Delete Backup

1 Description

This instruction describes how to delete a backup.

2 Procedure

2.1 Delete Backup

Prerequisites

- No documents are required.
- No tools are required.
- The following condition must apply:
 - No other backup operation is in progress.
 - The backup type is known.
 - The name of the backup to delete is known.
 - An Ericsson Command-Line Interface (ECLI) session in Exec mode is in progress.

Steps

1. Navigate to the *BrmBackupManager* managed object, for example:

```
>dn ManagedElement=NODE06ST, SystemFunctions=1, BrM=1, BrmBackupManager=SYSTEM_DATA
```

2. Start the delete operation, for example:

```
(BrmBackupManager=SYSTEM_DATA) >deleteBackup  
PERF_BACKUP_NAME1_20140428_175907
```

The system returns output `true` or `false`.

Note: To cancel the deletion of the backup, type `cancelCurrentAction`. If the delete operation is in the Prepare or Commit phase, the cancel is rejected.

3. Verify that the backup was successfully deleted:

```
(BrmBackupManager=PERF_BACKUP_NAME1_20140428_175907)  
>show progressReport
```

After a backup is successfully deleted, the progress report shows the following:

```
[...]  
actionName="DELETE"  
additionalInfo="Delete Backup for PERF_BACKUP_NAME1_20140428_175907:⇒  
Succeeded"  
progressInfo=""  
progressPercentage=100  
result=SUCCESS  
resultInfo="PERF_BACKUP_NAME1_20140428_175907 was deleted ⇒  
successfully."  
state=FINISHED  
[...]
```

If an error occurs during the execution of the operation, attribute `reportProgress` shows `result=FAILURE`, and `resultInfo` shows the cause of the failure.

For more information on the progress report, refer to *View Progress Report*.
