

# National Mobile Telephone Service

## Area Listings

Fall 1978

100-000

**These Listings are prepared for users of Public Mobile Telephone Service offered by many telephone companies in the United States. The listing of a company or location does not represent a warranty of service availability; however, the listings are compiled from the best available sources of the United States Independent Telephone Association and the American Telephone and Telegraph Company as of August, 1978.**

Due to data processing problems, this issue may not reflect current information.

## EXPLANATORY NOTES

### GENERAL

To determine the availability of service at a specific place, consult the Index for the page number of the state in which it is located. Cities are listed alphabetically under each state in each section. Sections correspond to the various segments of the radio spectrum used for public mobile telephone service. The following symbols used in these sections indicate the type of service offered and the availability of operator access in each listed city.

- X Manual service with access to an operator
- O IMTS 2-way dial service with automatic channel selection and access to an operator
- R IMTS 2-way dial service; equipped roamers may dial all station-to-station calls; service to manual units is not available
- \* 2-way dial service with access to an operator
- ϕ 2-way dial service without access to an operator

The locations shown designate only the cities in which the mobile telephone systems are located. Please note that other locations may be within the coverage area of the system but are not shown. Normally, service will be available within an average of about 20 miles from the locations listed, however, this can vary because of local terrain conditions.

It is suggested that the telephone company shown in this booklet as serving the nearest location to the desired area be contacted to determine service availability.

Should the channel designation shown (ZA, JL, QF, etc.) be unfamiliar to the user, Page 3 shows the actual frequencies associated with these designations.

### PLACING AND RECEIVING CALLS ON A ROAMING BASIS

If any of the aforementioned symbols are shown at locations in which service is desired, contact your local telephone company or mobile repair service bureau to determine specifically whether your mobile set can operate at that location.

### RECEIVING CALLS

To determine the proper technique for receiving calls in your vehicle while in a roaming area, it is suggested that you contact your local telephone company for instructions. Variations in equipment preclude the inclusion of a general instruction for this function.

### STATION IDENTIFICATION

The Federal Communications Commission requires, under rule 21.213, that mobile stations be identified on an individual basis on each call. To comply with the FCC regulation, it is necessary that the mobile subscriber verbally announce the assigned telephone number before terminating each call.

## PLACING CALLS

In determining the proper techniques for placing calls in a roaming area — the user should determine whether his mobile set is equipped with the proper channels and whether roaming is permitted in the area. Your local telephone company or mobile repair service bureau can provide advice on the manner of obtaining the proper channel complement for the particular mobile set(s) involved.

Cities whose channels are marked with an X offer manual mobile service. Normally, calls may be placed by depressing the push-to-talk button for 2 to 3 seconds. After release, listen for the operator to respond and place your call through her. Automatic dial sets designed for 450 MHz service are not normally equipped with push-to-talk handsets and do not have access to manual mobile systems.

Cities whose channels are marked with an 0 provide IMTS 2-way dial service with automatic channel selection and operator access.

IMTS mobile units roaming into these areas should be operating in the roam mode. Depending upon the type of service arrangements at a particular location, you may receive dial tone and be able to dial local exchange telephone numbers. The mobile service operator may respond and you will place your call through her or, if roaming is not permitted, service will not be available.

Manual or other dial mobile units roaming into 150 MHz service areas may if permitted, place calls in the same manner as described above for manual areas. 450 MHz manual mobile units cannot obtain service in IMTS areas.

Cities whose channels are marked with an "R" provide IMTS 2-way dial service with automatic channel selection. IMTS mobile units roaming into these areas should be operating in the roam mode, will receive dial tone and may dial all station-to-station calls. Manual mobile units cannot obtain service through these systems.

Calls should then be dialed in the following manner:

- (1) To call any telephone within the area code listed next to the city or system in which you are placing the call, dial only the seven digits of the telephone number.
- (2) To call a telephone in an area code different from the one listed next to the city or system in which you are placing the call, dial "1" + area code + seven-digit telephone number.
- (3) To place person-to-person, collect, credit card, bill to another number calls, or for operator assistance, dial "0." A mobile knowledgeable operator will respond.
- (4) For directory assistance: Within the listed area code: dial "411." In a different area code: dial "1" + area code + "555-1212."

Cities whose channels are marked with an \* offer 2-way dial service with operator access which may permit roaming vehicles to place and receive calls in this area.

Dial or manual mobile units roaming into these areas will place calls in the same manner as described above for manual areas.

Cities whose channels are marked with the  $\phi$  offer 2-way dial service without access to an operator which may prevent roaming vehicles from placing or receiving calls in this area.

## CHANNEL-FREQUENCIES
