

## Section 9 - Advanced SD-WAN

[ine.com](https://ine.com)

# Task 9.2

- Users at Site 34 require direct internet access. Provision this requirement to allow service-side VPN1 to access the internet using the MPLS core or the Biz-Internet. Your solution must incorporate redundant connections on vEdge3 and vEdge4. Your task is complete when R8 is able to ping 8.8.8.8 sourcing from the interface Loopback0.
