

DIMENSION® PBX
LOCAL CALL BILLING
AND
MESSAGE REGISTER SERVICE
CROSS CONNECTION
ON LC16B

CONTENTS

1. GENERAL
 2. DOCUMENTATION
 3. PROCEDURE
-

1. GENERAL

- 1.1 This section provides cross-connect information on LC16 B's which are used for local call billing (FP#9) and message register service (FP#3).
- 1.2 Local call billing and message register service features can be implemented with the message unit generated internally (on a time or call basis) or with the message unit pulses generated externally from the central office. When message unit is generated from the central office, LC16B message register circuits must be provided to receive and count the message unit pulse via a third wire (M-lead) from the central office.
- 1.3 On FP#9, the local call billing feature requires journal printers for the local call billing audit trail and the demand printout functions.
- 1.4 On FP#3, either 102C1-A or 102E1 Display Unit is used for station message register service.

2. DOCUMENTATION

- 2.1 The following sections of the job COD are required:
 - 2.1.1 System and Feature Summary
 - 2.1.2 Trunk Assignment
 - 2.1.3 Trunk Carrier X-Conn

PRIVATE

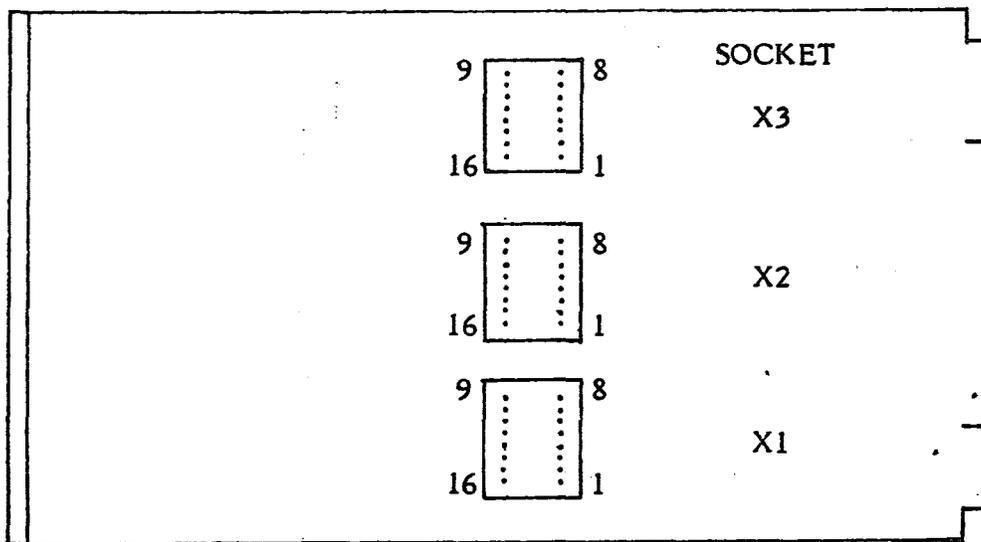

THE INFORMATION CONTAINED HEREIN SHOULD NOT BE DISCLOSED TO UNAUTHORIZED PERSONS. IT IS MEANT SOLELY FOR USE BY AUTHORIZED BELL SYSTEM EMPLOYEES.

3. PROCEDURE

- 3.1 The cross-connect information as shown in Fig. 1, and Tables A through G are for reference only. Normally, cross-connections to the CO feeder cable is done by telco personnel, unless otherwise specified. See Trunk Assignment section of COD for the M-lead assignment.
- 3.2 Insure that LC16B is set for ground return operation with battery provided remotely. See step 3.2.1 for setting option switches.

3.2.1 LC 16 B Circuit Pack Option

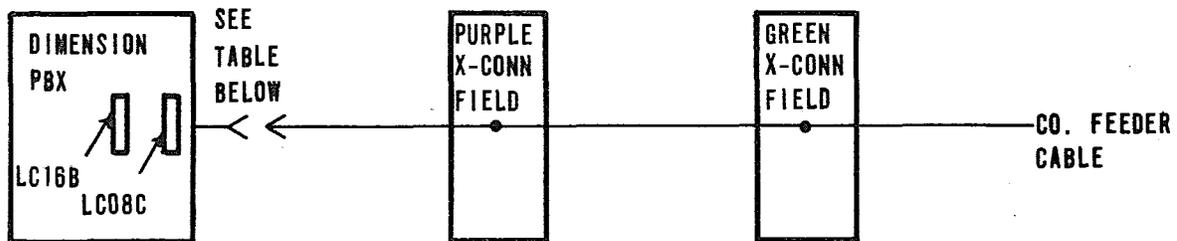

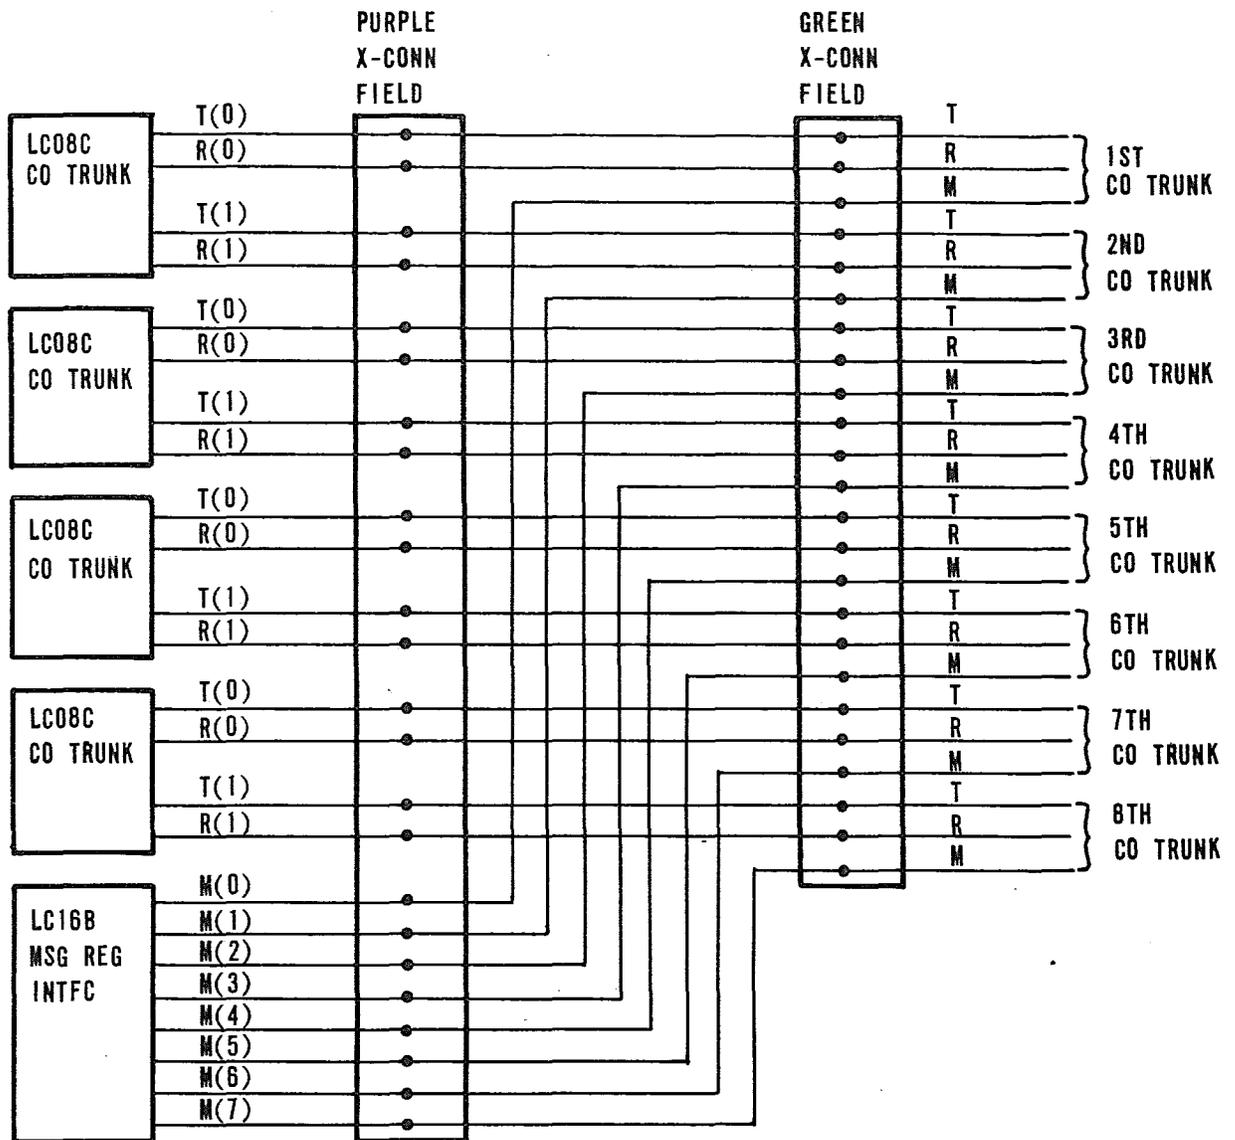

Circuit pack LC16B is a message register and energy control power monitor interface circuit. LC16B contains three 16 pin dual-in-line sockets. Each socket is divided into two halves. The lower half (pins 1-4 and 13-16) of each socket is associated with circuits 0-3. The upper half (pins 5-8 and 9-12) is associated with circuits 4-7. Each shorting block control four circuits. Circuit options are shown below:

FEATURE	SOCKET	CKT.	SHORT TERM.	CKT.	SHORT TERM.
For ground return operation with battery provided remotely (same as LC16)	X2	0	1 - 16	4	5 - 12
		1	2 - 15	5	6 - 11
		2	3 - 14	6	7 - 10
		3	4 - 13	7	8 - 9
For balance transmission line operation with battery provided remotely	---	0-3	None	4-7	None
Power monitor or peripheral alarm*	X1 & X3	0	1 - 16	4	5 - 12
		1	2 - 15	5	6 - 11
		2	3 - 14	6	7 - 10
		3	4 - 13	7	8 - 9

*FACTORY EQUIPPED OPTION

- 3.3 Connection journal printer (FP#9) or message register display unit (FP#3) per HB Section 250.28 and HB Section 250.12, respectively.

NOTES:

1. leads not designated are cut down on connecting blocks, but not used for cross-connections.
2. connector MX01 serves carrier slots 6,7, and 8.
3. LC16B for FP9 only.
4. LC07 and LC15 for FP8 only.

NOTES:

1. leads not designated are cut down on connecting blocks, but not used for cross-connections.
2. connector TX03 serves carrier slots 8, 9, 11, 12, and 13.
3. LC16B for FP3 and FP9; LC16 can be used for FP3.
4. LC15 for FP8 and FP10
