

**CABLE PRESSURE SYSTEMS
PRECAUTIONS**

1. GENERAL

1.001 This addendum supplements Section 637-025-010.

1.002 Whenever this addendum is reissued, the reason(s) for reissue will be provided in this paragraph.

1.003 This addendum is issued to add precautions and guidelines for securing a second nitrogen cylinder while it is being transported in a horizontal position, if a special compartment, rack, or other means of blocking, to prevent cylinder movement is not otherwise provided in the vehicle.

4. HANDLING AND USING AIR CYLINDERS

The following information supplements the handling and transporting procedures outlined in Part 4 of the section:

(a) 4.02 — supplement

4.02 TRANSPORTING MORE THAN ONE CYLINDER AT A TIME SHOULD BE AVOIDED WHENEVER POSSIBLE. In those case where it is necessary to regularly transport a second cylinder, an additional holder should be installed in the hauling vehicle. When the need to transport the second (or more) cylinder(s) arises only occasionally, they may be temporarily secured by means of a heavy rope, chain, or web strap of sufficient strength to prevent rolling or sliding within the vehicle interior.
