

Section 1 - LAN Switching

ine.com

Task 1.4

- Configure Spanning-Tree as per the following requirements:
 - Use the default spanning-tree mode.
 - Configure SW3 as the STP Root Bridge for VLAN 250 using the lowest possible priority.
 - If SW3 goes down, SW4 should take over the STP Root Bridge role for VLAN 250 using the second-lowest possible priority.
 - Configure SW4 as the STP Root Bridge for all other VLANs without using the priority command.
 - If SW4 goes down, SW3 should take over the STP Root Bridge role for all other VLANs without using the priority command.
