

## CHECKING ROUTINE

### BUILDING PROJECT PLANNING AND DESIGN

#### 1. GENERAL

1.001 This addendum supplements Section 760-220-151, Issue 2 and recommends the installation of safety measures for equipment entrances.

#### 3. PLANNING

##### 3.05 *Requirements and Considerations*

Add Sub Paragraph (D) (3)

Safety measures should be considered when an equipment entrance is planned, particularly when the entrance is near or at floor level. The safety measure could be a restraining metal bar or rod at waist height. In some instances a "Dutch Door" type of entrance enclosure might be desirable.

The safety device should be secured in a manner allowing it to be usable but not subject to being carried away.
