

TRANSFER OF AUTOMATIC ANSWERING
AND RECORDING DEVICE -
SINGLE OR MULTILINE INSTALLATIONS

1. GENERAL

1.01 This Section provides a method of transferring a telephone call to an associated Answering and Recording Device.

1.02 This method may be used on single or multi-line installations.

2. DESCRIPTION

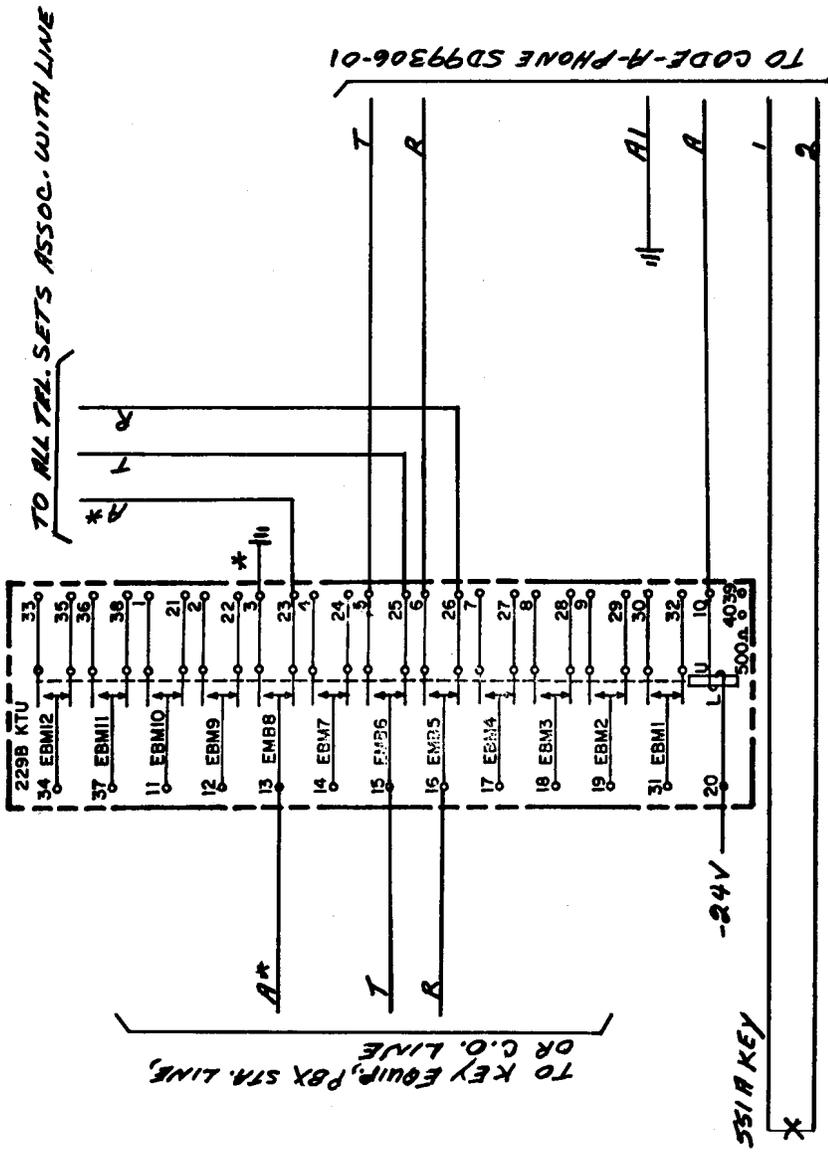

2.01 USOC Code RCY - This arrangement enables a customer with a single line telephone to answer his telephone and then transfer the call to an associated Answering and Recording Device. It is necessary for the customer to operate a push button to start the transfer. See Exhibit 1 for wiring diagram.

2.02 USOC Codes AAH and RTJ - This arrangement enables a customer to answer his telephone and then transfer the call to an Answering and Recording Device with one of several lines. The user can also manually transfer the Automatic Answering and Recording Device between several lines so that calls can be answered on a predetermined basis. An external key unit is required to transfer the call. The rate contemplates a maximum of four lines, and additional lines would be provided using the Special Assembly procedure.

2.03 Modifications consist of standard relays and key units that can be maintained by use of appropriate Bell System Practices.

2.04 Exhibit 2 is the wiring diagram of the multi-line installation.
