

COMMON LANGUAGE
FACILITY IDENTIFICATION
DESCRIPTION

1. GENERAL

1.01.1 This addendum is issued to supplement Issue 2 of the main section for application within the Southwestern Company. Numbering of the main section is followed in this addendum.

1.01.2 Facility identification procedures outlined in the main section and supplemented by this addendum shall be used on Circuit Layout Record Cards (CLRC), Form SW9350, described in Section 682-000-011. The issuance of this addendum does not preclude facility identification procedures of the main section for other purposes.

1.03 Should an Operating Area determine a need for additional facility identification codes, information for coding purposes shall be furnished by the Chief Engineer to the Assistant Vice President-Engineering at Company Headquarters, who will arrange for publication in the main section or this addendum.

2. DESCRIPTION OF LINE FACILITY CODE

2.01.1 The main section and this addendum refer to character positions 1 to 18 which are not compatible with character positions for entry on a CLRC. The CLRC outline utilizes character positions 19 to 36 for the same coding data. Compatibility for CLRC purposes may be obtained by adding the number 18 to any character position referenced in the main section or this addendum.

2.03.1 Any entry within the three code groups of character positions 1 to 5, 7 to 12 and 14 to 18 shall be left-hand aligned. (The term left-hand aligned means information entered in a field of character positions must begin in the lowest character position allotted for the entry.) Character positions 6 and 13 (24 and 31 on a CLRC) shall always contain a dash (-) when used for facility identification. Unused character positions in any of the three code groups shall always be left blank. Compression of facility identification codes shall not be used on CLRC's prepared in the Southwestern Company.
