

Netmiko Ultimate Challenge 2

ine.com

Lab Task

- Create a python script called as netmiko_challenge2.py in the /home/rack102-ubuntu/Desktop/rohit directory of the Ubuntu machine.
- This script must accomplish the following:
 - Connect to each router (R1, R2)
 - Save the config for each router
 - Backup the config for each router (“show run”) to a file (R1.cfg, R2.cfg) in the /home/rack102-ubuntu/Desktop/rohit directory of the Ubuntu machine.
 - Do not use any Functions or Conditionals to achieve this task.
 - You must use a For Loop to achieve this task.
