1. About This Document

1.1 Purpose

The purpose of this document is to provide the Seismic Zone Classification for Network Computing Services (NCS) Division equipment locations. The term Critical Central Offices reflects those locations that would cause the most disruption to customer service should outages/damage occur to the telecommunication network. Taking into consideration such things as changes in technology, seismic zone classifications, demographics, economic trends, and competitive markets, this publication will be updated to reflect any additions or deletions to the aforementioned list.

This publication does not contain admonishments.

1.2 Related Documentation

General Provisions of the Project Contract, Drawing and Specification Documentation as supplemented by the Architect of Record, AT&T/Supplier Agreements as in effect, including latest issues of referenced Company Standards, compliance with governmental building code authorities regulations as combined with Industry and Association Standards, and the "As-Approved Shop Drawings and Record Drawings" shall all apply.

- All applicable AT&T 760 series practices addressing building construction, e.g., AT&T Practice 760-200-020, "Design Loads for Telephone Buildings."
- AT&T Practice 800-610-155, "Earthquake and Disaster Bracing for Central Office Equipment."
- Bellcore GR-63-CORE, Network Equipment-Building System (NEBS) Requirements: Physical Protection.
- Latest issue of the Uniform Building Code (UBC) and verification with the local governing code authority requirements which may be greater than the national requirements.

For construction terminology defined or not defined herein, or as referred to in related sections for either the component, fabrication, testing, and/or installation method or standards, refer to the appropriate nationally recognized industry and/or independent associations and societies.

1.3 Reason for Reissue

This document was reissued to reflect the following changes:

- Updated Seismic Zone Classifications to reflect national code changes
- Updated list of Critical Buildings

1.4 How to Obtain a Copy of This Document

To obtain a paper copy of this document, call the Customer Information Center at:

TOLL FREE: **1-800-432-6600** (USA)
 1-800-255-1242 (Canada)

AT&T – PROPRIETARY
Use pursuant to Company instructions

TOLL: 1-317-352-8557 (Worldwide)

Use the document identifier and issue number (760-200-026, Issue 4) when ordering this document.

To obtain an electronic copy of this document in Portable Document Format (PDF), access the Master List Database (MLDB) via the NCS Home Page. Search for this document using the document identifier 760-200-026.

1.5 How to Comment on This Document

To report errors or suggest changes to this document, contact the document owner. The name of the document owner can be obtained from the MLDB via the NCS Home Page.

2. Summary

2.1 Common Language Location Identifier (CLLI)

CLLI (licensed by Bellcore) is an eight to eleven character code unique to an address and shall not be changed. The first eight characters designate the building by city and state as identified by the suppliers of the Location Code Administration group. The seventh and eighth character may not be accurate or appropriate for today's, however it may indicate how the location started its life.

2.2 Financial Management Language Location (FMLC) Code

The FMLC six-digit code identifies the physical locations of assets and/or employees. The Company's Finance and Asset District is responsible for the management of FMLCs for all locations.

2.3 Facility Address/Location

The physical location or address of the facility may not necessarily be the mailing address. The field identity is only provided to help identify the facility and may not be the correct location for material shipments

2.4 Seismic Zone Classification

The geographical location of each facility has been assigned a numerical value per the UBC (see Table A, Seismic Zone Classification) Seismic Zone Map of the United States. Each state has the right to assign a greater numerical value than that shown by the national code. This potential difference must be verified on a case basis.

⇒ NOTE:

If the facility's location is within 20 miles of a seismic zone classification change, then the greater seismic classification value shall be used for design and construction.

3. Seismic Zone Classification Table

⇒ NOTE:

Resolutions regarding design layout, construction, equipment, floor space and area uses, and occupancies issues other than the Company's Standard (760 series Practices), should be addressed with the AT&T Building Design Standards Manager directly by the AT&T Project (Building Engineer) Representative.
