| 3. MAINTENANCE CONTROLLER ARRANGEMENTS..... | 3 |
| 4. REFERENCES | 82 |

1. GENERAL

1.01 This section provides the craftsperson with methods and procedures for maintaining C400 controllers using circuit arrangements which are other than those shown in the controller arrangements of the installation Section 582-200-201.

1.02 This section is reissued to specify that the 410525 circuit card can replace the 410513 card.

Note: When ordering replaceable components unless otherwise specified, prefix each part number with the letters "TP" (ie, TP410400).

1.03 Whenever a C400 controller has been determined by controller self-diagnosis or other testing to contain a defective circuit card, that circuit card should be replaced with a circuit card having the same TP number. If that circuit card is not available, then this section should be used to determine an equivalent controller arrangement (see 3. MAINTENANCE CONTROLLER ARRANGEMENTS) and circuit cards (if available) contained in that arrangement should be used.

Note: Before replacing PROM or EPROM circuit cards, see 4. CIRCUIT CARD COMPATIBILITY in Section 582-200-501, Issue 3 or later.

1.04 The 410400, 410401, 410406 and all 41043N circuit cards do not have equivalent type circuit card substitutions and, must therefore be replaced with circuit cards having the same TP numbers.

2. CIRCUIT CARD SUBSTITUTIONS

2.01 This paragraph describes which circuit cards can be substituted for those circuit cards which are found to be defective but are not readily available.

2.02 A 410411 circuit card combines the features of the 410409, 410408 and 410403 circuit cards and may be substituted for these circuit cards when they are found to be defective. If a 410411 circuit card is used in a SCC which features the 410804 PROM circuit card or MCC which features the 410808 PROM circuit card, PROMs 450013, 450014, 450015 and 450016 contained on each of these circuit cards must be Issue 3 or later in order to perform a proper controller self-diagnostic test.

2.03 The 410409 (or 410408) and 410403 circuit cards may be substituted for the 410411 circuit card in a "PROM version" controller. Substitution of the 410411 circuit card with 410409 (or 410408) and 410403 circuit cards in a "EPROM version" controller will result in an identical self-test trouble and continue pattern and therefore is not recommended.

2.04 EPROM (4105NN series) circuit cards may be substituted for PROM (4108NN and 4109NN series) circuit cards, however, if present in the defective controller, 410409 (or 410408) and 410403 circuit cards must also be replaced by the 410411 circuit card because of the condition described in 2.03.

Caution : Since EPROM (4105NN series) circuit cards offer additional features, they should never be replaced by PROM (4108NN and 4109NN series) circuit cards.

2.05 Since EPROM (4105NN series) circuit cards contain the features of the following modification kits (which may be part of the PROM (4108NN and 4109NN) series circuit cards), no special considerations will be necessary when replacing PROM circuit cards (containing the following modification kits) with EPROM circuit cards.

| Modification Kits* | Controller Affected | Circuit Card(s) Affected |
|--------------------|---------------------|--------------------------|
| 408788 | MCC | 410909 |
| 408789 | MCC | 410409 and 410910 |
| 408796 | SCC | 410804 and 410905 |
| 408804 | MCC | 410909 and 410910 |
| 408798 | SCC | 410804 and 410905 |
| 408800 | MCC | 410909 and 410910 |

*These modification kits only improve system operation.

2.06 All RAM (41046N series) circuit cards are directly interchangeable. The 410461 and 410465 circuit cards are 4K RAM while the 410464 circuit card is an 8K RAM. The 8K RAM (410464) circuit cards should only be used to replace 2-4K RAM circuit cards, however, an 8K RAM may be used to replace 1-4K RAM when the 4K RAM (410641 or 410465) circuit cards are not available. If an 8K RAM circuit card is used to replace a 4K RAM in a controller that contains 2-4K RAM circuit cards, the second 4K RAM should be removed. The use of only 1-4K RAM in a DCC or MCC that employs EPROM circuit cards will result in an identical trouble and continue pattern and no video display patterns during self-test and therefore, 2-4K RAM or 1-8K RAM should always be used in this type of arrangement.

2.07 The following table summarizes the preceding paragraph 2. CIRCUIT CARD SUBSTITUTIONS.

| Controller(s) Affected | Circuit Card(s) to be Replaced | Circuit Card Replacement(s) | Comment |
|--|-----------------------------------|---|---|
| SCC or MCC | 410409 (or 410408) and 410403 | 410411 | If present, 410804 or 410808 must contain Issue 3 or later of the following PROMS: 450013, 450014, 450015 and 450016. |
| SCC or MCC | 410411 | 410409 (or 410408) and 410403 | Replacement applies only if PROM (4108NN and 4109NN series) cards are part of controller. (See Note 3.) |
| SCC | 410804 and 410905 | 410508 | (See Note 1.) |
| DCC With Typewriter Style Option | 410809 and 410911 | 410509 | (See Note 2.) |
| DCC With Internal Numeric Cluster Option | 410810 and 410907 | 410510 | (See Note 2.) |
| MCC With Typewriter Style Option | 410808, 410909 and 410910 | 410512 and 410513 (or 410525) | (See Notes 1 and 2.) |
| MCC With Internal Numeric Cluster Option | 410812, 410914 and 410915 | 410514 and 410515 | (See Notes 1 and 2.) |
| SCC, DCC or MCC | 1-410461 | 410465 or 410464 | Use 410464 only if 410465 is not available. |
| DCC or MCC | 2-410461 | 2-410465 or 1-410461 and 1-410465 or 1-410464 | |
| SCC, DCC or MCC | 1-410465 | 410461 or 410464 | Use 410464 only if 410461 is not available. |
| DCC or MCC | 2-410465 | 2-410461 or 1-410465 and 1-410461 or 1-410464 | |
| DCC or MCC | 410464 | 2-410461 or 2-410465 or 1-410461 and 1-410465 | |

Note 1: If present, the 410409 (or 410408) and 410403 circuit cards must be replaced with the 410411 circuit card.

Note 2: If only 1-4K RAM (410461 or 410465) circuit card is in controller, an additional 4K RAM must be added or; remove the 4K RAM and install an 8K RAM (410464) circuit card.

3. MAINTENANCE CONTROLLER
ARRANGEMENTS

3.01 This paragraph includes tables of all the Maintenance Controller Arrangements including those which are of the standard type shown in the installation Section 582-200-201 and those which are of the maintenance type shown in this document.

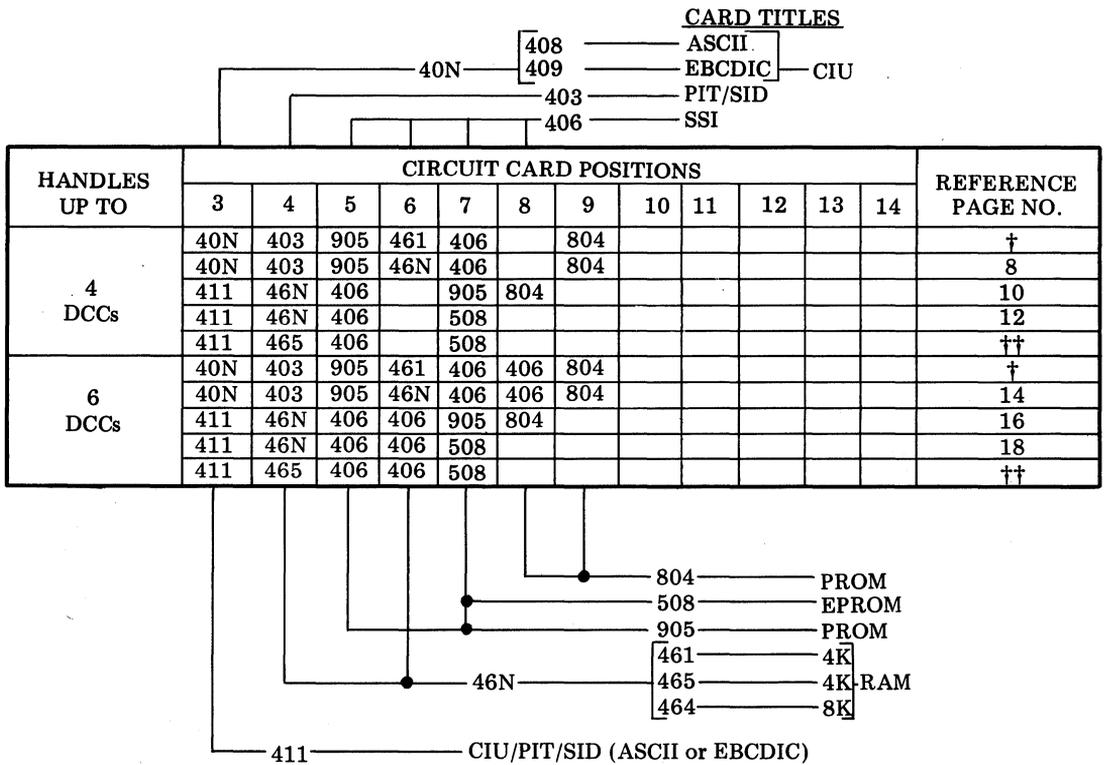

3.02 Finding a Maintenance Controller Arrangement equivalent to the arrangement being worked on can be found by:

- (a) Find the type of controller: SCC, DCC or MCC. (Each type includes its own table.)

- (b) If SCC type, find number of DDCs handled. If DCC or MCC type, find number of devices handled.

Example: A DCC which handles 1-KD and 1-PTR has a defective 410911 circuit card and no spare is available. By observing the table in 2. CIRCUIT CARD SUBSTITUTIONS it is noted that a 410509 circuit card (which is available) can be substituted for the 410911 and 410809 circuit cards. Scanning downward in the table, we find under "HANDLES" 1-KD and 1-PTR, an arrangement which does include a 4105NN circuit card. This arrangement should then be used. Note also that in this arrangement, a 4K RAM must be added to the controller to avoid an identical trouble and continue pattern.

3.03 Station Cluster Controller (SCC) Arrangements — 40C401*

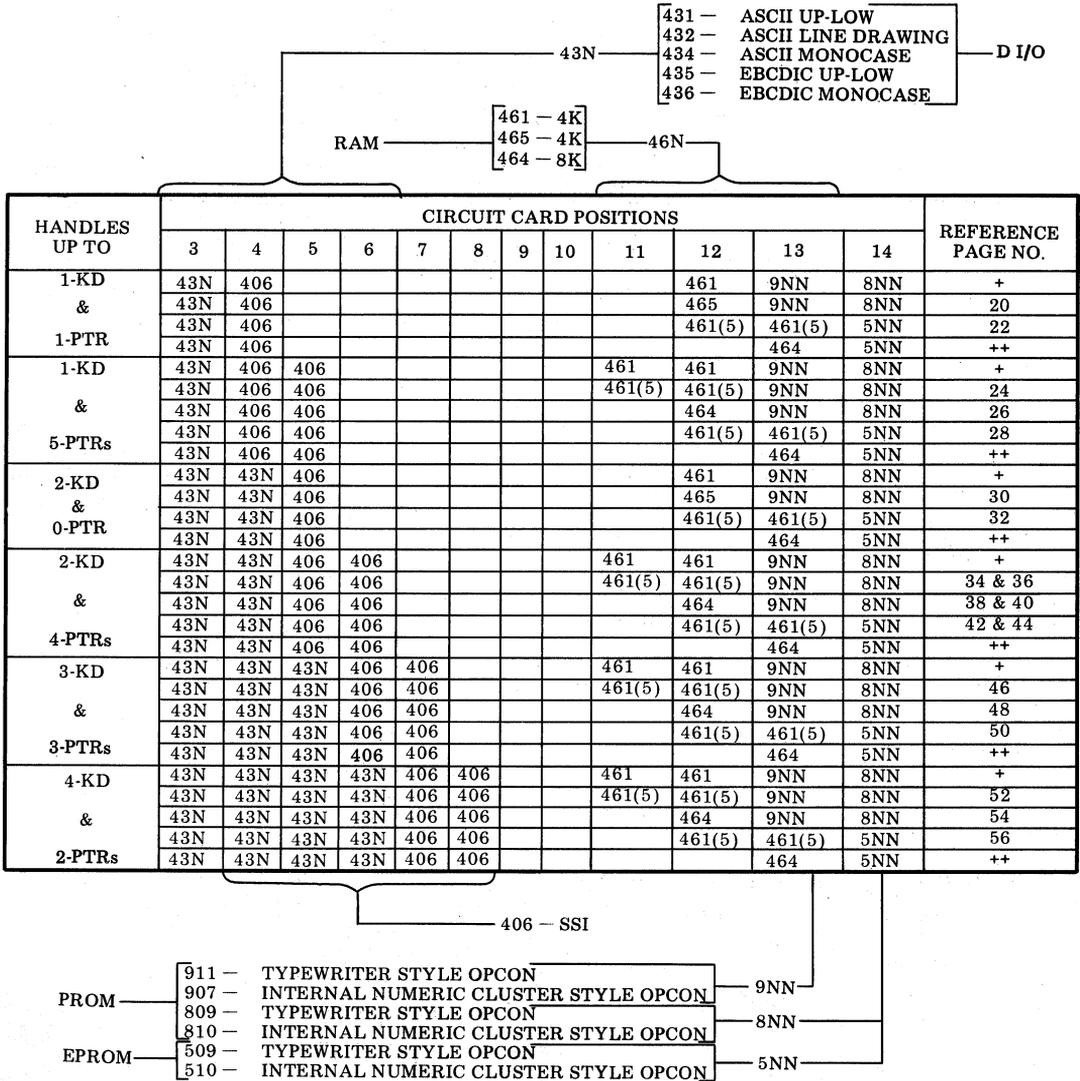

* — 410400 and 410401 circuit cards are in position 1 and 2.

All circuit card numbers are preceded by 410.

† — Standard PROM version — see Installation Section 582-200-201.

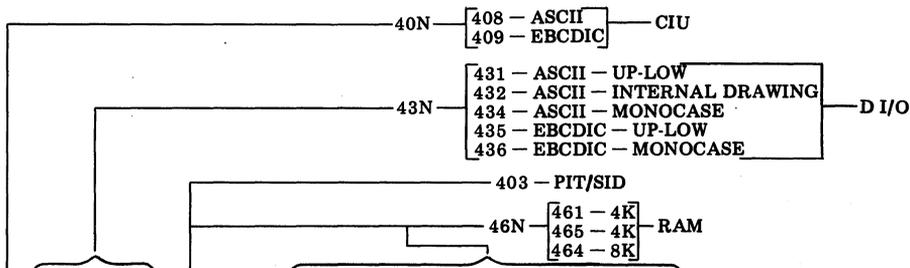

†† — Standard EPROM version — see Installation Section 582-200-201.

3.04 Device Cluster Controller (DCC) Arrangements — 40C402*

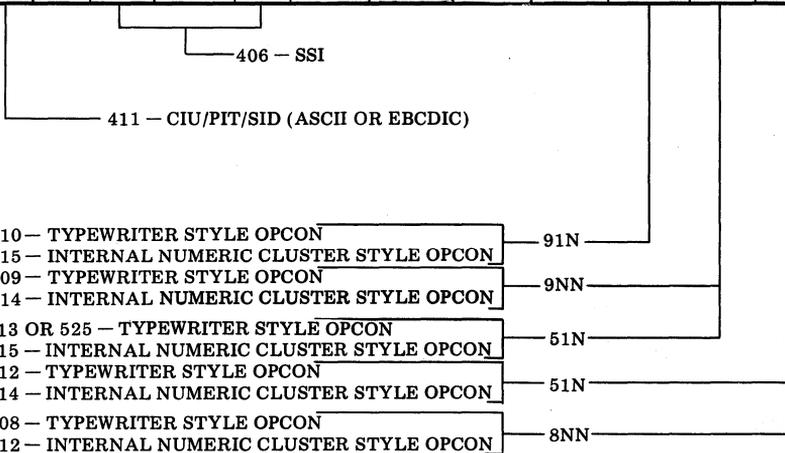

- * — 410400 and 410401 circuit cards are in position 1 and 2.
 All circuit card numbers are preceded by 410.
- + — Standard PROM version — see Installation Section 582-200-201.
- ++ — Standard EPROM version — see Installation Section 582-200-201.

3.05 Mini-Cluster Controller (MCC) Arrangements - 40C403*
