

**RELAYS**  
**221, 222, 223, 224, 225, 247, 248, 251, AND 252 TYPES**  
**132- AND 133-TYPE INDUCTORS**  
**AND CORRESPONDING AUTOMATIC ELECTRIC COMPANY APPARATUS**  
**PIECE-PART DATA AND REPLACEMENT PROCEDURES**

**1. GENERAL**

**1.01** This section covers the information necessary for ordering parts to be used in the maintenance of 221-, 222-, 223-, 224-, 225-, 247-, 248-, 251-, and 252-type relays, 132- and 133-type inductors and corresponding AEC<sub>o</sub> apparatus. It also covers approved procedures for replacing these parts.

**1.02** This section is reissued to add relay codes and coils in Tables A and C, to add information for replacing armatures on AEC<sub>o</sub> relays of early manufacture, and to add procedures for replacing parts not readily accessible on a switch. Detailed reasons for reissue will be found at the end of the section. Since this reissue covers a general revision, the arrows ordinarily used to indicate changes have been omitted.

**1.03** Part 2 of this section covers the piece-part numbers and the corresponding names of the parts which it is practical to replace in the field in the maintenance of the relays and inductors covered by this section. No attempt should be made to replace parts not designated. Part 2 also contains explanatory figures showing the different parts. This information is called "*Piece-Part Data*."

**1.04** Part 3 of this section covers approved procedures for the replacement of the parts covered in Part 2. This information is called "*Replacement Procedures*."

**1.05** Modified 221- and 222-type relays are 221- and 222-type relays equipped with 1:1 ratio armatures.

**2. PIECE-PART DATA**

**2.01** The figures included in this part show the various piece parts in their proper relation to the other parts. The piece-part numbers of the various parts are given together with the names of the parts. The part numbers given in

Fig. 1 to 6 inclusive, in Table A, and the second column of Table C are WEC<sub>o</sub> piece-part numbers, and the names given are those listed by the WEC<sub>o</sub> merchandise department. The part numbers given in Fig. 7 (except for two WEC<sub>o</sub> piece-part numbers), Table D and the third and fourth columns of Table C are AEC<sub>o</sub> part numbers. Where these names differ from those in general use in the field the latter names, in some cases, are shown in parentheses.

**2.02** Information enclosed by parentheses ( ) is not ordering information. It may be references to notes, parts referred to in other portions of the section and not considered replaceable, or where the name in general use in the field differs from the part name assigned by the manufacturer.

**2.03** The tables in this part of the section cover the following information:

(a) **Table A** on Page 5 is a numerical list of WEC<sub>o</sub> relay and inductor code numbers showing the part number of the WEC<sub>o</sub> coil and a cross-reference item number to Table C. Table A is to be used for ordering coils for all WEC<sub>o</sub> code relays and inductors (2.05 explains the use of the item reference to Table C).

(b) **Table B** on Page 11 is a numerical list of AEC<sub>o</sub> code relays and inductors, for which equivalent WEC<sub>o</sub> coils are available, showing an item number referring to Table C for coil ordering information. This table also shows in a third column the code number of the corresponding WEC<sub>o</sub> relay where such exists (2.06 explains the procedure for ordering coils for AEC<sub>o</sub> relays).

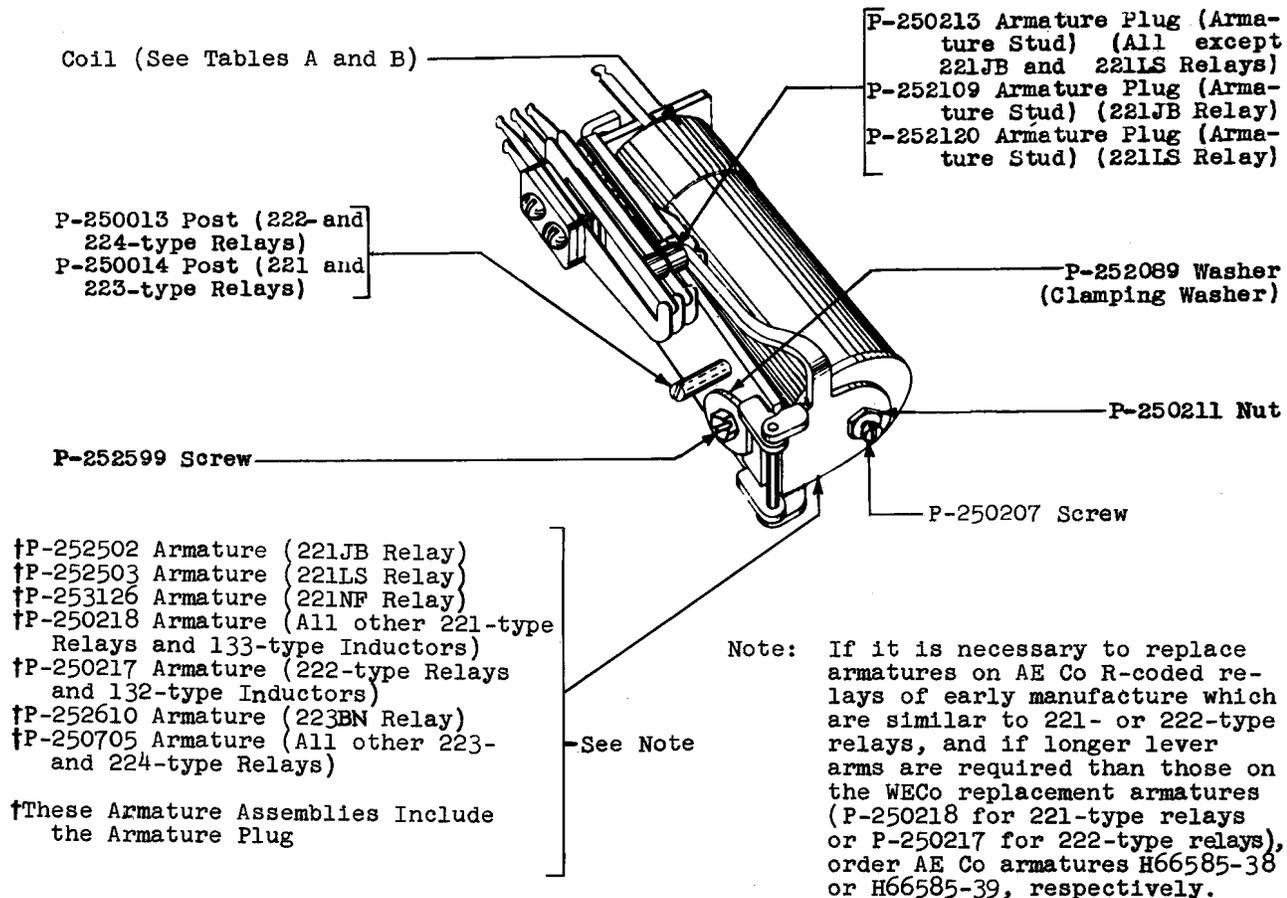

(c) **Table C** on Page 27 lists in numerical order the item numbers and the corresponding piece-part numbers for the various interchangeable coils. Item numbers below 1000 apply to WEC<sub>o</sub> coils. Item numbers above

1000 apply to AECo coils which do not have corresponding WECo coils. When coils are ordered in accordance with this table, use the WECo coil number for item numbers below 1000 and use the "White Covering" coil number for item numbers above 1000. The other coil numbers are listed merely to assist in identifying interchangeable coils that may be on hand.

(d) **Table D** on Page 30 lists all AECo coils in numerical order with a cross reference to item numbers in Table C for ordering information. The coils shown in Table D are interchangeable with any of the coils shown opposite the corresponding item number in Table C.

**2.04** Some AECo R coded relays of early manufacture have armatures with longer lever arms than those on armatures of corresponding 221- and 222-type relays. Since the 221- and 222-type relay armatures are not satisfactory for use on these AECo relays, order armatures for these relays as covered in Fig. 1.

**2.05 Procedure for Ordering Coils for a WECo Code Relay:** Refer to Table A and order the coil listed opposite the relay code or inductor code. To determine what interchangeable AECo coils can be used in place of the WECo coil, note the item number opposite the coil number in Table A, and refer to the corresponding item in Table C.

**Fig. 1 – Parts of 221-, 222-, 223-, and 224-type Relays, 132- and 133-type Inductors, and Corresponding AECo Apparatus**

**2.06 Procedure for Ordering Coils for an AECO Code Relay:** Refer to Table B. If the relay or inductor is listed in Table B, proceed as outlined in (a) below. If the relay or inductor is not listed in Table B, proceed as outlined in (b) below.

(a) **AECO relays listed in Table B.** Refer to the corresponding item number in Table C and order the coil by the WECO number shown opposite that item number. The coil numbers shown in Table C opposite that item number can be used interchangeably.

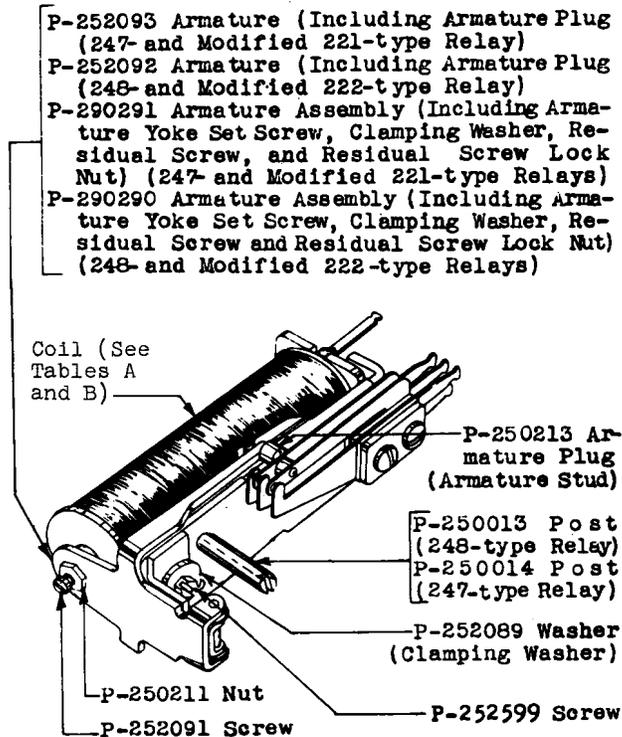

(b) **AECO relays not listed in Table B.** Note the coil number specified under the desired relay code on the circuit requirement table. If that coil number is listed in Table D refer to the corresponding item number in

Table C and order the coil number listed in the column headed "WECO Coil No." If no coil number appears in the column headed "WECO Coil No.", order the coil number listed in the column headed "White Covering." If the coil number is not listed in Table D, order the coil by the number specified on the circuit requirement table.

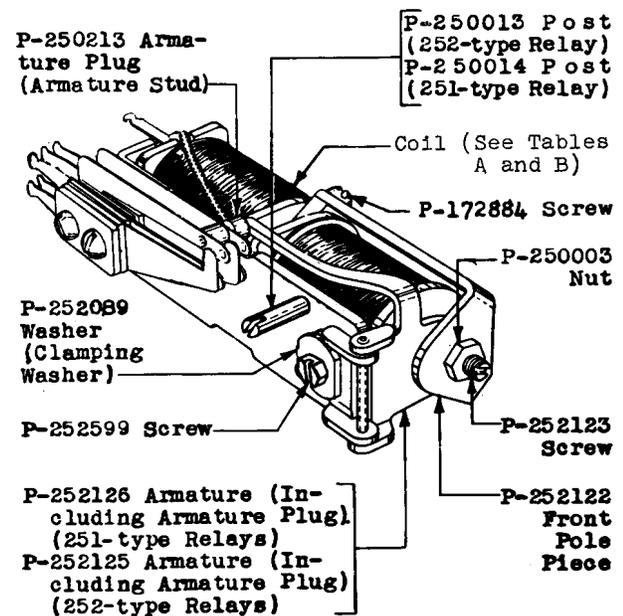

(c) If the coil number is not shown on the circuit requirement table, order a coil for a particular code relay as follows: "Coil for RXXX-A1 relay."

**2.07** In Tables A and B, certain relays are designated by an asterisk (\*). For these relays it is recommended that no coil replacements be made if "zero" or "slight residual" (SL) is specified for the relays.

**2.08** When ordering parts for replacement purposes give the piece-part number as well as the name of the part. Example: "P-250214 — Bushing." Do not refer to the BSP number or to any information shown in parentheses following the piece-part numbers.

**Fig. 2 — Parts for 247- and 248-type Relays, Modified 221- and 222-type, and Corresponding AECO Relays**

**Fig. 3 — Parts of 251- and 252-type Relays**

When ordering P-252552 Washer also order P-252551 Bushing where the bushing was not previously furnished

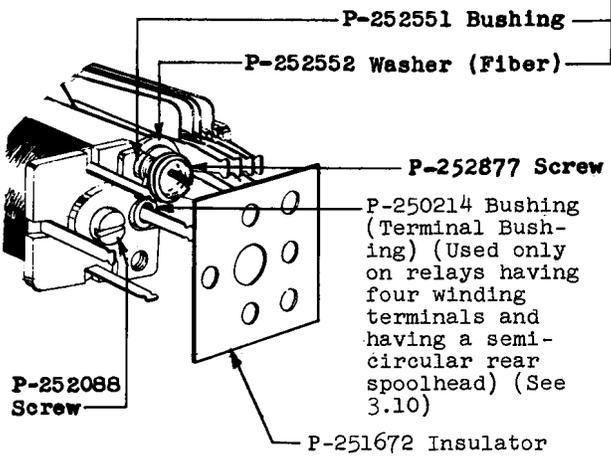

Fig. 4 - Parts Used in Mounting All Relays and Inductors, Except the 225 and Corresponding AECo Relays

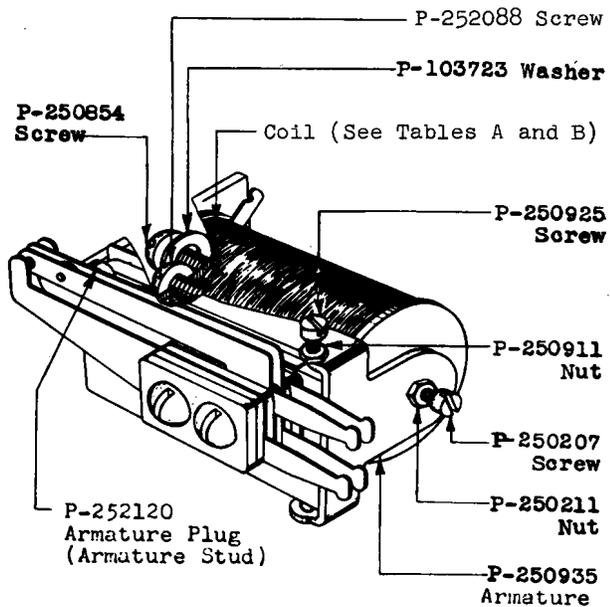

Fig. 6 - 225-type and Corresponding AECo Relays (Pivot-type Armature Bearings)

**Armature Assembly**

Note: When ordering any part of the armature assembly except the residual screw and lock nut and armature plug order an armature, armature plug and spring assembly, assembled for the particular code relay involved.

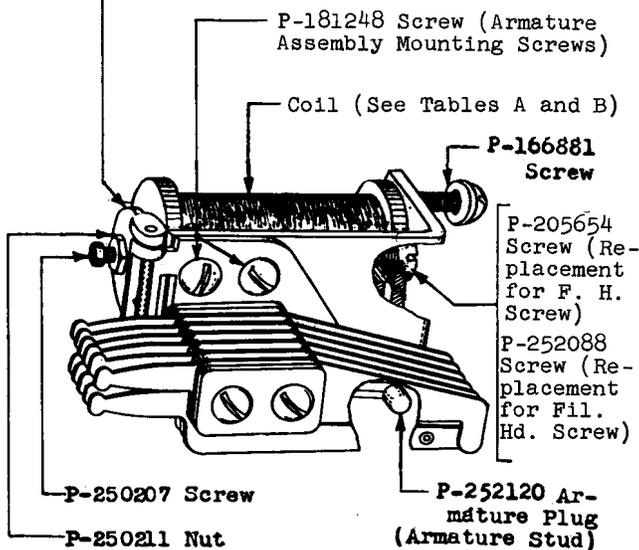

Fig. 5 - 225-type and Corresponding AECo Relays (Pin-type Armature Bearing)

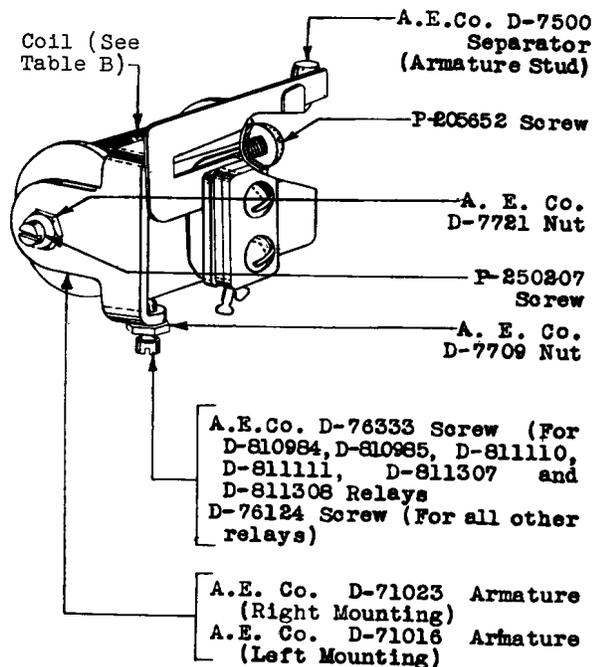

Fig. 7 - AECo Pivot-type Relays Used on Line Switches and Master Switches

**TABLE A — NUMERICAL LIST OF WEC<sub>o</sub> RELAY AND INDUCTOR CODE NUMBERS SHOWING PART NUMBERS FOR WEC<sub>o</sub> COILS AND CROSS REFERENCE TO TABLE C FOR INTERCHANGEABLE AEC<sub>o</sub> COILS [SEE 2.03 (a) AND 2.05]**

## 3. REPLACEMENT PROCEDURES

## 3.01 List of Tools

CODE OR  
SPEC NO.

DESCRIPTION

CODE OR  
SPEC NO.

DESCRIPTION

## TOOLS

## TOOLS

43	3/16- and 1/4-inch Hex. Open Double-end Flat Wrench	474A	3/16- and 1/4-inch Hex. Closed Double-end Offset Wrench
48	Combination 7/32-inch and 1/4-inch Hex. Double-end Socket Wrench and Screwdriver	476A	3/16-inch Hex. Offset Socket Wrench
206	30° Offset Screwdriver	563A	90° Offset Screwdriver
207	90° Offset Screwdriver	564A	45° Offset Screwdriver
207	90° Offset Screwdriver, Modified (See 3.02)	565A	90° Offset Screwdriver
209	5/16-inch Hex. Open Single-end Offset Wrench	566A	45° Offset Screwdriver
417A	1/4- and 3/8-inch Hex. Open Double-end Flat Wrench	R-1482	File
418A	5/16- and 7/32-inch Hex. Open Double-end Flat Wrench	—	5-inch Diagonal Pliers
		—	P-Long-nose Pliers
		—	3-inch Cabinet Screwdriver
		—	4-inch Regular Screwdriver
		—	6-inch Straight Tweezers, American Piano Supply Co., No. 56 (or equivalent)

**3.02** Modify a No. 207 offset screwdriver by cutting it in two parts with a hacksaw at a line midway between the two ends and remove burrs from the cut edges with the R-1482 file.

**3.03** After making any replacements of parts of a relay, the part or parts replaced shall meet the readjust requirements involved as specified in Section 040-236-701. Other parts whose adjustments may have been directly disturbed by the replacing operations shall be checked to the readjust requirements, and an over-all operation check shall be made of the relay before restoring the circuit to service.

**3.04** No replacement procedures are specified for screws or other parts where the replacement consists of a simple operation.

#### **221-, 222-, 223-, 224-, 247-, 248-, 251- AND 252-TYPE RELAYS AND 132- AND 133-TYPE INDUCTORS**

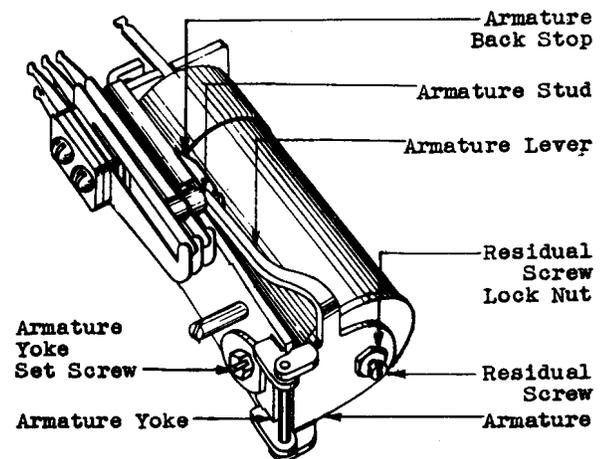

##### **3.05 Residual Screw and Residual Screw Locknut: (Fig. 8)**

(1) If the residual screw is readily accessible, loosen the residual screw locknut with the wrench portion of the No. 48 combination wrench and screwdriver and remove the residual screw with the screwdriver portion of the tool. Substitute the new parts. Adjust the screw to meet the residual airgap requirement covered in Section 040-236-701 and securely tighten the residual screw locknut.

(2) If the residual screw is behind a normal post spring assembly but is accessible for removal by the fingers, replace the screw as follows. First, remove the cover from the switch adjacent to the relay being worked on. Then, loosen the residual screw locknut with the No. 474A wrench, taking care to avoid grounding the adjacent springs. Turn the screw with the modified No. 207 screwdriver or with the fingers, and remove the screw and locknut. Substitute the new parts. Adjust the screw to meet the residual airgap requirement covered in Section 040-236-701 and securely tighten the residual screw locknut.

(3) If the residual screw is not accessible to the fingers, loosen the setscrew of the normal post spring assembly using the 3-inch cabinet screwdriver or the No. 476A wrench and shift or remove the spring assembly to

gain access to the screw, taking care not to damage the leads. Replace the residual screw as covered in (1) if the spring assembly has been removed, or as covered in (2) if the assembly has been shifted. Adjust the screw to meet the residual airgap requirement covered in Section 040-236-701. Reposition and adjust the normal post spring assembly.

**Fig. 8 – Parts of 221-, 222-, 223-, and 224-type Relays**

##### **3.06 Armature Backstop Screw (251- and 252-type Relays):**

(1) Replace the armature backstop screw and locknut following procedures similar to those for the residual screw and locknut covered in 3.05 (1), (2), or (3) except use the No. 209 wrench to loosen the locknut.

##### **3.07 Armature and Yoke, Armature Yoke Setscrew, and Armature Yoke Clamping Washer:**

To replace the armature and yoke, loosen the yoke setscrew with the No. 476A offset socket wrench for 247-, 248-, and modified 221- and 222-type relays or with the No. 563A and No. 564A offset screwdrivers for all other types. Remove the armature and yoke by drawing it forward. If the setscrew or clamping washer is to be removed, do it at this time. To remove the armature and yoke on 251- and 252-type relays, remove the armature yoke setscrew and armature yoke clamping washer. Then swing

the yoke forward and remove the armature from the side of the relay. Place the new armature yoke clamping washer in position on the heelpiece so that the lug on the washer engages the hole in the heelpiece. Place the yoke setscrew in position and give it a few turns to hold the clamping washer loosely. Guide the armature into position so that the armature yoke is between the armature yoke clamping washer and the heelpiece and the armature stud is between the armature backstop and the first lever spring. Then secure the armature and yoke in position by tightening the armature yoke setscrew with the No. 563A and 564A offset screwdrivers or the No. 476A wrench as required.

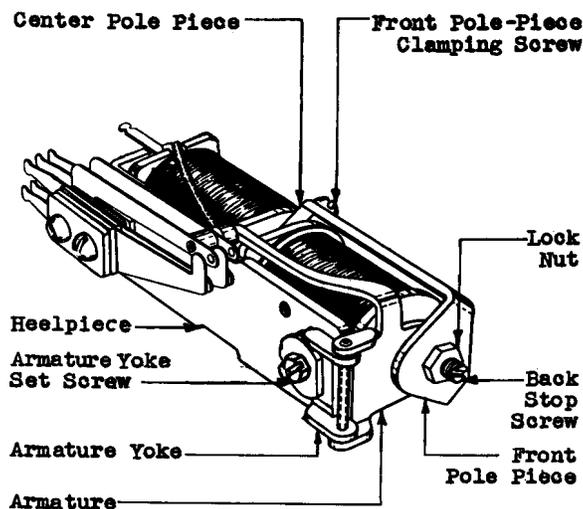

Fig. 9 – Parts of 251- and 252-type Relays

**3.08 Front Pole Piece** (251- and 252-type Relays): Loosen the front pole-piece clamping screws with the No. 206 and 207 offset screwdrivers and remove the front pole piece. Remove the backstop screw and locknut from the pole piece as covered in 3.06 and mount these parts on the new front pole piece. If the front pole-piece clamping screws are to be replaced, replace them at this time. Mount the new front pole piece in position with the armature between the front pole piece and the core and tighten the pole-piece clamping screw securely.

**3.09 Armature Stud:** Remove the armature and yoke as described in 3.07 and then remove the old stud from the armature arm by cutting it with the diagonal pliers. Place the new armature stud on the armature arm pressing it onto the arm with the long-nose pliers far enough to hold it in position. Then heat the armature arm slightly with a soldering iron and press the stud into place with the long-nose pliers as shown in Fig. 10.

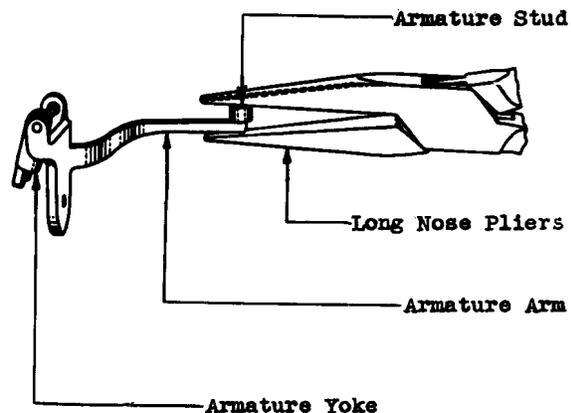

Fig. 10 – Method of Pressing the Armature Stud onto the Armature Arm

### 3.10 Coil

- (1) Replace the coil as covered in (2) if the coil is readily accessible or as covered in (3) if the coil is behind a normal post spring assembly on a switch.
- (2) If the coil is readily accessible, unsolder the leads from the winding terminals and remove the armature and yoke as described in 3.07. On 251- and 252-type relays, remove the front pole piece as covered in 3.08 and swing the armature outward. Remove the coil mounting screw with the 4-inch regular screwdriver and then remove the coil by drawing it forward until the winding terminals are free of the mounting plate. If the coil has four winding terminals and semicircular rear spoolhead, place a terminal bushing (see Fig. 4) over the winding terminal nearest the flat side of the spoolhead of the new coil so that

the collar on the bushing is adjacent to the spoolhead. If there is occasion to replace a coil having a square rear spoolhead and four winding terminals with one having a semi-circular rear spoolhead, use a terminal bushing per Fig. 4. On 251- and 252-type relays, mount the front pole piece and clamping screws in the new center pole piece. If the coil has a semicircular rear spoolhead, mount it so that the flat side of the spoolhead is adjacent to the heelpiece. If the coil has a square rear spoolhead, mount it so that the two rectangular holes in the front spoolhead are on the side away from the heelpiece. If the coil has a copper slug at the front end, mount it with the embossed side of the slug toward the heelpiece. Fasten the coil in place by tightening the coil mounting screws securely and assemble the armature and yoke in its correct position as covered in procedure 3.07. On 251- and 252-type relays, mount the front pole piece as covered in 3.08. When the relays are mounted on a mounting plate similar to the 930 type, it will be necessary to remove the mounting plate from the shelf as described for a 197- or 198-type switch in Section 030-705-801, in order to reach the wiring and the coil mounting screw.

(3) If the coil is behind a normal post spring assembly on a switch, make the coil accessible for removal by shifting or removing the spring assembly as covered in 3.05 (3). Replace the coil as covered in (2) above and remount the spring assembly as covered in 3.05 (3).

**3.11 Terminal Bushing** (Fig. 4): Remove the armature, yoke, and the coil as described in 3.10. Then remove the bushing from the winding terminal with the long-nose pliers or by cutting it with the diagonal pliers. Place the new bushing in place on the winding terminal nearest the flat side of the spoolhead so that the collar on the bushing is adjacent to the spoolhead. Then reassemble the coil and the armature and yoke as described in 3.10.

#### 225-Type Relays and AECo Pivot-type Relays

##### 3.12 Residual Screw and Residual Screw Locknut

(1) Replace the residual screw and locknut as covered in 3.05 (1) if the screw is readily accessible or as covered in (2) below if the

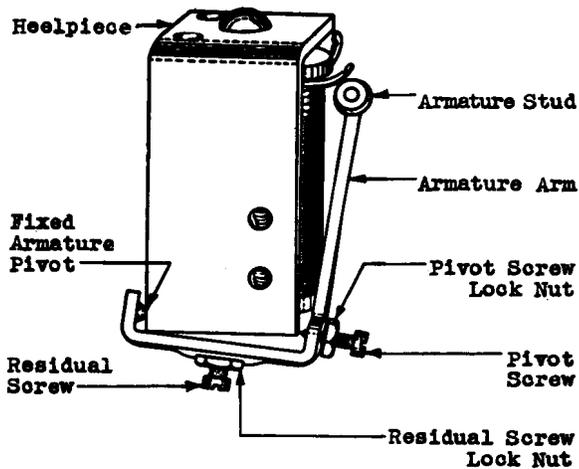

screw is behind a rotary off-normal spring assembly on a switch.

(2) If the residual screw is behind a rotary off-normal spring assembly, first remove the cover from the switch adjacent to the relay being worked on. Loosen the residual screw locknut with the No. 474A wrench, taking care to avoid grounding the adjacent springs. Turn the screw with the modified No. 207 screwdriver or with the fingers and remove the screw and locknut. Substitute the new parts. Adjust the screw to meet the residual airgap requirement covered in Section 040-236-701 and securely tighten the residual screw locknut.

**3.13 Pivot Screw and Locknut:** Loosen the pivot screw locknut with the No. 417A wrench if the nut is 1/4 inch across flats, with the No. 418A wrench if the nut is 7/32 inch across flats, or with the No. 43 wrench if the nut is 3/16 inch across flats. Remove the pivot screw with the modified No. 207 offset screwdriver. Substitute the new screw and locknut and tighten the locknut securely.

**3.14 Armature** (Pivot-type Armature Bearing): Remove the pivot screw and locknut as described in 3.13 after which the armature may be removed by swinging the armature arm away from the coil to disengage the fixed pivot from the heelpiece. If the armature assembly is not provided with an armature stud, assemble the stud on the new armature arm as described in 3.09. Substitute the new armature by engaging the fixed armature pivot in the bearing hole in the heelpiece as shown in Fig. 11 and guide the armature arm so that the armature stud is between the backstop and the first lever spring. Hold the armature in this position, turn the pivot screw into position, and tighten the pivot screw locknut securely.

**3.15 Armature and Yoke and Armature and Yoke Mounting Screws** (Pin-type Armature Bearing): To replace the armature and yoke of a relay used as the "Z" relay of a 197-type switch, remove the switch from the shelf as described in Section 030-705-801 covering Piece-Part Data and Replacement Procedures for 197- and 198-type Switches. Then unsolder the leads from the contact springs and remove the relay mounting screws on the rear

**Fig. 11 – Method of Replacing the Armature  
(Pivot-type Armature Bearing)**

of the mounting plate with the 4-inch regular screwdriver. Support the relay in the hand and remove the armature and yoke mounting screws with the 4-inch regular screwdriver. Substitute the new armature and yoke and spring assembly, resolder the leads to the contact springs, fasten the relay to the mounting plate with the mounting screws, and replace the switch on the shelf as covered in Section 030-705-801.

**3.16 Armature Stud:** To replace the armature stud, remove the armature and yoke as described in 3.14 or 3.15 and then substitute the new armature stud as described in procedure 3.09.

#### Coil

**3.17 225-type Relay with Pin-type or Pivot-type Armature Bearing:** To replace the coil of a relay used as the "Z" relay of a 197-type switch, remove the switch from the shelf as covered in Section 030-705-801. Then unsolder the leads from the winding terminals, and remove the coil by removing the coil mounting screw from the rear of the switch mounting plate with the 4-inch regular screwdriver. Substitute the new coil and fasten it in position with the coil mounting screw so that the winding terminals extend toward the right-hand side of the switch as viewed from the front. Solder the winding leads in place and replace the switch on the shelf as covered in Section 030-705-801.

#### 3.18 AECo Pivot-type Relay, Line Switch

**Mounting:** To replace the coil of a pivot-type relay mounted on a plunger-type switch frame, remove the line switch from the shelf as described in Section 030-705-801 covering the requirements and adjusting procedures for Plunger-type Primary and Secondary Line Switches and Out-Trunk Switches. Then remove the switch jack mounting screw with the 3-inch cabinet screwdriver and move the jack out of the way so as to give access to the coil mounting screw. Unsolder the leads from the coil winding terminals and remove the coil by removing the coil mounting screw with the 4-inch regular screwdriver. Substitute the new coil and tighten it in position with the coil mounting screw so that the winding terminals are on top as viewed from the front of the switch. Solder the leads to the winding terminals and remount the line switch on the shelf as covered in Section 030-705-801.

#### 3.19 AECo Pivot-type Relay, Master Switch

**Mounting:** To replace the coil of a pivot-type relay mounted on the left side of a master switch, it will be necessary to remove the bracket on which the relays are mounted from the master switch frame. Before removing the bracket, however, unsolder the leads from the winding terminals of the coil to be replaced. Remove the relay bracket by loosening the lower mounting screw first, with the 3-inch cabinet screwdriver and then withdrawing the screw with the 6-inch tweezers. Now support the relays with one hand and remove the top mounting screw. The slack in the wiring will now permit the bracket to be turned so that the coil mounting screws are accessible. Remove the coil to be replaced by removing the mounting screw with the No. 565A and 566A offset screwdrivers, or with the 4-inch regular screwdriver, substitute the new coil and tighten the coil mounting screw so that the winding terminals are accessible from the bottom of the master switch. Reassemble the relay bracket on the master switch frame by inserting the top mounting screw through the hole in the relay bracket with the 6-inch tweezers and then tightening the mounting screw sufficiently to hold the bracket loosely in position. Then place the other mounting screw in position with the 6-inch tweezers, tighten both mounting screws securely and then resolder the leads on

the winding terminals. When replacing the coils of relays mounted on the right side of the master switch, follow the same procedure as described above except that when reassembling the bracket on the master switch frame, observe that the stud on the lower leg of the locking arm of the master switch is between the armature arm and the first contact spring of the locking relay.

#### REASONS FOR REISSUE

1. To reword the information to specify inductors instead of retardation coils (1.01).
2. To add a paragraph covering uses of parentheses (2.02).
3. To add a paragraph covering information for replacing armatures on AECO relays of early manufacture (2.04).
4. To reword paragraph 2.05 of the previous section covering use of the asterisk (\*) designation (2.07).
5. To revise Fig. 1, 4, 5, and 6.
6. To revise Tables A, B, and C.
7. To revise the list of tools (3.01).
8. To add a paragraph for modifying a No. 207 tool (3.02).
9. To revise the procedures for replacing the residual screw and residual screw locknut (except on 225-type relays) (3.05).
10. To revise the procedures for replacing the armature backstop screw (3.06).
11. To revise the procedures for replacing coils (3.10).
12. To revise the procedures for replacing the residual screw and residual screw locknut on 225-type relays (3.12).
