1. GENERAL

A. Purpose

1.01 This section contains descriptions and examples of some standard batch outputs from the Motor Vehicle Information Management System (MOVIMS). For information on the on-line report generation capabilities of the MOVIMS System utilizing OTSS, see the manual, *General Terminal Procedures For The MOVIMS User*.

This section is written on the basis that one foreman controls one or more garages at which vehicles are stored. If there is another arrangement, the reports can be formatted to allow for this difference.

1.02 The example reports in this section are indicative only, and the form and content can be changed upon request by the OTC MOVIMS Data Base Administrator (DBA).

B. References

1.03 Related information concerning MOVIMS is contained in the following publications:

2. SYSTEM DESCRIPTION

2.01 The Motor Vehicle Information Management System is a computerized system for accumulating and measuring vehicle administrative and expense data. It will produce a series of output reports that can be used by line supervision and staff as a tool for controlling costs. Reports will be available on the following:

- (a) Individual vehicles
- (b) Vehicle groups
- (c) Vehicle and vehicle groups by location

NOTICE

Not for use or disclosure outside the Bell System except under written agreement

SECTION 720-610-102

- (d) First through fifth level (line) management
- (e) Total Fleet
- (f) Administrative Organization and Groups

2.02 For the above groups, MOVIMS can provide the following kinds of information:

- (a) Monthly, year-to-date and cumulative reports on expenses per mile, per repair, per fleet, per average vehicle, etc.
- (b) Repairs per vehicle by repair code, monthly year-to-date and cumulatively, including number of incidences and cost
- (c) Reports summarized by vehicle attribute (ie, expenses by make, by transmission type, etc.)
- (d) Administrative reports for tracking vehicle location, lists of license and serial numbers, etc.

2.03 This system uses inputs prepared from the following:

- (a) Vehicle manufacturer information
- (b) Universal credit card
- (c) Fleet maintenance work orders
- (d) Odometer readings
- (e) Gas and oil purchases and disbursements (in-house or outside)
- (f) Vehicle, garage, supervisor, and company administrative information
- (g) Vouchers, time sheets, WE input, etc.

The responsibility for completing, entering, and changing the MOVIMS input forms will be determined by the MOVIMS DBA in each company.

2.04 Each company will have a DBA, who will be responsible for the following:

- (a) All form design (using the fields and columns in this section)

(b) Creation of all codes and identification numbers to be used with the fields in this section

(c) Loading the data base with all administrative and vehicle data

(d) Determining all levels of responsibility within the company concerning MOVIMS.

3. OUTPUTS

A. General

3.01 Motor Vehicle Information Management

System output reports in this section are examples to show format. Individually, MOVIMS DBAs can decide on the number and type of reports they desire and format them, except the DUMP and Mileage Input (IMIL) reports, to meet their specific needs. This is accomplished through the use of the Report Definition Files (RDF). A Sample RDF is presented in Fig. 1 (7 sheets). To illustrate the way in which these files affect the final outputs, each report example will show the specific portion of the report definition file which generated it. More detailed information on modifying outputs through the RDF program is available in the MOVIMS Reference Manual for Data Base Administrators which should be consulted before any attempt at generating reports.

3.02 The report examples that follow have been reduced in size for convenience from the 11-by 15-inch computer printout. They are shown on facing pages with the pertinent RDF portion and an explanation for each report page. The first and last line of each report page is the same. The first data on these lines usually indicates the entity for which the data is being generated. The title of the report is the next data entry. This is followed by the date on which the reports are being run. This date is user specified by the date given in the MOVIMS run command (MOVIMS Reference Manual for DBAs). It may or may not be the date the reports were actually generated. The last number on the top and bottom lines is the total page count of the report.

B. Universal Options

3.03 TITLES—TTLS: Title options at the start of the RDF allow the user to specify titles

which will appear on the reports for the hierarchical levels.

3.04 RESET OPTIONS—RSET: The reset options specify that certain information be initialized to zero *before* processing input data for that run. These options affect the actual data base and are used to ensure that all data values represent the correct time periods. They do not affect reports directly and should generally not be set for a report generating run. No change should be made to the Reset options in any RDF without the guidance and approval of the company MOVIMS DBA.

3.05 LINES PER PAGE—LINE: The Line option of the RDF allows the user to specify the number of lines of output to be printed on each report page. The number of lines specified include all heading and title information and the blank lines that precede or follow them. The standard number of lines per page is 60.

3.06 EXCLUSION OPTIONS—EXCL: The vehicle exclusion option allows the user to set two separate and unrelated options. The first is the vehicle count averaging flag. If this option is selected, cost per vehicle summarized expenses are based on the number of vehicles as calculated in the formula presented in the MOVIMS Administration Manual for DBAs.

3.07 The second line of this option allows the user to exclude certain groups of vehicles, as specified by their status code, from any of the reports. The expense, mileage for these vehicles, etc, will not be included on any of the reports. They will not be counted in vehicle counts, and will not be included on any administrative type reports (ie, sorts, etc.). The structured 702 report allows for the reporting of these otherwise excluded expenses at the end of each report, if requested.

C. 702 Expense Reports

3.08 STRUCTURED 702 REPORT—S702: Figures 2, 3, and 4 show portions of structured 702 Expense Reports with various options specified. Figures 2 and 3 specify nine accounts for year-to-date (YTD) data. Figure 4 specifies three accounts for monthly, year-to-date and cumulative data. Note how the Garage Level Data (F5414), shown by arrows, is included in the Foreman level (11010303). This Foreman level data (Fig. 3) is likewise included

in the Foreman Supervisor (110103) level. Figure 3 specifies 60 lines per page; Figure 4 specifies 50 lines per page as specified by the line option.

3.09 NON-STRUCTURED 702-REPORT—N702: Non-structured 702 Expense Reports are based upon the report time frame and the 702 accounts selected. Figures 5 and 6 show two examples of this report format.

D. Repair Code Reports

3.10 STRUCTURED REPAIR CODE REPORT—SRPC: There are structured Repair Code Reports, Fig. 7 and 8, for several formats. Repairs can be shown by major category and further specified by 50 subcodes of these major categories, Fig. 7. Another breakout, Fig. 8, can be major repair categories by time periods.

3.11 NON-STRUCTURED REPAIR CODE REPORT—NRPC: The non-structured repair code reports (Fig. 9 and 10) permit data on repairs by vehicle make, frequency and cost per repair, etc.

E. Mileage Reports

3.12 MILEAGE INPUT REPORT—IMIL: The structured Mileage Input Form Report is one of the available options. It provides a Mileage Input Form, Fig. 11, with blanks for completion to input new data.

3.13 STRUCTURED MILEAGE REPORT—SMIL: Also available is the existing Vehicle Mileage Report and the MPG Report, Fig. 12 and 13, according to the options taken.

3.14 NON-STRUCTURED MILEAGE REPORT—NMIL: This report provides data based on various vehicle and time period attributes as shown in Fig. 14.

F. Administrative Reports

3.15 SORT REPORTS—SORT: Administrative data is presented on the MOVIMS organization and vehicle fleet by Sort Reports. Sort Reports, Fig. 15, 16 and 17, present this data according to sort keys selected by the user up to a maximum of four keys for a batch run.

SECTION 720-610-102

3.16 ADCODE REPORTS—CODE: The Adcode Report, Fig. 18 presents administrative data limited by user selected vehicle criteria.

3.17 TOTAL VEHICLE DATA REPORT—DUMP: This report (Fig. 19) can be obtained by entering an "X" in the STATUS CODE

field on Input Form 01, on retirement of the vehicle, or via an on-line request. The MOVIMS will dump all available data on a particular vehicle. This report provides a complete history of the vehicle and is a valuable tool in making replacement decisions.

Fig. 1—Sample Report Definition File (Sheet 7 of 7)

This is the RDF portion for the 702 Structured Report (S702).
 Nine account numbers (ACCT NOS) were selected by the
 user for the report data headings. Other user selections are
 indicated by yes-1, or no-0, as shown in the 010 TIME
 PERIODS where year-to-date (YTD) data was selected.

```

```

The first line of the S702 indicates the entity, Garage F5414, for the data being generated. This is a standard line as described in 3.02. The first data given is for individual vehicles by vehicle number. Vehicle 90-01251-673 (arrows) is the only one in the 90 group. The summary GROUP NUM, therefore, has the same data; but for the 93 group, there are three vehicles to summarize. The time period is for year-to-date as shown under the Line Code (LC) column.

The remainder of the S702 shows summary data for the foreman and foreman supervisor. A complete report is not shown because a foreman may have summary data from several garages and a foreman supervisor summary data of several foreman. But for reference, the arrow again shows vehicle group 90 with the same data as shown on Fig. 2 because there is only one vehicle in the group for the foreman. At the foreman supervisor level 5 vehicles are combined in the 90 group coming from other garages.

Here is another N702 Report sorted only by district as indicated in the first column. This report shows vehicle count (CNT), and cost per vehicle (CPV) for a monthly gas and oil expense. Note that while only accounts 12 and 13 were requested, the total of all other accounts is printed in the last column. Note also that the cost per vehicle includes the sum of all three accounts, not just the two requested.

The first and last lines of this report page are standard as described in 3.02. Note that the title wording was specified by the user on the third from last line on the RDF portion. The column headings are selected on the last two lines. This report presents total cost and frequency of occurrence for each vehicle by subcodes. These subcodes are defined in Section 720-610-101. Two of the vehicles in the 93 groups are omitted here for space reasons as shown by breaklines, but the group summary data is shown for all three vehicles in the middle of the page. The garage totals for 4 vehicles are shown in the bottom set of data.

This second page (Sheet 2) of the report shows the foreman level report. It includes the totals from page 1 for garage F5414, but these are combined with other garages under Foreman 11010303. Group totals of all combined vehicles under the Foreman are also shown, and finally summary totals for all vehicles under the foreman are presented. Some data has been omitted from this report in order to show samples of each type of data all on one page.

REPAIR COST AND FREQUENCY BY SUBCODE .(STRUCTURED REPAIR CODE REPORT TITLE)
F-AXLE .R-AXLE .BRAKES .DR LINE.ELECTEC.
ENGINE . FUEL . BODY .SP EQP . MISC .

```

In this report both inclusion of subcodes and all three time periods were requested. These are mutually exclusive options and the option for three time periods takes precedence. The figures shown for numbers of repairs and cost are therefore major repair code totals. Notice also that since cost per mile is based on cumulative miles, this figure is meaningful only for vehicles that have been on the data base since their purchase. Reports for foreman level and above are in the same format as the garage level summary report and are not shown here.

F-AXLE R-AXLE BRAKES DR LINEELECTR ENGINE FUEL BODY SP EQP MISC
COST PER VEHICLE AND PER REPAIR BY MAKE .(NON-STR REPAIR CODE REPORT TITLE)

```

This NRPC report shows frequency per vehicle (FPV) and cost per repair (CPR) for vehicles according to make, year and group. The number of vehicles per group (CNT) cost per mile (CPM) and total cost per vehicles per line (CPV) are also shown. CPM in this report is meaningless, since the CPM calculation always uses cumulative miles, and we are only monitoring year-to-date costs. In many cases, we show a significant cost per repair with a repair per vehicle of zero. This is because the total of repairs divided by the number of vehicles was less than 0.5 and was rounded to zero.

Fig. 10—Non-Structured Repair (Repair Cost And Frequency By Make)

This is the RDF portion of the IMIL report which is used to input vehicle mileage into the MOVIMS data base for each vehicle each month.

**1 THE MILEAGE INPUT FORM REPORT (GENERATE) YES-1, NO-0
MILEAGE INPUT FORM . (INPUT FORM TITLE)**

The IMIL report form is used to collect data for input of quarterly mileage per vehicle to the MOVIMS data base. A separate input report is printed for each garage location.

Three sort reports are indicated by this portion of the RDF.

```

1 THE SORT REPORTS (GENERATE) YES-1,NO-0
3 NUMBER OF SORT REPORTS (1 DIGIT NUMBER 1 TO 5)
ID LI GR 06 SR DS LC AC MK LD SD
ID .KEYS TO SORT THE 1ST REPORT BY (MAX 4)
      .VEHICLE SELECTION CRITERION FOR 1ST REPORT
      VEHICLE LISTING .TITLE FOR 1ST SORT REPORT

```

This first report includes all vehicles in the data base (no selection criteria specified). The report specifies 11 different data items to be printed for each vehicle. Definitions of these data keys are given in lines 23 through 60 of the sort section of the RDF. See Fig. 1, pages 10 and 11. These lines also allow the user to specify title information to correspond to each of these data items. Since a single sort key (ID) has been specified, the entire report will be listed in vehicle number order. Valid sort keys are given in the DBA Manual.

```

A maximum of five Adcode reports are permissible per batch run. The reports will be formatted according to the adcodes selected and the report titles indicated. The example shown here shows a portion of the printout for all vehicles in the files having three-speed manual transmission. Telephone Company Vehicle Number and Vehicle Make have been requested for each vehicle. The report is not sorted.

The Dump Report is selected by these two lines of the RDF.

X . WHAT STATUS OF VEHICLE ARE TO BE DUMPED (CAN BE BLANK)
MOVIMS VEHICLE INFORMATION RECORD .(DUMP REPORT TITLE)

In this Dump Report all of the available data on selected vehicles are printed out. The normal dump report is three pages long. Only portions of the data are shown here so that all of the format can be seen. The history of a vehicle is shown from make, model, service record, investment to gasoline, expense record and repairs.
