1 Introduction

This document describes how Ericsson SS7 TCAP ANSI complies with the following ANSI Standards:

- American National Standard for Telecommunications - Signaling System No. 7 (SS7) - Transaction Capabilities Application Part (TCAP), ANSI T1.114 - 2000 (Page 27)
- American National Standard for Telecommunications - Signaling System No. 7 (SS7) - Transaction Capabilities Application Part (TCAP), ANSI T1.114 - 1992 (Page 27)
- American National Standard for Telecommunications - Signaling System No. 7 (SS7) - Monitoring and Measurement for Networks, ANSI T1.115 - 1990 (Page 27)

1.1 Concept

This section will explain the different concepts that will be used in the compliance lists. The terms that are used are:

C	Ericsson Signaling Solution module complies with the specified paragraph in the standard.
N	Ericsson Signaling Solution module does not comply with the specified paragraph in the standard.
P	Ericsson Signaling Solution module complies partly with the specified paragraph in the standard. Specify in a note what in the module that does comply and what that does not.
-	There is nothing to implement in the referred paragraph (used in column "C").

2 Compliance Lists

2.1 TCAP, ANSI T1.114 - 2000

2.1.1 T1.114.1, Functional Description of Transaction Capabilities

Table 1 Functional Description of Transaction Capabilities

3 Notes

- Note 1** Only point 2 is considered, use of TCAP between Exchanges and Network Service Centres.
- Note 2** Layered approach is used.
- Note 3** ASP is not used in the Ericsson AB implementation of ANSI-SS7.
- Note 4** Connectionless mode is used (Application Service Part (ASP) is not used).
- Note 5** N-COORD and N-TRAFFIC are not supported. N-NOTICE and N-STATE are partially supported (providing T-NOTICE-Ind and T-STATE-Ind respectively from TCAP to the user).
- Note 8** Parameter IDs are handled transparently by TCAP.
- Note 9** There is no support for connection-oriented services in the current ANSI specification. This is for further study in the ANSI standard.
- Note 10** ANSI specification does not define support for this feature. This is for further study in the ANSI standard.
- Note 11** Requires further study in the ANSI standard.
- Note 12** TCAP ANSI does not support timestamps for events that are reported on occurrence.
- Note 13** Unavailability measurements are architecturally dependent and therefore optional in the ANSI standard. Local SSN availability is reported.
- Note 14** TCAP ANSI provides the necessary alarms/statistics to generate these measures but does not generate them directly.
- Note 15** Measurements concerning Invoke Problems, Return Result Problem and Return Error Problem in item 17.2 are for further study in the ANSI standard.
- Note 16** This module provides the necessary alarms and statistics necessary for network monitoring but does not in itself provide network monitoring.

- Note 17** This module provides the basic alarms and statistics required for maintenance but does not in itself provide network maintenance.
- Note 18** This module provides the basic alarms and statistics required for administrative purposes but does not actively participate in system administration.
- Note 19** The Length of Contents element has a maximum length of three octets.
- Note 20** In case of UNKNOWN messages TCAP does not check any Transaction IDs. Such Unknown messages are simply discarded.
