Safety Information

Warning: Keep your fingers and other objects clear of the fan module. The fans are on whenever the power is on in the chassis..

Warning: Keep your fingers and other objects clear of the fans when removing the Fan module. The fans continue to turn briefly after you have removed the module.
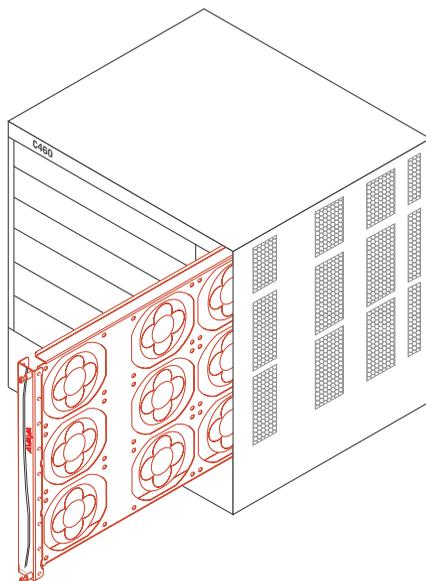

Caution: You need to replace the fan module within five minutes. If you do not, the I/O modules are shut down automatically to prevent overheating.
If this occurs, turn off the chassis and turn it on again.

To install a fan module:
1   Remove the existing fan module.
   a   Loosen the fastening screws.
   b   Gently pull the module towards you.
2   Position the module in the slot with the screws to the right side of the chassis. See Figure 1.
3   Gently slide the module in.
4   Gently tighten the screws.
