

DATA SET 109B-TYPE

TEST PROCEDURES

1. GENERAL

1.01 The Data Set 109B is tested only as a part of a data transmission system. This system type of testing checks the operation of the Data Set 109B, Data Auxiliary Set 811C, and the connections provided by the J70165A mounting and

connecting panel. The testing is performed under the control and direction of the serving test center. For information on the system test requirements and the procedures used in locating and clearing trouble, refer to the applicable telegraph serviceboard or testboard practices, and the section entitled Data Set 109B, Maintenance Procedures (312-802-300).
