3. REQUIREMENTS (Cont'd)

3.3 Verify that all LC172B CIRCUIT PACKS have their option blocks strapped for the common control in which they appear (See below).

OPTION	COMMON CONTROL IN WHICH LC172B APPEARS	STRAPPING ARRANGEMENT
A	∅	
AZ	1	

3.4 Verify that, for DUAL COMMON CONTROL installations, DATA CABLE ED-1E367-11 GROUP 201 (FLAT) is connected between basic carrier connectors BC09 of Control ∅ and BC11 of Control 1.

4. BASIC RMAT PBX EQUIPMENT CABLING

- 4.1 Place or mount the data set, associated with the RMAT to be installed, in its permanent position but not more than 50 cable feet from the associated Dimension PBX control carrier.
- 4.2 Assure that the selected data set position is in power cord length of a fused 117 volt AC receptacle that is not under control of a wall switch.
- 4.3 Connect an ED-1E367-11 group 931 cable from connector CX02 (Dimension 400) or BRM-1 (Dimension 2000) on the right side of the PBX control carrier to the input connector on the selected data set (see figure 1).

4. BASIC RMAT PBX EQUIPMENT CABLING (Cont'd)

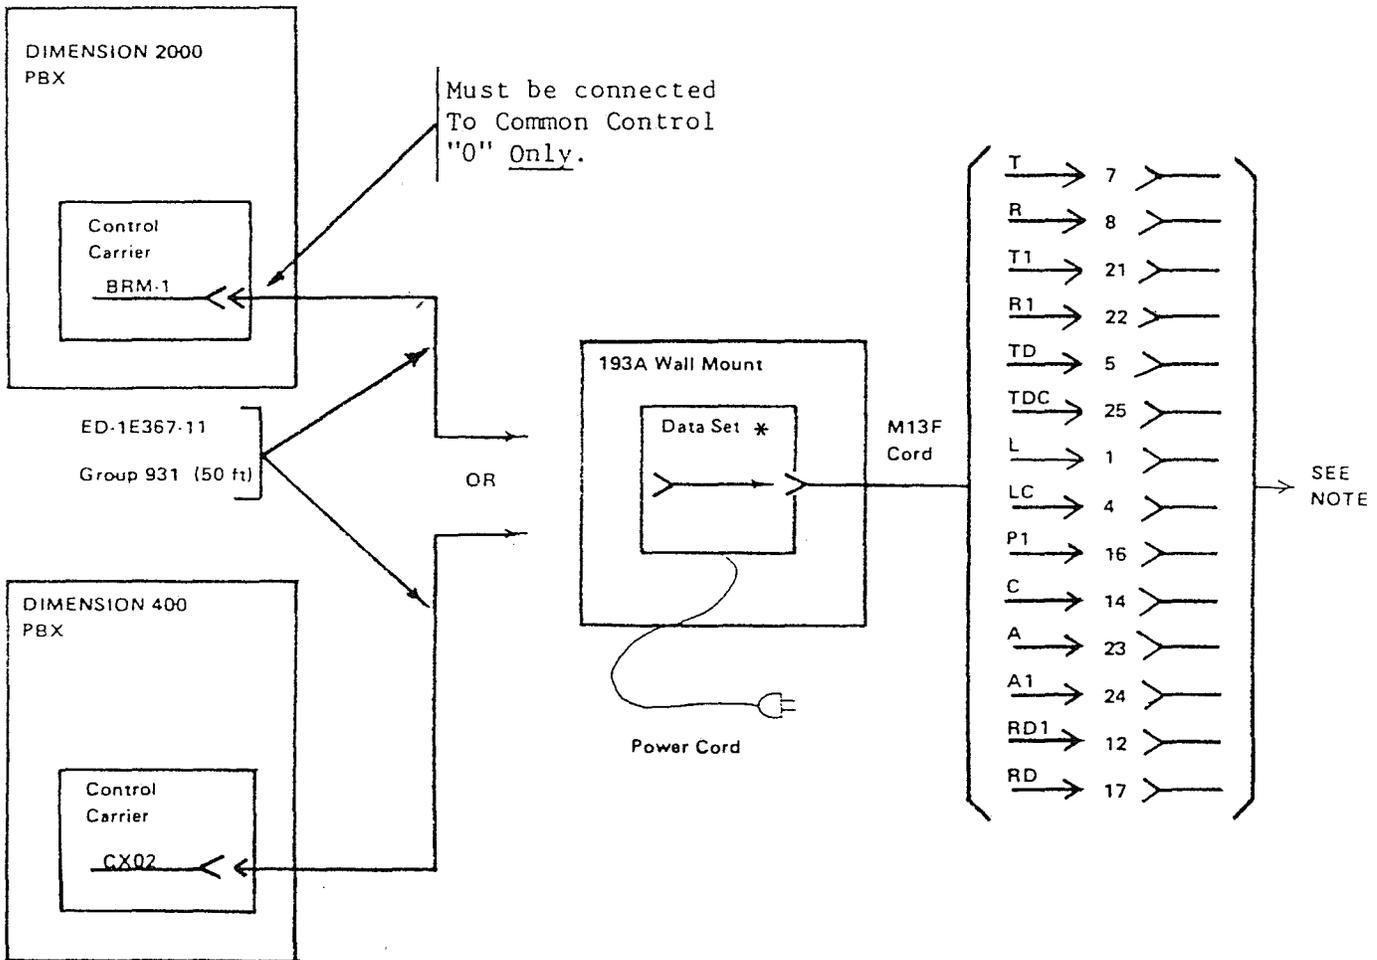

- 4.3.1 Wire (ED-1E367-11 group 931) has a 50 pin connector which connects to CX02 and a 25 pin connector which goes to Data Set, See Table B.

* These are the wires which are connected to the 25 pin terminal which connects to the Data Set.

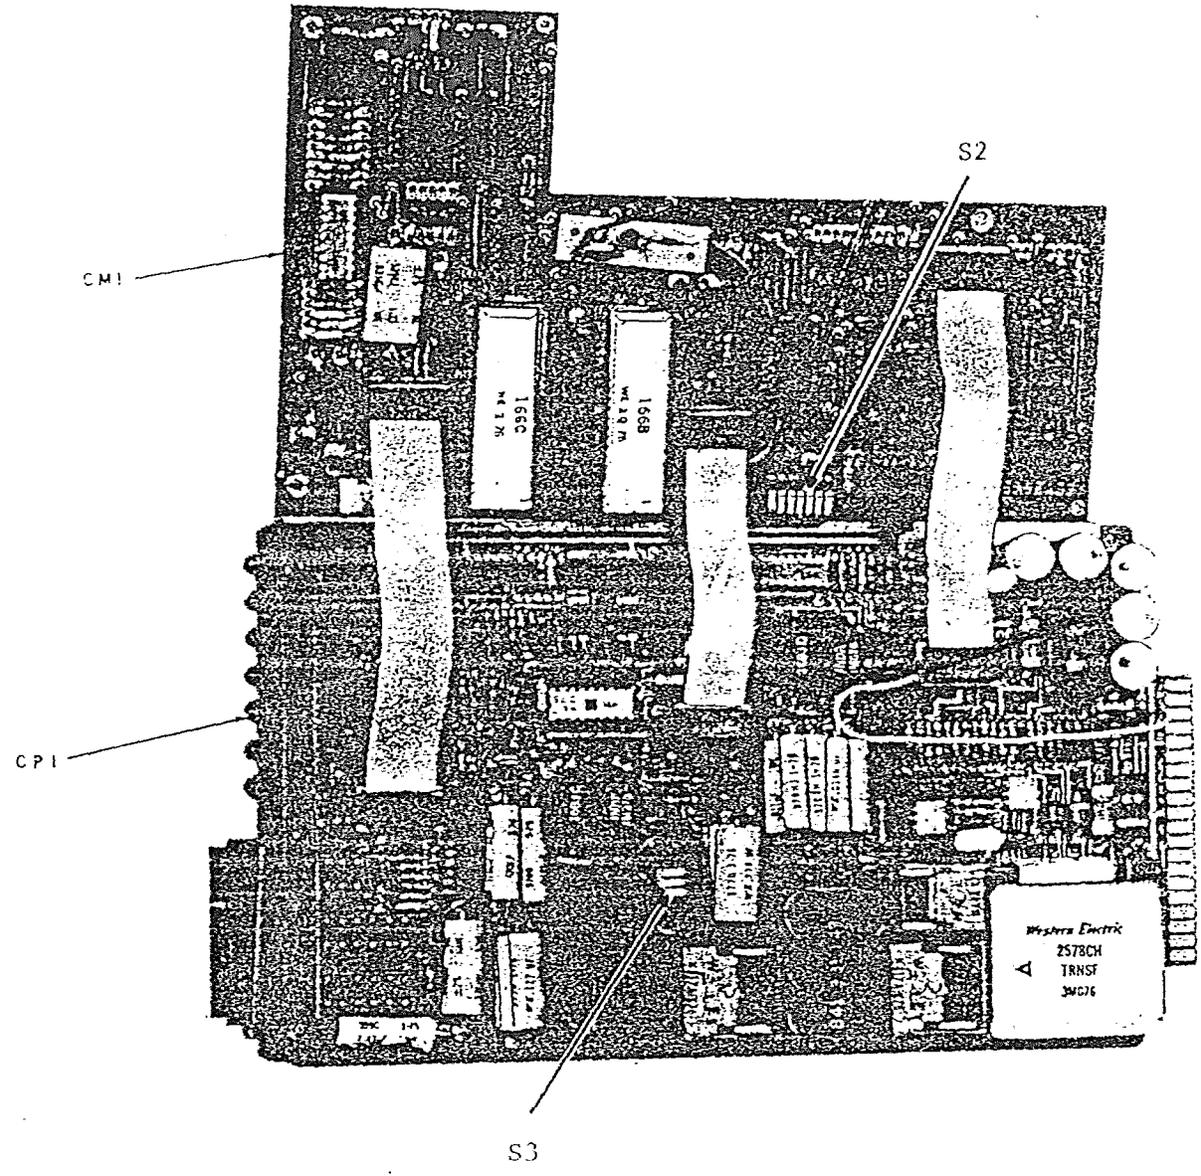

- 4.4 Connect an M13F cable to the output connector on the selected data set and terminate free end at the appropriate cross connect field (see Figure 1 and Table B).
- 4.5 Connect the selected data set power cord to the nearby 117 volt AC receptacle identified in paragraph 4.2 above.

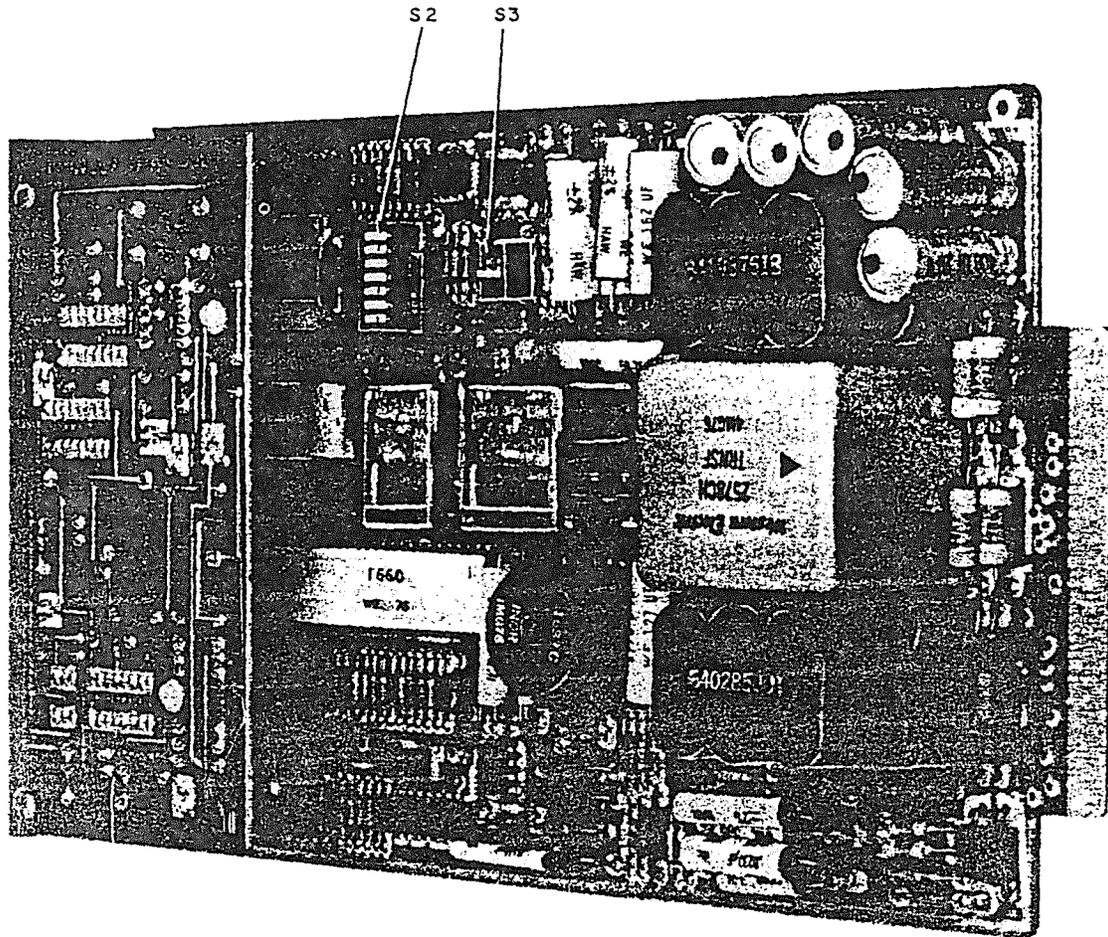

NOTE: To optional 2565 HK Tel Set Connector via mounting cord or cross-connect field. If Tel set is not used, Terminate T & R leads on Purple Cross-Connect Field.

→ *Refer to Figure 2 (or 3), and the respective Table C (or D) for option setting per Data Set.
