1. GENERAL

1.01 This section contains information on the 2872A1M (MD) and 2872A2M TOUCH-A-MATIC telephone sets equipped with a TOUCH-TONE* telephone dial (Fig. 1).

⚠Warning: This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class B computing device pursuant to Subpart J of Part 15 of Federal Communications Commission (FCC) Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.⚠

1.02 The reasons for reissuing this section are listed below. Revision arrows are used to emphasize the more significant changes.

- Include electromagnetic interference warning notice in compliance with the FCC ruling which requires that a warning statement be placed in the user's documentation for equipment that generates and uses radio frequency energy and may radiate this energy, paragraph 1.01

*Trademark of American Telephone and Telegraph Company.

- Change all references to 95B-type power unit to 95B1 power unit.
- Show that both 2012-type transformer and 95B1 power unit must be connected for 3B (MD) speakerphone system operation (Tables B and C)
- Show that both 85B1 and 95B1 power units must be connected for 4A speakerphone system operation (Tables D and E).

1.03 The 2872A1M (MD) or 2872A2M telephone set is factory-wired for use with 1A1, 1A2, or 6A key telephone systems (KTS). They may be converted (Table J) for use with 1A KTS.

1.04 The telephone sets are available in the following colors:

- Black (-03)
- Green (-51)
- White (-58)
- Light Beige (-60).

1.05 The 2872A1 (MD) faceplate is available in satin-silver (-87) color only.

1.06 The 2872B1 decorative faceplates are available in the following colors:

- Teak Woodgrain (-108)
- Walnut Woodgrain (-109)
- Matte Aluminum (-122).

2. IDENTIFICATION

2.01 The 2872A1M or 2872A2M telephone set provides all standard features of a 6-button key telephone set plus (manual) TOUCH-TONE† dialing, automatic dialing of 31 frequently called numbers, and a LAST NUMBER DIALED *scratch pad* memory.

†Registered Service Mark of American Telephone and Telegraph Company

Fig. 1—2872A1M (MD) or 2872A2M Telephone Set

2.02 The 2872A2M telephone set differs from the 2872A1M set only in the battery circuit. The 2872A2M set has a battery interlock circuit that prevents the set from dialing automatically if the battery is not plugged in. Also, the 2872A2M telephone set utilizes a newly coded battery (KS-20390L4) which can not be used in the 2872A1M set.

A. Design Features

2.03 Design features are as follows:

- Modular key telephone set
- Convertible to single line operation
- Integrated circuit RC TOUCH-TONE telephone dial oscillator
- Integrated circuit memory
- Surge protector
- Polarity guard (removable for dry circuit application)
- Common audible ringing
- Buzzer
- Busy lamp diode
- Line pickup buttons convertible to nonlocking signal buttons
- Memory buttons from which to select preprogrammed telephone numbers for automatic dialing
- Capability to record and automatically dial 31 telephone numbers of up to 15 digits each
- Last number manually dialed memory
- Plug-in battery
- Capability to pause for subsequent dial tones during automatic dialing (WAIT input)

- End-to-end signaling for data application.

B. Optional Features

2.04 Optional features (refer to Table A) are as follows.

- (a) **Speakerphone:** Either 3B (MD) or 4A speakerphone systems may be added to stations
- (b) **Dial Tone Detector:** Automatically starts dialer when precise TOUCH-TONE service dial tone (350 Hz and 440 Hz) is present.
- (c) **One-Touch Calling** (requires both dial tone detector and speakerphone): Depressing one memory button will automatically turn on speakerphone, detect dial tone, and dial complete number.

Note: All dial tones encountered in the process of placing a call must be precise TOUCH-TONE service dial tone if the call is to be completed automatically.

- (d) D-180818 Kit of Parts provides the following features.

Note: Telephone set must be equipped with 2870B memory.

- (1) **Record Disable:** Turns off recording feature to prevent accidental erasures of previously stored numbers. No recording possible except for last number dialed memory which will store digits manually dialed from the telephone set.
- (2) **Record Disable and Dial Intermix Feature:** Digits dialed manually from the telephone set dial and digits dialed automatically from memory may be intermixed without depressing RECORD OFF button. Memories cannot be altered and LAST NUMBER DIALED feature is inoperative.
- (e) **Station Busy Lamp** (busy lamp diode wired in set)
- (f) **2/4-Wire Service**
- (g) **Add-On-Conference**
- (h) **Exclusion (multiline)**

- (i) "I" Hold
- (j) Signaling
- (k) Bridged Ringing
- (l) Restricted Dialing
- (m) Amplifying Handset
- (n) Decorative Faceplate
- (o) Head telephone set operation using jacks.

2.05 All options are implemented by:

- (a) Wiring changes in the telephone set
- (b) Installation of appropriate additional items.

C. Ordering Guide

2.06 The 2872A2M telephone set is a modular type telephone set and may be ordered complete and ready to install.

- (a) Set, Telephone, 2872A2M- (refer to paragraph 1.04 for color suffix).

2.07 The following must be ordered separately.

- (a) Unit, Power, 95B1 (required for operation of the automatic dialing feature).

Note: One power unit is required for each telephone set.

- (b) Decorative Faceplate, 2872B1-108 (Teak Woodgrain) or 2872B1-109 (Walnut Woodgrain).

2.08 The 2872A2M set is comprised of the following component parts:

- (a) Housing, Lower, 870A1- (refer to paragraph 1.04 for color suffix)
- (b) Housing, Upper, 870A1U- (refer to paragraph 1.04 for color suffix) (used only with 2872B1 faceplate)
- (c) Faceplate, 2872B1-122 (matte aluminum)
- (d) Handset, G15A- (refer to paragraph 1.04 for color suffix)

TABLE A (Contd)

OPTIONS

OPTION	ADDITIONAL ITEMS REQUIRED	CONNECTION PER	
		FIGURE	TABLE
Decorative Faceplate (Paragraph 1.06 and 6.11)	2872B1-108 (Teak Woodgrain) ‡		
	2872B1-109 (Walnut Woodgrain) ‡		
Head Telephone Set Operation	Plantronics Jackset Model JS0180-1A or JS0180-2A	Tables provided with Plantronics Jackset	
	Desired Head Telephone Set §		

* D-kits for 2/4-wire service and speakerphone are designed to mount in the same place in the set. If both services are to be provided simultaneously, consult your Telco engineer.

† If set is equipped with the 2870A memory, replace with a 2870B memory.

‡ An 870A1U- upper housing may be required (paragraph 6.11).

§ The KS-19796, KS-20778, 52-, 53-, and 60-type headsets are registered with the Jackset Models.

(e) Cord, Handset, H4DU- (refer to paragraph 1.04 for color suffix)

(f) Base, Telephone Set, 2872A2M (includes the following):

- Dial, 35AG3A
- Key, 635BT5
- 812365039 (P-23F503) Collar
- Ringer, P1B
- Network, 425K (MD) or 4228-type
- Buzzer, KS-20419L1 or KS-20419L2
- Cord, Mounting, D50BB-87
- Battery, KS-20390L2 [may be used in either 2872A1M (MD) or 2872A2M sets]
- Battery, KS-20390L4 (2872A2M sets only)
- Jack, Handset, 616B
- Memory, 2870B
- 840393581 Power Supply Printed Wiring Board (PSB) Assembly [2872AM (MD) base]

- 841382658 Power Supply Printed Wiring Board (PSB) Assembly (2872A2M base)

- 840393672 Directory Sheet Set

- Booklet, Instruction, Subscriber, SIB-2455B.

2.09 Order optional apparatus (order as required) as follows:

- Kit of Parts, D-180492 (must be used for speakerphone service)
- Kit of Parts, D-180493 (Dial Tone Detector and One-Touch Calling switch)
- Kit of Parts, D-180494 (for conversion to 4-wire service)
- Kit of Parts, D-180818 (Record Disable and Dial Intermix)

Note: This kit of parts may be used only with sets equipped with a 2870B memory

- Faceplate, 2872B1- (refer to paragraph 1.06 for color suffix)

Note: If set is equipped with 2872A1-87 faceplate, then an upper housing (870A1U- [refer to

paragraph 1.04 for color suffix]) of the appropriate color must also be ordered.

- Handset, Amplifier (G6BM, G7BM, and G8BM)
- Set, Head Telephone [using Plantronics Jackset Model JS0180-1A (1-1/2 foot cord) or JS0180-2A (6 foot cord)].

D. Operating Features

2.10 Operating features (Fig. 2) are as follows.

- Dial (TOUCH-TONE service).
- Line key (635BT5), 6-button key. Hold with five line pickup buttons which are convertible to nonlocking. An additional momentary contact (logic reset switch) is attached to the Hold side of the key to reset the logic circuit anytime a key button is depressed.
- 32-button array of low force, low travel nonlocking memory buttons arranged in three columns. Left and right columns have eleven buttons, center column has ten buttons.
- LAST NUMBER DIALED button located in lower right corner of memory array, when momentarily depressed, automatically redials the last number manually dialed.
- RECORD button (nonlocking), when momentarily depressed, lights the RECORD lamp and enables the memory circuits to store telephone numbers.
- RECORD OFF button (nonlocking), when momentarily depressed extinguishes the RECORD lamp, indicating that the dialer is switched out of the record mode.
- WAIT button (nonlocking), when momentarily depressed during recording operation, enters a code into memory to initiate a halt in the automatic dialing sequence [used where access digit(s) required].

3. INSTALLATION

STANDARD INSTALLATION

3.01 Make all wiring changes and telephone set modifications (Table A) before external connections are made to the set (paragraph 4.01).

Warning: *Do not plug in either battery or power unit until all connections and modifications are completed. Take extreme care not to damage the exposed components, circuit, etc. when the set is opened.*

3.02 The set is shipped from the factory with the battery disconnected. After all wiring changes and modifications have been completed, connect the battery (Fig. 7) by tilting the set up, and inserting the battery plug into the mating jack.

Note: Write date of installation on label provided on battery.

Danger 1: *If used, securely attach retaining clamp to ac outlet using outlet cover screw BEFORE attempting to install #95B1 power unit. The power unit and any other cord plugged into the ac outlet should always be unplugged completely from the outlet BEFORE attempting to attach or remove the retaining clamp. This will prevent the possibility of a loosened retainer clamp or metallic outlet cover making contact with the ac prongs of the power unit when partially withdrawn from outlet. Do not use retaining clamps on outlets where the cover mounting screw holds the duplex outlet in the box.*

Danger 2: *Care should be taken to trim and dress leads connecting to low voltage output terminals of #95B1 power unit to assure that inadvertent connection to conducting surfaces or other power source does not occur. If more than one power unit is plugged into a multiple receptacle power strip, there must be at least one inch separation between power units. Only UL listed receptacle power strips with adequate power rating shall be used. Use of a continuous terminal power strip that allows the secondary output terminals of the power unit to be in close proximity to the ac line source is not recommended.*

3.03 Install the 95B1 power unit within 150 feet (24 gauge conductors) of the telephone set and plug into an ac outlet not controlled by a switch (con-

Fig. 2—2872A2M Telephone Set, Faceplate and Handset Removed

tinuous ac power is required). The power unit may be located at the equipment end of the cable or run directly into the telephone set by conductors separate from the mounting cord and connected to PSB terminals 30 and 31. Refer to applicable tables and Fig. 8 for particular type of installation. When separate power conductors are used, disconnect, insulate, and store the (BL-V) and (V-BL) mounting cord leads from PSB terminals 30 and 31.

Note: The 95B1 power unit must be located no closer than 1-1/2 feet from the telephone set in order to prevent a noise problem.

- 3.04** The station number card retainer 812558039 (P-25E803) snaps into the faceplate below the dial.
- 3.05** The directory sheets (Fig. 2) fit over the buttons of the memory and are held in place by the faceplate. Additional sheets are available in the directory sheet set, 840393672.
- 3.06** Perform the following to designate the buttons of the 635-type 6-button key.

- (1) Use Form 5837 tabs.
- (2) Squeeze the sides of the key button caps gently and remove.
- (3) Insert the tabs.
- (4) Replace the caps so that small bumps on side of caps fit into small holes on sides of buttons.

Installation Check Procedure

3.07 Check telephone set installation per the following tests (refer to Part 5 for operation). In case of failure, refer to Trouble Analysis, Table N.

- (1) Disconnect the power unit and manually dial a known telephone number to check that the telephone operates correctly in the absence of commercial power.
- (2) Reconnect the power unit to ac outlet.
- (3) With handset on-hook, record digits 1 through 0 into consecutive memory locations, storing

Fig. 3—2872A2M Telephone Set With Faceplate, Handset, Handset Cradle, and Upper Housing Removed

one digit per memory. Fill all memory locations except LAST NUMBER DIALED and location immediately above it [paragraph 5.01 (4) through (7)].

- (4) Manually dial CO dial test and ringer circuit and simultaneously record into memory location immediately above LAST NUMBER DIALED button [paragraph 5.01 (4) through (7)]. After depressing RECORD OFF button, and when dial test circuit is ready, test dial frequencies by manually dialing digits 1 through 0 into the test circuit.
- (5) Momentarily hang up handset and automatically dial the test circuit number recorded in Step (4) by depressing button immediately above LAST NUMBER DIALED button and proceed as follows.

- (a) Depress LAST NUMBER DIALED button. Digits 1 through 0 will be automatically dialed into test circuit. Verify that correct signal is returned from test circuit.
- (b) Momentarily depress the memory buttons used in Step (3) in the same sequence in which the digits were recorded. Verify that correct signal is returned from test circuit after each series of numbers.

The battery and the power unit must be connected a minimum of five minutes before doing Step (c).

- (c) Momentarily disconnect the power unit (for 5 to 10 seconds). After reconnecting power unit, depress a memory button of a memory location used in Step (3), to verify retention of memory.
- (6) Dial the appropriate code for ring-back to test the ringer.
- (7) Check operation of the logic reset switch by pressing the RECORD button (RECORD lamp will come on) and subsequently pressing an unoperated line button. The RECORD lamp must go out.
- (8) If equipped with one-touch calling option (D-180493 Kit of Parts and speakerphone), and with set in on-hook condition, depress the memory

button used in Step (4). The speakerphone should turn on, dial tone should be detected, and the stored number should be automatically dialed.

- (9) Go off-hook and manually dial a known telephone number with a WAIT input inserted in the telephone number.
- (10) Momentarily hang up the handset and then automatically dial the number by depressing the LAST NUMBER DIALED button. The set should stop dialing when it reaches the stored WAIT input. Depress the LAST NUMBER DIALED button again and the remaining digits should be dialed.

OPTIONAL APPARATUS INSTALLATION

A. D-180492 Kit of Parts (With Speakerphone)

3.08 Install as follows.

- (1) Perform steps in paragraph 3.16.
- (2) Make connections per the appropriate Tables B through E.
- (3) Mount the kit assembly to the chassis with the screws provided (Fig. 4). Beveled corner of printed wiring board (PWB) should be located at lower right corner.

B. D-180493 Kit of Parts (Dial Tone Detector and One-Touch Calling Switch)

3.09 Install as follows.

- (1) Remove the housings (paragraph 3.21), and access PSB terminal board (paragraph 3.17).
- (2) Insert the board assembly from the back of the set and locate as shown in Fig. 4, such that the two tabs on the board assembly fit into the slots in the bottom of the chassis.
- (3) Lock the board into position by inserting the self-threading screw through the right side of the chassis.
- (4) Mount the one-touch calling switch below the dial with the two screws provided.

Note: If switch for D-180818 Kit of Parts is already present, the one-touch calling switch

Fig. 4—2872A2M Telephone Set, Dial Removed To Show Terminal Area

can not be installed. The PSB terminal where the switch leads should be connected (Table C or E) shall be strapped together. (The one-touch calling option cannot be turned off by the subscriber.)

- (5) Make connections per Table C, E, or F.
- (6) Break off the detail at the bottom of the cover (Fig. 2) and trim edge as required.
- (7) Verify correct operation of the option.
- (8) Reassemble set.

C. D-180494 Kit of Parts (2/4-Wire Service)

3.10 Install as follows.

- (1) Perform steps in paragraph 3.17.
- (2) Make connections per Table G.
- (3) Mount the kit assembly to the chassis with the screws provided (Fig. 4).

D. D-180818 Kit of Parts (Record Disable and Dial Inter-mix Features)

3.11 Install as follows.

- (1) Remove faceplate (paragraph 3.19).
- (2) Loosen the captive screw at the bottom of the cover around the dial and remove the cover.

Fig. 5—2872A2M Telephone Set, Internal View, Overall

- (3) Disengage the four captive memory mounting screws (Fig. 4).
- (4) Disengage the two captive dial mounting screws and move dial aside.
- (5) Rotate left edge of the memory upward as shown by Fig. 5.

Note: If set is equipped with a 2870A Memory, replace it with 2870B Memory and carefully pack and return the old memory according to local procedures.

- (6) Mount switch below dial using the two screws provided (Fig. 4).

Note: If the one-touch calling switch (D-180493 Kit of Parts) has been provided, it must be removed. The PSB terminals where the switch leads were connected (Table C or E) must be strapped together. (The one-touch calling option can no longer be turned off by the subscriber.)

- (7) Connect switch lead connectors to post terminals on memory board per Table K.
- (8) With feature switch in OFF position, verify that set operates in normal manner:
 - Numbers can be recorded into memory.
 - Numbers can be changed.
 - Numbers can be deleted from memory.

(9) Set feature switch to ON position and verify feature provided.

- (a) For record disable feature, only.
- (1) RECORD lamp will not light when RECORD button is depressed.
 - (2) No telephone numbers can be recorded, changed, or deleted in memory.
 - (3) LAST NUMBER DIALED feature is operative.
- (b) For record disable and dial intermix features.
- (1) RECORD lamp will not light when record button is depressed.
 - (2) No telephone numbers can be recorded, changed, or deleted in memory.
 - (3) LAST NUMBER DIALED feature is disabled.
 - (4) Manually and automatically dialed digits may be intermixed (paragraph 5.07).

(10) Reassemble set.

E. Single Line Service

3.12 The 2870A2M TOUCH-A-MATIC telephone set is available from the factory as a single line set. However, the 2872A1M (MD) and 2872A2M telephone sets may be converted to single line service as follows.

- (1) Remove the faceplate, key collar, and all buttons of the 635-type key.
- (2) Gain access to terminal area (paragraph 3.17).
- (3) Remove the cradle (paragraph 3.20).
- (4) Make connections per Table L.
- (5) Reassemble set and install a 2870B1 faceplate of the appropriate color.

Note: If set was originally equipped with a 2872A1-87 faceplate, refer to paragraph 6.11.

F. Head Telephone Set

3.13 Install as follows.

- (1) Remove housing (paragraph 3.21).
- (2) Access PSB terminal area (paragraph 3.17).
- (3) Remove cradle (paragraph 3.20).
- (4) Thread jackset cord through hole in rear of housing and make connections per appropriate table provided with Plantronics Jackset.
- (5) Reassemble telephone set.
- (6) Insert head telephone set plug into jackset.

Other optional components may be used such as SPOKESMAN loud-speaker sets, etc. Refer to the appropriate section for connection information for these components.*

COMPONENT LOCATION AND ACCESS INFORMATION

A. Location of Components

3.14 The components are located in three areas as follows.

- (1) The following are located under the handset cradle (Fig. 3):
 - (a) Buzzer
 - (b) Ringer
 - (c) Line switch assembly
 - (d) Handset jack
 - (e) Terminal boards (TB1 and TB2).
- (2) The following are located under the faceplate, inside the set (Fig. 4 and 5):
 - (a) Battery jack (Fig. 5)
 - (b) Power supply (PSB) terminal area (Fig. 4)
 - (c) Network (Fig. 4)
 - (d) Options (Fig. 4) are:

(d) Options (Fig. 4) are:

- (1) D-180492 (relay kit for speakerphone)
- (2) D-180493 (dial tone detector and one-touch calling switch kit)
- (3) D-180494 (2/4-wire relay kit)
- (4) D-180818 (record disable and dial intermix feature switch).

(3) The battery is located in the bottom of telephone set (Fig. 7).

B. Mounting Cord

3.15 The D50BB-87 mounting cord is amphenol ended at the equipment end and equipped with 508-type plugs for terminating on the back of the 635-type key module at the telephone set end. The conductors terminated in the 508-type plugs provide the major line service requirements. Spade-tipped con-

Fig. 6—2872A1M (MD) or 2872A2M Telephone Set, Connection of D-180818 Kit of Parts, Record Disable Feature Only

Fig. 7—2872A1M (MD) or 2872A2M Telephone Set, Bottom View

ductors are provided for auxiliary control functions or options and are terminated directly on associated equipment, terminal boards, or stored.

Note: Sets manufactured prior to fourth quarter 1976 are equipped with D50AM-87 mounting cords. The major difference in the cords is that TIP and RING contact strips are required with the D50AM-87, whereas individual conductors of the D50BB-87 connect to the TIP and RING contacts of the 635-type key.

C. Network Terminals

3.16 For access to the network terminals, proceed as follows.

- (1) Remove the faceplate (paragraph 3.19).
- (2) Loosen the captive cover screw at the bottom of the white cover around the dial (Fig. 2).
- (3) Remove the cover.

95B1 Pwr-Unit §	AC1						3B ¶
	AC2						4B ¶
2012B (MD) or 2012D Trnsf §	AC1				27	27	
	AC2				36	36	

Note 1: Plug telephone set mounting cord into 149B adapter.

Note 2: When 55A control unit is used, it must be the type modified for TOUCH-TONE dialing, and strap terminals 20 and 21 (55A) or 4 and 5 (55B).

* Insulated and stored.

† Terminal on network.

‡ To reduce loudspeaker volume, move SP2 lead to terminal 24 (55A) or 30 (55B)

§ Both 95B1 power unit and 2012B (MD) or 2012D transformer must be connected for speakerphone operation.

¶ Insulate and store (BL-V) and (V-BL) leads in connector cable.

- (4) To replace the cover, the three tabs of the cover (one at the top center and one at each side just above the dial) must be aligned with holes in the chassis before the screw is refastened. Failure to do this will result in improper seating of the faceplate.

D. Power Supply (PSB), Terminals

3.17 To access the terminal field on the power supply board, proceed as follows.

- (1) Remove the faceplate (paragraph 3.19).
- (2) Loosen the captive cover screw at the bottom of the white cover around the dial (Fig. 2).
- (3) Remove the cover.
- (4) Loosen the two captive screws that hold the dial in place.

Note: On sets with metal dial brackets, the screws will have to be removed.

- (5) Gently raise the dial and disconnect 12 position plug from terminal board.
- (6) Rotate dial over onto the memory.
- (7) To reassemble; reverse procedure.

- (8) To replace the cover, the three tabs of the cover (one at the top center and one at each side just above the dial) must be aligned with holes in the chassis before the screw is refastened. Failure to do this will result in improper seating of the faceplate.

E. Line Key Removal

3.18 To remove, use the following procedure.

- (1) Remove faceplate (paragraph 3.19).
- (2) Push the key toward the rear of the set to unlock it from the tabs.

Warning: Do not damage logic reset switch attached on HOLD side of key. (Contact strips will only be found on sets equipped with D50AM-87 mounting cords.)

- (3) Raise the metal plate of the key just above the tabs and move the key toward the left, then

raise the right end of the key until it clears the chassis of the set.

- (4) Lift the key completely out of the set.
- (5) Replace key by reverse procedure.

F. Faceplate Removal

3.19 Removal will differ depending on faceplate provided.

- (a) The 2872B1 faceplate is held in place by a spring clip attached to the 870A1U upper housing. To disengage the faceplate, lift up the tab which protrudes from the center of the back edge of the faceplate.

Note: The 2872B1 faceplate is not a direct replacement for the 2872A1-87 faceplate. An 870A1U upper housing is also required with the 2872B1 faceplate (see paragraph 6.11).

- (b) The 2872A1-87 faceplate is held in place by two snaps bonded to the faceplate and aligned to fit holes in the chassis. To remove the faceplate, grasp it by any convenient edges and lift.

G. Handset Cradle Removal

3.20 To remove the handset cradle from the housing, proceed as follows.

- (1) Remove the faceplate (paragraph 3.19), and place the handset aside.
- (2) Remove upper housing, if provided, [paragraph 3.21(b)].
- (3) Disengage the captive cradle screws (if provided) located in the two tabs on the cradle (Fig. 2).

Warning: The plunger must be held from the top side of the cradle as it is slid into position to prevent damage to the line switch arm.

- (4) Lift the cradle, by pulling up on the plunger, and remove.
- (5) Replace the handset cradle by sliding it sideways to engage the clips with the mating tabs in the side of the housing.

- (6) Refasten the captive cradle screws, if provided.

H. Housing Removal

3.21 To remove, proceed as follows.

(a) Remove lower housing as follows.

- (1) Unplug the handset cord, at the telephone set end and remove handset.
- (2) Remove the faceplate (paragraph 3.19).

Warning: Attempting to remove the housing without removing the handset cradle may damage the line switch arm.

- (3) Remove the handset cradle (paragraph 3.20).
- (4) Disengage the four captive housing screws (Fig. 2) located in each corner of the upper housing.
- (5) Separate the housing from the telephone set base.
- (6) Feed mounting cord through hole in bottom of housing as housing is removed.
- (7) Before replacing the housing, lift the set to check that the shoulders of the battery jack are against the two tabs on the chassis. Misalignment may cause the bottom of the housing to bow.
- (8) When replacing the housing, keep the handset jack from being trapped between the housing and the chassis.

(b) Remove upper housing as follows.

- (1) Remove the faceplate (paragraph 3.19).
- (2) Disengage the captive housing screws located in each corner of the upper housing (Fig. 2). This will release the lower housing.
- (3) Pull the upper housing away from the chassis as each housing screw is backed out. This will separate the upper housing from the chassis.
- (4) If necessary, back screws out of upper housing.

- (5) To reassemble, reverse procedure.

4. CONNECTIONS

Caution: Some conductor assignments are not standard (Table I).

- 4.01 Telephone set connections are shown in Fig. 9 and Table I.
- 4.02 Refer to Table A for connection reference for all options.
- 4.03 A partial functional schematic is shown in Fig. 15.

5. OPERATION

A. Record a Number Into Memory

5.01 To record a number, proceed as follows.

- (1) Remove the faceplate (paragraph 3.19).
- (2) Write or type the desired name and telephone number for a selected memory button on the associated position of the directory sheet.
- (3) Replace the directory sheet and faceplate.
- (4) Depress the RECORD button. The RECORD lamp adjacent to the RECORD button will light. (A number can be called and recorded simultaneously by lifting handset before depressing the RECORD button.)

Note: If set is equipped with the D-180818 Kit of Parts, switch must be in the OFF position.

- (5) Depress the specific memory button adjacent to the desired telephone number listed on the directory sheet.
- (6) Manually dial the desired telephone number, if an access code and pause for second dial tone is required:
 - (a) Dial the access digit(s) for the outside line.
 - (b) Push the WAIT button when the RECORD lamp relights. (The WAIT entry counts as one digit.)
 - (c) Dial the telephone number.

Note: A number up to 15 digits in length may be recorded. The RECORD lamp will go out momentarily as each digit is dialed. If exactly 15 digits are recorded, the RECORD lamp will go out and stay out, indicating that the dialer has been reset. If a memory button has not been depressed, the RECORD lamp will go out when the first digit is dialed and recording operation will be voided.

- (7) Depress the RECORD OFF button if less than 15 digits are recorded. The RECORD lamp will go out. The dialer will be reset. The number is now stored in the selected memory. The dialer will also be reset by a line switch, line key, or speakerphone operation.

B. Change a Number In Memory

Note: If set is equipped with a D-180818 Kit of Parts, switch must be in the OFF position.

- 5.02 Whenever a new number is recorded in a previously used memory position, it will automatically replace the previously stored number.

C. Delete a Number From Memory

Note: If set is equipped with a D-180818 Kit of Parts, switch must be in the OFF position.

- 5.03 Complete the following operations in succession.

- (1) Depress the RECORD button.
- (2) Depress the memory button corresponding to the name and number to be deleted.
- (3) Depress the RECORD OFF button.

D. Automatically Dial a Number From Memory

- 5.04 To automatically dial a number, proceed as follows.

- (a) For factory-wired sets go off-hook, listen for dial tone, and depress the desired memory button. If WAIT input has been recorded, automatic dialing will stop. When second dial tone is heard, depress memory button again to complete automatic dialing.
- (b) For sets equipped with the dial tone detector only, go off-hook, listen for dial tone, and depress the desired memory button.

- (c) For sets equipped with the one-touch calling option (with speakerphone and dial tone detector), simply depress the memory button.

E. LAST NUMBER DIALED Feature

- 5.05 The TOUCH-A-MATIC telephone set automatically records into the LAST NUMBER DIALED position (Fig. 1) any number dialed using the standard telephone dial. Each number in the LAST NUMBER DIALED position is automatically replaced by the next number manually dialed. Although the unit is recording, the RECORD lamp does not light at any time during this operation.

Note: If set is equipped with a D-180818 Kit of Parts, and dial intermix feature is provided, LAST NUMBER DIALED feature is functional only when the feature switch is in the OFF position.

- 5.06 Operation of LAST NUMBER DIALED feature is as follows.

- (a) With no access digit(s) required.
 - (1) Go off-hook
 - (2) Listen for dial tone
 - (3) Manually dial telephone number.
 - (4) To redial same number automatically, proceed as follows.
 - (a) For factory-wired sets, go off-hook, listen for dial tone and depress LAST NUMBER DIALED button.
 - (b) For sets equipped with the dial tone detector only, go off-hook, listen for dial tone, and depress the LAST NUMBER DIALED button.
 - (c) For sets equipped with the one-touch calling option (with speakerphone and dial tone detector), simply depress the LAST NUMBER DIALED button.
- (b) When an access code and pause for second dial tone is required.
 - (1) Go off-hook
 - (2) Listen for dial tone

- (3) Dial access digit(s)
- (4) Depress WAIT button, after second dial tone is heard
- (5) Manually dial telephone number
- (6) To redial same number automatically, proceed as follows.

(a) For factory-wired sets, go off-hook, listen for dial tone and depress LAST NUMBER DIALED button. Automatic dialing will stop at the recorded WAIT input. When second dial tone is heard, depress LAST NUMBER DIALED button again to complete automatic dialing.

(b) For sets equipped with the dial tone detector only, go off-hook, listen for dial tone, and depress LAST NUMBER DIALED button.

(c) For sets equipped with the one-touch calling option (with speakerphone and dial tone detector), simply depress the LAST NUMBER DIALED button.

F. End-to-End Signaling

5.07 For end-to-end signaling (such as data transmission) this set has the capability to intermix manual and automatic dialing. This can be accomplished if the following procedures are observed.

Note: If the telephone set is to be used for end-to-end signaling, V option (with polarity guard) shall be used, (Fig. 9B).

(1) If the telephone set is equipped with the one-touch calling option the initial number must be dialed automatically (even if the one-touch calling switch is in the OFF position). This allows the dial tone detector to complete its function and then additional numbers may be dialed automatically or manually.

(a) **Standard Operation:** If, at any time, information is keyed in manually, the RECORD OFF button must be depressed before another number can be dialed from memory. (The RECORD lamp will not light at any time

but depressing the RECORD OFF button will remove the set from the "last number dialed" mode and allow additional automatic dialing.)

(b) **Dial Intermix (D-180818 Kit of Parts):** With the switch in the ON position, manually and automatically dialed digits may be intermixed as desired. Operation of the RECORD OFF button is not required.

Note: In this mode, the RECORD button and the LAST NUMBER DIALED feature are inoperative.

6. MAINTENANCE

6.01 In case of power failure, the automatic dialing feature cannot be used. The battery retains the number associated with each of the memory buttons for at least 24 hours. If power loss exceeds 24 hours, the numbers may have to be rerecorded.

A. Trouble Analysis

6.02 When trouble is encountered, the subsequent procedure should be followed.

(1) Confirm improper operation either as a basic telephone set or as an automatic dialer (Part 5).

(2) Check for improper connections.

(3) Refer to Table N, and the following paragraphs.

(4) If removal of set is required, proceed as follows.

(a) Disconnect power unit from ac outlet and unplug battery.

(b) Disconnect telephone set.

Warning: Failure to restrain plug can result in plug damage necessitating battery replacement.

(c) Place battery plug sideways into housing slot below battery jack and tape into place.

B. Battery

6.03 The KS-20390L2 and L4 batteries are not completely interchangeable. The List 2 battery

may be used in both sets but the List 4 battery should only be used in the 2872A2M telephone set. Either battery has an expected life of about 4 years. It can be replaced without loss of memory provided that commercial ac power to the set is continuously maintained. To replace the battery, proceed as follows (Fig. 7).

- (1) Tilt the front of the set up.
- (2) Unplug the battery.
- (3) Loosen captive screw on the battery support.
- (4) Remove battery support.
- (5) Remove battery.
- (6) Install new battery.
- (7) When battery has been connected at least five minutes, check memory retention by momentarily disconnecting ac power and then automatically dialing a known telephone number.

C. Memory

6.04 The memory may be replaced in the following manner.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of the memory or ac and battery power results in loss of stored telephone numbers.
- (2) Remove the faceplate (paragraph 3.19).
- (3) Loosen the four captive memory mounting screws (Fig. 4).
- (4) Rotate the left edge of the memory upward as shown in Fig. 5.
- (5) Disengage the two connectors by pulling on them perpendicular to the printed wiring board.
- (6) Replace the memory by engaging the dial connector first. The dial connectors are keyed, one position is filled and should fit over the vacant position in the row of pins. The flat power supply

cable should not be twisted. It should form a loop as shown in Fig. 5 when connected to the board.

- (7) Reassemble set.
- (8) Reconnect battery and power unit.
- (9) Test per paragraph 3.07.
- (10) Reprogram memory (see Part 5).

D. Dial

6.05 Replace dial as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in the loss of stored numbers.

- (2) Proceed per paragraph 3.17.
- (3) Loosen the four captive mounting screws of the memory (Fig. 4).
- (4) Gently raise the left side of the memory and rotate to position shown in Fig. 5. This will expose 10-position dial connector.
- (5) Carefully disengage the dial connector by pulling on it perpendicular to the printed wiring board.
- (6) Lift the dial out.
- (7) To install a new dial, reverse the previous steps. The connectors are keyed to orient them relative to the pins. Observe the correct orientation and do not force the connection.
- (8) Reconnect battery and power unit.
- (9) Reprogram memory (see Part 5).

E. 6-Button Line Key

6.06 Replace line key as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in loss of stored numbers.

- (2) Remove key per paragraph 3.18.
- (3) Access PSB terminal area per paragraph 3.17.
- (4) Disconnect logic reset leads from PSB terminals 14 and 29.
- (5) Remove the 508-type plugs and (if provided) the two contact strips from the back of the key.
- (6) Install new key.
- (7) Reassemble the set.
- (8) Reconnect battery and power unit.
- (9) Test for operation of the logic reset switch [paragraph 3.07(7)].
- (10) Reprogram memory (see Part 5).

F. Ringer

6.07 Replace ringer as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in loss of stored numbers.
- (2) Remove the faceplate (paragraph 3.19) and place handset aside.
- (3) Remove upper housing, if provided, [paragraph 3.21(b)].
- (4) Remove the cradle (paragraph 3.20).
- (5) Disconnect the ringer leads (Fig. 9I).
- (6) Tilt the front of the set up.
- (7) Loosen ringer mounting screws (Fig. 7).
- (8) Remove ringer.
- (9) Install new ringer and assemble in reverse order. The leads should be routed as shown in Fig. 3 to prevent contact with the gong and subsequent dampening of the ringer output.
- (10) Reassemble set.

- (11) Reconnect battery and power unit.
- (12) Dial ringback code to test ringer.
- (13) Reprogram memory (see Part 5).

G. Buzzer

6.08 Replace the buzzer as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in loss of stored numbers.
- (2) Remove the faceplate (paragraph 3.19), and place handset aside.
- (3) Remove upper housing, if provided, [paragraph 3.21(b)].
- (4) Remove the cradle (paragraph 3.20).
- (5) Remove the buzzer mounting screw.
- (6) Remove the mounting screw and spacer for TB1 (Fig. 3).
- (7) Move terminal board TB1 to gain access to the appropriate terminals on TB2.
- (8) Remove appropriate leads (Fig. 9H).
- (9) Reassemble. When replacing TB1, locate its tabs in the slots of the chassis before refastening the TB1 mounting screw.
- (10) Reconnect battery and power unit.
- (11) Reprogram memory (see Part 5).

H. Handset Jack

6.09 Replace the 616B handset jack as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in loss of stored numbers.
- (2) Remove the faceplate (paragraph 3.19), and place handset aside.

- (3) Remove upper housing, if provided, [paragraph 3.21(b)].
- (4) Remove the cradle (paragraph 3.20).
- (5) Remove the mounting screw and spacer for TB1 (Fig. 3).
- (6) Move terminal board TB1 to gain access to the appropriate terminals on TB2.
- (7) Disconnect the appropriate leads (Fig. 9H), and remove jack.
- (8) Reassemble. When replacing TB2, locate its tabs in the slots of the chassis before refastening the TB1 mounting screw.
- (9) Route leads through wire guide as shown in Fig. 3.
- (10) Reconnect battery and power unit.
- (11) Reprogram memory (see Part 5).

I. Handset

6.10 A defective G15A handset may be replaced or changed to a modular amplifying handset (G6BM, G7BM, or G8BM) by unplugging the H4DU cord and inserting it into the new handset. To replace the G15A handset with a nonmodular amplifying handset (G6B, G7B, or G8B) proceed as follows.

- (1) Disconnect power unit from ac outlet and unplug battery.

Note: Removal of ac and battery power results in loss of stored numbers.
- (2) Unplug H4DU handset cord at telephone set end.
- (3) Remove faceplate (paragraph 3.19), and place handset aside.
- (4) Remove upper housing, if provided, [paragraph 3.21(b)].
- (5) Remove handset cradle (paragraph 3.20).
- (6) Disconnect 616B handset jack (paragraph 6.09). (Jack may be removed or stored just to right of ringer.)

- (7) Insert spade-tipped end of handset cord through hole in the side of the housing.
- (8) Attach stayband hook to bottom of chassis (Fig. 3).
- (9) Route leads as shown in Fig. 3.
- (10) Make connections (Fig. 9H).
- (11) Reassemble set.
- (12) Reconnect battery and power unit.
- (13) Reprogram memory (see Part 5).

J. Faceplate

6.11 To replace a 2872A1-87 faceplate with a 2872B1 faceplate, proceed as follows.

- (1) Remove the 2872A1-87 faceplate by lifting up at any of its edges.
- (2) Remove the four captive housing screws (Fig. 2) from the chassis.
- (3) Use the four housing screws to mount the 870A1U upper housing to the chassis and 870A1 housing. The three parts should be held tightly together as the screws are driven.
- (4) Place the two tabs located along the lower edge of the 2872B1 faceplate in the notches in the lower side of the 870A1U-type upper housing.
- (5) Lower the faceplate to rest on the memory. The spring clip located at the top center of the upper housing should retain the faceplate.

K. Speakerphone

6.12 For maintenance information on the 3B (MD) or 4A speakerphone systems, refer to Section 512-620-100 or 512-700-100, respectively.

6.13 For speakerphone connections use appropriate Tables, B through E.

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
1	Dead set on all lines	Line lamp does not come on when handset is taken off-hook	Mounting cord improperly inserted at equipment end	Check cord insertion and connections
		Line lamp comes on when handset is taken off-hook	Bad connection between handset and telephone set	1. Check handset cord connections 2. Check handset jack connections
			Defective receiver	Check handset
		Unknown	Replace telephone set*	
		Dial tone is not present when speakerphone is on	Open tip or ring lead at line key	Check leads and connections from contact strips
Dial tone is present when speakerphone is on	Defective line switch d-e or j-k contacts	Replace telephone set*		
2	Cannot transmit or receive when off-hook using handset	Line lamp comes on	Handset cord improperly inserted into handset or jack in telephone set	Check handset cord and/or handset
		Dial tone present, but sidetone absent. No audible TOUCH-TONE dialing signal	12-pin connector or dial not properly inserted on pins on power supply board	1. Check connector insertion 2. Replace dial
			Defective 616B jack	Replace 616B jack
		Defective network	Replace telephone set*	
3	Cannot manually dial when off-hook	Clicking sounds or damped TOUCH-TONE dialing signals heard when dial buttons are depressed Cannot hang up set.	Bridged set off-hook	Place bridged set on-hook
			No audible TOUCH-TONE dialing signal present	20-pin power supply connector not properly inserted on pins on memory PWB
		Dial connectors not properly inserted		1. Check connector insertion 2. Replace dial
		Defective memory PWB		Replace memory
		Unknown	Replace telephone set*	
Some TOUCH-TONE dialing frequencies incorrect	Static discharge damage	1. Consult Telco engineer for proper grounding procedure 2. Replace memory		
4	Cannot manually dial some digits when off-hook		Open or loose leads to dial contacts	Check for proper insertion of leads into 10-position dial connector
			Defective frequency contacts on dial	Replace dial

*Refer to paragraph 6.02(4).

♦ TABLE N (Contd) ♦

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION	
4 (contd)			Defective memory PWB	Replace memory.	
			Unknown	Replace telephone set*	
5	Cannot manually dial off-hook for ac power failure condition	Can manually dial off-hook with ac power	Open strap lead between screw terminals 10 and 15 on PSB	Repair or replace strap lead	
			Open path on PSB	Replace telephone set*	
6	RECORD lamp does not function properly	RECORD lamp does not turn on when RECORD button is depressed or RECORD lamp is on and cannot be turned off	Battery not plugged in, or defective	Plug in or replace battery	
			RECORD lamp does not turn on when RECORD button is depressed	AC power not present	Check for commercial power
				Switch of D-180818 Kit of Parts in ON position	Change switch position to OFF
			AC power unit not plugged in or defective	Check or replace power unit (should read 13.4 to 18 VAC across screw terminals 30 and 31 on PSB)	
			Open in IW	Check IW and connection	
			Memory, RECORD OFF, or WAIT button stuck down	Clear stuck button	
			Defective lamp or lamp driver circuit	Replace memory	
			Defective logic reset switch on line key	Replace line key	
			Static discharge damage	1. Consult your Telco engineer for proper grounding procedures 2. Replace memory	
			Unknown	Replace telephone set*	
			Lamp turns off when any memory button is depressed or Lamp does not momentarily turn off when a dial button is depressed	Defective logic	Replace memory
Unknown	Replace telephone set*				
7	Cannot record into memory	RECORD lamp momentarily flashes when RECORD button is depressed	Stuck RECORD OFF button	Check RECORD OFF button	
			Wait contacts closed even when WAIT button is not depressed	1. Check WAIT button 2. Replace memory	

*Refer to paragraph 6.02(4).

♦ TABLE N (Contd) ♦

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION	
8	Cannot record properly into the 31 memory positions or into the LAST NUMBER DIALED position	Warble tones heard when automatically dialing. Get "cannot complete" intercept for automatic or manual dialing	WAIT contacts closed even when WAIT button is not depressed	Replace memory	
			Switch of D-180818 Kit of Parts in ON position	Change switch position to OFF	
		Party is reached when number is recorded as it is manually dialed. However, when number is subsequently dialed from memory, party is not reached – wrong number is dialed from memory	Incorrect dial contact sequence	Replace dial	
			Defective logic	Replace memory	
			Open circuit on PSB	Replace telephone set*	
9	Cannot dial properly from memory		Did not record properly	1. Record per paragraph 5.01 2. See No. 7	
		MB7 relay does not operate (no clicking sound heard) when memory button is depressed. No audible TOUCH-TONE dialing signal present	Battery not plugged in (2872A2M tel set)	Plug battery in	
			Memory not securely mounted	Tighten memory mounting screws	
			Open circuit in power path	Check for proper strap lead connections on PSB. See Fig. 9 [B]	
			Defective logic	Replace memory	
			Defective line switch h-i contacts	Replace telephone set*	
		MB7 relay operates (clicking sound heard) but holds for less than 0.1 second for a 15 digit number	Incorrect dial sequence	Replace dial	
					No audible TOUCH-TONE dialing signal present
					Audible gap in train of digits being dialed
		Digits dialed too rapidly (fast dialer)	Noise on ac power line (2872A1M)	Minimize wire length between 95B1 power unit and telephone set.	
			Defective power supply PWB assembly (2872A2M)	Replace telephone set*	

*Refer to paragraph 6.02(4).

♦ TABLE N (Contd) ♦

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
9 (contd)		No digits or random digits in memory	AC power outage for 24 hours or longer	Reestablish ac power and rerecord numbers into memory
			Disconnected or defective battery	<ol style="list-style-type: none"> 1. Plug in the battery 2. Allow the battery to be charged for a minimum of 5 minutes. Then momentarily remove the 95B1 power unit from the ac power outlet and reinsert 3. If previously stored numbers are not dialed from memory, replace the battery 4. Repeat procedure
			Defective power supply circuit	Replace telephone set*
		No digits or all the same digits in random memory locations	Defective memory	Replace memory
		Two or more memory locations have some digits which are usually different from originally recorded digits	Static discharge damage	<ol style="list-style-type: none"> 1. Consult your Telco engineer for proper grounding procedures 2. Replace memory
Automatically dials through a "wait" after pausing momentarily at the "wait" space on a train of recorded digits		Defective WAIT contacts or defective circuit components	Replace memory	
		Defective dial tone detector	Replace dial tone detector PWB assembly of D-180493 Kit of Parts (if option is provided).	
10	Cannot manually dial off-hook for ac power failure condition (Wired for speakerphone option)	With a strap lead between screw terminals 10 and 15 on PSB, can manually dial off-hook for ac power failure condition	Defective circuit or connections on D-180492 Kit of Parts	<ol style="list-style-type: none"> 1. Check connections per Table B, C, D, or E 2. Replace D-180492 Kit of Parts
11	Cannot turn speakerphone on when ON button is depressed (Wired for speakerphone option)	Speakerphone indicator lamp does not turn on, but line lamp is lit.	Handset off-hook	Place handset on-hook
		No dial tone heard, but indicator lamp turns on	Line button not depressed	Depress line button
		Speakerphone indicator lamp does not turn on and neither does line lamp	Improper connections or defective 85B1 power unit	<ol style="list-style-type: none"> 1. Check connections per Table B, C, D, or E 2. Check for commercial power 3. Check that 85B1 power unit is plugged into commercial ac power outlet 4. Check or replace 85B1 power unit (should read 18 to 25 VAC across secondary screw terminals)

*Refer to paragraph 6.02(4).

♦ TABLE N (Contd) ♦

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
11 (cont'd)		Speakerphone indicator lamp does not turn on but line lamp lights	Improper connections or defective 95B1 power unit	1. Check connections 2. Check or replace power unit (should read 13.4 to 18 VAC across screw terminals 30 and 31 on PSB)
		With temporary strap lead added between power supply screw terminals 16 and 17, speakerphone turns on when ON button is depressed	Defective 327A relay, MA3 relay or connecting leads on D-180492 Kit of Parts	Replace D-180492 Kit of Parts
		When temporary strap lead added between screw terminals 11 and 12 on TB1, speakerphone turns on when ON button is depressed	Defective line switch a-b contacts or connecting lead to PSB	1. Check (G-W) harness lead between screw terminal 11 on TB1 and terminal 16 on PSB 2. Replace telephone set*
			Defective speakerphone	See appropriate speakerphone BSP
12	Cannot turn speakerphone off when handset is lifted off-hook (Wired for speakerphone option)	Speakerphone turns off when OFF button is depressed but turns back on when OFF button is released	Short circuit between screw terminals 11 and 12 on TB1	Clear short
			Defective line switch a-b contacts	Replace telephone set*
13	RECORD lamp does not turn off when speakerphone ON button is depressed (Wired for speakerphone option)	Speakerphone indicator lamp does not turn on. Line lamp is lit	Handset off-hook	Place handset on-hook
		With temporary strap lead added between screw terminals 16 and 17 on power supply, speakerphone turns on when ON button is depressed and RECORD lamp goes off	LK relay circuit defective on D-180492 Kit of Parts	Replace D-180492 Kit of Parts
		Operation of RECORD OFF button or line key buttons turns RECORD lamp off	Defective line switch h-i contacts	Replace telephone set*
14	Cannot break dial tone when dialing with speakerphone on (Wired for speakerphone option)	Cannot manually dial when off-hook	Refer to trouble number 3	Refer to trouble number 3
		When dial button is depressed, audible level of TOUCH-TONE dialing signal is high on spkrphn	Defective muting circuit on PSB	Replace telephone set*
15	Cannot hear tones when dialing with speakerphone on (Wired for speakerphone option)	With the speakerphone ON button depressed, the audible tone level is normal	Physical spacing between speakerphone loudspeaker and transmitter units is too close	See appropriate speakerphone BSP for proper placement of units
		Normal conversational level on speakerphone	Defective muting circuit on PSB	Replace telephone set*

*Refer to paragraph 6.02(4).

◆ TABLE N (Contd) ◆

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
16	Cannot turn speakerphone off (Wired for one-touch option)	Speakerphone turns off when OFF button is depressed but turns on when OFF button is released	Black strap lead to PSB-27 was not insulated and stored	Remove the strap lead
		Speakerphone turns off and stays off when (Y-BL) lead is disconnected from terminal 27 on PSB and OFF button is depressed	Defective output logic level from memory PWB	Replace memory
		Speakerphone turns off when handset is taken off-hook but turns on when handset is placed on-hook	Defective circuit on D-180493 Kit of Parts	Replace dial tone detector board assembly of D-180493 Kit of Parts
17	Speakerphone does not turn on when a memory button is momentarily depressed in the automatic dialing mode (Wired for one-touch option)	MB7 relay does not operate (no click heard) when memory button is depressed	Battery not plugged in (2872A2M set)	Plug battery in
			3B (MD) speakerphone: V-BR lead connected to PSB-34	Insulate and store V-BR lead, and connect O-V lead to PSB-34
			4A speakerphone installed using 82A connecting block	Change to 82B connecting block
			4A speakerphone with 82B block: strap not placed on 82B block	Add strap from terminal 10 to 35 in 82B block
		With temporary strap between screw terminals 28 and 29 on PSB, speakerphone turns on when a memory button is depressed	One-touch calling switch turned off or defective	1. Turn one-touch calling switch on 2. Replace one-touch calling switch assembly of D-180493 Kit of Parts
			Defective dial tone detector D-180493 Kit of Parts	Replace dial tone detector PWB assembly of D-180493 Kit of Parts
		With temporary strap between screw terminals 17 and 34 on PSB, speakerphone turns on.	Defective connections between dial tone detector and PSB	Check (Y-G) and (G-Y) leads to PSB terminals 17 and 34, respectively
Defective dial tone detector D-180493 Kit of Parts	Replace dial tone detector PWB assembly of D-180493 Kit of Parts			
18	Delay time between depression of a memory button and initiation of automatic dialing exceeds 3 seconds (Wired for one-touch option)		Defective timing circuit	1. Replace memory 2. Replace dial tone detector PWB assembly of D-180493 Kit of Parts

*Refer to paragraph 6.02(4).

♦TABLE N (Contd) ♦

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
19	Speakerphone turns on but set does not automatically dial when memory button is depressed		Black strap leads were not lifted from PSB terminals 19 and 26 when option was wired	Insulate and store strap leads.
	(Wired for one-touch option)	Set dials when screw terminals 26 and 29 on PSB are temporarily shorted	Precise dial tone not present	1. Check CO line for presence of precise dial tone (350 Hz and 440 Hz) 2. If correct dial tone is present, replace dial tone detector PWB assembly of D-180493 Kit of Parts
		Set does not dial from memory when screw terminals 26 and 29 on PSB are temporarily shorted	Defective logic	Replace memory
20	Automatic dialing commences for no apparent reason (wired for one-touch option)		Static discharge damage	1. Consult your Telco engineer for proper grounding procedures 2. Replace memory
21	Calls not completed if handset is quickly taken off-hook while automatically dialing on a speakerphone	Automatic dialing is terminated before all digits are dialed	Marginal switchhook sequence between a-b and h-i contacts	Remove handset more slowly from handset cradle
22	Set dials automatically but does not wait for dial tone (Wired for one-touch calling)		Noise on line	1. Add 0.05 uf capacitor between PSB-21 and PSB-26 2. Remove above capacitor and add resistor (10K Ω -50K Ω) in series with (G-R) dial tone detector input lead.
23	Cannot dial properly from memory when on handset (Wired with dial tone detector option)	MB7 relay does not operate (no click heard) when memory button is depressed.	Battery not plugged in (2872A2M tel set)	Plug battery in
			Precise TOUCH-TONE service dial tone may not be present	Make sure precise (350 Hz and 440 Hz) dial tone is present
			Memory not securely mounted	Tighten memory mounting screws
		Improper installation of dial tone detector, D-180493	Check connections for D-180493 installation	
		Same as above – Addition of strap lead between PSB terminals 26 and 29 does not correct problem	Improper connection to or defective memory	1. Check connector cable 2. Replace memory
		Addition of strap lead between PSB terminals 26 and 29 corrects problem	Defective memory	Replace memory
	Defective dial tone detector	Replace D-180493 dial tone detector		
	Unknown	Replace telephone set*		

*Refer to paragraph 6.02(4).

◆ TABLE N (Contd) ◆

TROUBLE ANALYSIS – 2872A1M OR 2872A2M

TROUBLE NUMBER	FAILURE	ADDITIONAL SYMPTOM	POSSIBLE CAUSE	REMEDIAL ACTION
24	Hum or Noise caused by electrical apparatus (light dimmer switch, etc)		Unbalanced telephone line	Check for unintentional connections that might cause an unbalanced telephone line
