4. PROCEDURE

1. GENERAL INFORMATION

1.1 Description

1.11 This section describes the tests to be performed whenever the Busy Verification of Station Lines feature is provided.

1.12 This feature allows the attendant to verify the state of a station line.

2. RECORDS

2.1 Form SD-97-1313 is required for recording the results of this test.

3. TEST EQUIPMENT

3.1 Telephone Set

<u>Amount</u>	<u>Code</u>	<u>Description</u>
2	500 (or equiv.)	Telephone Set

3.2 Apparatus

<u>Amount</u>	<u>Code</u>	<u>Description</u>
2	249A	Adapter

4. PROCEDURE

4.1 Test Procedure

4.101 Select two lines from the Line Assignment section of the Customer Order Document.

4.102 Utilizing the 249A Adapters, connect the telephone sets to the circuit pack test lines associated with the stations chosen in Step 4.101. Designate one Station "A" and the other Station "B".

4.103 From Station A call Station B. Do not answer Station B.

4.104 At the attendant console, momentarily depress an idle LOOP key, VER key, START key, and dial Station B. Verify attendant hears reorder tone.

4.105 At the attendant console, momentarily depress the RELEASE key and answer Station B. Verify loop selected in Step 4.104 goes idle and Station A is connected to Station B.

4.106 At the attendant console, momentarily depress an idle LOOP key, VER key, START key, and dial Station B. Verify busy verification tone is heard by all three parties, repeated every 14 seconds, and 3-way transmission is satisfactory.

4.107 At the attendant console, momentarily depress the RELEASE key and hang up Stations A and B. Verify console and stations are idle.

4.108 At the attendant console, momentarily depress an idle LOOP key, VER key, START key, and dial Station B. Verify audible ringing is heard by the attendant and Station B is ringing.

4.109 Release the console by depressing the RELEASE key. Verify console is idle.

4.110 This completes the testing of the Busy Verification of Station Lines feature.
