DBS, Memory Limit Reached

# 1 Alarm Description

The alarm is raised when DBN memory use exceeds a threshold.

Table 1 DBS Memory Limit Reached Alarm Causes

Alarm Cause	Description	Fault Reason	Fault Location	Impact
Reconfiguration ongoing	DBN is redistributing data either because a node being locked or unlocked or because a node failed.	N/A	N/A	Node lock, node unlock, and scaling operations must not be initiated until the alarm clears, as these can temporarily increase memory usage even more.
Overload	The system is overloaded.		Dimensioning	

**Note:** The alarm can be raised during a reconfiguration operation.

## 2 Procedure

### 2.1 Handle Alarm DBS, Memory Limit Reached

#### Prerequisites

- This instruction references the following document:
  - [Data Collection Guideline](#)
- No tools are required.
- Before starting this procedure, ensure that the following condition is met:
  - The alarm is raised.

#### Steps

1. Is the system overloaded?

Yes: Decrease load on the cluster, if possible.

No: Continue with the next step.

2. Is data redistribution (reconfiguration) in progress?

Yes: Wait for the reconfiguration to finish, then continue with the next step.

No: Consult the next level of maintenance support. Further actions are outside the scope of this Operating Instruction.

3. Is the alarm cleared?

Yes: Job is completed.

No: Consult the next level of maintenance support. Further actions are outside the scope of this Operating Instruction.
