

**700A-S MODULAR PLUG
IDENTIFICATION
CUSTOMER PARTICIPATION PRODUCTS**

1. GENERAL

1.01 This section provides information on the 700A-S station wire modular plug. This plug is part of the Customer Convenience Product (CCP) line.

1.02 Whenever this section is reissued, the reason(s) for reissue will be listed in this paragraph.

1.03 The 700A-S plug (Fig. 1) is packaged in a blister pack with complete instructions for its use. It is available to the customer from Bell retail outlets such as PhoneCenter Stores, Bell Customer Service Centers, or Bell Phone Booths.

1.04 The 700A-S plug is made of clear polycarbonate and molded in two sections held together by a self-tapping screw. It is made to allow a customer to modularize one end of a length of four conductor station inside wire to permit plugging it into a network interface or other working modular connecting block.

2. IDENTIFICATION

2.01 The 700A-S plug is made in two molded sections. The contacts of the miniature plug are internally connected to four miniature slotted-beam connectors which will be forced through the insulation of the individual conductors when they are properly aligned according to their color code in the holes in the mating molded section and the sections screwed together.
