachi, Ltd.

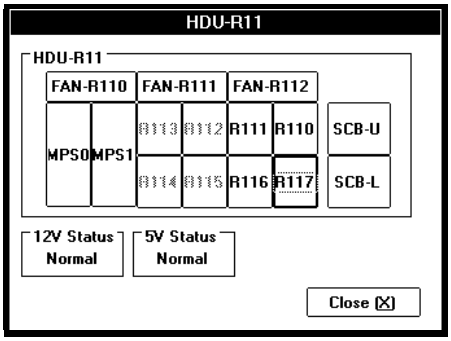
1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.



2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting [Close] (CL) returns you to step 1.

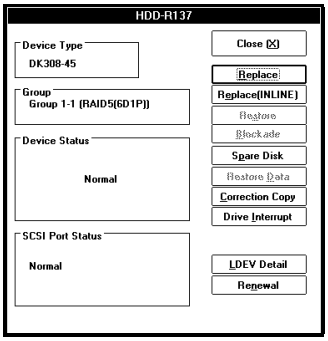


3. <Select HDD>
   Check and select [Rnnn] or [Lnnn] to be replaced.
   Selecting [Close] (CL) returns you to step 2.



4. <Specify replacement on HDD>
   Check status display.
   - ◆ In the case of a warning SIM, "NORMAL" is displayed.
   - ◆ In the case of a blocking SIM, "FAILED" is displayed.

   Select (CL) [Replace].

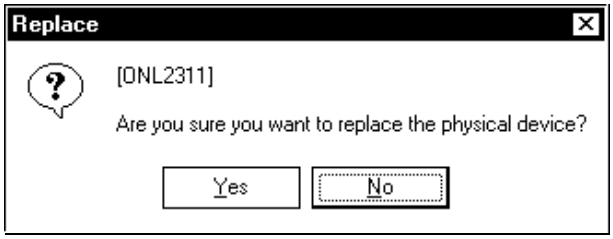


Copyright ©1997,1998, Hitachi, Ltd.

5. <Checking the P-DEV status & saving the spare>
   "Checking..." is displayed.

NOTICE
When the screen appears prompting the operator to input a password to prevent a multiple maintenance or for executing a pin check, contact the technical support center to ask for an instructions.

6. <P-DEV blocking>
   Select (CL) [Yes] in response to "Are you sure you want to replace the physical device?".



7. <Blocking the Physical device>
   "Blocking..." is displayed.

8. <Spin down the Physical device>
   "Spinning down..." is displayed

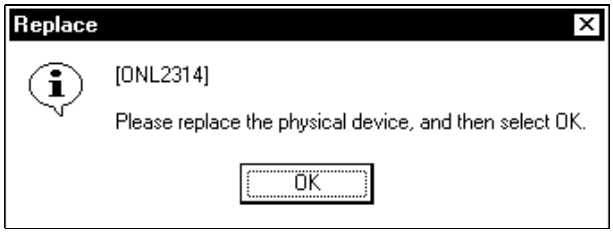
9.

BLANK

10. <Check shut down LED>
Check the shut down LED on the HDD to be replaced.
If LED is off, reconfirm the location of the HDD to be replaced with LOCATION SECTION before hardware work.

NOTICE
If a wrong HDD is removed, a data loss or a system down may be caused.

11. <Confirmation of replace>
Select (CL) [OK] in response to “Please replace the physical device, and then select OK.” after replace the unit (Step 12).



12. <Replace HDD>
Replace HDD.
See HARDWARE A (REP03-10).

Copyright ©1997,1998, Hitachi, Ltd.

[PRE-PROCEDURE E]

— OUTLINE —

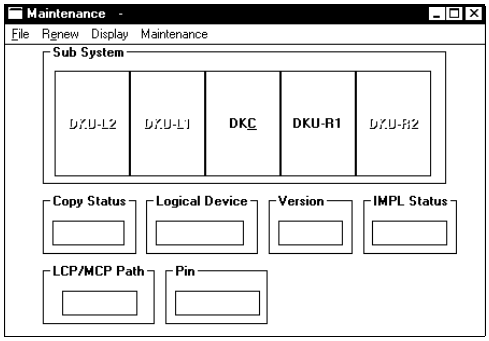
① Select HDD (status check).
② Specify Replacement.
③ Block parity group (enter password).
④ Place HDD into unpluggable state.
⑤ Replace HDD.
⑥ Perform steps ② to ⑤ on blocked drives in parity group.

NOTICE

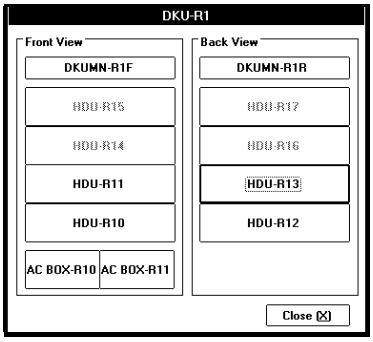
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

Copyright ©1997,1998, Hitachi, Ltd.

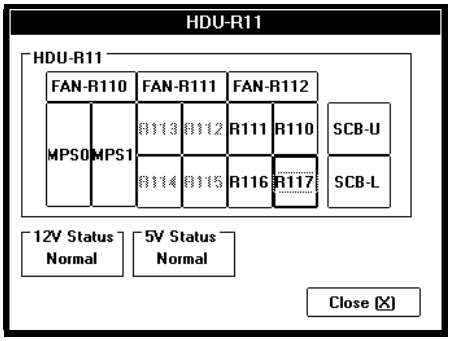
1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.



2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting [Close] (CL) returns you to step 1.

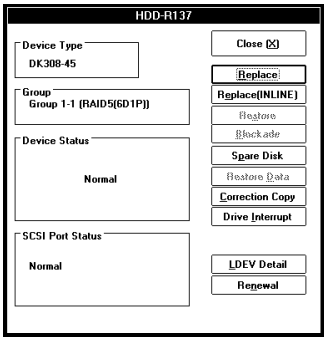


3. <Select HDD>
   Check and select [Rnnn] or [Lnnn] to be replaced.
   Selecting [Close] (CL) returns you to step 2.



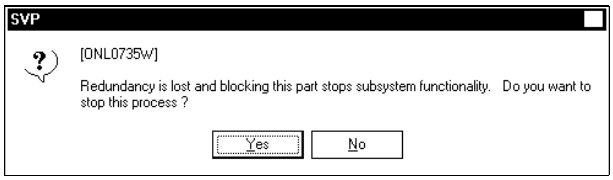
4. <Specify replacement on HDD>
   Make sure that the status is FAILED.

   Select (CL) [Replace].



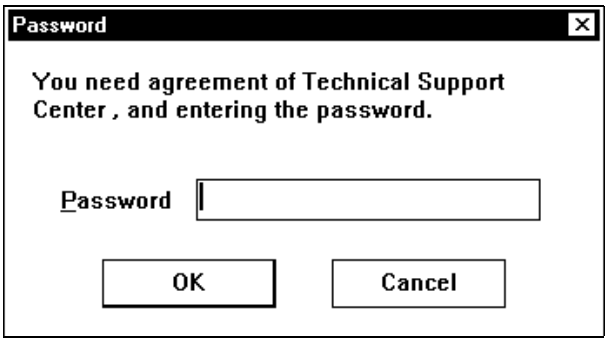
Copyright ©1997,1998, Hitachi, Ltd.

5. <Confirm lost data>
Select (CL) [No] in response to "Redundancy is lost and blocking this part stops subsystem functionality. Do you want to stop this process?"



NOTICE
Executing this operation may cause a serious error such as a system down or a data loss. Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

6. <Enter password>
Enter the password in response to "You need agreement of Technical Support Center, and entering the password." and select (CL) [OK]. Password is needed for this operation.



NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

7. <Checking the P-DEV status>
"Checking..." is displayed.

8. <P-DEV blocking>
Select (CL) [Yes] in response to "Are you sure you want to replace the physical device?".

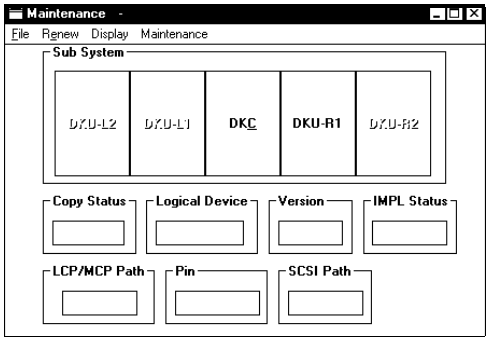
[PRE-PROCEDURE F]

— OUTLINE —

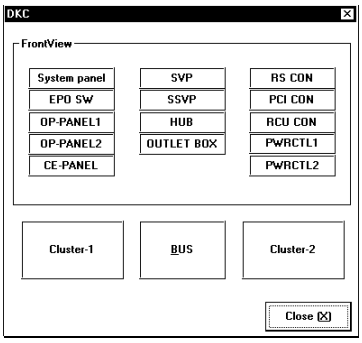
① Select (main platter) cache (status check).
② Specify Replacement.
③ Place PCB into unpluggable state.

Copyright ©1997, Hitachi, Ltd.

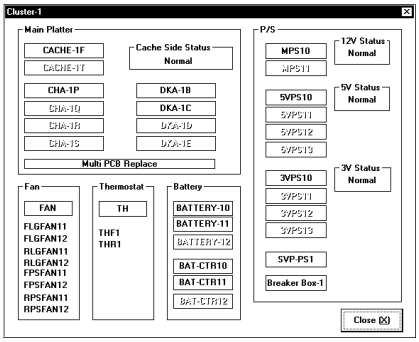
1. <Maintenance window>
   'Maintenance' window is displayed.
   In the 'Maintenance' window, check and select (CL) [DKC] to be replaced.



2. <DKC screen>
   Select (CL) [Cluster] in the 'DKC'.



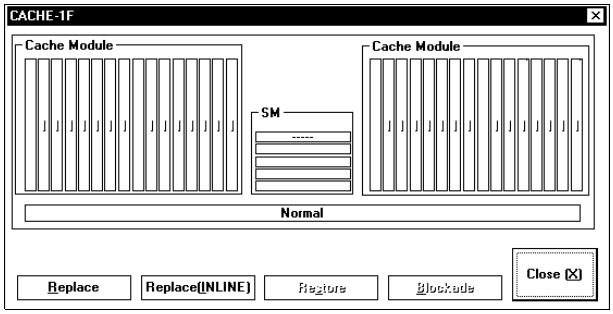
3. <Select Part>
   Select (CL) part.



Copyright ©1997,1998, Hitachi, Ltd.

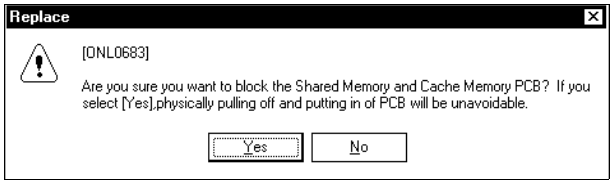
4. <Select Cache>
Check status display.
Select (CL) cache and select (CL) [Replace].

If INLINE CUDG in the Install or replace operation is failed, select (CL) [Replace (INLINE)] to recover target PCB.



NOTICE
When the screen appears prompting the operator to input a password to prevent a multiple maintenance or for executing a pin check, contact the technical support center to ask for an instructions.

5. <Check beginning of cache blocking>
Select (CL) [Yes] after making sure that the package to be blocked is correct in response to:

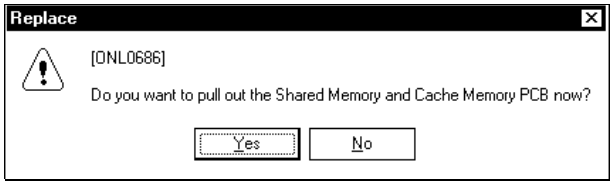


* For CACHE (with SM) -- [Go to step 6]
"Are you sure you want to block the Shared Memory and Cache Memory PCB? If you select [Yes], physically pulling off and putting in of PCB will be unavoidable."
* For CACHE ---------- [Go to step 6]
"Are you sure you want to block the Cache Memory PCB? If you select [Yes], physically pulling off and putting in of PCB will be unavoidable."

6. <Cache blocking>
"The Cache Memory PCB is being blocked." is displayed.
"The Shared Memory PCB is being blocked…" is displayed.

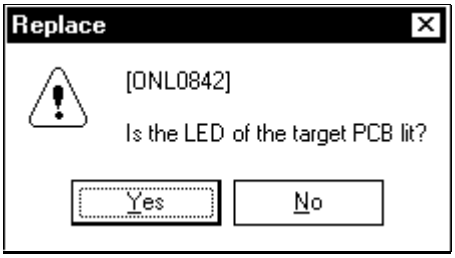
Copyright ©1997,1998, Hitachi, Ltd.

7. <Check removal of cache>
   Select (CL) [Yes] in response to:
   * For CACHE (with SM)
   "Do you want to pull out the Shared Memory and Cache Memory PCB now?"
   * For CACHE
   "Do you want to pull out the Cache Memory PCB now?"



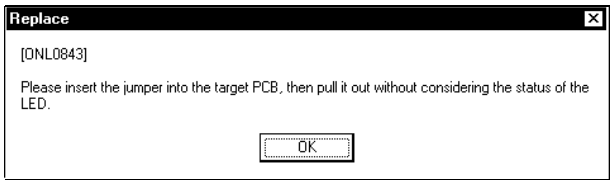
Copyright ©1997,1998, Hitachi, Ltd.

8. <Check shut down LED>
Select (CL)
* [Yes] if LED is on
* [No] if LED is off
in response to “Is the LED of the target PCB lit?”.



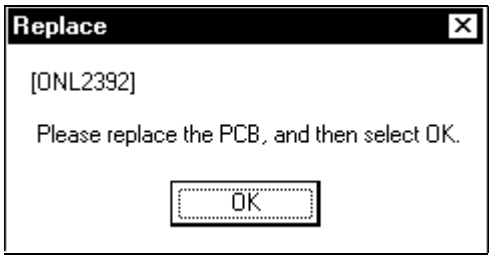
<Forcing shut down LED on>

NOTICE
If the jumper is inserted in the wrong PCB, a system down may be caused.



If [No] is selected:
Insert a jumper in response to “Please insert jumper into the target PCB, then pull it out without considering the status of the LED”.
(Refer REP03-60)
Go to step 9.

9. <Cache Replacement>
“Please replace the PCB, and then select OK.” is displayed.
(Select (CL) [OK] after replacing the PCB.)



10. <Replace cache PCB>
Replace cache.

For CACHE (with SM) See HARDWARE B (REP03-50)

Copyright ©1997,1998, Hitachi, Ltd.

[PRE-PROCEDURE H]

— OUTLINE —

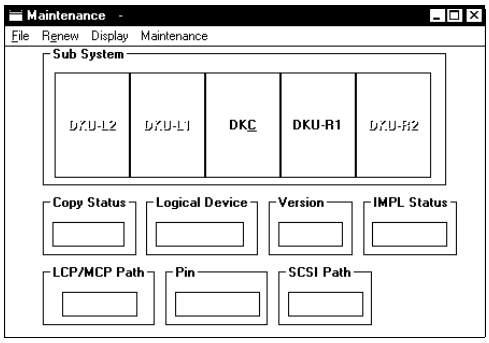
① Select CHA/DKA (status check).
② Specify Replacement.
③ Place PCB into blocked state.

Copyright ©1997, Hitachi, Ltd.

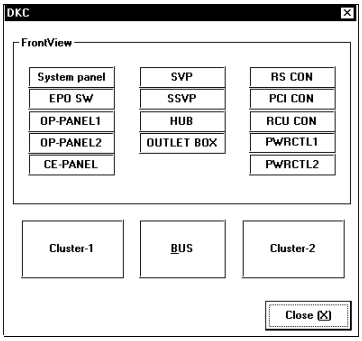
1. <Set path offline>
   Set the path offline from HOST when replacing CHA by your customer.

NOTICE
The path to be placed offline is that connected with the CHA concerned.

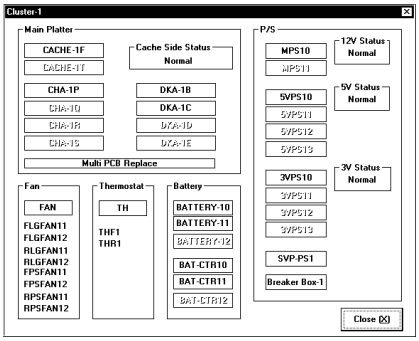
2. <Maintenance window>
   'Maintenance' window is displayed.
   In the 'Maintenance' window, check and select (CL) [DKC] to be replaced.



3. <DKC screen>
   Select (CL) [Cluster] in the 'DKC'.

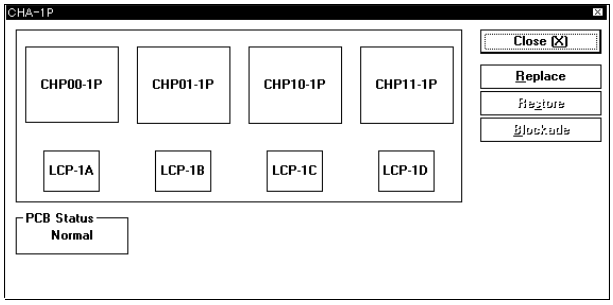


4. <Select CHA/DKA>
   Select (CL) CHA/DKA.
   Selecting (CL) [Close] returns you to step 3.



Copyright ©1997,1998, Hitachi, Ltd.

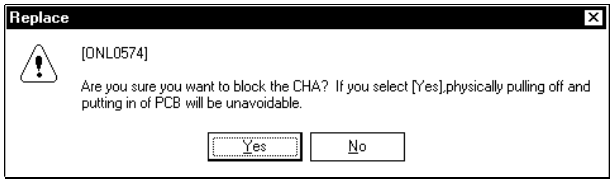
5. <Specify Replacement of CHA/DKA>
Make sure that the status is WARNING.
Select (CL) CHA/DKA PCB. The screen as shown on the right is displayed.
Select (CL) [Replace].



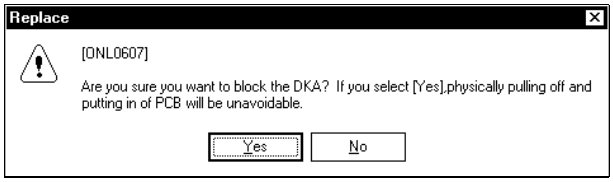
NOTICE
When the subsystem is placed online, ask the customer to place it offline.

NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

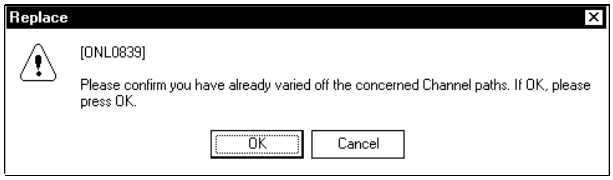
6. <CHA/DKA blocking>
Select (CL) [Yes] in response to:
* For CHA
"Are you sure you want to block the CHA? If you select [Yes], physically pulling off and putting in of PCB will be unavoidable."
Go to step 7.



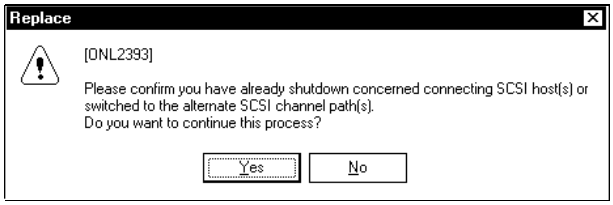
* For DKA
"Are you sure you want to block the DKA? If you select [Yes], physically pulling off and putting in of PCB will be unavoidable."
Go to step 8.



7. <Confirm Channel Path offline>
Select (CL) [OK] in response to:
"Please confirm you have already varied off the concerned Channel paths. If OK, please press OK."



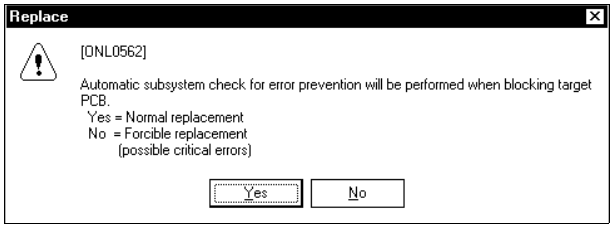
If SCSI channel adapter is installed:
After you confirm that you have stopped concerned SCSI channel paths, select (CL) [Yes].



Copyright ©1997,1998, Hitachi, Ltd.

8. <Caution message for system down>

NOTICE
Select (CL) [Yes] in response to the message below.



"Automatic subsystem check for error prevention will be performed when blocking target PCB.
Yes = Normal replacement
No = Forcible replacement
(Possible critical errors)"

9. <CHA/DKA blocking>
* For CHA
"The CHA is being blocked..."
* For DKA
"The DKA is being blocked..."

Copyright ©1997,1998, Hitachi, Ltd.

10. <Removal of CHA/DKA>

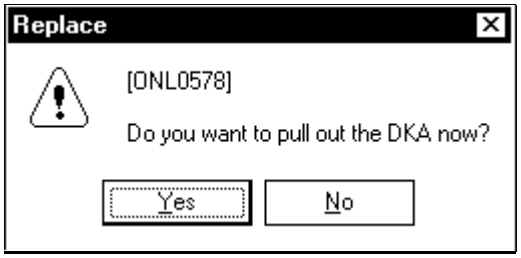
Select (CL) [Yes] in response to:

* For CHA

“Do you want to pull out the CHA now?”

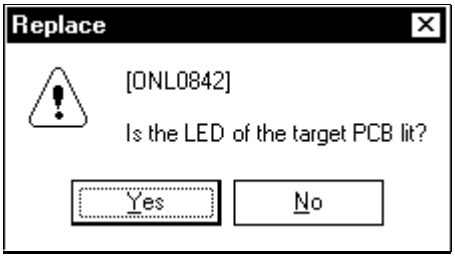
* For DKA

“Do you want to pull out the DKA now?”



Copyright ©1997,1998, Hitachi, Ltd.

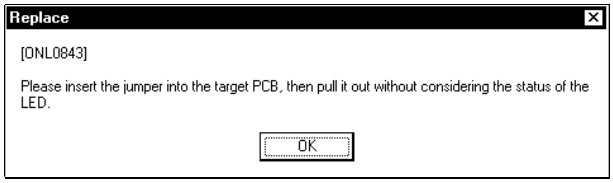
11. <Check to see if shut down LED is lit>



Select (CL)
* [Yes] if LED is on
* [No] if LED is off
in response to “Is the LED of the target PCB lit?”.
If [No] is selected:
Select in response to “Is the LED of the target PCB lit?” again.

<Forcing shut down LED on>

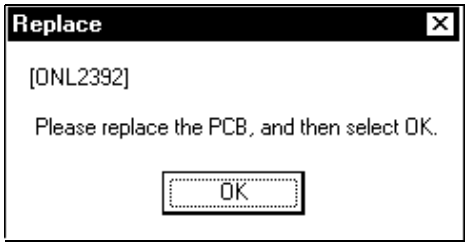
NOTICE
If the jumper is inserted in the wrong PCB, a system down may be caused.



If [No] is selected twice:
Insert a jumper in response to “Please insert the jumper into the target PCB, then pull it out without considering the status of the LED”. (Refer REP03-90)

For CHA (SERIAL)	HARDWARE C (REP03-80)
CHA (PARALLEL)	HARDWARE D (REP03-110)
DKA	HARDWARE G (REP03-200)

12. <Beginning of CHA/DKA Replacement>



“Please replace the PCB, and then select OK.” is displayed. Select (CL) [OK] after replacing the PCBs

For CHA (Serial)	Go to HARDWARE C (REP03-80)
For CHA (Parallel)	Go to HARDWARE D (REP03-110)
For SCSI	Go to HARDWARE E (REP03-140)
For FIBRE	Go to HARDWARE F (REP03-170)
For DKA	Go to HARDWARE G (REP03-200)

13. <Waiting for Power Event>
“Waiting for Power Event...
Usually several minutes (maximum 10 minutes).” is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

Blank Sheet

Copyright ©1997,1998, Hitachi, Ltd.

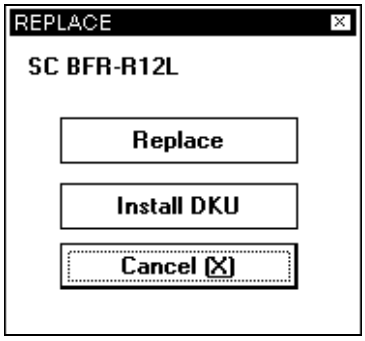
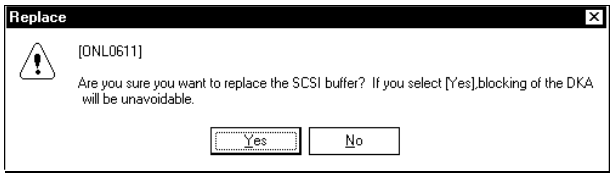
4. <Specify Replacement>
   Select (CL) [Replace].
   Selecting (CL) [Cancel] returns you to step 3.



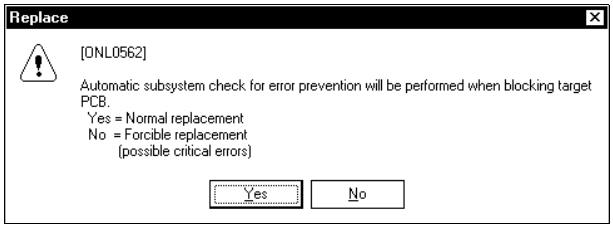
NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

5. <Check beginning of DKA blocking>
   Select (CL) [Yes] in response to "Are you sure you want to replace the SCSI buffer? If you select [Yes], blocking of the DKA will be unavoidable.".



6. <Check system down>

NOTICE
Select (CL) [Yes] in response to the message below.

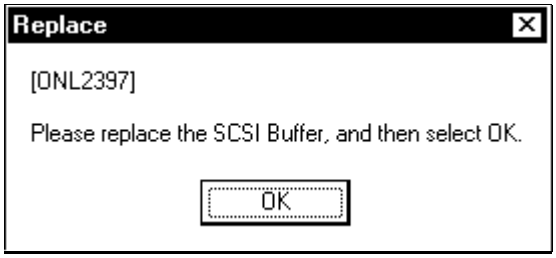


"Automatic subsystem check for error prevention will be performed when blocking target PCB.
Yes = Normal replacement
No = Forcible replacement
(Possible critical errors)"

7. <Check DKA blocking>
   "The DKA is being blocked..." is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

8. <Replace SCSI Buf>
Remove SCSI BUF PCB, and insert it to turn off shut down LED.
Refer HARDWARE H (REP03-221)



Select (CL) [OK] in response to “Please replace the SCSI Buffer. If OK, press return.” after replace the PCB.

If the SCSI Buffer LED is not turn on, please remove SCSI BUF PCB, and insert it.

Perform SCSI Buf PCB Replacement procedure.
A pair of SCSI Buf PCBs which connected by same SCSI Interface cable should be replaced at the same time.

Copyright ©1997,1998, Hitachi, Ltd.

[PRE-PROCEDURE J]

— OUTLINE —

① Select DKA (status check).
② Specify Replacement.
③ Place PCB into unpluggable state.

NOTICE

This processing is a special procedure for detecting a cause of a bus error.
Contact the technical support center before performing this processing.

NOTICE

This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. This processing is a special procedure for detecting a cause of a bus error.
Contact the technical support center before performing this processing.

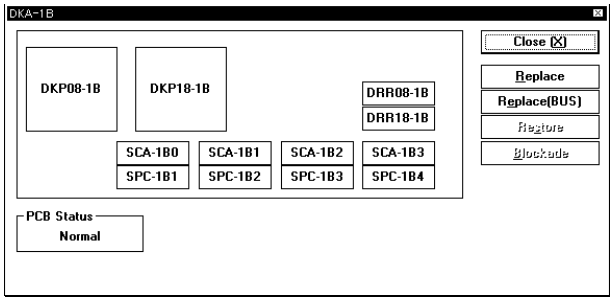
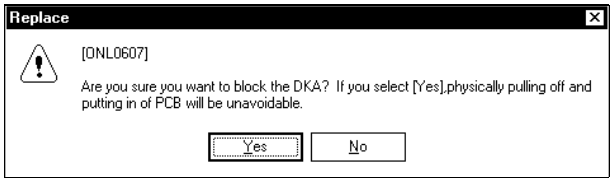
4. <Select DKA>
Select (CL) DKA PCB. The screen as shown on the right is displayed.
Make sure that the status is WARNING.
Select (CL) [Replace(BUS)].



Copyright ©1997,1998, Hitachi, Ltd.

NOTICE
This processing is a special procedure for detecting a cause of a bus error.
Contact the technical support center before performing this processing.

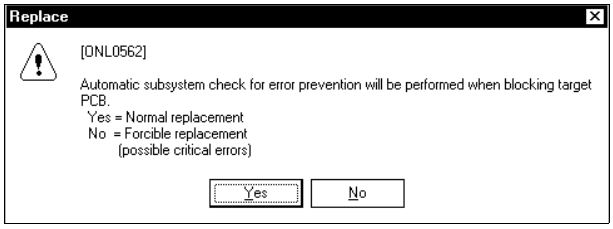
5. <DKA blocking>
Select (CL) [Yes] in response to "Are you sure you want to block the DKA? If you select [Yes], physically pulling off and putting in of PCB will be unavoidable.".



6. <Caution message for system down>

NOTICE
Select (CL) [Yes] in response to the message below.

"Automatic subsystem check for error prevention will be performed when blocking target PCB.
Yes = Normal replacement
No = Forcible replacement
(Possible critical errors)"

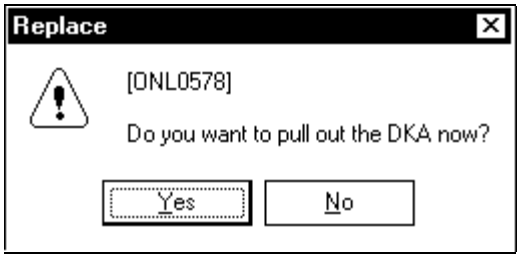


Copyright ©1997,1998, Hitachi, Ltd.

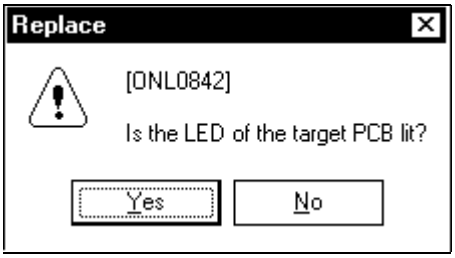
NOTICE
This processing is a special procedure for detecting a cause of a bus error.
Contact the technical support center before performing this processing.

7. <DKA blocking>
"The DKA is being blocked..."

8. <Removal of DKA>
Select (CL) [Yes] in response to "Do you want to pull out the DKA now?".

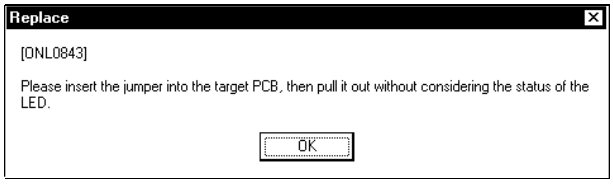


9. <Check to see if shut down LED is lit>
Select (CL)
* [Yes] if LED is on
* [No] if LED is off
in response to "Is the LED of the target PCB lit?".
If [No] is selected:
Select in response to "Is the LED of the target PCB lit?" again.



<Forcing shut down LED on>

NOTICE
If the jumper is inserted in the wrong PCB, a system down may be caused.



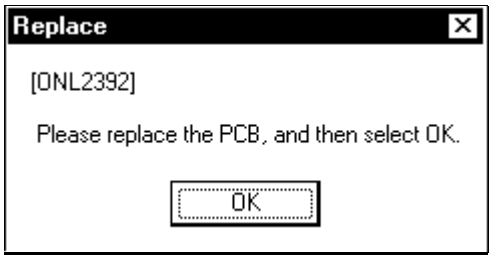
If [No] is selected twice:
Insert a jumper in response to "Please insert the jumper into the target PCB, then pull it out without considering the status of the LED". (Refer REP03-210)

For SCSI HARDWARE E (REP03-140)
For FIBRE HARDWARE F (REP03-170)
For DKA HARDWARE G (REP03-200)

Copyright ©1997,1999, Hitachi, Ltd.

NOTICE
This processing is a special procedure for detecting a cause of a bus error.
Contact the technical support center before performing this processing.

10. <Beginning of CHA/DKA Replacement>
"Please replace the PCB, and then select OK." is displayed. Select (CL) [OK] after replacing the PCBs



For SCSI	Go to HARDWARE E (REP03-140)
For FIBRE	Go to HARDWARE F (REP03-170)
For DKA	Go to HARDWARE G (REP03-200)

11. <Waiting for Power Event>
"Waiting for Power Event...
Usually, several minutes (maximum 10 minutes)." is displayed.

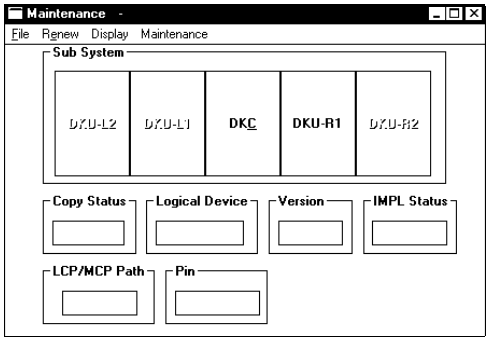
[PRE-PROCEDURE K]

— OUTLINE —

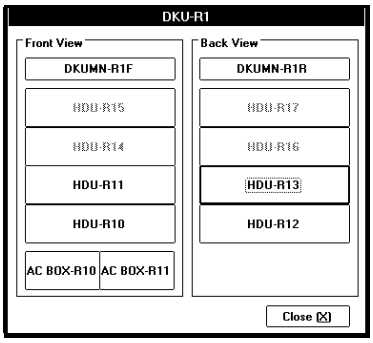
① Select drive (status check).
② Check progress of copy processing
③ Specify Correction Copy
④ Save Spare

Copyright ©1997, Hitachi, Ltd.

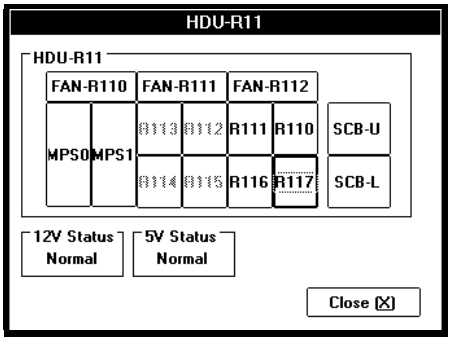
1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.



2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting (CL) [Close] returns you to step 1.

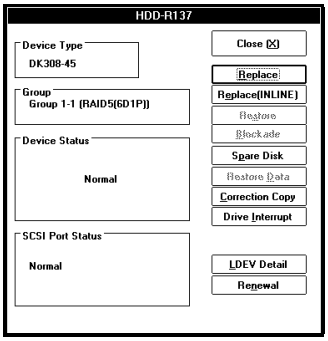


3. <Select HDD>
   Check and select [Rnnn] or [Lnnn] to be replaced.
   Selecting (CL) [Close] returns you to step 2.



4. <Specify replacement on HDD>
   Check status display.
   - ◆ In the case of a warning SIM, "NORMAL" is displayed.
   - ◆ In the case of a blocking SIM, "FAILED" is displayed.

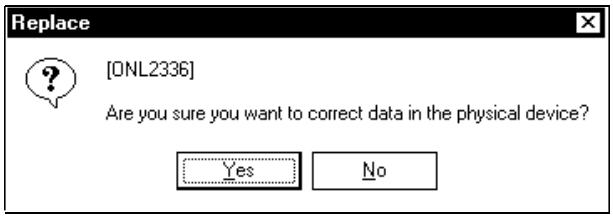
   Select (CL) [Correction Copy].



Copyright ©1997,1998, Hitachi, Ltd.

5. <Reading the subsystem configuration data and Checking the P-DEV status>
   "Checking..." is displayed.

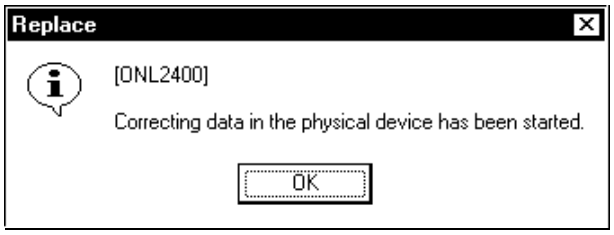
6. <Saving the spare>
   Select (CL) [Yes] in response to "Are you sure you want to correct data in the physical device?".



7. <Correction copy in progress>
   "Correcting..." is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

8. <End of starting correction copy>
   Select (CL) [OK] in response to “Correcting data in the physical device has been started.”.



Copyright ©1997,1998, Hitachi, Ltd.

[PRE-PROCEDURE T1]

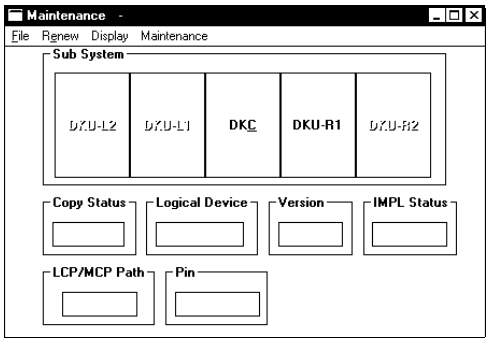
— OUTLINE —

① Select special (DKC) part (status check).
② Specify Replacement.
③ Detach parts related to special part.

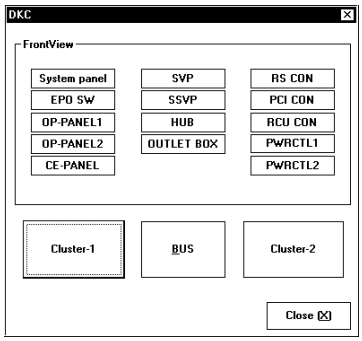
Copyright ©1997, Hitachi, Ltd.

[1] Select special part

1. <Maintenance window>
'Maintenance' window is displayed.
In the 'Maintenance' window, check and select (CL) [DKC] to be replaced.



2. <Specify special part>
Select (CL) part [XXXXX] to be replaced from 'DKC'.



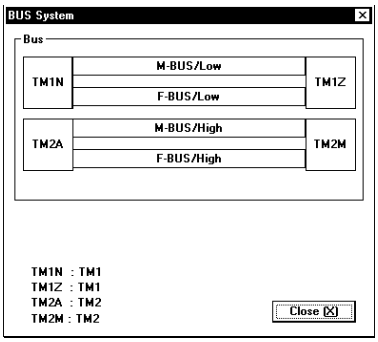
Valid [XXXXX] values are listed below.

- System panel ---------- [System panel]
- OP panel ---------- [OP panel-1/2]
- CE panel ---------- [CE panel]
- PWRCTL ---------- [PWRCTL-1/2]
- PCI CONN ---------- [PCI CONN]
- RCU CONN ---------- [RCU CONN]
- EPO SW ---------- [EPO SW]
- OUTLET BOX -------- [Outlet Box]
- SVP/LAN Card ------- [SVP]
- SSVP ---------- [SSVP]
- HUB ---------- [HUB]
- RS CONN ---------- [RS CONN]

And go to step 4.

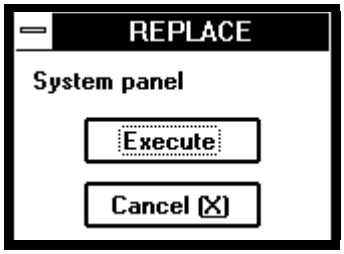
- Terminator
  Select (CL) [BUS]. Go to step 3.

3. <Specify special part>
Select (CL) part [XXXXX] to be replaced from 'BUS System'.
- Terminator ---------- [TMnn]



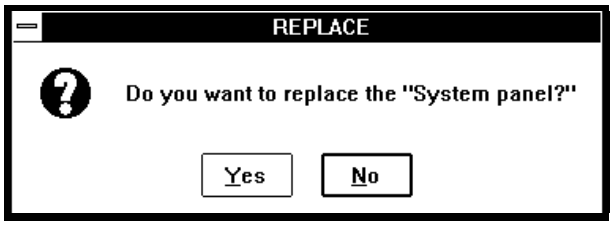
Copyright ©1997,1998, Hitachi, Ltd.

4. <Execute>
Select (CL) [Execute].



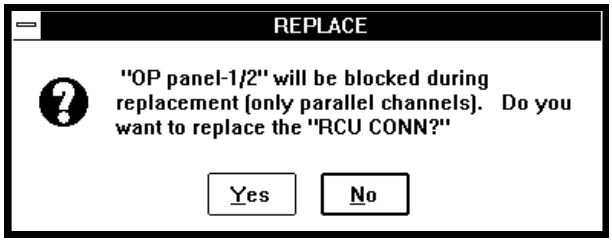
NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

5. <Check beginning of special part Replacement>
Select (CL) [Yes] in response to “Do you want to replace the "XXXXX? "”.



XXXXX represents one of the part names listed in step 2.
- “System panel” ---------Go to [10] (REP02-630)
- “OP panel-1/2” ---------Go to [2] (REP02-520)
- “CE panel” ----------Go to [3] (REP02-530)
- “EPO SW” ----------Go to [4] (REP02-550)
- “PCI CONN” ----------Go to [5] (REP02-560)
- “PWRCTL 1/2” --------Go to [7] (REP02-590)
- “Outlet Box”----------Go to [8] (REP02-600)
- “RS CONN” ----------Go to [10] (REP02-630)
- “SVP” ----------Go to [11] (REP02-640)
- “SSVP”----------Go to [12] (REP02-660)
- “HUB”----------Go to [13] (REP02-670)

Select (CL) [Yes] in response to “"OP panel-m" will be blocked during replacement [only parallel channels]. Do you want to replace the "XXXXX ?"”.

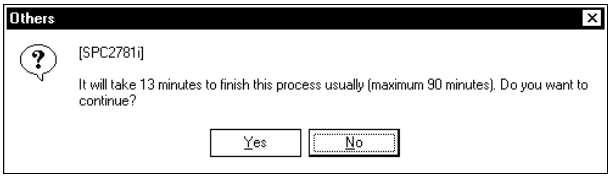


OP panel-m:
- For “RCU CONN” :m = 1/2 (“OP panel-1/2”), OP panel-1 and 2 will be blocked.
- For “TM1” :m = 1 (“OP panel-1”), OP panel-1 will be blocked.
- For “TM2” :m = 2 (“OP panel-2”),OP panel-2 will be blocked.

XXXXX represents one of the part names listed in step 2 or 3.
- “RCU CONN” ---------Go to [6] (REP02-580)
- “TMn” ----------Go to step 6

Copyright ©1997,1999, Hitachi, Ltd.

6. <Display time to finish>
Select (CL) [Yes] in response to “It will take xx minutes to finish this process usually (maximum yy minutes). Do you want to continue?”

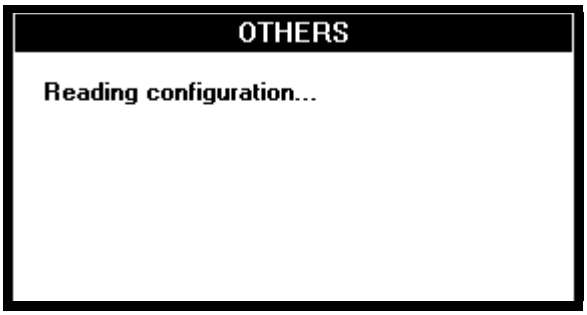


Parts name:
• “TMn” ----------Go to [9] (REP02-610)

Copyright ©1999, Hitachi, Ltd.

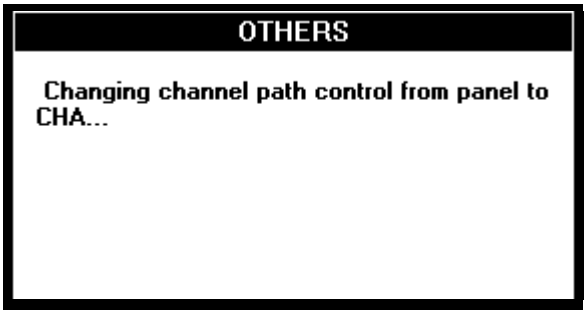
[2] OP PANEL

1. <Check type of CHA>
   "Reading configuration..." is displayed.
   If there are no parallel channels, Go to [10] (REP02-630).



2. <Memorize REMOTE channel name>
   Memorize channel name that switch is REMOTE position, and select (CL) [OK].

3. <Change CHP mode>
   "Changing channel path control from panel to CHA..." is displayed.
   Go to [10] (REP02-630).



Copyright ©1997,1998, Hitachi, Ltd.

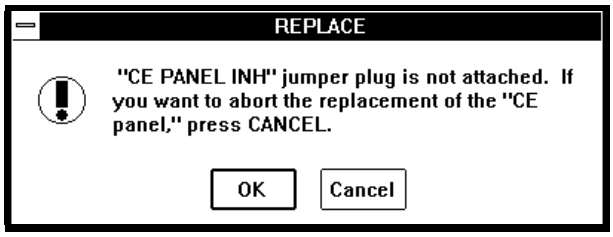
[3] CE PANEL

1. <Read environment monitor>
   The SVP automatically read REMOTE/LOCAL position of the CE panel.

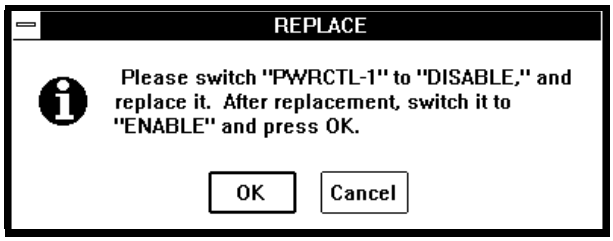
2. <Check jumper installation>
   Attach jumper on HUB in response to “Please attach "CE PANEL INH" jumper plug. Then press OK.”. (see HARDWARE T3 (REP03-1110 step 1)).
   Select (CL) [OK] after confirming that jumper is attached.
   Go to step 4.
   If jumper plug is not attached, go to step 3.

Copyright ©1997,1998, Hitachi, Ltd.

3. <Check jumper reinstallation>
"CE PANEL INH" jumper plug is not attached. If you want to abort the replacement of the "CE panel," press CANCEL." is displayed if no jumper is attached. Attach jumper and select (CL) [OK].
If jumper plug is not attached, step 3 again.



4. <Check beginning of special part replacement>
"Please switch "XXXXX" to "DISABLE," and replace it. After replacement, switch it to "ENABLE" and press OK." is displayed.
(Reply with [OK] after replacing the special part)



5. <Replace special part>
Replace the special part.
(See HARDWARE T3 step 2 (REP03-1120).)

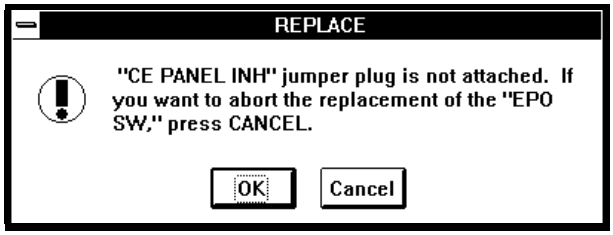
[End of PRE-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

[4] EPO SW

1. <Check jumper installation>
   Attach jumper on HUB in response to “Please attach "CE PANEL INH" jumper plug. Then press OK.”. (see HARDWARE T4 (REP03-1160 step 1)).
   Select (CL) [OK] after confirming that jumper is attached.
   Go to [10] (REP02-630).
   If jumper plug is not attached, go to 2.

2. <Check jumper reinstallation>
   “"CE PANEL INH" jumper plug is not attached. If you want to abort the replacement of the "EPO SW," press CANCEL.” is displayed if no jumper is attached. Attach jumper and select (CL) [OK].
   Go to [10] (REP02-630).
   If jumper plug is not attached, step 2 again.

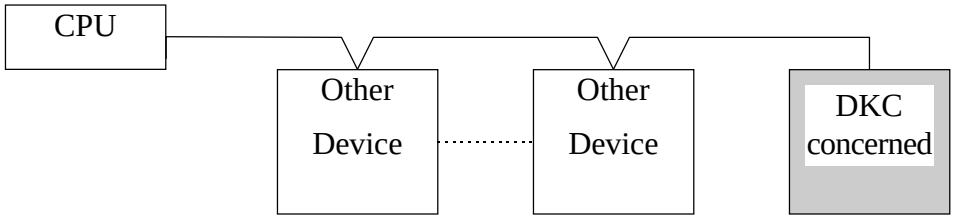


Copyright ©1997,1998, Hitachi, Ltd.

[5] PCI CONN

Note: Replacement of PCI CONN Panel causes other devices running on the same PCI connection line to be powered off except a) and b) shown below (because giving the EPO instruction is assumed). Therefore, stop the other device before performing replacement.

a) If PCI cable is not connected to the replacing DKC.
b) If the replacing DKC (DKC concerned) is connected to the end of the PCI cable as shown below.



1. <Check CE panel switches>
Set REMOTE/LOCAL SW to LOCAL and select (CL) [OK] in response to “Please switch REMOTE/LOCAL Sw, on "CE panel," to the LOCAL position. Then press OK.”. (see HARDWARE T6 (REP03-1230 step 1))
Select (CL) [OK] after confirming that REMOTE/LOCAL SW is LOCAL.
Go to [10] (REP02-630).
If REMOTE/LOCAL SW is not LOCAL, go to 2.

Copyright ©1997,1998, Hitachi, Ltd.

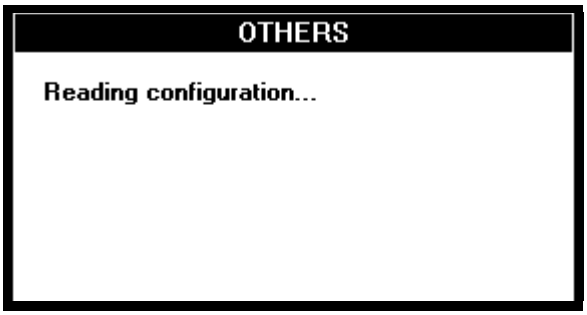
2. <Check that the REMOTE/LOCAL switch of CE panel is LOCAL>
"REMOTE/LOCAL Sw is not "LOCAL." Please check it. If you want to abort the replacement of the "PCI CONN," press CANCEL." is displayed if REMOTE/LOCAL SW is not LOCAL. Turn to LOCAL and select (CL) [OK], or [Cancel] to terminate replacing.

Go to [10] (REP02-630).
If REMOTE/LOCAL SW is not LOCAL, step 2 again.

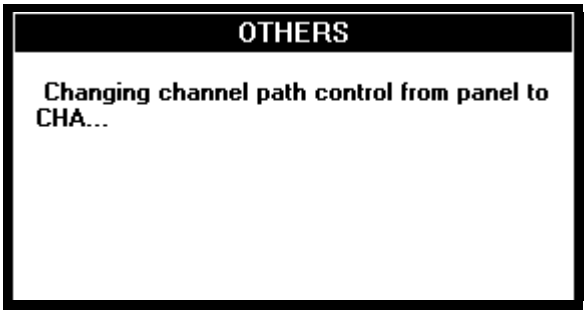
Copyright ©1997,1998, Hitachi, Ltd.

[6] RCU CONN

1. <Read configuration>
   "Reading configuration..." is displayed.



2. <Change CHP mode>
   "Changing channel path control from panel to CHA..." is displayed.
   Go to [10] (REP02-630).



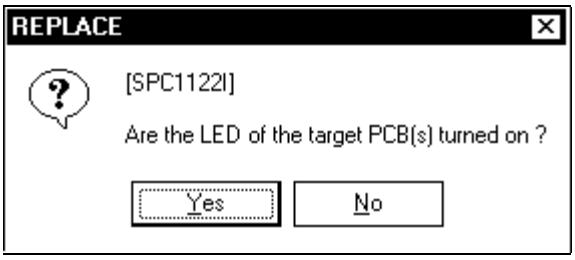
Copyright ©1997, Hitachi, Ltd.

[7] PWRCTL

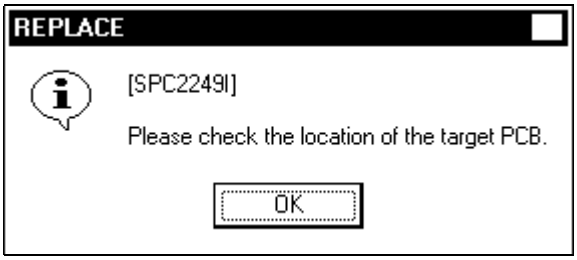
1. <Check DKUMN switch>
Select (CL) [OK] after disabling DKUMN in response to:
“Please switch "DKUMN-n" of all DKU to "DISABLE." Then press OK.”
(About DKUMN position, see LOCATION SECTION (LOCATION02-80), and about connection, see LOCATION SECTION (LOCATION05-40))

DKUMN-n:
① For PWRCTL-1
n = F (“DKUMN-F”), Switch DKUMN on front side of DKU to DISABLE.
② For PWRCTL-2
n = R (“DKUMN-R”),Switch DKUMN on rear side of DKU to DISABLE.

2.
The message “Are the LED of the target PCB(s) turned on?” is displayed.
If you select (CL) [Yes], go to [10] (REP02-630).
If you select (CL) [No], go to step 3.



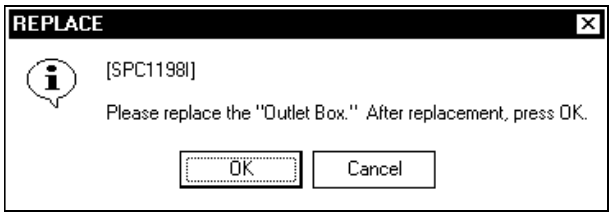
3.
The message shown on the right is displayed.
Check the location of the PWRCTL.
(see HARDWARE T5 (REP03-1190 step 1))
Select (CL) [OK].
Go to [10] (REP02-630).



Copyright ©1997,1998, Hitachi, Ltd.

[8] OUTLET BOX

1. <Checking special part Replacement>
   “Please replace the "Outlet Box." After replacement, press OK.” is displayed.
   (Reply with [OK] after replacing the special part.)



2. <Replace special part>
   Replace the special part.

   (See HARDWARE T16 (REP03-1620))

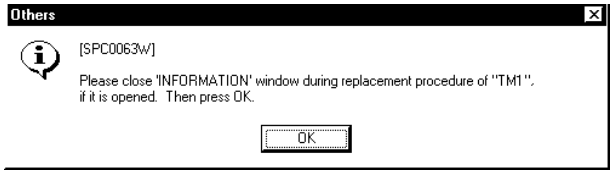
   [End of PRE-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

[9] TM PCB (Terminator PCB)

1.

Please confirm that “INFORMATION” program is not executed.
Select (CL) [OK].



2.

When the internal process is completed normally, the message shown on the right is not displayed. Go to 3.
If blocking OP panel is failed, “Please confirm you have already varied off the concerned channel path(s).” is displayed.

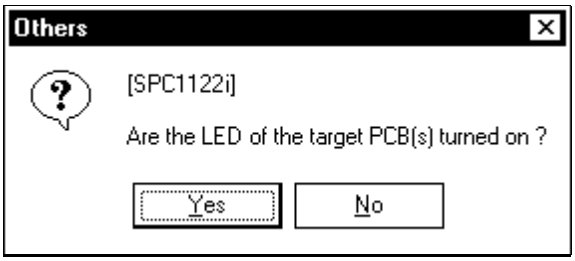
If you replace “TM1”, vary off the channel of Cluster-1.
If you replace “TM2”, vary off the channel of Cluster-2.
If you select (CL) [OK], go to step 3.
If you select (CL) [Cancel], go to step 6.

NOTICE
When failing to block the OP panel, channel must be placed offline. If the channel is not allowed to be placed offline, select [Cancel] to cancel the replacement.

3.

The message “Are the LED of the target PCB(s) turned on?” is displayed.

Note: Because two TM PCBs must be replaced at one time, the LEDs on these PCBs are turned on.

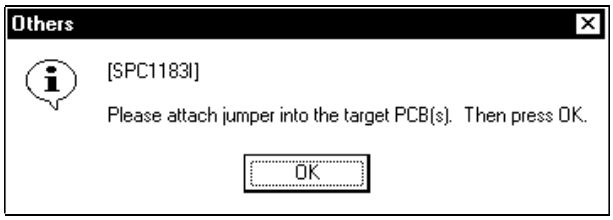


If you select (CL) [Yes], go to step 5.
If you select (CL) [No], go to step 4.

Copyright ©1997,1999, Hitachi, Ltd.

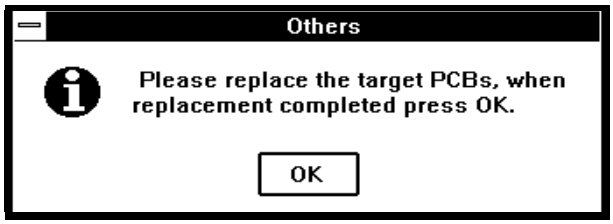
4.

Please attach the jumper in response to the displayed message. And select (CL) [OK].



5.

The message “Please replace the target PCBs, when replacement completed press OK.”is displayed.
(Reply with [OK] after replacing the special part.)
(TM1 : see HARDWARE J (REP03-230))
(TM2 : see HARDWARE K (REP03-260))



Note : When you plug in new PCBs, the LEDs are lit on again.
But you select (CL) [OK], then the LEDs are lit off.

[End of PRE-PROCEDURE]

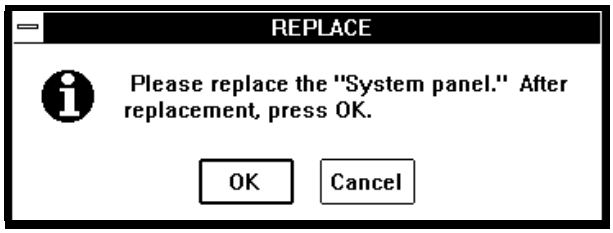
6. Replacement error
Select (CL) [OK] in response to “The replacement has failed.”.

[End of Replacement]

Copyright ©1997,1998, Hitachi, Ltd.

[10] Check beginning of replacement 1

1. <Check beginning of special part Replacement>
   “Please replace the "XXXXXX." After replacement, press OK.” is displayed.
   (Reply with [OK] after replacing the special part.)



2. <Replace special part>
   Replace the special part.

   System panel ----------see HARDWARE T1 (REP03-1000)
   OP panel-1/2 ----------see HARDWARE T2 (REP03-1030)
   EPO SW ----------see HARDWARE T4 (REP03-1150)
   PCI CONN----------see HARDWARE T6 (REP03-1220)
   RCU CONN ----------see HARDWARE T7 (REP03-1270)
   RS CONN ----------see HARDWARE T23 (REP03-2140)
   PWRCTL-1/2 ----------see HARDWARE T5 (REP03-1180)

   [End of PRE-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

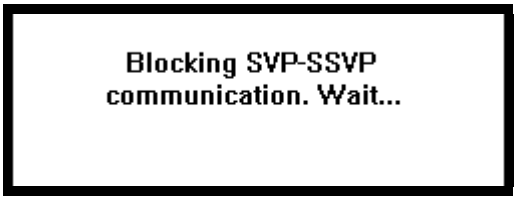
[11] SVP/LAN Card

1.

Select (CL) [OK] in response to the message shown on the right.

2.

The message “Blocking SVP-SSVP communication. Wait...” is displayed.



The message “Blocking DKC-SVP communication. Wait...” is displayed.

Copyright ©1997,1998, Hitachi, Ltd.

3.

The message “This will end SVP operation. Replace SVP after turning off.” is displayed. Select (CL) [OK], so SVP is turned off automatically.
(See HARDWARE T10 (REP03-1330))

[End of PRE-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

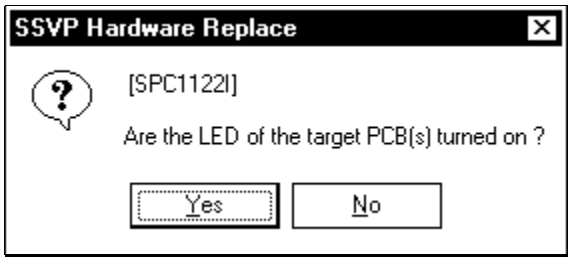
[12] SSVP

1.

Select (CL) [OK] in response to the message shown on the right.

2.

The message “Are the LED of the target PCB(s) turned on?” is displayed.
If you select (CL) [Yes], go to step 4.
If you select (CL) [No], go to step 3.



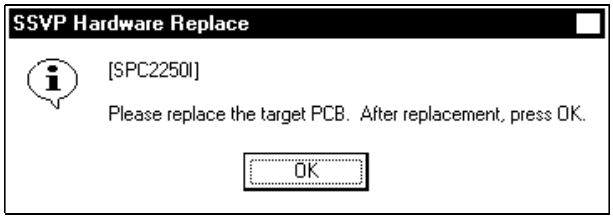
3.

The message shown on the right is displayed.
Check the location of the SSVP.
(see HARDWARE T11 (REP03-1390 step 1))
Select (CL) [OK].

4.

The message “Please replace the target PCB. After replacement, press OK.” is displayed.
(Reply with [OK] after replacing the special part.)
(see HARDWARE T11 (REP03-1380))

[End of PRE-PROCEDURE]

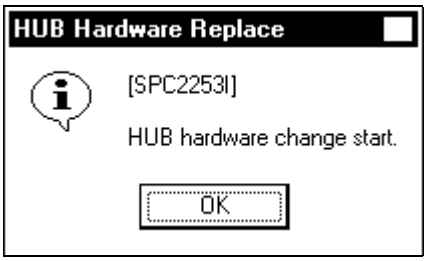


Copyright ©1997,1998, Hitachi, Ltd.

[13] HUB

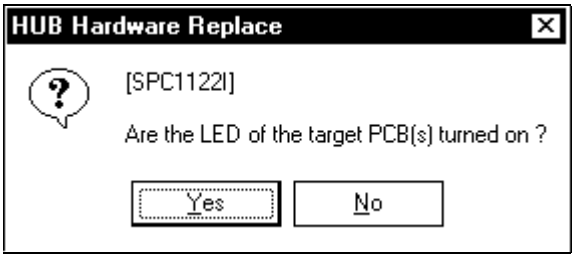
1.

Select [OK] (CL) in response to the message shown on the right.



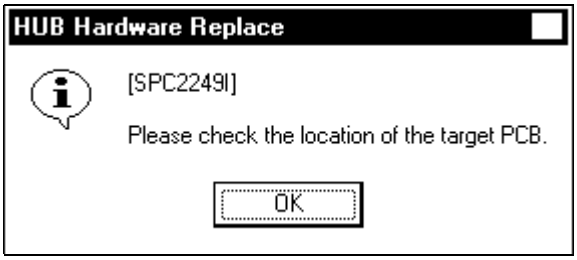
2.

The message “Are the LED of the target PCB(s) turned on?” is displayed.
If you select (CL) [Yes], go to step 4.
If you select (CL) [No], go to step 3.



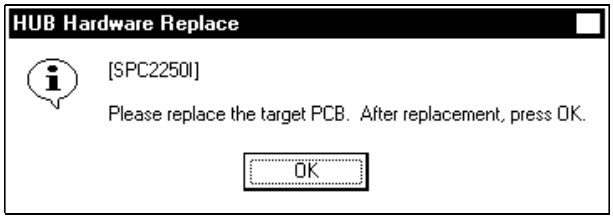
3.

The message shown on the right is displayed.
Check the location of the HUB.
(see HARDWARE T26 (REP03-2240 step 1))
Select (CL) [OK].



4.

The message “Please replace the target PCB. After replacement, press OK.” is displayed.
(Reply with [OK] after replacing the special part.)
(see HARDWARE T26 (REP03-2230))



[End of PRE-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

[PRE-PROCEDURE T3]

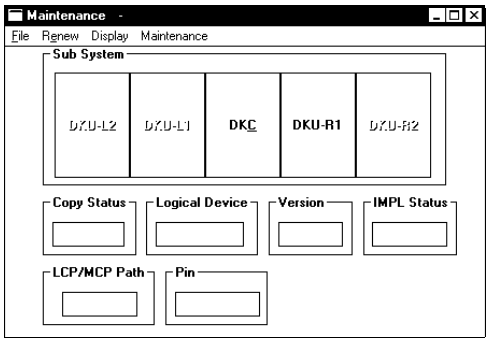
— OUTLINE —

① Select special (DKC) part (status check).
② Specify Replacement.
③ Detach parts related to special part.
④ Place parts related to special part into unpluggable state.

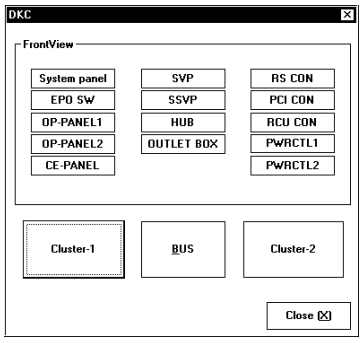
Copyright ©1997, Hitachi, Ltd.

[1] Select special part

1. <Maintenance window>
In the 'Maintenance' window, check and select (CL) DKC to be replaced.

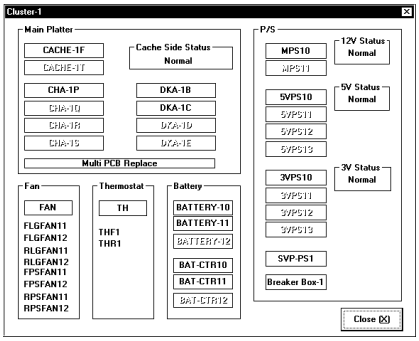


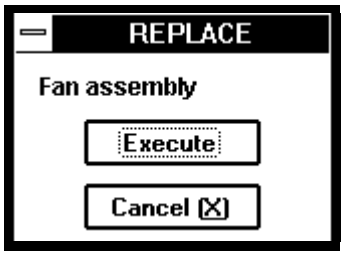
2. <DKC window>
Select (CL) [Cluster-n] in the 'DKC'.



3. <Select special part>
Select (CL) part [XXXX] to be replaced from [Cluster-n] window and select (CL) [Execute].
Valid [XXXX] values are listed below.

- FAN..... [FAN]
- PS ..... [MPSn], [5VPSn], [3VPSn]
- SVPPS..... [SVPPSn]
- Battery..... [Battery, BAT CTR]
- Breaker Box ..... [Breaker Box-n] Go to [6] (REP02-760)
- Thermostat [TH]

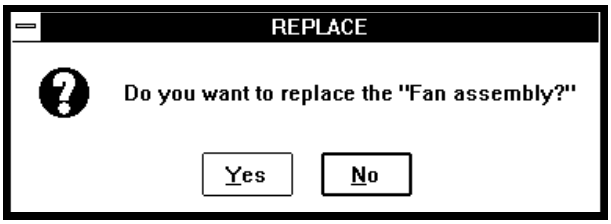




Copyright ©1997,1998, Hitachi, Ltd.

4. <Check beginning of special part Replacement>
Select (CL) [Yes] in response to “Do you want to replace the "XXXXX?."”.

XXXXX represents one of the part names listed in step 3.

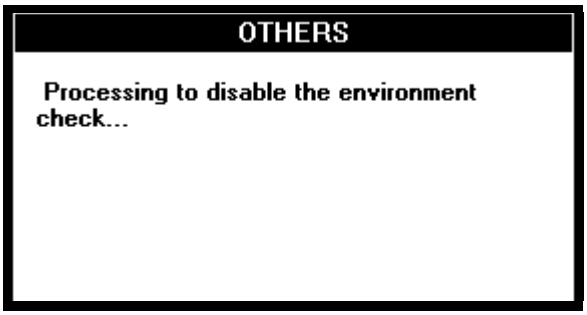


- “FAN” ----------Go to [2] (REP02-710)
- “MPSn” ----------Go to [3] (REP02-720)
- “5V PSn”----------Go to [3] (REP02-720)
- “3V PSn”----------Go to [3] (REP02-720)
- “Battery-n”----------Go to [4] (REP02-740)
- “BAT CTR-n”----------Go to [4] (REP02-740)
- “Thermostat” ----------Go to [5] (REP02-750)
- “SVPPSn”----------Go to [7] (REP02-810)

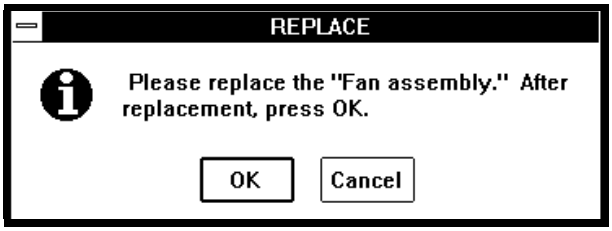
Copyright ©1997,1998, Hitachi, Ltd.

[2] FAN

1. <Check environment monitor stopped state>
   “Processing to disable the environment check...” is displayed.



2. <Special part Replacement>
   “Please replace the "XXXXX." After replacement, press OK.” is displayed.
   (Reply with [OK] after replacing the special part.)
   Go to [8] (REP02-820).

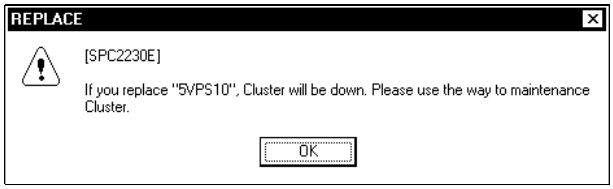


Copyright ©1997,1998, Hitachi, Ltd.

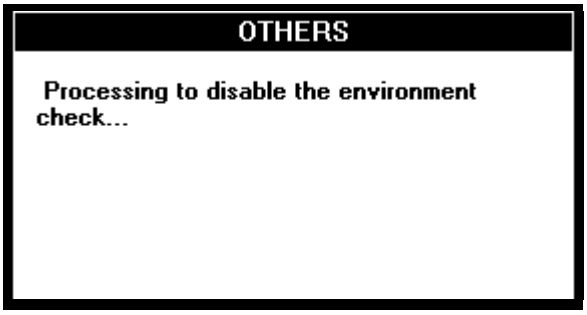
[3] 5V PS, 3V PS, MPS

1. <Check matching power supply>
   The SVP automatically checks the power supply to see if it is replaceable.

2.
   When a cluster needs to be blocked, the message shown on the right is displayed.
   Select (CL) [OK].
   Go to 5.

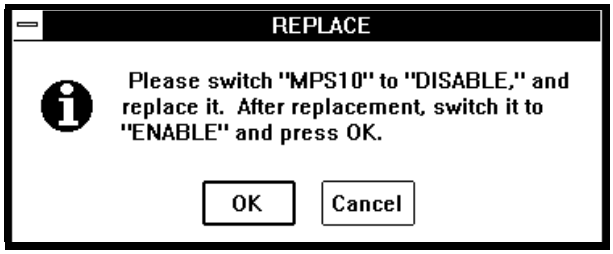


3. <Environment monitor state>
   "Processing to disable the environment check..." is displayed.



Copyright ©1997,1998, Hitachi, Ltd.

4. <Special part replacement>
The message shown on the right is displayed. (Reply with [OK] after replacing the special part.)
Go to [8] (REP02-820).



5. <Block Cluster>
• 5VPS, 3VPS, MPS
Block cluster that include target PS.
see SVP02-860.

6. <Special part replacement>
Go to [8] (REP02-820).

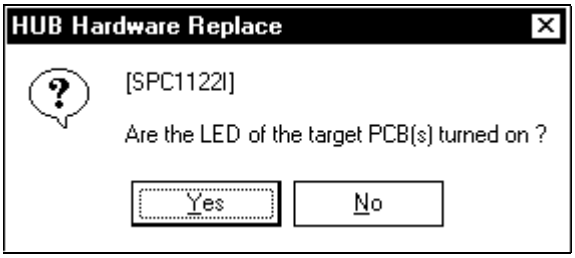
Copyright ©1997,1998, Hitachi, Ltd.

[4] Battery/BATCTR

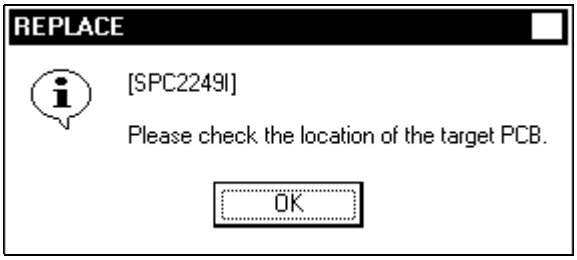
1. <Check source power>
   The SVP automatically checks the 3V power supply to determine whether it is not shut down.

   Battery-xx : Go to 4

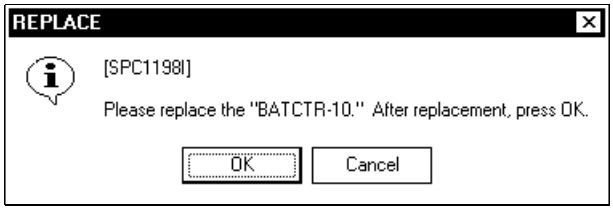
2.
   The message “Are the LED of the target PCB(s) turned on?” is displayed.
   If you select (CL) [Yes], go to step 4.
   If you select (CL) [No], go to step 3.



3.
   The message shown on the right is displayed.
   Check the location of the BATCTR.
   (see HARDWARE T15 (REP03-1610 step 1))
   Select (CL) [OK].



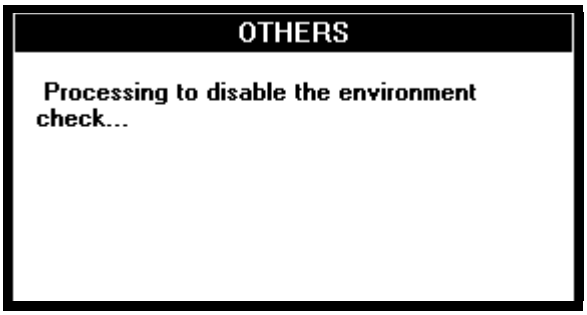
4. <Check beginning of special part Replacement>
   “Please replace the "XXXXX." After replacement, press OK.” is displayed.
   (Reply with [OK] after replacing the special part.)
   Go to [8] (REP02-820).



Copyright ©1997,1998, Hitachi, Ltd.

[5] Thermostat

1. <Environment monitor state>
   "Processing to disable the environment check..." is displayed.



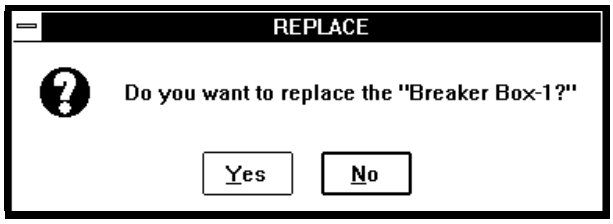
2. <Special part Replacement>
   "Please replace the "Thermostat assembly." After replacement, press OK." is displayed. (Reply with [OK] after replacing the special part.)
   Go to [8] (REP02-820).

Copyright ©1997,1998, Hitachi, Ltd.

[6] Breaker Box

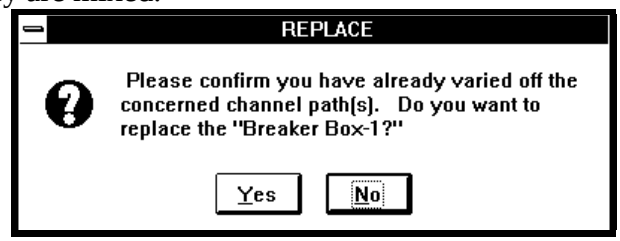
1.

① When redundant power supply is installed, then go to 5.

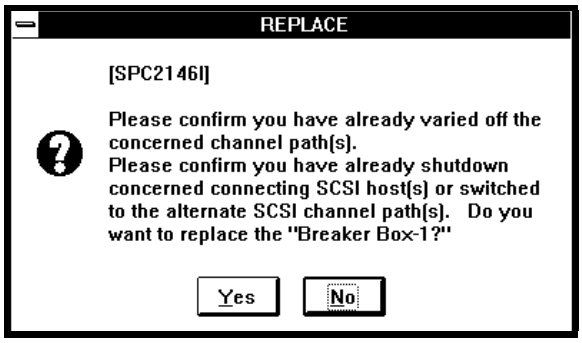


② Otherwise

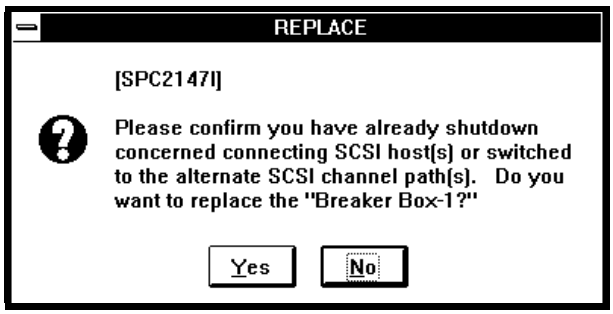
- When only serial or parallel channels, or they are mixed.
  "Please confirm you have already varied off the concerned channel path(s). Do you want to replace the "Breaker Box-n?" " is displayed. Select (CL) [Yes].



- When SCSI channels and other kinds are mixed.
  "Please confirm you have already varied off the concerned channel path(s). Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to replace the "Breaker Box-n?" " is displayed. Select (CL) [Yes].



- When only SCSI channels are installed.
  "Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to replace the "Breaker Box-n?" " is displayed. Select (CL) [Yes].



Copyright ©1997,1998, Hitachi, Ltd.

2.

The SVP automatically checks the power supplies to see if Breaker Box is replaceable.

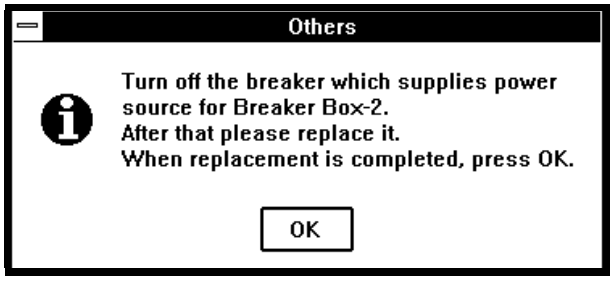
3. <Block cluster>

NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

Blocking cluster has finished normally, go to next step.

4.

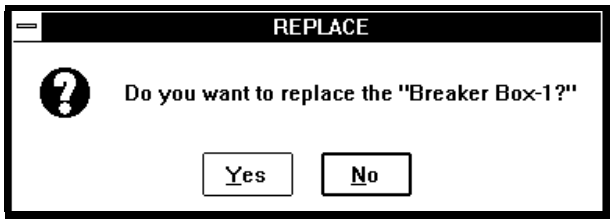
The message shown on the right is displayed. (Reply with [OK] after replacing the special part.)
Go to [8] (REP02-820).



Copyright ©1997,1998, Hitachi, Ltd.

5.

When redundant power supply is installed.
“Do you want to replace the "Breaker Box-n?"” is displayed.
Select (CL) [Yes].

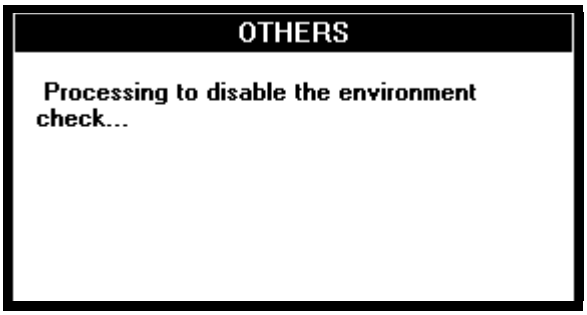


Copyright ©1997,1998, Hitachi, Ltd.

6.

The SVP automatically checks the power supplies to see if Breaker Box is replaceable.

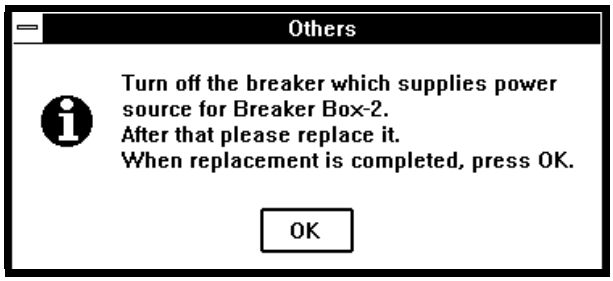
7. <Check environment monitor stopped state>
"Processing to disable the environment check..." is displayed.



Copyright ©1997, Hitachi, Ltd.

8.

The message shown on the right is displayed. (Reply with [OK] after replacing the special part.)
Go to [8] (REP02-820).



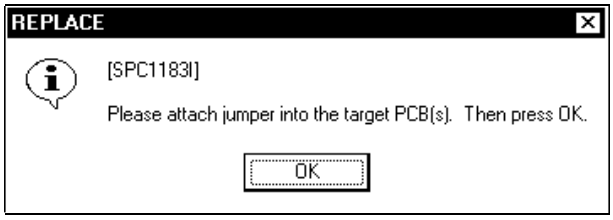
Copyright ©1997,1998, Hitachi, Ltd.

[7] SVPPS

1. <Check matching power supply>
   The SVP automatically checks the power supply if it is replaceable.

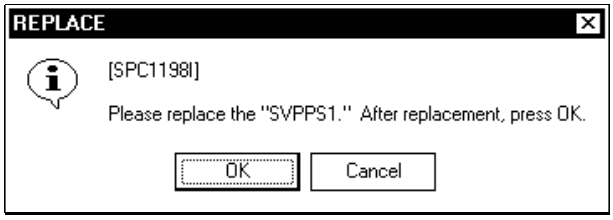
2.

Please attach the jumper in response to the displayed message.
(see HARDWARE T25 (REP03-2220 step 1))
Select (CL) [OK].



3.

The message “Please replace the "SVPPS1." After replacement, press OK.”is displayed.
(Reply with [OK] after replacing the special part.)
Go to [8] (REP02-820)



Copyright ©1997,1998, Hitachi, Ltd.

[8] Replacement

1. <Replace special part>
   Replace the special part.

FAN----------see HARDWARE T8 (REP03-1290)
Thermostat----------see HARDWARE T9 (REP03-1310)
Breaker Box-1----------see HARDWARE T12 (REP03-1400)

[PRE-PROCEDURE T4]

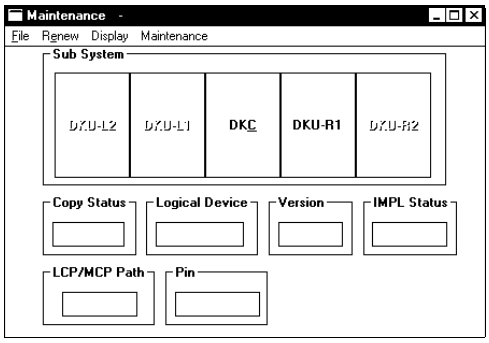
— OUTLINE —

① Select special (DKU) part (status check).
② Specify Replacement.
③ Detach parts related to special part.
④ Place part into unpluggable state.

Copyright ©1997, Hitachi, Ltd.

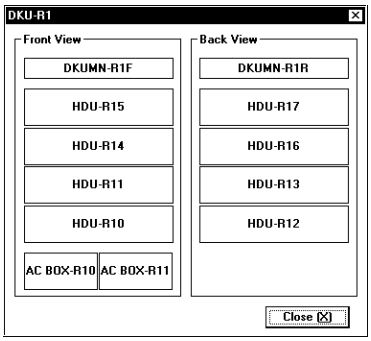
[1] Select special part

1. <Select DKU-nn>
   Select (CL) [DKU-nn] from 'Maintenance'.

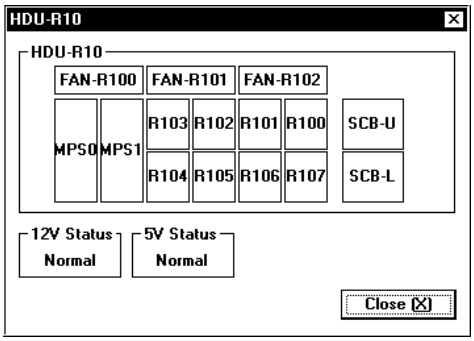


2. <Specify special part>
   Select part [XXXXX] to be Replaced.
   • DKUMN -------- [DKUMN-nnn]
   • AC BOX -------- [AC BOX-nn]
   Go to step 4.

   • FAN
   • PS (DKU 5/12V)
   Select (CL) [HDU-nnn]. Go to step 3.



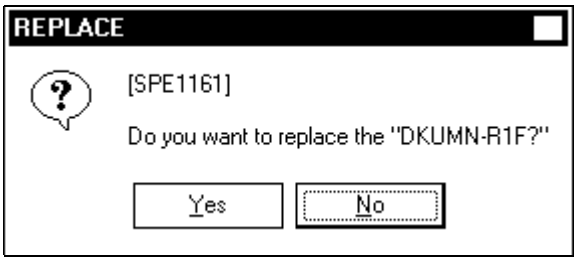
3. <Specify special part>
   Select (CL) [HDU-nnn] containing part to be replaced.
   • FAN----------[FAN-nnnn]
   • PS (DKU 5/12V)-------[MPS-n]



Copyright ©1997,1998, Hitachi, Ltd.

4. <Specify special part Replacement>
Select (CL) [Execute].
• 'AC BOX-nnn'---------Go to [5] (REP02-890)

5. <Special part Replacement>
Select (CL) [Yes] in response to "Do you want to replace the "XXXXXX?"".
XXXXX represents one of the part names listed in step 2 or 3.
Valid [XXXXX] values are listed below.

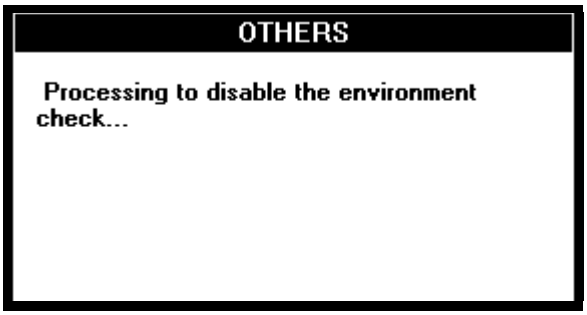


• 'DKUMN-nnn'---------Go to [2] (REP02-860)
• 'MPS-n' ----------Go to [3] (REP02-870)
• 'FAN'----------Go to [4] (REP02-880)

Copyright ©1997,1998, Hitachi, Ltd.

[2] DKUMN PCB

1. <Environment monitor state>
   "Processing to disable the environment check..." is displayed.
   • DKUMN-R2n, DKUMN-L2n -----Go to 3



2. <Disable DKUMN>
   When DKUMN-XXX (listed below) is installed, this message is displayed.
   Disable the DKUMN in response to "Please switch "DKUMN-XXX" to "DISABLE". Then press OK." (see HARDWARE T18 (REP03-1750)).
   After confirming that the DKUMN-XXX has been disabled, select (CL) [OK].

   DKUMN-XXX:
   • For DKUMN-R1F: XXX=R2F ("DKUMN-R2F"), Switch DKUMN-R2F to DISABLE.
   • For DKUMN-R1R: XXX=R2R ("DKUMN-R2R"), Switch DKUMN-R2R to DISABLE.
   • For DKUMN-L1F: XXX=L2F ("DKUMN-L2F"), Switch DKUMN-L2F to DISABLE.
   • For DKUMN-L1R: XXX=L2R ("DKUMN-L2R"), Switch DKUMN-L2R to DISABLE.

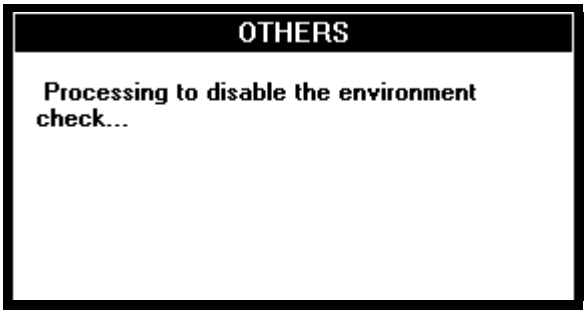
3. <Special part Replacement>
   "Please switch "DKUMN-xxx" to "DISABLE," and replace it. After replacement, switch it to "ENABLE" and press OK." is displayed.
   (Reply with [OK] after replacing the special part.)
   Go to [6] (REP02-940).

Copyright ©1997,1998, Hitachi, Ltd.

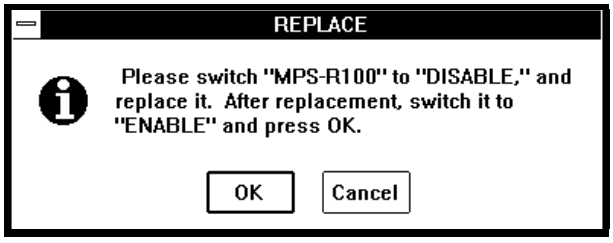
[3] MPS (DKU 5/12V)

1. <Check matching power supply>
   The SVP automatically checks that the mate power supply is normal.

2. <Environment monitor state>
   "Processing to disable the environment check..." is displayed.



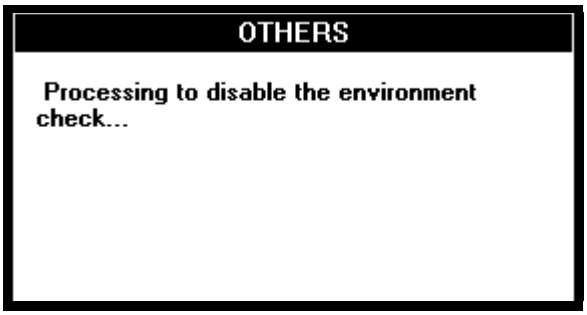
3. <Special part replacement>
   The message shown on the right is displayed. (Reply with [OK] after replacing the special part.)
   Go to [6] (REP02-940).



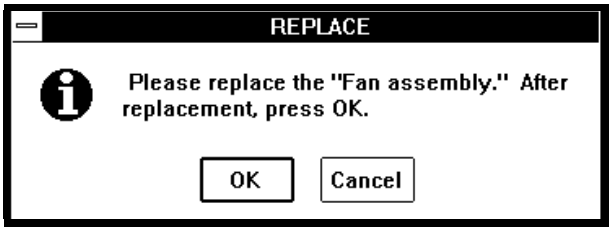
Copyright ©1997,1998, Hitachi, Ltd.

[4] FAN

1. <Environment monitor state>
   “Processing to disable the environment check...” is displayed.



2. <Special part Replacement>
   “Please replace the "Fan assembly." After replacement, press OK.” is displayed.
   (Reply with [OK] after replacing the special part.)
   Go to [6] (REP02-940).



Copyright ©1997,1998, Hitachi, Ltd.

[5] AC BOX

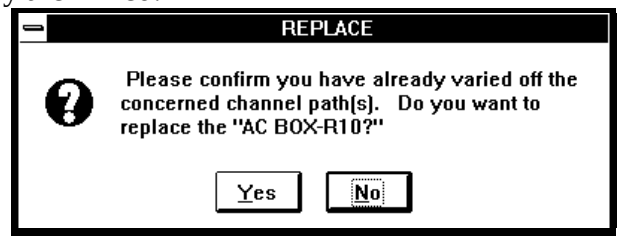
When part to be replaced is neither “AC-BOX-R10” nor “AC-BOX-R11”, Go to 6.

1.

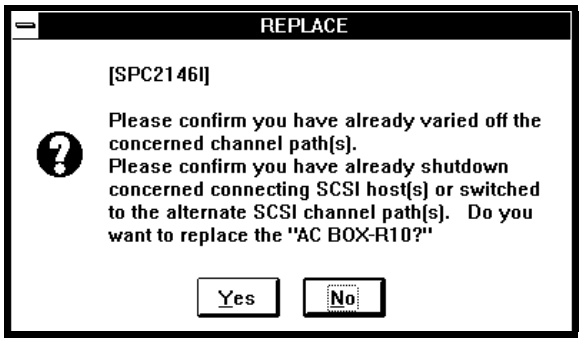
① When redundant power supply is installed, then go to 6.

② Otherwise

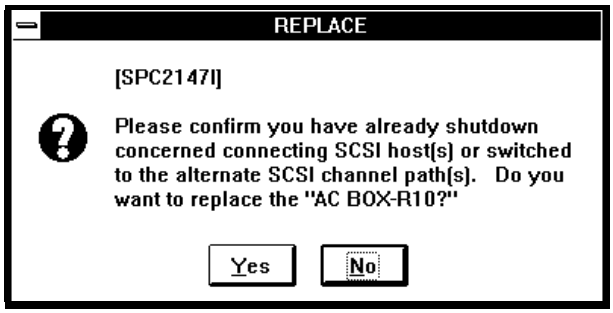
- When only serial or parallel channels, or they are mixed.
  “Please confirm you have already varied off the concerned channel path(s). Do you want to replace the “AC BOX-XXX?” ” is displayed. Select (CL) [Yes].



- When SCSI channels and other kinds are mixed.
  “Please confirm you have already varied off the concerned channel path(s). Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to replace the “AC BOX-XXX?” ” is displayed. Select (CL) [Yes].



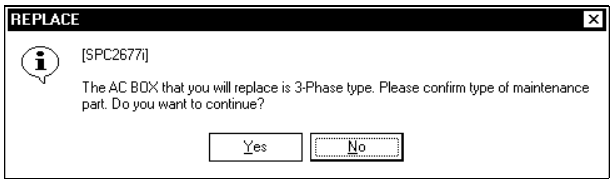
- When only SCSI channels are installed.
  “Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to replace the “AC BOX-XXX?” ” is displayed. Select (CL) [Yes].



Copyright ©1997,1998, Hitachi, Ltd.

2.

"The AC BOX that you will replace is 3-Phase type. Please confirm type of maintenance part. Do you want to continue?" is displayed. Confirm that maintenance part is 3-Phase type, and select (CL) [Yes].



3. <Check power supply>

The SVP automatically checks that the power supplies to see if AC BOX is replaceable.

4. <Block cluster>

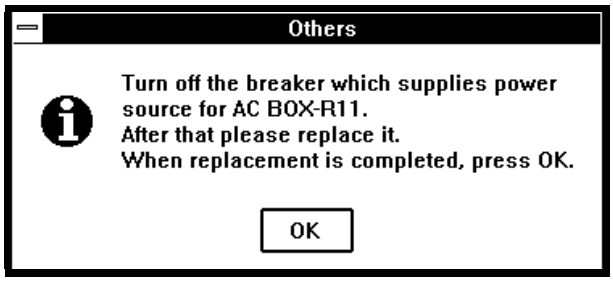
NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

Blocking cluster has finished normally, go to next step.

Copyright ©1997,1998, Hitachi, Ltd.

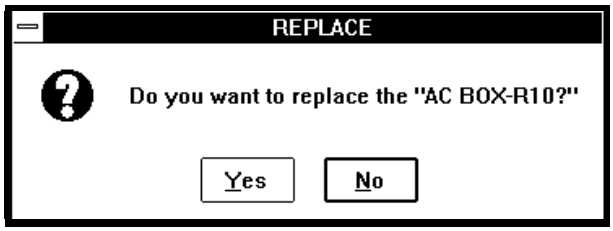
5.

Turn off the AC BOX-R1n, and replace the AC BOX-R1n.
(Reply with [OK] after replacing the special part.)
Go to [6] (REP02-940).



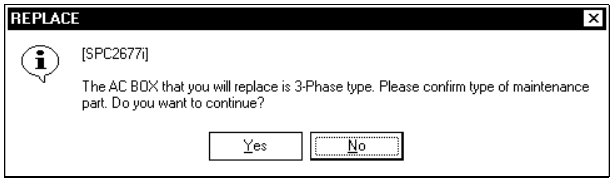
6.

"Do you want to replace the "AC BOX-xxx?"" is displayed.
Select (CL) [Yes].



7.

"The AC BOX that you will replace is 3-Phase type. Please confirm type of maintenance part. Do you want to continue?" is displayed.
Confirm that maintenance part is 3-Phase type, and select (CL) [Yes].

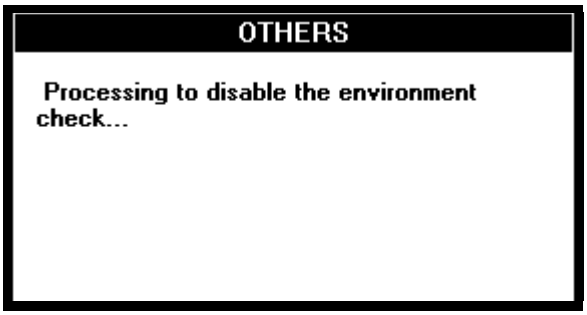


Copyright ©1997,1998, Hitachi, Ltd.

8.

The SVP automatically checks the power supplies to see if AC BOX is replaceable.

9. <Check environment monitor stopped state>
"Processing to disable the environment check..." is displayed.



Copyright ©1997,1998, Hitachi, Ltd.

10.

"Turn off the breaker which supplies power source for AC-BOX-xxx. After that please replace it. When replacement is completed, press OK." is displayed.
(Reply with [OK] after replacing the special part.)
Go to [6] (REP02-940).

[PRE-PROCEDURE V]

— OUTLINE —

① Select P-DEV (status check).
② Specify Replacement.
③ Place HDD into unpluggable state.

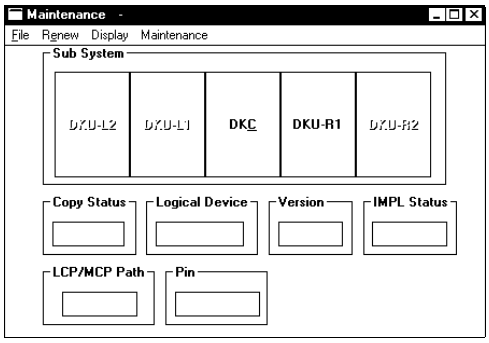
NOTICE

This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

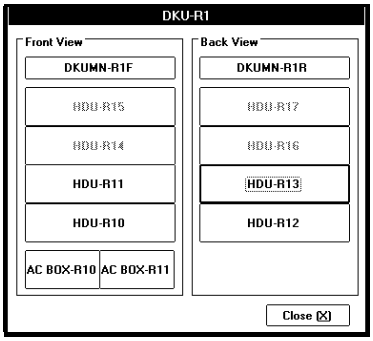
Copyright ©1998, Hitachi, Ltd.

NOTICE
This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

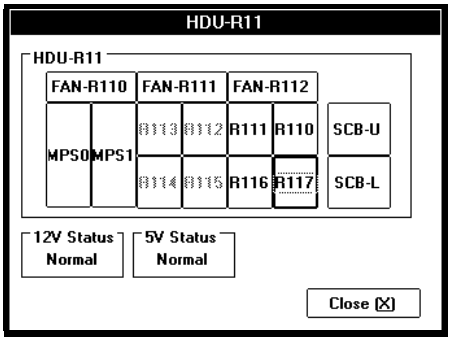
1. <Maintenance window>
   In the 'Maintenance' window, check and select (CL) [DKU-Rn] or [DKU-Ln] to be replaced.



2. <Select HDU-BOX>
   Check and select (CL) [HDU-Rnn] or [HDU-Lnn] to be replaced.
   Selecting [Close] (CL) returns you to step 1.



3. <Select HDD>
   Check and select [Rnnn] or [Lnnn] to be replaced.
   Selecting [Close] (CL) returns you to step 2.

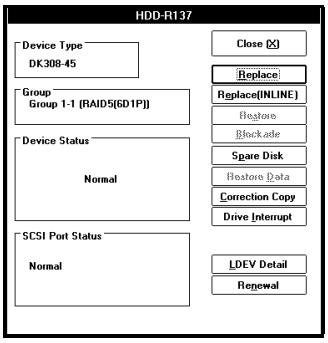


Copyright ©1998, Hitachi, Ltd.

NOTICE
This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

4. <Specify replacement on HDD>
Check status display.
◆ In the case of a warning SIM, “NORMAL” is displayed.
◆ In the case of a blocking SIM, “FAILED” is displayed.

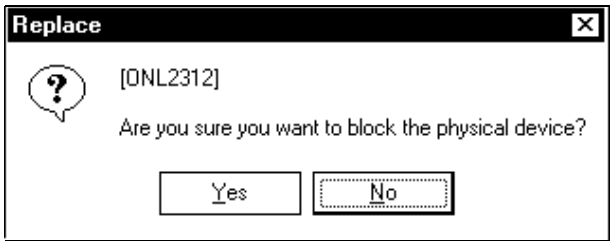
Select (CL) [Replace (INLINE)].



5. <Checking the P-DEV status & saving the spare>
“Checking...” is displayed.

NOTICE
When the screen appears prompting the operator to input a password to prevent a multiple maintenance or for executing a pin check, contact the technical support center to ask for an instructions.

6. <P-DEV blocking>
Select (CL) [Yes] in response to “Are you sure you want to block the physical device?”.



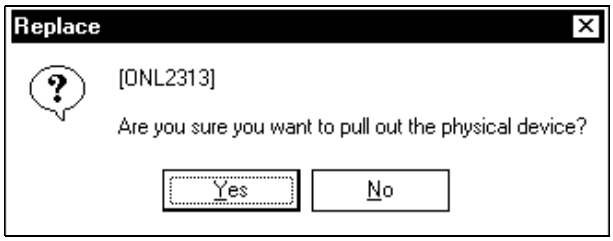
Copyright ©1998, Hitachi, Ltd.

NOTICE
This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

7. <Blocking the Physical device>
"Blocking..." is displayed.

8. <Spin down the Physical device>
"Spinning down..." is displayed

9. <P-DEV pull out>
Select (CL) [Yes] in response to "Are you sure you want to pull out the physical device?".



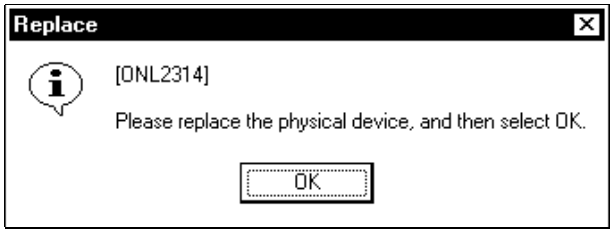
Copyright ©1998, Hitachi, Ltd.

NOTICE
This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

10. <Check shut down LED>
    Check the shut down LED on the HDD to be replaced.
    If LED is off, reconfirm the location of the HDD to be replaced with LOCATION SECTION before hardware work.

NOTICE
If a wrong HDD is removed, a data loss or a system down may be caused.

11. <Confirmation of replace>
    Select (CL) [OK] in response to "Please replace the physical device, and then select OK." after replace the unit (Step 12).



12. <Replace HDD>
    Replace HDD.
    See HARDWARE A (REP03-10).

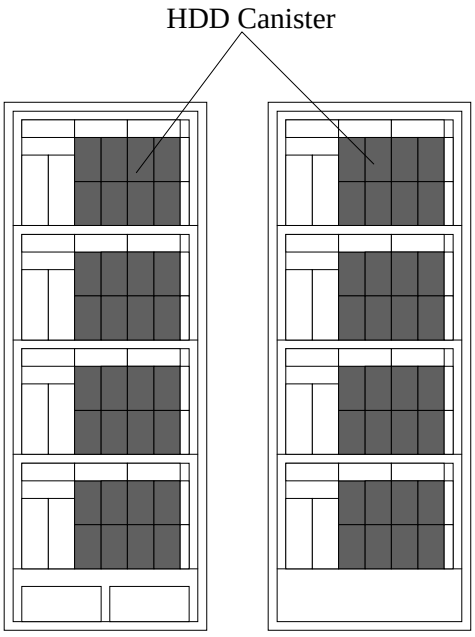
[HARDWARE A]

Location	Function Name of Component		Part Name	HDA Label
HDU Box in DKU	1	HDD Canister	HDU-6F1(60)	DK3F1-60
			HDU-901(90)	DK308/309-90
			HDU-1801(180)	DK309/30A-180
			HDU-9F1(90)	DK3F2-90
			HDU-15F1(150)	DK3F2-150
			HDU-3601(360)	DK30A-360
			HDU-18J1SC(180)	DKR2B-J18SC
			HDU-47J1SC(470)	DKR1B-J47SC

NOTICE:
Replace the HDD canister in the subsystem power on status only.
Do not replace with the subsystem power off status.



Front View of DKU

Rear View of DKU

NOTICE:
(1) Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.
(2) HDD is a precise component. Be careful in handling HDD to avoid vibration and impact.

Copyright ©1997,2000, Hitachi, Ltd.

1. The following figure shows the correct way to replace the HDD canister.

a. Check Shut Down LED ① on the HDD canister.

> **⚠ CAUTION**
>
> A system down may be caused by a replacement of an HDD canister other than that to be replaced. Make sure that it is the HDD canister to be replaced.

b. Remove the HDD Box Cover (acrylic cover ②).
Process 1: Move HDD Box Cover toward the right edge, and take fastener parts(two parts on the left side of HDD Box Cover) off from HDD Box.
Process 2: Push the HDD Box Cover toward lower edge then pull it out from HDD Box (HDD Box Cover should NOT touch Jumper Cover(connector ③)). Please refer to Caution Label.
*Please handle Jumper Cover with care, especially the right side and lower side of the Jumper Cover.
*Caution Label says: Ensure HDD Jumpers are NOT disturbed(disconnected) while removing this cover.
c. Remove Jumper Cover from the replacement HDD canister.
d. Loosen screw ④ and remove the HDD canister.
e. Insert the spare HDD canister into the HDU Box. Fix screw ④.
f. Insert Jumper Cover into the spare HDD canister.
g. Attach the HDD Box Cover.

2. See SVP post-procedure as follows.

<Data drive, spare drive>

Work ID	Part name	Condition Item				Procedure *1
		Condition			Configuration	SVP post-procedure
		Failure		Preventive	Unused Spare drive	
		Warning SIM	Block SIM			
RDK1	Data Drive Note 1	×	-	-	Yes	Post a *1
RDK2	Data Drive Note 1	-	×	-	Yes	Post a *1
RDK3	Data Drive Note 1	-	-	×	Yes	Post a *1
RDK4	Data Drive Note 1	×	-	-	No	Post b *1
RDK5	Data Drive Note 1	-	×	-	No	Post b *1
RDK6	Data Drive Note 1	-	-	×	No	Post b *1
RDK7 Note 2 Note 3	Data Drive Note 1	Note 2				Post c *1
RDK8	Spare Drive Note 1	-				Post d *1

*1: Refer to REP01-170

Note 1) Parts Name is indicates attribute of a drive.
Data Drive : The drive is installed in the position for a drive except spare drive (Data Drive).
Spare Drive : The drive is installed in the position for a spare drive.

Note 2) RDK7 is a Work ID for a work which is applicable to a case that two or more drives in a same parity group are blocked.
When the procedures instructed by RDK7 are executed, data will be lost. Ask the technical support center about the appropriateness of the operation.

Note 3) Confirm the parity group and the LDEV No. corresponding to the HDD through the SVP STATUS. See page SVP03-100 for the procedure for referring to SVP STATUS.

Note : If a Work ID cannot be found or if multiple drive error is occurring, see page TRBL05-170 on TROUBLE SHOOTING section.

1. Remove the Cache Memory PCB

   a. Check that the Shut Down LED is on. If not, connect the Shut Down Jumper to the Shut Down Connector. (only hot replace)

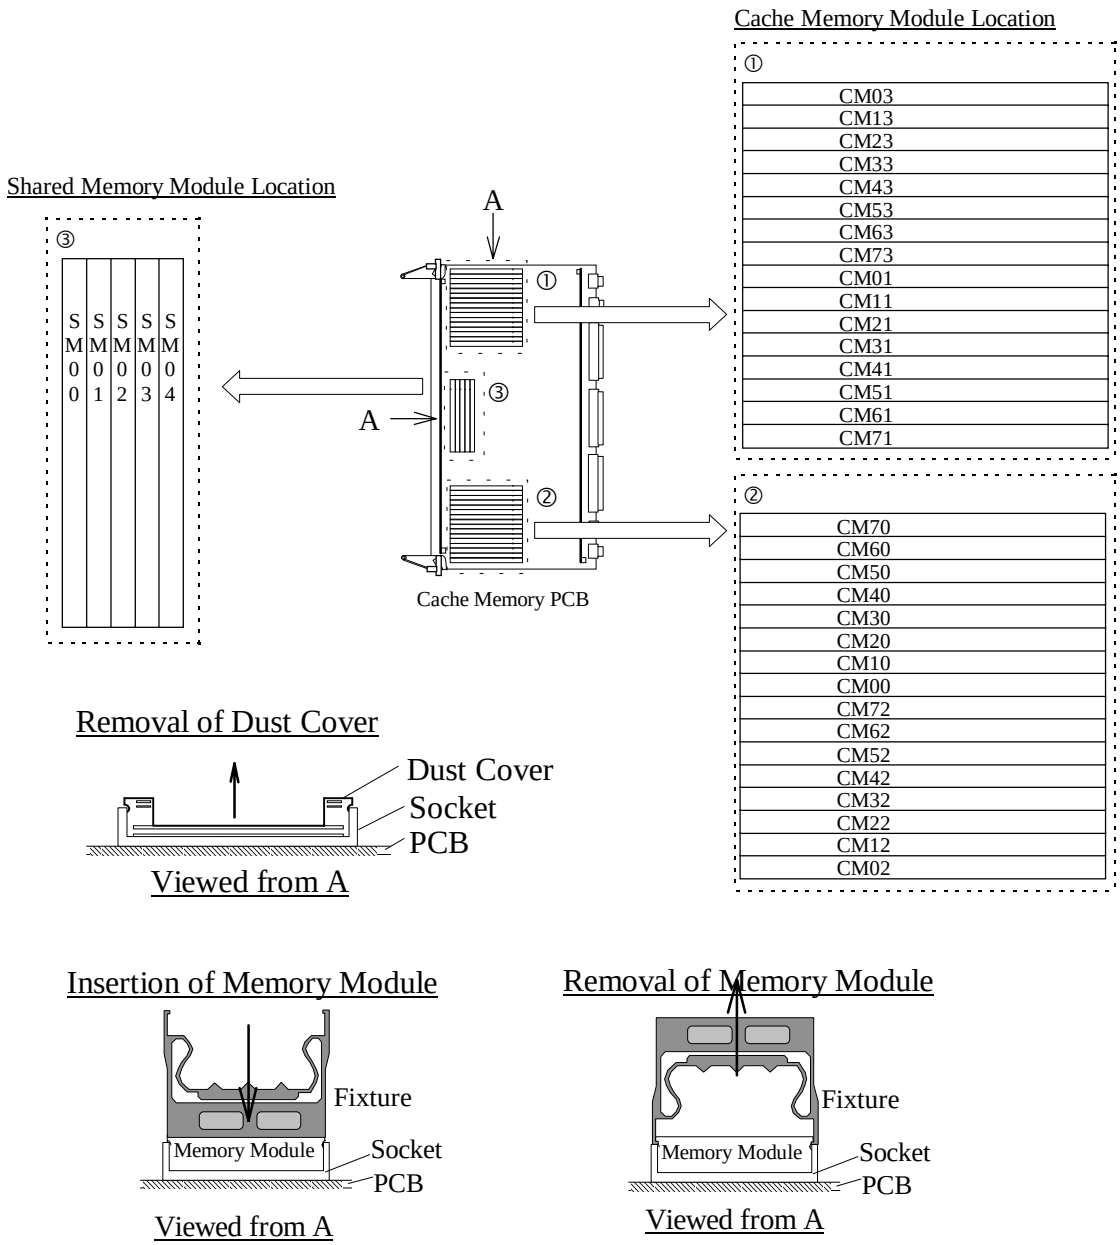
> **⚠ CAUTION**
>
> A system down may be caused if the Shut Down jumper socket is inserted in a PCB other than that to be replaced. Make sure that it is the PCB to be replaced.

   b. Remove the two screws and remove the Cache Memory PCB.

   c. Remove the Shut Down Jumper if it is mounted.

Copyright ©1997,1998, Hitachi, Ltd.

2. Replace the failed part to spare part.
   a. When replacing the CM package, move all the shared memory modules and cache memory modules (including dust covers if any) mounted on an extracted PCB to the same mounting positions on the spare PCB.
   b. When the failed part is Cache Memory Module, replace the Cache Memory Module.
   c. When the failed part is Shared Memory Module, replace the Shared Memory Module.



3. Insert the Cache Memory PCB.
   a. Insert the Cache Memory PCB and fasten the two screws.

4. Go to SVP post-procedure e [REP04-330].

Caution

Whenever you have to replace a SCSI BFR PCB, you have to replace also, all the concerned SCSI cables and SCSI BFR PCB (In case DKU-R2 and/or DKU-L2 are installed). This consists of all parts connected to the same SCSI path, i.e., (1) SCSI cable connecting the DKA and SCSI BFR, (2) SCSI cable connecting the two SCSI BFRs and (3) the other SCSI BFR in the same path. If the SCSI cable and/or the other SCSI BFR are/is not available, proceed by replacing the SCSI BFR specified in FPC first.

1. Check Shut Down LED on the SCSI BFR PCB.

⚠ CAUTION

A system down is caused by a replacement of the SCSI BFR PCB other than that to be replaced. Make sure that it is the SCSI BFR PCB to be replaced.

2. Disconnect the SCSI interface cables.
3. Loosen screw and slide stopper.
4. Replace the SCSI BFR PCB.
5. Slide stopper and fasten screw.

Cable No. 1-8 DKA-1B/2H through SC BFR-R10-R13U/L

(1) Remove the cable fixing wires and repeat binders.

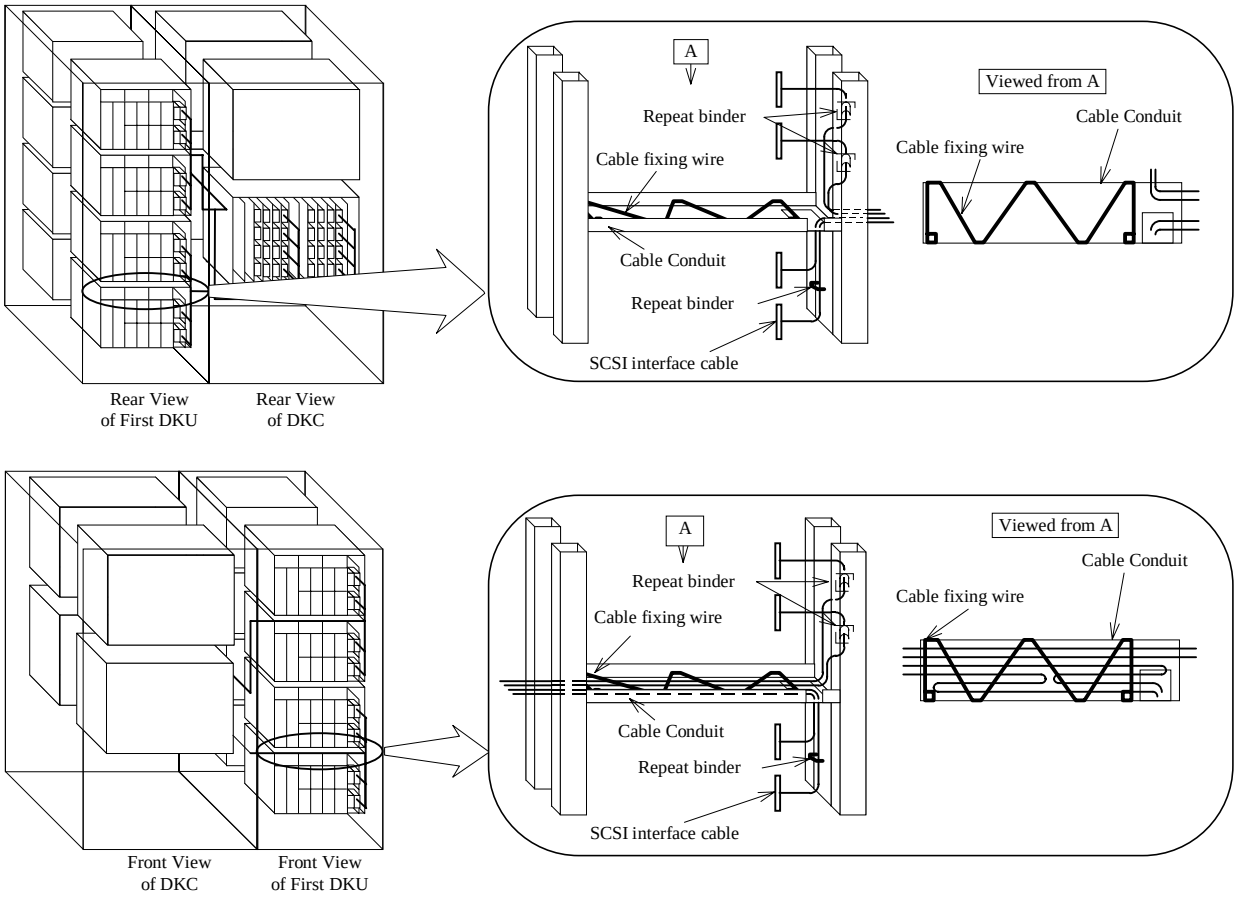

Fig. H-2 Removal of the cable fixing wires and repeat binders

Copyright ©1998, Hitachi, Ltd.

(2) Remove the Front and Rear Logic Box covers. Refer to Installation Section 3.1.1 How to open / close the cover [INST03-20 and 40].

(3) Loosen the screws and remove the cable duct covers.

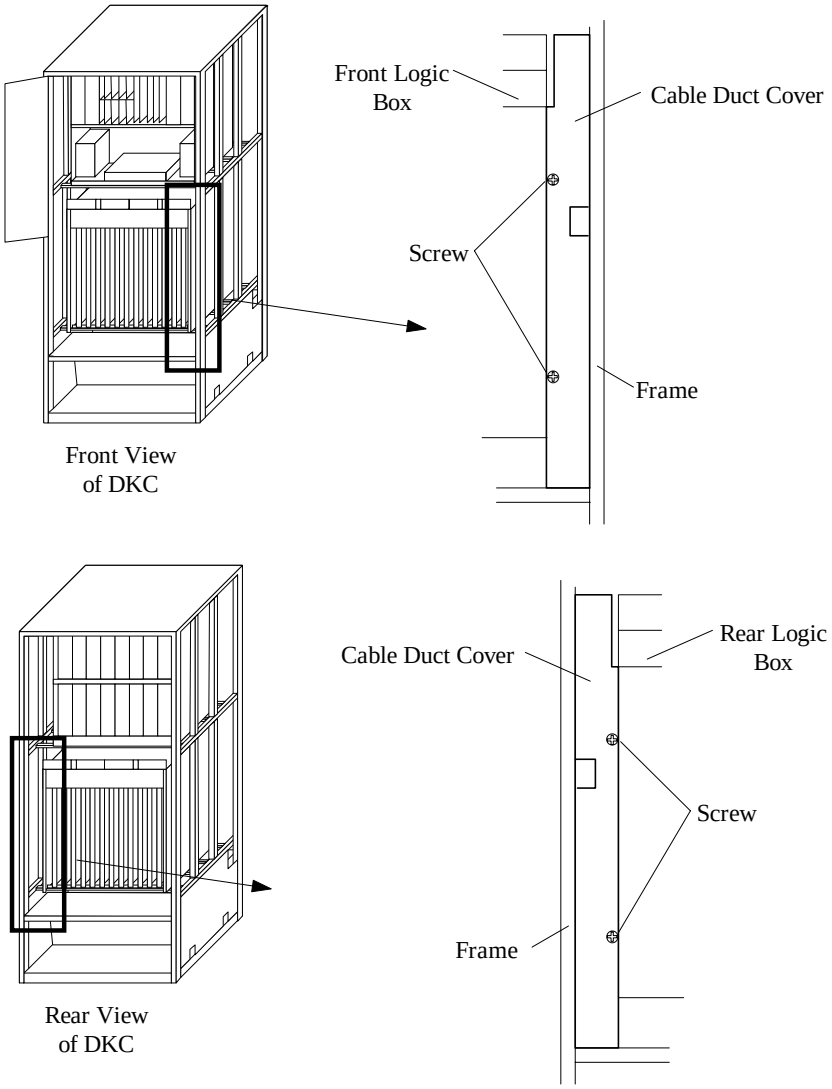

Fig. H-3 Removal of Cable Duct Covers

Copyright ©1998, Hitachi, Ltd.

(4) Since the SCSI interface cable shown in the table below is not detachable, it should be replaced after wiring a cable for maintenance parts in a different route. Other cables should be wired in the same way as the previous route.

Table H-3 SCSI Interface Cable Connections

DKA PCB			SCSI BFR PCB (1st/3rd DKU)		
Location No.	Connector No.	Cable No.	Location No.	Connector No.	Cable No.
DKA-1B	1R·B1	1R·B1	SCBFR-R10U	0U·J501	0U·P501
	1R·B2	1R·B2	SCBFR-R11U	1U·J501	1U·P501

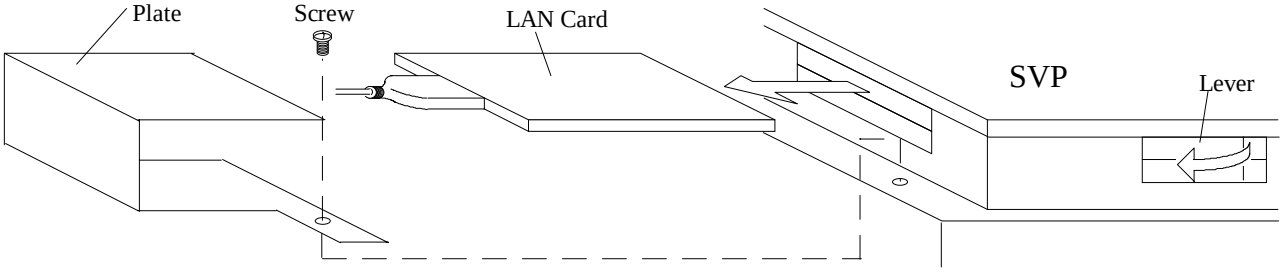
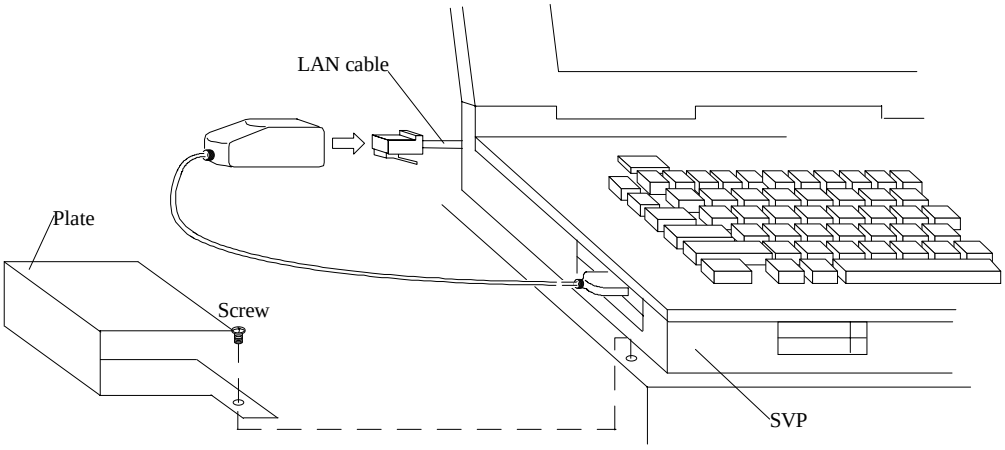
   a. Loosen the screw and remove the plate.
   b. Move the lever located on the front left side of the SVP to left to release the LAN Card.



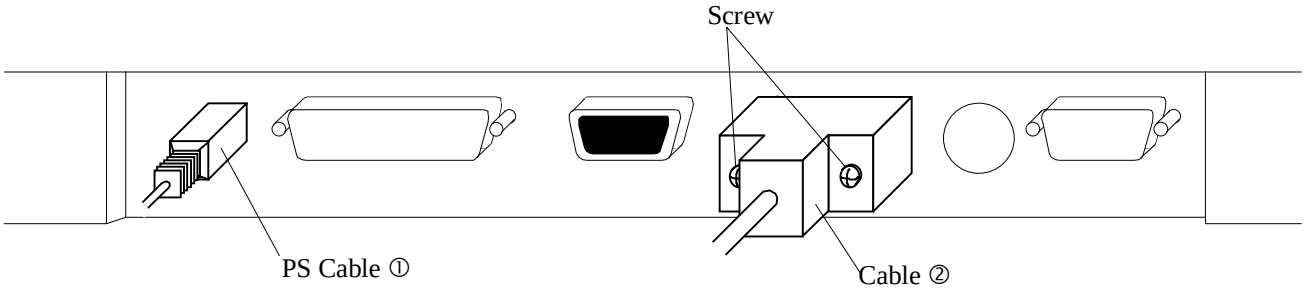
3. When replacing both the SVP and LAN card at the same time, remove the LAN cable. (When replacing the SVP only, go to step 4.)

   a. Loosen the screw and remove the plate.
   b. Remove the LAN cable.



4. Disconnect the cables.

   a. Disconnect the PS cable ① from the SVP.
   b. Loosen the two screws and disconnect the cable ②.



Rear View of SVP

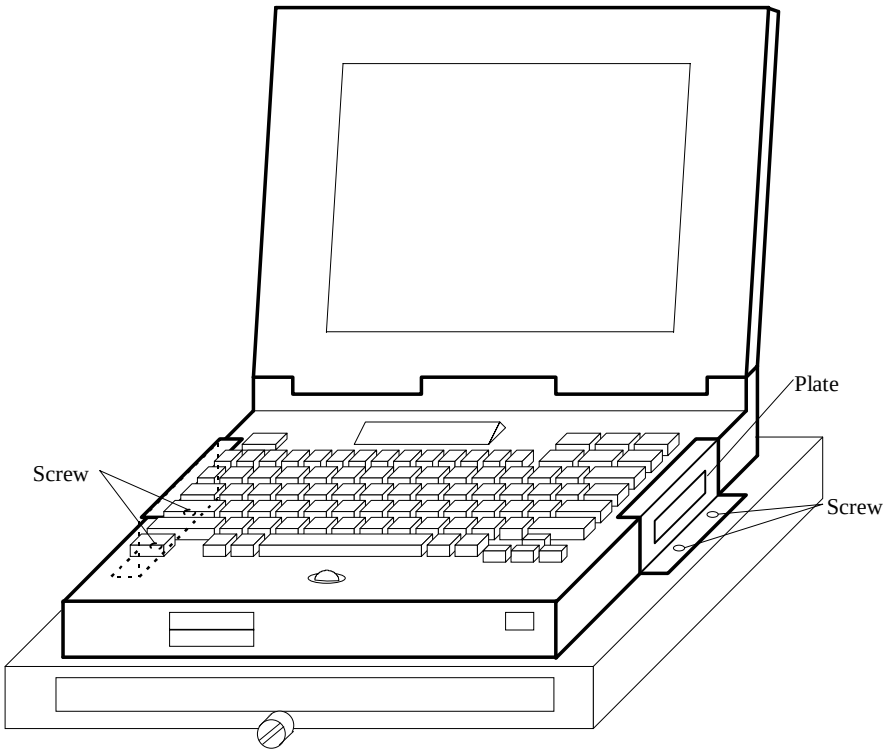
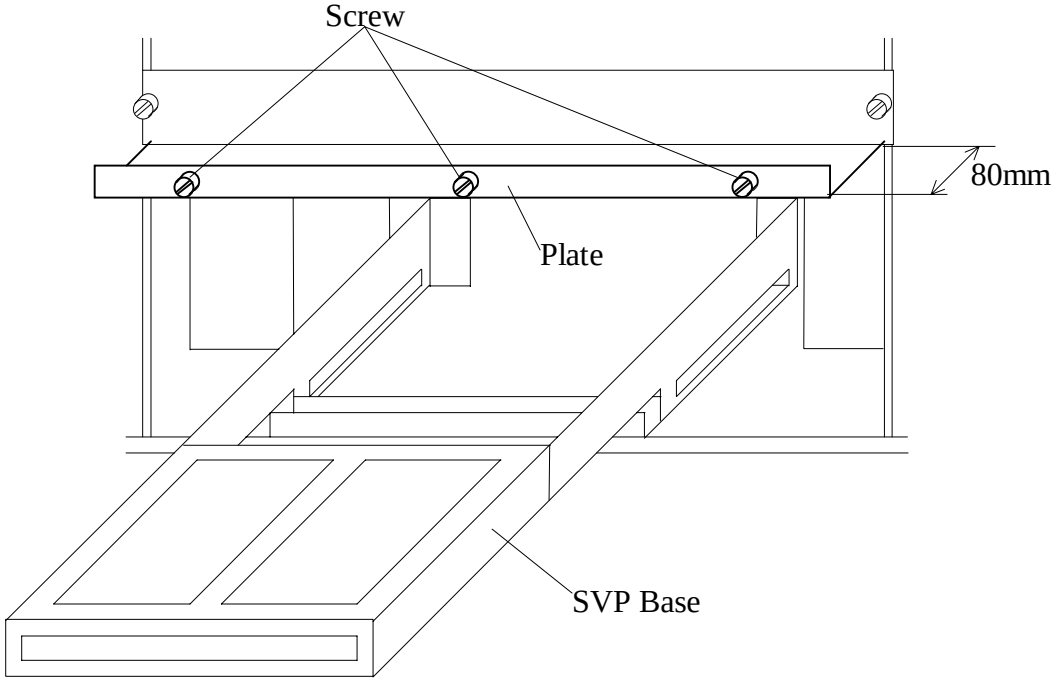
5. Remove the SVP.

   a. Loosen the four screws with a torque driver, and remove the plates which fix the side of SVP.
   b. Remove the SVP.



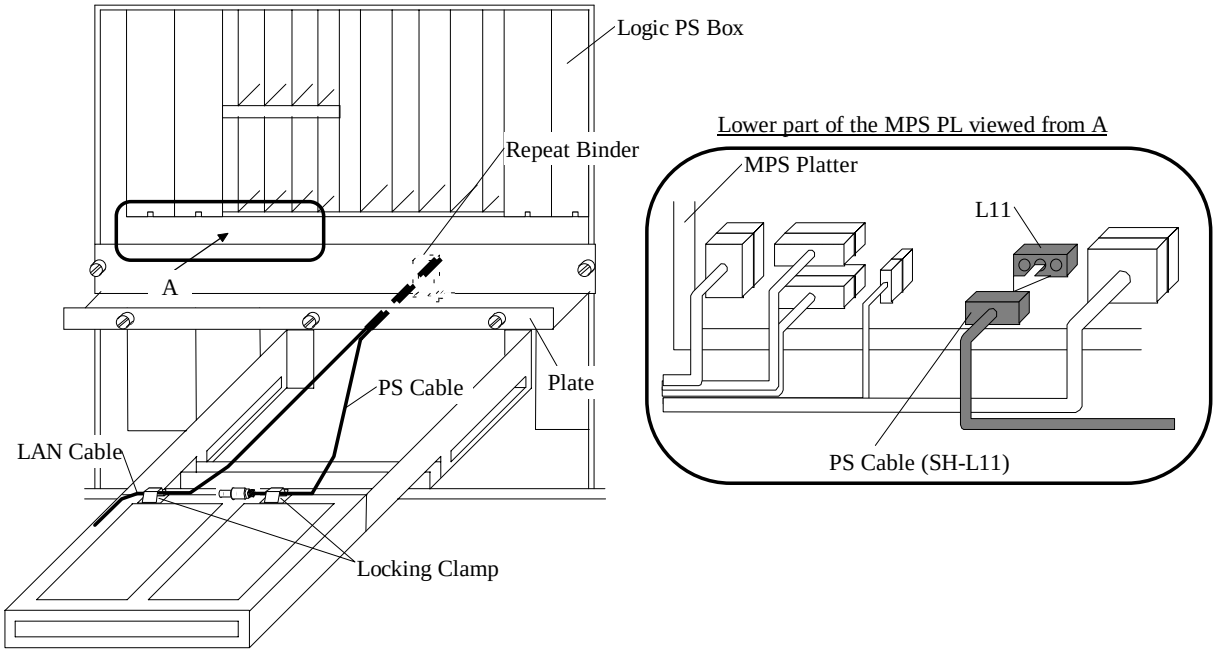
6. Disconnect the PS cable for the SVP. (When the model of the failed SVP is the same as that of the spare SVP, go to step 7.)

   a. Loosen the three screws and pull out the plate approximately 80mm.



Copyright ©1998, Hitachi, Ltd.

b. Open the Repeat binder and the two locking clamps under the plate, and then remove the PS cable and LAN cable.
c. Put in your hand from the bottom of the plate, and disconnect the PS cable (SH-L11) from the connector (L11) on the MPS platter.



7. Install the spare SVP.

a. Go to REP03-1360.

Copyright ©1998, Hitachi, Ltd.

When failed SVP is FLORA230

CAUTION : Do not replace the SVP for 20 minutes after turning AC power on.
The SSVP may power off and then power on the SVP in order to recover.

1. Turn off the SVP.

   a. Loosen the screw and open the Movable Rack.
   b. Remove the Front PS Box Covers 1 and 2 from the Front PS Box.
   c. Connect the Shut Down Jumpers to the SVP PS 1 and 2 PCBs in the Front PS Box.

[2] Installation of Spare SVP

(i) When replacing both the SVP and LAN card at the same time, connect the LAN adapter cable to the LAN card referring to Fig. T10-2.
If the LAN adapter cable is connected to the LAN card, go to step (ii).

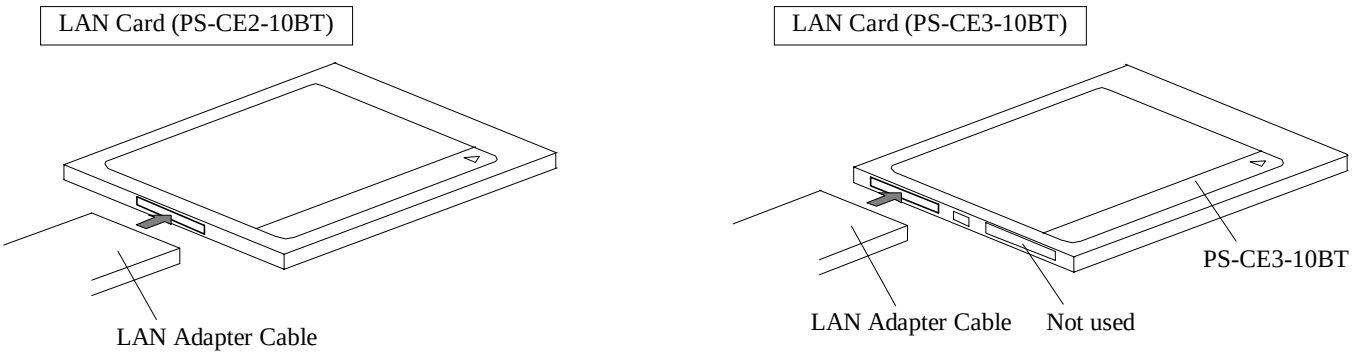

Fig. T10-2 Connection of LAN Adapter Cable

(ii) Refer to Table T10-2 and Fig. T10-3, and go to corresponding step for installing the SVP.

Table T10-2 Installation of Spare SVP

No.	Spare SVP	Page
1	ARMADA (COMPAQ)	REP03-1361
2	FLORA230 (HITACHI)	REP03-1365
3	FLORA270V (HITACHI)	REP03-1369

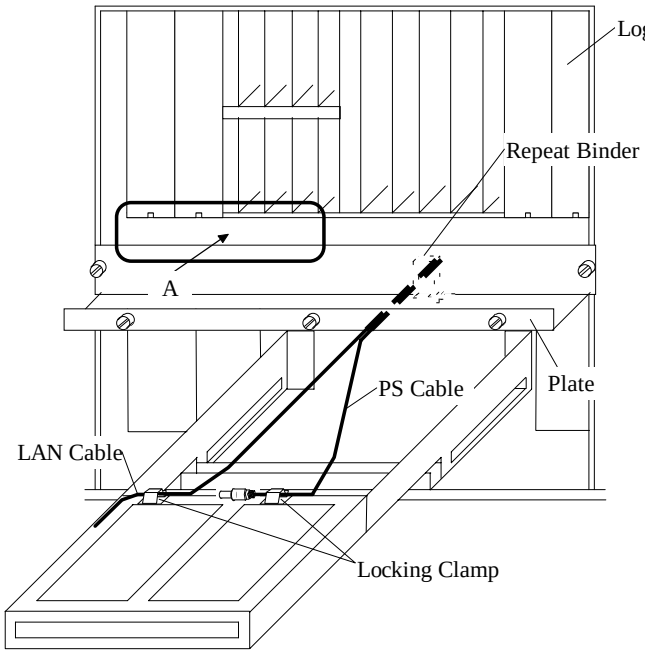
When Spare SVP is ARMADA

1. Connect the PS cable for the SVP. (When the model of the failed SVP is the same as that of the spare SVP, go to step 2.)
   a. Remove the two locking clamps on the SVP base, and affix the two locking clamps which are spare parts.

   b. Connect the spare PS cable to the connector on the MPS platter.
   c. Fasten the PS cable with the Repeat binder and locking clamp.
   d. Fasten the LAN cable with the locking clamp.



Lower part of the MPS PL viewed from A

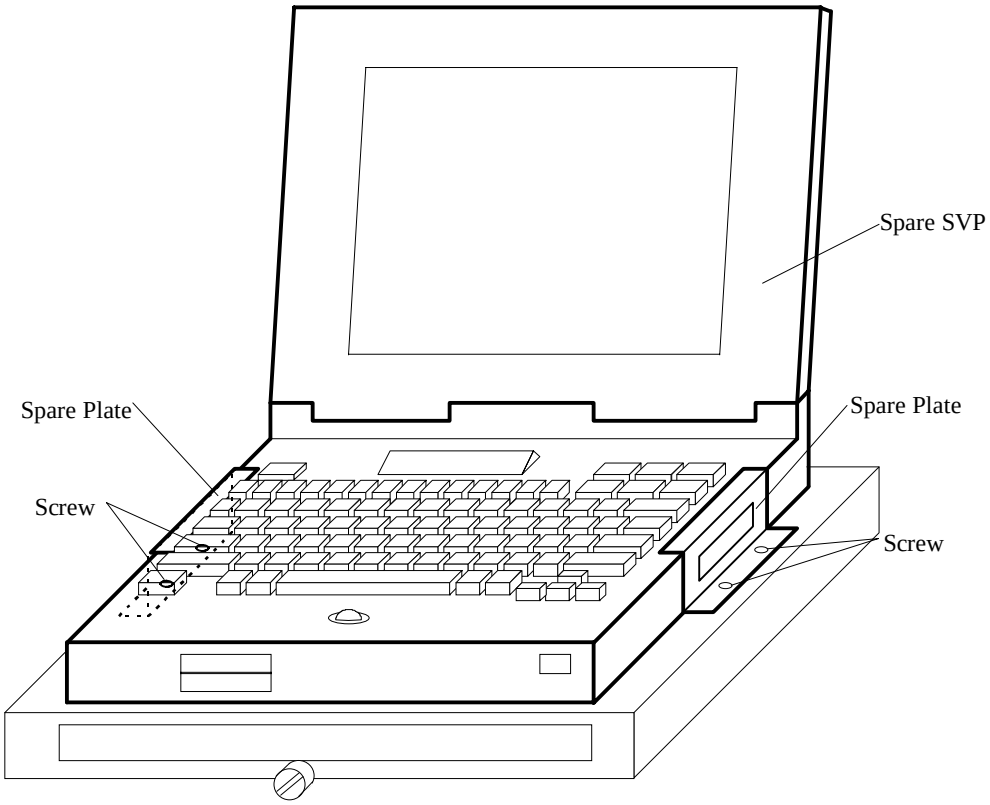
2. Install the spare SVP.

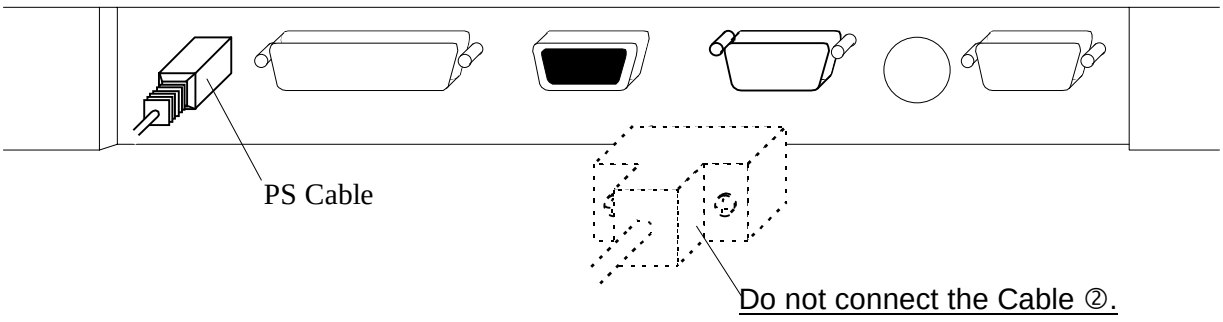
   a. Install the spare SVP.
   b. Attach the spare plates and fasten the four screws.



3. Connect the PS cable.

   a. Connect the spare PS cable to the SVP.

Note : In this step, do not connect the cable ② because it will be connected in Post-Procedure t1.



Rear View of SVP

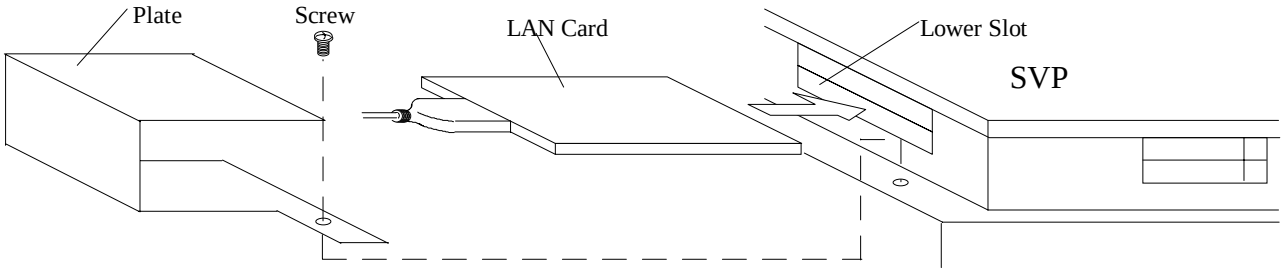
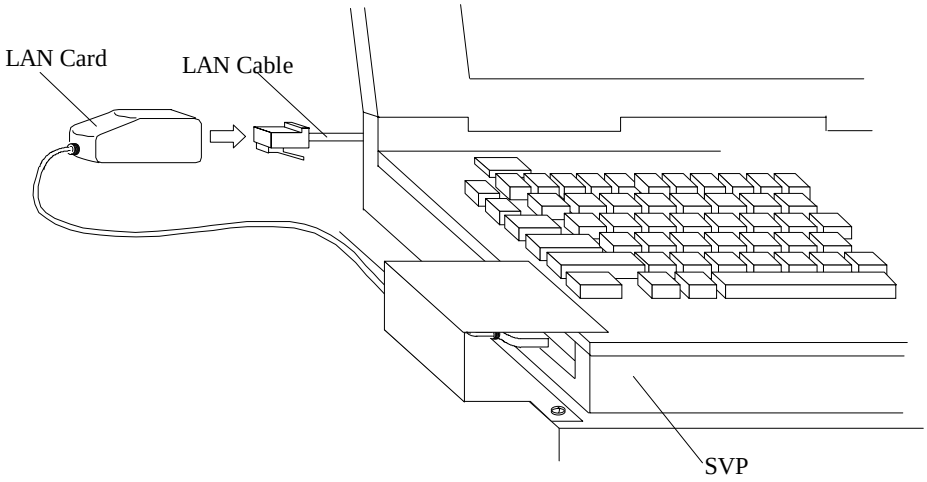
4. Insert the LAN card.
   a. Insert the LAN card into the lower slot.
   b. Attach the plate and fasten the screw.



5. When replacing both the SVP and LAN card at the same time, install the LAN cable. (When replacing the SVP only, go to step 6.)
   a. Attach the LAN cable to the LAN card.



6. Remove the Shut Down Jumpers from the SVP PS PCBs.
   a. Remove the Shut Down Jumpers attached to the SVP PS 1 and 2 PCBs.

7. Go to SVP post procedure t1 [REP04-490].

Copyright ©1998, Hitachi, Ltd.

When Spare SVP is FLORA230

1. Connect the PS cable for the SVP. (When the model of the failed SVP is the same as that of the spare SVP, go to step 2.)
   a. Remove the two locking clamps on the SVP base, and affix the two locking clamps which are spare parts.

   b. Connect the spare PS cable to the connector on the MPS platter.
   c. Fasten the PS cable with the Repeat binder and locking clamp.
   d. Fasten the LAN cable with the locking clamp.

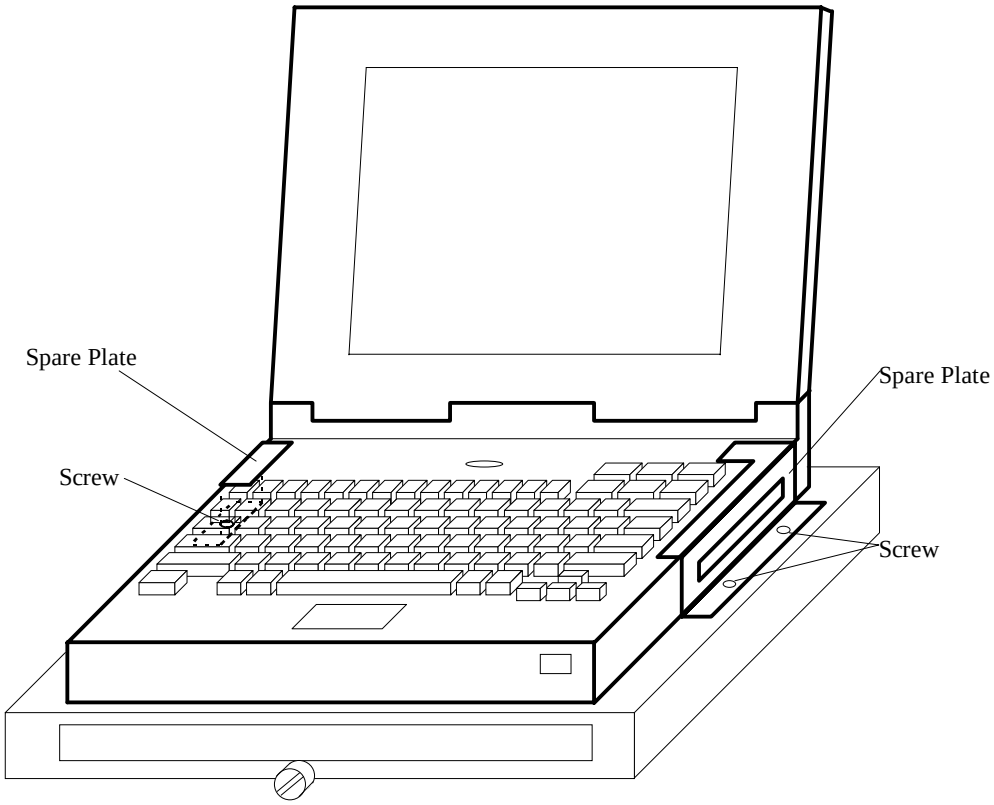
2. Install the spare SVP.

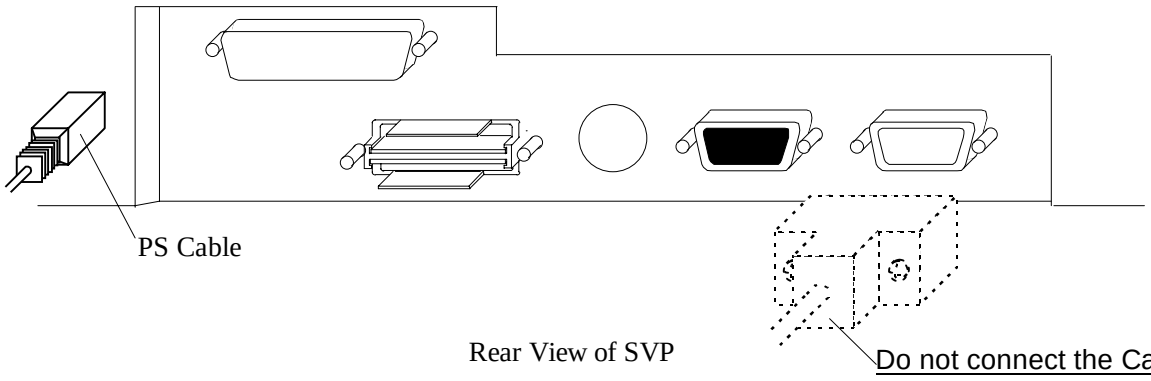
   a. Install the spare SVP.
   b. Attach the spare plates and fasten the three screws.



3. Connect the PS cable.

   a. Connect the spare PS cable to the SVP.

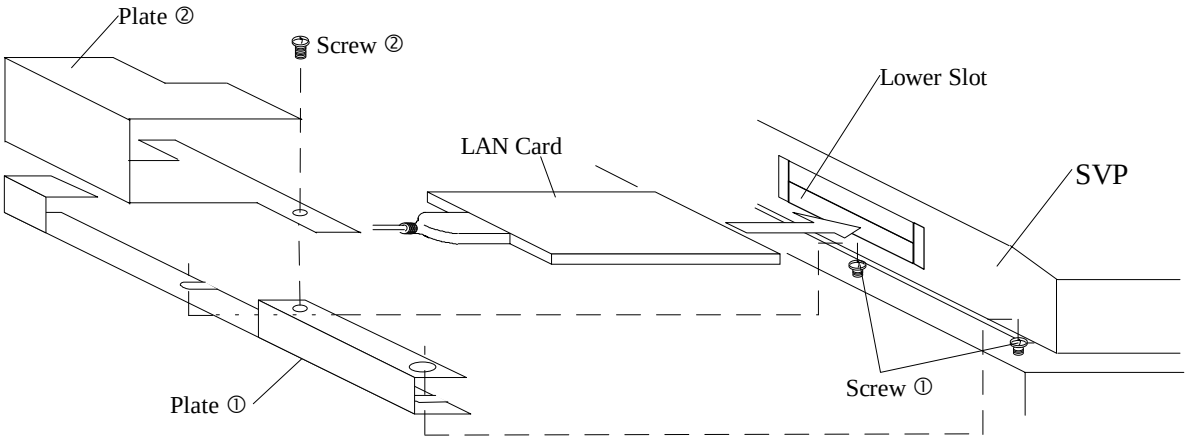
   Note : In this step, do not connect the cable ② because it will be connected in Post-Procedure t1.



Copyright ©1998, Hitachi, Ltd.

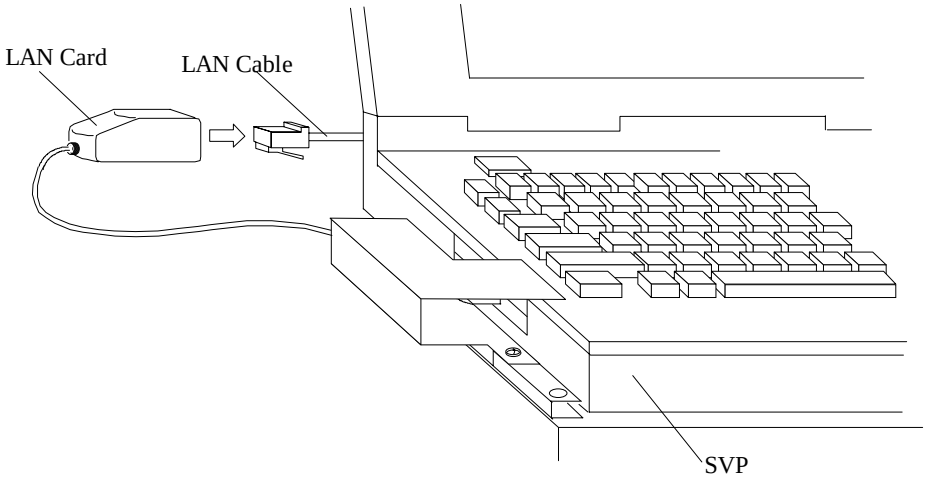
4. Insert the LAN card.

   a. Attach the Plate ① and fasten the two screws ①.
   b. Insert the LAN card into the lower slot.
   c. Attach the Plate ② and fasten the screw ②.



5. When replacing both the SVP and LAN card at the same time, install the LAN cable. (When replacing the SVP only, go to step 6.)

   a. Attach the LAN cable to the LAN card.



6. Remove the Shut Down Jumpers from the SVP PS PCBs.

   a. Remove the Shut Down Jumpers attached to the SVP PS 1 and 2 PCBs.

7. Go to SVP post procedure t1 [REP04-490].

2. Power Off the Component to be Replaced

⚠ WARNING

Be Careful of Electric Shock

- The power to the device is still on after turning off the breakers shown below.
- The device may be powered off when turning off the breakers not shown below.
- The circuit has residual voltage for one minute after turning off the breakers, so be sure to disconnect all the connectors after this period.

⚠ CAUTION

Mind Your Head

- Be sure to mind your head during operation, or you might hit your head against the movable rack, which could cause injury.

Table T12-1 Circuit Breakers to be Turned Off When Replacing Breaker Box-1

1. The following figure(Fig. T18-1) and table(Table T18-1) show the correct way to replace the DKUMN PCB.

a. Set Enable/Disable Switch to Disable on the DKUMN PCB.

⚠ CAUTION

A system down may be caused by setting the Enable/Disable switch of the DKUMN PCB other than that to be replaced to "Disable". Be sure that it is the DKUMN PCB to be replaced.

b. Disconnect all cables.
c. Remove the failed DKUMN PCB off the four latches.
d. Attach the spare PCB on the latches.
e. Connect all the cables.

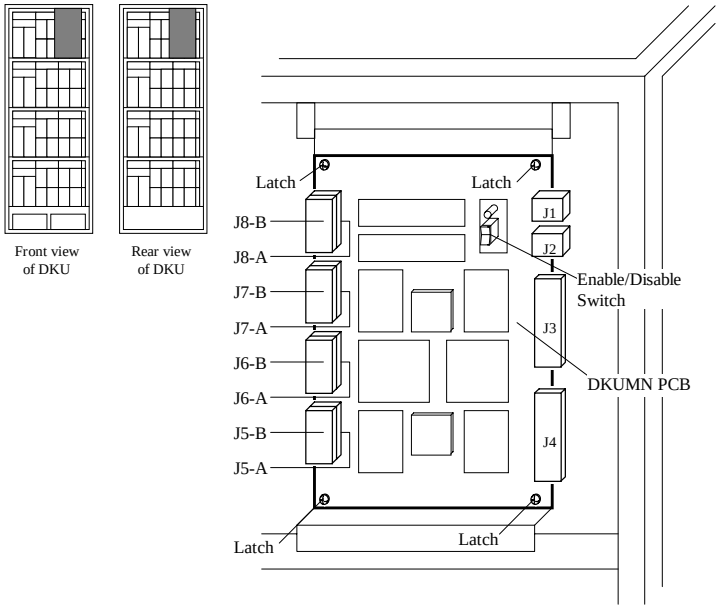

Fig. T18-1 Replacement of DKUMN PCB

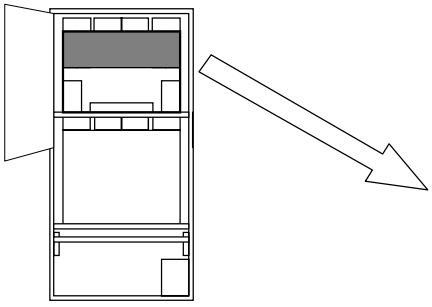
AC BOX-R11

1. Connection of the Jumper

Be sure to wear your wrist strap and attach to ground prior to performing the following work. This will ensure that the IC and LSI on the PCB are protected from static electricity.

a. Connect the Alarm INH Jumpers to the connectors on the PWRCTL-1 and PWRCTL-2.



Front View of DKC

2. Power Off the Component to be Replaced

⚠ WARNING

Be Careful of Electric Shock

- The power to the device is still on after turning off the breakers shown below.
- The device may be powered off when turning off the breakers not shown below.
- The circuit has residual voltage for one minute after turning off the breakers, so be sure to disconnect all the connectors after this period.

⚠ CAUTION

Mind Your Head

- Be sure to mind your head during operation, or you might hit your head against the movable rack, which could cause injury.

Table T22-1 Circuit Breakers to be Turned Off When Replacing AC BOX-R11

No.	Unit	Location No.	Breaker No.	Remarks
1	Disk Controller	Breaker Box-2	CB201	
2	First Disk Unit	AC BOX-R11	CB101	
3	First Disk Unit	AC BOX-R11	CB102	
4	First Disk Unit	AC BOX-R11	CB103	
5	Circuit breakers on the power distribution panel in the plant that are connected to the AC BOX-R11.			Failure to turn off may result in an electric shock.

Other AC Boxes

(AC BOX-R20, AC BOX-R21, AC BOX-L10, AC BOX-L11, AC BOX-L20, AC BOX-21)

⚠ WARNING

Be Careful of Electric Shock

- The power to the device is still on after turning off the breakers shown below.
- The device may be powered off when turning off the breakers not shown below.
- The circuit has residual voltage for one minute after turning off the breakers, so be sure to disconnect all the connectors after this period.

1. Power Off the Component to be Replaced

a. Turn off the circuit breakers for the AC Box to be replaced (CB101, CB102, and CB103).

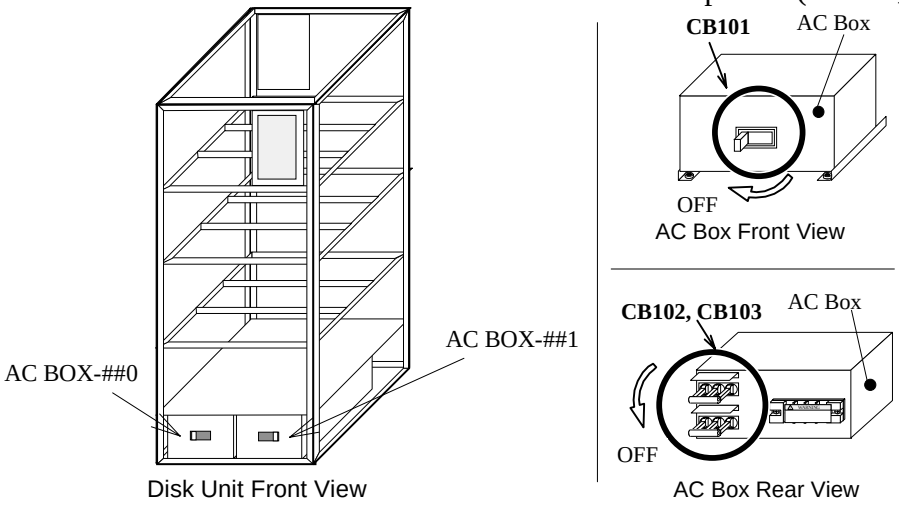

Fig. T22-19 AC Box Location

b. Turn off the circuit breakers on the power distribution panel in the plant that are connected to the AC Box to be replaced.

Failure to turn off may result in an electric shock.

Copyright ©1997, Hitachi, Ltd.

2. AC Box Removal

a. Remove the plate from the rear of the Disk Unit as illustrated in Fig. T22-20

Remove the two screws. Slide the plate toward the rear side to remove it.

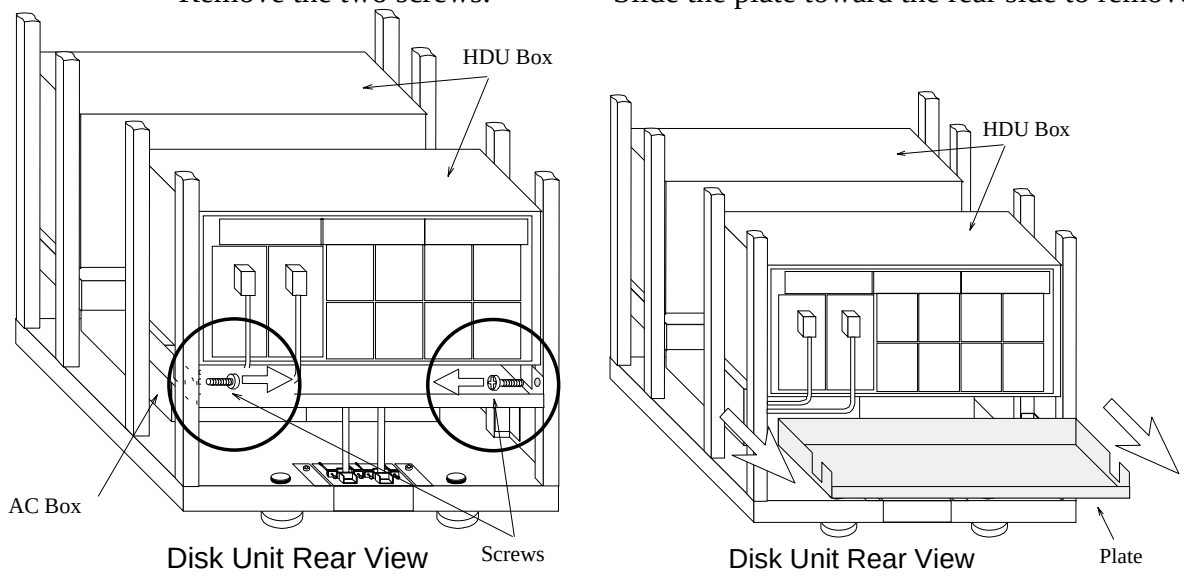

Fig. T22-20 Removal of Plate

⚠ WARNING

Be Careful of Electric Shock

• Be sure to turn off the breaker on the power distribution panel connected to replaced AC BOX.

b. Unplug cable connectors P101-# and P102-# from the AC Box to be replaced.

[POST-PROCEDURE t1]

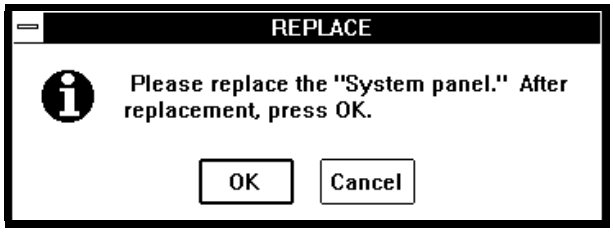
— OUTLINE —

① Specify end of special part replacement.
② Reinstall related parts.
③ Start environment monitor.
④ SIM Complete

Copyright ©1997, Hitachi, Ltd.

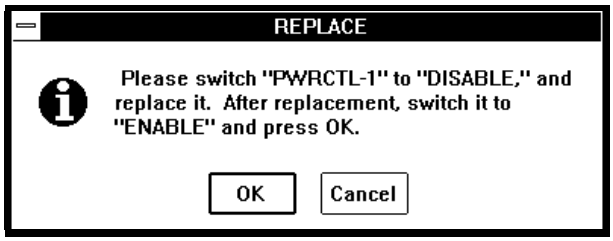
[1] Start of POST-PROCEDURE

1. <Check replacement of special part>
Select (CL) [OK] in response to “Please replace the "XXXXX." After replacement, press OK.”.
Valid “XXXXX” values are listed below.



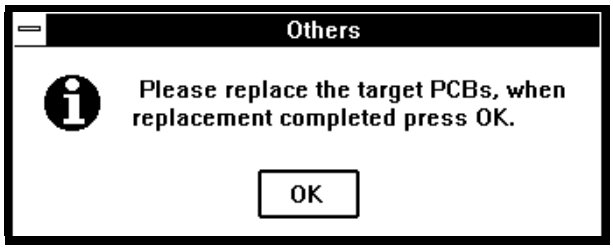
- System panel------ Go to [16] (REP04-790)
- PCI CONN-------- Go to [5] (REP04-560)
- RCU CONN ------ Go to [6] (REP04-570)
- EPO SW---------- Go to [7] (REP04-580)
- RS CONN--------- Go to [13] (REP04-760)
- OP panel 1/2 ------ Go to [2] (REP04-510)
- PWRCTL 1/2 ----- Go to [4] (REP04-550)
- OUTLET BOX --- Go to [13] (REP04-760)

Select (CL) [OK] in response to “Please switch "XXXXX" to "DISABLE," and replace it. After replacement, switch it to "ENABLE" and press OK.”
Valid “XXXXX” values are listed below.



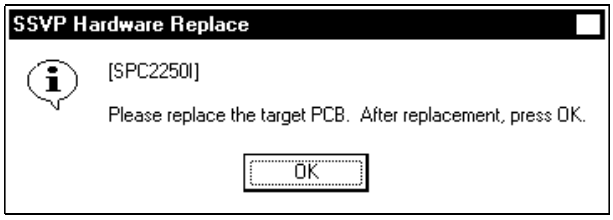
- CE panel---------- Go to [3] (REP04-540)

Select (CL) [OK] in response to “Please replace the target PCBs, when replacement completed press OK.”.



- TM PCB---------- Go to [10] (REP04-710)
- SVP ---------- Go to [9] (REP04-610)

Select (CL) [OK] in response to “Please replace the target PCB. After replacement, press OK.”.



- SSVP ---------- Go to [12] (REP04-740)
- HUB ---------- Go to [8] (REP04-600)

Copyright ©1997,1998, Hitachi, Ltd.

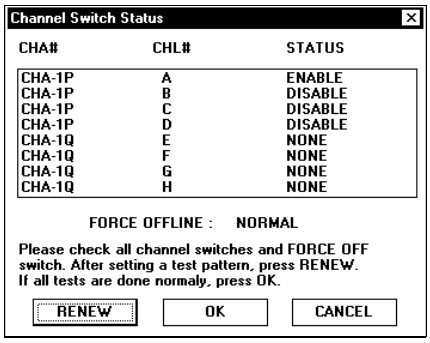
[2] OP panel

If all channel types are SCSI, execute only <LED TEST>.

1. <Diagnostic of SW. on OP panel>

Select (CL) [OK] in response to "Please set all channel switches to DISABLE, and FORCE OFF switch to NORMAL. Then press OK.".

Select (CL) [RENEW] in response to "Please check all channel switches, and FORCE OFF switch. After setting a test pattern, press RENEW.".
If all tests are done normally, select (CL) [OK].
Note: You can't test the channel which displayed "SCSI" or "NONE" at STATUS column.



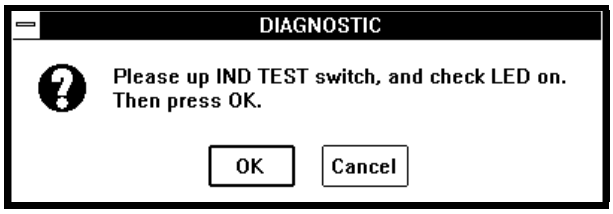
TEST PATTERN

PATTERN#	CHL#								FORCE
	A	B	C	D	E	F	G	H	OFF
1	○	×	×	×	×	×	×	×	×
2	×	○	×	×	×	×	×	×	×
3	×	×	○	×	×	×	×	×	×
4	×	×	×	○	×	×	×	×	×
5	×	×	×	×	○	×	×	×	×
6	×	×	×	×	×	○	×	×	×
7	×	×	×	×	×	×	○	×	×
8	×	×	×	×	×	×	×	○	×
9	×	×	×	×	×	×	×	×	○

○ : ENABLE (FORCE OFF switch. : OFF)
× : DISABLE (FORCE OFF switch. : NORMAL)

<LED TEST>

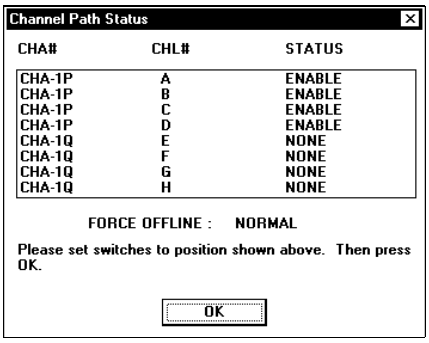
Select (CL) [OK] in response to "Please up IND TEST switch, and check LED on. Then press OK.".
If there are no parallel channels, go to [13] (REP04-760).



Copyright ©1997,1998, Hitachi, Ltd.

2. <Display CH SW status>

Check whether the CH switch settings are the same as those on the replaced OP panel. And select (CL) [OK].

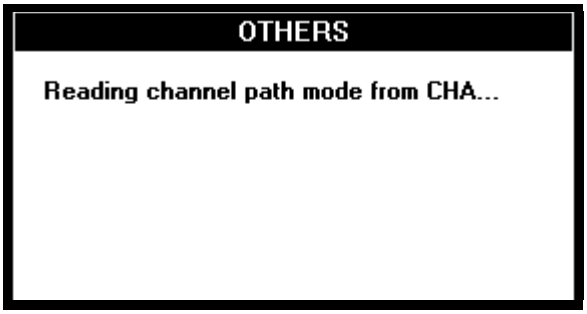


STATUS:
- ENABLE : Channel is enable (parallel channel)
- DISABLE : Channel is disable(parallel channel)
- SERIAL : Serial channel
- SCSI : SCSI channel
- BLOCKADE : Connected CHP is blocked up.
- NONE : Channel is not installed.

FORCE OFFLINE
- OFFLINE : FORCE OFFLINE
- NORMAL : NOT FORCE OFFLINE

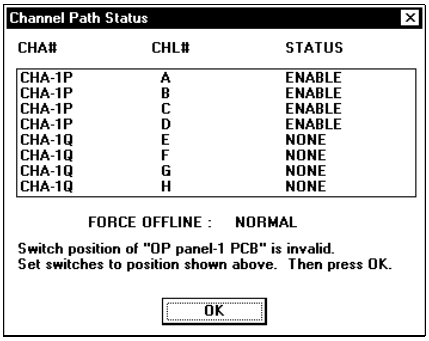
3. <Read channel mode>

"Reading channel path mode from CHA..." is displayed.
If all switches are set correctly, go to 6.
If some switches are illegal, go to 4.



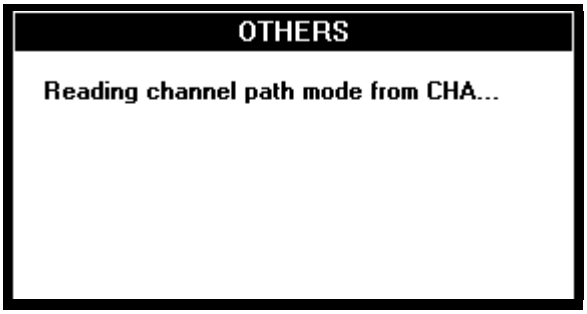
4. <Channel switch incorrect>

Please set switches correctly, and select (CL) [OK].

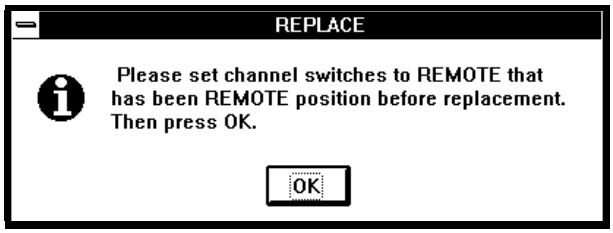


Copyright ©1997,1998, Hitachi, Ltd.

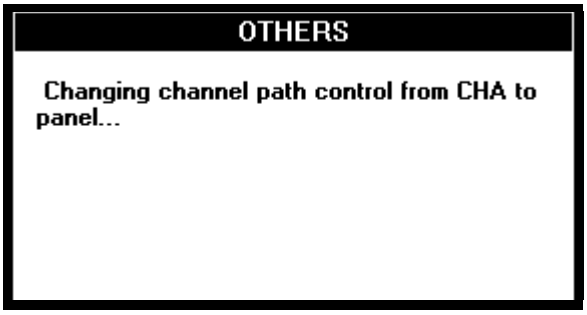
5. <Read channel mode>
"Reading channel path mode from CHA..." is displayed.
If all switches are set correctly, go to 6.
If some switches are illegal, go to 4.
If step 4 is performed twice, go to 8.



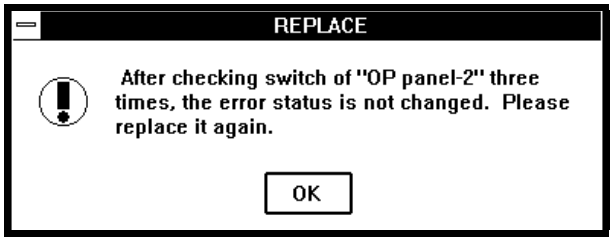
6. <Set channel switches to REMOTE>
Set channel switches to REMOTE that has been REMOTE position before replacement.
Refer to memorandum is 2 of PRE-PROCEDURE T1 [2] (REP02-520).
Select (CL) [OK].



7. <change CHP mode>
"Changing channel path control from CHA to panel..." is displayed.
Go to [13] (REP04-760).



8. <error status>
If step 4 is performed twice, the error message is displayed as shown on the right.
Select (CL) [OK], go to [14] (REP04-770).



Copyright ©1997,1998, Hitachi, Ltd.

[3] CE panel

1. <Set REMOTE/LOCAL>
   Set REMOTE/LOCAL switch, in response to the message “Please set "REMOTE/LOCAL" switch of "CE panel""XXXXX". Then press OK.”.
   “XXXXX” represents “REMOTE” or “LOCAL”.
   After confirming that switch set, select (CL) [OK].
   Go to [11] (REP04-720).

Copyright ©1997,1998, Hitachi, Ltd.

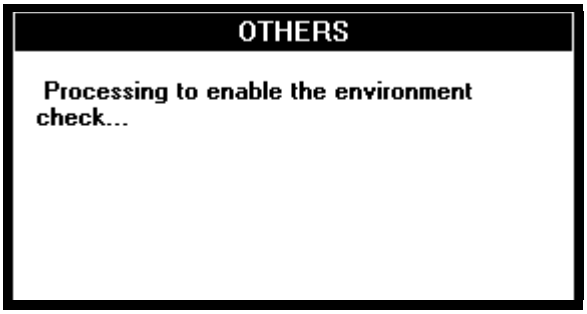
[4] PWRCTL 1/2

1. <Enable DKUMN>
   Enable DKUMN in response to “Please switch "XXXXX" of all DKU to "ENABLE." Then press OK.”. After confirming DKUMN is enabled, select (CL) [OK].

   XXXXX
   • For PWRCTL-1:
   [Power on DKUMN on front side of DKU]
   • For PWRCTL-2:
   [Power on DKUMN on rear side of DKU]

2. <Check environment monitor start processing>
   “Processing to enable the environment check...” is displayed.

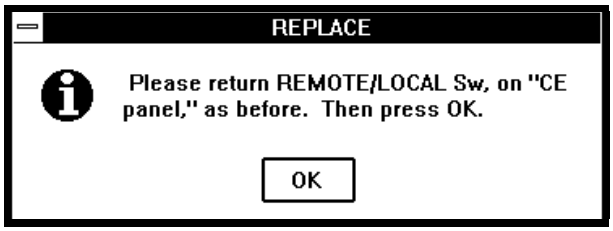
   Go to [13] (REP04-760).



Copyright ©1997,1998, Hitachi, Ltd.

[5] PCI CONN

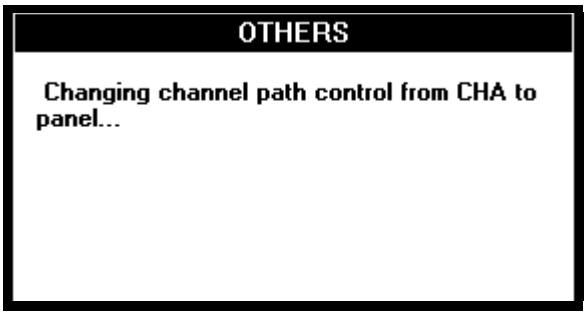
1. <Reset CE panel SW>
   Reset REMOTE/LOCAL SW to original value in response to “Please return REMOTE/LOCAL Sw, on "CE panel," as before. Then press OK.” (see HARDWARE T6) (REP03-1260 step 7).
   After checking SW setting, select (CL) [OK].
   Go to [13] (REP04-760).



Copyright ©1997,1998, Hitachi, Ltd.

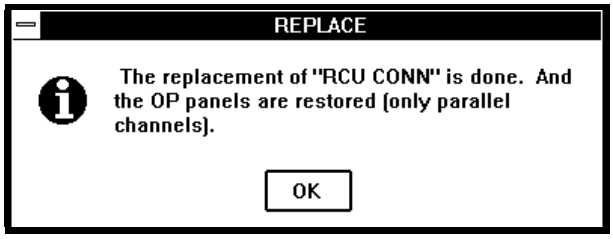
[6] RCU CONN

1. <Change CHP mode>
   "Changing channel path control from CHA to panel..." is displayed.



2.
   "The replacement of "RCU CONN" is done. And the OP panels are restored (only parallel channels)." is displayed.
   Select (CL) [OK].

   Go to [15] (REP04-780).



Copyright ©1997,1998, Hitachi, Ltd.

[7] EPO SW

1.

The SVP automatically checks the EPO SW status.
Go to [11] (REP04-720).

Copyright ©1997, Hitachi, Ltd.

Blank Sheet

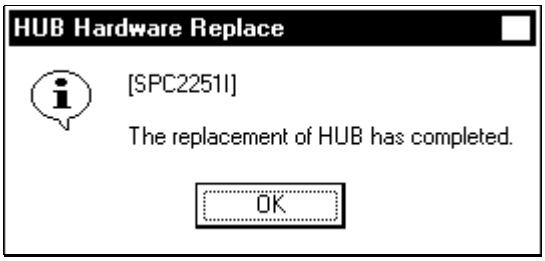
Copyright ©1997,1998, Hitachi, Ltd.

[8] HUB

1. The message “Restoring DKC-SVP communication. Wait...” is displayed.

   Wait about 5 minutes.

2. Select (CL) [OK] in response to “The replacement of HUB has completed.”.
   Go to [15] (REP04-780).



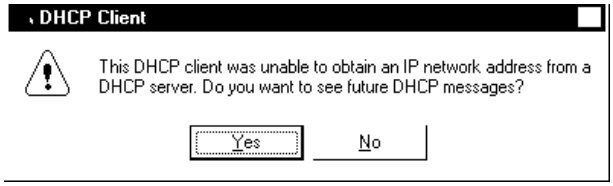
Copyright ©1997,1998, Hitachi, Ltd.

[9] SVP

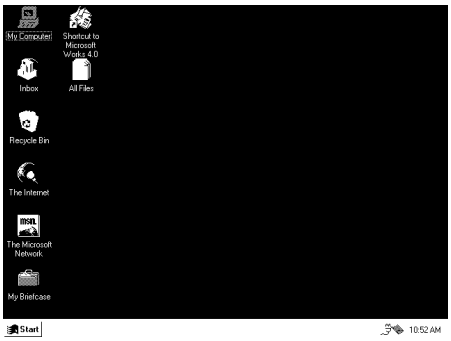
1. Powering up the SVP

1-1. Set LAN Card Driver

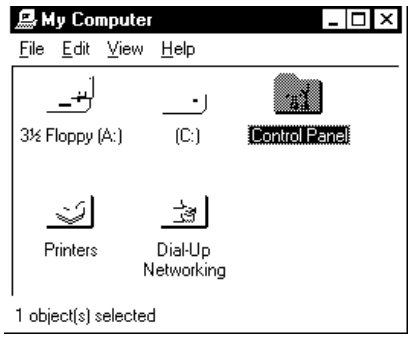
If SVP displays a message, “This DHCP client was unable to obtain an IP network address from a DHCP server. Do you want to see future DHCP messages?”, select (CL) [Yes].



(1) <Open “My Computer”>
Select (DC) “My Computer”.

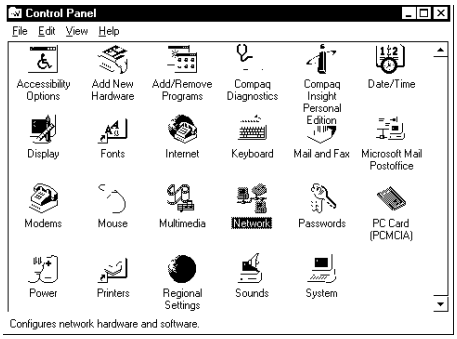


(2) <Open “Control Panel”>
Select (DC) “Control Panel” from “My Computer”.

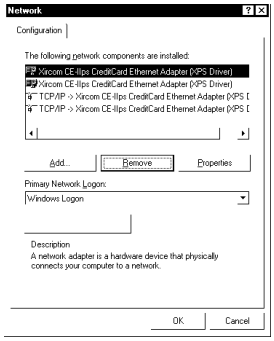


Copyright ©1997,1998, Hitachi, Ltd.

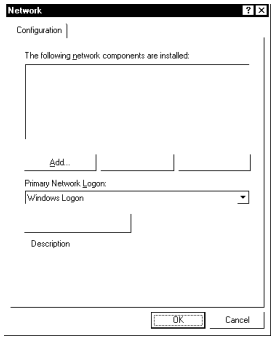
(3) <Open “Network”>
Select (DC) “Network” from “ Control Panel”.



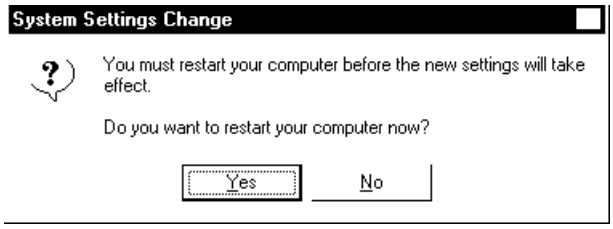
(4) <Delete “Network components”>
Select (CL) one of the “Network components” from “Configuration”, and select (CL) [Remove]. Delete other all “Network components” for this operation.



(5) <Close “Network”>
Select (CL) [OK] from “Configuration” of “Network”.

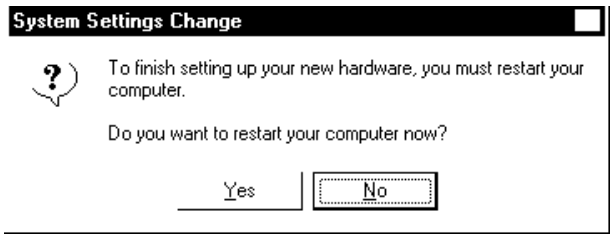


(6) <Reboot the SVP>
Select (CL) [Yes] in response to “You must restart your computer before the new settings will take effect.
Do you want to restart your computer now?”.

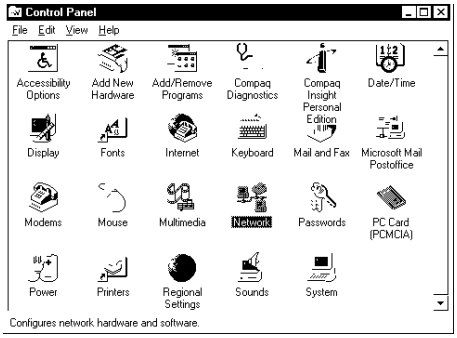


Copyright ©1997,1998, Hitachi, Ltd.

(7) <Check setting LAN Card Driver>
Select (CL) [No] in response to “To finish setting up your new hardware, you must restart your computer.
Do you want to restart your computer now?”.

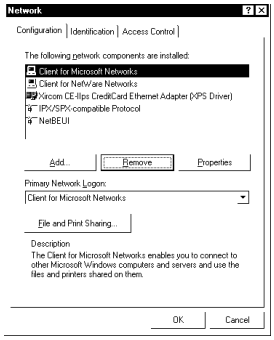


(8) <Open “Network”>
Select (DC) “Network” from “Control Panel”.

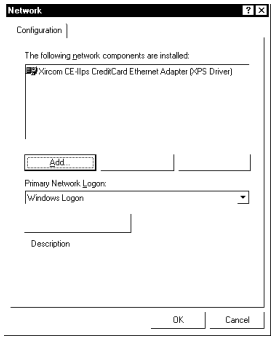


(9) <Delete “Network components”>
Select all “Network components” from “Configuration” of “Network” except the following necessary “Network components”, and select (CL) [Remove].

Necessary “Network components”
• Xircom CE-IIps Credit Card Ethernet Adapter [XPS Driver]
• Xircom Credit Card Ethernet Adapter 10/100



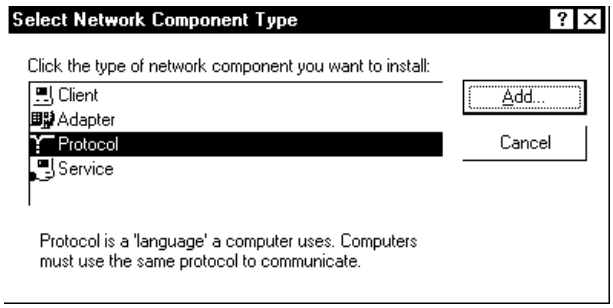
(10) <Add “Network components”>
Select (CL) [Add...] from “Configuration” of “Network”.



Copyright ©1997,1998, Hitachi, Ltd.

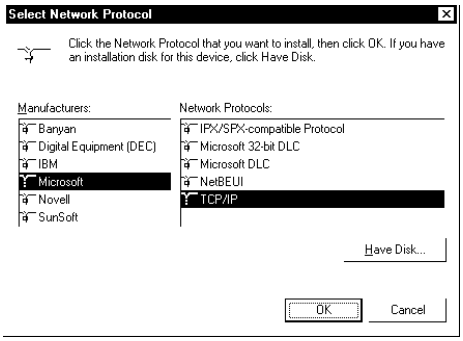
(11) <Add “Protocol”>

Select (CL) “Protocol” from “Select Network Components Type”, and select (CL) [Add...].



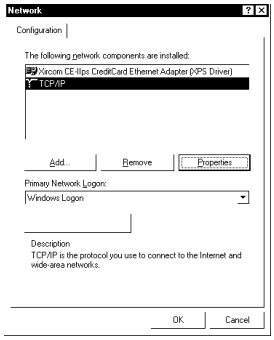
(12) <Select “Protocol”>

Select (CL) “Microsoft” from “Manufacturers”, and “TCP/IP” from “Network Protocols”, and select (CL) [OK].



(13) <Set “TCP/IP”>

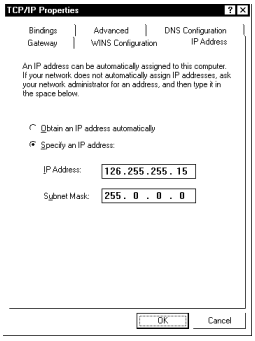
Select (CL) “TCP/IP” from “Configuration”, and select (CL) [Properties].



(14) <Select “IP Address”>

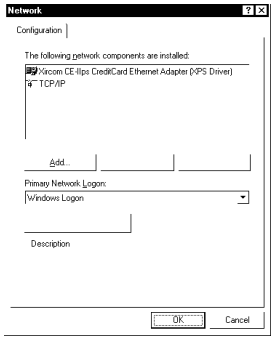
Select (CL) “IP Address”.

Select (CL) “Specify an IP Address”, and set “126.255.255.15” for “IP Address”, and set “255.0.0.0” for “Subnet Mask”, and select (CL) [OK].

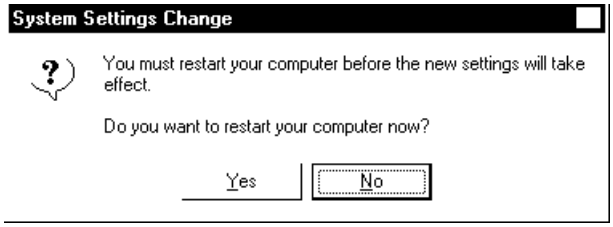


Copyright ©1997,1998, Hitachi, Ltd.

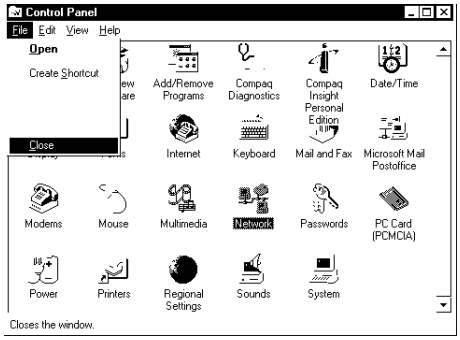
(15) <Close “Network”>
Select (CL) [OK] from “Configuration” of “Network”.



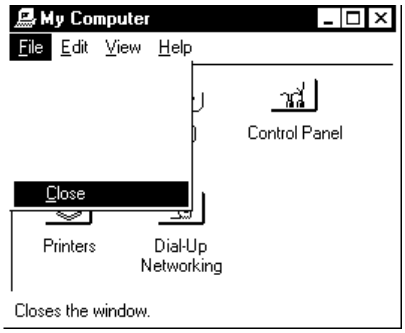
(16) <Check reboot SVP>
Select (CL) [No] in response to “You must restart your computer before the new settings will take effect.
Do you want to restart your computer now?”.



(17) <Close “Control Panel”>
Select (CL) [File] on “Control Panel”.
Select (CL) [Close].



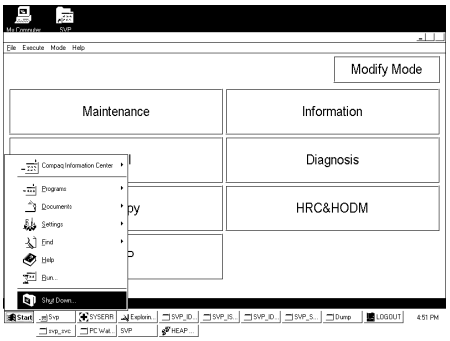
(18) <Close “My Computer”>
Select (CL) [File] on “My Computer”.
Select (CL) [Close].



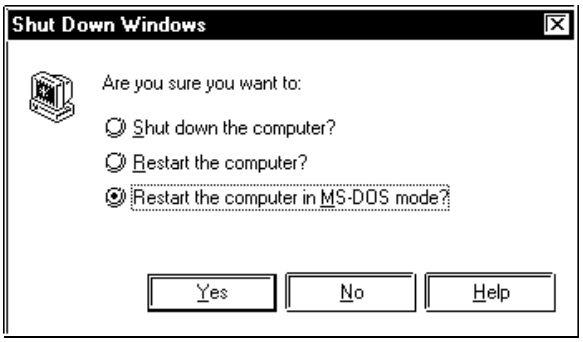
Copyright ©1997,1998, Hitachi, Ltd.

2. <Restart the computer in MS-DOS mode>

(1) <Shut Down Windows>
Select (CL) [Start].
Select (CL) [Shut Down].



(2) <Restart the computer in MS-DOS mode>
Select "Restart the computer in MS-DOS mode" from Shut Down Windows, and select (CL) [Yes] in response to "Are you sure you want to:".



3. <Installation of Micro-program>
① Insert the floppy disk of (1/24 or 1/31) into the FDD.
② Input "a:\setcopy.bat" in 'DOS prompt', and press the [Enter] key.
③ When the message "SET FD NO. (2/24 or 1/31)" is displayed, insert the floppy disk of (2/24 or 1/31) into the FDD and press the [Enter] Key.
④ Copy the remaining floppy disks ((3/24 or 3/31) through (24/24 or 31/31)) in succession in response to the displayed messages.
⑤ When the message "SET FD NO. (1/24 or 1/31)" is displayed, insert the floppy disk of (1/24 or 1/31) into the FDD and press the [Enter] key.
⑥ Remove the floppy disk of (1/24 or 1/31) from FDD.

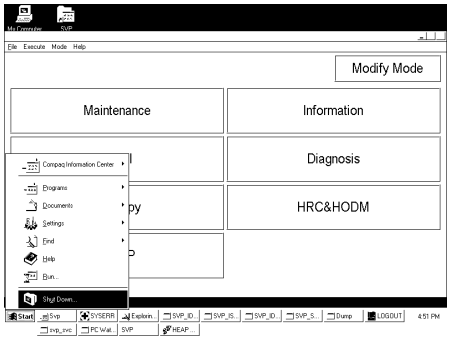
4. <Copy the SVP information to HD>
① Insert the floppy disk of (1/24 or 1/31) into the FDD.
② Input "a:\pcconf.bat" in 'DOS prompt' and press the [Enter] key.
③ The message ""pcconf" change START!!" is displayed, when the message ""pcconf" change END!!" is displayed, file copy, is complete.
④ Press the [Enter] key, and remove the floppy disk of (1/24 or 1/31) from the FDD.

Copyright ©1997,1998, Hitachi, Ltd.

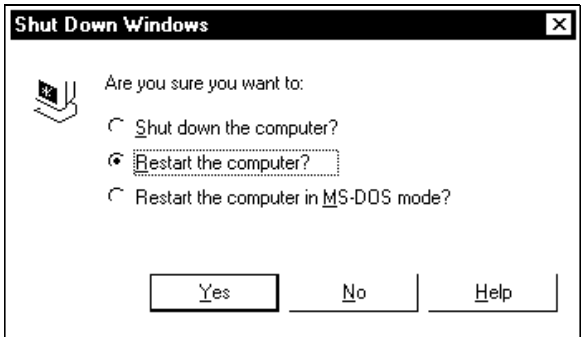
5. <Reboot the SVP>
① Reboot the SVP by [Alt], [Ctrl], and [Del] keys simultaneously.

6. <Installation of Program group and item>
① Insert the floppy disk of (1/24 or 1/31) into the FDD.
② Select (CL) [Start]. Select (CL) [Run...].
③ Input "a:\setup.exe" on 'open', and select (CL) [OK]. The 'SVP' and the 'Startup' groups will be made.
④ Remove the floppy disk of (1/24 or 1/31) from FDD.

6-1. <Reboot the SVP>
(1) <Shut Down Windows>
Select (CL) [Start].
Select (CL) [Shut Down].



(2) <Reboot the SVP>
Select (CL) "Restart the computer" from Shut Down Windows, and select (CL) [Yes] in response to "Are you sure you want to:"

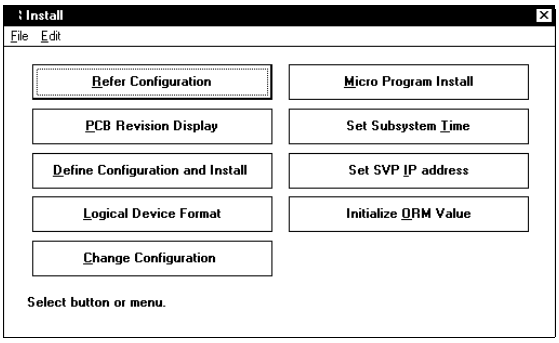


Copyright ©1997,1998, Hitachi, Ltd.

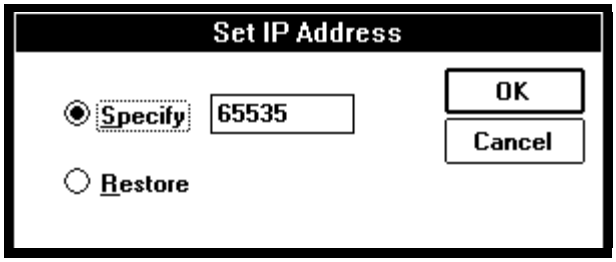
7. <Set IP address of SVP>

(1) <Open [Install]>
Select (CL) [Install] from 'SVP'.

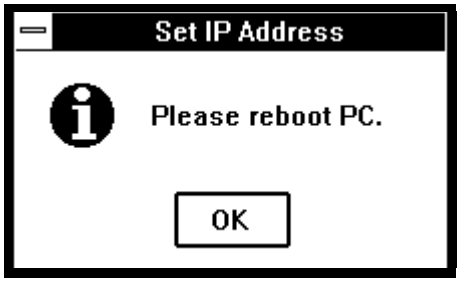
(2) <Select [Set Subsystem IP Address...]>
Select (CL) [Set Subsystem IP Address...] from 'Install'.



(3) <Set IP Address>
Select (CL) [Specify], Enter "Serial No.".
Select (CL) [OK].

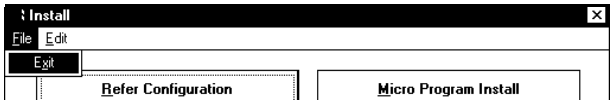


(4) <Check SVP reboot>
Select (CL) [OK].



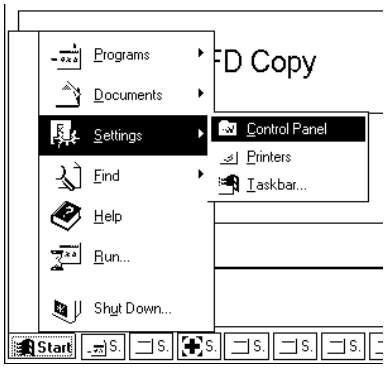
Copyright ©1997,1998, Hitachi, Ltd.

(5) <Select [Exit]>
Select (CL) [File].
Select (CL) [Exit].

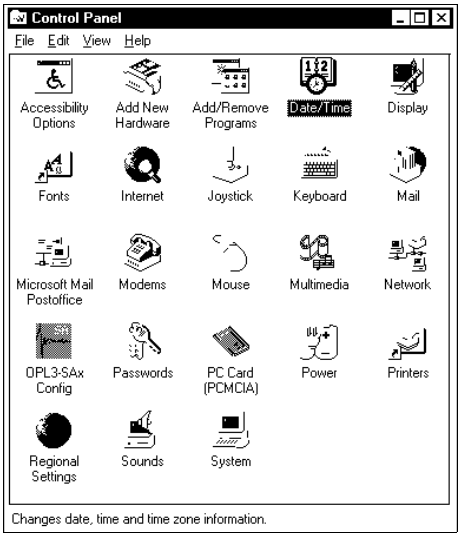


7-1. <Check of Time Zone setting>

(1) <Open [Control Panel]>
Select (DR) [Settings] and then [Control Panel] from [Start].

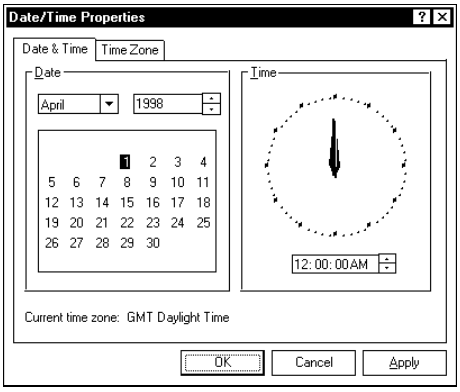


(2) <Open [Date/Time]>
Select (DC) [Date/Time] from [Control Panel].

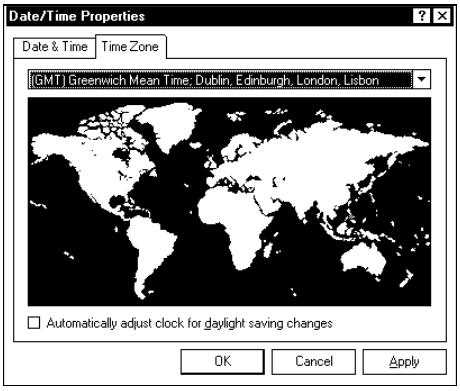


Copyright ©1997,1998, Hitachi, Ltd.

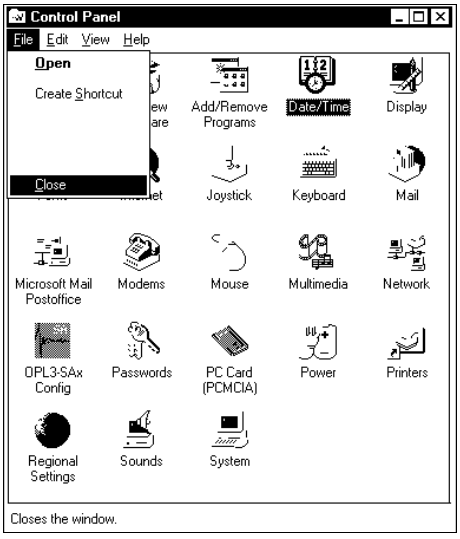
(3) <Select [Time Zone]>
Select (CL) [Time Zone].



(4) <Check the setting of [Time Zone]>
Make sure that the setting of [Time Zone] is "[GMT] Greenwich Mean Time; Dublin, Edinburgh, London, Lisbon". Also, make sure that a check box on the left of "Automatically adjust clock for daylight saving changes" is ☐ (without a check mark). Then, press [OK] (CL).



(5) <Close [Control Panel]>
Select (DR) [File] and then [Close] from [Control Panel].

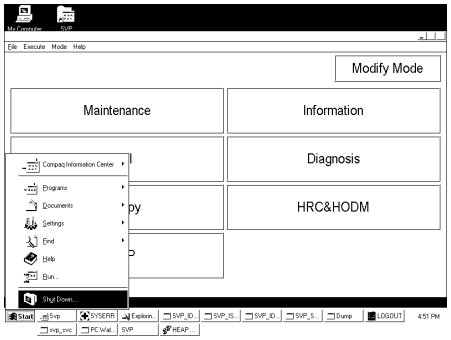


Copyright ©1998, Hitachi, Ltd.

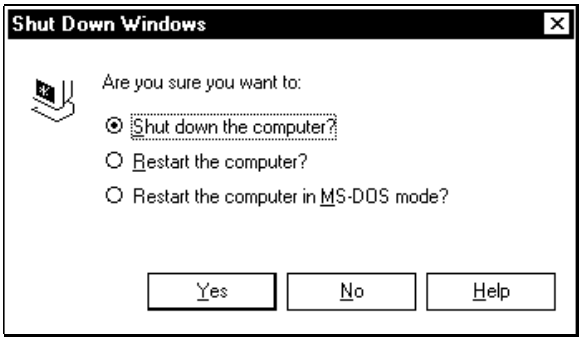
7-2. <TOD Setting>
See SVP02-10.

8. <Reboot the SVP>

(1) <Shut Down Windows>
Select (CL) [Start].
Select (CL) [Shut Down].



(2) <Shut down the SVP>
Select (CL) “Shut down the computer?” from Shut Down Windows, and select (CL) [OK] in response to “Are you sure you want to:”.



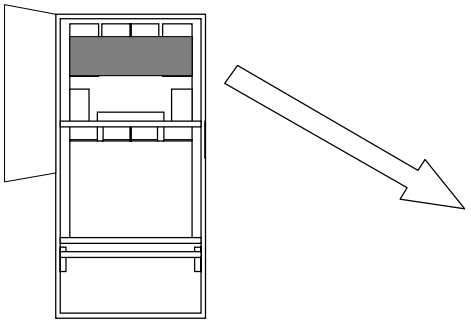
Copyright ©1998, Hitachi, Ltd.

8-1. <Connect the RS232C cable>

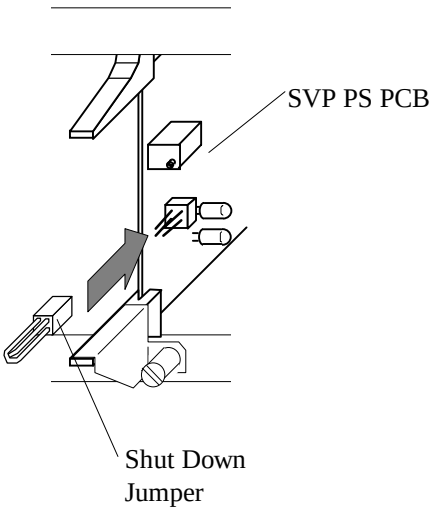
(1) Power Off SVP

① Insert the Shut Down Jumpers in SVPPS1 and SVPPS2.

② Wait for one minite.



Front View of DKC



Front PS Box

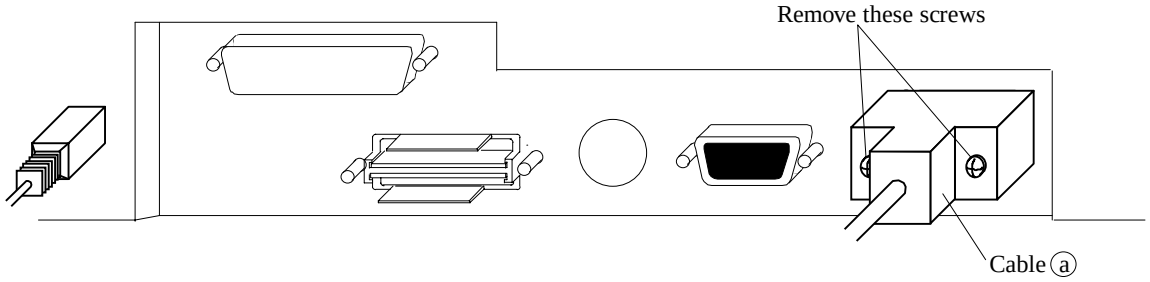
(2) Connect the RS232C cable from the SVP

① Connect the ⓐ (RS232C cable) from the SVP



Rear View of SVP

(3) Remove the Shut Down Jumpers in SVPPS1 and SVPPS2.

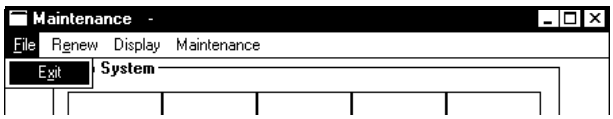
Copyright ©1998, Hitachi, Ltd.

9. <Load the Configuration from the SM to the SVP's HDD>

(1) <Open [Maintenance]>
Wait a few minutes, message "Loading SVP Program... SVP requests to DKC can not be performed presently. Please wait..." will be extinguished.
Then select (CL) [Maintenance] form 'SVP'.

(2)
Check "Connection error occurred SVP-DKC." is not displayed.
If "Connection error occurred SVP-DKC" is displayed, see TRBL05-70.

(3) <Select [Exit]>
Select (CL) [File] from the "Maintenance".
Select (CL) [Exit].



10. <SSVP Reset>
Press the "SSVP ALARM RESET" switch (see ㉚ on page LOCATION03-40).
Open the "Maintenance" window and wait until the initializing SSVP message ceases to be displayed (for about 15 minutes).

11. <SIM Complete>
See SVP02-500.
[End of POST-PROCEDURE]

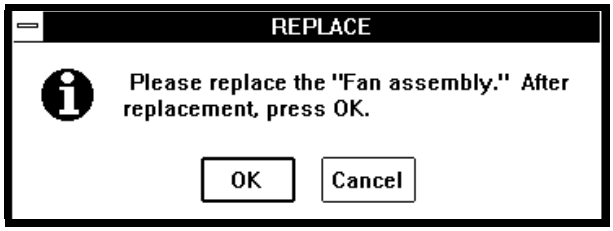
[1] Start of POST-PROCEDURE

1. <Making part replacement check>

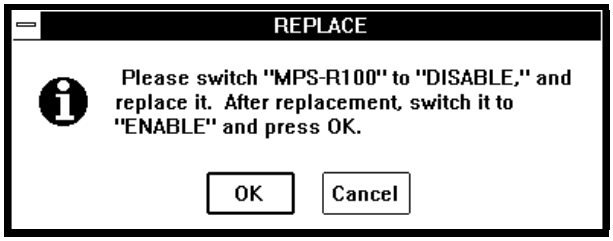
• FAN

Select (CL) [OK] in response to “Please replace the "XXXXX" After replacement, press OK.”
Valid “XXXXX” values are listed below.
‘FAN’---------- Go to [2]-2 (REP04-900)



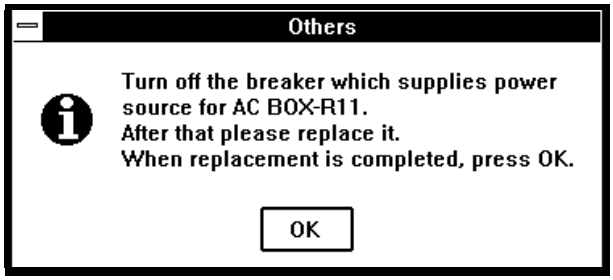
• MPS-n, DKUMN-n

Select (CL) [OK] in response to “Please switch "XXXXX" to "DISABLE," and replace it. After replacement, switch it to "ENABLE" and press OK.”.
‘MPS-n’ ---------- Go to [2]-2 (REP04-900)
‘DKUMN-R2n’, ‘DKUMN-L2n’
---------- Go to [2]-2 (REP04-900)
‘DKUMN-R1n’, ‘DKUMN-L1n’
---------- Go to [2] (REP04-900)



• AC BOX-n

Select (CL) [OK] in response to “Turn off the breaker which supplies power source for AC BOX-XXX. After that please replace it. When replacement is completed, press OK.”.



‘AC BOX-R1n’
When redundant power supply is installed
---------- Go to [2]-2 (REP04-900)
not installed--------- Go to [3] (REP04-920)
Other ‘AC BOX-n’
---------- Go to [4] (REP04-930)

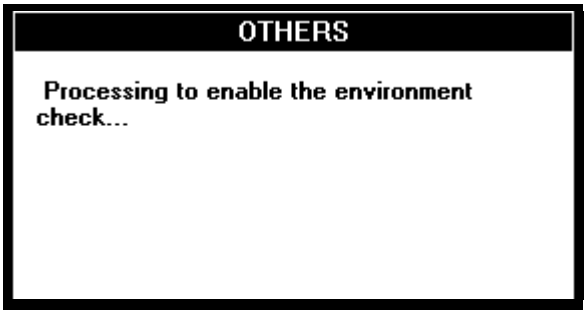
Copyright ©1997,1998, Hitachi, Ltd.

[2] DKUMN, FAN, MPS, AC BOX

1. <Enabling DKUMN>
When DKUMN-XXX (listed below) is installed, this message is displayed.
Enable DKUMN in response to “Please switch "DKUMN-XXX" to "ENABLE." Then press OK.”.
After confirming DKUMN-XXX is enabled, select (CL) [OK].

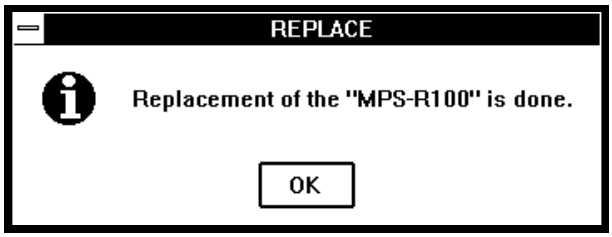
DKUMN-XXX:
- For DKUMN-R1F: XXX=R2F (“DKUMN-R2F”), Switch DKUMN-R2F to ENABLE.
- For DKUMN-R1R: XXX=R2R (“DKUMN-R2R”), Switch DKUMN-R2R to ENABLE.
- For DKUMN-L1F: XXX=L2F (“DKUMN-L2F”), Switch DKUMN-L2F to ENABLE.
- For DKUMN-L1R: XXX=L2R (“DKUMN-L2R”), Switch DKUMN-L2R to ENABLE.

2. <Checking environment monitor start processing>
“Processing to enable the environment check...” is displayed.



Copyright ©1997,1998, Hitachi, Ltd.

3. <Checking end of replacement>
Select (CL) [OK] in response to “Replacement of the "XXXXX" is done.”.



4. <Confirm status>
Confirm the status display.
If button is valid, go to [6] (REP04-940).
If button is blinking, replace the target part again, or TROUBLE SHOOTING SECTION.

[End of POST-PROCEDURE]

[3] AC BOX-R1n

1. <End of replacement>
   If an error occurs, Go to [5] (REP04-940).
   - When only serial or parallel channels, or they are mixed.
     Select (CL) [OK] in response to "The replacement of AC BOX-R1n has finished and Cluster is enabled. The concerned channel path(s) are available. Please vary the path(s) on.".

   - When SCSI channels and other kinds are mixed.
     Select (CL) [OK] in response to "The replacement of AC BOX-R1n has finished and Cluster is enabled. The concerned channel path(s) and SCSI channel path(s) are available. Please vary the path(s) on.".

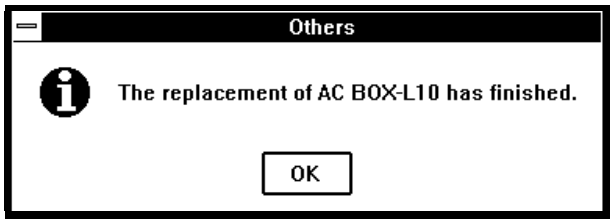
   - When only SCSI channels are installed.
     Select (CL) [OK] in response to "The replacement of AC BOX-R1n has finished and Cluster is enabled. The concerned SCSI channel path(s) are available.".

   Go to [6] (REP04-940).

Copyright ©1997,1998, Hitachi, Ltd.

[4] AC BOX-n

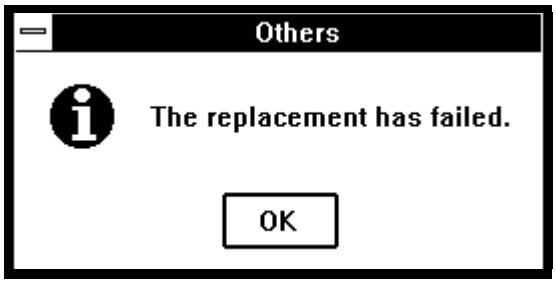
1. <End of replacement>
   If an error occurs, go to [5] (REP04-940).
   Select (CL) [OK] in response to “The replacement of AC BOX-Rn/Ln has finished.”.
   Go to [6] (REP04-940).



Copyright ©1997,1998, Hitachi, Ltd.

[5] Error

1. <Replacement error>
   Select (CL) [OK] in response to “The replacement has failed.”.



[End of POST-PROCEDURE]

---

[6] Confirm Cluster

- MPS-n, AC BOX-n
  If Cluster is blocked, recover it.
  See SVP02-890.
  Go to [7] (REP04-940).

- FAN, DKUMN-n
  Go to [7] (REP04-940).

---

[7] SIM Complete

See SVP02-500.
Close ‘HDU-xxx’ window. (When MPS-n or FAN)
Close ‘DKU-xx’ window.
Close ‘Maintenance’ window.

[End of POST-PROCEDURE]

Copyright ©1997,1998, Hitachi, Ltd.

[POST-PROCEDURE u]

— OUTLINE —

① Execute CUDG on P-DEV.
② Specify recovery.
③ Correction copy
④ Reset ORM Error Count on the P-DEV.
⑤ Reset Threshole Counter
⑥ SIM Complete

NOTICE

This processing is a special operation for detecting a cause of a SCSI bus error. Ask the technical support center about the appropriateness of the operation.

1 Types of Diagnoses

This subsystem's diagnostics consist of the five types of test routines listed below. They are selected according to the purpose and the part to be tested.

Table 1-1 Diagnostics Test Routines

Item No.	Type	Diagnosis	Part	Timing
1	CUDG3/ LCDG3	Initial diagnoses	CHA,DKA,CACHE/SHARED MEMORY	When DKC is powered on or CHA or DKA is replaced (automatic)
2	CUDG4 /LCDG4	Functional diagnoses executed when the unit is offline	CHA,DKA,CACHE/SHARED MEMORY	During installation (as specified by service personnel)
3	INLINE CUDG	Functional diagnoses executed when the unit is online	CACHE/SHARED MEMORY	When Cache or Shared memory is replaced or installed (automatic)
4	DKU INLINE	DKA-HDU functional (connection) check	DKA,SCSI BUFF,SCSI CTL,HDD	When an HDD is replaced (automatic) or during installation (as specified by service personnel)
5	LAN	LAN check between DKC and SVP	SVP,SSVP,DKA,CHA	When LAN communication error or communication time-out error is occurred.

Notes:
1. RUN Option can be set for CUDG4, LCDG4.
2. All RUN Option types are specified in Table 1-2, Table 1-3 and Table 1-4.
3. Because INLINE CUDG and DKU INLINE are executed automatically during Hot Replace, normally they are not executed.
4. Run Option set to a value other than "08" is valid only when performing DKU INLINE for one drive.

Table 1-2 CUDG RUN Option

Item No.	Run Option	If an error is not detected	If an error is detected
1	Normal	CUDG test will be executed only once.	CUDG test will be finished when an error is detected. And the error detail will be displayed on the SVP screen. After finishing the CUDG function, please refer to Diag log. (See 27 of DIAG04-90)
2	Loop	CUDG test will be executed continuously.	CUDG test will be finished when an error is detected. And the error detail will be displayed on the SVP screen. After finishing the CUDG function, please refer to Diag log. (See 27 of DIAG04-90)
3	Error Loop	CUDG test will be executed continuously.	Continuous CUDG test. And an error detail is displayed on the SVP screen. But the CUDG test will be continued testing.
4	Error Log	CUDG test will be executed continuously.	Continuous CUDG test. And an error detail will be displayed on the SVP screen. After finished the CUDG function, refer to Diag log. (See 27 of DIAG04-90)

Copyright ©1997,1998, Hitachi, Ltd.

Table 1-3 DKU INLINE RUN Option

Item No.	RUN Option	Contents
1	01	Dynamic error display
2	02	Loop routine
3	03	Dynamic error display Loop routine
4	04	Link inhibit
5	05	Dynamic error display Link inhibit
6	06	Loop single routine
7	07	Dynamic error display Loop single routine
8	08	Reset RUN Option

Table 1-4 LCDG4 RUN Option

Item No.	RUN Option	If an error is detected
1	Normal	LCDG test will be executed only once. LCDG test will be finished when an error is detected. And the error detail will be displayed on the SVP screen. After finishing the LCDG function, please refer to Diag log. (See 27 of DIAG04-90)
2	Error Loop	Continuous execution of LCDG test. And an error detail will be displayed on the SVP screen. But the LCDG test will be continued testing.
3	Loop	Continuous execution of LCDG test. LCDG test will be finished when an error is detected. And an error detail will be displayed on the SVP screen. After finishing the LCDG function, please refer to Diag log. (See 27 of DIAG04-90)

Copyright ©1997,1998, Hitachi, Ltd.

2 DIAG Details

2.1 CUDG3 (Control Unit Diagnosis 3)/LCDG3 (Link Control module Diagnosis 3)

CUDG3/LCDG3 is a collection of test routines that are started at system start time (when the unit power is turned on), prior to the execution of the main program and automatically check the basic functions of the unit to ensure the normal hardware operation of the system. The CUDG3/LCDG3 routines are listed in Table 2.1.

Table 2.1 CUDG3/LCDG3 Test Routines

Item No.	Routine Name	Function
1	CUDG3B	Local memory/RCHK diagnosis
2	CUDG3C0	MIC timer #5,6/interrupt diagnosis, LANC self-diagnosis
3	CUDG3C1	CHA PCB self-diagnosis
4	CUDG3C2	DKA PCB self-diagnosis
5	CUDG3C3	Shared resource diagnosis by all processors (SMP, SMC)
6	CUDG3C4	Shared resource diagnosis by all processors (DRR, CACHE)
7	CUDG3C5	Shared resource diagnosis by a delegated processor (SMC)
8	CUDG3C6	Shared resource diagnosis by a delegated processor (CACHE)
9	LCDG3	CS, for Serial/Parallel port, read/write test, internal diagnostic test, communication diagnostic test

Copyright ©1997,1998, Hitachi, Ltd.

2.2 CUDG4 (Control Unit Diagnosis 4)/LCDG4 (Link Control module Diagnosis 4)

CUDG4/LCDG4 supports Cache memory/Shared memory read after full write tests and other tests that cannot be covered by CUDG3/LCDG3. It is executed by the service personnel when the unit is offline. After CUDG4/LCDG4, the subsystem PS OFF/ON is mandatory in order to return to ONLINE status of the subsystem. The CUDG4/LCDG4 test routines are listed in Table 2.2-1 and Table 2.2-2.

Table 2.2-1 CUDG4 Test Routines

Item No.	Routine Name	Function
1	P/K test Group	CHA/DKA diagnosis
2	SMC Normal test Group	SMC, SHARED MEMORY diagnosis (Normal test)
3	Cache Normal test Group	CACHE PCB, CACHE MEMORY diagnosis (Normal test)
4	SMC test Group	SMC, SHARED MEMORY diagnosis
5	Cache test Group	CACHE PCB, CACHE MEMORY diagnosis
6	Heatrun test Group	All the above tests are included.

Note 1: When 'Heatrun test Group' is selected, 'Run Option' settings are invalidated and diagnosis is executed under Heatrun mode.

Table 2.2-2 LCDG4 Test Routines

Item No.	Routine No.	Parameter	Contents of Test
1	10	—	(1) LCP Operation (2) LCP Register Test (3) Data Buffer Read/Write (4) SPS Function
2	20	—	(1) LCP-MP Communication Test (2) Data Transfer Test
3	30	CB750F	(1) Serial Channel Wraparound Test
4	40	—	(1) Optical Signal Defect Test
5	50	—	(1) Optical Signal Error Rate Check

Note 2: Routine 30 is used for running a serial channel wraparound test.
To execute Routine 30, the wraparound test connector is required.
Note 3: Routine 40 and Routine 50 are used for checking optical signals for the serial channel.
Note 4: If Routine 40 or Routine 50 is selected, RUN option will be selected only Normal.

Copyright ©1997,1998, Hitachi, Ltd.

2.3 INLINE CUDG(INLINE Control Unit Diagnosis)

INLINE CUDG checks the validity of Cache memory and Shared memory when the entire disk subsystem is running normally. The INLINE CUDG test routines are listed in Table 2.3.

Table 2.3 INLINE CUDG Test Routines

Item No.	Routine Name	Function
1	Cache memory system	CACHE PCB, CACHE MEMORY diagnosis
2	Shared memory system	SMC (Shared Memory Control) diagnosis

2.4 DKU INLINE

The DKU INLINE execute the diagnosis of HDD equipped in DKU. The DKU INLINE test routines are listed in Table 2.4.

Table 2.4 DKU INLINE Test Routines

Item No.	Routine Name	Function
1	C1 Link series	HDD standalone test and check for normal operation against accesses from the higher-level unit (DKC)
2	DKU path inline	Check for connection between DKA (Disk Adapter) and HDU

Copyright ©1997,1998, Hitachi, Ltd.

2.4.1 C1 Link series

The C1 Link series of test routines are used to ensure that the HDD is accessible to the Disk Controller when one is installed (a new or as an additional unit). This INLINE facility is also executed when a HDD is replaced during online processing as part of the recovery procedure to ensure that the HDD is normal. In this case, this INLINE facility runs automatically (with no SVP manipulation). The C1 Link series test routines are listed in Table 2.4.1.

Table 2.4.1 C1 Link Series Test Routines

Routine ID	Test Name	Function
C1	TEST UNIT READY & REQ.SENSE	Issues the TEST UNIT READY to the HDD and verifies that the status is GOOD or CHECK. The path is changed during this test to check both paths.
C2	START/STOP TEST	Issues the STOP COMMAND to the HDD and verifies that the command terminates normally. In 10 seconds, the test routine issues the START command and verifies that normal status is returned.
C3	INQUIRY	Checks the HDU-specific information.
C4	REZERO/ SEEK TEST	Executes CYL SEEK and REZERO and verifies that they terminate normally. Subsequently, perform seeks between 0 and 1, 0 and 2, 0 and 4, 0 and 8, 0 and 16, ..., 0 and 2048(cyl), 0 and MAX, and MAX and 0 to verify that the seeks terminate normally.
C5	READ/WRITE TEST	Make read/write tests on all heads on the CE cylinders and verifies that the tests terminate normally.
C6	ECC TEST	Writes all zeros to the HEAD#0 sectors on the CE cylinders and reads data including ECC with the READ LONG to verify the validity of the ECC data. The test routine also writes the bit-inverted data with the WRITE LONG and verifies that Correctable or Uncorrectable is reported when the written field is read.
C7	HDU SELF TEST	Activates the SCSI CTL self-diagnostics facility to check the following functions: · HDC functions (SEEK ERROR, SECTOR CHECK, FLAG CHECK, AM CHECK, ID CRC CHECK, DRIVE OVERRUN CHECK) · M-ESDI interface check (WRITE OK, M-ESDI INTERFACE PARITY, ILLEGAL COMMAND) · Drive write fault check (OFFSET WRITE, SERVO AREA WRITE, NRZ DATA PARITY ERROR, SYNCHRONOUS READ/WRITE GATE ON, WRITE TRANSITION)

Copyright ©1997, Hitachi, Ltd.

Notes:
1. All logical devices must be in the “BLOCKED” state. If not, the test routine will error-terminate. Refer to from SVP02-630 to SVP02-705 of SVP SECTION for all logical devices blocked.
2. The previous test routines must have been terminated normally before the pertinent test routine is started.
3. The Disk Controller should have been powered on normally.
4. Run Option setting to a value other than “08” is valid only when performing DKU INLINE for one drive.
5. After performing C1 Link Series, report on two SSB Log. (FM : 9F ErrCode : AE5A, E/F : E0 ErrCode : A772)

2.4.2 D8 Routine

D8 routine confirm the connection status of equipped HDD.

Note: Refer to Notes in C1 Link series.

2.4.3 DKU PATH INLINE

The DKU Path Inline is used to check that the connection between the DKA and the HDU is correct. The DKU path inline test routines are shown in Table 2.4.3.

Table 2.4.3 DKU PATH INLINE TEST ROUTINE

Routine ID	Test Name	Function
A0	SCSI cable connection check test	Checks whether the selected DKA and HDU are correctly connected.
A1	HDD read test	Executes the read test of the mounted HDD is executed.
A2	Failed HDD detection test	Detects the failed HDD and recovers it by using the reset function when an A0 10 or A0 20 error occurs.

Note: The routine A2 forcibly blocks the port of the HDD by using the individual SCSI RESET function for the HDD connected to the designated port of the selected DKA. Therefore, you must not do this operation expect for finding the factor of A010/A020 error.

2.5 LAN Checker

LAN checker analyses the LAN connection between DKC and SVP to determine whether the LAN error is caused by the physical connection or the communication software.

#	Test Name	Function
1	Hardware check	Checker executes “Ping” to all MPs. If the result is “no-response”, for a MP, the physical connection error has occurred between the MP and SVP.
2	Software check	Checker executes the communication between SVP and MPs whose result of #1 is “responsed”.

4 DIAG Test Procedures (SVP Operations)

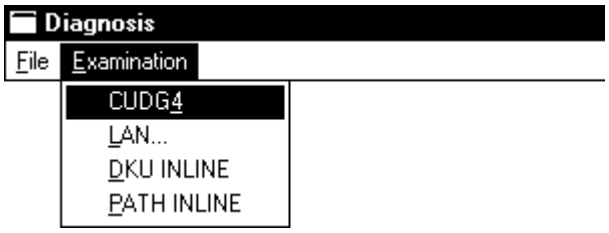
NOTICE
Powering off/on is required owing to the performance of this operation.

4.1 CUDG4/LCDG4 Test Procedures

1. <Initial screen>

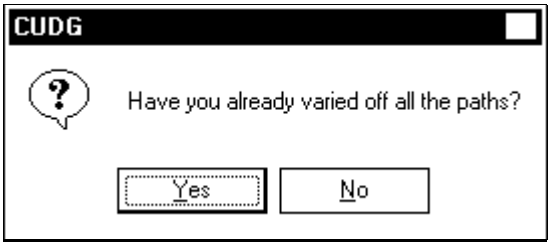
2. <Operation mode change>
   Change the mode to [Modify Mode].
   Select (CL) [Diagnosis].

3. <Activating CUDG>
   Select (DR) [CUDG4] from [Examination] in the Diagnosis menu.



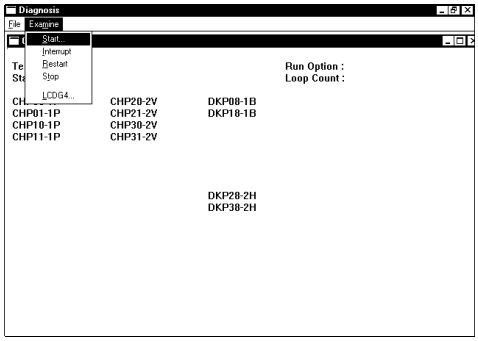
Copyright ©1997,1998, Hitachi, Ltd.

4. <Confirming that the channel path has been varied off>
An inquiry “Have you already varied off all paths?” is displayed.
Vary off the channel path, then select (CL) the [Yes] button.



5. <Selection of CUDG4/LCDG4>
In case of executing CUDG4, go to step 6.
In case of executing LCDG4, go to step 16.

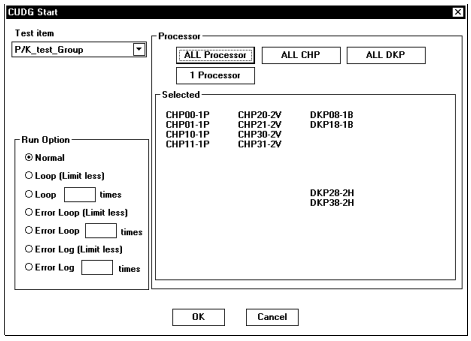
6. <Start of CUDG4 test>
Select (DR) [Start] from [Examine] in the Diagnosis menu.



Copyright ©1997,1998, Hitachi, Ltd.

7. <Setting test parameters>

Select a test item, a test execution type, and a test object processor from Test Item, Run Option, and Processor respectively.
Select (CL) the [OK] button after all the selections are made.



[Test items]

P/K test Group	: Diagnosis on the CHA PCBs or DKA PCBs
SMC Normal test Group	: Diagnosis on the shared memory control (test on the normal system)
Cache Normal test Group	: Diagnosis on the cache platter (test on the normal system)
SMC test Group	: Diagnosis on the shared memory control
Cache test Group	: Diagnosis on the cache platter
Heatrun test Group	: All the above tests are included

Note 1: When 'Heatrun test Group' is selected, 'Run Option' settings are invalidated and diagnosis is executed under Heatrun mode.

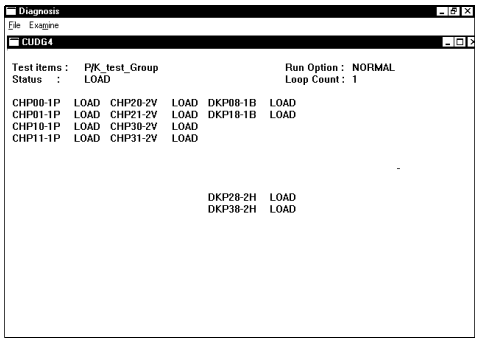
[Run option (test execution types)]
Refer to DIAG01-10.

[Test object processors]

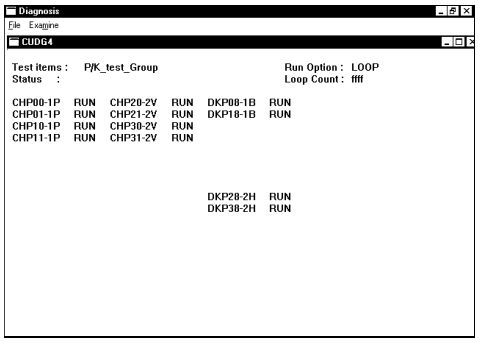
ALL Processor	: The test is executed on all the processors exist in the configuration.
ALL CHP	: The test is executed on all the CHPs exist in the configuration.
ALL DKP	: The test is executed on all the DKPs exist in the configuration.
1 Processor	: The test is executed on specified processor exist in the configuration. For details, see Item 15.

Copyright ©1997,1998, Hitachi, Ltd.

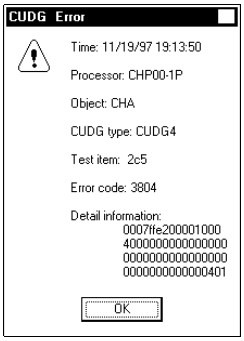
8. <Displaying CUDG4 loading>
Statuses of INIT, LOAD, and WAIT are displayed on the 'CUDG4' screen.
The illustration on the right shows the screen when the CUDG4 is being loaded.



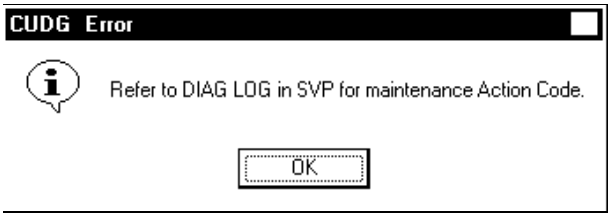
9. <Displaying RUN>
State of the run is displayed on the 'CUDG4' screen.
The illustration on the right shows the screen when the CUDG4 test is being executed.
Normal end ---------- Go to step 11.
Abnormal end -------- Go to step 10.



10. <Displaying error>
If an error occurs in CUDG4 test, CUDG Error window is displayed.
Confirm the type of the error, then select (CL) the [OK] button.
Refer to DIAG LOG according to the message.



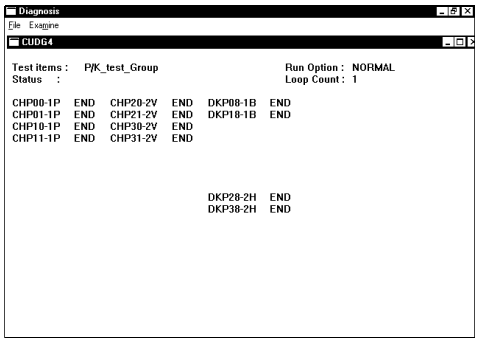
To display DIAG LOG, see step 27.
To execute CUDG4 again, go to step 6.
To terminate CUDG4, go to step 12.



Copyright ©1997,1998, Hitachi, Ltd.

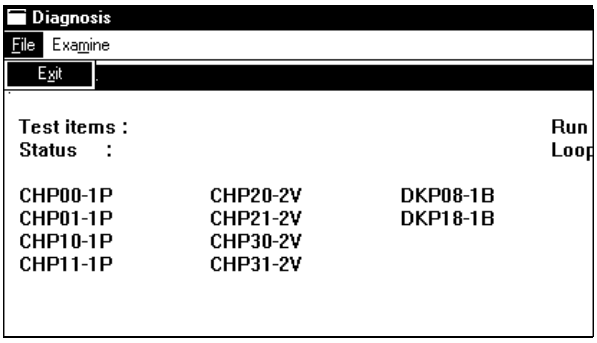
11. <Displaying END>

Status 'END' is displayed for the processor that CUDG4 test ends.
To continue CUDG4, go to step 6.
To terminate CUDG4, go to step 12.



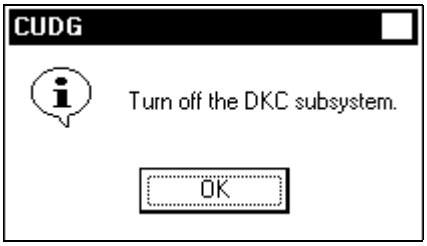
12. <Displaying Exit>

Select (CL) [Exit] from [File] in the Diagnosis menu.



13. <PS-OFF>

Turn off the DKC subsystem by performing the PS-OFF operation following the displayed instruction "Turn off the DKC subsystem", then select (CL) the [OK] button.
If the power is not turned off after PS-OFF operation, immediately turn off the breaker.



14. <Quitting the diagnosis screen and PS-ON>

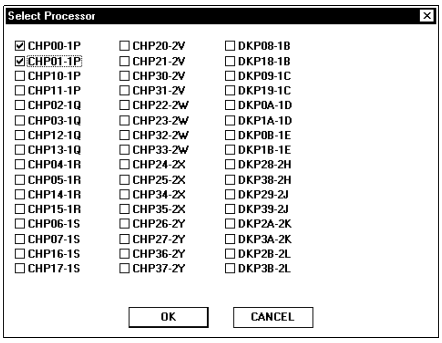
The screen is returned to the initial screen.

Turn on the DKC Subsystem by performing the PS-ON operation.
If any error is detected in the CUDG4 test, go to step 27.

Copyright ©1997,1998, Hitachi, Ltd.

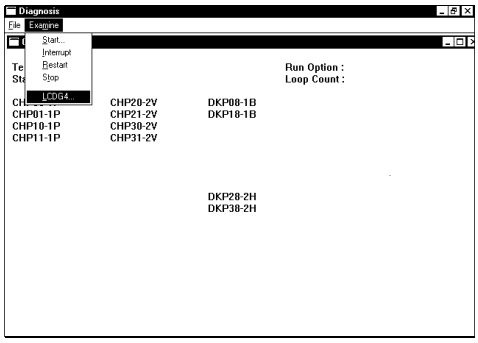
15. <Specifying a test object processor>

Select a processor on which the test is to be executed.
(Two or more processors can be selected.)
After specifying the processor(s), then select (CL) the [OK] button.
Go to step 7.



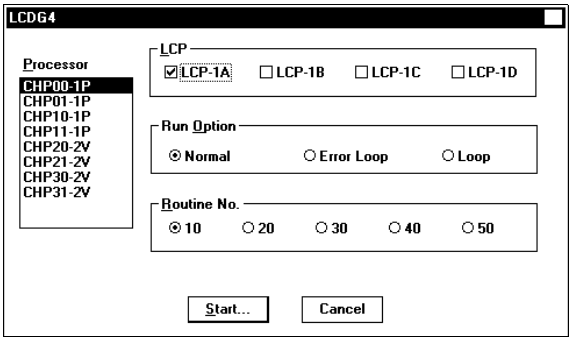
16. <Start of LCDG4 test>

Select (DR) [LCDG4...] from [Examine] on 'Diagnosis'.



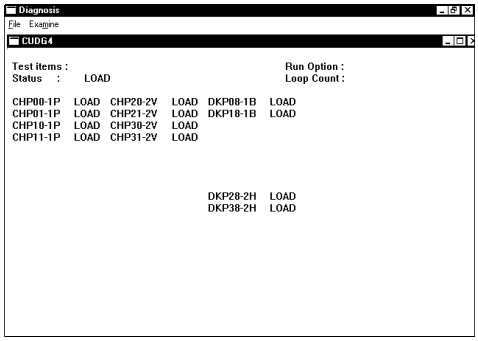
17. <Select [CHA], [LCP], [Run Option] and [Routine No.]>

Select (CL) [CHA], [LCP], [Run Option] and [Routine No.] in the 'LCDG4' dialog box.
Select (CL) [Start] button.
Refer to DIAG01-20, DIAG02-20.



18. <Display of [LOAD]>

Status [INIT], [LOAD], and [WAIT] are displayed in the 'CUDG4' dialog box.

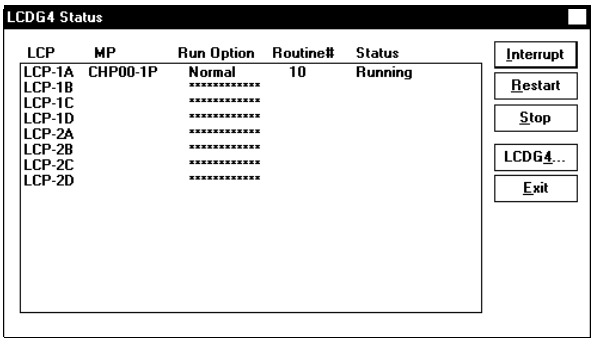


Copyright ©1997,1998, Hitachi, Ltd.

19. <Display of [Running]>

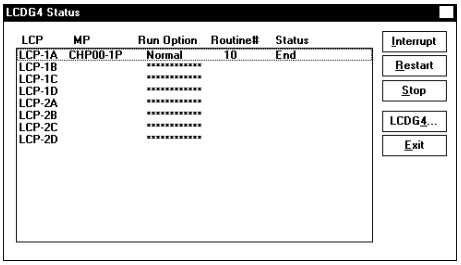
Status [Running] is displayed in the 'LCDG4 Status' dialog box.

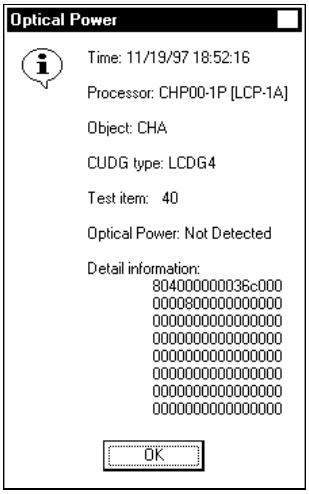
Go to 20. in case of Normal End.
Go to 21. in case of Abnormal End.

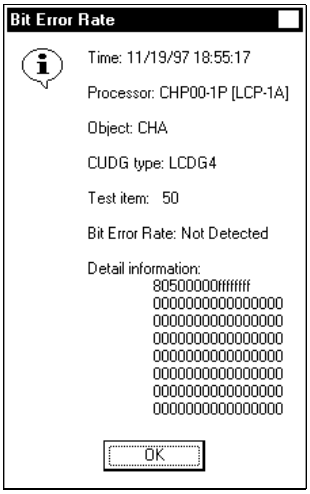


20. <Display of [End]>

Status [End] is displayed in the 'LCDG4 Status' dialog box.
When the routine number is 40, 'Optical Power' is displayed. Select (CL) [OK]. When the routine number is 50, 'Bit Error Rate' is displayed. Select (CL) [OK].
Go to 22.



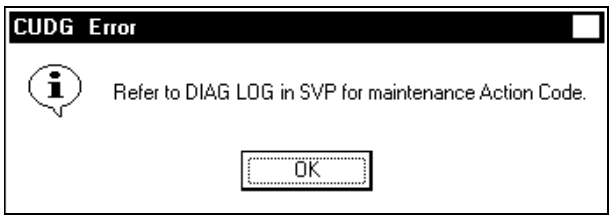


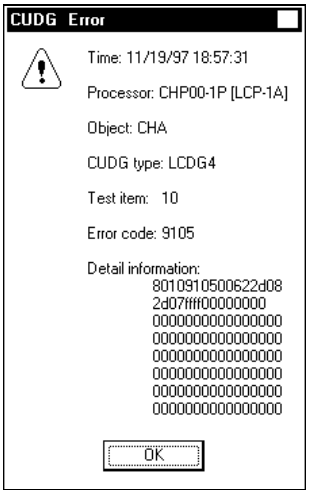


21. <Display of 'CUDG Error'>

After 'CUDG Error' is displayed, select (CL) [OK].

To display DIAG LOG, see step 27.

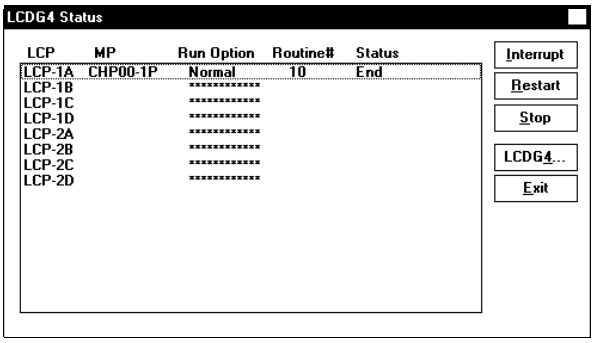




Copyright ©1997,1998, Hitachi, Ltd.

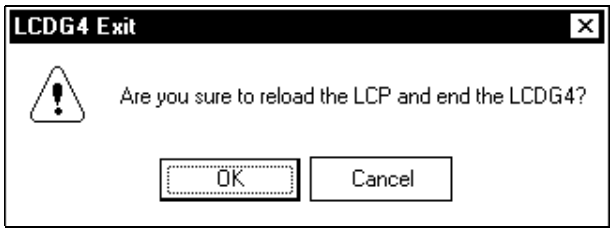
22. <Selection of continuation/termination of LCDG4>

To continue LCDG4, select (CL) [LCDG4] in 'LCDG4 Status' dialog box and go to step 17.
To terminate LCDG4, select (CL) [Exit] in 'LCDG4 Status' dialog box and go to step 23.



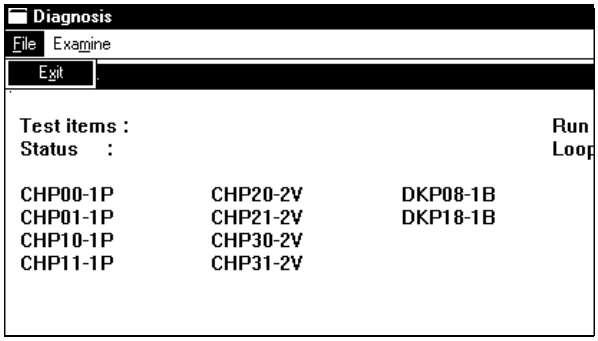
23. <End of LCDG4>

"Are you sure to reload the LCP and end the LCDG4?" is displayed.
Select (CL) [OK].



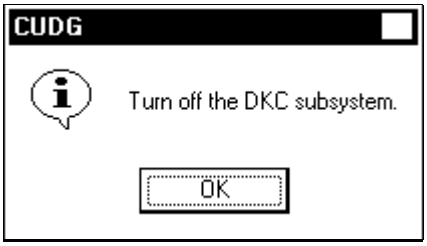
24. <Select [Exit]>

Select (DR) [Exit] from [File] on 'CUDG4'.



25. <PS-OFF>

After "Turn off the DKC subsystem." is displayed, turn off the DKC subsystem by the PS-OFF operation and then select
(CL) [OK].



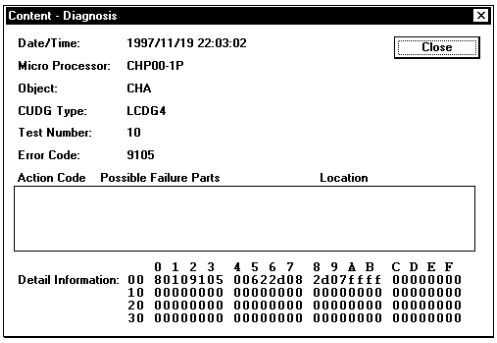
Copyright ©1997,1998, Hitachi, Ltd.

26. <End of the DIAGNOSIS screen>
The Initial screen is displayed.

Turn on the DKC subsystem by performing the PS-ON operation.
In case of error go to 27.

27. <See 'Diag Log'>
If CUDG4/LCDG4 ends with an error, select ACC from the 'Diag Log' dialog box in [INFORMATION] ICON.
See 2.2 Log indication in SVP section.

Note: Refer to ACC (ACTION-CODE) SECTION for ACC analysis.



Copyright ©1997,1998, Hitachi, Ltd.

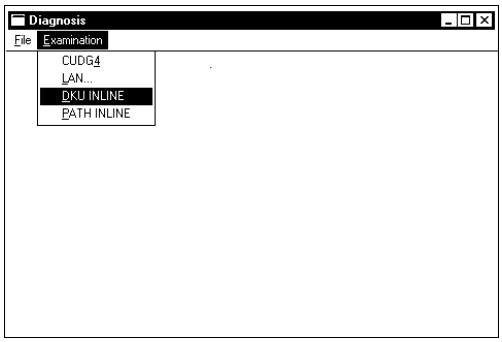
4.2 DKU INLINE Test Procedures

4.2.1 C1 Link series Test Procedures

1. <Initial screen>

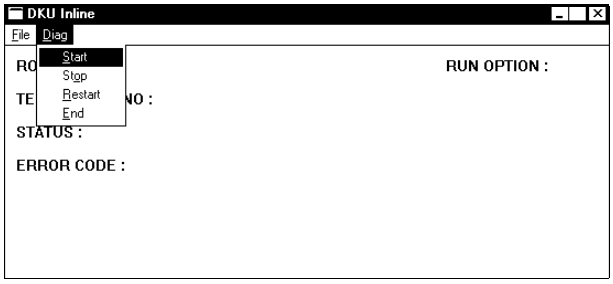
2. <Operation mode change>
   Change the mode to [Modify Mode].
   Select (CL) [Diagnosis].

3. <Select 'DKU INLINE'>
   'Diagnosis' window is displayed.
   And select (DR) [DKU INLINE] from [Examination] in the Diagnosis menu.

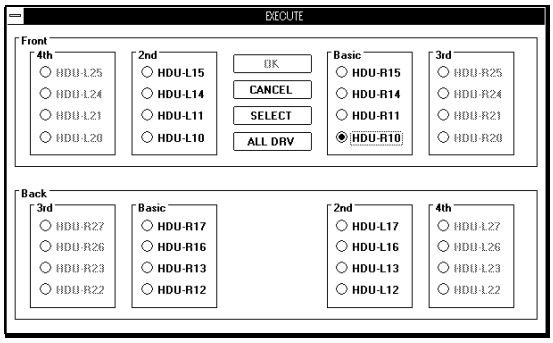


Copyright ©1997,1998, Hitachi, Ltd.

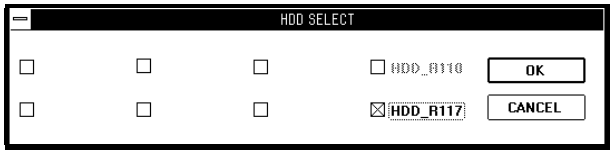
4. <Select [Start]>
Select (DR) [Start] form [Diag].



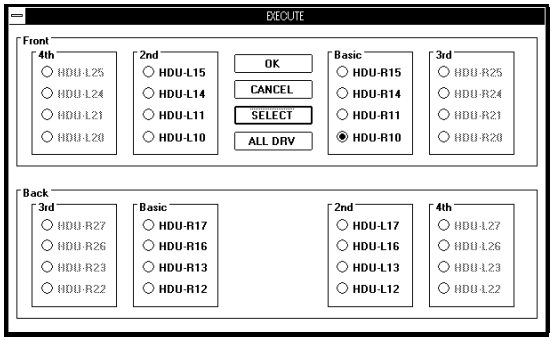
5. <Select HDU group to be tested>
Select (CL) the HDU group for which the test routine is to be executed from 'EXECUTE'.
Then select (CL) [SELECT] button.



6. <Select HDD to be tested>
Select (CL) HDD for which the test routine is to be executed from 'HDD SELECT'.
Then select (CL) [OK] button.

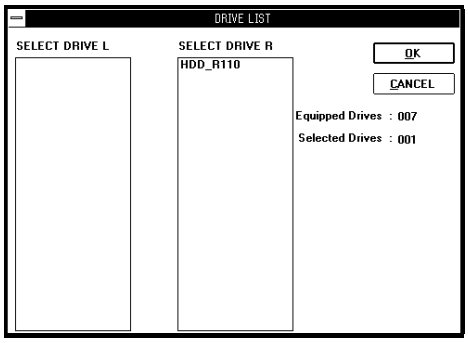


7. <Select [OK]>
Select (CL) [OK] button.



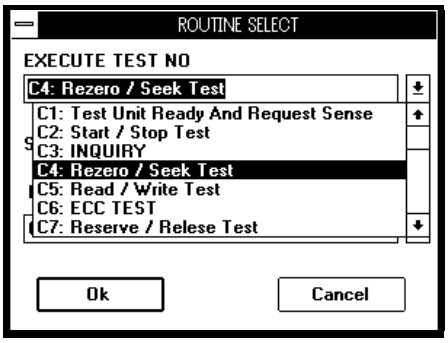
Copyright ©1997,1998, Hitachi, Ltd.

8. <Confirm HDD to be tested>
Confirm HDD to be tested in the 'DRIVE LIST'.
Then select (CL) [OK].

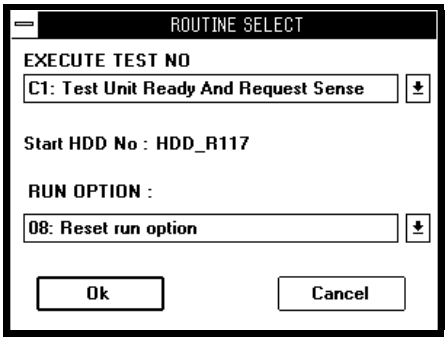


9. <Select [EXECUTE TEST NO] and [RUN OPTION]>
Select (DR) [EXECUTE TEST NO] and [RUN OPTION] from 'ROUTINE SELECT'.

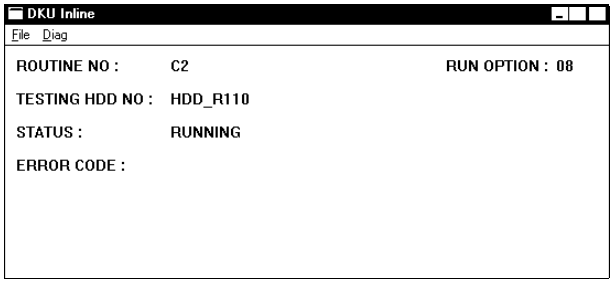
Note: Refer to "RUN OPTION terms" details listed in Table 1.1 for CUDG RUN Options.



10. <Execute routine>
Select (CL) [OK] button.



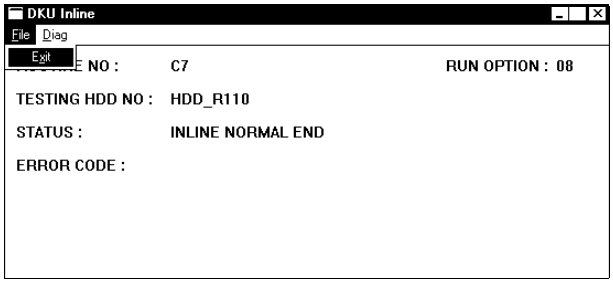
11. <Display of "RUNNING">
Status "RUNNING" is displayed.
Go to 12. in case of Normal End.
Go to 14. in case of Abnormal End.



Copyright ©1997,1998, Hitachi, Ltd.

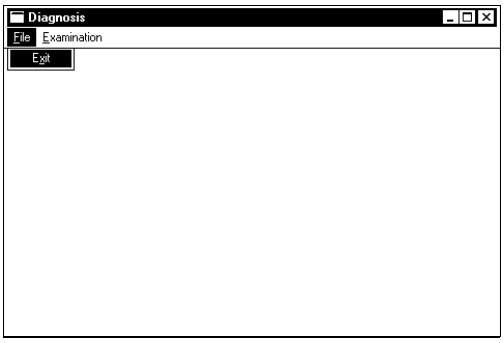
12. <DKU INLINE end>

After the status “INLINE NORMAL END” is displayed, select (DR) [Exit] from [File].



13. <Diagnosis end>

Select (DR) [Exit] from [File] in the Diagnosis menu.



14. <Error End>

“STATUS : ERROR STOP” is displayed.
Refer to Diag Log for details information.
Select (DR) [Exit] from [File].
Go to 13.

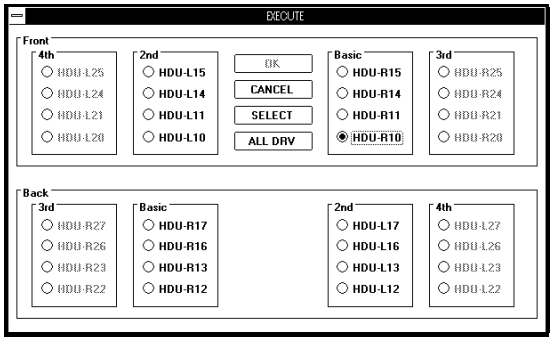
4.2.2 D8 routine Test Procedures

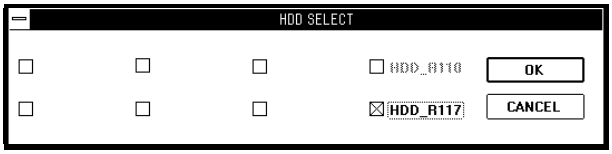
1. <Refer to C1 Link Procedures>
   Refer from 1 to 4 in C1 Link series Test Procedures.

2. <Select HDU group to be tested>
   Select HDU group to be tested, then select (CL) [SELECT], or [ALL DRV].

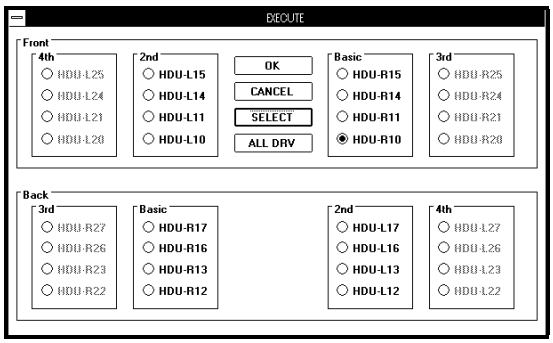
   In case of select [SELECT], go to 3.
   In case of select [ALL DRV], go to 5.



3. <Select HDD to be tested>
   Select HDD to be tested.
   Then select (CL) [OK].

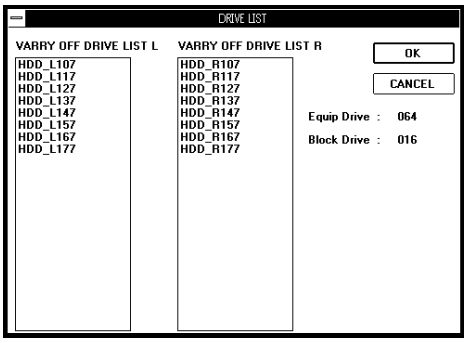


4. <Select [OK]>
   Select (CL) [OK].

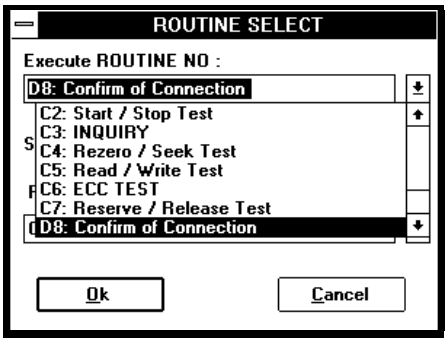


Copyright ©1997,1998, Hitachi, Ltd.

5. <Confirm of HDD>
Confirm HDD from 'DRIVE LIST'.
Then select (CL) [OK].

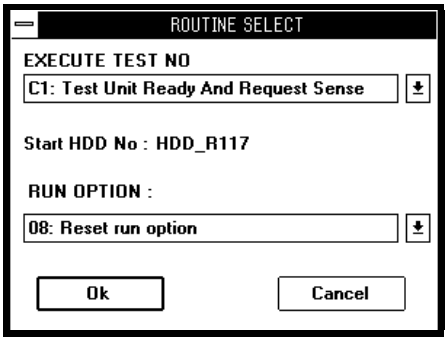


6. <Select D8 routine>
Select (CL) "D8: Confirm of Connection" from [Execute ROUTINE NO :].

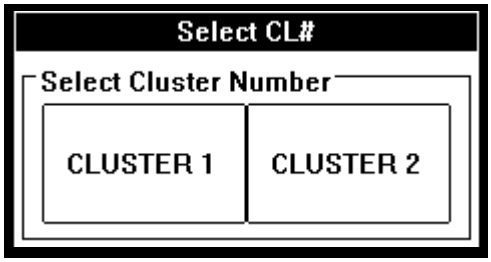


7. <Select Run Option>
Select Run Option from [RUN OPTION :].
Then select (CL) [OK].

Explanation of Run Option:
01 : All drive running.
02 ~ 08 : End when Error occurred.
("Restart" to next drive.)



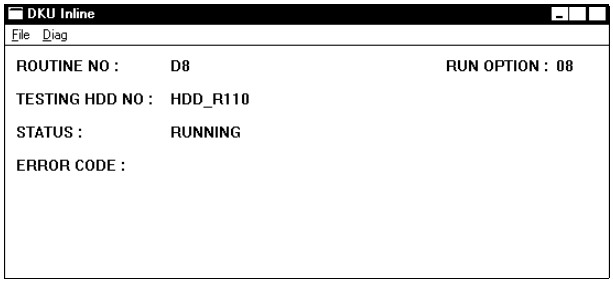
8. <Select cluster>
Select cluster to be tested.
Select (CL) [CLUSTER1] or [CLUSTER2].



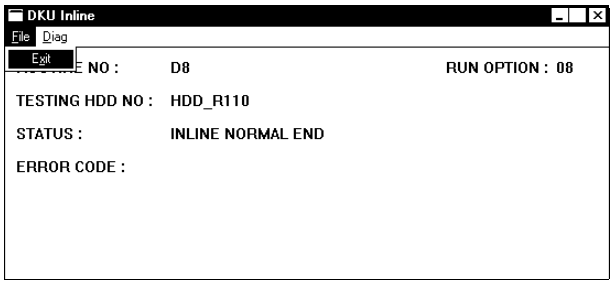
Copyright ©1997,1998, Hitachi, Ltd.

9. <Display of “RUNNING”>
Status “RUNNING” is displayed.

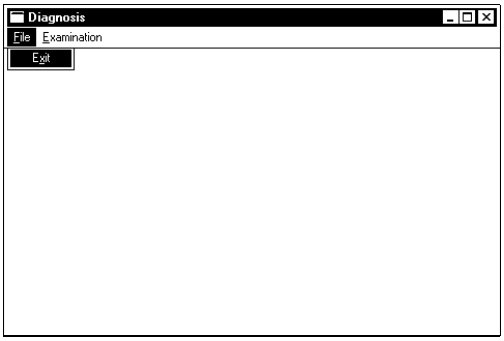
In case of normal end, go to 10.
In case of abnormal end (Single), go to 13.
In case of abnormal end (Multi), go to 12.



10. <DKU INLINE end>
After the status “INLINE NORMAL END” is displayed, select (DR) [Exit] from [File].



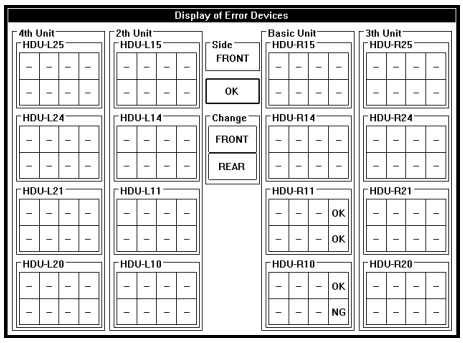
11. <Diagnosis end>
Select (DR) [Exit] from [File] in the Diagnosis menu.



Copyright ©1997,1998, Hitachi, Ltd.

12. <Display of Error Drives>

Error Drives are displayed.
Change “FRONT” or “REAR” by [FRONT] and [REAR] button.
In case of End, select (CL) [OK].

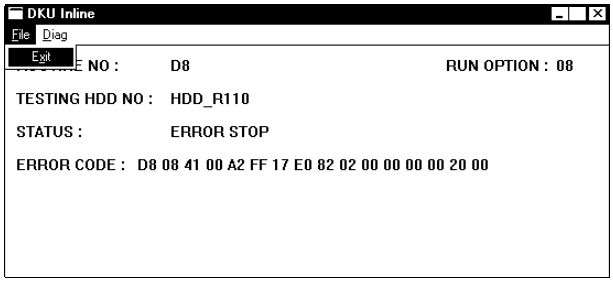


Explanation of symbol:
“--” : Unequipped drive.
“EQ” : Equipped drive.
“OK” : Normal end of select drive.
“NG” : Abnormal end of select drive.

13. <Error End>

“STATUS : ERROR STOP” is displayed.
Refer to Diag Log for details information.
Select (DR) [Exit] from [File].
Go to 11.

Refer to 2.2 Log indication in SVP section.



Copyright ©1997,1998, Hitachi, Ltd.

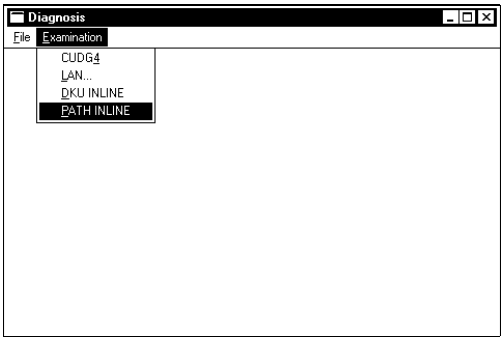
4.2.3 DKU PATH INLINE Test Procedures

4.2.3.1 A0 routine Test Procedures

1. <Initial screen>

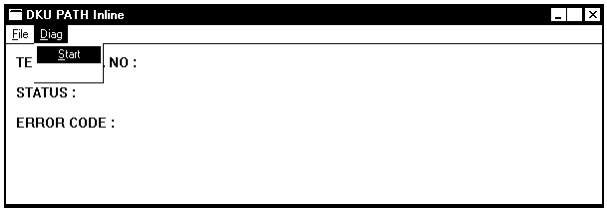
2. <Operation mode change>
   Change the mode to [Modify Mode].
   Select (CL) [Diagnosis].

3. <Select 'PATH INLINE'>
   'Diagnosis' window is displayed.
   And select (DR) [PATH INLINE] from [Examination] in the Diagnosis menu.

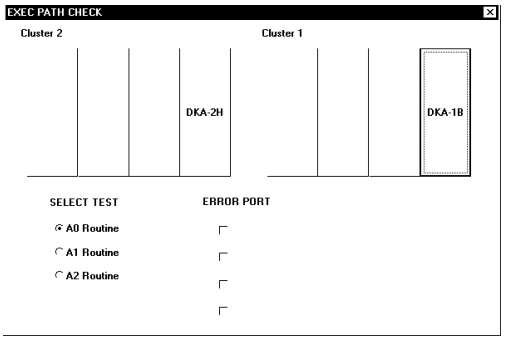


Copyright ©1997,1998, Hitachi, Ltd.

4. <Selecting [Start]>
Select (DR) [Start] from [Diag].

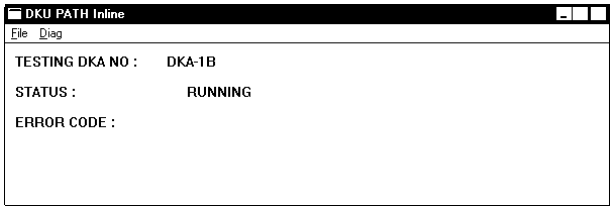


5. <Selecting the routine to be executed and the DKA to be diagnosed>
Select the routine and DKA from 'EXEC PATH CHECK'.

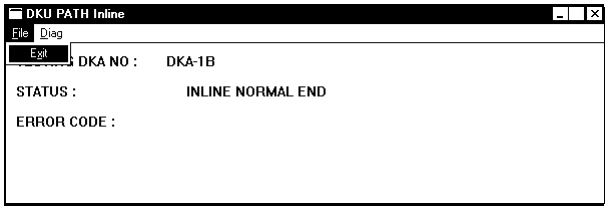


6. <Display of "RUNNING">
"RUNNING" is displayed in the STATUS field.

Normal end ------ Go to 7
Abnormal end --- Go to 8



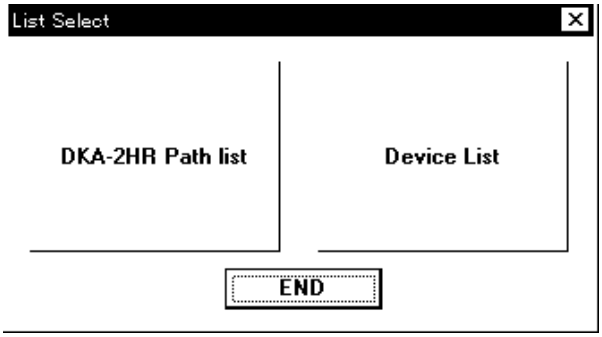
7. <Completing diagnosis>
After "INLINE NORMAL END" is displayed in the STATUS field, select (DR) [Exit] from [File].
Go to 17.



Copyright ©1997,1998, Hitachi, Ltd.

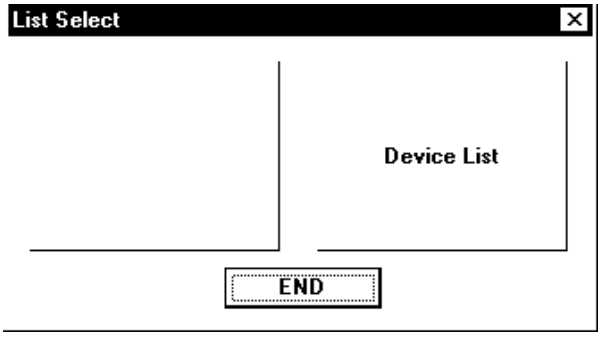
8. <Selecting [DKA-XX Path List] and [Device List]>

Select (CL) [DKA-XX Path List] or [Device List] from 'List Select'.



When the routine A0 is executed and there is Path List information, the [DKA-XX Path List] button and the [Device List] button can be selected.

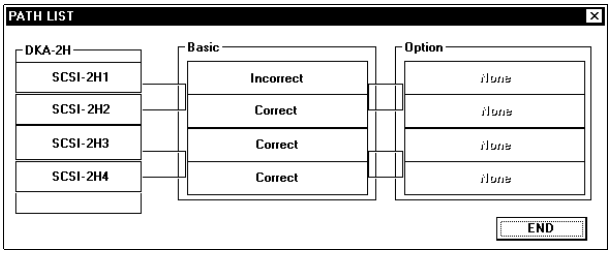
When the routine A0 is not executed and the routines A1 and A2 are executed, the [DKA-XX Path List] button cannot be selected but only the [Device List] button can be selected.



When [DKA-XX Path List] is selected, go to 9.
When [Device List] is selected, go to 11 or 14.
When [END] is selected, go to16.

9. <Selecting [Incorrect]>

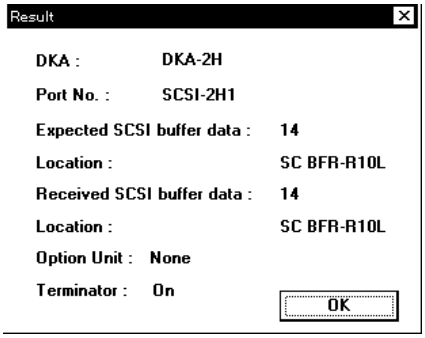
Select (CL) [Incorrect] from 'Path List'.



When [Incorrect] is selected, go to 10.
When [END] is selected, go to 8.

10. <Displaying 'Result'>

Select (CL) the [OK] button after 'Result' is selected.

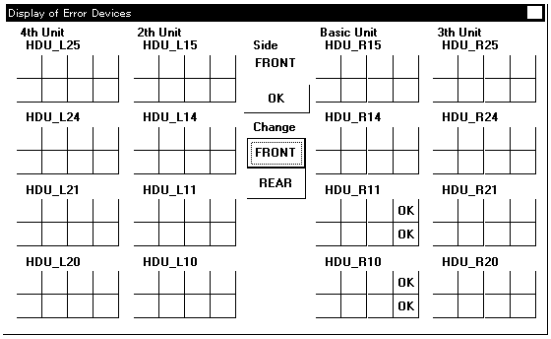


Copyright ©1997,1998, Hitachi, Ltd.

11. <Displaying 'Display of Error Devices' (in the normal state)>

"OK" is displayed in the PDEV installing position viewed from the front side.

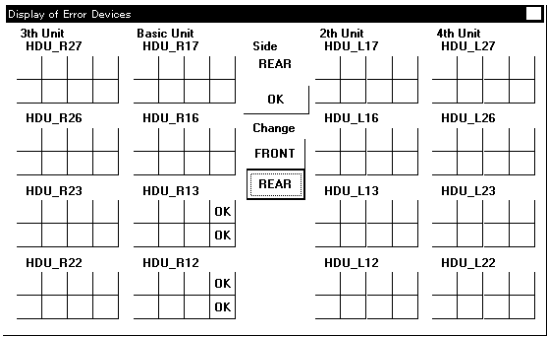
When [REAR] is selected, go to 12.
When [Pdev] is selected, go to 13.
When [OK] is selected, go to 8.



12. <Selecting [REAR]>

When the "REAR" button is selected, "OK" is displayed in the installing position viewed from the rear side.

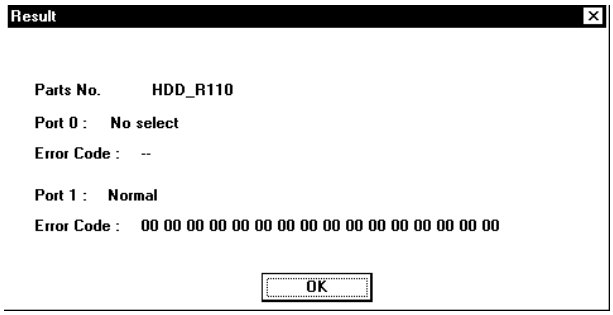
When [FRONT] is selected, go to 11.
When [Pdev] is selected, go to 13.
When [OK] is selected, go to 8.



13. <Displaying 'Result' (in the normal state)>

Select (CL) the [OK] button after 'Result' is displayed.

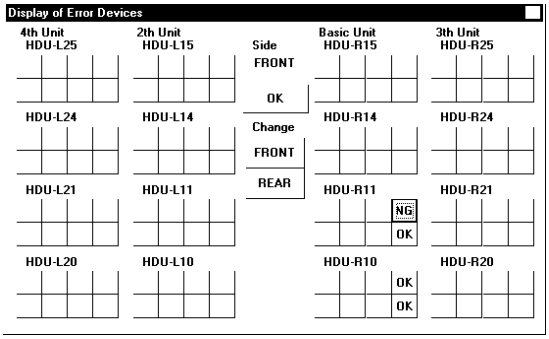
When [OK] is selected, go to 11 or 12.



14. <Displaying 'Display of Error Devices' (in the abnormal state)>

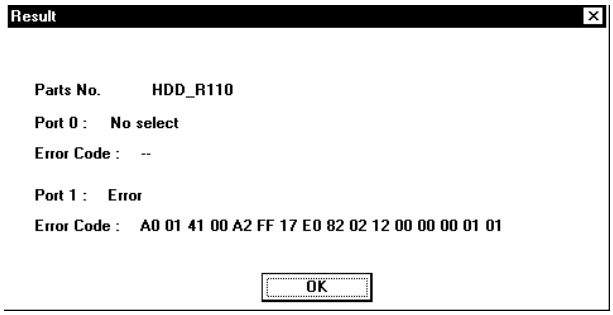
When an error occurs, "NG" is displayed in the installing position of the Pdev in which the error occurs.

When [OK] is selected, go to 11 or 12.

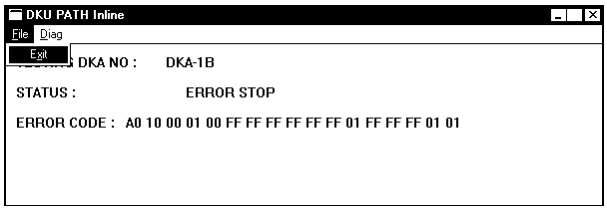


Copyright ©1997,1998, Hitachi, Ltd.

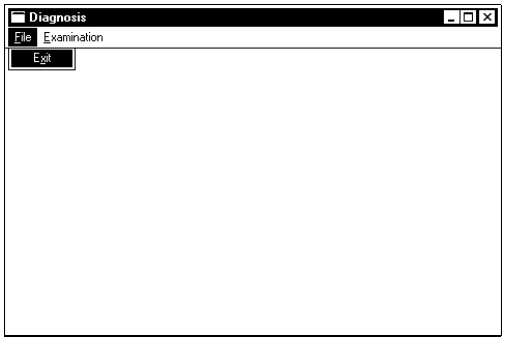
15. <Displaying ‘Result’ (in the abnormal state)>
When the button of each Pdev is selected, detailed result will be displayed (in the abnormal state).



16. <DKU Path inline end>
After “ERROR STOP” is displayed in the Status field, select (DR) [Exit] from [File].



17. <End of [Diagnosis]>
Select (DR) [Exit] from [File] in the Diagnosis menu.



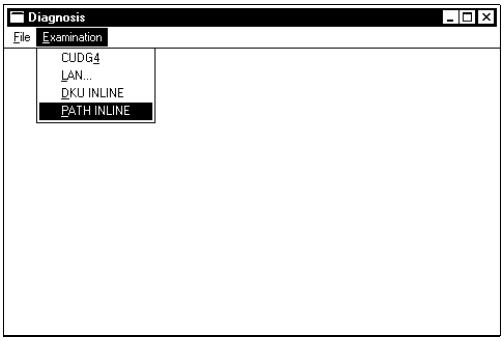
Copyright ©1997,1998, Hitachi, Ltd.

4.2.3.2 A1 routine Test Procedures

1. <Initial screen>

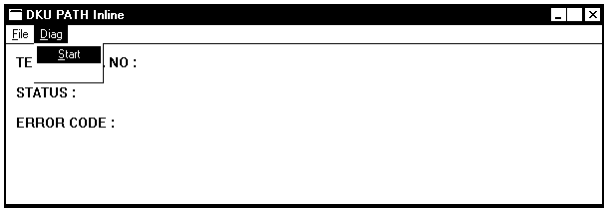
2. <Operation mode change>
   Change the mode to [Modify Mode].
   Select (CL) [Diagnosis].

3. <Select 'PATH INLINE'>
   'Diagnosis' window is displayed.
   And select (DR) [PATH INLINE] from [Examination] in the Diagnosis menu.

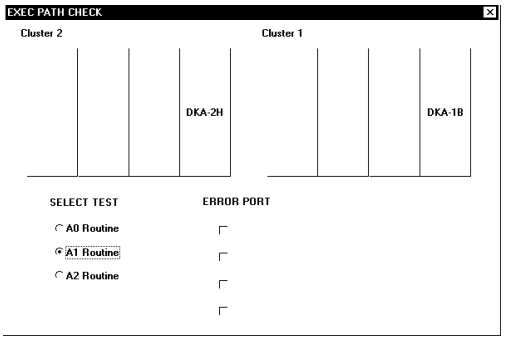


Copyright ©1997,1998, Hitachi, Ltd.

4. <Selecting [Start]>
Select (DR) [Start] from [Diag].

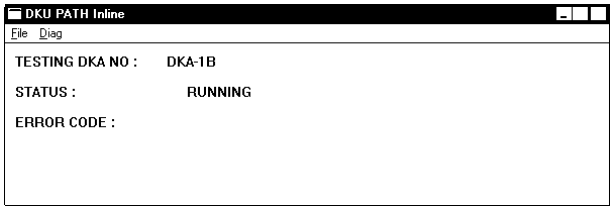


5. <Selecting the routine to be executed and the DKA to be diagnosed>
Select the routine and DKA from 'EXEC PATH CHECK'.

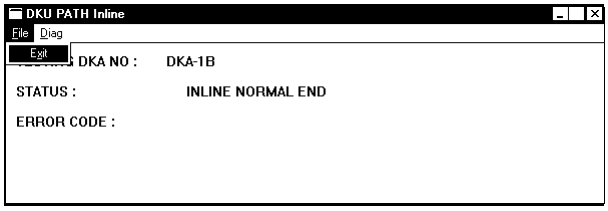


6. <Display of "RUNNING">
"RUNNING" is displayed in the STATUS field.

Normal end ------ Go to 7
Abnormal end --- Go to 8



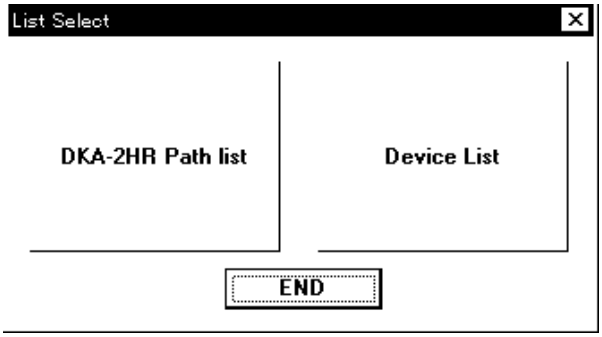
7. <Completing diagnosis>
After "INLINE NORMAL END" is displayed in the STATUS field, select (DR) [Exit] from [File].
Go to 17.



Copyright ©1997,1998, Hitachi, Ltd.

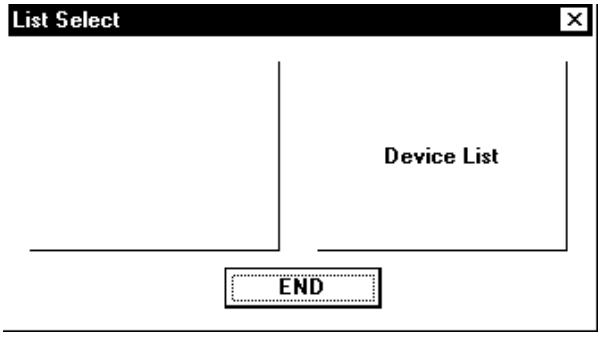
8. <Selecting [DKA-XX Path List] and [Device List]>

Select (CL) [DKA-XX Path List] or [Device List] from 'List Select'.



When the routine A0 is executed and there is Path List information, the [DKA-XX Path List] button and the [Device List] button can be selected.

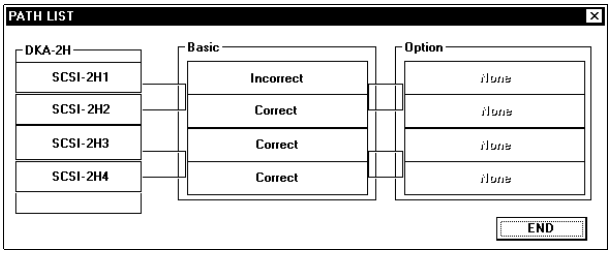
When the routine A0 is not executed and the routines A1 and A2 are executed, the [DKA-XX Path List] button cannot be selected but only the [Device List] button can be selected.



When [DKA-XX Path List] is selected, go to 9.
When [Device List] is selected, go to 11 or 14.
When [END] is selected, go to16.

9. <Selecting [Incorrect]>

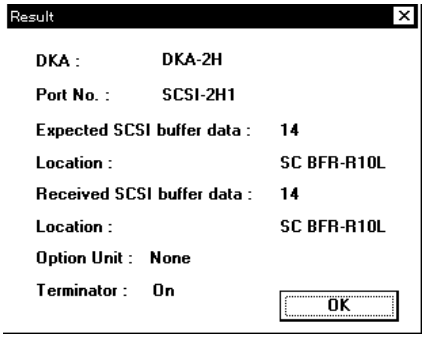
Select (CL) [Incorrect] from 'Path List'.



When [Incorrect] is selected, go to 10.
When [END] is selected, go to 8.

10. <Displaying 'Result'>

Select (CL) the [OK] button after 'Result' is selected.

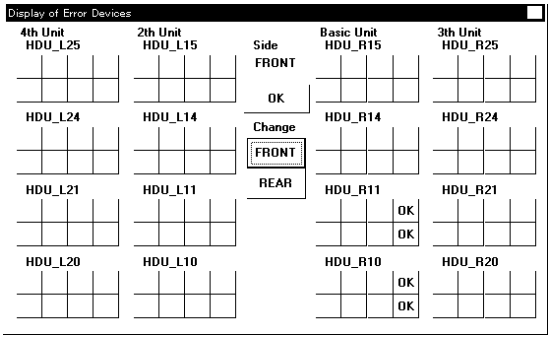


Copyright ©1997,1998, Hitachi, Ltd.

11. <Displaying 'Display of Error Devices' (in the normal state)>

"OK" is displayed in the PDEV installing position viewed from the front side.

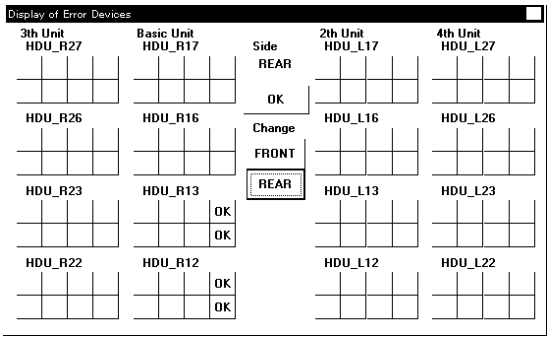
When [REAR] is selected, go to 12.
When [Pdev] is selected, go to 13.
When [OK] is selected, go to 8.



12. <Selecting [REAR]>

When the "REAR" button is selected, "OK" is displayed in the installing position viewed from the rear side.

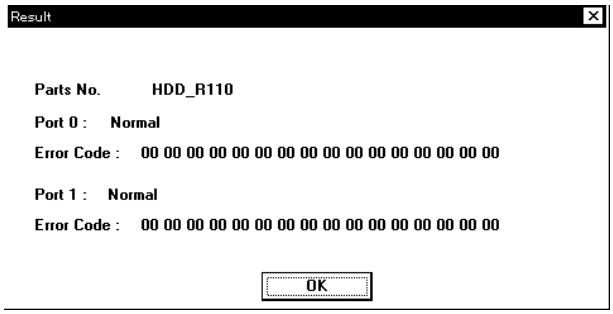
When [FRONT] is selected, go to 11.
When [Pdev] is selected, go to 13.
When [OK] is selected, go to 8.



13. <Displaying 'Result' (in the normal state)>

Select (CL) the [OK] button after 'Result' is displayed.

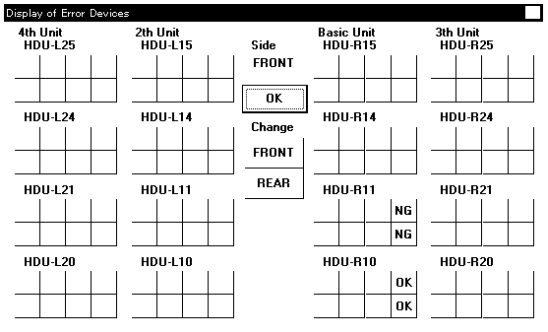
When [OK] is selected, go to 11 or 12.



14. <Displaying 'Display of Error Devices' (in the abnormal state)>

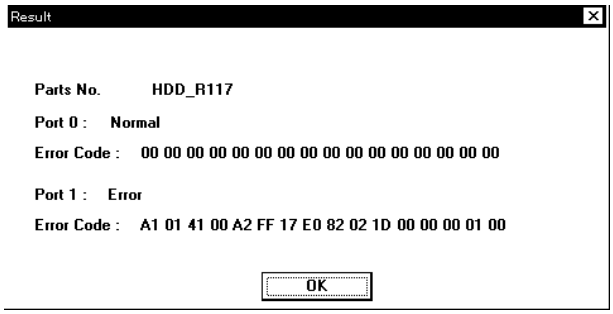
When an error occurs, "NG" is displayed in the installing position of the Pdev in which the error occurs.

When [OK] is selected, go to 11 or 12.

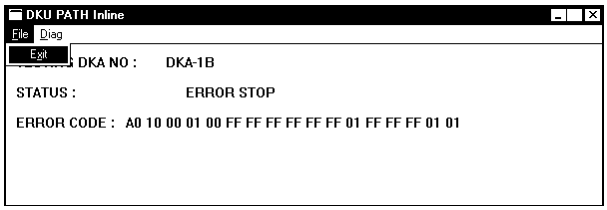


Copyright ©1997,1998, Hitachi, Ltd.

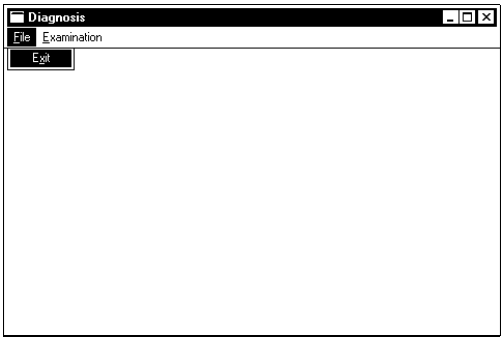
15. <Displaying 'Result' (in the abnormal state)>
When the button of each Pdev is selected, detailed result will be displayed (in the abnormal state).



16. <DKU Path inline end>
After "ERROR STOP" is displayed in the Status field, select (DR) [Exit] from [File].



17. <End of [Diagnosis]>
Select (DR) [Exit] from [File] in the Diagnosis menu.



Copyright ©1997,1998, Hitachi, Ltd.

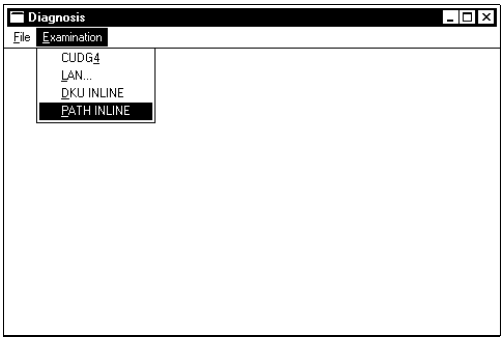
4.2.3.3 A2 routine Test Procedures

1. <Initial screen>

2. <Operation mode change>
   Change the mode to [Test Mode].
   Select (CL) [Diagnosis].

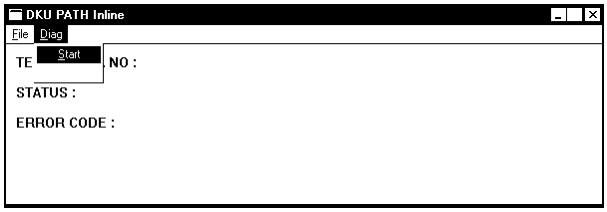
   <Note>
   Please call Technical Support Center for asking how to change the mode to Test Mode.

3. <Select 'PATH INLINE'>
   'Diagnosis' window is displayed.
   And select (DR) [PATH INLINE] from [Examination] in the Diagnosis menu.

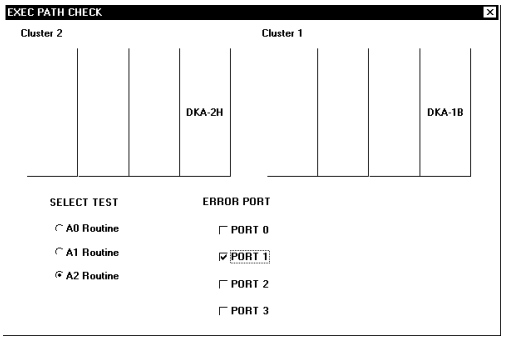


Copyright ©1997,1998, Hitachi, Ltd.

4. <Selecting [Start]>
Select (DR) [Start] from [Diag].

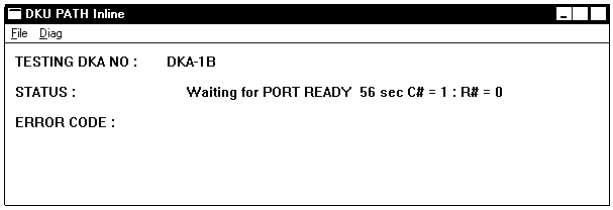


5. <Selecting the routine to be executed and the DKA to be diagnosed>
Select the routine and DKA from 'EXEC PATH CHECK'.

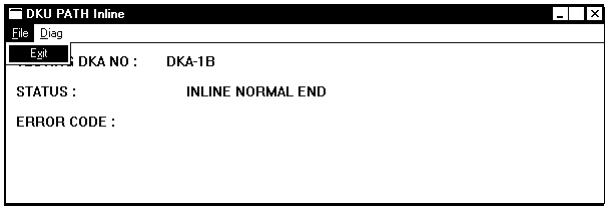


6. <Display of "RUNNING">
"RUNNING" is displayed in the STATUS field.
During execution of the routine A2, waiting for one minute occurs to cancel SCSI RESET.
"Waiting for PORT READY XX sec C#=XX R#=XX" is displayed in the STATUS field.

Normal end ------ Go to 7
Abnormal end --- Go to 8



7. <Completing diagnosis>
After "INLINE NORMAL END" is displayed in the STATUS field, select (DR) [Exit] from [File].
Go to 17.



Copyright ©1997,1998, Hitachi, Ltd.

8. <Selecting [DKA-XX Path List] and [Device List]>
Select (CL) [DKA-XX Path List] or [Device List] from 'List Select'.

When the routine A0 is executed and there is Path List information, the [DKA-XX Path List] button and the [Device List] button can be selected.

5 DIAG Trouble shooting

5.1 CUDG Trouble shooting

Procedures of CUDG Trouble Shooting vary with CUDG Error Opportunity.
The procedures are listed in Table 5.1 CUDG Trouble shooting Types.

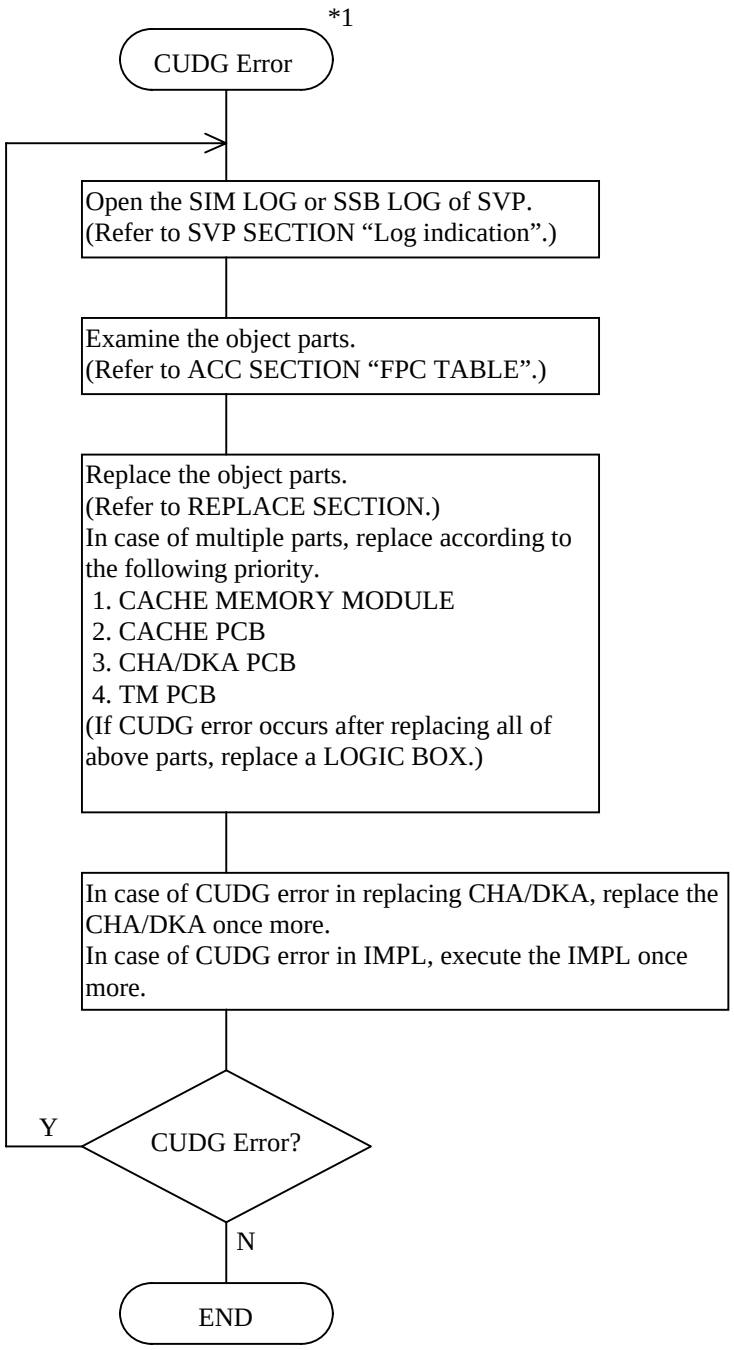
Table 5.1 CUDG Trouble shooting Types

CUDG Error Opportunity	CUDG Trouble shooting Types	Procedure
IMPL, CHA/DKA Replace	CUDG3 Trouble shooting	Following Subsection 5.1.1
CUDG4	CUDG4 Trouble shooting	Following Subsection 5.1.2
CACHE Replace	INLINE CUDG Trouble shooting	Following Subsection 5.1.3

Note : If FPC is CACHE PCB or CACHE MEMORY MODULE, see Subsection 5.1.4 (DIAG05-50).

Copyright ©1997,1998, Hitachi, Ltd.

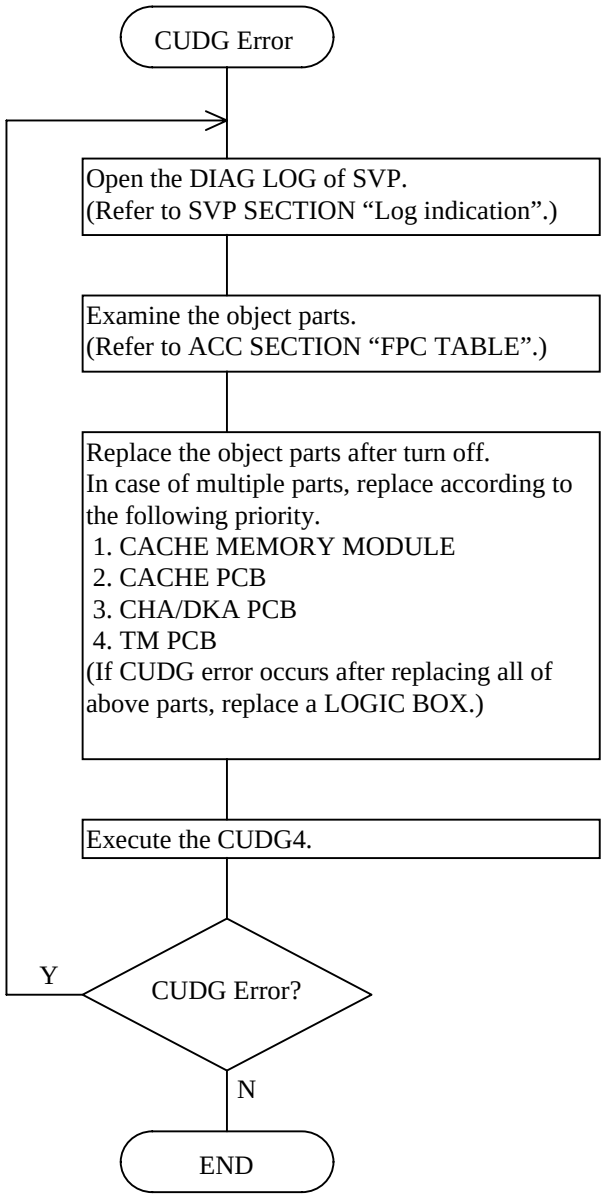
5.1.1 CUDG3 Trouble shooting



*1 CUDG Error Code is SIM REFERENCE CODE = (7601xx) or SSB ERROR CODE = (3306).
*2 See Subsection 5.1.4 (DIAG05-50).

Copyright ©1997,1998, Hitachi, Ltd.

5.1.2 CUDG4 Trouble shooting

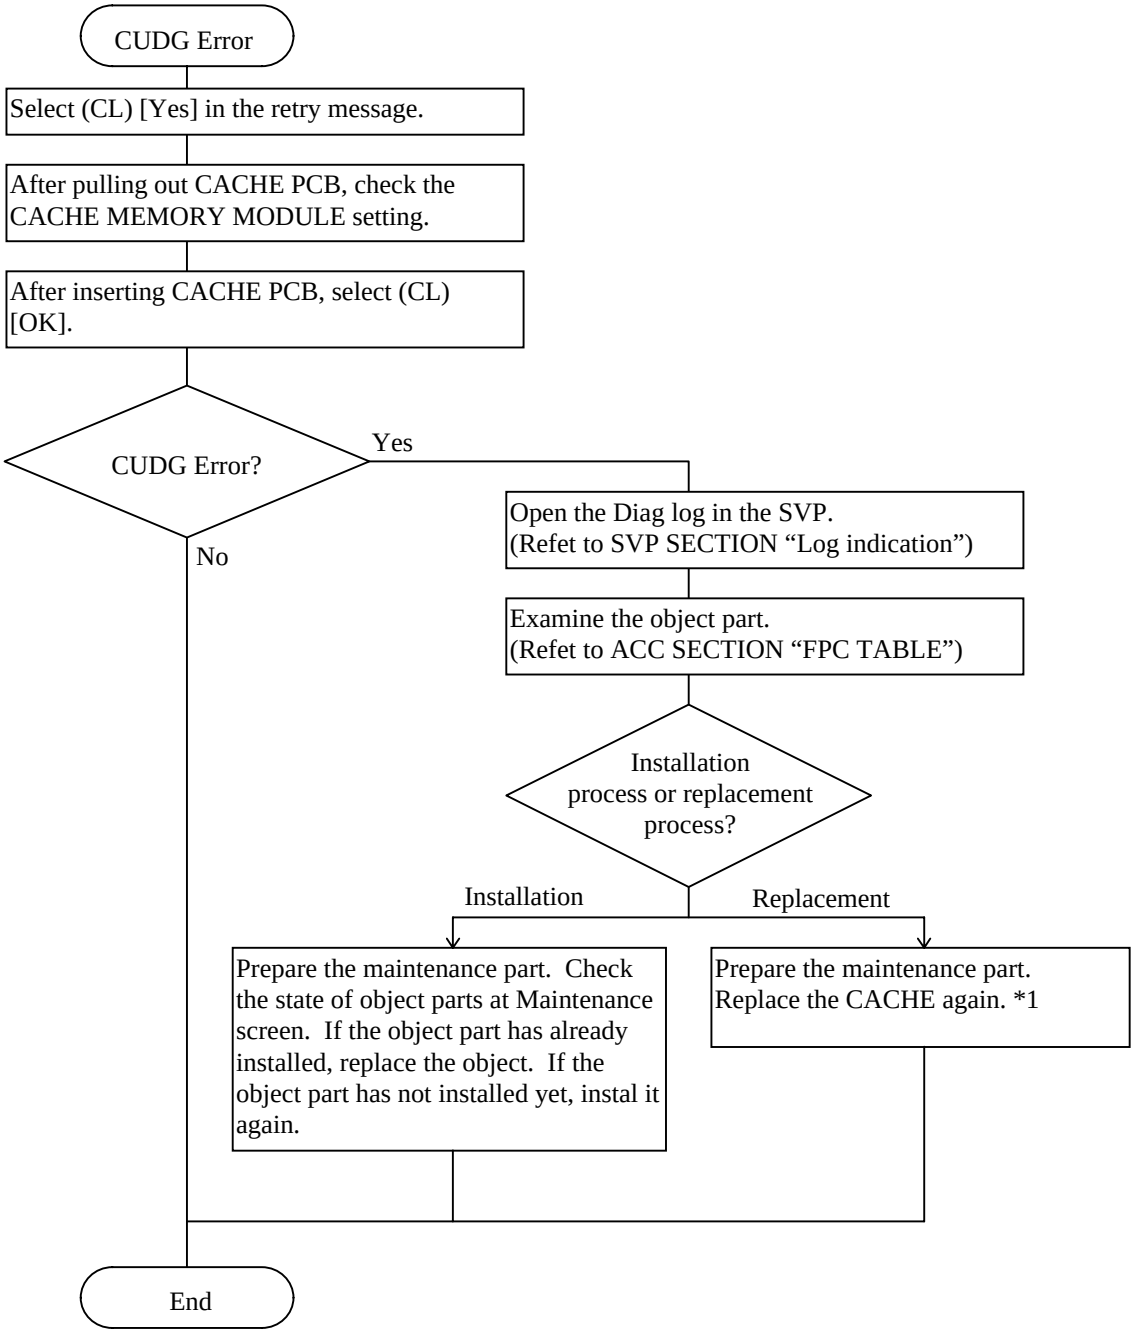


*1 See Subsection 5.1.4 (DIAG05-50).

Copyright ©1997,1998, Hitachi, Ltd.

5.1.3 INLINE CUDG Trouble shooting

(1) Installation



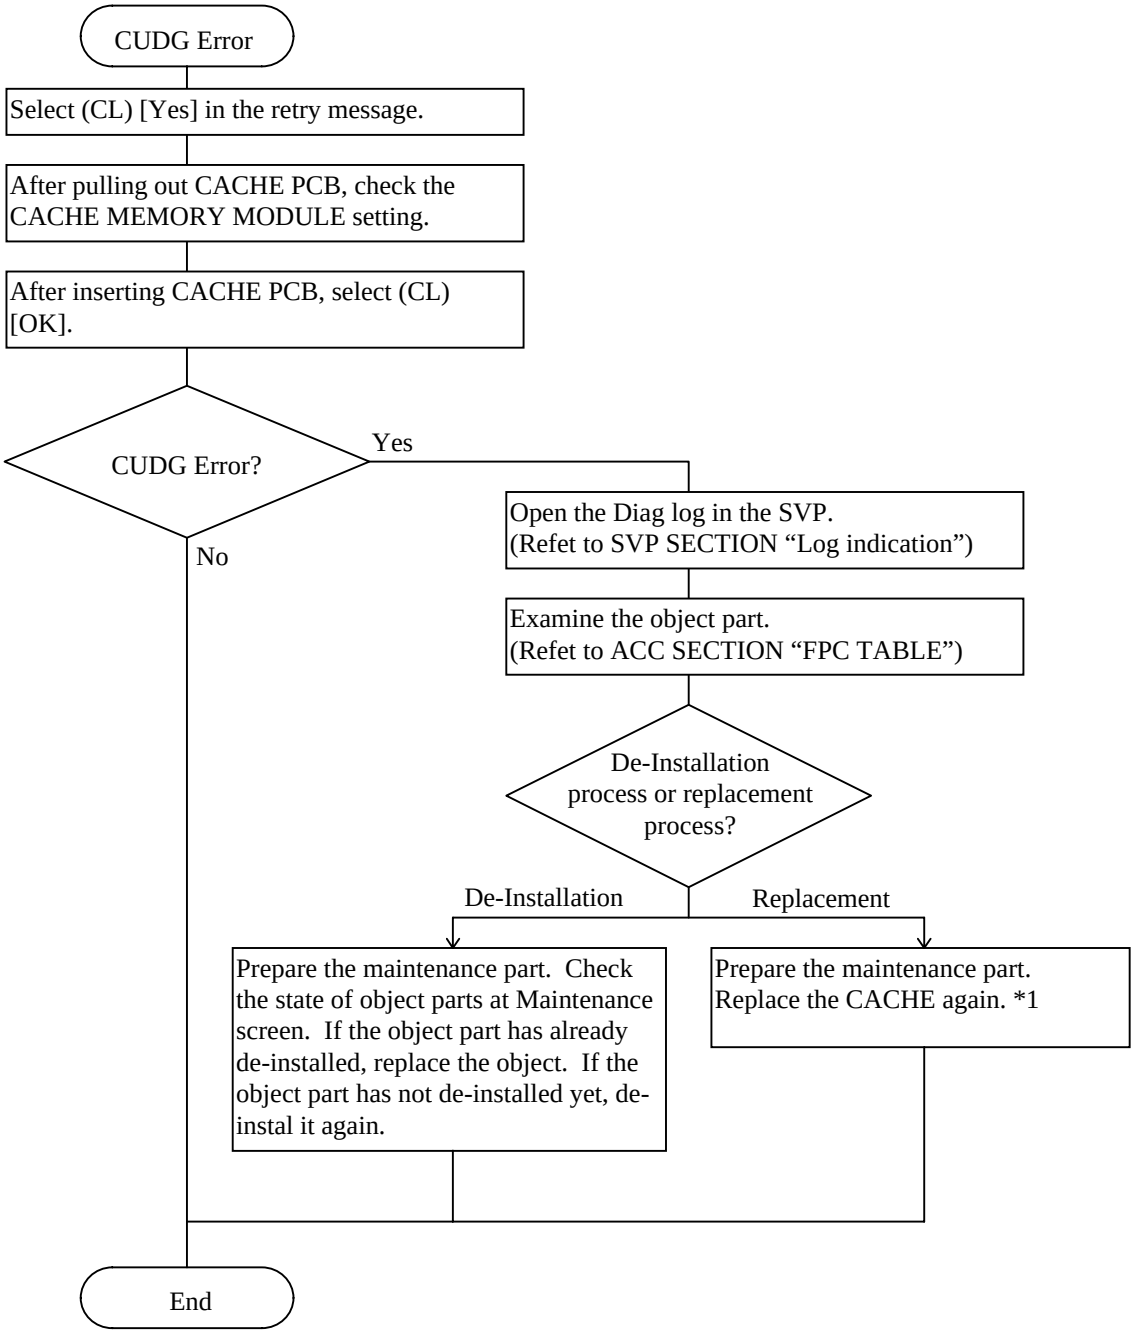
*1 In case of multiple parts, replace according to the following priority.

1. CACHE MEMORY MODULE
2. CACHE PCB
3. CHA/DKA PCB
4. TM PCB

(If CUDG error occurred after replacing all of above parts, replace LOGIC BOX.)
If error part is CACHE MEMORY MODULE/CACHE PCB, refer to Subsection 5.1.4 (DIAG05-50).

Copyright ©1997,1998, Hitachi, Ltd.

(2) De-Installation



*1 In case of multiple parts, replace according to the following priority.

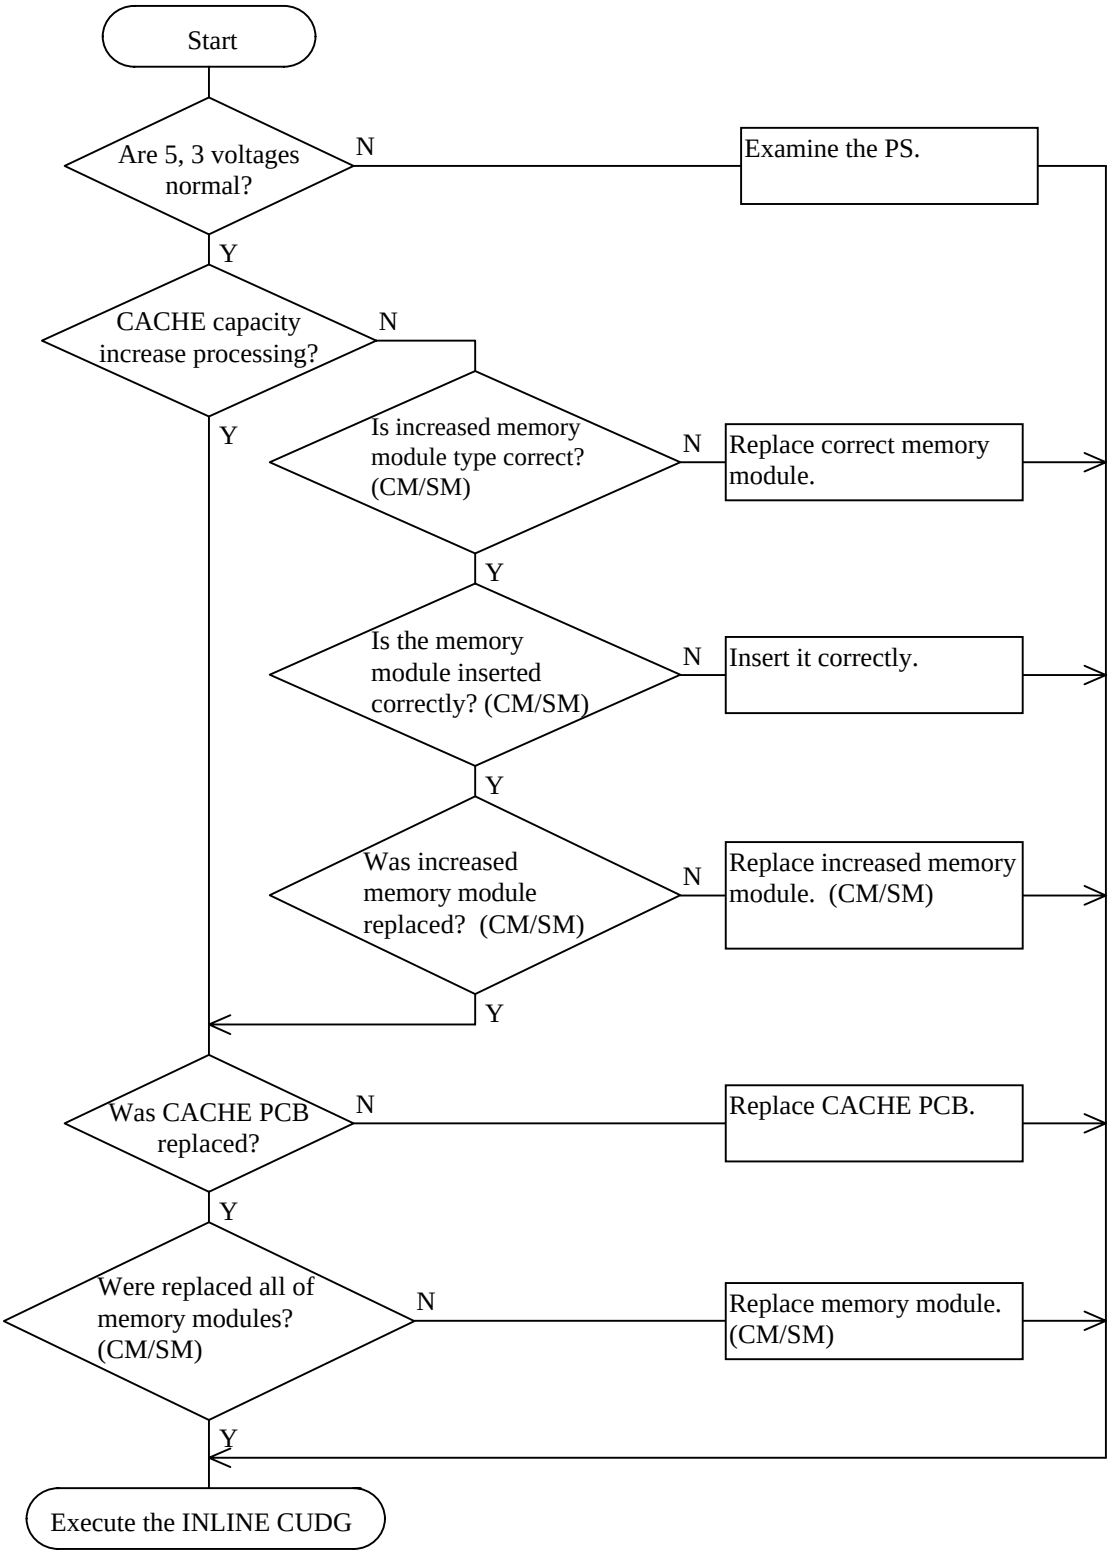
1. CACHE MEMORY MODULE
2. CACHE PCB
3. CHA/DKA PCB
4. TM PCB

(If CUDG error occurred after replacing all of above parts, replace LOGIC BOX.)
If error part is CACHE MEMORY MODULE/CACHE PCB, refer to Subsection 5.1.4 (DIAG05-50).

Copyright ©1998, Hitachi, Ltd.

5.1.4 CACHE PCB, CACHE MEMORY MODULE Trouble shooting

If FPC is CACHE PCB, CACHE MEMORY MODULE, execute the following process.

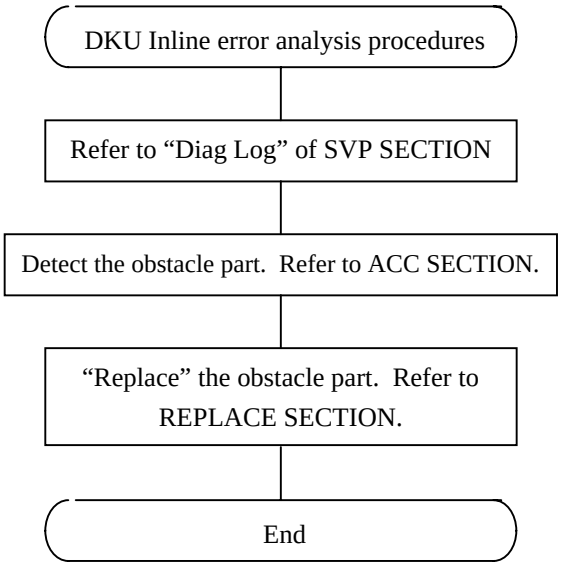


*1 In case of multiple module groups, replace module groups one by one.
If CUDG error occurs after replacing , put them original position.

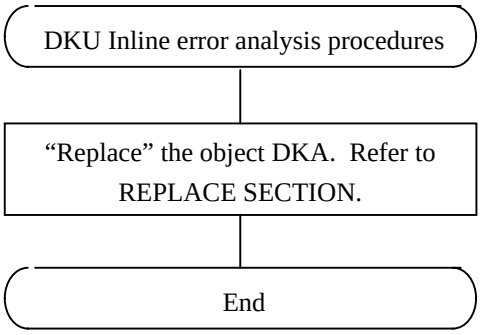
Copyright ©1997,1998, Hitachi, Ltd.

5.2 DKU INLINE Trouble shooting

Trouble shoot procedures (Except Error Code = “xx e3”)



Trouble shoot procedures (In case of Error Code = “xx e3”)



Copyright ©1997, Hitachi, Ltd.

5.3 DKU PATH INLINE Trouble shooting

Trouble shoot procedures (In case of Error Code = “00 1c”, “01 9c”, “02 1d”, “03 9d”, “04 14”, “05 94”, “06 15” “07 95”, “00 0c”, “01 8c”, “02 0d”, “03 8d”, “04 04”, “05 84”, “06 05”, “07 85”)

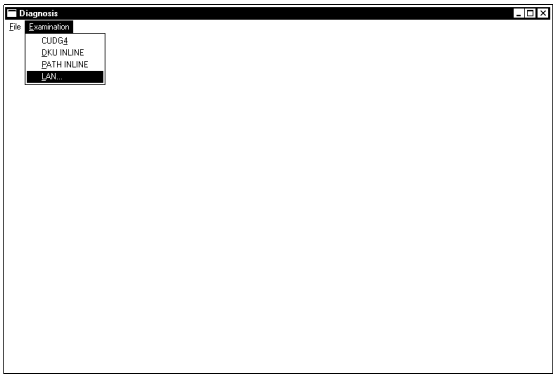
6 LAN Check Procedure

1. <Initial screen>

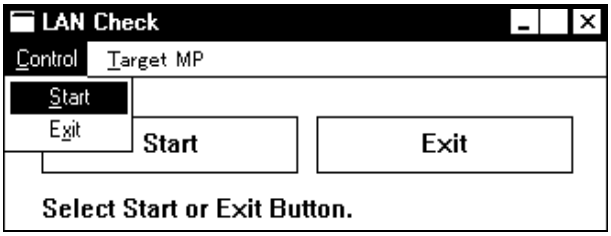
2. <Operation mode change>
   Change the mode to [Modify mode].
   Select (CL) [Diagnosis].

3. <Activating LAN...>
   Select (DR) [LAN...] from Examination in the Diagnosis menu.
   (The screen is changed to the LAN Check menu screen.)



Copyright ©1997,1998, Hitachi, Ltd.

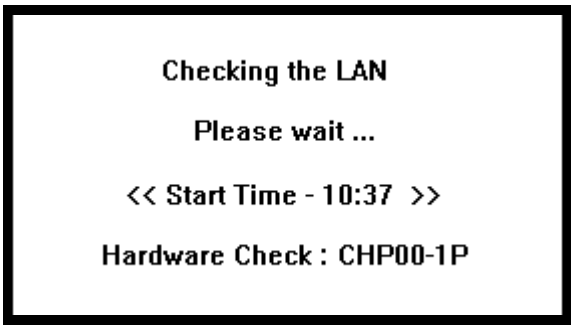
4. <Starting LAN Check>
Select (DR) [Start] from Control of the LAN Check menu.



<Supplementary explanation>
Although a default processor to execute a hardware diagnosis is an installed processor, all processors can be selected.

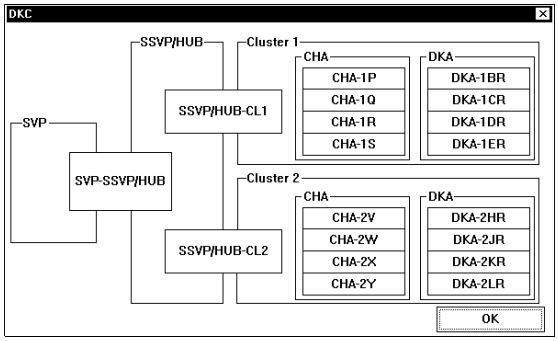
Installed processor : Select (CL) [Target MP] and then select (DR) [Equipped MP].
All processors : Select (CL) [Target MP] and then select (DR) [All MP].

5. <Displaying Wait message>
The Wait message is displayed. It changes to the result display screen a few minutes later.



6. <Displaying result>

(1) Adapter status display
When the Adapter button is selected, the screen is changed to that displaying the MP status.
The screen is returned to the LAN Check menu screen by selecting (CL) [OK].

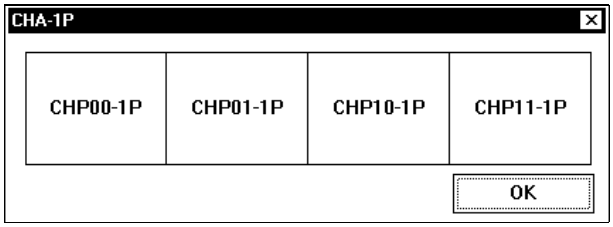


[Explanation on statuses]
The status is shown by the appearance of the button as follows:
Black : The test object is normal.
Blinking : The test object is abnormal.
Gray : The test object is not installed.

Copyright ©1997,1998, Hitachi, Ltd.

(2) MP status display

When the MP button is selected, the screen is changed to that displaying detailed status.
The screen is returned to that displaying the adapter status by selecting (CL) [OK].

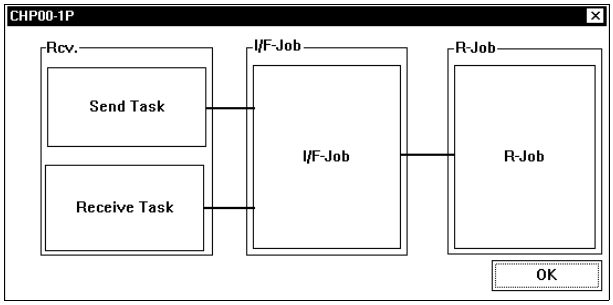


[Explanation on statuses]
The status is shown by the appearance of the MP button as follows:
Black : The concerning MP is normal.
Blinking : The test object is abnormal. However, for the MP which was normal at the time of an FF-Ping, "#" is indicated ahead MP name.
Gray : The test object is not installed.

[Supplemental explanation]
When the test object is not installed in the state that the hardware is abnormal:
The concerning MP is indicated in gray.
When the test object is not installed in the state that the hardware is normal:
The indication of the concerning MP is grayed and blinks.
When the test object is installed by an FF-Ping:
A character "#" is indicated ahead the MP name, and the name indication blinks.
When the test object is connected by an FF-Ping but not installed:
A character "#" is indicated ahead the MP name, and the name indication is grayed and blinks.

(3) Detailed status display

Detailed information on the concerning MP is displayed.
The screen is returned to that displaying the MP status by selecting (CL) [OK].

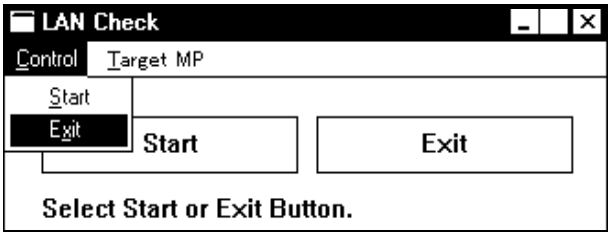


[Explanation on statuses]
The test result is shown by the appearance of the Tusk button as follows:
Black : The MP is normal from the viewpoint of software.
Blinking : The part indication of which is blinking has a problem.
Gray : Not diagnosed yet.

[Supplemental explanation]
There are five types of status as shown below:
When the hardware is abnormal : Rcv., I/F-JOB, and R-JOB are indicated in gray.
When the software is normal : Rcv., I/F-JOB, and R-JOB are indicated in black.
When the Rcv. is abnormal : Rcv. indication blinks, and I/F-JOB and R-JOB are indicated in gray.
When the I/F-JOB is abnormal : Rcv. is indicated in black, I/F-JOB indication blinks, and R-JOB is indicated in gray.
When the R-JOB is abnormal : Rcv. and I/F JOB are indicated in black and R-JOB indication blinks.

Copyright ©1997,1998, Hitachi, Ltd.

7. <Exiting from LAN Check>
   Select (DR) [Exit] from Control in the LAN Check menu.



Copyright ©1997,1998, Hitachi, Ltd.

1. PERIODIC CHECK LIST

The following table shows the items of the periodic check for the DKC and DKU.
When the parts are replaced , refer to 'PARTS REPLACEMENT SECTION' of this manual.

Table 1-1 Periodic Check List

No.	Item	Tools	Frequency of Periodic Check	Check Time	DKC DKU	Reference Page
1	Check of DC voltage	• Digital voltmeter • Voltage check fixture	Once per year	5 min. per logical part	DKC DKU	PERIOD 02-10 to PERIOD 02-100
2	Check of air filter	• Vacuum cleaner	Once per year	10 min.	DKC DKU	PERIOD 03-10
3	Check and Replacement of battery	• Philips screwdriver	See Table 4.2-2 on page PERIOD 04-20	Replacement time: 10 min. per battery.	DKC	PERIOD 04-10 to PERIOD 04-20

Copyright ©1997, Hitachi, Ltd.

2. Check of DC Voltage

a. Measure DC +5V, DC +12V, and DC +3.3V current at the check point with a digital voltmeter. Refer to the following table and figure:
   Table 2-1 'Range of Acceptable DC Voltage' on PERIOD 02-10
   Fig. 2-1 'Location of Power Supplies' on PERIOD 02-20
   Fig. 2-2 'Location of Voltage Check Point' on PERIOD 02-30

Table 2-1 Range of Acceptable DC Voltage

No.	Logic Part	Standard DC Voltage (Between +DC and GRD)	Acceptable Range (Between +DC and GRD)	Power Supply Location	Remarks
1	Cluster 1 Logic	+5V	+4.90V to +5.20V	5VPS10	
2				5VPS11	
3				5VPS12	
4				5VPS13	
5		+3.3V	+3.25V to +3.45V	3VPS10	
6				3VPS11	
7				3VPS12	
8				3VPS13	
9		+5V/+12V	5V : +4.75V to +5.25V	MPS10	
10		(multi)	12V : +11.4V to +12.6V	MPS11	
11	Cluster 2 Logic	+5V	+4.90V to +5.20V	5VPS20	
12				5VPS21	
13				5VPS22	
14				5VPS23	
15		+3.3V	+3.25V to +3.45V	3VPS20	
16				3VPS21	
17				3VPS22	
18				3VPS23	
19		+5V/+12V	5V : +4.75V to +5.25V	MPS20	
20		(multi)	12V : +11.4V to +12.6V	MPS21	
21	HDU-XX0	+5V/+12V	5V : +4.75V to +5.25V	MPSXX00	
22		(multi)	12V : +11.4V to +12.6V	MPSXX01	
23	HDU-XX1	+5V/+12V	5V : +4.75V to +5.25V	MPSXX10	
24		(multi)	12V : +11.4V to +12.6V	MPSXX11	
23	HDU-XX2	+5V/+12V	5V : +4.75V to +5.25V	MPSXX20	
26		(multi)	12V : +11.4V to +12.6V	MPSXX21	
27	HDU-XX3	+5V/+12V	5V : +4.75V to +5.25V	MPSXX30	
28		(multi)	12V : +11.4V to +12.6V	MPSXX31	
29	HDU-XX4	+5V/+12V	5V : +4.75V to +5.25V	MPSXX40	
30		(multi)	12V : +11.4V to +12.6V	MPSXX41	
31	HDU-XX5	+5V/+12V	5V : +4.75V to +5.25V	MPSXX50	
32		(multi)	12V : +11.4V to +12.6V	MPSXX51	
33	HDU-XX6	+5V/+12V	5V : +4.75V to +5.25V	MPSXX60	
34		(multi)	12V : +11.4V to +12.6V	MPSXX61	
35	HDU-XX7	+5V/+12V	5V : +4.75V to +5.25V	MPSXX70	
36		(multi)	12V : +11.4V to +12.6V	MPSXX71

b. To check the output voltage of the power supplies, measure it with the voltmeter, by connecting the voltmeter to the voltage check point.
If the output voltage of the power supply is not within the acceptable DC voltage, replace it to the spare part. Refer to REPLACE SECTION [REP01-160].

3. Cleaning of Air Filter

3.1 DKC

Clean the air filters located at the bottom of the Front and Rear Logic Boxes and inside the front and rear doors.
The location of the air filters are shown in Fig. 3.1-1.

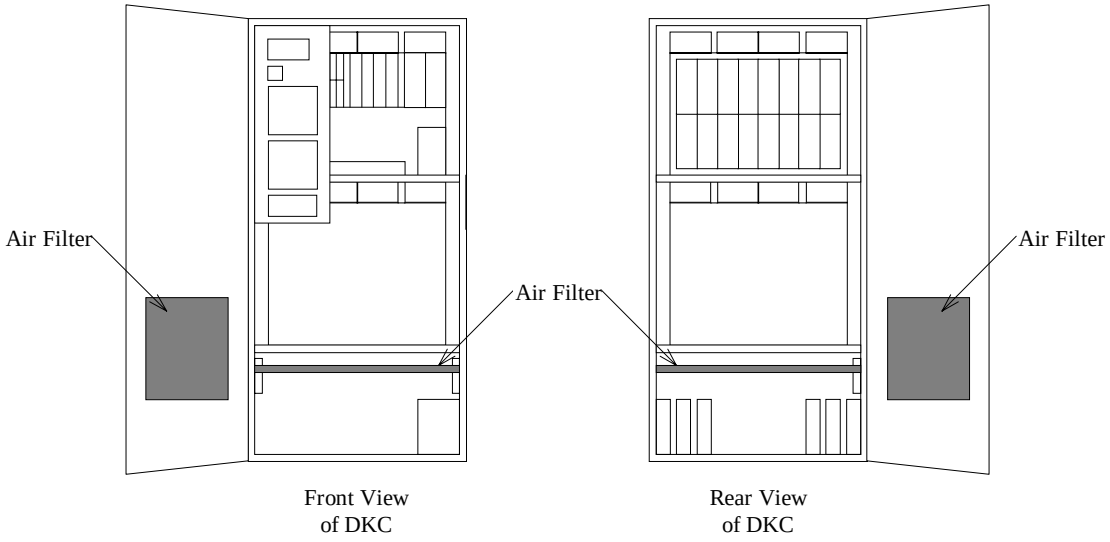

Fig. 3.1-1 Air Filter Location in DKC

3.2 DKU

Clean the air filters located inside the front and rear doors.
The location of the air filters are shown in Fig. 3.2-1.

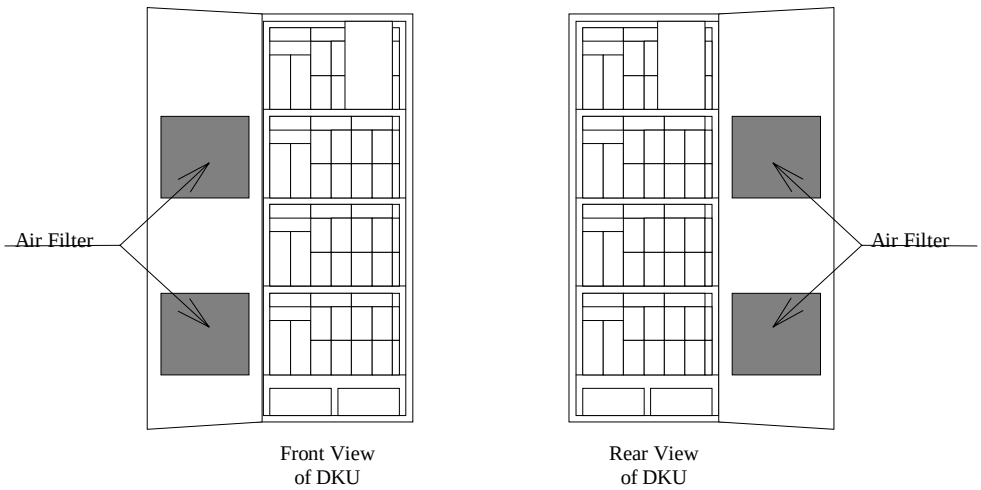

Fig. 3.2-1 Air Filter Location in DKU

Copyright ©1997, Hitachi, Ltd.

4. Check and Replacement of Battery

4.1 Type of battery

The DKC has the batteries shown in Table 4.1.-1 and Fig. 4.1-1.

Table 4.1-1 Batteries used in DKC

No.	Battery Name	Logic Part	ALARM LED on Operator Panel	Warning Detecting Voltage
1	BATTERY-10	Cluster 1 Shared Memory	SUB-SYSTEM ALARM	Less than 3.8V
2	BATTERY-11	Cluster 1 Cache Memory		
3	BATTERY-12	Cluster 1 Cache Memory		
4	BATTERY-20	Cluster 2 Shared Memory		
5	BATTERY-21	Cluster 2 Cache Memory		
6	BATTERY-22	Cluster 2 Cache Memory		

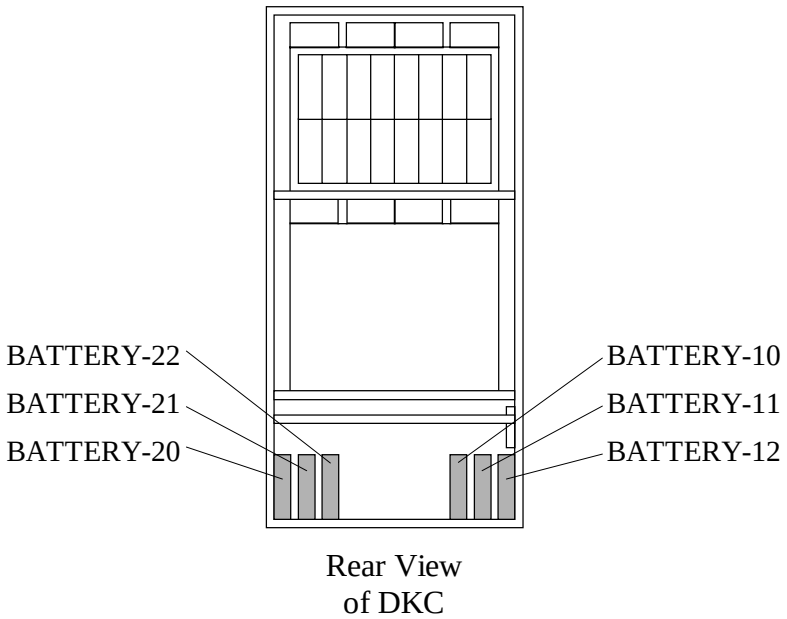

Fig. 4.1-1 Battery Location

Copyright ©1997, Hitachi, Ltd.

4.2 Specification of battery

Specifications of the batteries mounted on the DKC are shown in Table 4.2-1.
Replace the battery, in case that a battery warning is detected, even though battery charging time passes 8 hours.

Table 4.2-1 Specification of the battery

No.	Type of Battery		Maximum Back-up Time	Charging Time Necessary after Back-up
1	For SM		168 hours (7 days)	8 hours
2	For CM	Configuration with SH024-A only	96 hours (4 days)	8 hours
		Configuration with SH100-A only	48 hours (2 days)	
		Configuration with mixture of SH024-A and SH100-A		

Specifications of the batteries for the spare parts are shown in Table 4.2.-2.
Replace the battery, in case that the battery is used more than 2.5 years.

Table 4.2-2 Specification of the battery (spare parts)

No.	Type of Battery	Charging Time and Frequency of Battery for Spare Parts	Life
1	For SM	Time : 48 hours (2 days) Frequency : Once every six months (Note) Use the DKC for charging.	2.5 years
2	For CM		2.5 years

4.3 Replacing of battery

Refer to REPLACE SECTION [REP01-150 Work ID RT14] in this manual.

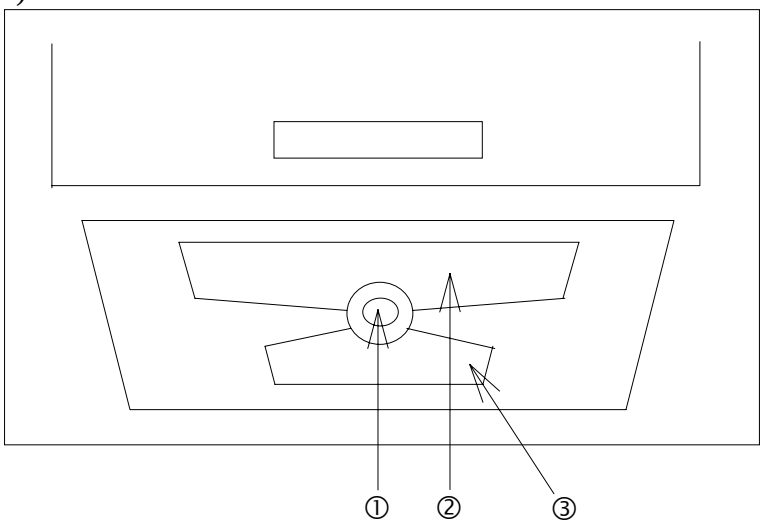
1 How to Operate the SVP (PC)

This manual describes how to operate the SVP (PC) with a trackball.

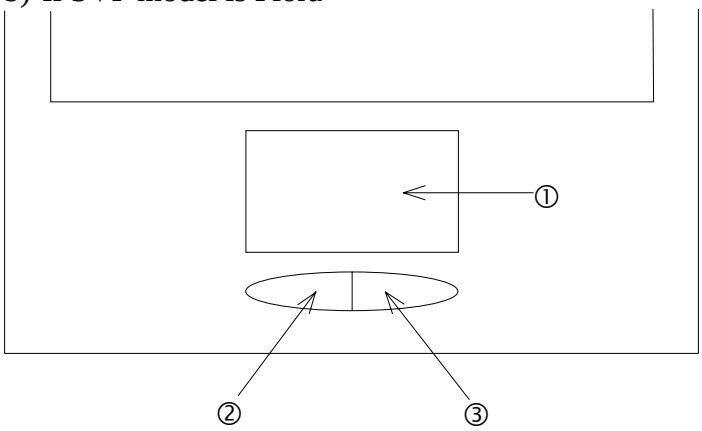
1.1 How to use a trackball or touchpad

a) If SVP model is Armada



① : Trackball
Rotate this device to move the pointer to a desired position.
② : Button
Pressing this button selects an item on which the pointer is placed.
③ : Not used

b) If SVP model is Flora

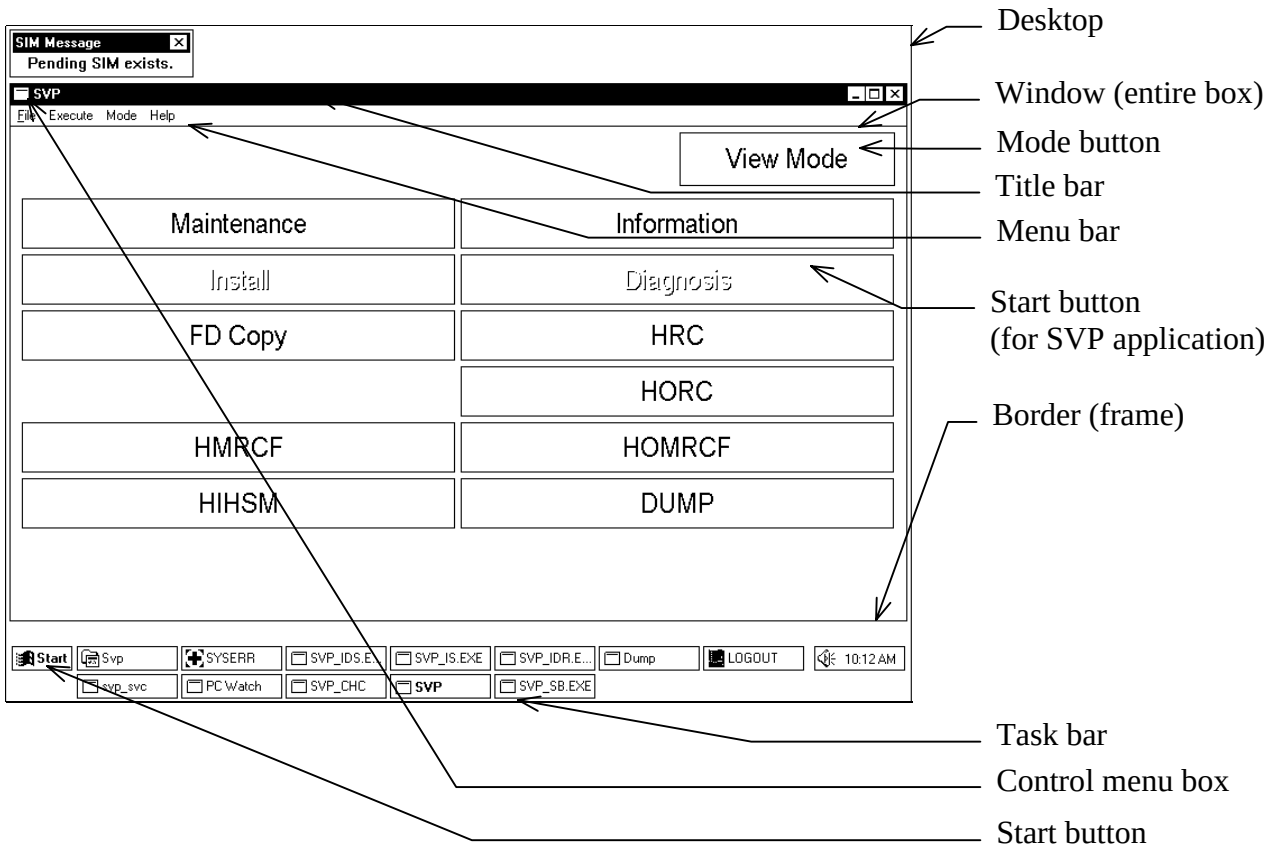


① : Touchpad
Trace this device to move the pointer to a desired position.
② : Button
Pressing this button selects an item on which the pointer is placed.
③ : Not used

Copyright ©1997,1998, Hitachi, Ltd.

1.2 Windows Screen Component Nomenclature

Either of the following windows is displayed.



(Note)
Each SVP screen on this maintenance manual is a sample, and it may not be the same as the actual screen.

Copyright ©1997,1999, Hitachi, Ltd.

1.3 How to use Windows

(1) Notation

In this manual, “select” has the following three meanings, and (CL), (DC), or (DR) is added to the word for each meaning.

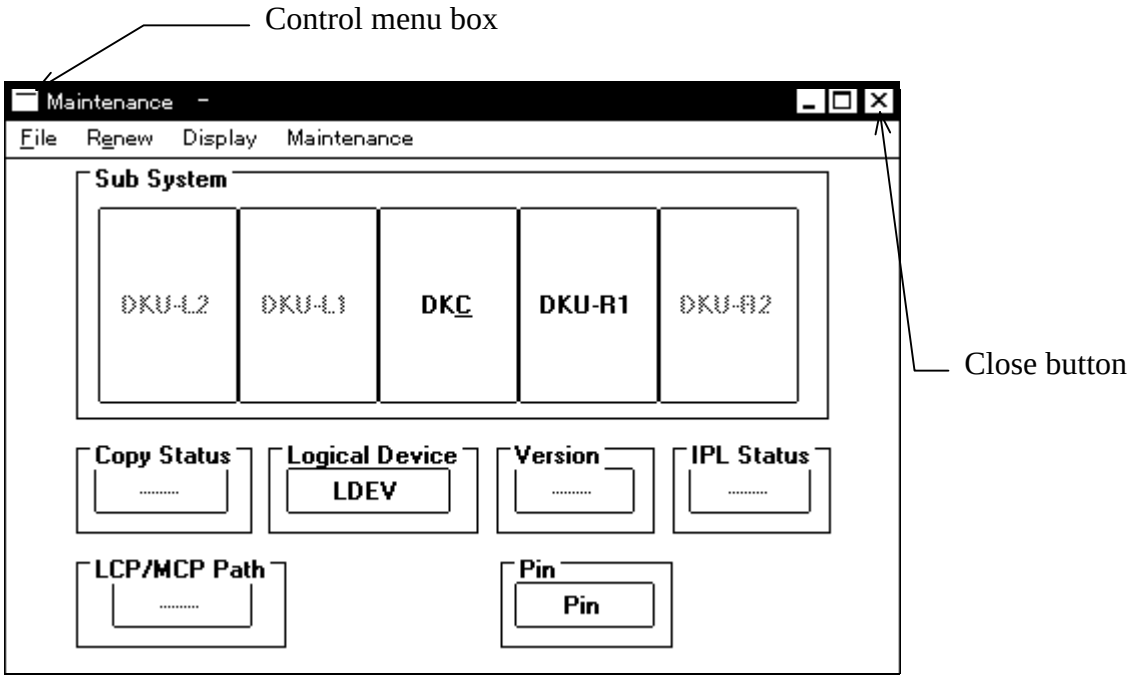
(CL) Click:
Quickly press and release the button above the trackball.
(DC) Double-click:
Click the button above the trackball or touchpad twice in rapid succession.
(DR) Drag:
To hold down the button above the trackball or touchpad while you rotate the trackball or trace the touchpad to move the pointer to a desired position. Then release the button.

example)
Select (DC) the [Install] icon in the ‘SVP’ window.

Move the pointer to [Install] with the trackball or touchpad. Then click the button above the trackball or touchpad twice in rapid succession.

(2) Close

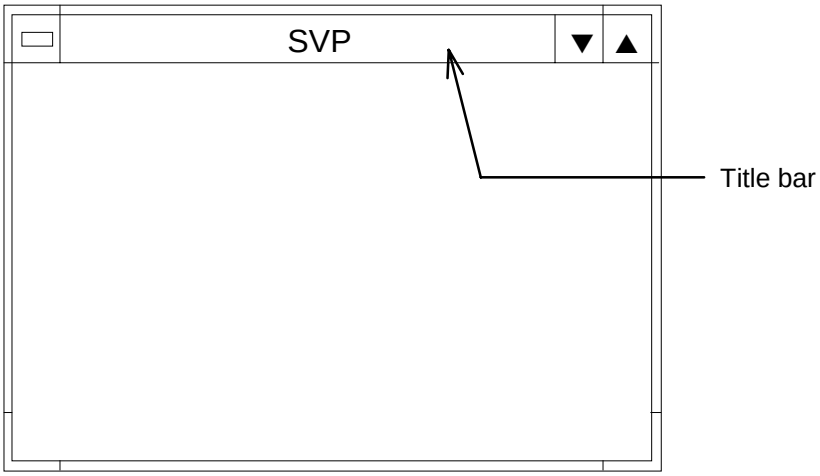
“Close” means to close the aplication window.
(Double-click the control menu box of the window or click the close button for Windows 95.)



Copyright ©1997,1998, Hitachi, Ltd.

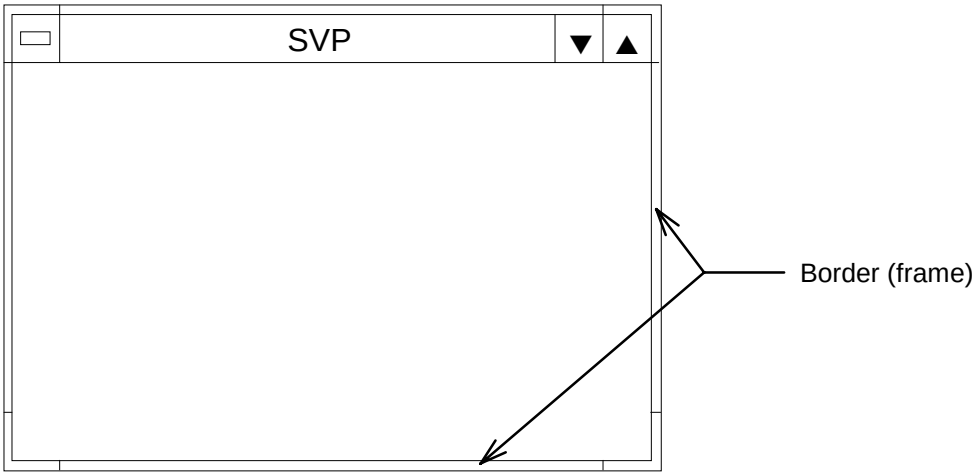
(3) Moving the Window

Move the pointer to the title bar with the trackball.
While pressing the button, move the window with the trackball or touchpad (DR) to a desired position and release the button.



(4) Changing the window size

Move the pointer to the window border (frame) (the pointer changes to the double- headed arrow). While pressing the button, move the border (the border changes to the broken line) until the window becomes a desired size, and release the button.



(5) Switching the screen (when two or more screens are opened)

While pressing the ALT key , press TAB (or ESC) until your desired window title is displayed, and release the ALT key.

Copyright ©1997,1998, Hitachi, Ltd.

1.4 Power On

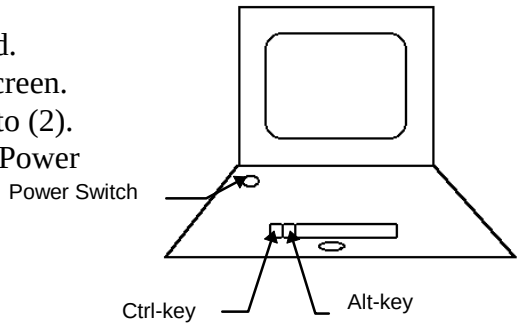
Usually, SVP start automatically at the breakers-ON.
If some problem occurred and you must start SVP, do as following procedures.

a) If SVP model is Armada

(1) Power On SVP

a. Press Power Switch on the SVP keyboard.

b. Watch messages displayed on the SVP screen.
If following messages are displayed, Go to (2).
Otherwise, power off (press Alt + Ctrl + Power Switch) and on SVP to retry. (*1)
After retrying twice, replace SVP.



[Message]
xxxx KB OK
Starting Windows95
(Some other messages)

(2) Windows Start (SVP Start)

a. Wait a few minutes until Windows system will start.

b. Read message displayed on the SVP screen. (Go to SVPMSG section)
Otherwise, power off (press Alt + Ctrl + Power Switch) and on SVP to retry. (*1)
After retrying twice, replace SVP.
[End of Power On]

*1: If you press only Power Switch on the SVP keyboard when SVP and Windows system are active, these systems will be frozen.
You should be sure to press Alt + Ctrl + Power Switch for power off SVP.

*2: If Windows 95 doesn't start, check the following items.
(1) Is the DKC "CE mode" ?
(2) The two LEDs at the LAN cable socket are always on?

If above two conditions are satisfied, pull out LAN cable until Windows 95 is starting.

Copyright ©1997,1998, Hitachi, Ltd.

b) If SVP model is Flora

(1) Power On SVP

a. Insert the Shut Down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).
b. Wait for one minute.
c. Remove the Shut Down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).
d. Watch messages displayed on the SVP screen.
   If following messages are displayed, Go to (2)
   Otherwise, Go to a, b and c.
   After retrying twice, replace SVP.

[Message]
   xxxx KB OK
   Starting Windows95
   (Some other messages)

(2) Windows Start (SVP Start)

a. Wait a few minutes until Windows system will start.
b. Read message displayed on the SVP screen. (Go to SVPMSG section)
   Otherwise, Go to (1) a, (1) b and (1) c.
   After retrying twice, replace SVP.
   [End of Power On]

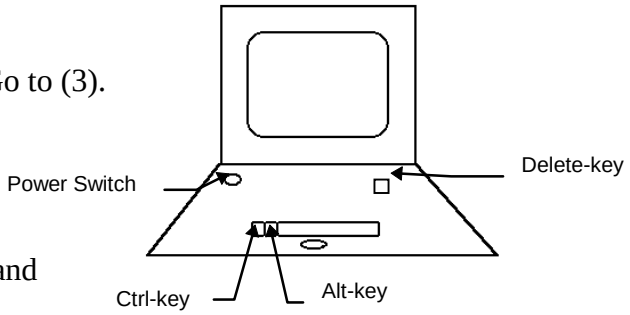
Copyright ©1998, Hitachi, Ltd.

1.5 Power Off

a) If SVP model is Armada

(1) What is running?

a. See what is displayed.
If Windows is displayed, Go to (2).
If DOS prompt is displayed, like "C:\>", Go to (3).



(2) Exit Windows(Stop SVP)

a. Select (CL) "Start button".
b. Select (CL) "Shut Down".
c. Select (CL) "Shut Down the computer?", and
Select (CL) [Yes].
[End of Power Off]

(3) Power Off SVP

a. Press 2 keys —— Ctrl-key and Alt-key ——, and Power Switch simultaneously.
[End of Power Off]

Note : Do not press only Power Switch key.
Because, since SVP does not stop to perfection, we do not guarantee the operation of SVP after re-power on.
If only Power Switch key was pressed, please power off SVP.

b) If SVP model is Flora

(1) What is running?

a. See what is displayed.
If Windows is displayed, Go to (2).
If DOS prompt is displayed, like "C:\>", Go to (3).

(2) Exit Windows(Stop SVP)

a. Select (CL) "Start button".
b. Select (CL) "Shut Down".
c. Select (CL) "Shut Down the computer?", and
Select (CL) [Yes].
[End of Power Off]

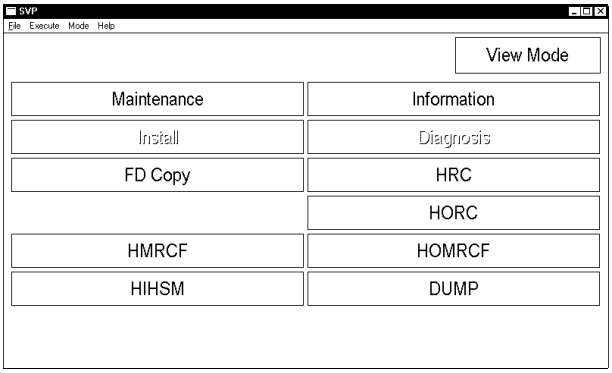
(3) Power Off SVP

a. If replace of SVP
Insert the Shut down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).
Wait for one minute.
Replace SVP.
Remove the Shut Down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).
b. If reboot of SVP
Insert the Shut Down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).
Wait for one minute.
Remove the Shut Down Jumpers in SVPPS1 and SVPPS2 (See LOCATION06-20).

Copyright ©1997,1998, Hitachi, Ltd.

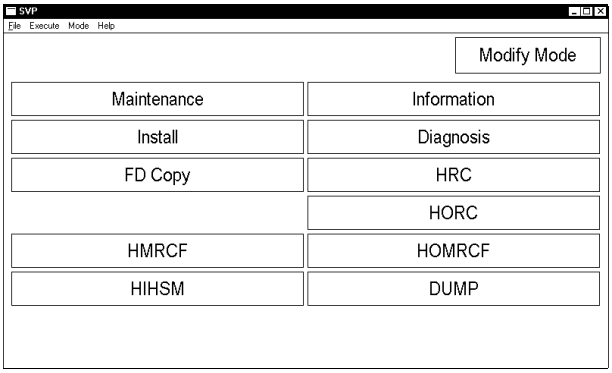
1.6 Mode

(1) View Mode
In view mode, only referring the subsystem status can be allowed.



(2) Modify Mode
In modify mode, referring and changing the subsystem status can be allowed.

For example, log/pin data indication and status display on MAINTENANCE are available in any mode, but replacement is available in only modify mode.



Note : When view mode, pending SIMs (if exist) are reported to host.

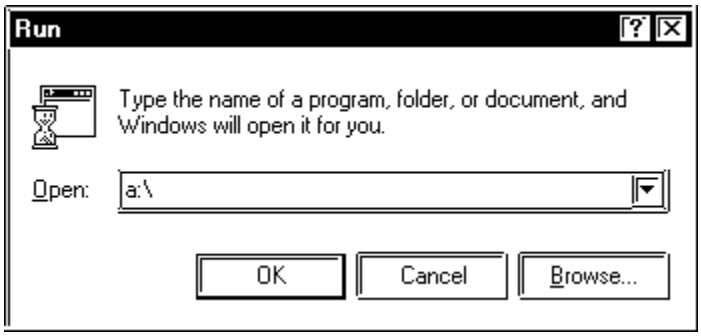
(3) Change Mode
If you push (CL) [View Mode] button, it changes [Modify Mode], and SVP changes Modify Mode.
If you push (CL) [Modify Mode] button, it changes [View Mode], and SVP changes View Mode.

Copyright ©1997,1999, Hitachi, Ltd.

1.7 Run

(1) <Select the [Run]>
Select (CL) the [Run...] in the [Start button].

(2) <Input file name>
Input file name in 'Open' and select (CL) [OK].



Copyright ©1997, Hitachi, Ltd.

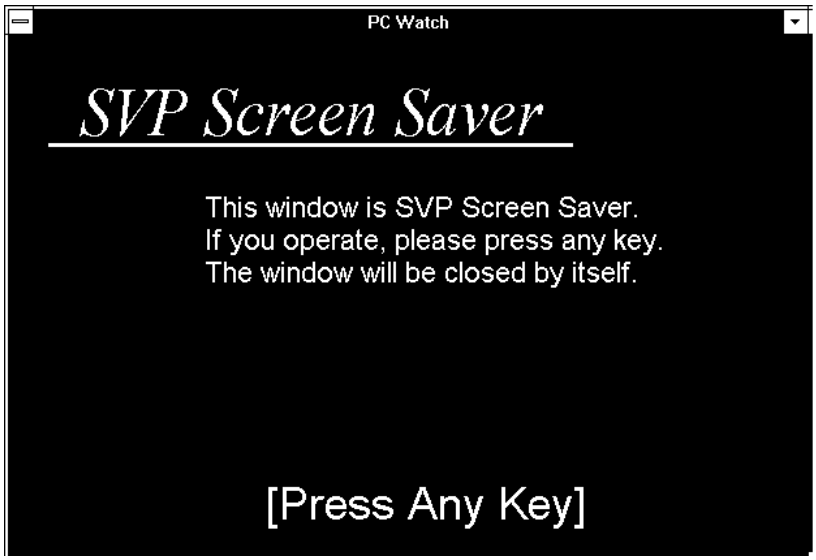
1.8 Screen Saver, and SVP reboot function

This function executes SVP reboot at intervals of a certain duration, one time per day.
Normally, the function displays a new windows for Screen Saver.

(1) SVP (PC) reboot
When SVP detects the reboot time under displaying the Screen Saver, the function will reboot SVP automatically. But, if other applications of SVP are executing, the function will stop rebooting, and wait until the next time will arrive.

(2) Screen Saver

1. If there is no access from keyboard or mouse during 60 minutes, and other SVP applications windows are closed, SVP will open the screen saver window.



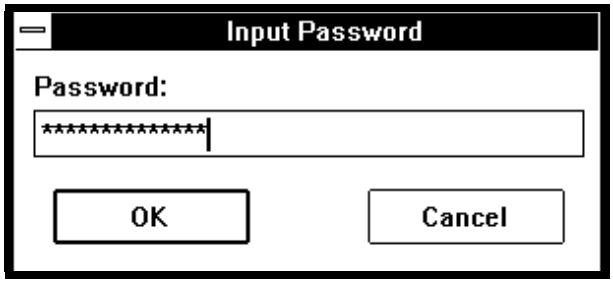
2. Normally, the function becomes icon.

Copyright ©1997, Hitachi, Ltd.

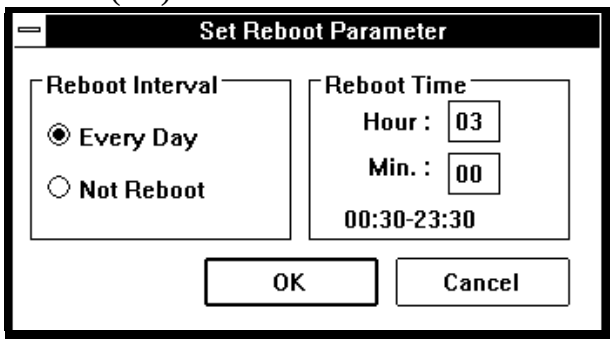
(3) Setting reboot timer

1. Please select (DC) “PC Watch” Icon.

2. SVP will displays “Input Password” screen. Please enter the password and select (CL) “OK”.



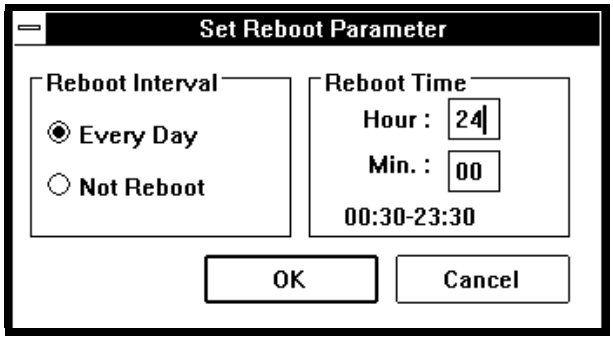
3. Next, SVP will displays “Set Reboot Parameter” Screen. Please input Reboot interval and Reboot time, and select (CL) “OK”.



① Reboot Interval
Every Day : one time per day.
Not Reboot : not available to reboot.

② Reboot Time
Reboot time will be set.
Notice:
The SVP usually receives a TH/ORM log data from DKC-Main at 23:30 - 0:30, so that you can not input those time.

If you input the reboot time as 24:00 or above timer 23:30 - 0:30, will move the focus.



Copyright ©1997,1998, Hitachi, Ltd.

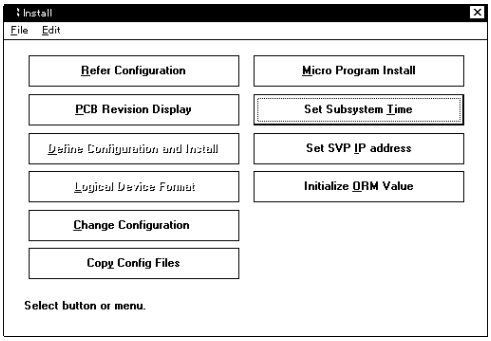
2 Function of the SVP

2.1 TOD (Time Or Date) setting

(1) Change the mode to [Modify Mode] from [View Mode] (CL).

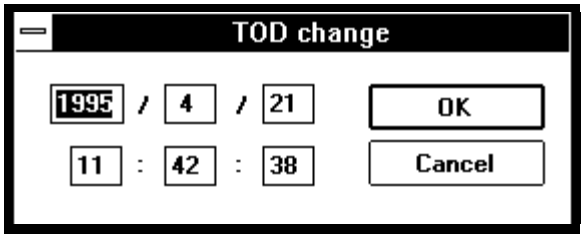
(2) Select (CL) [Install].

(3) Select (CL) [Set Subsystem Time] in the 'Install' window.



Copyright ©1997,1998, Hitachi, Ltd.

(4) Specify the date (year, month and day) and time (hour, minute and second) and select (CL) [OK].



(5) Close the ‘Install’ window.

Copyright ©1997,1998, Hitachi, Ltd.

2.2 Log indication

[1] SSB Log ---------- SVP02-40
[2] SIM Log ---------- SVP02-60
[3] Detail Log ---------- SVP02-80
[4] Reset Log ---------- SVP02-90
[5] Power Event Log ---------- SVP02-100
[6] Incident Log ---------- SVP02-110
[7] LCP/MCP Log ---------- SVP02-130
[8] Diagnosis Log ---------- SVP02-140
[9] Copy History Log ---------- SVP02-145
[10] MP# - Location correspondence table ---------- SVP02-165

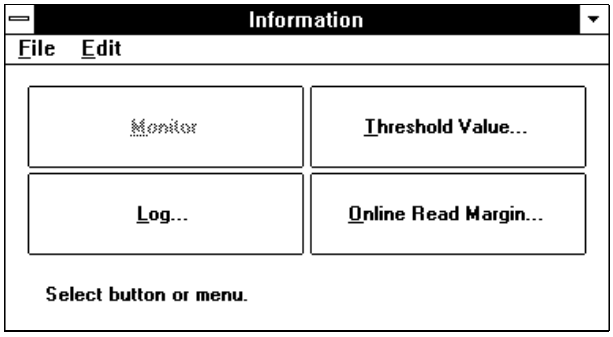
Indication condition

If there is no corresponding log, you cannot select any log from the menu.

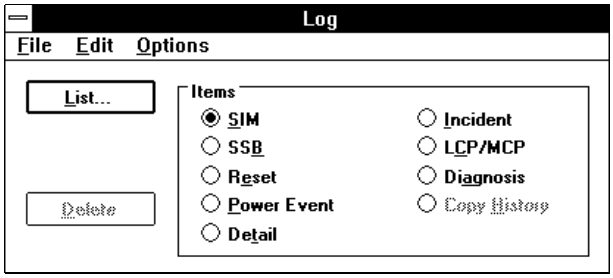
Do this first:

(1) Select (CL) [Information].

(2) Select (CL) [Log...].



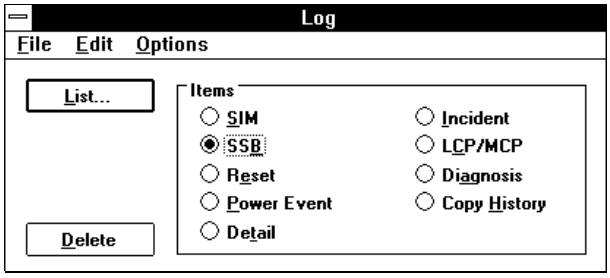
(3) 'Log' dialog box is displayed.



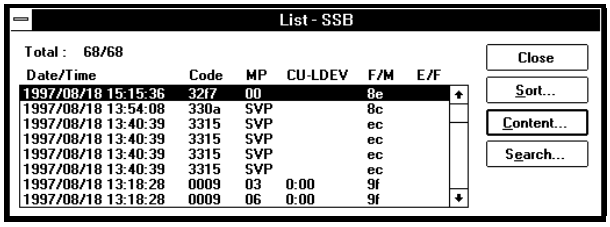
Copyright ©1997,1998, Hitachi, Ltd.

[1] SSB Log

(1) Select (CL) [SSB] in the 'Log'.
Select (CL) [List].

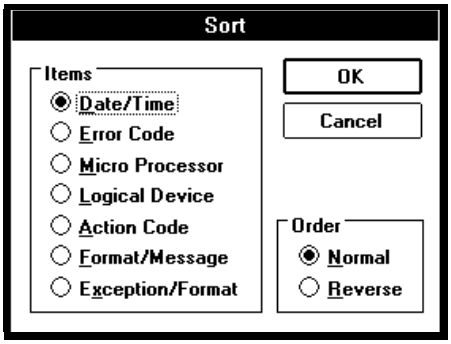


(2) Select (CL) data to be indicated in the 'List-SSB' dialog box and select (CL) [Content...].



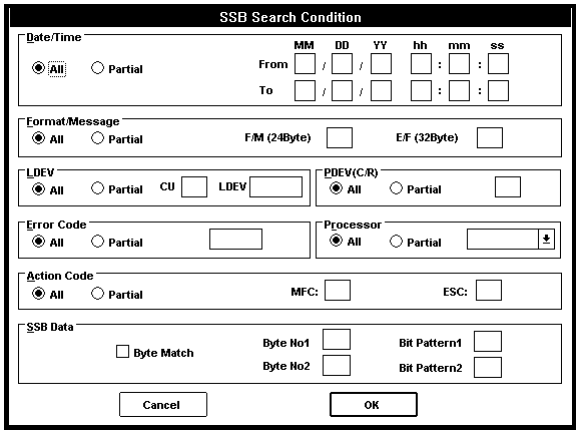
Note1: To sort and list items, select (CL) [Sort...] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].

Note2: To search for the desired log, select (CL) [Search...]. Then set the log for which you want to search individual List in the 'SSB Search Condition' dialog box and select (CL) [OK].



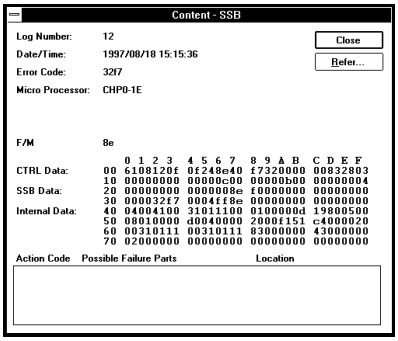
Note3: In case of the log data exceeded 1000 cases (Denominator of the total displays 1000 or more), the log data can be displayed from new data to 1000 data out of the entry sequence on SVP.
The entry sequence sometimes differs from occurrence order of the log.
Perform search function in order to check occurrence order.

Note4: Please do not change an application's window until search function finish.

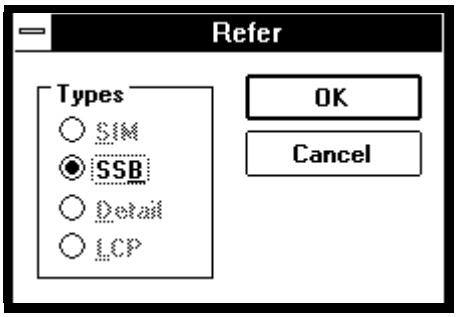


Copyright ©1997,1998, Hitachi, Ltd.

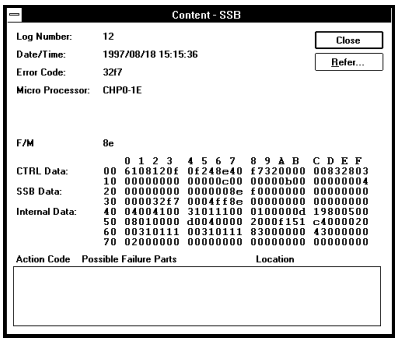
(3) The detailed data is displayed in the ‘Content-SSB’ dialog box.
Select (CL) [Refer...] in the ‘Content-SSB’ dialog box to display the relative log is displayed.



(4) Select (CL) the log to be displayed in the ‘Refer’ dialog box.
([SSB] is selected in this example.)



(5) Display the log to be selected.
(‘SSB Log’ is displayed in this example.)
See SSB LOG Section



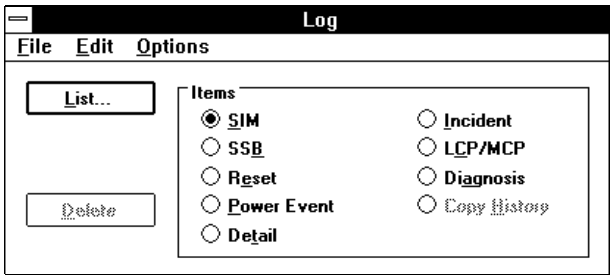
(6) Select (CL) [Close] in the ‘Content-SSB’ dialog box.
Select (CL) [Close] in the ‘List-SSB’ dialog box.
Close the ‘Log’ dialog box and close the ‘Information’ window.

Copyright ©1997,1998, Hitachi, Ltd.

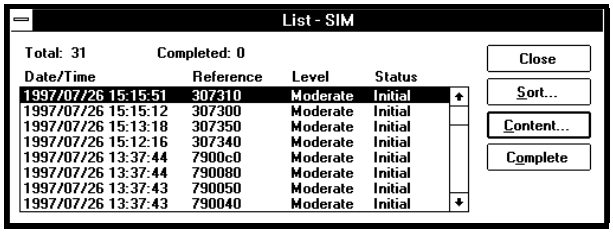
[2] SIM Log

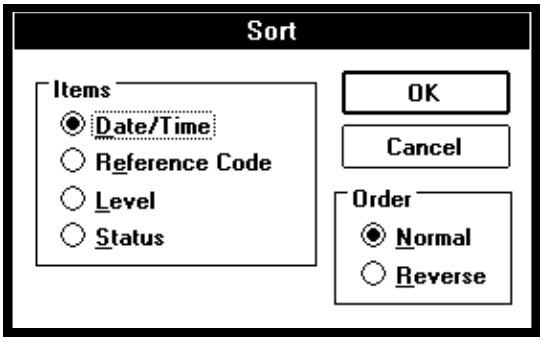
Note: When SIM log exists after SVP started up, the 'SIM Message' window is displayed.

(1) Select (CL) [SIM] in the 'Log' dialog box.
Select (CL) [List...].



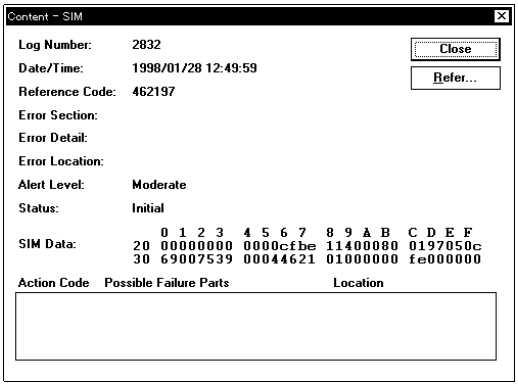
(2) Select (CL) data to be indicated in the 'List-SIM' dialog box and select (CL) [Content...].
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].





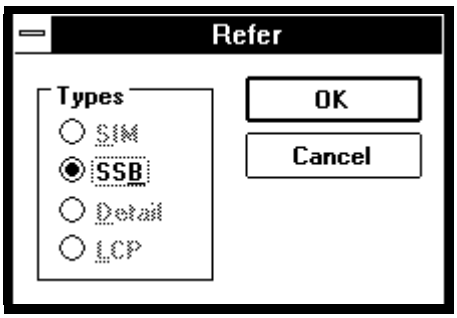
(3) The 'Content-SIM' dialog box is displayed.
Select (CL) [Refer...] in the 'Content-SIM' dialog box, when the relative log is displayed.

Note1: In WCHK1 dump and ABEND dump received SIM (RC = 3080X0, 3081X0), the system error code is indicated in the format [YYYY] as in Reference Code 3080X0[YYYY].
Note2: If Reference Code is 73XX00 or 1400X0, perform the recovery procedure for LAN error. (see TRBL05-70.)

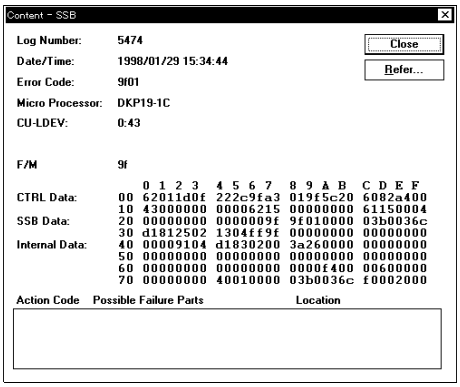


Copyright ©1997,1998, Hitachi, Ltd.

(4) Select (CL) the log to be displayed in the 'Refer' dialog box.
([SSB] is selected in this example.)



(5) The selected log is displayed.
('Content-SSB' is displayed in this example.)

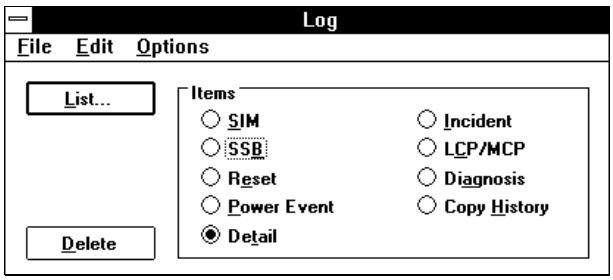


(6) Select (CL) [Close] in the 'Content-SSB' dialog box.
Select (CL) [Close] in the 'Content-SIM' dialog box.
Select (CL) [Close] in the 'List-SIM' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

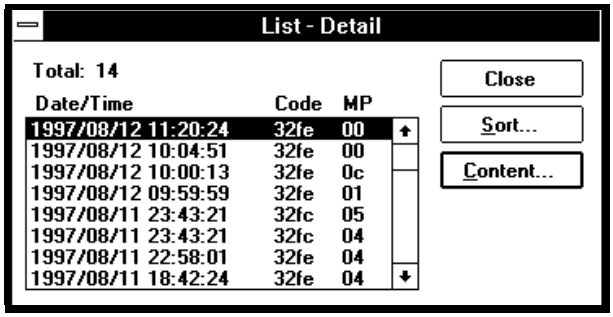
Copyright ©1997,1998, Hitachi, Ltd.

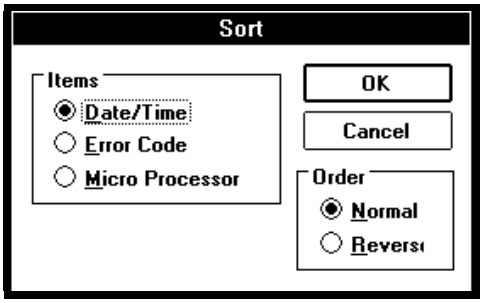
[3] Detail Log

(1) Select (CL) [Detail] in the 'Log' dialog box.
Select (CL) [List...].

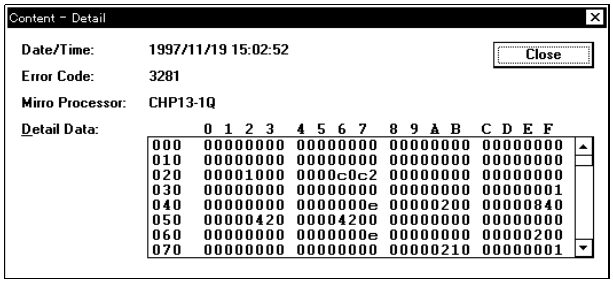


(2) Select (CL) data to be indicated in the 'List-Detail' dialog box and select (CL) [Content...].
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].





(3) The 'Content - Detail' dialog box is displayed.

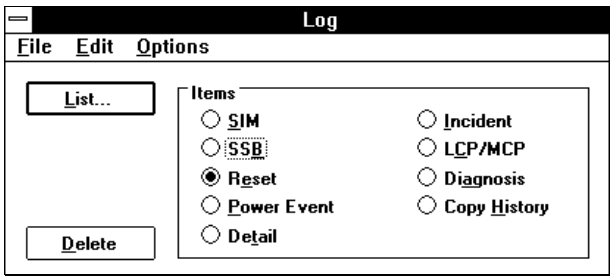


(4) Select (CL) [Close] in the 'Content - Detail' dialog box.
Select (CL) [Close] in the 'List-Detail' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

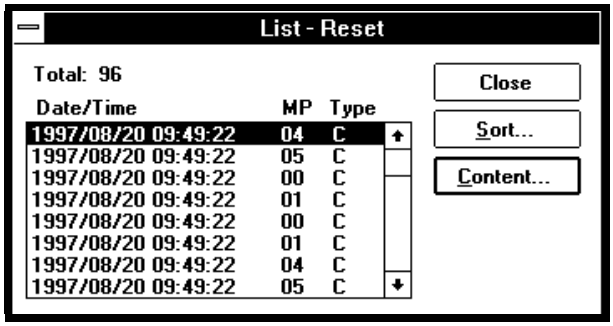
Copyright ©1997,1998, Hitachi, Ltd.

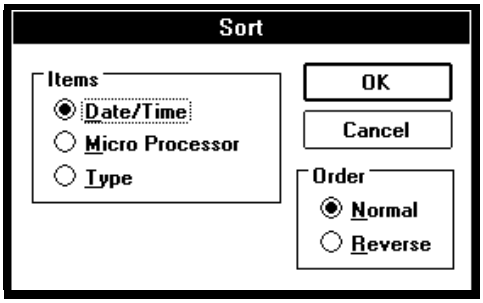
[4] Reset Log

(1) Select (CL) [Reset] in the 'Log' dialog box.
Select (CL) [List...].

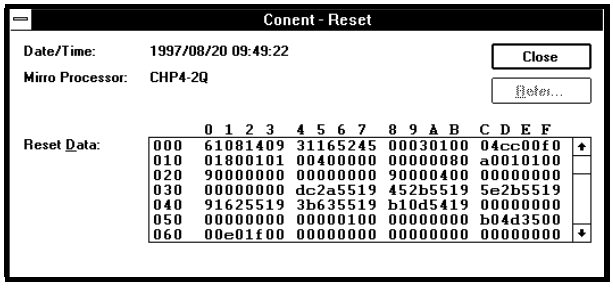


(2) Select (CL) data to be indicated in the 'List-Reset' dialog box and select (CL) [Content...].
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Reset Log Sort' dialog box, and select (CL) [OK].





(3) The 'Content-Reset' dialog box is displayed.

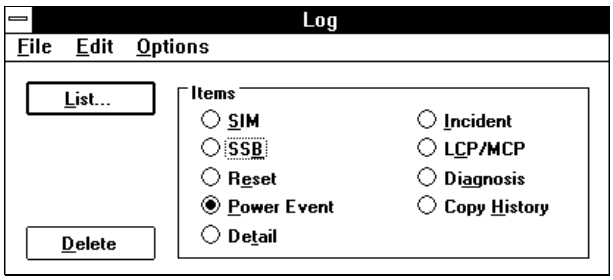


(4) Select (CL) [Close] in the 'Content-Reset' dialog box.
Select (CL) [Close] in the 'List-Reset' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

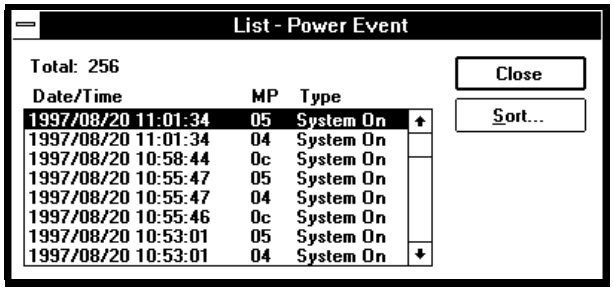
Copyright ©1997,1998, Hitachi, Ltd.

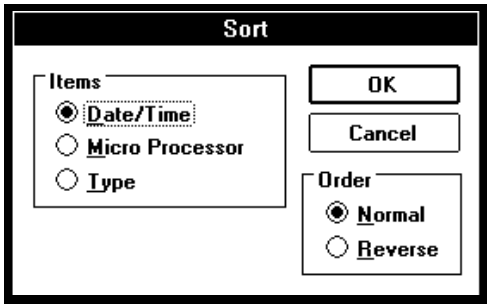
[5] Power Event Log

(1) Select (CL) [Power Event] in the 'Log' dialog box.
Select (CL) [List...].



(2) The 'List-Power Event' dialog box is displayed.
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].



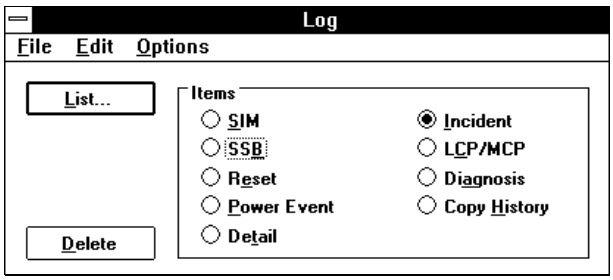


(3) Select (CL) [Close] in the 'List-Power Event' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

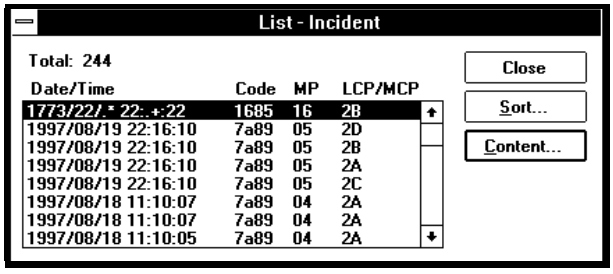
Copyright ©1997,1998, Hitachi, Ltd.

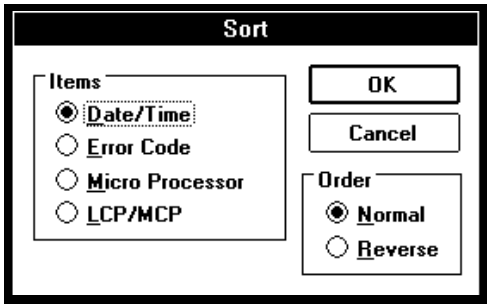
[6] Incident Log

(1) Select (CL) [Incident] in the 'Log' dialog box.
Select (CL) [List...].

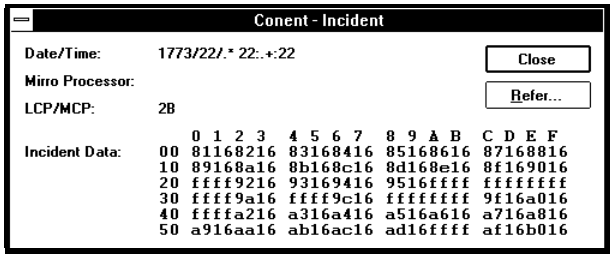


(2) Select (CL) data to be indicated in the 'List-Incident' dialog box and select (CL) [Content...].
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].



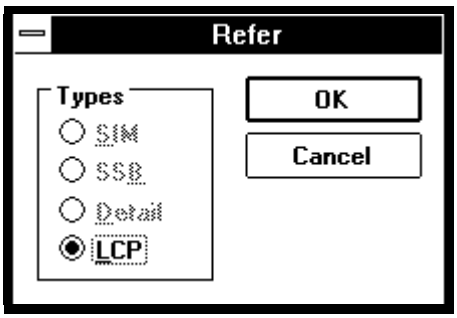


(3) The 'Content-Incident' dialog box is displayed.



Copyright ©1997,1998, Hitachi, Ltd.

(4) To display the relative log, select (CL) [Refer...] in the 'Content-Incident' dialog box.
Select (CL) the log type to be displayed in the 'Refer' dialog box and then select (CL) [OK].

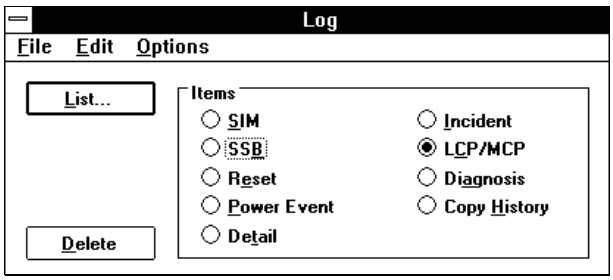


(5) Select (CL) [Close] in the 'Content-Incident' dialog box.
Select (CL) [Close] in the 'List-Incident' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

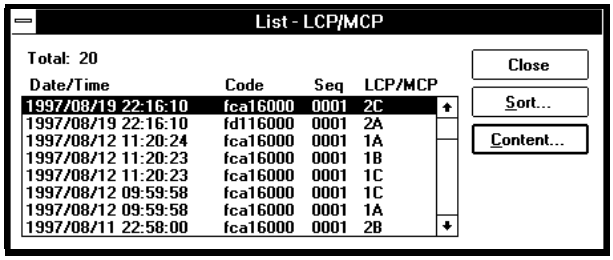
Copyright ©1997, Hitachi, Ltd.

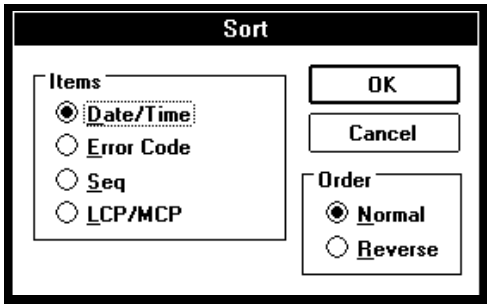
[7] LCP/MCP Log

(1) Select (CL) [LCP/MCP] in the 'Log' dialog box.
Select (CL) [List...].

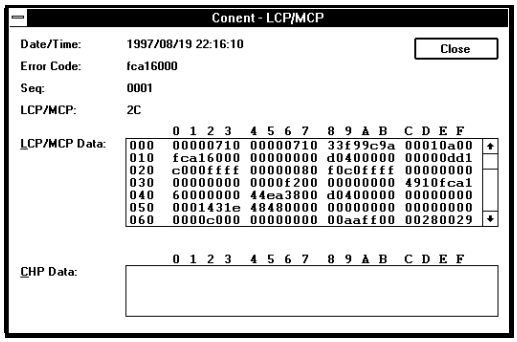


(2) Select (CL) data to be indicated in the 'List-LCP/MCP' dialog box and select (CL) [Content...].
Note:To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].





(3) The 'Content-LCP/MCP' dialog box is displayed.

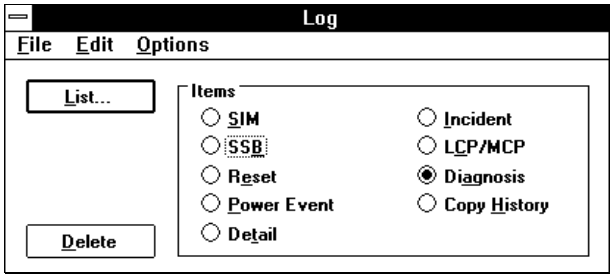


(4) Select (CL) [Close] in the 'Content-LCP/MCP' dialog box.
Select (CL) [Close] in the 'List-LCP/MCP' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

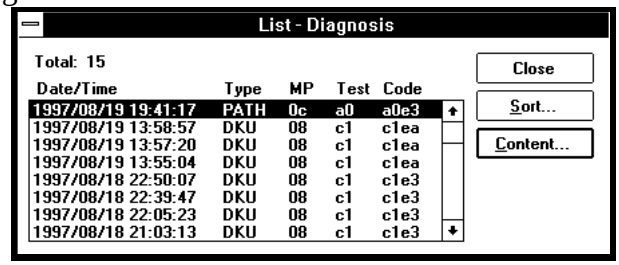
Copyright ©1997,1998, Hitachi, Ltd.

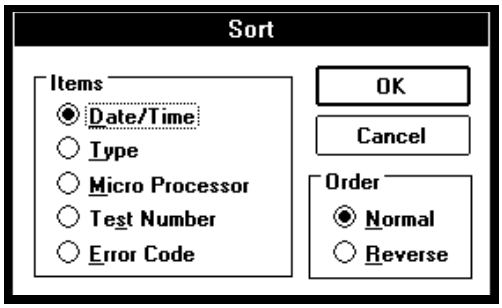
[8] Diagnosis Log

(1) Select (CL) [Diagnosis] in the 'Log' dialog box.
Select (CL) [List...].

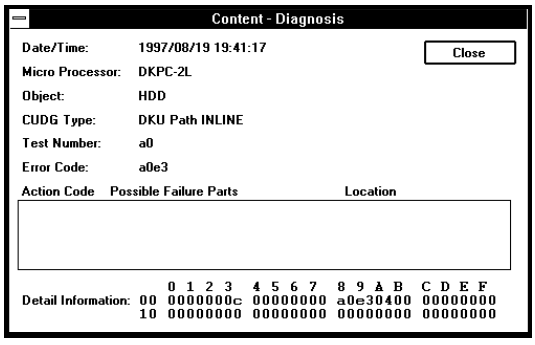


(2) Select (CL) data to be indicated in the 'List-Diagnosis' dialog box and select (CL) [Content...].
Note: To sort and list items, select (CL) [Sort] first.
Then select (CL) the desired item in the [Items] and [Order] options in the 'Sort' dialog box, and select (CL) [OK].





(3) The 'Content-Diagnosis' dialog box is displayed.



(4) Select (CL) [Close] in the 'Content-Diagnosis' dialog box.
Select (CL) [Close] in the 'List-Diagnosis' dialog box.
Close the 'Log' dialog box and close the 'Information' window.

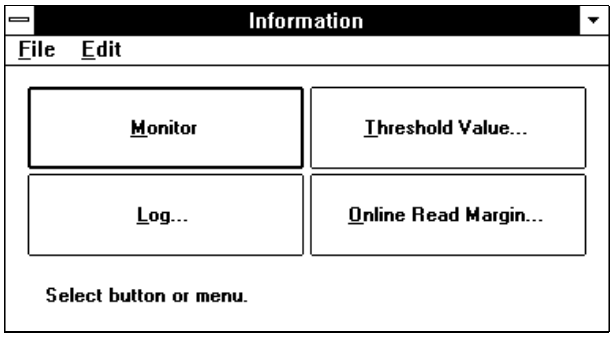
2.4 Monitoring

[1] Displaying a graph for items ---------- SVP02-180
[2] Displaying the operation ratio of the processor ---------- SVP02-200
[3] Displaying the use ratio of the cache and the write pending data ratio in a tabular form
---------- SVP02-220
[4] Displaying the read hit ratio in a tabular form ---------- SVP02-230
[5] Displaying the use ratio of the BUS in a tabular form ---------- SVP02-240

(1) Select (CL) the [Information] in the 'SVP' window.

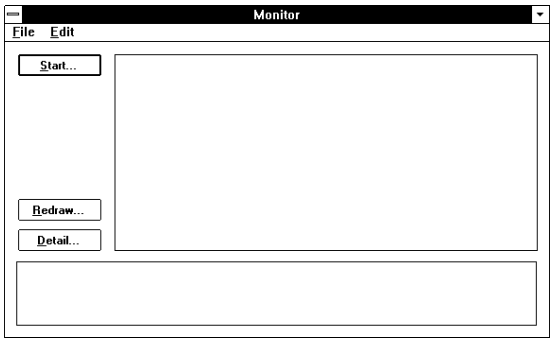
(2) Select (CL) [Monitor] in the 'Information' window



Copyright ©1997, Hitachi, Ltd.

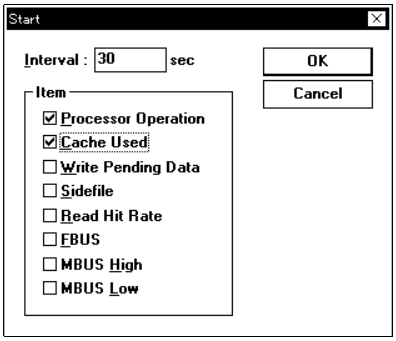
[1] Displaying a graph for items

(1) Select (CL) [Start...].

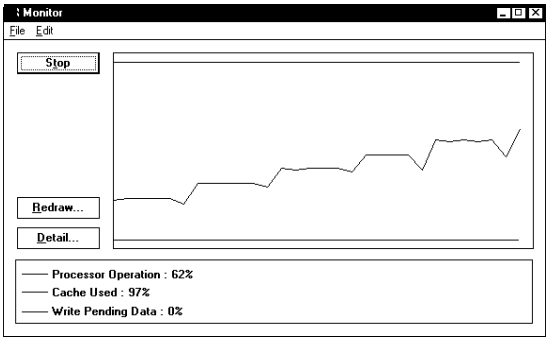


(2) Select (CL) [Interval] , [File Output] , and [Item] in the 'Monitoring' dialog box and select (CL) [OK].
Note 1 : "Interval" indicates a time interval from 5 to3600 at which samples are taken.
Note 2 : Up to three items can be selected in the "Item" list box. The selectable values are:

Processor Operation	: Operation ratio of the processor
Write Pending Data	: Write pending data ratio
Cache Used	: Use ratio of the cache
Read Hit Rate	: Read hit ratio of the subsystem
Sidefile	: Sidefile ratio of the subsystem
FBUS	: Use ratio of the FBUS
MBUS High	: Use ratio of the MBUS (High)
MBUS Low	: Use ratio of the MBUS (Low)

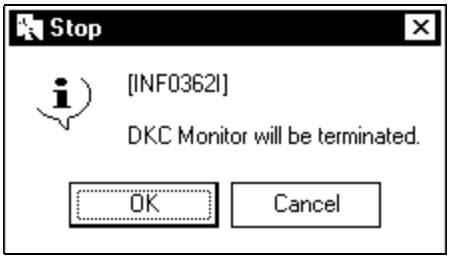


(3) After a few minutes, a graph is displayed for the item selected in step (2).

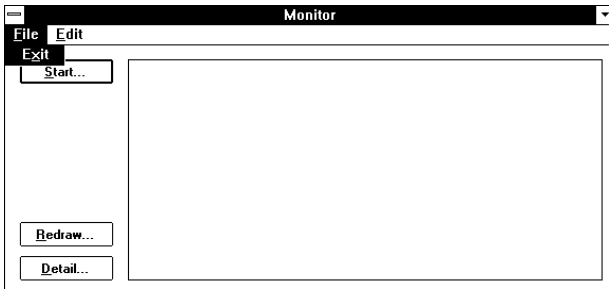


Copyright ©1997,1998, Hitachi, Ltd.

(4) When [Stop] is selected (CL) during the display of the graph, displaying is interrupted.
If [OK] is selected (CL) in the 'Stop' dialog box, displaying is stopped.



(5) Select (CL) the [File] menu in the 'Monitor' and select (DR) [Exit].

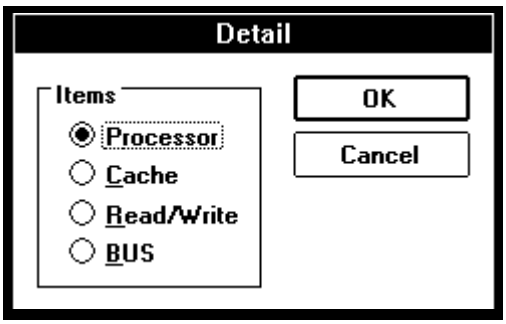


(6) Close the 'Monitor' dialog box and close the 'Information' window.

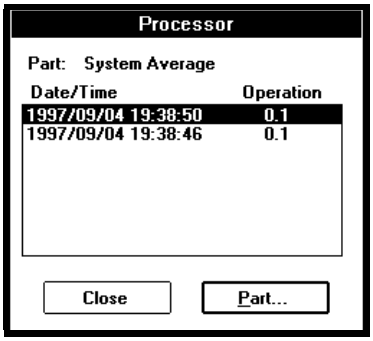
Copyright ©1997,1998, Hitachi, Ltd.

[2] Displaying the operation ratio of the processor

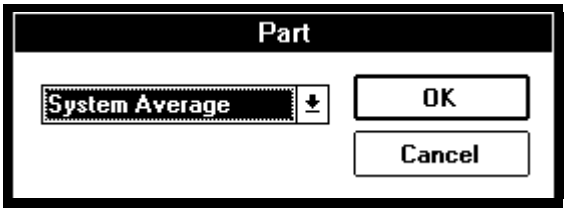
(1) Display a graph (see steps listed above).
Select (CL) [Processor Operation] in the “Item” list box.
Select (CL) [Detail...] and select (CL) [Processor].



(2) Select (CL) [Part...] in the ‘Processor’ dialog box.



(3) Select (DR) the contents of “Parts” in the ‘Part’ dialog box and select (CL) [OK].
Note: In the Parts list box, the following values are selectable.

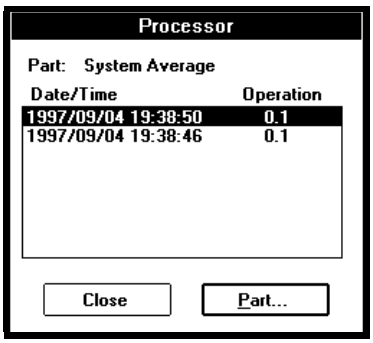


System Average : Average in the system
CHP[CHA] Average : Average for the CHP
DKP[DKA] Average : Average for the DKP
CHP00-1P : Average for a particular processor

-
-
-

Copyright ©1997,1998, Hitachi, Ltd.

(4) Select (CL) [Close] in the ‘Processor’ dialog box.

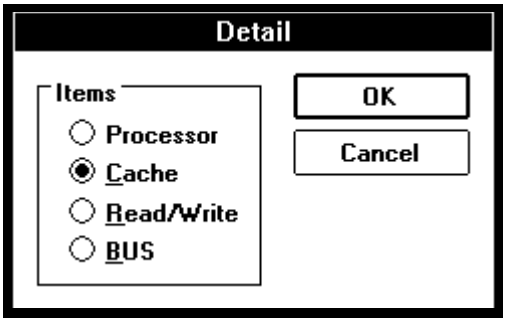


(5) Close the ‘Monitor’ dialog box and close the ‘Information’ window.

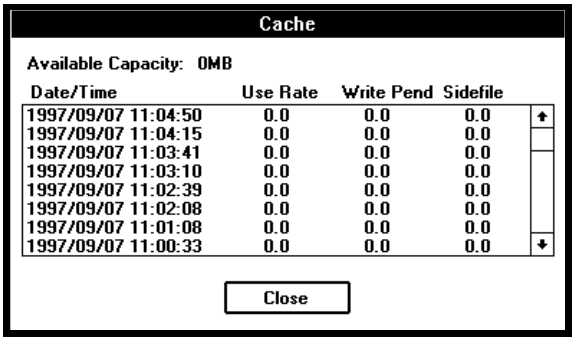
Copyright ©1997, Hitachi, Ltd.

[3] Displaying the use ratio of the cache and the write pending data ratio in a tabular form.

(1) Display a graph (see section [1] (SVP02-180) above).
Select (CL) [Write Pending Data], [Cache Used] or [Sidefile] in the “Item” list box.
Select (CL) [Detail...] in the ‘Monitor’. Select (CL) [Cache] in the ‘Detail’ and select (CL) [OK].



(2) Select (CL) [Close] in the ‘Cache’ dialog box.

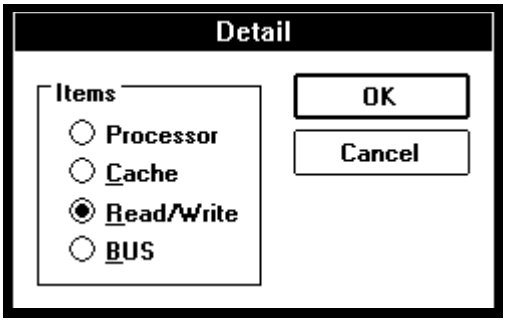


(3) Close the ‘Monitor’ dialog box and close the ‘Information’ window.

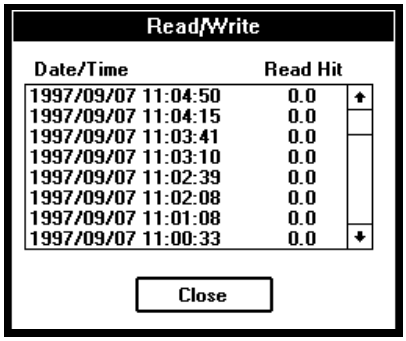
Copyright ©1997,1998, Hitachi, Ltd.

[4] Displaying the read hit ratio in a tabular form

(1) Display a graph by executing steps (1) to (5) in "[1] Displaying a graph for items" in advance.
In step (2), select (CL) [Read Hit Rate] in the "Item" list box.
Select (CL) [Detail...] in the 'Monitor'. Select (CL) [Read/Write] in the 'Detail' and select (CL) [OK].



(2) Select (CL) [Close] in the 'Read/Write' dialog box.

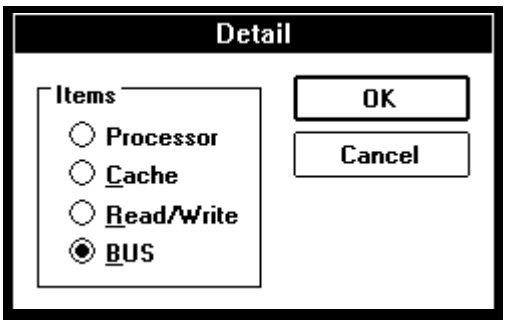


(3) Close the 'Monitor' window and close the 'Information' window.

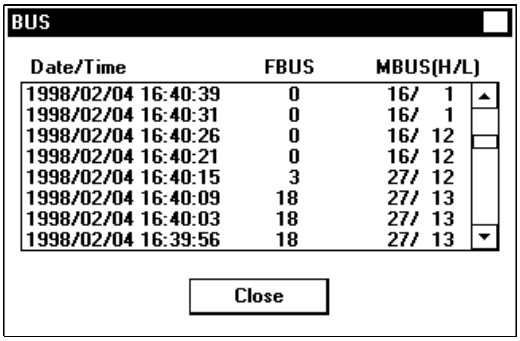
Copyright ©1997,1998, Hitachi, Ltd.

[5] Displaying the use ratio of the BUS in a tabular form

(1) Display a graph by executing steps (1) to (5) in "[1] Displaying a graph for items" in advance. Select (CL) [Detail...] in the 'Monitor'. Select (CL) [BUS] in the 'Detail' and select (CL) [OK].



(2) Select (CL) [OK] in the 'BUS' dialog box.

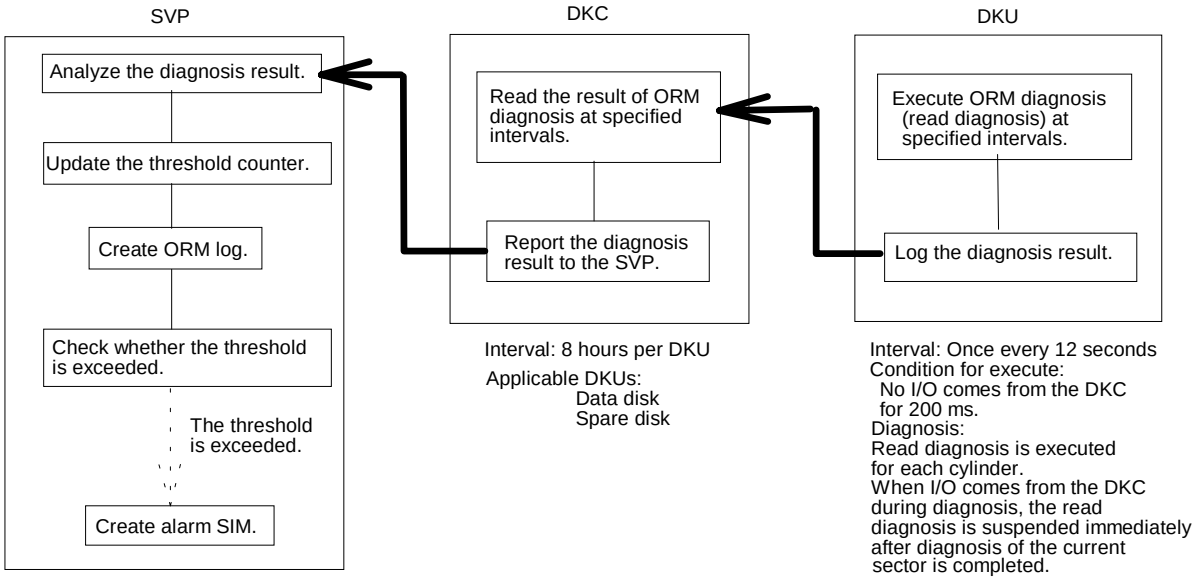


(3) Close the 'Monitor' window and close the 'Information' window.

Copyright ©1997,1998, Hitachi, Ltd.

2.6 Online read margin (ORM)

[Overview]
The on-line read margin test (ORM) function is a read diagnostic function provided for preventive maintenance of disk drives. The diagnostic is automatically executed in each SCSI drive. The DKC reads the diagnostic result at specified intervals and reports it to the SVP.
The SVP calculates the error ratio to the threshold value which is set in advance, and indicates it in the OVER RATE Display (see [1], (2)). When the Rate in the display exceeds 100%, it means the error count is exceeding the threshold, the SVP creates the warning SIM. It is, however, not reported to the Host. The disk drive reporting the SIM should be exchanged with higher priority than other normal drives.



The SVP classifies the errors into six types in the Over Rate Counter Display. They are Unrecovered Read Error, Recovered Read Error, Unrecovered Seek error, Recovered Seek Error, Not Ready and Other Errors. Each has three types of counters indicated as Today, 7 days and Total. Refer to [1], (4) for the Over Rate Counter Display. In the OVER RATE Display, the error ratio which has the largest number among those classified types is displayed for each drive to represent each error.

The warning SIMs to be reported in the ORM are shown below.

ORM SIM and Reference Code

No	Error Type	Reference Code	Meaning
1	Unrecovered Read Error	5020	Drive Media Error
2	Recovered Read Error		
3	Unrecovered Seek Error	5010	Drive Unit Error
4	Recovered Seek Error		
5	Not Ready		
6	Other Errors		

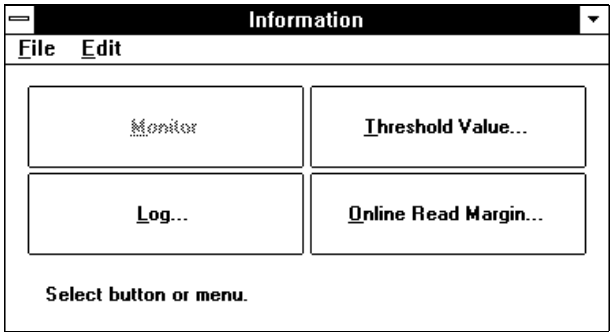
Copyright ©1997, Hitachi, Ltd.

[1] Displaying an error count, thresholds, and log ---------- SVP02-270
[2] Resetting an error count ---------- SVP02-300
[3] Displaying thresholds ---------- SVP02-320
[4] Altering a threshold ---------- SVP02-330
[5] Displaying the ORM running status ---------- SVP02-350
[6] Resetting thresholds ---------- SVP02-360

(1) Check SVP Mode.
Following operation needs SVP Mode is 'Modify'. (See SVP 01-70)
[2] Resetting an error count
[4] Altering a threshold
[6] Resetting thresholds

(2) Select (CL) the [Information] in the 'SVP' window.

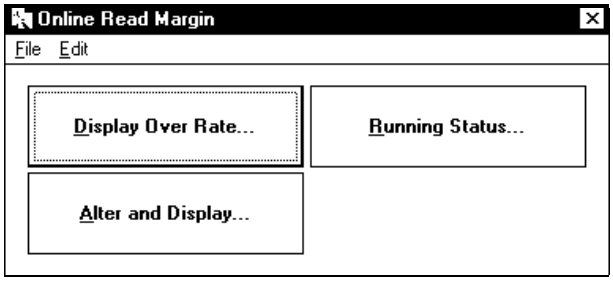
(3) Select (CL) [Online Read Margin...] in the 'Information' window.



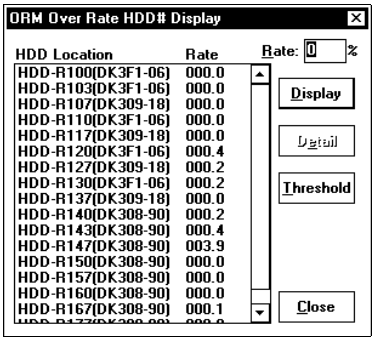
Copyright ©1997,1998, Hitachi, Ltd.

[1] Displaying an error count, thresholds, and log

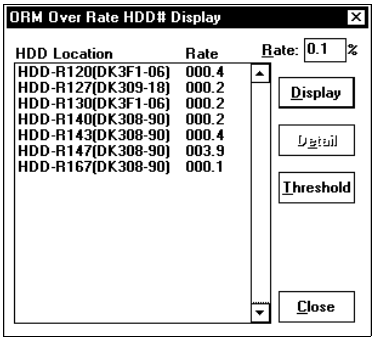
(1) Select (CL) [Display Over Rate...] in the 'Online Read margin' window.



(2) Enter a number from 0 to 100 at "Rate" in the 'ORM Over Rate HDD# Display' dialog box. Select (CL) [Display]. Then only the HDDs which have the rate of equal to or greater than the input number at "Rate" will appear in the display.
Rate : ratio of the number of errors for the threshold value.

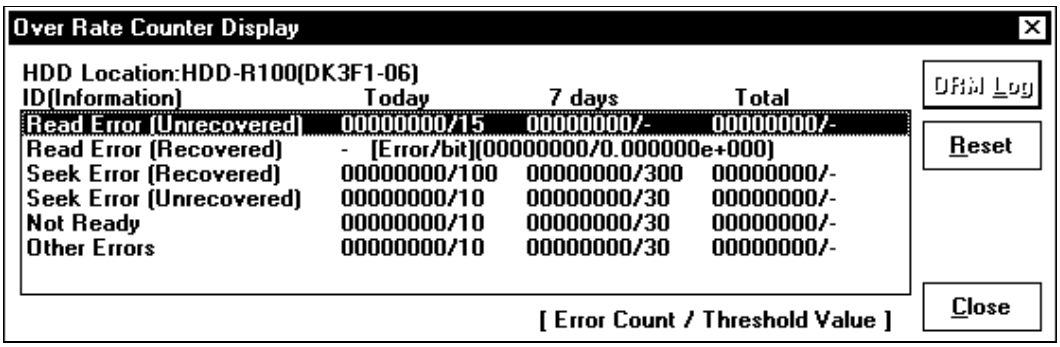


(3) When more detail information is needed for the particular drive, select (CL) the HDD from the "HDD Location" list box. Select (CL) [Detail].



Copyright ©1997,1998, Hitachi, Ltd.

(4) In the 'Over Rate Counter Display' dialog box, select (CL) the error for which detailed log is to be displayed from the "ID" list box. Select (CL) [ORM LOG].



The errors detected in the ORM are classified into six types of error category. Each error has the following definition.

a) Read Error [Unrecovered]
A disk media error was detected. After ten times retries, the error was judged that it might become a serious media error which could not be recovered with ECC or retries.

b) Read Error [Recovered]
A disk media error was detected. After ten times retries, the error was judged that it was an intermittent read error and recoverable, and included in the error rate management for the preventive maintenance.

c) Seek Error [Recovered]
A seek error was detected. After ten times retries, the error was judged to be recoverable.

d) Seek Error [Unrecovered]
A seek error was detected. After ten times retries, the error was judged to be unrecoverable.

e) Not Ready
Not Ready status of the drive was detected.

f) Other Errors
Any error which does not belong to the above classification was detected.

They are also managed with different time periods. "Today" is for one day count and cleared at AM 0:00 every day. "7 days" is for the cumulative value in the latest 7 days. "Total" shows the total cumulative count.

In this Over Rate Counter Display, each error category indicates the Error Count and the Threshold value except for the Read Error [Recovered]. The "-" for the Threshold value means no threshold is set.

Only the Read Error [Recovered] has an error rate expression. It is not managed with error count per day, per 7 days or Total. The error rate of the Read Error [Recovered] is calculated in the following formula:

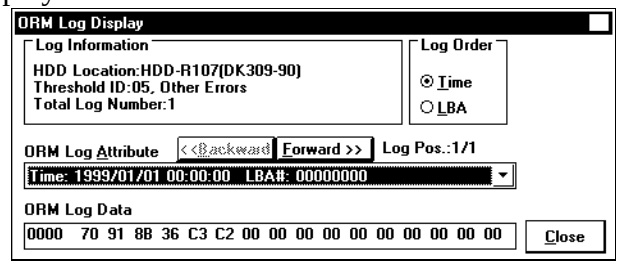
Error rate = Number of error sectors/Number of ORM scan bits

Note 1) Only the result from approximately the latest one volume scan in ORM is used for the calculation.

Copyright ©1997,1998, Hitachi, Ltd.

In the example display, “4.13e-011” means the error rate is “3.18×10^{-10}”. This is corresponding to the raw error count and scan bits shown as “00000001/2.422270e+010”, where the error count is one sector and the scan bits is 2.422270×10^{10}.

(5) The nature of the error selected in step (4) is displayed.
(In this example, the nature of “Other Errors” is displayed.)



Byte	Bit	Name	Explanation
0 - 3		UCT	Time when the diagnostic result was reported from the DKC to the SVP
4	7	Log Valid	When this bit is 1, it indicates that this log is valid.
	6	Address Valid	When this bit is 1, it indicates that the address information in bytes 8 to F is valid
	5 - 4	(Reserved)	Reserved
	3 - 0	Sense Key	Error sense key in the SCSI drive report. (*1)
5		Additional Sense Code	Additional sense code in the SCSI drive report .(*1)
6		Sense Code Qualifier	Additional sense code qualifier in the SCSI drive report. (*1)
7		Seek Error Count	Number of seek errors within 10 seek error retries.
8 - 9		CC	Address of the cylinder where the error occurred.
A		H	Address of the head where the error occurred.
B		S	Address of the sector where the error occurred.
C - F		LBA	LBA where the error occurred.

*1 Definition and contents of the error codes are same as those of the SSB for ordinary DKU errors.

(6) Select (CL) [Close] in the ‘ORM Log Display’ dialog box.

(7) Select (CL) [Close] in the ‘Over Rate Counter Display’ dialog box.

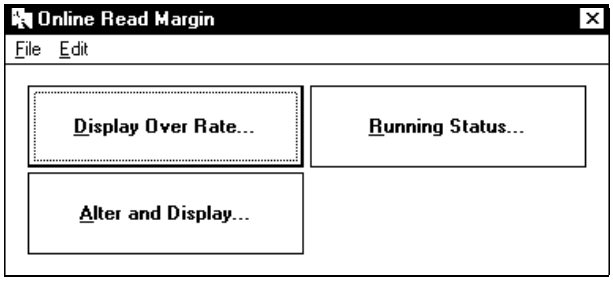
(8) Select (CL) [Close] in the ‘ORM Over Rate HDD# Display’ dialog box.

(9) Close the ‘Information’ window.

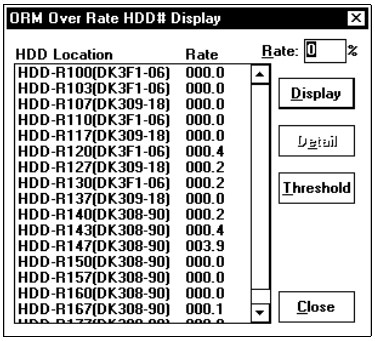
Copyright ©1997,1999, Hitachi, Ltd.

[2] Resetting an error count

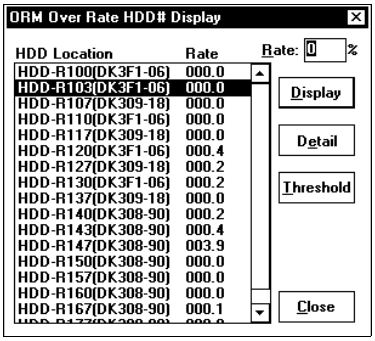
(1) Select (CL) [Display Over Rate...] in the 'Online Read Margin' window.



(2) Enter a number from 0 to 100 at 'Rate' in the 'ORM Over Rate HDD# Display' dialog box. Select (CL) [Display]. Then only the HDDs which have the rate of equal to or greater than the input number at "Rate" will appear in the display.
Rate : ratio of the number of errors for the threshold value.

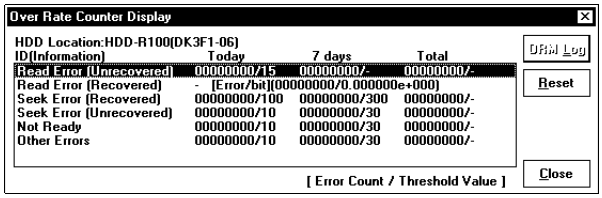


(3) In the 'ORM Over Rate HDD# Display' dialog box, select (CL) the HDD for which an error count and thresholds are to be reset from the "HDD Location" list box. Select (CL) [Detail].

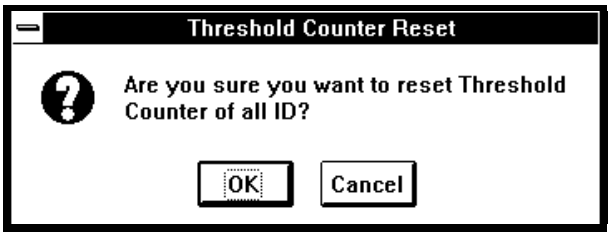


Copyright ©1997,1998, Hitachi, Ltd.

(4) In the ‘Over Rate Counter Display’ dialog box, select (CL) [Reset].



(5) Select (CL) [OK] in the ‘Threshold Counter Reset’ dialog box.



(6) Select (CL) [Close] in the ‘Over Rate Counter Display’ dialog box.

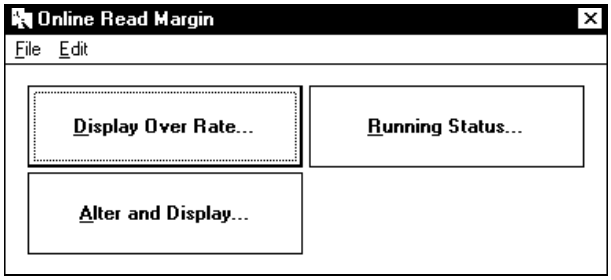
(7) Select (CL) [Close] in the ‘ORM Over Rate HDD# Display’ dialog box.

(8) Close the ‘Information’ window.

Copyright ©1997,1998, Hitachi, Ltd.

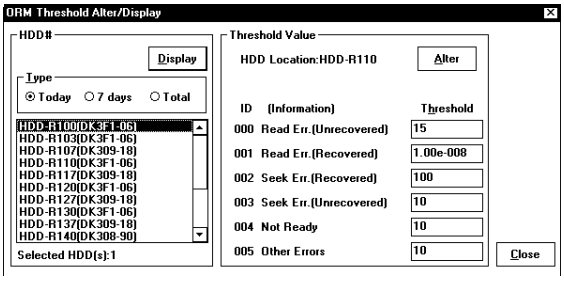
[3] Displaying thresholds

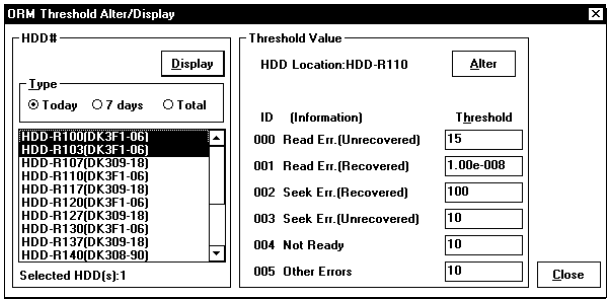
(1) Select (CL) [Alter and Display] in the 'Online Read Margin' window.



(2) In the 'ORM Threshold Alter/Display' dialog box, select (CL) an HDD from the "HDD#" list box and select (CL) [Display]. In order to display threshold of another interval, select (CL) the interval from the "Type" list box.

Note: Multiple HDDs can be selected (CL) from the "HDD#" list box while the control key is being held down. In this case, each "Threshold" field in the "Threshold Value" list box shows the threshold for the HDD that is highlighted in the "HDD#" list box.



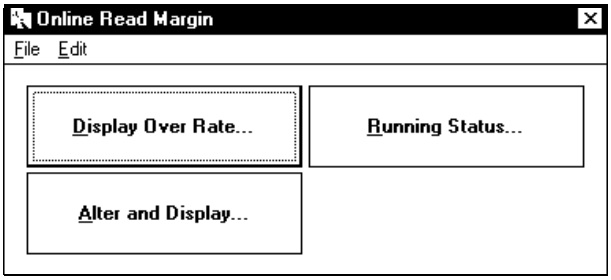


(3) Select (CL) [Close] in the 'ORM Threshold Alter/Display' dialog box and close the 'Information' window.

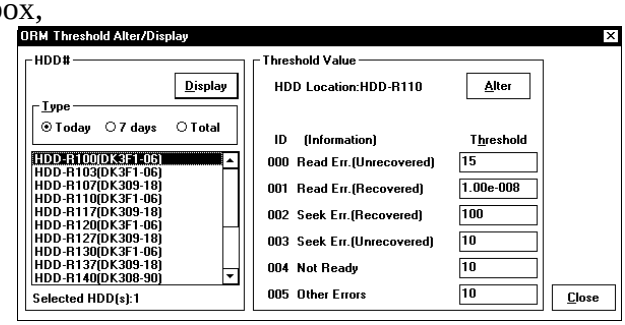
Copyright ©1997,1998, Hitachi, Ltd.

[4] Altering a threshold

(1) Select (CL) [Alter and Display...] in the 'Online Read Margin' window.

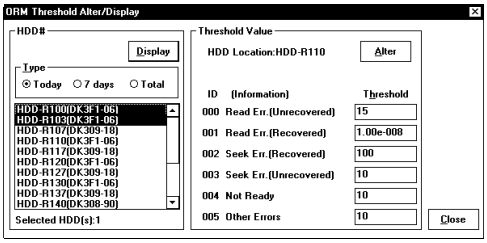


(2) In the 'ORM Threshold Alter/Display' dialog box, select (CL) an HDD from the "HDD#" list box and select (CL) [Display]. In order to display threshold of another interval, select (CL) the interval from the "Type" list box.



(3) In the 'ORM Threshold Alter/Display' dialog box, alter the threshold in the "Threshold" field in the "Threshold Value" list box. Then select (CL) [Alter].

Note: When multiple HDDs are selected in the "HDD#" list box, the thresholds of all HDDs are altered to the same value.



Copyright ©1997,1998, Hitachi, Ltd.

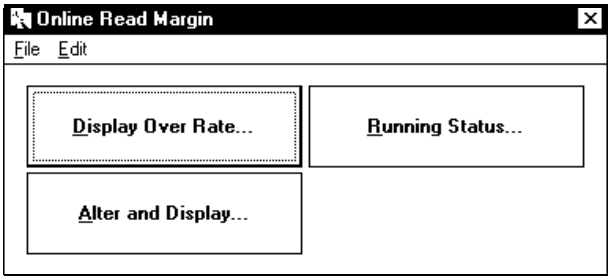
(4) Select (CL) [OK] in the 'Alter Threshold Value' dialog box.

(5) Select (CL) [Close] in the 'ORM Threshold Alter/Display' dialog box and close the 'Information' window.

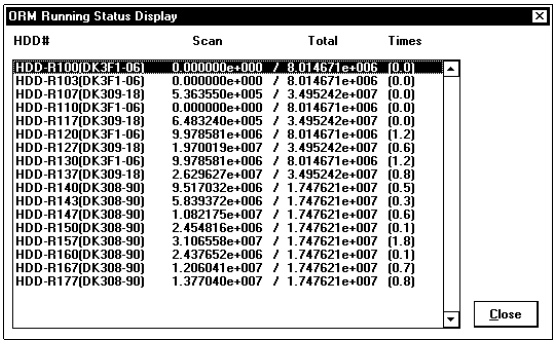
Copyright ©1997,1998, Hitachi, Ltd.

[5] Displaying the ORM running status

(1) Select (CL) [Running Status...].



(2) In the 'ORM Running Status Display' dialog box, the ORM running status is displayed as the number of sectors.
Note: The "HDD#" list box shows the location numbers of HDDs. "Scan" shows the number of scanned sectors.
"Total" shows the total number of sectors in the drive. "Times" shows the number of times the entire drive was scanned.

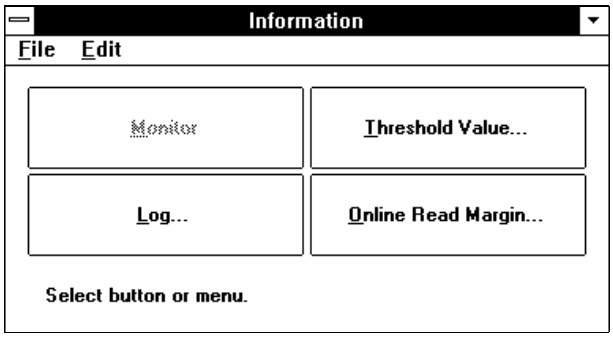


(3) Select (CL) [Close] in the 'ORM Running Status Display' dialog box and close the 'Information' window.

Copyright ©1997,1998, Hitachi, Ltd.

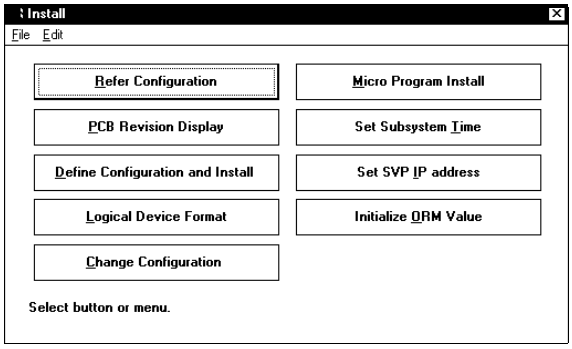
[6] Resetting thresholds

(1) Select (CL) [File]-[Exit] in the 'Information' window.

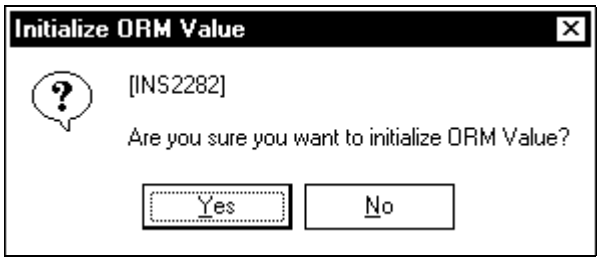


(2) Select (CL) [Install] in the 'SVP'.

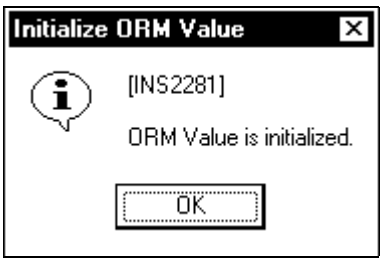
(3) Select (CL) [Initialize ORM Value] in the 'Install' window.



(4) Select (CL) [Yes] in the 'Initialize ORM Value' dialog box.



(5) Select (CL) [OK] in the 'Initialize ORM Value' dialog box.



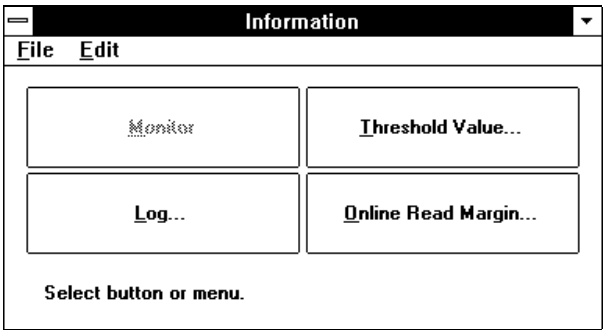
Copyright ©1997,1998, Hitachi, Ltd.

2.7 SIM Reporting Specification

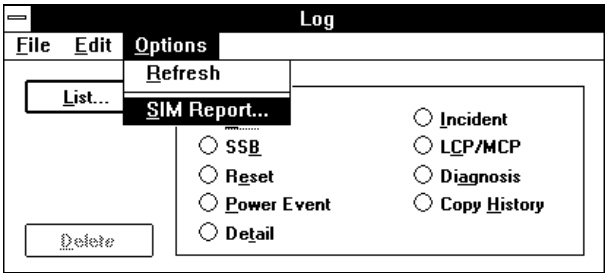
[1] DKC SIM
[2] Cache SIM
[3] Media SIM
[4] Device SIM

(1) Select (CL) [Information].

(2) Select (CL) [Log...] in the 'Information'.



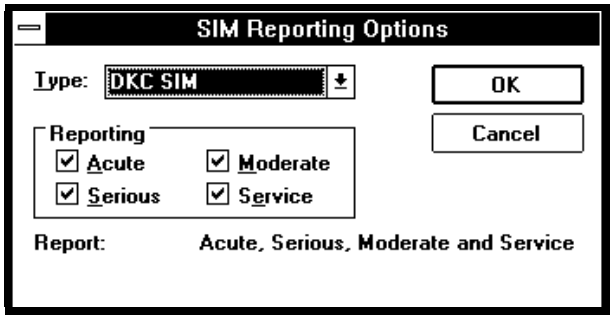
(3) Select (DR) [SIM Report...] from the [Options] menu in the 'Log' dialog box.



Copyright ©1997, 1998, Hitachi, Ltd.

(4) Select (CL) SIM report type from the 'Type' list box.

Type : DKC SIM
Cache SIM
Media SIM
Device SIM



Select (CL) the level to be reported in the 'SIM Reporting Option' dialog box, and also select (CL) [OK].

SIM message report level are arranged as follows in order of the higher level.
Acute > Serious > Moderate > Service
Selecting of a level means all higher levels are to be reported.

(5) Close the 'Log' dialog box and also close the 'Information' window.

Copyright ©1997, Hitachi, Ltd.

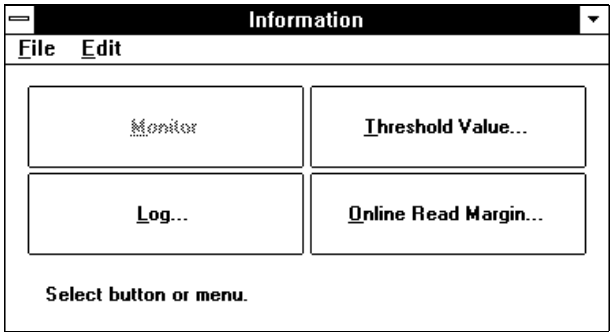
2.8 Management of drive threshold values

[1] Displaying threshold values ---------- SVP02-400
[2] Altering threshold value ---------- SVP02-410
[3] Displaying an error count ---------- SVP02-430
[4] Resetting an error count ---------- SVP02-440

(1) Check SVP Mode.
Following operation needs SVP Mode is 'Modify'. (See SVP01-70)
[2] Altering threshold value
[4] Resetting an error count

(2) Select (CL) the [Information] in the 'SVP' window.

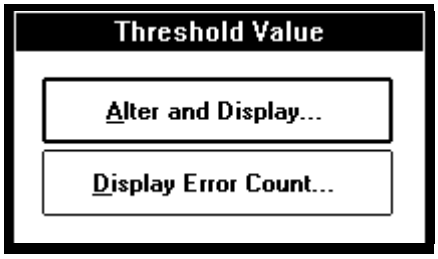
(3) Select (CL) [Threshold Value...] in the 'Information'.



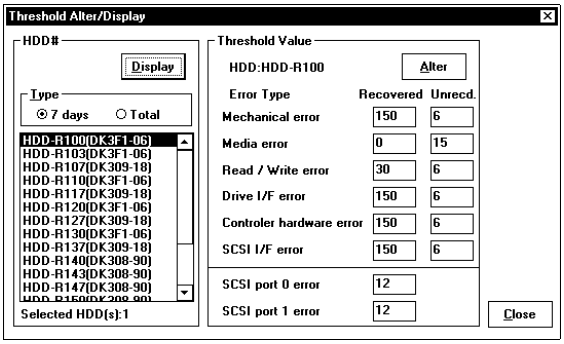
Copyright ©1997, 1998, Hitachi, Ltd.

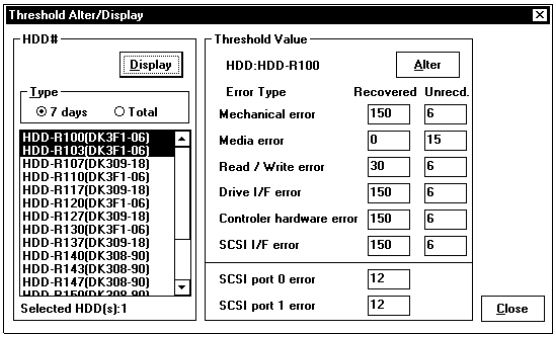
[1] Displaying threshold values

(1) Select (CL) [Alter and Display...] in the 'Threshold Value'



(2) Select (CL) an HDD location from the "HDD#" list box in the 'Threshold Alter/Display' dialog box and select (CL) [Display].
In order to display threshold of another interval, select (CL) the interval from the "Type" list box.
Note: Multiple HDD locations can be selected (CL) from the "HDD#" list box while the control key being held down. The threshold value in the "Threshold Value" list box shows the threshold value for the HDD location that is highlighted in the "HDD#" list box.
Recovered: Threshold of errors recoverable by retry.
Unrecd: Threshold of errors not recoverable by retry.



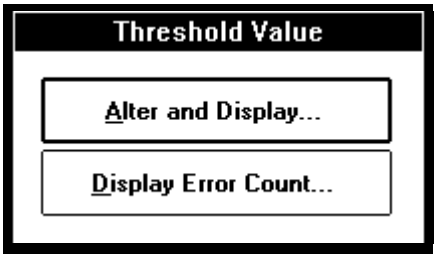


(3) Select (CL) [Close] in the 'Threshold Alter/Display' dialog box and close the 'Information' window.

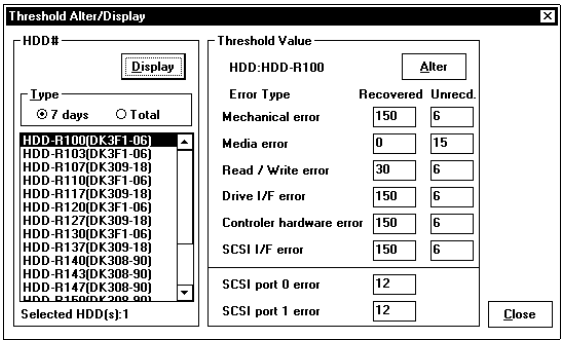
Copyright ©1997,1998, Hitachi, Ltd.

[2] Altering threshold value

(1) Select (CL) [Alter and Display...] in the 'Threshold Value'.

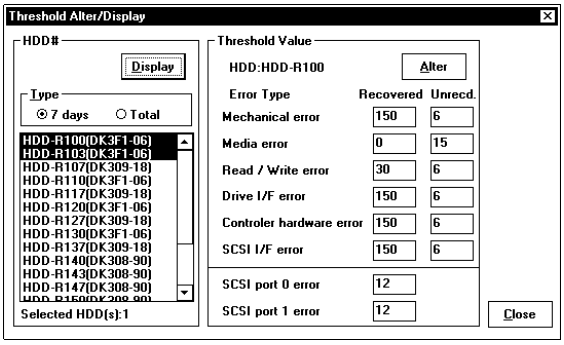


(2) Select (CL) an HDD location from the "HDD#" list box in the 'Threshold Alter/Display' dialog box and select (CL) [Display]. In order to display threshold of another interval, select (CL) the interval from the "Type" list box.



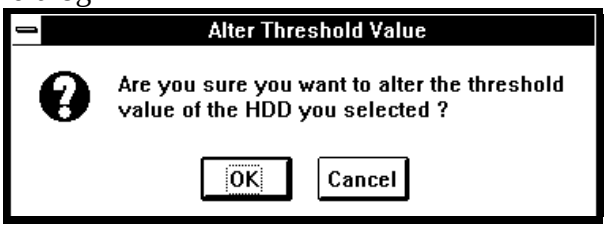
(3) Alter a threshold value in the "Threshold Value" list box in the 'Threshold Alter/Display' dialog box. Then select (CL) [Alter].

Note: When multiple HDD location are selected (CL) from the "HDD#" list box while the control key being hold down, the thresholds for the all selected HDDs are modified to the same value.



Copyright ©1997, 1998, Hitachi, Ltd.

(4) Select (CL) [OK] in the 'Alter Threshold Value' dialog box.

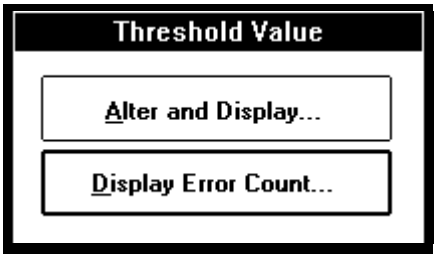


(5) Select (CL) [Close] in the 'Threshold Alter/Display' dialog box and close the 'Information' window.

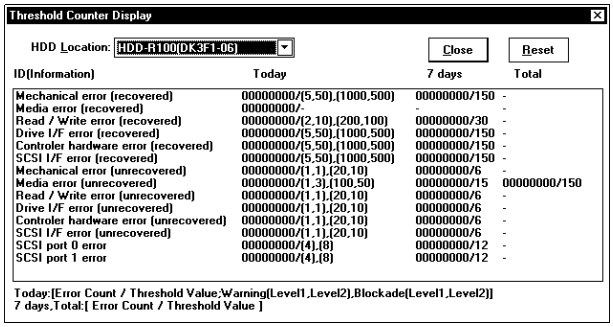
Copyright ©1997, Hitachi, Ltd.

[3] Displaying an error count

(1) Select (CL) [Display Error Count...] in the 'Threshold Value'.



(2) Select (CL) an HDD location from the "HDD Location" drop-down list in the 'Threshold Counter Display' dialog box to display the error count for the HDD.

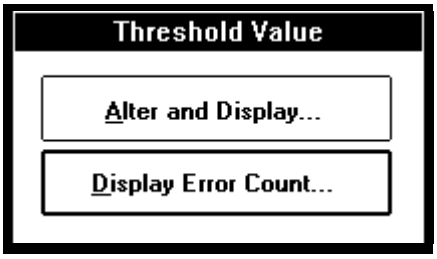


(3) Select (CL) [Close] in the 'Threshold Counter Display' dialog box and close the 'Information' window.

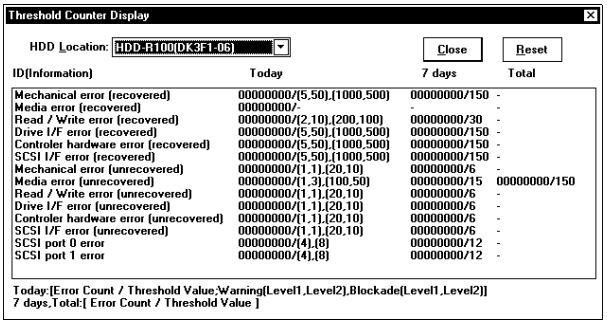
Copyright ©1997, 1998, Hitachi, Ltd.

[4] Resetting an error count

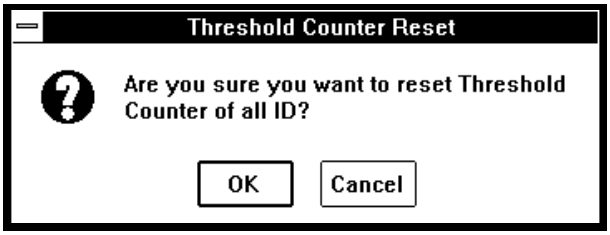
(1) Select (CL) [Display Error Count...] in the 'Threshold Value'.



(2) Select (CL) the HDD location , for which you want to reset the error count, from the "HDD Location" drop-down list in the 'Threshold Counter Display' dialog box and also select (CL) [Reset].

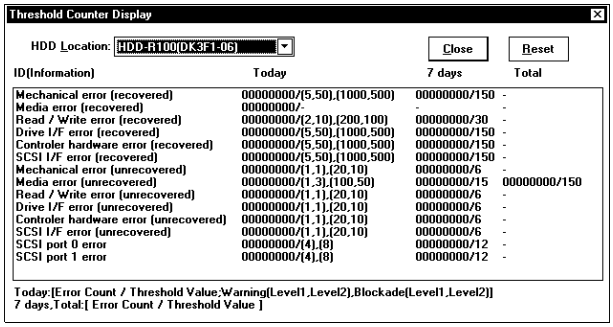


(3) Select (CL) [OK] in the 'Threshold Counter Reset' dialog box.



Copyright ©1997, 1998, Hitachi, Ltd.

(4) After confirming that the error count has been reset in the 'Threshold Counter Display' dialog box select (CL) [Close] and close the 'Information' window.



Copyright ©1997, 1998, Hitachi, Ltd.

2.9 DUMP/LOG FD Copy

Auto DUMP is useful because you can select the dump data type and the output media.
When you use Auto Dump (refer to “2.11 Dump”), please select Type (Rapid) and Media (FD or HDD).

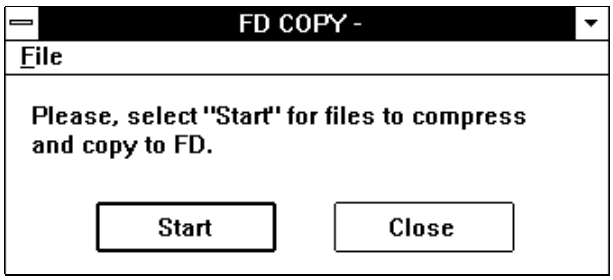
Note) You can use FD Copy as usual.

The first operation.
(1) Select (CL) [FD Copy].

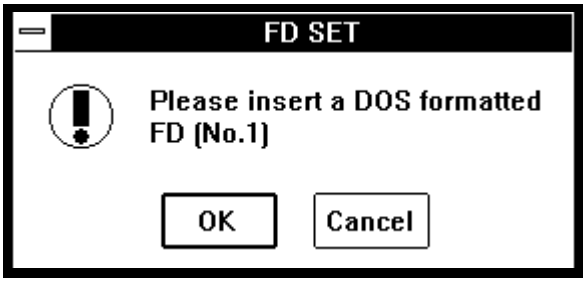
Copyright ©1997, 1999, Hitachi, Ltd.

Copying the dump and log files to a floppy disk.

(1) Select (CL) [Start] in the ‘FD Copy” dialog box.

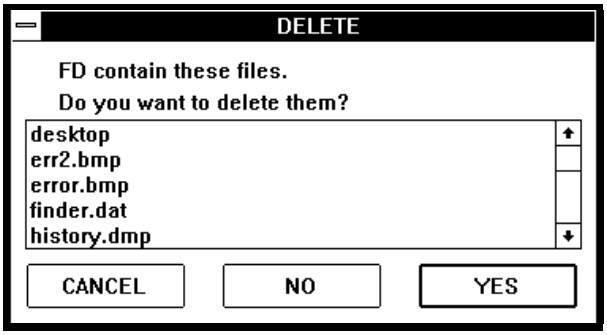


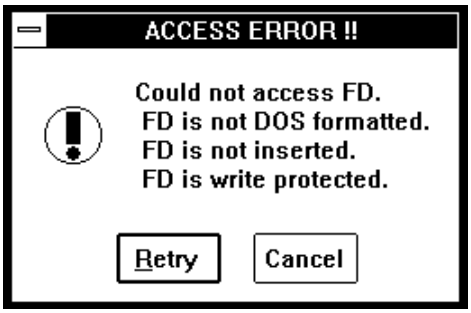
(2) The message “Please insert a DOS formatted FD (NO.1) ” will be displayed in the ‘FD SET’ dialog box.
In response to this message, insert a floppy disk and select (CL) [OK].



Copyright ©1997, Hitachi, Ltd.

(3) If the floppy disk contains files, the message “FD contain these files. Do you want to delete them ?” is displayed.
If you want to delete these files, select (CL) [YES] and proceed to step (4).
If you don’t want to delete these files, select (CL) [NO] and proceed to step (4).
If an error occurs, check the items indicated by the ‘ACCESS ERROR!!’ dialog box then select (CL) [Retry].
(You will go to the beginning of step (4).)





(4) The message “Compressing files...” is displayed, and compressing is started.

(5) The message “Copying files to FD...” is displayed, and copying is started.
(If the capacity of the floppy disk becomes insufficient, go back to step (2) and replace the floppy disk with a new one.)

Copyright ©1997,1998, Hitachi, Ltd.

(6) The message “Delete DUMP files in HDD.” is displayed in the ‘DUMP DELETE’ dialog box.
Select (CL) [OK] and delete DUMP files in HDD.

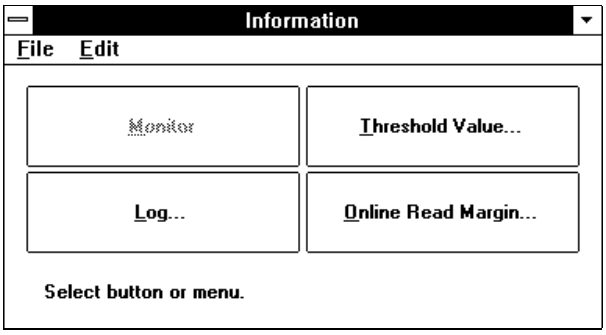
(7) Close the ‘Fdcopy’ dialog box.

Copyright ©1997,1998, Hitachi, Ltd.

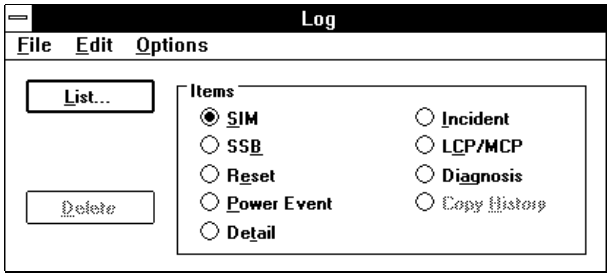
2.10 SIM Log Complete

(1) Select (CL) [Information].

(2) Select (CL) [Log...] in the 'Information' dialog box.

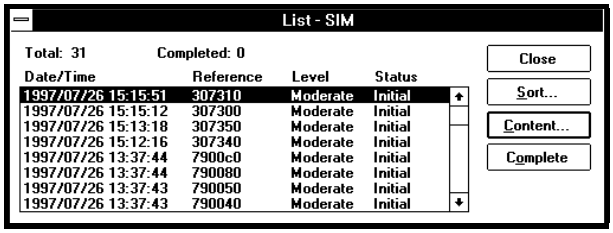


(3) Select (CL) [SIM] and [List...] in the 'Log'.

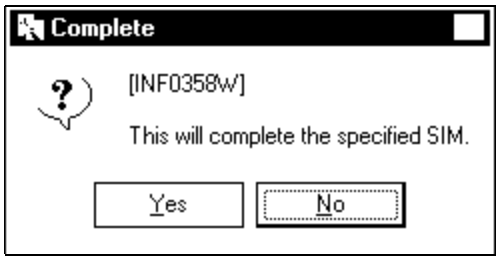


Copyright ©1997,1998, Hitachi, Ltd.

(4) Select (CL) data to be completed in the 'List-SIM' dialog box and select (CL) [Complete].

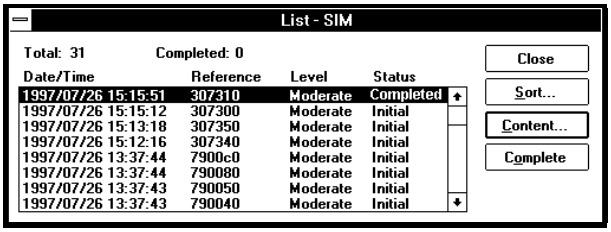


(5) Select (CL) [Yes] in the 'Complete' dialog box.



Copyright ©1997,1998, Hitachi, Ltd.

(6) In the ‘List-SIM’ dialog box, make sure that “Completed” is displayed in the status.



(7) Select (CL) [Close] in the ‘List-SIM’ dialog box.
Close the ‘Log’ dialog box and close the ‘Information’ window.

Copyright ©1997, Hitachi, Ltd.

2.11 Dump

Auto Dump is useful because you can select the dump data type and the output media.
So please use Auto Dump in order to get dump information.

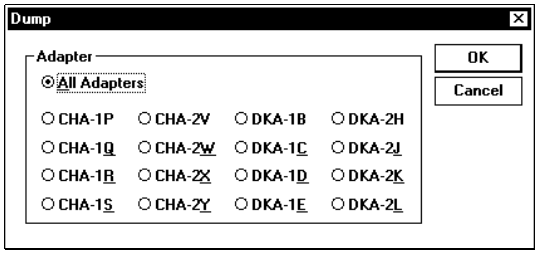
Note 1) Please use DUMP in order to select MP.
Note 2) You can use DUMP as usual.

[1] Manual Dump

(1) Select (CL) [Dump] in the 'SVP' window.

Copyright ©1997,1999, Hitachi, Ltd.

(2) Select (CL) processor in the [Adapter] in the 'Dump' dialog box, and select (CL) [OK]. [All Adapters] indicates that dumps for all processors are collected.

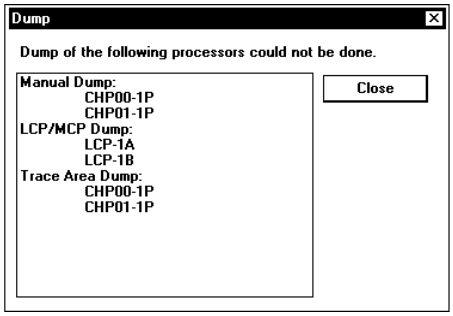


(3) The message "Receiving memory dump..." "Receiving trace area dump..." "Receiving LCP/MCP dump..." is displayed.
Note: "LCP" is displayed as a processor name during the collection of the dump for MCP. (Within about 1 minute)

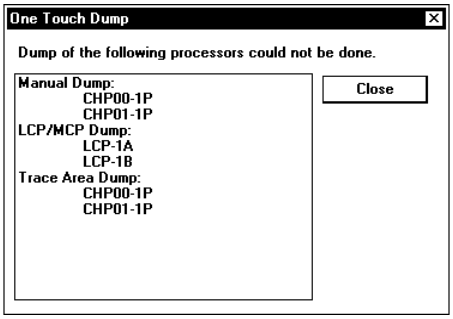
If the memory dump is finished normally, please go to (6).
If some errors occur, please go to (4).

(4) When some errors occur, SVP displays a following dialog box.
After the operation in (4-1) or (4-2), please go to (1) to retry the collection of the dump.

(4-1) Select (CL) [Close] in the 'Dump' dialog box.



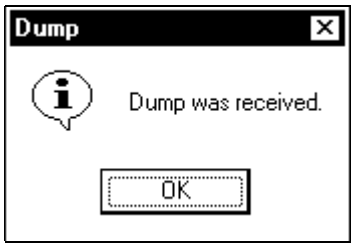
(4-2) If you selected [All Adapters] at step (2), select (CL) [Close] in the 'One Touch Dump'.



Copyright ©1997,1998, Hitachi, Ltd.

(5) If you want to copy the Dump file to a floppy disk, perform ‘Dump FD Copy’.
(Refer to 2.9 DUMP/LOG FD Copy)

(6) The message “Dump was received” is displayed in the ‘Dump’ dialog box, and select (CL) [OK].

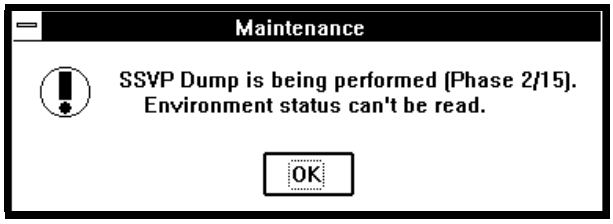


Copyright ©1997,1998, Hitachi, Ltd.

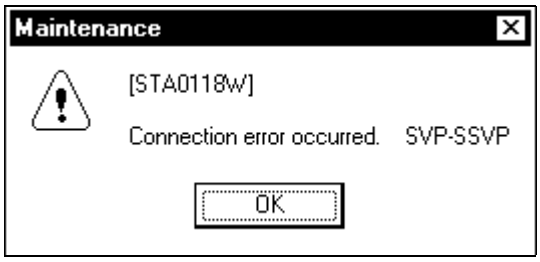
[2] SSVP DUMP

(1) Push the SSVP DUMP switch.
(see “3.2 Other switches and LEDs” on page LOCATION03-40.)

(2) Open Maintenance display (see SVP section). Confirm that the message “SSVP Dump is being performed [XXXX]. Environment status can’t be read.” is displayed and select (CL) [OK].



If the message “Connection error occurred. SVP-SSVP” is displayed, check the wiring connection and select (CL) [OK] to start from step (1) again. If step (1) is performed three times and the same message “Connection error occurred. SVP-SSVP”is displayed, replace SSVP (see REP01-150).



(3) SSVP ALARM lamp blinks after completion of dump.
(Within about 40 minutes after performing step (1))

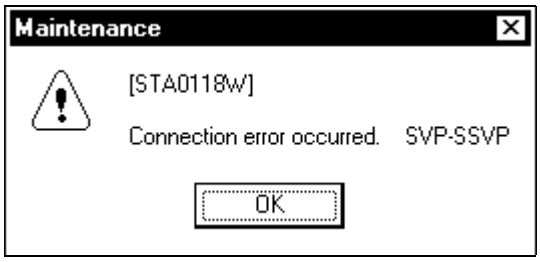
(4) Copy dump file to FD.
Perform “2.9 DUMP/LOG FD Copy” on page SVP02-460.

Copyright ©1997,1998, Hitachi, Ltd.

(5) Push SSVP Alarm Reset switch and implement SSVP again.
(see “3.2 Other switches and LEDs” on page LOCATION03-40.)

(6) Open Maintenance display.
Confirm that the message “Initializing SSVP [XXXX]. Please wait.” is displayed and select (CL) [OK].

If the message “Connection error occurred .SVP-SSVP” is displayed, select (CL) [OK] to perform step (5) again.
If step (5) is performed three times and the same message “Connection error occurred. SVP- SSVP” is displayed, replace SSVP (see REP01-150).



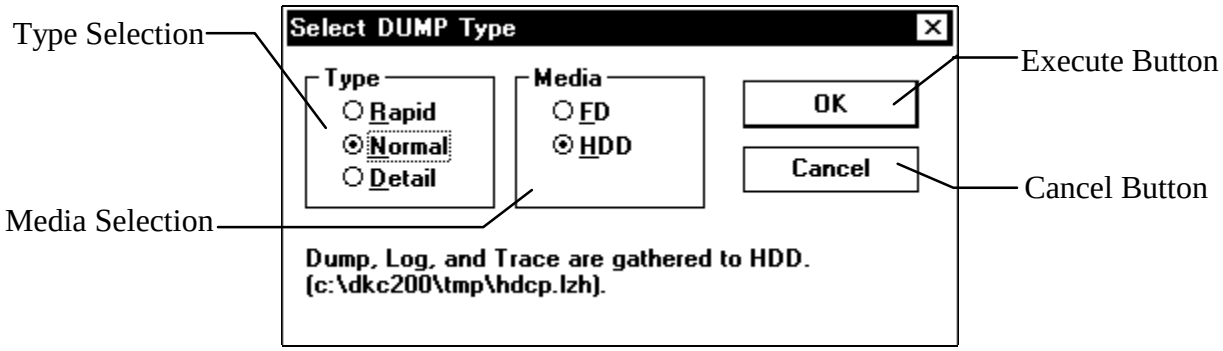
(7) Open Maintenance display again after waiting for about 20 minutes.
If two messages shown at step (6) are not displayed, the SSVP implementation is completed.

Copyright ©1997,1998, Hitachi, Ltd.

[3] Auto Dump

(1) Select(CL) [**AutoDump**] button

(2) Select one of three dump types and one of two media types, and select (CL) [OK].



<Dump Type>

(a)Rapid This dump type is to get log information, SVP operation history, or configuration information. SVP will compress these files automatically. The compressed files will be stored in a few FDs. This dump type will be used when the initial analysis of error is need. In this case, you should gather the files used by this type and send it to the Center. After sending this files, you should gather dump data by selection "Normal" type and send it to the Center to be able to analysis more detail.

(b)Normal This dump type is to get dump data (you can get DUMP information of all adapters.) adding to the log files used by "Rapid" type. SVP will compress these dump files automatically. You should get dump data by using this dump type after sending the "Rapid" type of data to Center.

(c)Detail This type is to get monitor information adding to the dump files used by "Normal" type. This data will be need when the performance of the DKC want to be checked. If there is no order to get these data, you do not need to use this type.

<Media>

(a)FDD SVP will store the compressed files to FD. If the data could not be hold in one FD, SVP will divide the compressed files into smaller files and store them into several FDs. If you cannot transfer the compressed files to your center from the SVP, you could use this media type to save files into several FDs and transfer them by using other PC which can connect to the center.

(b)HDD SVP will store the compressed files to HDD. The file name is "c:\dkc200\tmp\hdcp.lzh". If you can transfer the files to your center directly, this type will be useful. (Notice When operating the maintenance, SVP will sometimes delete the files. Do not use the maintenance operation before sending the files to your center.)

Copyright ©1999, Hitachi, Ltd.

(3) Executing Auto Dump
SVP will execute Auto Dump. Please refer to the following section during the process.
2.8 DUMP/LOG FD Copy
2.10 DUMP

(4) Finish Auto Dump
After finishing the auto dump function, SVP will display the message, "FD Copy was completed". Select (CL) [OK] to end this process.

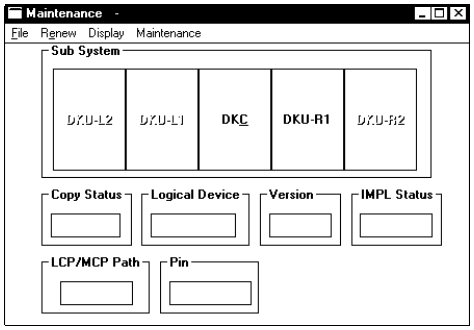
2.12 Logical Device Maintenance

2.12.1 Logical Device

[1] Physical Device List ---------- SVP02-600
[2] FORMAT Logical Device ---------- SVP02-610
[3] Block Logical Device ---------- SVP02-630
[4] Restore the Logical Device ---------- SVP02-650
[5] Refer the system configuration data ---------- SVP02-670
[6] Verify Logical Device ---------- SVP02-680
[7] LDEV recovery for multiple PDEV failure ---------- SVP02-700

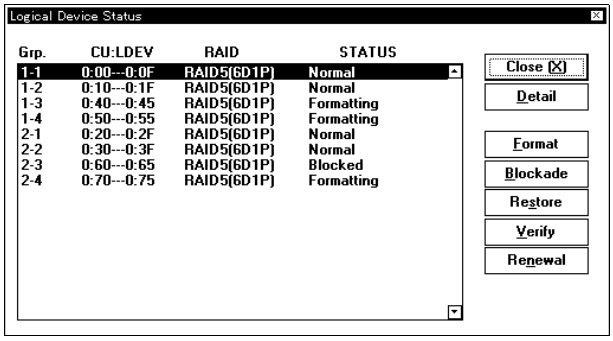
(1) Select (CL) the [Maintenance] in the ‘SVP’ window.

(2) Select (CL) [Logical Device] in the ‘Maintenance’.



Copyright ©1997,1998, Hitachi, Ltd.

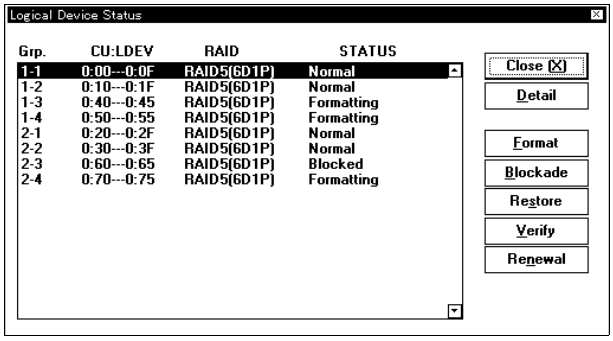
(3) “Logical Device Status” is displayed.



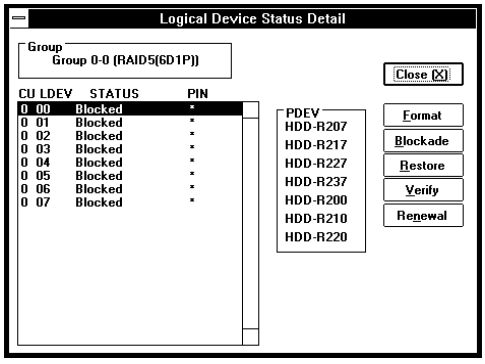
Copyright ©1997,1998, Hitachi, Ltd.

[1] Physical Device List

(1) Select (CL) an LDEV from the LDEV list box in the 'Logical Device Status' dialog box and select (CL) [Detail].



(2) 'Logical Device Status Detail' is displayed. And select (CL) [Close].



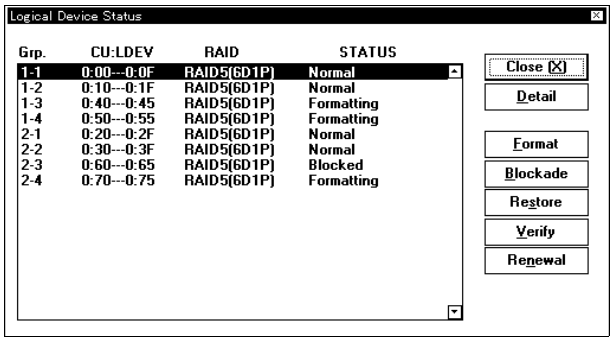
(3) Select (CL) [Close] in the 'Logical Device Status' dialog box. Close the 'General Status Display' window.

Copyright ©1997,1998, Hitachi, Ltd.

[2] FORMAT Logical Device

NOTICE
Executing this operation may cause a serious error such as a system down or a data loss. Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

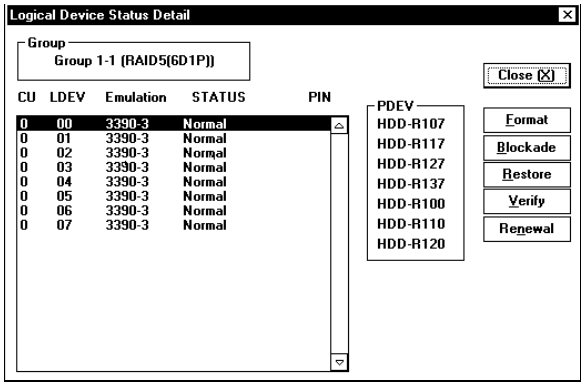
(1) Select (CL) ECC group from the LDEV list box in the 'Logical Device Status' dialog box.



Format by Ldev unit :
Select (CL) [Detail] -----Go to (2-1)
Format by ECC group :
Select (CL) [Format] ----Go to (2-2)
(It can select multiple item at once)

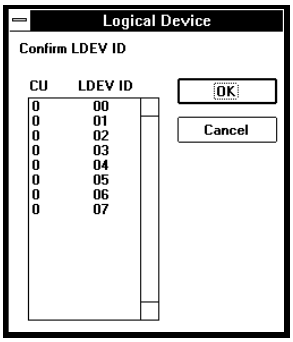
Note: Execute Format Logical Device after you confirm the target Logical Device is blocked.

(2-1) Select (CL) LDEVs which you want to format from "Logical Device Status Detail", and select (CL) [Format]. Go to (2-2).
(It can select multiple items at once.)



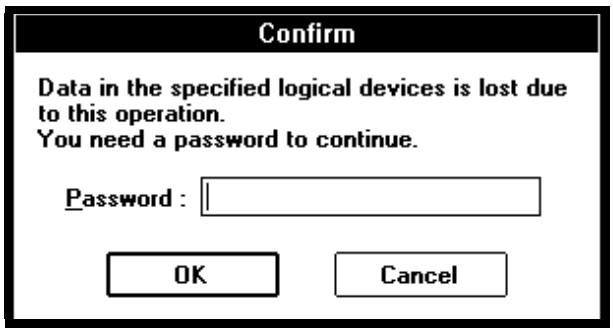
(2-2) Select (CL) corresponding LDEV from the LDEV ID list in the 'Logical Device' dialog box and select (CL) [OK].

If target LDEV was not blocked, return to 'Logical Device Status' dialog box.



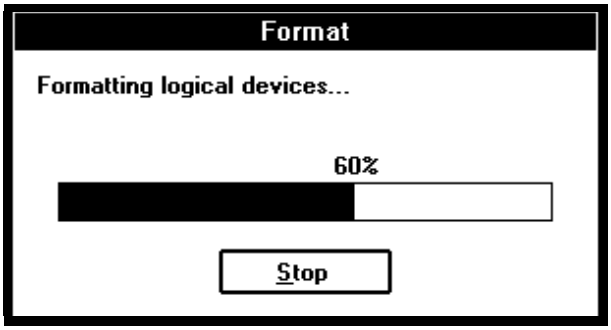
Copyright ©1997,1998, Hitachi, Ltd.

(3) "Data in the specified logical devices is lost due to this operation. You need a password to continue." is displayed.
Enter the password and select (CL) [OK].



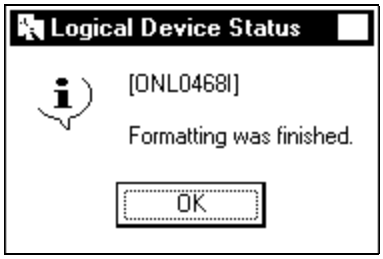
NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

(4) "Formatting the logical device..." is displayed.



NOTICE
When REFER CONFIG etc. is executed during LDEV FORMAT of open volume, there is the rare case that MAINTENANCE WINDOW may disappear. Then please reboot SVP and execute LDEV FORMAT again.
For your information, even if rebooting SVP, LDEV FORMAT is executed without intermission. When you open LDEV FORMAT WINDOW again, you can see the current status of LDEV FORMAT.

(5) Select (CL) [OK] in response to "Formatting was finished.".



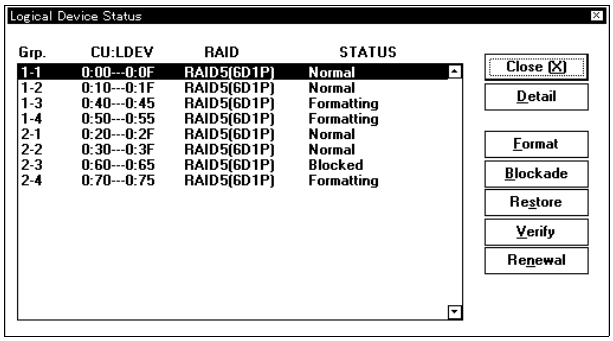
(6) Select (CL) [Close] in the 'Logical Device Status' dialog box.
Close the 'Maintenance' window.

Copyright ©1997,1998, Hitachi, Ltd.

[3] Block Logical Device

NOTICE
Executing this operation may cause a serious error such as a system down or a data loss. Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

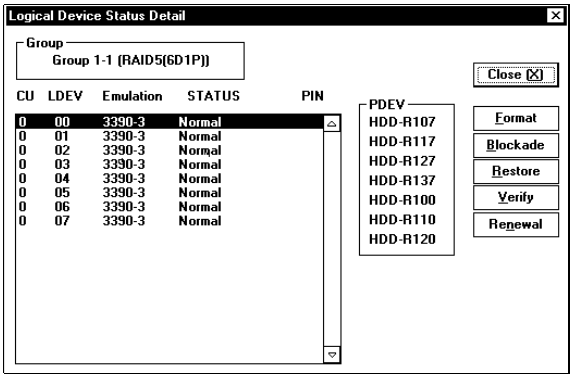
(1) Select (CL) ECC group from the LDEV list box in the 'Logical Device Status' dialog box.



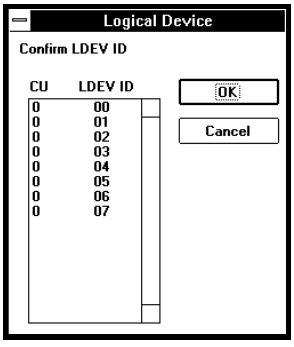
Blockade by Ldev unit :
Select (CL) [Detail] ------ Go to (2-1)
Blockade by ECC group :
Select (CL) [Blockade] -- Go to (2-2)
(It can select multiple item at once)

NOTICE
Execute Format Logical Device after you confirm the target Logical Device is blocked.

(2-1) Select (CL) LDEVs which you want to format from "Logical Device Status Detail", and select (CL) [Blockade]. Go to (2-2).
(It can select multiple items at once.)

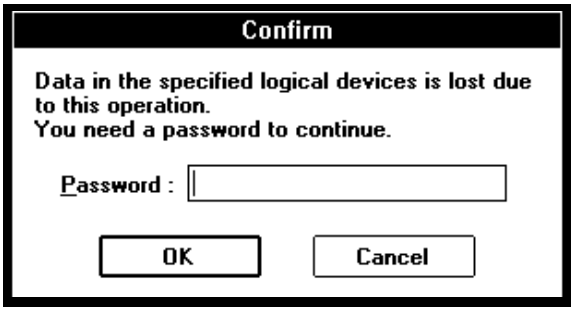


(2-2) Select corresponding LDEV from the LDEV ID list in the 'Logical Device' dialog box and select (CL) [OK].



Copyright ©1997,1998, Hitachi, Ltd.

(3) "Data in the specified logical devices is lost due to this operation. You need a password to continue." is displayed.
Enter the password and select (CL) [OK].



NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

(4) "Blocking the logical device..." is displayed.

(5) Select (CL) [OK] in response to "Blocking the logical device is completed.".

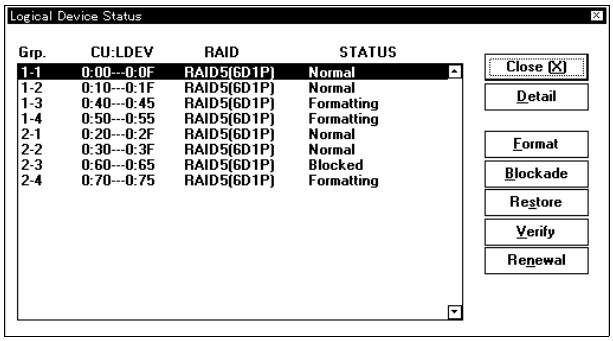
(6) Select (CL) [Close] in the 'Logical Device Status' dialog box.
Close the 'Maintenance' window.

Copyright ©1997,1998, Hitachi, Ltd.

[4] Restore the Logical Device

NOTICE
Executing this operation may cause a serious error such as a system down or a data loss. Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

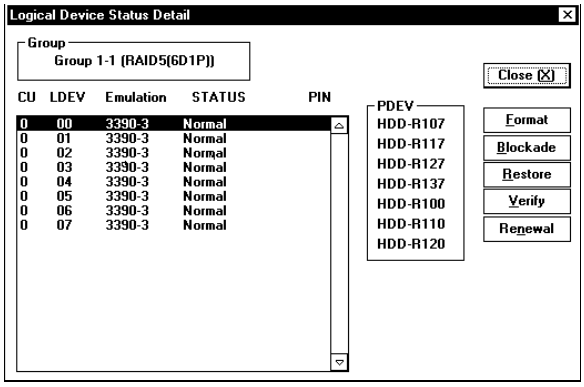
(1) Select (CL) ECC group from the LDEV list box in the 'Logical Device Status' dialog box.



Restore by Ldev unit :
Select (CL) [Detail] -----Go to (2-1)
Restore by ECC group :
Select (CL) [Restore]----Go to (2-2)
(It can select multiple item at once)

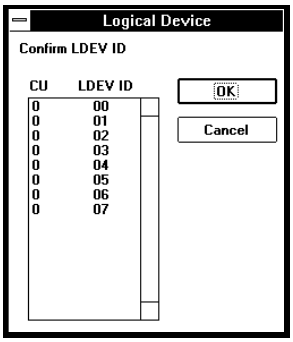
Note: Execute Restore Logical Device after you confirm the target Logical Device is blocked.

(2-1) Select (CL) LDEVs which you want to format from "Logical Device Status Detail", and select (CL) [Restore]. Go to (2-2).
(It can select multiple items at once.)



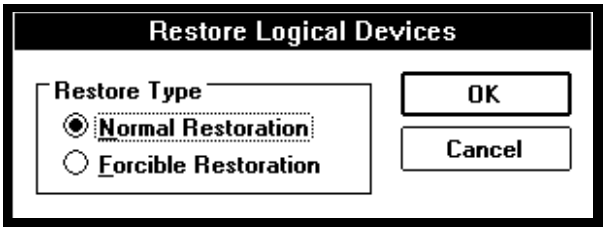
(2-2) Select (CL) corresponding LDEV from the LDEV ID list in the 'Logical Device' dialog box and select (CL) [OK].

If target LDEV was not blocked, return to 'Logical Device Status' dialog box.

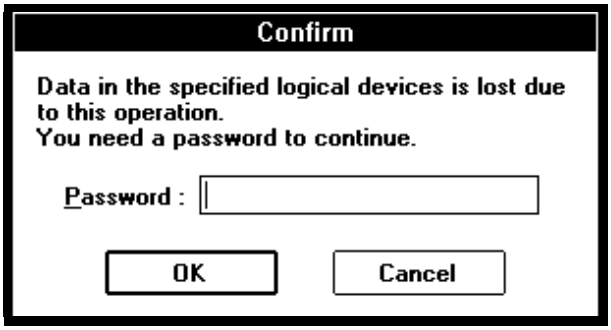


Copyright ©1997,1998, Hitachi, Ltd.

(3) Select (CL) corresponding item from the Restore Type in the 'Restore Logical Device' dialog box and select (CL) [OK].



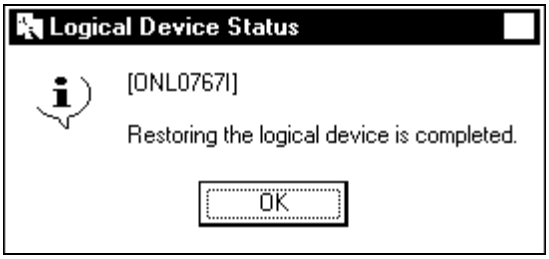
If "Forcible Restoration" is selected, the message "Data in the specified logical devices is lost due to this operation.
You need a password to continue." is displayed.
Enter the password and select (CL) [OK].



NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

(4) "Restoring..." is displayed.

(5) Select (CL) [OK] in response to "Restoring the logical device is completed.".

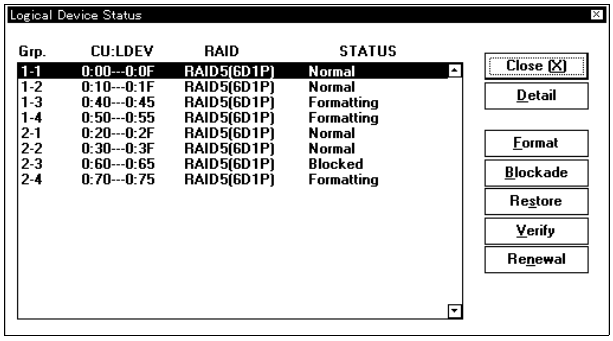


(6) Select (CL) [Close] in the 'Logical Device Status' dialog box.
Close the 'Maintenance' window.

Copyright ©1997,1998, Hitachi, Ltd.

[5] Refer the system configuration data

(1) Select (CL) [Renewal] in the ‘Logical Device Status’ dialog box.



(2) “Reading the subsystem configuration...” is displayed.

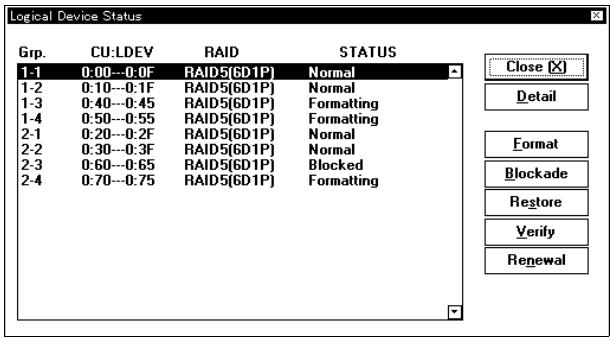
(3) Select (CL) [Close] in the ‘Logical Device Status’ dialog box.
Close the ‘Maintenance’ window.

Copyright ©1997,1998, Hitachi, Ltd.

[6] Verify Logical Device

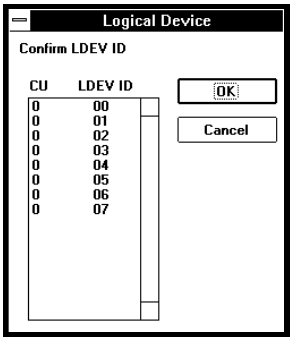
NOTICE
Executing this operation may cause a serious error such as a system down or a data loss. Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

(1) Select (CL) an LDEV from the LDEV list box in 'Logical Device Maintenance List' dialog box and select (CL) [Verify...].



(2) Select (CL) corresponding LDEV from the LDEV ID list in the 'Logical Device' dialog box and select (CL) [OK].

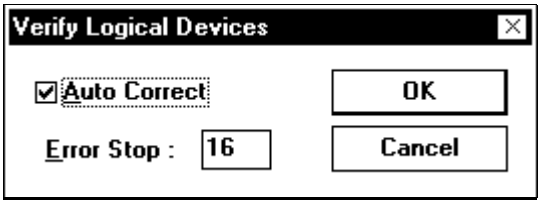
If target LDEV was not Normal, return to 'Logical Device Status' dialog box.



(3-1) Enter the password and select (CL) [OK].

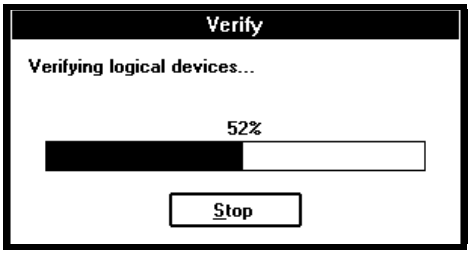
NOTICE
This is a special (exceptional) operation that can cause a serious failure such as a system down or a data loss and requires an input of a password. Ask the technical support center about the appropriateness of the operation, and input the password after getting an approval of executing the operation.

Select (CL) 'Auto Correct' or input the value of Error Stop, and select (CL) [OK].



Copyright ©1997,1998, Hitachi, Ltd.

(3-2) "Verifying logical devices..." is displayed.
If you want to stop the check, select (CL) [Stop].
Go to (6)
If the parity error is not beyond the 'Error Stop' value, go to (4).
If the error is beyond the value, go to (5).



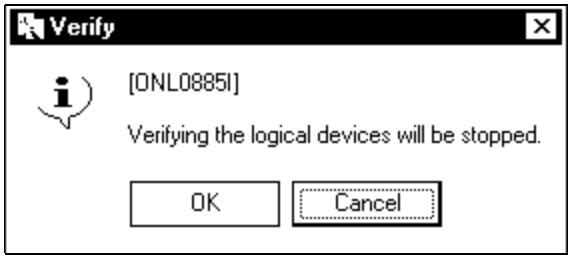
(4) If parity has errors less than the specified "Error Stop", "Verifying the logical devices is finished." is displayed.

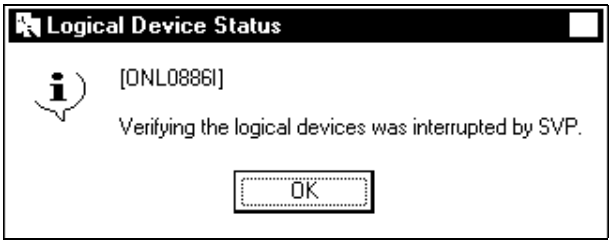
Go to (7)

(5) If parity has errors more than the specified "Error Stop", "Verifying the logical device is stopped." is displayed.

Go to (7)

(6) If [Stop] is selected (CL) and [OK] in response to inquiry message is selected (CL), "Verifying the logical devices was interrupted by SVP." is displayed.

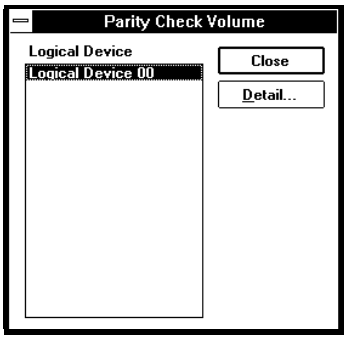




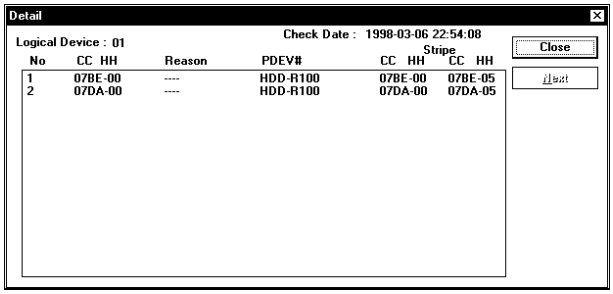
Copyright ©1997,1998, Hitachi, Ltd.

(7) Select (CL) [OK] in response to the message (4) ~ (6).
Select (CL) [Close] in the 'Logical Device Status' dialog box,
Close the 'Maintenance' window.

(8) LDEV to exist parity errors is displayed. Select (CL) LDEV to be indicated in the 'Parity Check Volume' dialog box and select (CL) [Detail...].



(9) Detail of parity errors.
(When "No." exist more than 17, select (CL) [Next].)



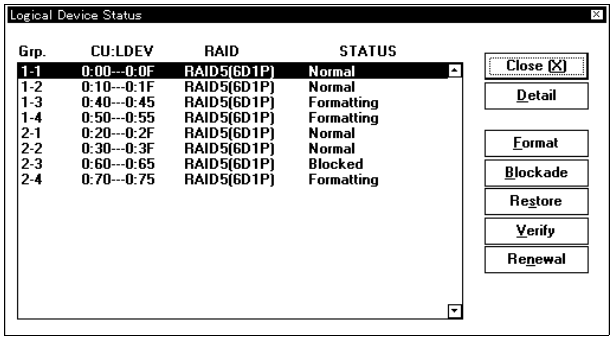
(10) Select (CL) [Close] in the 'Detail' dialog box.
Select (CL) [Close] in the 'Parity Check Volume' dialog box.

(11) Select (CL) [close] in the 'Logical Device Status' dialog box.
Close the 'Maintenance' window.

Copyright ©1998, Hitachi, Ltd.

[7] LDEV recovery for multiple PDEV failure

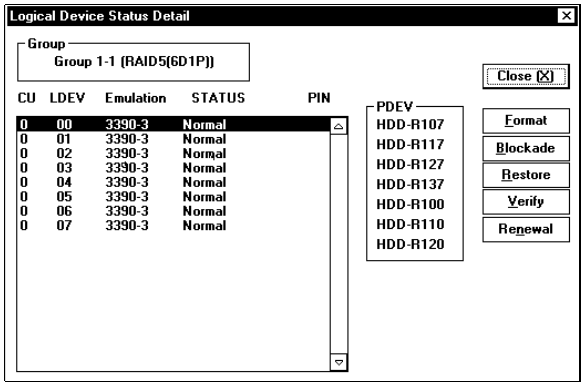
(1) Select (CL) ECC group from the LDEV list box in the 'Logical Device Status' dialog box.



Restore by Ldev unit :
Select (CL) [Detail] -----Go to (2-1)
Restore by ECC group :
Select (CL) [Restore]----Go to (2-2)
(It can select multiple item at once)

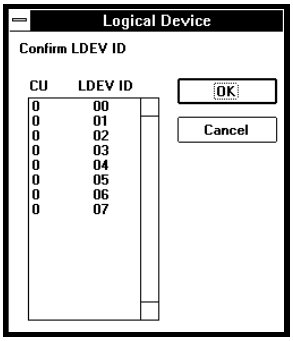
Note: Execute Restore Logical Device after you confirm the target Logical Device is blocked.

(2-1) Select (CL) LDEVs which you want to format from "Logical Device Status Detail", and select (CL) [Restore]. Go to (2-2).
(It can select multiple items at once.)



(2-2) Select (CL) corresponding LDEV from the LDEV ID list in the 'Logical Device' dialog box and select (CL) [OK].

If target LDEV was not blocked, return to 'Logical Device Status' dialog box.



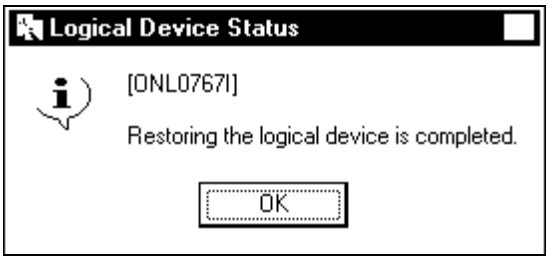
Copyright ©1997,1998, Hitachi, Ltd.

(3)

BLANK

(4) “Restoring...” is displayed.

(5) Select (CL) [OK] in response to “Restoring the logical devices is completed.”.



(6) Select (CL) [Close] in the ‘Logical Device Status’ dialog box.
Close the ‘Maintenance’.

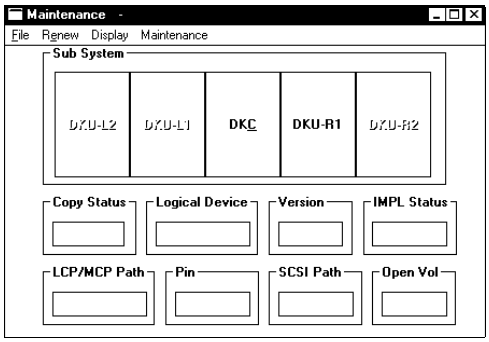
2.12.2 Open VOL

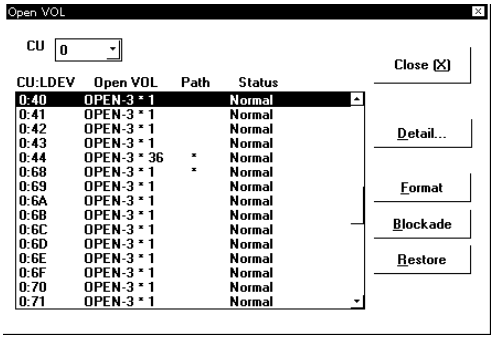
[1] FORMAT Open VOL ---------- SVP02-707
[2] Block Open VOL ---------- SVP02-709
[3] Restore Open VOL ---------- SVP02-709B

(1) Select (CL) the [Maintenance] in the 'SVP' window.

(2) Select (CL) [Open VOL] in the 'Maintenance'.



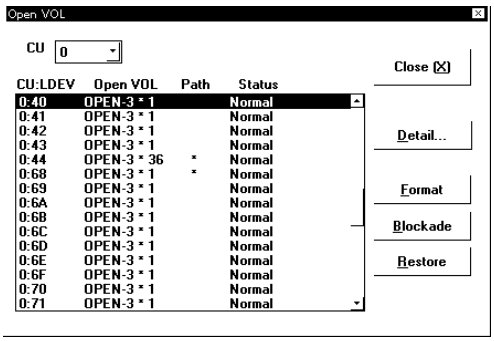
(3) 'Open VOL' is displayed.



Copyright ©1998, Hitachi, Ltd.

[1] FORMAT Open VOL

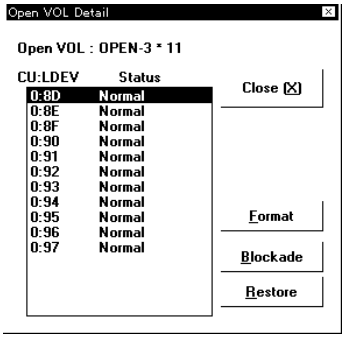
(1) Select (CL) Open VOL from the Open VOL list box in the 'Open VOL' window.



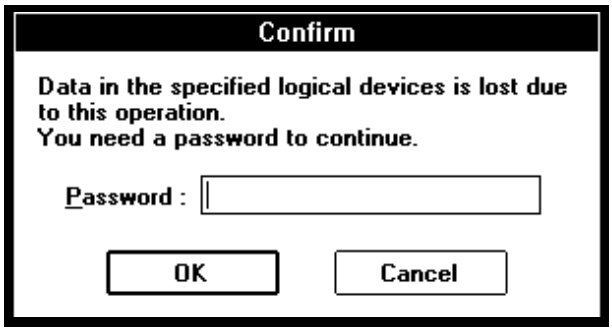
Format by LDEV unit:
Select (CL) [Detail] -------- Go to (2)
Format by Open VOL:
Select (CL) [Format] ------- Go to (3)
(It can select multiple item at once.)

Note: Execute Format Open VOL after you confirm the target Open VOL is blocked.

(2) Select (CL) LDEVs which you want to format form 'Open VOL Detail' window, and select (CL) [Format]. Go to (3).
(It can select multiple items at once.)



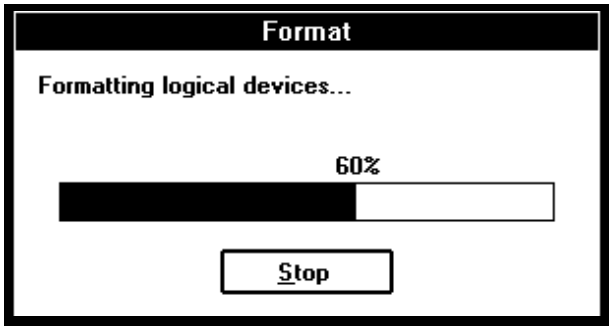
(3) "Data in the specified logical devices is lost due to this operation. You need a password to continue." is displayed.
Enter the password and select (CL) [OK].



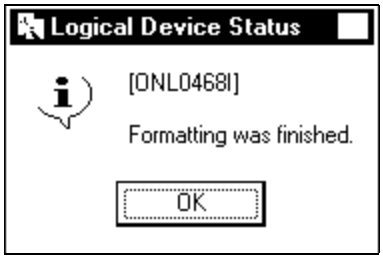
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.

Copyright ©1998, Hitachi, Ltd.

(4) “Formatting the logical device...” is displayed.



(5) Select (CL) [OK] in response to “Formatting was finished.”.



(6) Select (CL) [Close] in the ‘Open VOL’ window.
Close the ‘Maintenance’ window.

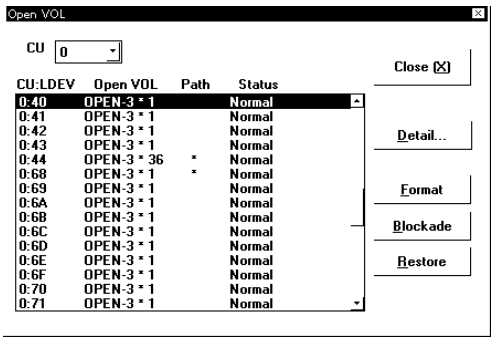
Copyright ©1998, Hitachi, Ltd.

[2] Block Open VOL

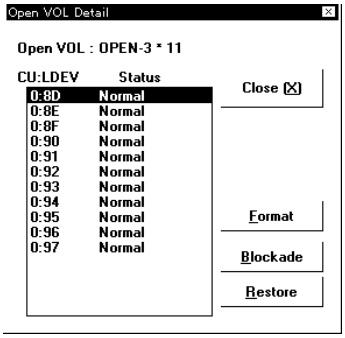
(1) Select (CL) Open VOL from the Open VOL list box in the 'Open VOL' window.

Blocked by LDEV unit:
Select (CL) [Detail] -------- Go to (2)
Blocked by Open VOL:
Select (CL) [Block]--------- Go to (3)
(It can select multiple items at once.)

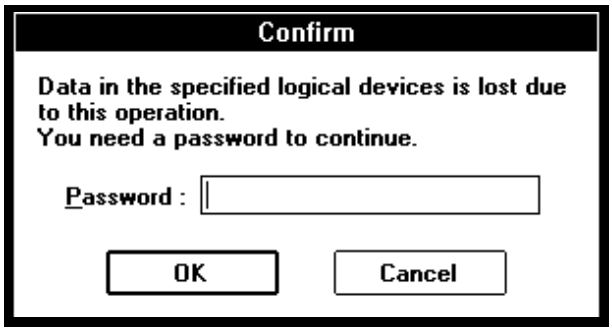
Note: Execute Format Open VOL after you confirm the target Open VOL is blocked.



(2) Select (CL) LDEVs which you want to block from 'Open VOL Detail' window, and select (CL) [Blockade]. Go to (3).
(It can select multiple items at once.)



(3) "Data in the specified logical devices is lost due to this operation. You need a password to continue." is displayed.
Enter the password and select (CL) [OK].
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.



Copyright ©1998, Hitachi, Ltd.

(4) “Blocking the logical device...” is displayed.

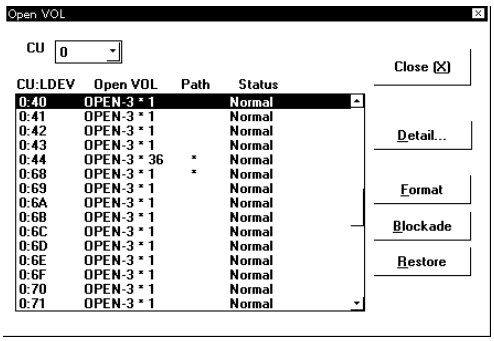
(5) Select (CL) [OK] in response to “Blocking the logical device is completed.”.

(6) Select (CL) [Close] in the ‘Open VOL’ window.
Close the ‘Maintenance’ window.

Copyright ©1998, Hitachi, Ltd.

[3] Restore Open VOL

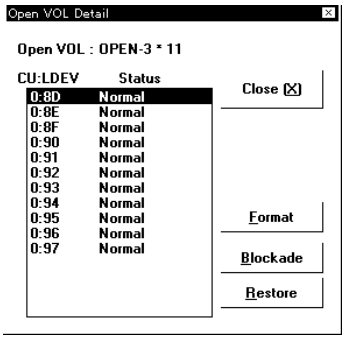
(1) Select (CL) Open VOL from the Open VOL list box in the 'Open VOL' window.



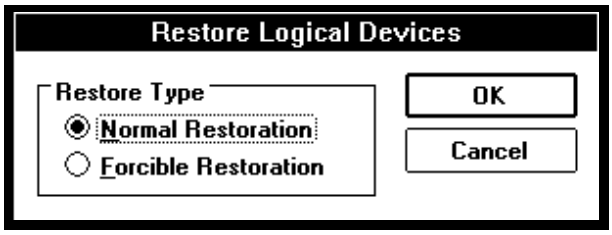
Restore by LDEV unit:
Select (CL) [Detail] -------- Go to (2)
Restore by Open VOL:
Select (CL) [Restore]------- Go to (3)
(It can select multiple items at once.)

Note: Execute Restore Open VOL after you confirm the target Open VOL is blocked.

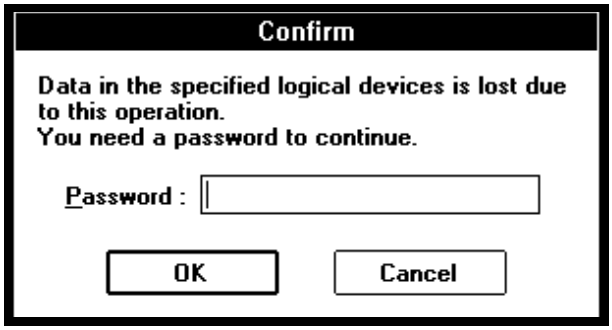
(2) Select (CL) LDEVs which you want to restore from 'Open VOL Detail' window, and select (CL) [Restore]. Go to (3).
(It can select multiple items at once.)



(3) Select (CL) corresponding item from the Restore Type in the 'Restore Logical Device' window and select (CL) [OK].



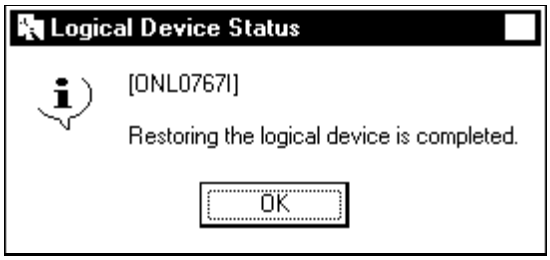
If "Forcible Restoration" is selected, the message "Data in the specified logical devices is lost due to this operation. You need a password to continue." is displayed.
Enter the password and select (CL) [OK].
Password is needed for this operation.
Please call Technical Support Center to obtain password and authorization.



Copyright ©1998, Hitachi, Ltd.

(4) “Restoring...” is displayed.

(5) Select (CL) [OK] in response to “Restoring the logical device is completed.”.



(6) Select (CL) [Close] in the ‘Open VOL’ window.
Close the ‘Maintenance’ window.

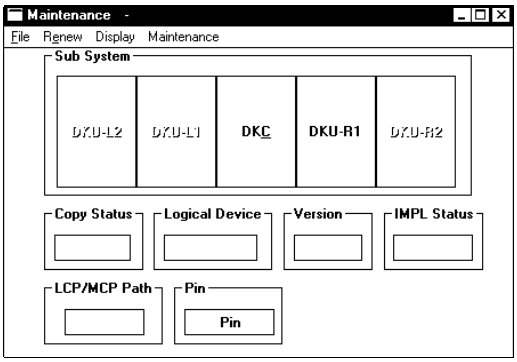
2.13 Pin Data indication

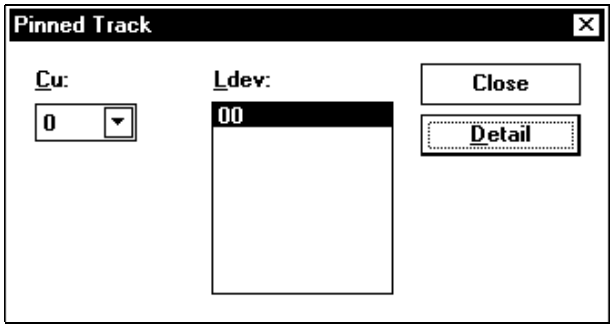
Prerequisite operation
(1) Select (CL) [Maintenance].

(2) Select (CL) [PIN] in the ‘Maintenance’ dialog box.

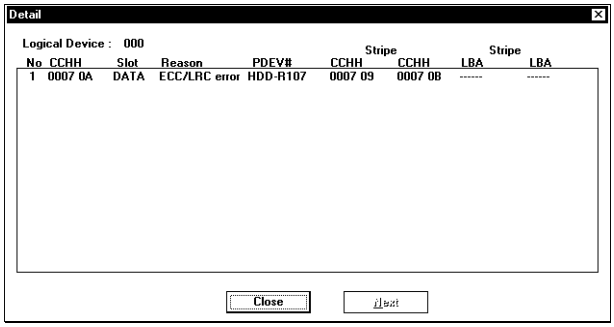


Copyright ©1997,1998, Hitachi, Ltd.

(3) Displaying the LDEVs which has Pin Slots.
Select (CL)a LDEV in the 'Pin Volume' dialog box and select (CL) [Detail...].
(Note) After Pin Slot recovers, the LDEV which was reported as Pin Slot SIM will be not displayed in the box.



(4) Displays the detail of a Pin Slot.
If there are more than 17 Pin Slots, [Next] button will be enable to display other Pin Slots.)
(Note) If a Pin Slot has some trouble, but it can be recovered, the detail of the Pin Slot will not be displayed.
In case of OPEN-LDEV, only LBA's are displayed. But, if LBA of the Pin Slot can't be displayed, "-----" is displayed in both CCHH and LBA columns.



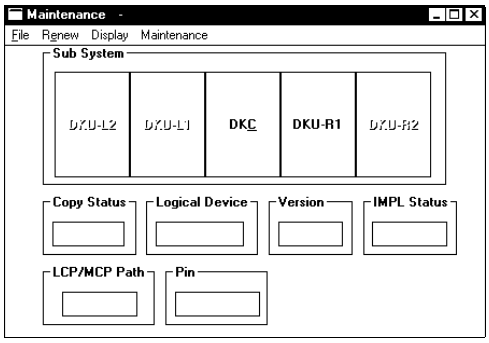
(5) Select (CL) [Close] in the 'Detail' dialog box.
Select (CL) [Close] in the 'Pin Volume' dialog box.
Close the 'General Status' window.

Copyright ©1997,1999, Hitachi, Ltd.

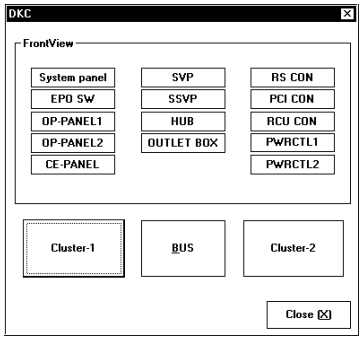
2.14 Multi PCB Replace

(1) <Set path offline>
Set the path offline from HOST when replacing CHA.

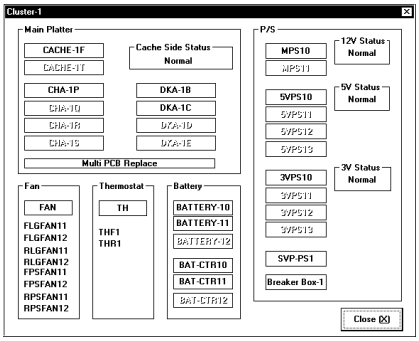
(2) <Maintenance>
'Maintenance' window is displayed.
In the 'Maintenance' window, check and select (CL) [DKC] to be replaced.



(3) <DKC screen>
Select (CL) [Cluster] in the 'DKC'.

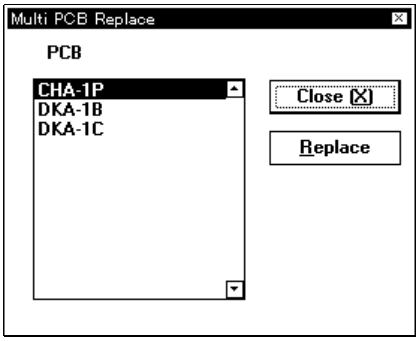


(4) <Select Multi PCB Replace>
Select (CL) [Multi PCB Replace].
Selecting (CL) [Close] returns you to step (3).



Copyright ©1997,1998, Hitachi, Ltd.

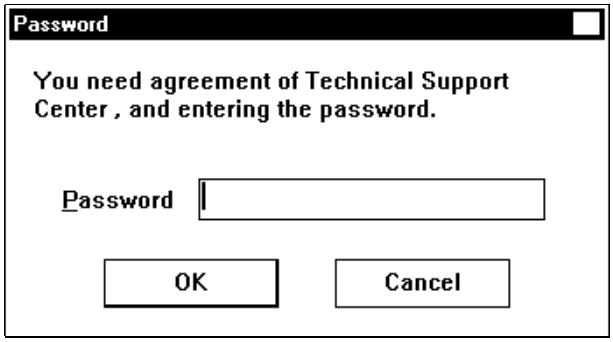
(5) <Select CHA/DKA>
Select (CL) CHA/DKA PCB.
Select (CL) [Replace].



NOTICE
When the subsystem is placed online, ask the customer to place it offline.

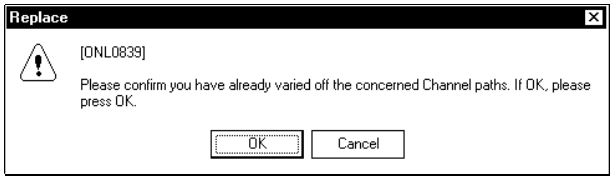
NOTICE
When the screen prompting an operator to input a password in order to prevent a multiple maintenance, contact the technical support center to ask for an instruction.

(6) <Enter Password>
Enter the password in response to [Password?] and select (CL) [OK].

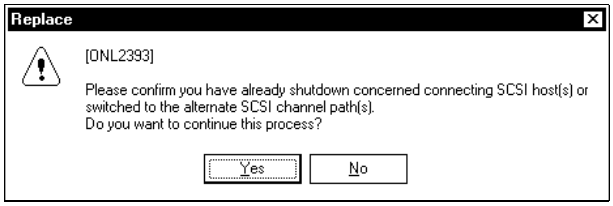


NOTICE
Executing this operation may cause a serious error such as a system down or a data loss.
Accordingly, confirmation of the appropriateness of the operation and input of a password on the succeeding password input screen is required.

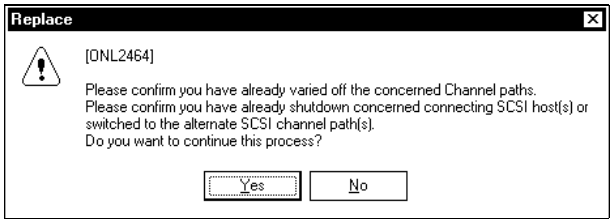
(7) <Confirm Channel Path offline>
Select (CL) [OK] in response to "Please confirm you have already varied off the concerned Channel paths. If OK, please press OK."



If SCSI channel adapter is installed:
After you confirm that you have stopped concerned SCSI Channel paths, select (CL) [OK].



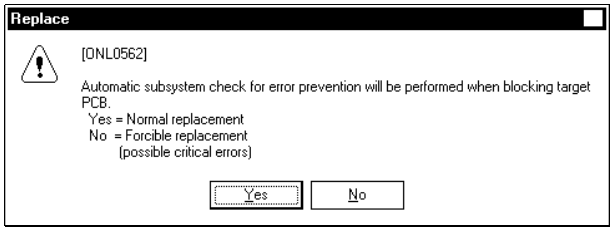
CHA and CHA (SCSI) are exist:
After you confirm that you have stopped concerned Channel paths and SCSI channel paths, select (CL) [OK].



Copyright ©1998, Hitachi, Ltd.

(8) <Caution message for system down>

NOTICE
Select (CL) [Yes] in response to the message below.

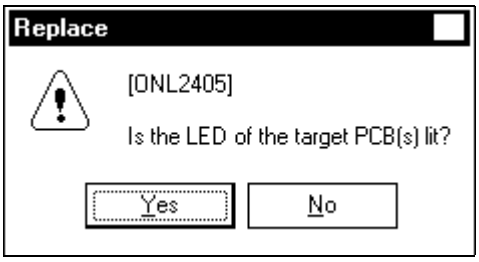


"Automatic subsystem check for error prevention will be performed when blocking target PCB.
Yes = Normal replacement
No = Forcible replacement
(Possible critical errors)"

Copyright ©1998, Hitachi, Ltd.

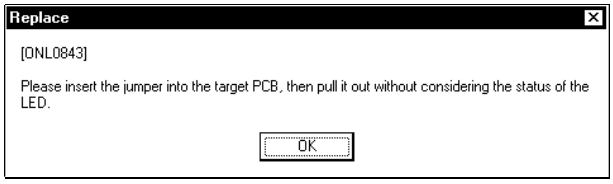
(9) <CHA/DKA blocking>
* For CHA
"The CHA-xx is being blocked..."
* For DKA
"The DKA-xx is being blocked..."

(10) <Check to see if shut down LED is lit>
Select (CL)
* [Yes] if LED is on
* [No] if LED is off
in response to "Is the LED of the target PCB(s) lit?".
If [No] is selected:
Select in response to "Is the LED of the target PCB(s) lit?" again.



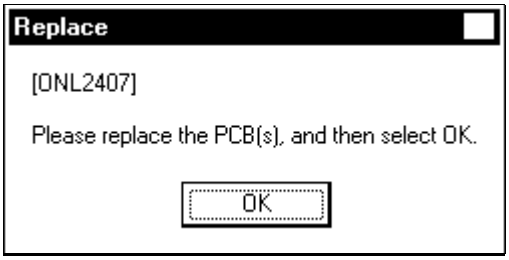
NOTICE
If the jumper is inserted in the wrong PCB, a system down may be caused.

<Forcing shut down LED on>
If [No] is selected twice:
Insert a jumper in response to "Please insert jumper into the target PCB, then pull it out without considering the status of the LED".
(Refer REP03-90)



For CHA (SERIAL)	HARDWARE C (REP03-80)
CHA (PARALLEL)	HARDWARE D (REP03-110)
For SCSI	HARDWARE E (REP03-140)
For FIBRE	HARDWARE F (REP03-170)
DKA	HARDWARE G (REP03-200)

(11) <Beginning of CHA/DKA Replacement>
"Please replace the PCB(s), and then select OK." is displayed. Select (CL) [OK] after replacing the PCBs.



Copyright ©1997,1999, Hitachi, Ltd.

(12) <Replace CHA / DKA>

For CHA (Serial)	Go to HARDWARE C (REP03-80)
For CHA (Parallel)	Go to HARDWARE D (REP03-110)
For SCSI	Go to HARDWARE E (REP03-140)
For FIBRE	Go to HARDWARE F (REP03-170)
For DKA	Go to HARDWARE G (REP03-200)

---

(13)

Select (CL) [OK] in response to “Please replace the PCB(s). After replacement, please press OK.”

“Waiting for Power Event... Usually, several minutes (maximum 10 minutes)” is displayed.

---

(14) <Check the CHA/DKA recovery processing>

The following message is displayed:

* For CHA

“CHA-xx is being checked...”

“Restoring the CHA-xx...”

* For DKA

“Restoring the DKA-xx...”

“DKA-xx is being path recovered...”

Copyright ©1998, Hitachi, Ltd.

(15) <Check the end of CHA/DKA recovery>
Select (CL) [OK] in response to “Replace finished.”.

NOTICE
When one or more PCBs are replaced normally, “Replace finished.” will be displayed. So please confirm PCBs’ status.

(16) <Path on-line when CHA is replaced>
Whenever a CHA is replaced, set the path (from the host) on the replaced CHA to ONLINE by your customer.

(17) <SIM Complete>
Go to SVP02-500.

(18)
Close ‘Multi PCB Replace’ window.
Close ‘Cluster-n’ window.
Close ‘Maintenance’ window.

Copyright ©1997,1999, Hitachi, Ltd.

2.16 System Option

[Over view]

Change following system option when the system operates.

<1> Spare Disk Recovering - Select the performance density when data is copied to a spare disk. (correction copy and drive copy)

- Interleave : Everytime 4-slot copy is completed, copy job sleeps for the time dependent on load of HOST I/O.
- Offline : No sleep. (No considering HOST job)

NOTICE
Please do not use if no channel paths is varied offline.

<2> Disk Copy Pace ---------- Specification of copy pace is supported with the “Interleave” mode at Spare Disk Recovering. 3 modes are supported.

- Medium : Optimization mode. The copy time depends on load of HOST I/O.
- Faster : Copy job is prior to HOST job.
- Slower : HOST job is prior to copy job.

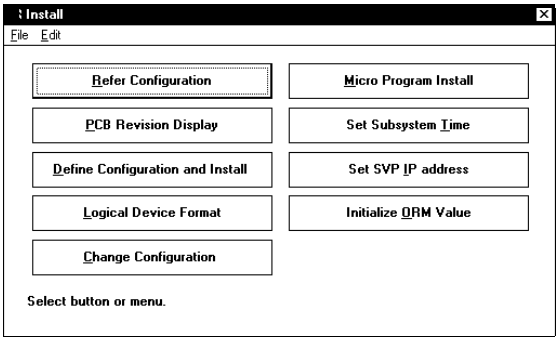
<3> Copy Operation ----------

- Dynamic Sparing : Copy automatic to a spare disk if disk failure exceeded the threshold value.
- Correction Copy : Execute correction copy to a spare disk automatically when one drive has blocked.

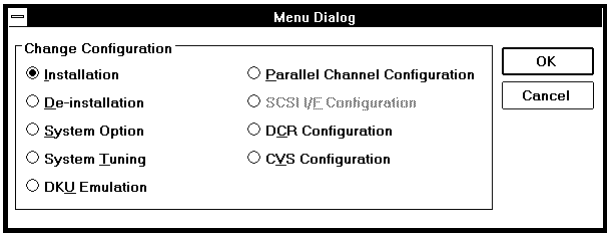
(1) Select (CL) [Install].

Copyright ©1997,1998, Hitachi, Ltd.

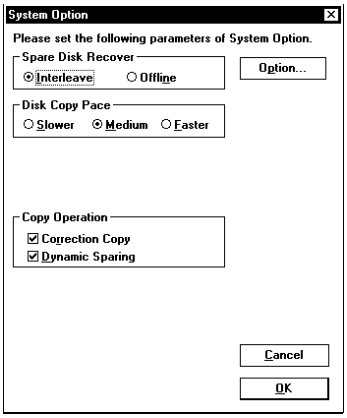
(2) Select (CL) the [Change Configuration] menu in the 'Install' window and select (CL) [OK].



(3) Select (CL) [System Option] menu in the 'Menu Dialog' window and select (CL) [OK].



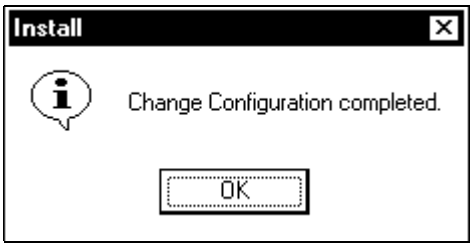
(4) Select (CL) the desired item in the 'System Option' dialog box, and select (CL) [OK].



Copyright ©1997,1998, Hitachi, Ltd.

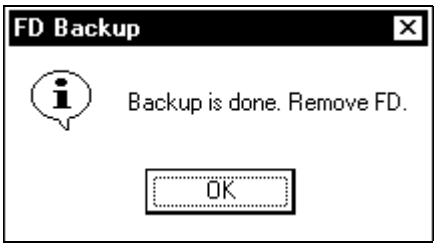
(5) “Loading configuration...” is displayed.

(6) “Change configuration completed.” is displayed.
Select (CL) [OK].



(7) “Reading subsystem configuration data...” is displayed.
“Please insert config FD in FDD.” is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

(8) When this procedure is completed, message “Back up is done. Remove FD.” is displayed.
Remove the FD, select (CL) [OK].



Copyright ©1997,1998, Hitachi, Ltd.

(9) Close the ‘Install’ window.

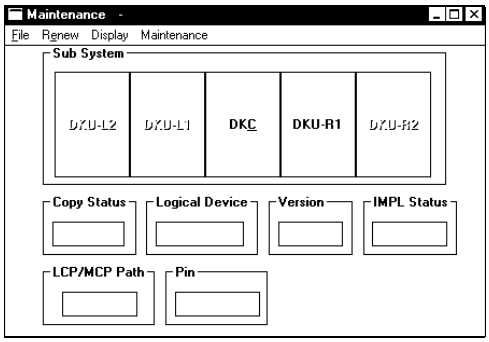
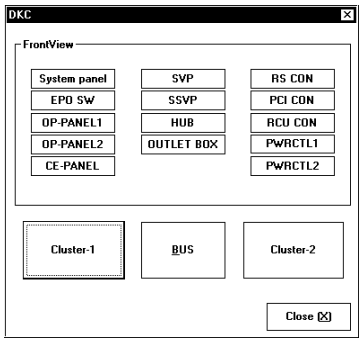
2.17 Recovery Procedure for Bus

(1) Select (CL) [Maintenance].

(2) Select (CL) [DKC] in the 'Maintenance' dialog box.

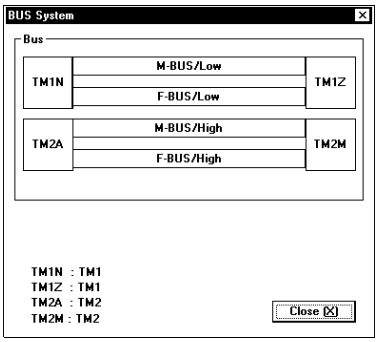


(3) Select (CL) [BUS] in the 'DKC. '



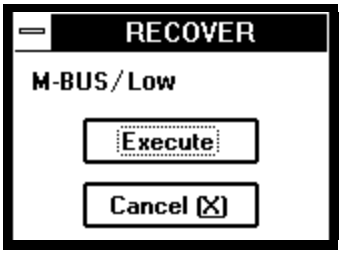
(4) Select(CL) blocked bus [XXXX] to be recovered from 'Bus System'.
Valid [XXXX] values are listed below.

- [M-BUS/Low] M-BUS(Low)
- [F-BUS/Low] F-BUS (Low)
- [M-BUS/High] M-BUS(High)
- [F-BUS/High] F-BUS (High)

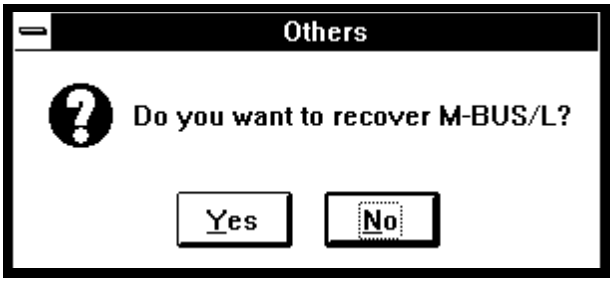


Copyright ©1997,1998, Hitachi, Ltd.

(5) Make sure that the designation is correct.
Then select(CL) [Execute].

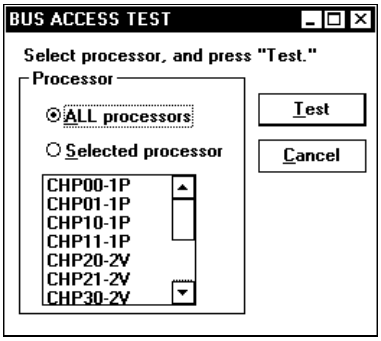


(6) Select [Yes] (CL) in response to “Do you want to recover XXXX?”.
XXXX represents one of the bus names listed in
step (4).

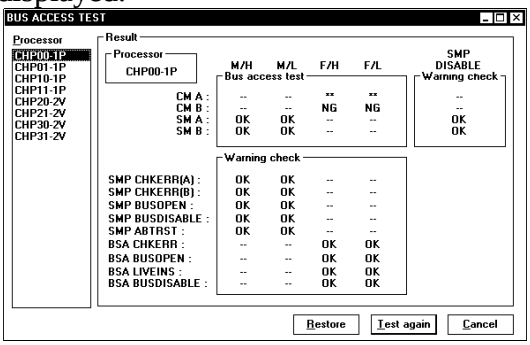


Copyright ©1997, Hitachi, Ltd.

(7) Select a processor that execute bus access test, and select [Test] (CL).
If you select “ALL processors”, bus access test will be executed at all listed processor.



(8) Bus access test has finished normally, and the result is displayed.



• If you select single processor in step (7).
Processor(in Result) Processor selected in step(7).

• If you select “ALL processors” in step (7).
Processor(List box) - Processor that failure has occurred.
Processor(in Result) Processor selected in Processor(List box).
Note : If failure has not occurred at all processors, no string has displayed at Processor(List box) and “ALL” at Processor(in Result).

Bus access test OK - : Failure has not occurred.
NG : Failure has occurred.
** : Memory is blocked.
-- : This term is not tested.

Warning check (*1) - OK : Warning has not occurred.
NG : Warning has occurred.
-- : This term is not checked.

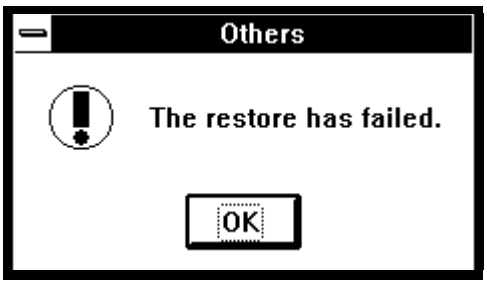
*1 When warning check is not supported, all columns are “--”.

If blocked bus isn’t a failure part, you select [Restore] and recover the bus.
Refer to the following table:
“Patterns of bus access test result and guessed failure parts” (SVP02-820 ~ 840).
“NG column of warning check result and guessed failure parts”(SVP02-850)
If you select [Restore] (CL), go to (9).
If you select [Test again] (CL), go to (7).
If some errors have occurred at bus access test, go to (7).

Copyright ©1997,1998, Hitachi, Ltd.

(9) Select (CL) [OK] in response to “The restore has finished.”.

If an error has occurred, the message “The restore has failed.” is displayed as shown on the right. Select (CL) [OK].



(10) Select (CL) [Close] in the ‘BUS System’ dialog box.
Select (CL) [Close] in the ‘DKC’ dialog box.
Close the ‘Maintenance’ window.
Return to TRBL05-20.

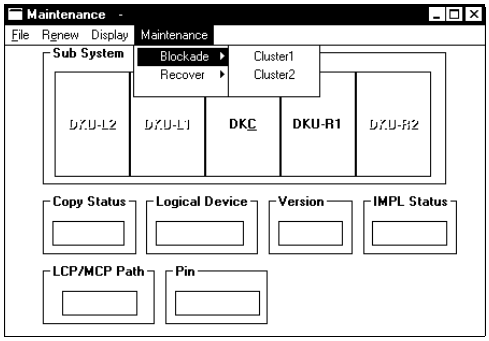
2.18 Blocking of Cluster

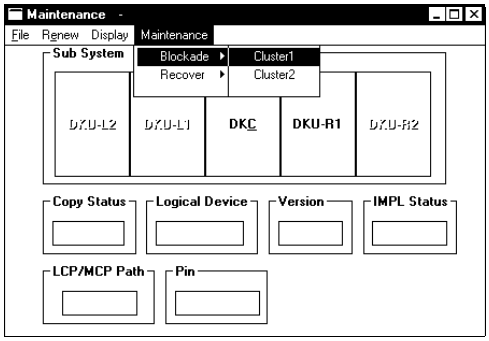
NOTICE
These following procedure is very special. Please ask your TSC if you can do.

(1) Select (CL) [Maintenance].

(2) Select (CL) the [Maintenance] menu in the 'Maintenance' dialog box and select(DR) [Blockade].



(3) Select (DR) the [Cluster-n] to be blocked.

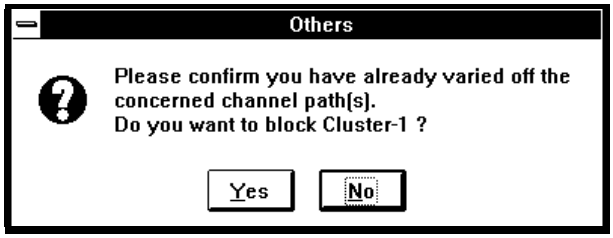


Copyright ©1997,1998, Hitachi, Ltd.

(4) Beginning Block

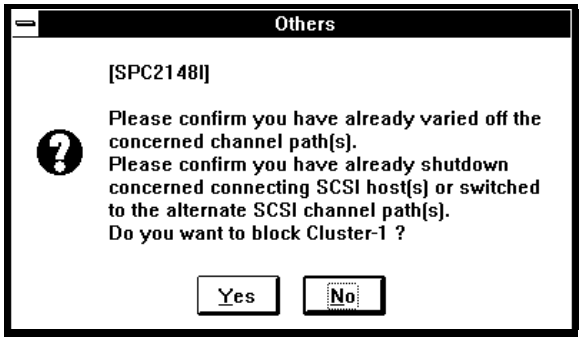
• When only serial or parallel channels, or they are mixed.

Select [Yes] (CL) in response to “Please confirm you have already varied off the concerned channel path(s). Do you want to block xxxxx?”.



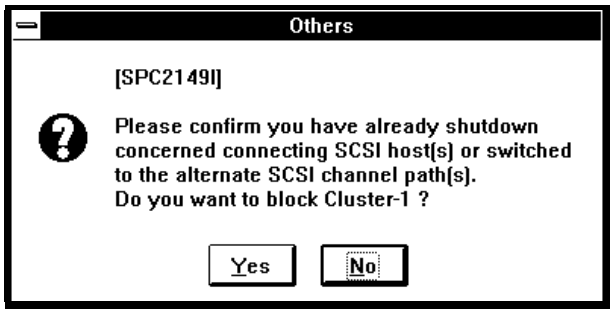
• When SCSI channels and other kinds are mixed.

Select [Yes] (CL) in response to “Please confirm you have already varied off the concerned channel path(s). Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to block xxxxx?”.



• When only SCSI channels are installed.

Select [Yes] (CL) in response to “Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to block xxxxx?”.



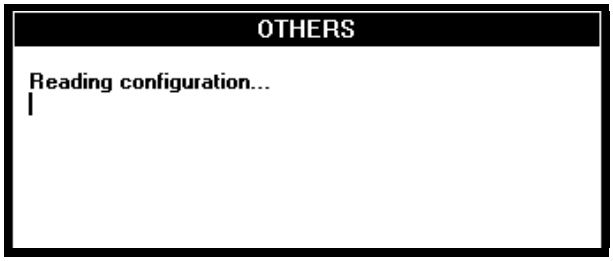
Valid xxxxx values are listed below.

• Cluster-1

• Cluster-2

Copyright ©1997,1998, Hitachi, Ltd.

(5) Processing to Cluster block.



"Reading configuration..."
"Blocking cache memory..."
"Blocking shared memory..."
"Blocking Bus..."
"Blocking CHA..."
"Blocking DKA..."
"Blocking CHP..."
"Blocking DKP..."
"Blocking Cluster failure report..."
"Processing to disable the environment check..."

(6) End of Cluster block
Select [OK] (CL) in response to "The blockade has finished. Cluster is blocked.".

(7) Close the 'Maintenance' window.

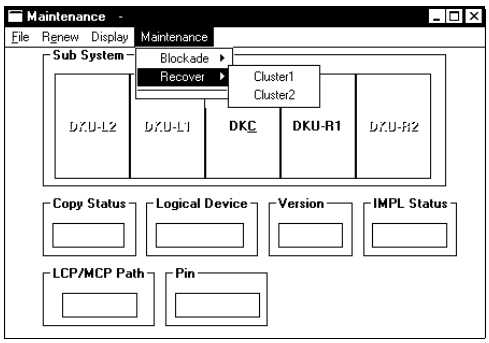
Copyright ©1997,1998, Hitachi, Ltd.

2.19 Recovering of Cluster

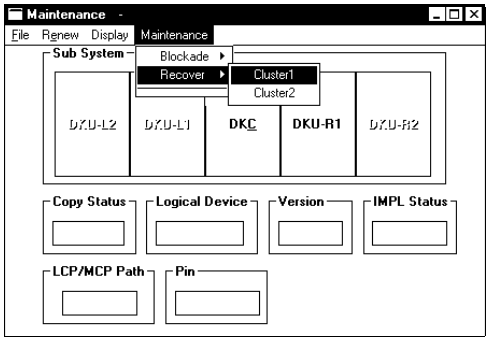
Note : Before recovering of Cluster, please reboot SVP.

(1) Select (CL) [Maintenance]

(2) Select (CL) the [Maintenance] menu in the 'Maintenance' and select(DR) [Recover].

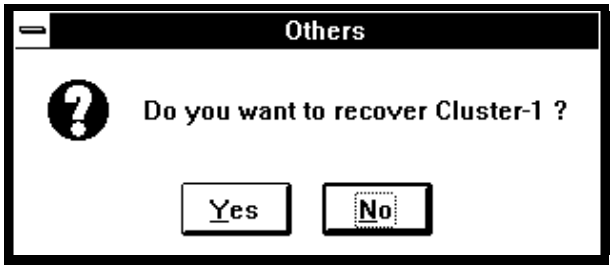


(3) Select (DR) [Cluster-n] to be recovered.



Copyright ©1997,1998, Hitachi, Ltd.

(4) Beginning Recover
Select [Yes] (CL) in response to “Do you want to recover xxxx?”.

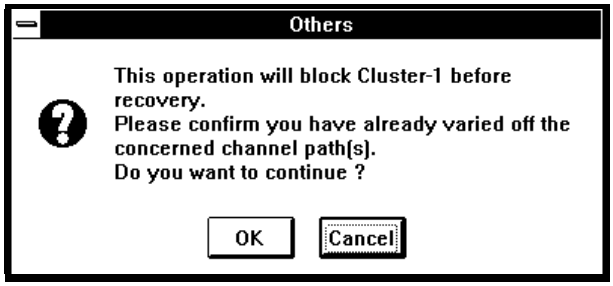


Valid xxxx values are listed below.
• Cluster-1
• Cluster-2

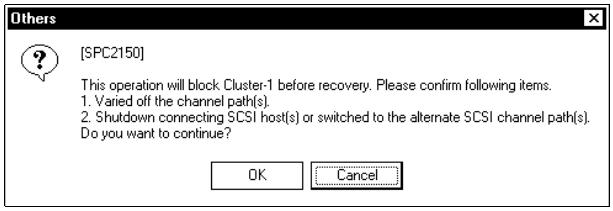
If Cluster 1/2 is fail. Go to (5)
If Cluster 1/2 is blockade. Go to (8)
If Cluster 1/2 is normal. Go to (9)

---

(5) Confirm varied Off-line.
• When only serial or parallel channels, or they are mixed.
Select [OK] (CL) in response to “This operation will block xxxxx before recovery. Please confirm you have already varied off the concerned channel path(s). Do you want to continue?”.

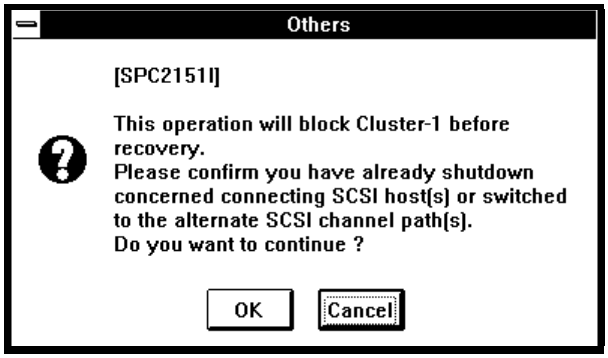


• When SCSI channels and other kinds are mixed.
Select [OK] (CL) in response to “This operation will block xxxxx before recovery. Please confirm following items.
1. Varied off the channel path(s).
2. Shutdown connecting SCSI host(s) or switched to the alternate SCSI channel path(s).
Do you want to continue?”.



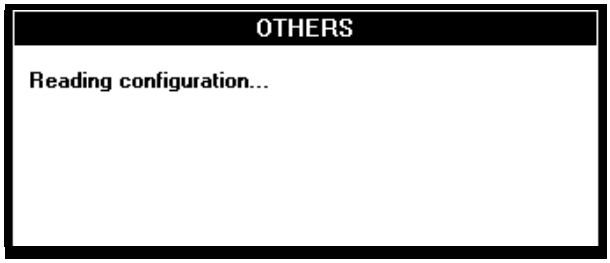
Copyright ©1997,1998, Hitachi, Ltd.

• When only SCSI channels are installed.
Select [OK] (CL) in response to “This operation will block xxxxx before recovery. Please confirm you have already shutdown concerned connecting SCSI host(s) or switched to the alternate SCSI channel path(s). Do you want to continue?”.



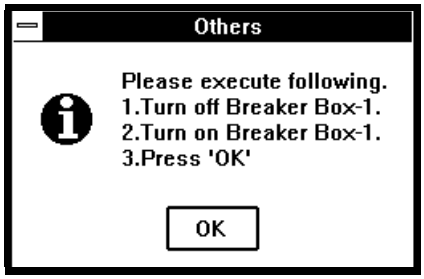
Valid xxxxx values are listed below.
• Cluster-1
• Cluster-2

(6) Processing to Cluster block.

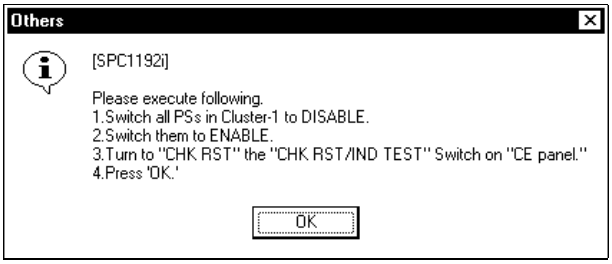


“Reading configuration...”
“Checking status of Cluster...”
“Blocking Cluster...”
“Blocking cache memory...”
“Blocking shared memory...”
“Blocking Bus...”
“Blocking CHA...”
“Blocking DKA...”
“Blocking CHP...”
“Blocking DKP...”
“Blocking Cluster failure report...”
“Processing to disable the environment check...”

(7) When redundant PS is not installed, select [OK] (CL) response to “Please execute following.
1.Turn off Breaker Box-X. 2.Turn on Breaker Box-X.
3.Press ‘OK’.”.



When redundant PS is installed, select [OK] (CL) response to “Please execute following.
1.Switch All PSs in Cluster-X to DISABLE.
2.Switch them to ENABLE. 3.Turn to "CHK RST" the "CHK RST/IND TEST" Switch on "CE panel." 4.Press 'OK.'”.

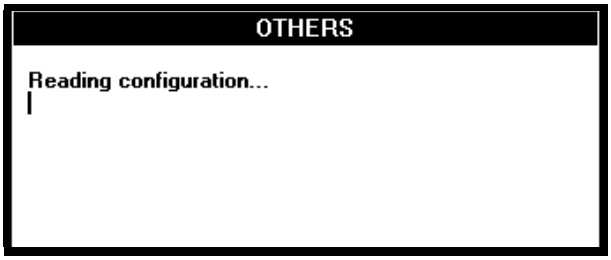


Valid X values are listed below.
• Cluster-1 --- 1
• Cluster-2 --- 2

Copyright ©1997,1999, Hitachi, Ltd.

(8) The SVP automatically checks the power supplies to determine if cluster is recoverable.

(9) Processing to Cluster recover.



"Reading configuration..."
"Checking status of Cluster..."
"Restoring Cluster..."
"Checking Power on..."
"Waiting for Power Event...
Usually, several minutes(maximum 15 minutes)"
"Restoring DKA..."
"Restoring DKA (SCSI Path)..."
"Restoring DKP Path..."
"Restoring CHA..."
"Restoring Cluster failure report..."
"Restoring Bus..."
"Running INLINE CUDG..."
"Restoring shared memory..."
"Restoring cache memory..."
"Processing to enable the environment check..."

Copyright ©1997,1998, Hitachi, Ltd.

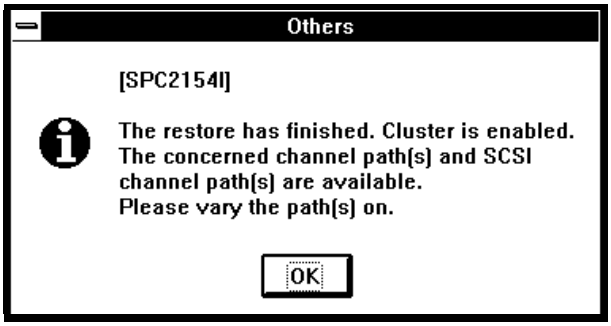
(10) End of Cluster Recover

• When only serial or parallel channels, or they are mixed.

Select (CL) [OK] in response to “The restore has finished. Cluster is enabled. The concerned channel path(s) are available. Please vary the path(s) on.”.

• When SCSI channels and other kinds are mixed.

Select (CL) [OK] in response to “The restore has finished. Cluster is enabled. The concerned channel path(s) and SCSI channel path(s) are available. Please vary the path(s) on.”.



• When only SCSI channels are installed.

Select (CL) [OK] in response to “The restore has finished. Cluster is enabled. The concerned SCSI channel path(s) are available.”.

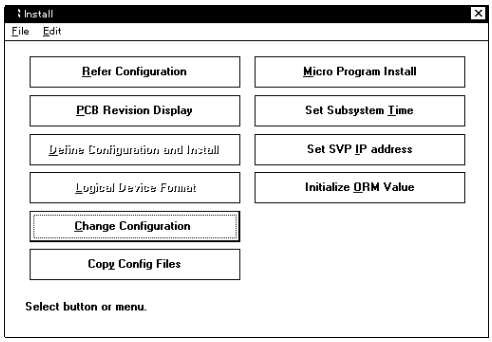
(11) Close the ‘Maintenance’ window.

Copyright ©1998, Hitachi, Ltd.

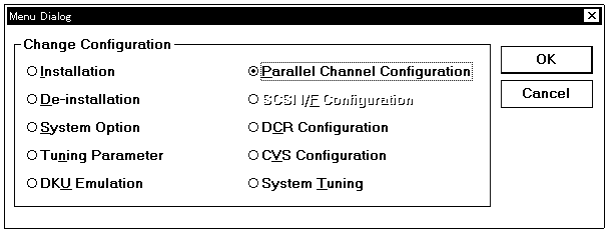
2.20 Parallel Configuration

(1) Select (CL) [Install].

(2) Select (CL) [Change Configuration] in the 'Install' dialog box.

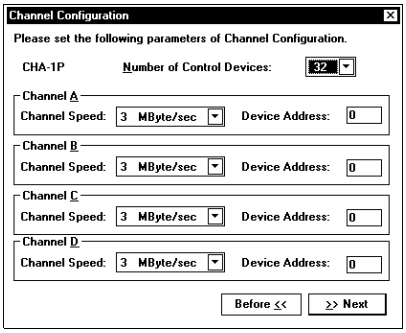


(3) Select (CL) [Parallel Channel Configuration] in the 'Menu Dialog' dialog box and select (CL) [OK].



Copyright ©1997,1998, Hitachi, Ltd.

(4) Set parallel channel configuration
Define the device configuration information from 'Channel Configuration'.
After setting up all items, select (CL) [OK].



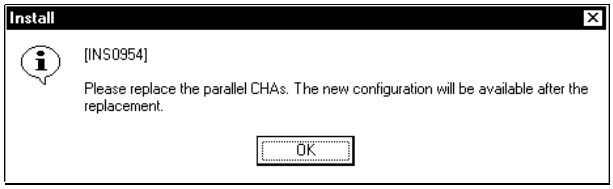
- Change the value of Number of Control Device, if necessary.
- Content in the Channel Speed Combo box can be changed, if necessary.
- Value of the Device Address for each port can be changed, if necessary.

By pressing the [>>Next] button, the screen advances to that for the next PCB. When the current screen is that for the last PCB, the setting is terminated.
By pressing the [Before<<] button, the screen returns to that for the previous PCB. When the current screen is that for the first PCB, the setting is canceled.

---

(5)

Repeat the above operation for all the MCP PCBs installed.



"Loading Configuration..." is displayed.

Please replace the parallel CHAs. The new configuration will be available after the replacement.

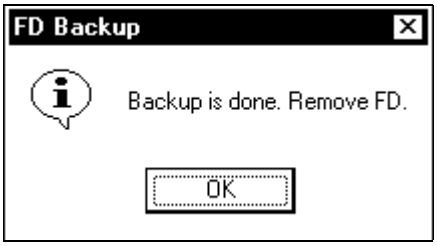
Select (CL) [OK].

---

(6) "Reading subsystem configuration data..." is displayed.
"Please insert config FD in FDD." is displayed.
Insert the configuration FD into FDD, select (CL) [OK].

---

(7) When this procedure is completed, message "Back up is done. Remove FD." is displayed.
Remove the FD, select (CL) [OK].

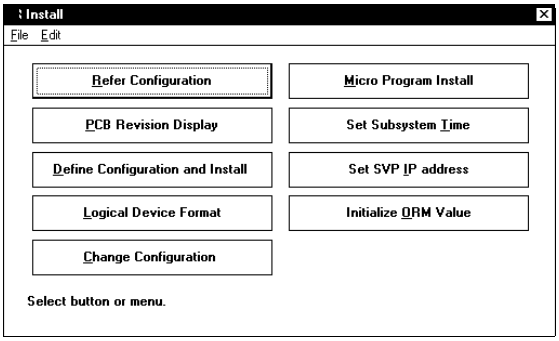


Copyright ©1997,1998, Hitachi, Ltd.

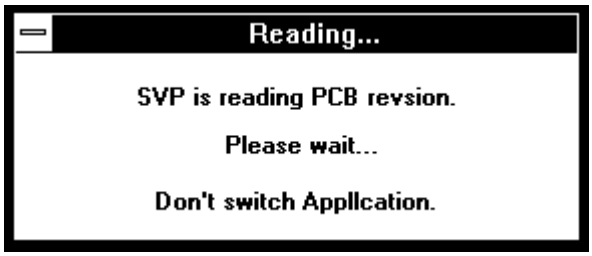
2.22 PCB Revision Display

(1) Select (CL) [Install] in the ‘SVP’ window.

(2) Select (CL) [PCB Revision Display] in the ‘Install’ window.



(3) ‘Reading’ is displayed.

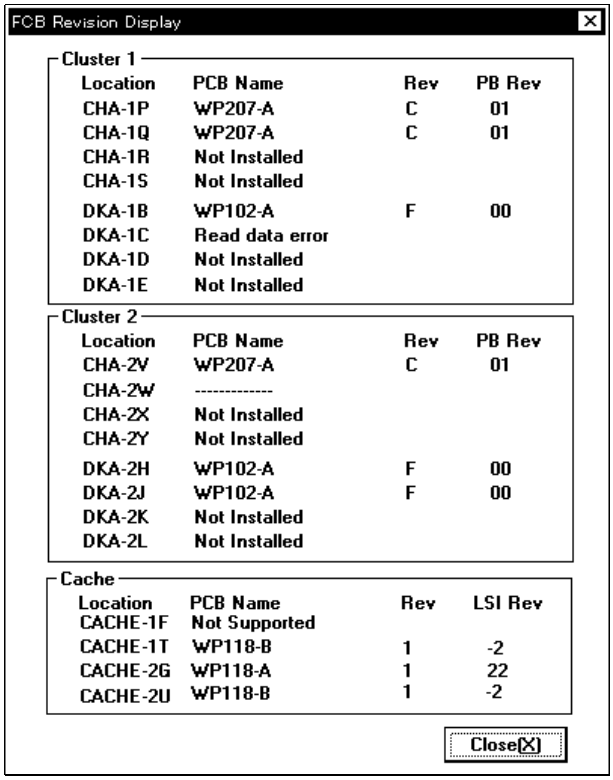


Copyright ©1997,1998, Hitachi, Ltd.

(4) PCB Revisions are displayed.

Meaning of comments in the PCB Name.
'----------' ;
Revision data isn't written on this PCB.
'Not Installed' ;
PCB isn't installed on this location or PCB on this location is failed.
'Communication Error' ;
Communication Error has occurred in reading PCB revision.
'Not Supported' ;
This function is not supported.

A byte code of "LSI Rev" shows "CMC Revision" and "SMC Revision".
[LSI Rev] : X Y
X: CMC Revision
Y: SMC Revision



(5) Select(CL) [Close] in the 'PCB Revision Display' dialog box.

(6) Close the 'Install' window.

Copyright ©1997,1998, Hitachi, Ltd.

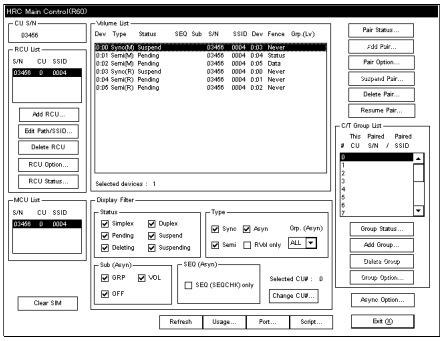
2.23 HRC&HODM Operation

2.23.1 Referring to the Path Status

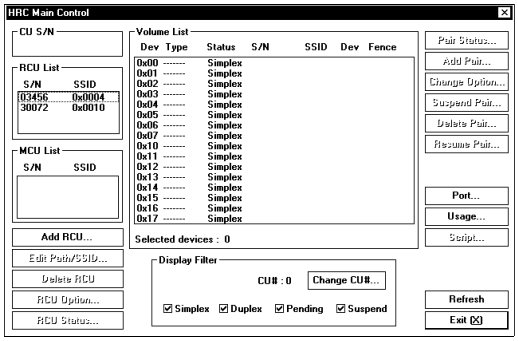
Refer to the MCU-RCU connection status. This operation is possible only from the MCU.

1. Display the HRC (HODM) screen.
   Select (CL) [HRC] ([HODM]) in the 'SVP' window.

2. Selecting an RCU
   Set the CU# corresponding to the CU image address of the subsystem.
   Select an RCU whose path status is desired to be referred to from the RCU list (see the figure) on the HRC (HODM) screen. (Two or more RCUs cannot be selected here.)



(HRC)



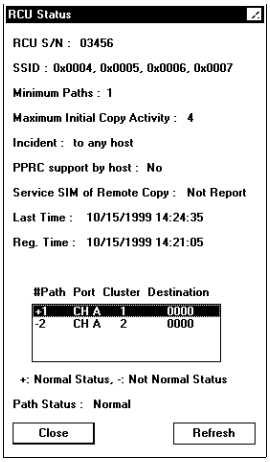
(HODM)

3. Displaying the RCU status
   Select (CL) the [RCU Status...] button on the HRC (HODM) screen to display the RCU Status screen.

Copyright ©1998,2000, Hitachi, Ltd.

4. Selecting a path to be displayed

The path list is displayed on the RCU Status screen. Select a path whose status is desired to be displayed from the list. (Two or more paths cannot be selected here.)



5. Updating the path status

Select (CL) the [Refresh] button on the RCU Status screen to update the screen display. When updating the screen display, select (CL) the [Refresh] button. When closing the screen, select (CL) the [Close] button.

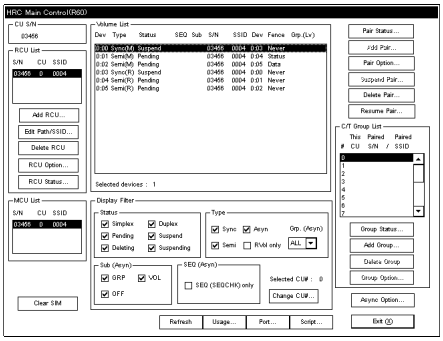
Copyright ©1998,2000, Hitachi, Ltd.

2.23.2 Referring to the Pair Status

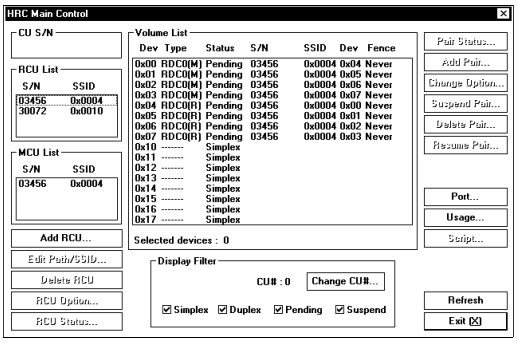
Refer to the object volume pair status. The screen data displayed will differ between when this operation is executed from only the MCU and when it is executed from the RCU.

1. Displaying the HRC (HODM) screen.
   Select (CL) [HRC] ([HODM]) in the 'SVP' window.

2. Selecting a volume
   Set the CU# corresponding to the CU image address of the subsystem.
   Select a volume whose status is desired to be referred to from the volume list (see the figure) on the HRC (HODM) screen. (Select only one volumes here although two or more volume can be selected from the list.)

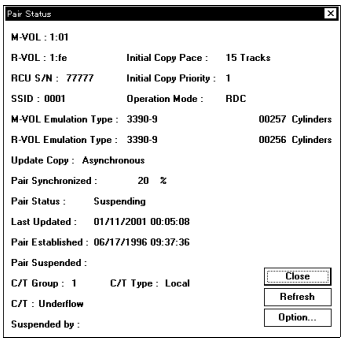


(HRC)



(HODM)

3. Displaying the pair status
   Select (CL) the [Pair Status...] button on the HRC (HODM) screen. The Pair Status screen will appear.
   (The figure is HODM Pair Status screen.)



4. Updating the pair status
   Select (CL) the [Refresh] button on the Pair Status screen. This operation updates the display of the pair status. Press (CL) the [Close] button to close the screen.

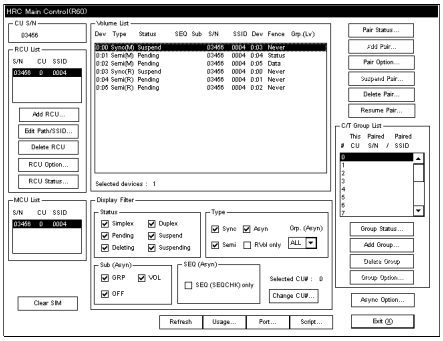
Copyright ©1998,2000, Hitachi, Ltd.

2.23.3 Suspending the Volume Pair(s)

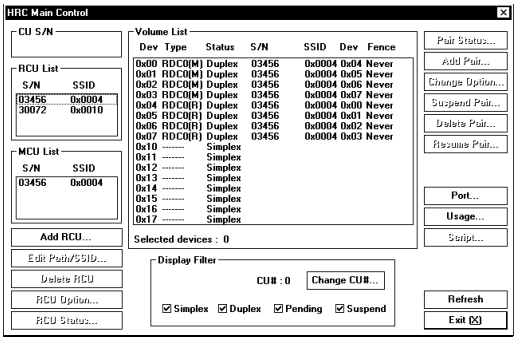
This operation suspends the object volume pair(s). The operation can be executed from both the MCU and the RCU.

1. Display the HRC (HODM) screen.
   Select (CL) [HRC] ([HODM]) in the 'SVP' window.

2. Selecting the volume pair(s)
   Set the CU# corresponding to the CU image address of the subsystem.
   Select the volume pair(s) desired to be suspended from the volume list (see the figure) on the HRC (HODM) screen.

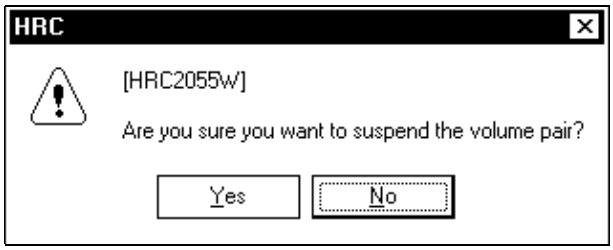


(HRC)



(HODM)

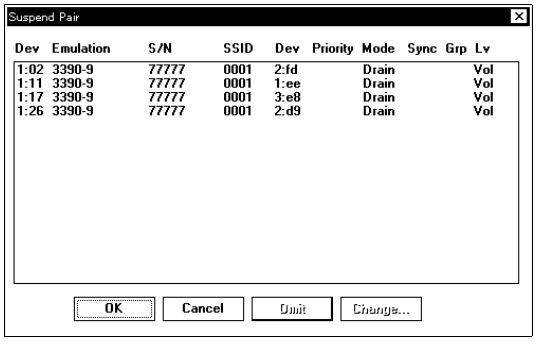
3. Instructing a suspension
   Select (CL) the [Pair Suspend...] button on the HRC (HODM) screen. A confirmation message will appear. To suspend the pair really, press (CL) the [Yes] button. The Suspend Pair screen will appear.



Copyright ©1998,2000, Hitachi, Ltd.

4. Confirm the suspension volume pairs

Confirm the suspension volume pairs that are displayed to the Suspend pair screen and select (CL) [OK] button and go to 6.
If you want to change suspend parameters of HRC pairs, select the volume pairs from the volume list and select (CL) [Change...] button and go to 5.
If you want to omit the volume pair suspension, select the volume pairs from the volume list and select (CL) [Omit] button.

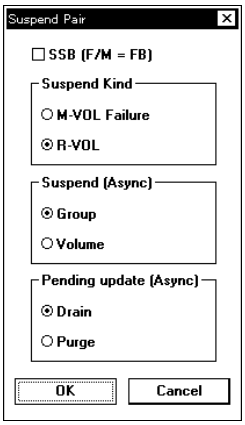


5. Inputting the suspending parameters

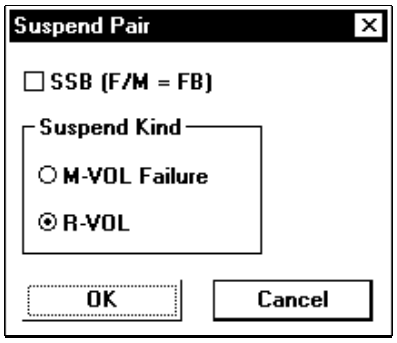
Press (CL) the [OK] button on the Suspend Pair screen to execute the suspending processing.

- SSB [F/M= FB]
  This parameter specifies whether to issue a suspension report with SSB[F/M= FB].
- Suspend type
  This parameter specifies which instruction is to be issued, an M-VOL suspension or an R-VOL suspension. Only “R-VOL” can be specified for asynchronous copy pairs.
- Suspend (Async)
  This parameter specifies the kind of suspension.
  “Group” means all volume pair(s) suspension which are assigned to the same C/T group as the specified volume pair(s).
  “Volume” means only specified volume pair(s) will be suspended.
  This parameter can be specified HRC asynchronous copy volume pairs only. If 2 or more volume pairs are specified, only “Volume” can be specified.
- Pending update (Async)
  This parameter specifies the method of the release of the Record set.
  “Drain” means that the volume pair(s) should be suspended after all pending record set are settled.
  “Purge” means that the volume pair(s) should be suspended even if pending record set remain. The pending record set will be copied when the Resume Pair operated.
  This parameter can be specified HRC asynchronous copy volume pair(s) only.

Notice : If you specify “Drain”, you must stop I/O from the hosts beforehand.



(HRC)

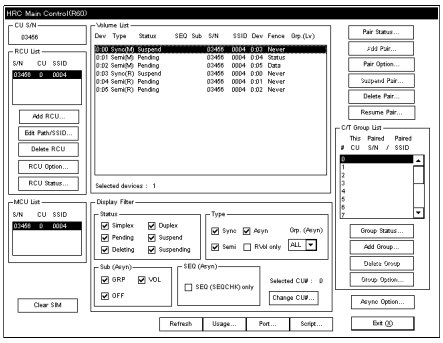


(HODM)

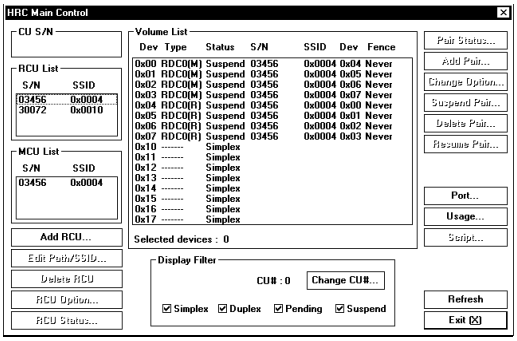
Copyright ©1998,2000, Hitachi, Ltd.

6. Verifying the suspension

Verify if the volume pair selected from the volume list (see the figure) is in the suspended status or not by pressing (CL) the [Refresh] button on the HRC (HODM) screen.



(HRC)



(HODM)

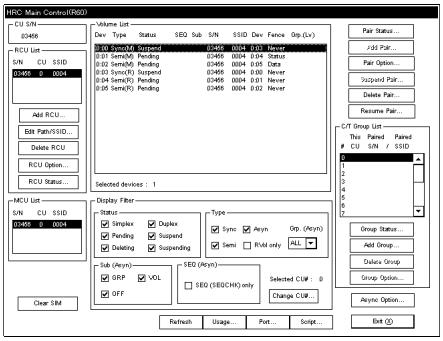
Copyright ©1999,2000, Hitachi, Ltd.

2.23.4 Resuming the Suspended Pair(s)

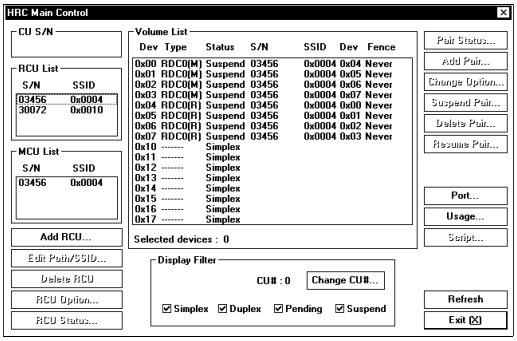
This operation resumes the volume pair(s) suspended. The operation can be performed only from the MCU.

1. Display the HRC (HODM) screen.
   Select (CL) [HRC] ([HODM]) in the 'SVP' window.

2. Selecting the volume pair(s)
   Set the CU# corresponding to the CU image address of the subsystem.
   Select the volume pair(s) desired to be resumed from the volume list (see the figure) on the HRC (HODM) screen to resume it.
   Select the [Resume Pair...] button on the HRC (HODM) screen. The Resume Pair screen will appear.

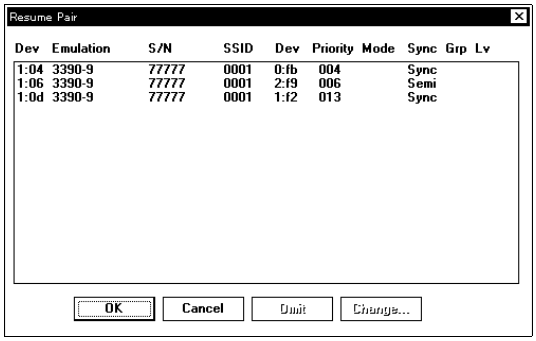


(HRC)



(HODM)

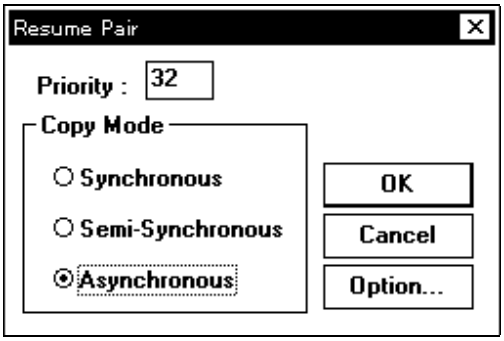
3. Confirm a resume parameter
   Confirm a resume option on the Resume Pair screen.
   Select (CL) the [OK] button on the Resume Pair screen and go to 6.
   If you want to change resume parameter, select the volume pairs from the volume list and select (CL) [Change...] button and go to 4.1 (HRC) or 4.2 (HODM).
   If you want to omit resume pair, select the volume pairs from the volume list and select (CL) [Omit] button.



Copyright ©1998,2000, Hitachi, Ltd.

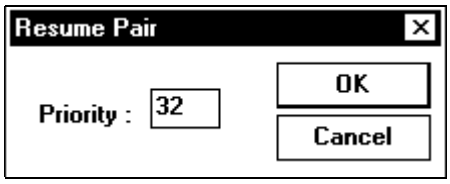
4.1 Inputting the resume parameter (HRC)

On the Resume pair screen, perform the following.
Input the initial copy priority to the Priority.
Select one of the copy mode indicated at Copy Mode.
(If the Copy Mode is “Asynchronous”, it cannot be changed.)
If you want to set pair option, press (CL) [Option...] button and go to 5.
When all operations above are finished, press (CL) the [OK] button (see the figure) and go to 3.



4.2 Inputting the resume parameter (HODM)

On the Resume pair screen, perform the following.
Input the initial copy priority to the Priority.
When all operations above are finished, press (CL) the [OK] button (see the figure) and go to 3.



5. Setting HRC pair option

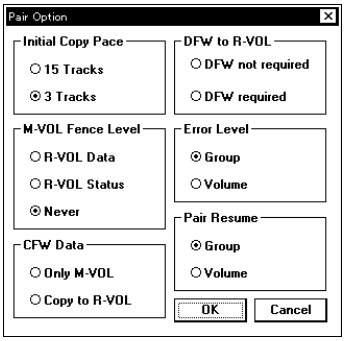
On the Pair Option screen, perform the following.
Set one of the following in Initial Copy Pace.
- 15 Tracks
- 3 Tracks

Set one of the following in M-VOL Fence Level.
(Fixed “Never” when asynchronous copy pair resuming)
- R-VOL Data
- R-VOL Status
- Never

Set one of the following in Error Level.
(Effective only asynchronous copy pair.)
- Group
- Volume

Set one of the following in Pair Resume.
(Effective only asynchronous copy pair.)
- Group
- Volume

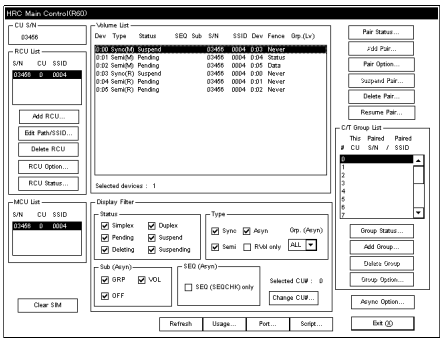
If 2 or more volumes are specified, you can specify “Volume” only.
When all above operation are finished, press (CL) [OK] button. Then go to 4.1.



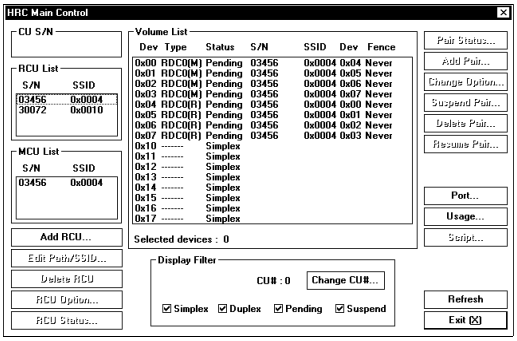
Copyright ©1998,2000, Hitachi, Ltd.

6. Verifying the resumption

Verify if the volume pair(s) selected from the volume list (see the figure) is in the pending (or duplex) status by pressing (CL) the [Refresh] button on the HRC (HODM) screen.



(HRC)



(HODM)

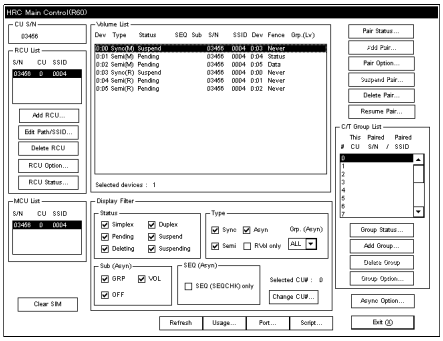
Copyright ©1999,2000, Hitachi, Ltd.

2.23.5 Deleting the Existing HRC Pair(s)

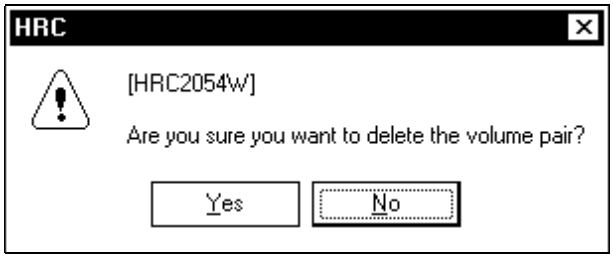
This operation deletes the HRC pair(s). The operation can be performed from both the MCU and the RCU.

1. Display the HRC screen.
   Select (CL) [HRC] in the 'SVP' window.

2. Selecting the volume pair(s)
   Set the CU# corresponding to the CU image address of the subsystem.
   Select the volume pair(s) desired to be deleted from the volume list (see the figure) on the HRC screen.



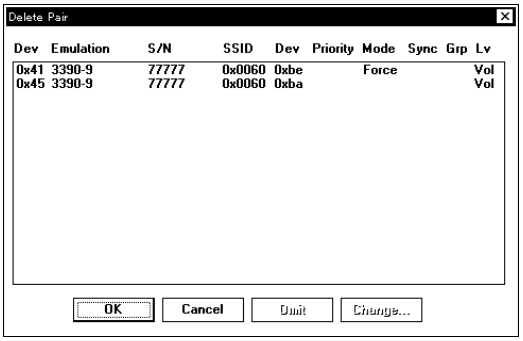
3. Instructing the deletion
   Select (CL) the [Delete Pair...] button on the HRC screen. The confirmation message will appear. To delete the pair(s) really, press (CL) the [Yes] button. Then Delete Pair screen will appear.



Copyright ©1998,2000, Hitachi, Ltd.

4. Confirm the deletion volume pairs

Confirm the deletion volume pairs that are displayed to the Delete pair screen and select (CL) [OK] button and go to 6.
If you want to change delete parameters, select the volume pairs from the volume list and select (CL) [Change...] button and go to 5.
If you want to omit the volume pair deletion, select the volume pairs from the volume list and select (CL) [Omit] button.



5. Inputting a deleting parameter

Press (CL) the [OK] button on the Delete Pair screen to execute the deletion and go to 4.

• Delete Pair by Force

This parameter deletes the selected pair(s) forcibly regardless of the status of the communication between MCU and RCU.

• Delete All Pairs

By using this parameter, you can delete all pairs (This operation could not be done against the asynchronous pairs.) In the step (2), you can use this option when you select one volume (it is not asynchronous copy) and select Delete Pair by Force.

Set one of the following in Delete. (Effective only asynchronous copy pair.)

• C/T
• Group
• Volume

“C/T” means all volumes deletion which displayed in “Sub” column of Volume List of HRC Main Control screen as “GRP”.

“C/T” can be specified only for undermentioned conditions :

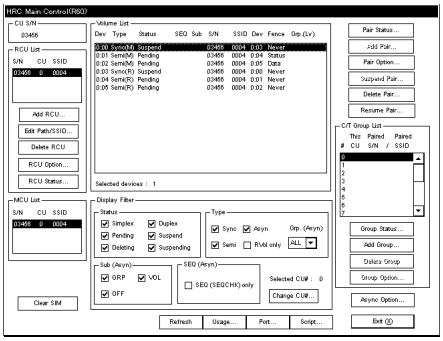
• Only one volume is specified.
• The specified volume is R-VOL.
• The specified volume is neither “Suspending” status nor “Deleting” status.

“Group” means all volume pair(s) deletion which is(are) assigned to the same C/T group as the specified volume pair(s).

“Volume” means only specified volume pair(s) will be deleted.

6. Verifying the pair(s) deleted

Verify if the volume pair(s) selected from the volume list (see the figure) is(are) in the simplex status by pressing (CL) the [Refresh] button on the HRC screen.



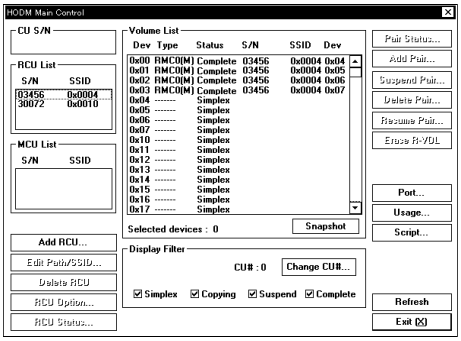
Copyright ©1998,2000, Hitachi, Ltd.

2.23.6 Deleting the Existing HODM Pair(s)

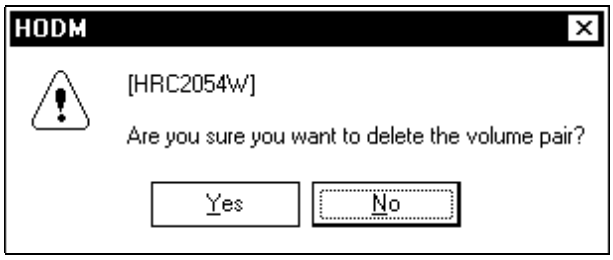
This operation deletes the HODM pair(s). The operation can be performed only from the MCU.

1. Display the HODM screen.
   Select (CL) [HODM] in the 'SVP' window.

2. Selecting the volume(s)
   Set the CU# corresponding to the CU image address of the subsystem.
   Select the volume pair(s) desired to be deleted from the volume list (see the figure) on the HODM screen.



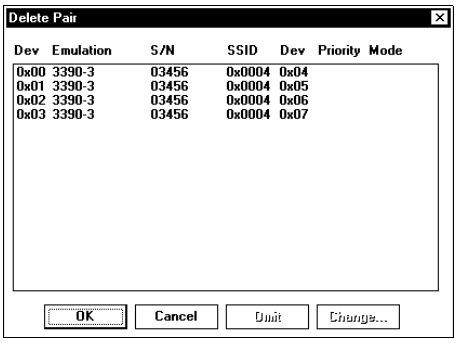
3. Instructing a deletion
   Press (CL) the [Delete Pair...] button on the HODM screen. The confirmation message will appear. To delete the pair(s) really, press (CL) the [Yes] button. The Delete Pair screen will appear.



Copyright ©1998,1999, Hitachi, Ltd.

4. Confirm the deletion volumes

Confirm the deletion volumes that are displayed to the Delete pair screen and select (CL) [OK] button and go to 6.
If you want to change delete parameters, select the volumes from the volume list and select (CL) [Change...] button and go to 5.
If you want to omit the volume deletion, select the volumes from the volume list and select (CL) [Omit] button.

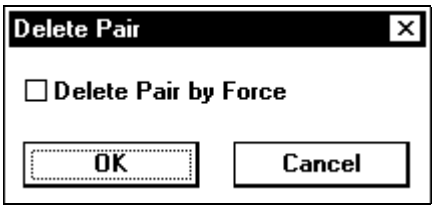


5. Inputting a deleting parameter

Press (CL) the [OK] button on the Delete Pair screen to execute the deletion and go to 4.

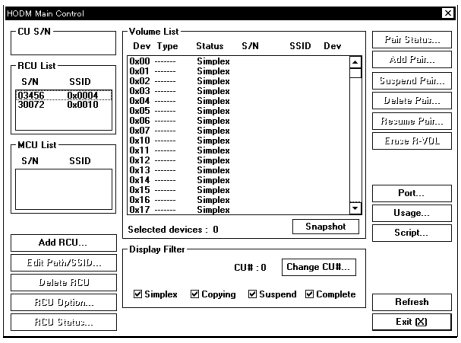
- Delete by Force

This parameter deletes the selected pair(s) forcibly regardless of the status of the communication between MCU and RCU.



6. Verifying the pair(s) deleted

Verify if the volume(s) selected from the volume list (see the figure) is(are) in the simplex status by pressing (CL) the [Refresh] button on the HODM screen.



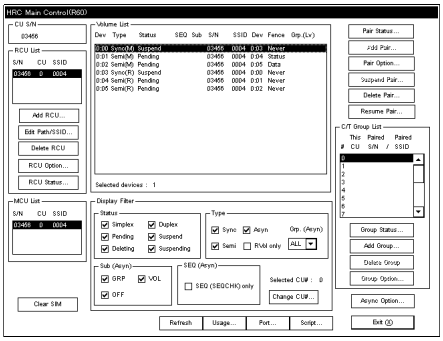
Copyright ©1998,1999, Hitachi, Ltd.

2.23.7 Deleting an RCU Registered

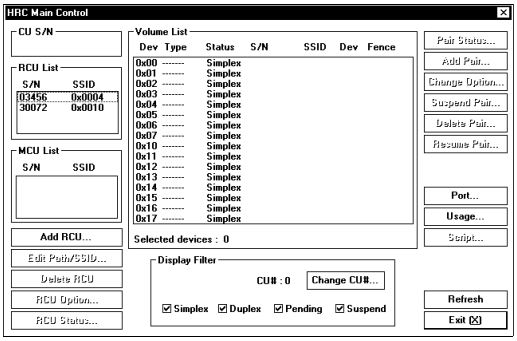
This function deletes an RCU. The function can be executed only from the MCU.

1. Display the HRC (HODM) screen.
   Select (CL) [HRC] ([HODM]) in the 'SVP' window.

2. Selecting an RCU
   Set the CU# corresponding to the CU image address of the subsystem.
   Select an RCU desired to be deleted from the RCU list (see the figure) on the HRC (HODM) screen. (Only one RCU can be selected here.)



(HRC)



(HODM)

3. Instructing the deletion
   Select (CL) the [Delete RCU] button on the HRC (HODM) screen. The confirmation message will appear. To delete the RCU really, press (CL) the [Yes] button.
