1. GENERAL

1.1 This section provides testing information for Intercept Treatment.

1.2 Calls which cannot be completed are routed to the intercept treatment selected. The treatments provided are:

1.21 Attendant Intercept - Calls which cannot be completed are routed to the attendant position for further treatment.

1.22 Intercept Tone - Provides a continuous tone alternating between a low pitch and a high pitch indicating that a restricted or unassigned code has been dialed or that a special service has been denied.

1.23 Recorded Announcement - Calls which cannot be completed are routed to a recorded announcement.

2. RECORDS

2.1 Form SD-97-1313 is required for reporting the results of these tests.

3. TEST EQUIPMENT AND DOCUMENTATION

3.1 Handsets

<u>Amount</u>	<u>Type</u>	<u>Description</u>
1	ITE-4208A	Telephone Handset
1		CSS-201 Console

3.2 Documentation

3.21 From the System and Feature Summary in the Customer Order Document, determine the type of intercept provided.

4. TEST SET-UP

4.1 Connect telephone handset to test line.

4.2 Verify that the console is connected to the system.

5. INTERCEPT TREATMENT TEST

5.1 From test line dial an unassigned station code.

5.11 Intercept tone received.

5.2 If DID trunks are provided, proceed to next step else go to Paragraph 6.

5.3 Arrange for an incoming call to an unassigned station.

5.31 Verify that appropriate intercept treatment per Customer Order Document is provided.

6. RESTORATION

6.1 Determine if part of existing set-up can be utilized for the next test and restore all other facilities to normal.
