

558D, 558F, 558FM, 2558D, AND 2558DM TELEPHONE SETS

CONNECTIONS

SPEAKERPHONE SYSTEM—4A

1. GENERAL

1.01 Refer to Section 512-700-100 for detailed information on the components of the 4A speakerphone system.

1.02 This section is reissued to:

- Revise information on registered arrangements
- Add Fig. 7.

1.03 To provide 4A speakerphone feature at the 558- and 2558-type telephone sets, refer to Fig. 1 or 2 for layout arrangement of the components required for the system and Fig. 3, 4, 5, 6, or 7 for individual lead connections.

2. CONNECTIONS

A. 223-Type Adapter

2.01 The cords from the 108-type loudspeaker set, 680-type transmitter, and 85B1 power unit are installed in the proper receptacle of the 223A (MD) or 223D adapter. The cover must be fastened securely to assure proper mating of connectors.

B. 108-Type Loudspeaker Set

2.02 The loudspeaker set and transmitter must be placed a minimum of one foot apart.

C. 680-Type Transmitter

2.03 The transmitter must be placed at least two feet from transformer or any ac powered device.

D. 85B1 Power Unit

2.04 Power shall be supplied by connecting 85B1 power unit as shown in Fig. 1 or 2.

2.05 Use an ac power outlet (not under control of a switch) located as close as possible to the system being installed. A retaining clamp will be shipped with the power unit and should be mounted to the ac receptacle to hold power unit securely and to prevent accidental loss of power.

Danger: For safety, securely attach a retaining clamp to ac outlet using outlet cover screw **BEFORE** attempting to install 85B1 power unit. The power unit and any other cord plugged into the ac outlet should always be unplugged completely from outlet **BEFORE** attempting to attach or remove the retaining clamp. This will prevent the possibility of a loosened retainer clamp or metallic outlet cover making contact with the ac prongs of the 85B1 power unit when partially withdrawn from outlet. Do not use retaining clamp on outlets where the cover mounting screw holds the duplex outlet in the box.

Warning: Care should be taken to trim and dress leads connecting to low voltage output terminals of 85B1 power unit to assure that inadvertent connection to conducting surfaces or other power source does not occur. If more than one power unit is plugged into a multiple receptacle power strip, there must be at least one inch separation between power units. Only UL listed receptacle power strips with adequate power rating shall be used. Use of a continuous terminal power strip that allows the secondary output terminals of the power unit to be in close proximity to the ac line source is not recommended.

2.06 The M2FG cord is furnished as part of the 223-type adapter for connecting the 85B1 power unit.

NOTICE

Not for use or disclosure outside the
Bell System except under written agreement

2.07 The 85B1 power unit should be located less than 125 feet from 108-type loudspeaker set when using 24 gauge wire or 85 feet when using 26 gauge wire. Refer to Section 512-700-100 for detailed information on power supply applications.
