

TRUNK TRANSMISSION MAINTENANCE INDEX

GENERAL DESCRIPTION

1. GENERAL

1.001 This addendum supplements Section 301-120-100, Issue 2. It is issued to include a change in the type of trunks covered by the noise component of the Trunk Transmission Maintenance Index (TTMI). Trunks which normally return on-hook supervision when in the talking condition currently have no noise objectives.

2. SCOPE OF THE INDEX

The following change applies to Part 2.

(a) 2.01—revised.

2.01 The TTMI covers *all* message trunks, both local and toll. Local trunks of all types are weighted equally with toll connecting and intertoll trunks in the component plans. Intercept, information, and repair service trunks are currently excluded from the noise component of the TTMI because objectives have not been established for these trunks. Intrabuilding trunks without gain devices are excluded from the loss and noise components of the TTMI.
