

Installation Quick Reference

for

DEFINITY[®]

Enterprise Communications Server

Release 9

and

**Avaya IP600 Internet Protocol
Communications Server**

555-233-738

Issue 4

November 2000

This is a guide to the information needed to install a DEFINITY ONE or IP600 system. For expanded information about these topics, see *Installation and Upgrades for DEFINITY ONE Communications System Release 9 and Avaya IP600 Internet Protocol Communications Server* (555-233-109).

1. Install and cable the cabinet (same as ProLogix).
2. Power up the system (same as ProLogix).
3. Connect the laptop computer.
4. Access DEFINITY ONE or IP600 via telnet and start a LAC bash session.
5. Verify the serial number (use **serialnumber** command). Ensure that the serial number matches the number on the TN795 faceplate.
6. Acquire a license file. License file information is available online. For further information, contact your Avaya technical services representative.
 - For external access: <https://www.lucent-teamworks.com>
 - For internal access: <http://info.dr.avaya.com/~epr/contry>
7. Request the RAS IP address from the INADS contact person.
8. Run *setip* to set the RAS IP address, the system name; and, if applicable, the customer LAN information.
9. Reboot the system, using the *reboot nice* command.
10. Wait for notification from INADS that the license file has been installed. This requires a reboot.
11. Administer the DEFINITY ONE platform. For example, set the system time and time zone, and enable customer logins. To enable AUDIX customer logins, execute the following commands from a Bash shell:

```
net user sa <new password>
```

```
net user sa /active
```

(Repeat these commands for **vm** and **browse** logins.)

12. Administer applications (DEFINITY, AUDIX, and AUDIX Networking).

Typical Bash (GAS) commands for installation

Command	Description
alarmorig	Turns on alarm origination from the GAM (INADS)
alarmstat	Gives global alarm status (major, minor, or none) for GAM, DEFINITY, and AUDIX
cleargamalarm	Clears alarms after analysis
d1stat	Displays the status of all application groups running on the system
environment	Displays the TN795 temperature and voltage ranges
ftpserv	Enables the ftp service
gamalarmstat	Displays GAM alarm information
installconfig	Installs license files (INADS)
lucent help	Lists all commands
oss	Sets telephone numbers for outgoing INADS calls
pcAnywhere	Starts the pcAnywhere application (use -c to stop application)
reboot	Reboots system as follows: nice: shuts down applications and Windows NT in a graceful manner immediate: reboots the system without waiting for the applications to shut down, causing possible loss of voice messages that are being recorded and all calls drop
restartcause	Displays the restart causes for system (for technician/TSC)
setip	Sets the IP address, subnet mask, and default gateway of the LAN interface to the customer's LAN. Turns on RAS. Reboot is required.
shutdown	Shuts down: all: Avaya DEFINITY ONE applications system: all Avaya DEFINITY ONE applications and Windows NT appname: the name of the application to be shut down camp-on: (AUDIX feature) notifies users of a system shutdown all and waits for users to end their sessions before shutting down
serialnumber	Reads and displays the serial number of the circuit pack

Physical Connection	IP Address
Local Monitor/Mouse/ Keyboard	127.1
PCMCIA Network Connection	192.11.13.6
RAS Modem (Dial-up)	10.21.0.X (X is Customer Dependent — Avaya Assigned)
Customer's LAN	Customer Dependent (default login value of 192.11.13.9)

Once connected, there are several ways to access DEFINITY ONE, as shown in the next table.

Access Method	
Telnet	<ip addr> [Start > Run...]
DSA	using appropriate ip-addr
Web Browser	http://<ip-addr>
pcAnywhere	using appropriate ip-addr

The following table shows Lucent Personnel Login information.

Logins to Enter System	Logins to Enter DEFINITY	Logins to Enter AUDIX
lucent1	dinit	atsc
lucent2	dinads	acraft
lucent3	dcraft	acraft

- Each row of logins has the same password. For example, the **lucent1**, **dinit**, and **atsc** logins all have the same password.
- The **lucent** logins are used for web browser and pcAnywhere access.
- All logins can be used for telnet access.
- The **d** and **a** logins (columns 2 and 3) are used for DSA access.
