3A WIRE-LINE ENTRANCE LINK

1.001 This addendum replaces ADDENDUM 940-392-101, Issue 1 and supplements Section 940-392-101, Issue 1.

1.002 This addendum is issued to:

- (a) Rate the squelch feature for the 3A Wire-Line Entrance Link "Manufacture Discontinued".
- (b) Make a correction to Table G on page 36.

1.003 The existing squelch circuit in the 3A WLEL is not compatible with future 1500 voice channel loading for TD-2 or TD-3. Therefore, since master group multiplex squelch is now available,

amplifiers which include the squelch circuit (ED-51059-30, G-1 and G-2) are rated "Manufacture Discontinued."

1.004 A number of 3A WLEL equipped with squelch circuits have been installed. These squelch circuits may be disabled by operating the SQCH switch to the DIS AB position. With the squelch circuit disabled, the amplifier unit (ED-51059-30) functions as a standard 263A amplifier unit.

1.005 Table G contains a reference to Table C in two places. Change these to reference Table D in both places.
