

35 CONTROLMATIC TELETYPEWRITER
DATA STATION ARRANGED FOR PRIVATE LINE SERVICE
TESTS

1. GENERAL

1.01 This section provides reference for testing the teletypewriter (TTY) and data set components that comprise a private line CONTROLMATIC data station.

1.02 This section is reissued to correct the references listed in Part 2.

1.03 Since CONTROLMATIC on-line operation is identical to that of conventional Model 35 ASR private line equipment, the data set test section for 4-row private line data stations may be used to test a CONTROLMATIC data station.

1.04 Specific CONTROLMATIC functions, usually related to format (off-line) operation, are tested in a section specifically for CONTROLMATIC private live operation.

1.05 Mechanical tests and adjustments for TTY components common to 35 TTYS, such as the keyboard, page printer, reperforator, etc, are covered in Sections 574-YYY-ZZZ applicable to such TTY equipment.

2. REFERENCES

2.01 The following sections are to be used for tests:

591-023-501 Data Set 108-Type—Single Private Line Station—Test Procedures

591-024-501 Data Set 109A-Type—Single Private Line Station Using Data Auxiliary Set 820D-Type—Test Procedures

574-YYY-ZZZ (Common TTY Equipment)
