

Netmiko Ultimate Challenge 3

ine.com

Lab Task

- Create a python script called as netmiko_challenge3.py in the /home/rack102-ubuntu/Desktop/rohit directory of the Ubuntu machine.
- This script must accomplish the following:
 - Connect to each device (R1, R2, FW1)
 - Save the config for each device
 - Backup the config for each device (“show run”) to a file (R1.cfg, R2.cfg, FW1.cfg) in the /home/rack102-ubuntu/Desktop/rohit directory of the Ubuntu machine.
 - You must use a For Loop and Functions to achieve this task.
