1. GENERAL DESCRIPTION

1.01 This document covers the enhanced Trendline, pushbutton dial, desk/wall telephone. (See Figure 1.) A general description as well as information peculiar to the enhanced Trendline, pushbutton dial, desk/wall telephones is included.

AW89-224

Figure 1: Enhanced Trendline, Pushbutton Dial, Desk/Wall Telephone

1.02 Whenever this section is reissued, reason for the reissue will be listed in this paragraph.

1.03 A replacement parts list and an exploded-view drawing for the telephones are contained in Section 50-275-101. Circuit labels are not provided for the telephones. Related documents of the CORTELCO Telephone Apparatus Practices Manual provide information on components.

1.04 The Model 8275 telephones are Trendline, pushbutton dial telephones equipped with a dial light. The dial light is on when the station user goes off-hook. These telephones are anti-sidetone units that operate efficiently over a wide range of loop resistances and line impedances. The telephones are compatible with inductively-coupled hearing aid devices. A receiver volume control switch is located on the side of the handset.

1.05 The Model 8275 telephones are identified by a coded label affixed to the bottom of the telephone. Refer to ordering information in Table A for an explanation of each code number and available features.

1.06 The Model 8275 telephones are available in full-modular versions. Full-modular version telephones are equipped with a modular handset cord, a modular line cord for desk mounting, and a built-in modular line cord for wall mounting. The modular handset cord and the modular line cord are terminated on each end with modular plugs. The built-in line cord is terminated on one end with a modular plug and on the other end with spade tip connectors. This version is designated by the code letter M. (Refer to Table A.)

1.07 The Model 8275 telephone is described in the following paragraphs.

MODEL 8275** () 21

1.08 The Model 8275 telephone is a single-line, pushbutton dial, desk/wall telephone equipped with an operator recall button, tone/pulse switchable dialing, redial, timed hookswitch flash, and automatic dialing for three, one-touch emergency numbers and ten, two-touch numbers.

hookswitch assembly. The handset assembly includes the transmitter assembly, the receiver, and the dial network assembly. The components in the handset are plugged in or connected by spade-tip connectors.

1.16 The transmitter is an electret condenser microphone with a permanent electrical charge. The receiver is a central armature type compatible with hearing aids that have a T-Switch (Telecoil). The dial network assembly converts the dial keypad inputs into DTMF (Dual Tone Multifrequency) tones and acts as the network circuitry for the transmitter and receiver.

2. INSTALLATION

2.01 The Model 8275 telephone can be installed as a desk telephone or as a wall telephone.

2.02 To install as a desk telephone:

- (a) Insert a modular plug of the long line cord into the modular jack in the bottom of the telephone base.
- (b) Insert the plug on the other end of the line cord into a standard modular telephone jack.
- (c) Route the line cord through the channel in the bottom of the telephone base (see Figure 2), and press under the two tabs at the top of the channel.

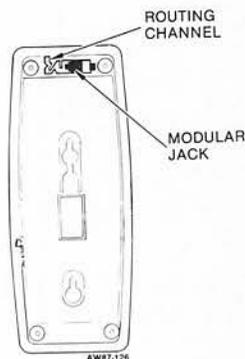

Figure 2: Line Cord Connecting Diagram - Desk Telephone

2.03 To install as a wall telephone:

- (a) Remove the modular plug of the short line cord from its storage area in the bottom of the telephone base. (See Figure 3.)

(b) Insert the modular plug into the modular jack of the wall jack assembly. Fold the excess cord into the storage area.

(c) Note the two mounting rivets on the wall jack assembly. Align the base so that the two mounting rivets are inserted into the two mounting holes in the bottom of the telephone. Slide the base downward until it snaps into position.

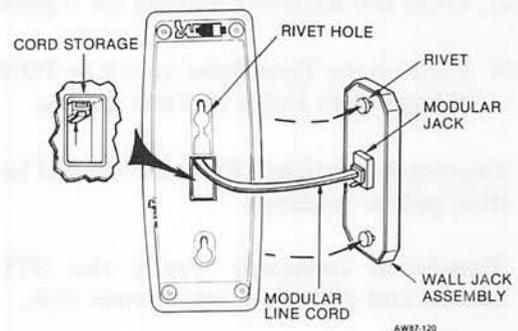

Figure 3: Installation Diagram - Wall Telephone

3. MAINTENANCE

3.01 For replacement parts information and for an exploded-view drawing of major assembly groups, refer to Section 50-275-101.

Warning: The electret condenser microphone used in the Model 8275 telephone handset may be damaged by cleaning solvents. Solvents that contain acids or ammonia emit fumes that may damage the internal components of the microphone. When cleaning the handset, use solvents sparingly. Apply solvents with a cloth to avoid direct contact with the microphone.

4. OPERATION

A. Automatic Dialing

4.01 Automatic dialing can be performed with the Model 8275 telephone to store and retrieve programmed numbers or functions. Three one-touch and ten two-touch locations can be stored.

4.02 To store a number or function for automatic dialing:

- (a) Lift the handset and check for dial tone.

SECTION 50-275-100, ISS 1

- (b) Press the STORE button.
- (c) Dial the desired number or function (32 digits maximum).
- (d) If desired, store the following functions:
 - (1) Press the FLASH button for a timed hookswitch flash.
 - (2) Press the REDIAL button for a pause.
 - (3) Position the Tone/Pulse switch to TONE to change from Pulse to Tone dialing.
- (e) **One-touch location:** Press the desired button (fire, police, medical).

Two-touch location: Press the STORE button and dial the location code (0-9).
- (f) Place the handset on-hook.

4.03 To access a number for automatic dialing:

- (a) Lift the handset and check for dial tone.
- (b) **One-touch location:** Press the desired button (fire, police, medical).

Two-touch location: Press the MEM button and dial the location code (0-9).

B. Redial

4.04 To automatically redial the last number dialed:

- (a) Lift the handset and check for dial tone.
- (b) Press the REDIAL button.

C. Flash

4.05 To send a flash during an active call, press and release the FLASH button. The results depend on the connected telephone service.
