# Task 6.4

- Configure a WebRTC bridge to allow users to use the browser to join a meeting space using the FQDN `hq-cms.ine.com`.
- The Web bridge should use the standard default SSL port 443.
- The web bridge should also redirect the browser if the browser connects on `http` to `https`.
- Your task is complete, when Tony Stark can join HQ Two's space using the IVR created in earlier task and HQ Two joins the conference using a browser on the Jabber 1 machine.
