

Section 1 - LAN Switching

ine.com

Task 1.9

- End-hosts need fast convergence in-case of a link failure. Ensure the following requirements are met:
 - Configure Spanning-Tree enhancements on SW3 and SW4 so that port Gi1/0 does not have to wait for the Spanning-Tree listening and learning phases to begin forwarding.
 - Configure Spanning-Tree enhancements on SW1 - SW4 so ports in access mode do not have to wait for the Spanning-Tree listening and learning phases to begin forwarding. Use a single command on each switch to achieve this requirement.
