

Section 5 - NETWORK AUTOMATION

ine.com

Task 5.3

- Create a python script called as outputs.py in the /root/Scripts. This script must accomplish the following:
 - Ask for an input from the user, for example, “Enter the IOS-XE router show command you want to display?”
 - Connect to each device (R19, R20, R21, R29, R30, R31)
 - Print "show ip interface brief | exclude unassigned"
 - Ensure the script asks for a username and password to connect to the devices.
 - Router username is rohit and the password is admin.
 - You must use a For Loop and a Function to achieve this task.
