

Database Query Layer;
Determines what Back-END
use case and database
query to use.

Entry -by entry match filtering
in the GUI Back-End.
The more finegrained the query
use case above is, the faster
this step runs.

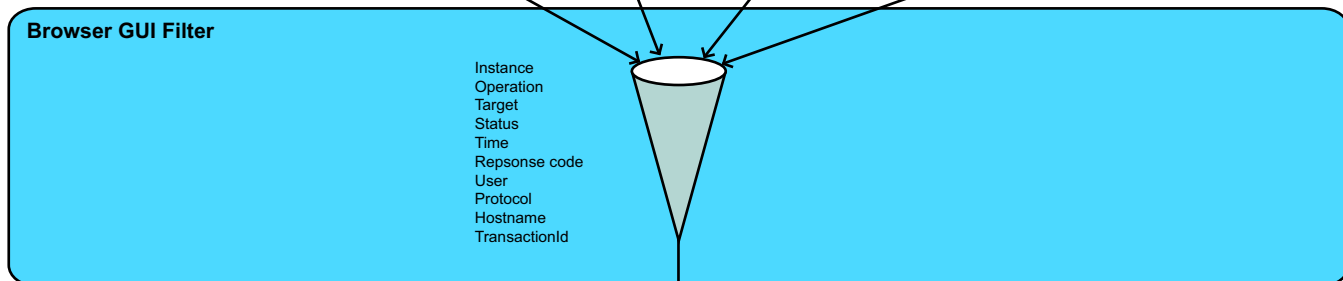

0-n of these can be specified.

This is a free text matching that
acts on the results that appears
in the browser.

This filters on any column and
any value within thos columns.

0-n of these can be specified.
