15.05 Lamp Bulbs (IN-USE, AUTO-ANS, and ON-OFF):

General Electric No. 334 Lamp (rated 1000 hours) should be replaced by General Electric No. 388 or Chicago Miniature No. 334-LSV Lamp (both rated 25,000 hours).

15.06 Drive Belt Slippage: Silicone oil from the drive motors creeps along the shafts and eventually over the pulleys until it reaches the belts. This causes the belts to stretch somewhat and also reduces the friction between the belts and the pulleys, both of which causes warble. Stretched belts work satisfactorily if they and the pulley surfaces are cleaned per 12.02.

16. OPERATIONAL PROCEDURE

The following tests require operation of the set with outer cover removed and 24 vdc on exposed terminals. Do not operate solenoids, tape reels or other mechanism parts by hand.

16.01 If securing of loose connections or replacement of fuse, lamp bulbs, List 2 recorder, List

3 recorder, List 4 amplifier, List 5 amplifier, List 6 cartridge, List 10 or 11 power cords, or plug-in relays does not correct trouble, return set to Distributing House.
