

MANUAL TESTS OF
LINE LOAD CONTROL EQUIPMENT
NOS. 1, 1C, 1D, 9C, 10 AND 11 OFFICES

1. GENERAL

1.01 This addendum, which supplements Section A230.341, Issue 1, is issued to include No. 10 type offices and to delete reference to No. 9 type offices. The test of line load control equipment in Special No.9 offices is covered in Section A234.341.

1.02 Paragraphs 1.07 and 1.08 of this addendum supplement Part 1 of the section.

1.07 In No.10 type offices, the line load control keys are mounted at the positions, usually directly above the subscriber multiple.

The control keys are designated (A), (B), (C), etc. The number of keys provided depends upon the number of lines in the position to be controlled, and are associated with a common (GL) guard lamp for the position. The guard lamp lights whenever any of the control keys are operated. In any case, no less than two control keys are provided per position.

1.08 The audible alarm features described in the section are not provided in No.10 type offices. The features in other type offices are optional and may, therefore, not be provided.
