12. PROCESSING RETURN MATERIAL	16		
13. MAINTENANCE OF C STOCK	17	1. GENERAL	
14. TRAVEL CARD PLAN—C STOCK	18	1.01 This section provides a complete outline of information which is recommended for training of Supply employees along with a cross-reference to standard source materials as appropriate.	
15. TURNAROUND PLAN	19	1.02 This section is reissued to:	
16. KIT PLAN	20	(a) Improve the job knowledge and skills of all Supply employees	
17. OPERATION OF MOTOR VEHICLES AND MECHANIZED EQUIPMENT	20	(b) Help determine and record the training needs of all Supply department employees performing specific supply job functions using a matrix (see Exhibit I)	
18. PROTECTIVE PACKAGING	21		
19. PROPER HANDLING OF MATERIAL	22		
20. MAINTAINING A STOREROOM OR LOCKER	23		

NOTICE

Not for use or disclosure outside the Bell System except under written agreement

SECTION 740-001-000

- (c) Provide a list of available source material to help improve the job skills and knowledge needed to perform specific supply job functions
- (d) Encourage the use of the various media available to improve job performance and efficiency
- (e) Provide Operating Companies with the supply training material presently used in various Bell System Companies.

1.03 Initially, every employee should be given training in supply terminology (see Part 2, GLOSSARY), safety, and security and be exposed to an overview of total Supply department operation which should include a tour of a Service Center. (See Parts 2 through 5.)

1.04 The job titles in supply operations encompass many skills and many job functions. These skills and functions are basically the same in all companies. However, supply methods vary in each company because of contract commitments, population density, geographic locations, distance from the Service Center, etc. Training must be tailored to meet the needs of a particular company. Each company is encouraged to develop its own training program. It should be structured to ensure that each employee is exposed to the same training and that each employee is able to function at the maximum level of proficiency.

1.05 Individual skills and initiative of Supply employees must be developed. A team effort is needed if the Supply department is to meet its commitment to serve at a cost consistent with sound business practices.

1.06 The matrix shown in Exhibit I suggests the training needed if a Supply employee is to perform effectively in the job assignments listed.

Note: In Exhibit I, note that all the Supply employees should be offered training in the first four categories. (See Parts 2 through 5.)

1.07 Exhibit II is an example of how to use a blank matrix form to plot and record the training progress of any Supply employee. In the example, John Jones is to be trained as a platform worker. The "Xs" under the PLATFORM column indicate that John should be exposed to the training

suggested in four basic parts (2 through 5) of this section plus Parts 7, 8, 9, 11, 12, 17, and 19 of this section.

1.08 Part 7 suggests that John read Section 744-002-001. John should also be exposed to the training material which is suggested in Parts 31.01(C), 34.01(E), 34.01(F), 35.01(D), and 35.01(E). It will be necessary for John to study Parts 8, 9, 11, 12, 17, and 19 in the same manner. With the knowledge acquired and proper supervision, John should become a capable platform worker.

1.09 Experience and local conditions might suggest deviating from the basic format. For this reason, a blank matrix sheet (Exhibit III) is provided and should be duplicated and modified as needed. As additional source material is accumulated, it should be added to those already listed.

2. GLOSSARY

2.01 Following is a glossary of terms commonly used and needed by Supply employees.

Alpha Book: List of all items of supply stored in computer.

Audit Trail: Any means by which a tracking or follow-up on the processing of paper work flow or other activity is accomplished (ie, requisitions, claims, service orders, etc)

AX Material: Material sold to or purchased from another Telephone Company.

Back Order: Failure to ship a valid order, due to the item ordered not being in stock.

Cargo Container (Cargo Cages): A cage which can be locked. Approximately 5 × 4 × 6 feet, mounted on wheels. Used to transport TELCO supplies from a Service Center to a field location by truck or trailer.

Class C: Material owned by the Telephone Company, held by Western Electric Company in one of three conditions:

- (a) Unrepaired
- (b) In the process of being repaired
- (c) Stock ready for use.

Exhibit III

SECTION 740-001-000

COMCODE: Common identification code for materials. A system by which a series of numbers is assigned to all items (stock and nonstock) to further enhance and aid in controlling material procurement.

CR: Materials previously refurbished requiring no shop work or repairs and returned directly to C stock.

CRT: A cathode ray tube display terminal device used for feedback from a computer.

Cutting Length: The predetermined lengths of cable to be cut by Western Electric. Stated on both Telephone Company internal and Telephone Company/Western Electric ordering documents.

Cut-Off Time: The final time at which various order, material, or information flow into the computer is stopped.

Dirty Ticket: A DPR/SD-540 that has been manually altered showing a change in the order (ie, quantity, type, class, etc).

DIS: Distribution information system (a computer system).

Disk File: A magnetic disc storage file, used to store information and data in computerized supply systems.

DRP (SD 94-540.6): Data processing requisition. The 6-part document generated by Western Electric order processing system is used by the Telephone Company and Western Electric for order processing and as a requisition. (See M-250 and/or Order Invoice Plan.)

Emergency Requisition: A requisition for material or supplies needed to meet an emergency condition, such as an out-of-service condition or due dated order. Stock items can be ordered using DATA-PHONE® facilities or telephone. Nonstock items require a manually prepared requisition. All emergency orders require supervisory intervention.

Field Stock: Material and apparatus purchased and shipped to the Telephone Company and held in other than a Western Electric location for current or future use (includes unprocessed returned material).

Functional Accounting: A systemwide accounting concept that allows for cost development of all Telephone Company activities by function.

Item: Refers to specific piece of material listed on a requisition (order) placed with Western Electric Company.

Item Number (Item Address): A 7-digit number, assigned to all stock items, that is stored in the disk file.

Keep List: A list that designates the quantities and kinds of material to be kept or placed into class C upon return to the Service Center.

Leading Demand: A telephone set ordering and usage technique designed to minimize field investment levels of telephone sets. (See Section 680-400-023.)

Loop Closure: The final activities involved in completing the daily cycle of business required to process Telephone Company material or orders and to update the Western Electric computer records.

Major Items: Telephone sets and apparatus.

MCF: Million conductor feet (ie, cable).

Minor Items: Transmitters, backboards, etc.

M Material: New material returned from field to C stock.

MMP: Minor material plan. (See Section 740-002-000.)

MOF: Material ordering form.

Nonstock: Any material not a stock item at a particular Service Center, ordered direct from the supplier or another Western Electric facility.

OAN: Order authority number.

Order Invoice Plan (OIP): See Section 743-002-000, M-250, and DPR/SD-540.

Overstock: A condition existing when the material quantity level exceeds a predetermined maximum inventory level.

PA: Pattern accounting. A simplified method of determining proper account codes by mechanical means based on usage.

P & E: Price and extension list. A computer-generated report showing Telephone Company transaction summarizing the activity by quantity and price, used to verify accuracy of prices stated in the transaction between the Telephone Company and Western Electric.

PIC: Plug-in coordinator. A plan for controlling the investment and use of central office plug-in equipment (solid state) circuit boards.

Piece: A piece is a carton, bag, bundle, or hamper containing one or more items of material ordered from Western Electric.

Printout: A report or listing of data and information that is printed mechanically by computer from computer records.

RMC: Return material card. (See Section 745-001-000 and M-250.)

RMN: Return material notice. A document used to expedite the return of material from the field (ie, material not covered under the Travel Card Plan).

RMTO: Return material trucking order.

Salvage: High and low value types of junk.

SAS: Supply automation system. A computer system designed to expedite delivery of telephone supplies from Western Electric to TELCO.

Service Center: A Western Electric facility where supply items are warehoused and, in addition, shop facilities are available to refurbish used equipment.

Shop Schedule: A schedule of proposed shop repair activities usually derived from information in the computer file and mechanically produced, but can be a manually produced schedule. (See Sections 741-002-001 and 741-002-002.)

S & R: Service and return including Red Ball, capital tools, equipment, and plug-in units returned for repairs and calibration.

SRP: Set recovery plan. (See Section 680-400-014.)

Staging: The process of locating supplies in a specific location within a Service Center, tranship location, or storeroom. Thus located, they can be readily identified, stacked, and counted either on a pallet, in a cargocontainer, or in a pile which is made ready for shipping or use.

Standard Package: The smallest packaged quantity of an item as received by Western Electric from its vendors or suppliers for sale to the Telephone Company (ie, screws—10 per package; telephone set—1 per box, etc).

Stock Item: Any item stocked by Western Electric at the Service Center (or satellite) that may normally be ordered by using DATA-PHONE facilities.

Stock List: A list showing items stocked and their prices, suppliers, etc (a Western Electric document).

Stock Maintainer: The Western Electric employee immediately responsible for Western Electric inventory levels and resupply of material as it is used from stock.

TAL: Ticket or truck audit list. A manually prepared sheet which lists truck stops, requisition numbers, and pieces by bag, carton, hamper, and reels.

TELCO: A specific Telephone Company such as New York Telephone, Bell Telephone Company of Pennsylvania, etc.

Travel Card: Cards associated with RMC and MMP.

TRL: Printout of requisitions for a particular day in a predetermined sequence by truck stop number.

Turnaround: A rapid recovery of telephone sets that do not necessitate a complete or major repair operation. Sets which are refurbished by TELCO at field locations.

WECO: Western Electric Company.

Zero-Day—Due Date: Reference to business due for completion in the current day (ie, orders, requisitions, etc).
