SMI-S Support

Beginning with code level B4xx, an embedded SMI-S agent is no longer provided with, or supported by, the TS3500 Tape Library. It is still possible to use a proxy SMI-S Agent for Tape on a separate Linux machine or to enable SNMP messaging as an alternative to SMI-S.

To get the most up-to-date information about SMI-S, SNMP, and TS3500 Tape Library, please visit the IBM® System Storage® TS3500 Tape Library Information Center on the web:
