

NONKEY TELEPHONE SETS CONVERSION FOR USE WITH 1A1 OR 1A2 KEY TELEPHONE SYSTEMS

1. GENERAL

1.01 This section provides connections and conversion of nonkey general purpose sets to **A** lead control to permit their use with 1A1 or 1A2 key telephone systems.

1.02 This section is reissued to:

- Revise Fig. 5
- Revise Fig. 11
- Revise Fig. 12

1.03 Sets that are factory-wired for **A** lead control such as the 500L/M or 2500M are not included since no conversion is required.

1.04 The sets included in this section are equipped with line switches adjusted to break the line circuit before the **A** lead when going on-hook to prevent false hold conditions.

2. CONNECTIONS

2.01 Connections shown provide for a separate ringer circuit when possible. This is necessary

with older types of 1A1 KTS line circuits where tip and ring are not available for incoming signals at the telephone set.

2.02 At installations equipped with 1A1 or 1A2 KTS line circuits where tip and ring are continuous to the telephone set and only one line is picked up, the R-R1 and B-B1 leads may not be required and the ringer can be connected across the line in the set. When used as an individual line ringer, the capacitor must be in the ringer circuit with the ringer poled as a ring station.

2.03 Some sets included in this section also have the capability of other services such as 3-type speakerphone, requiring additional connections and leads. For information on these features, refer to the Reference Section for the Set involved.

2.04 For connection of the sets to separately mounted keys, refer to Division 512.

2.05 In sets having a dial light (TRIMLINE® or PRINCESS® type) A1 ground should not be common with one of the transformer leads. This is necessary to prevent feedback of AC to the A relay in the case of accidental grounding of the transformer leads.

NOTICE

Not for use or disclosure outside the
Bell System except under written agreement

NOTES:
 1. FOR COMMON RINGER WITHOUT CAPACITOR, MOVE (S) RINGER LEAD TO A.
 2. CONNECT R-RI AND B-BI LEADS FOR COMMON OR LINE RINGER AT EQUIPMENT OR KEY AS REQUIRED.
 * INSULATED AND STORED

NOTES:

1. REPLACE D3BN MOUNTING CORD WITH D6AF.
2. CONNECTIONS FOR 425K NETWORK SHOWN. FOR 425G CONNECT:
 - (BK) LINE SWITCH AND (W-BL) DIAL LEAD TO TBI-1
 - (R) DIAL LEAD TO TBI-3
 (W) AND (R) STRAPS ARE NOT REQUIRED.
3. SETS MAY BE EQUIPPED WITH AN MIA OR MIB RINGER. MIB DOES NOT HAVE (S) AND (S-R) LEADS.
4. CONNECT R-R1 AND B-B1 LEADS FOR COMMON OR LINE RINGER AT EQUIPMENT OR KEY AS REQUIRED.
5. FOR COMMON RINGER WITHOUT CAPACITOR, CONNECT (BL) MOUNTING CORD LEAD TO K OF NETWORK.
