

B SUPPORT CLIP

1. GENERAL

1.01 The B Support Clip (Fig.1) provides a means of attaching drive rings and wire loops to hanger wires and rods used in false-ceiling construction or the flanges of structural steel framework. It replaces the B Hanger Clip and B Beam clip.

1.02 This notched spring-steel clip has two loops, each providing a fit for the drive rings. In addition, these loops and a centrally located hole each accommodate a No. 8 sheet metal screw. The clip is intended for inside use only.

1.03 This clip can be used on wire and rod from No. 12 through 3/8-inch diameter and on flanges from 1/8-inch to 3/8-inch thick.
