SALE/REMOVAL OF PREMISES WIRING

A. GENERAL

When a customer replaces a Bell Operating Company (BOC) provided Key, PBX, ACD or Multifunction system with a CPE system, IBT "black" sheath cable furnished within a premises for a customer's telephone service remains the property of IBT. It is the current policy of IBT to offer to sell to the customer or authorized agent premises "black" sheath cable associated with the removed system **exclusive of:**

1. entrance cable facilities and associated equipment

2. wiring needed to extend IBT services to the Network Interface (Network Interfaces the point of connection with the telephone network per FCC Rules, Part 68).

3. wiring needed to provide basic exchange, private line, data, etc. services, not directly associated with the Key or PBX system

4. wiring determined by IBT to be needed in the foreseeable future

"Black" sheath cable facilities include cable, terminals, frames, blocks, poles, etc.

All in-place house and riser "black" sheath cables outside of the building will only be considered for sale following a premises inventory.

Premises "black" sheath cable offered for sale to the CPE customer/agent and not purchased will be removed or disabled. Any "black" sheath cable not removed shall remain the property of IBT and cannot *be used by customers or vendors for their customer's telephone systems.*

The Vendor Service Center (VSC) is the responsible point-of-contact for customers or their authorized agents to request the purchase of IBT owned premises "black" sheath cable in association with the conversion from an IBT to customer provided system installation.

If a customer/agent is interested in receiving a quote on IBT owned premises wiring, contact with the VSC will commence the process as described in Section B.

The vendor's request for IBT service will be terminated in the standard network interface jack as outlined in FCC Rules, Part 68.

B. SALE OF WIRING PROCEDURES

1. The VSC service representative will forward all service requests where there is an application for a sale of "black" sheath cable, to the coordinator sale/purchase of wire (CSPW) together with the customer's name, location, billing telephone number and the name of the customer's authorized representative (appropriate party to whom all correspondence pertaining to the purchase of premises "black" sheath cable should be directed having the authority to consummate the sale). Proper agency status will be verified by VSC if the request is from a party other than the customer.

   The customer or authorized agent must completely identify all requested premises "black" sheath cable in order for the CSPW to produce an accurate and complete inventory.

   Should the decision be made to purchase the requested premises "black" sheath cable the CSPW will finalize the Bill of Sale with the customer/agent. Payment in full must be received by IBT to effect the transfer of title.

   If a decision is made not to buy, IBT will remove or disable all IBT "black" sheath cable.

2. **Pricing**

   The value of the premises "black" sheath cable will be determined from the inventory and/or customer records to establish a sale price. Factors involved are:

   a. Estimated cost to construct customer's premises "black" sheath cable requirements at current rates for labor and material.

   b. Present physical condition of the premises "black" sheath cable.

   In a very small proportion of cases where there are special circumstances, other factors (e.g., obsolescence) may also be considered for pricing.

C. TIME INTERVAL

The estimated time interval for processing a premises inventory request and developing the price quote is ten (10) working days. This interval covers the majority of cases up to 100 stations. Over 100 stations will depend on individual circumstances and can be negotiated to achieve an acceptable date.

D. REMOVAL OF CABLING PROCEDURE

1. Should the decision be made not to purchase the premises "black" sheath cable, VSC will notify CSPW who in turn will notify IBT field forces to coordinate removal or disablement of "black" sheath cable to coincide with removal of station equipment.

2. **Removal and/or Disablement**

   - All "black" sheath cabling, terminals and/or IBT equipment (except inside wire) associated with the provision of the previously provided BOC service but not purchased will be either removed from the premises or disabled. Such items of equipment and cabling will be identified assuming a premises cabling price request is involved.

   - All "black" sheath cable will be removed to the extent possible without damage to the customer's property. IBT is not liable for any loss or damage resulting from the removal activities except negligent acts of its employees that result in loss or damage. IBT is not required to paint or refinish walls or to repair or replace floor, ceiling or wall panels or surfaces because of damage resulting from the normal removal of instruments, premise "black" sheath cable and associated equipment that was installed in accordance with IBT installation standards and practices.

   - Removal of IBT provided cabling from existing conduits and/or ducts will be attempted. However, in certain instances cable removal may not be either feasible or possible.

   - In the event that the cable cannot be physically removed or can be removed only with substantial damage to the premises, IBT will advise the customer/vendor of the situation as early as possible.

   - Where IBT has determined that cable removal is neither feasible nor possible, the cable will be disabled at both ends of the cable run. In disabling the cable, the telephone company will leave a 2-foot stub at each end to allow the customer/vendor a means to attempt removal.

     Note: *Care should be taken to insure that remaining IBT services, if they exist, are not disconnected in error while removal of cables is being attempted. The customer/vendor may be billed if Telco working service is disturbed during customer/vendor removal attempts.*

3. **Removal Costs**

- Where IBT removals are completed in a normal manner, no removal costs will be billed to either the customer or vendor.

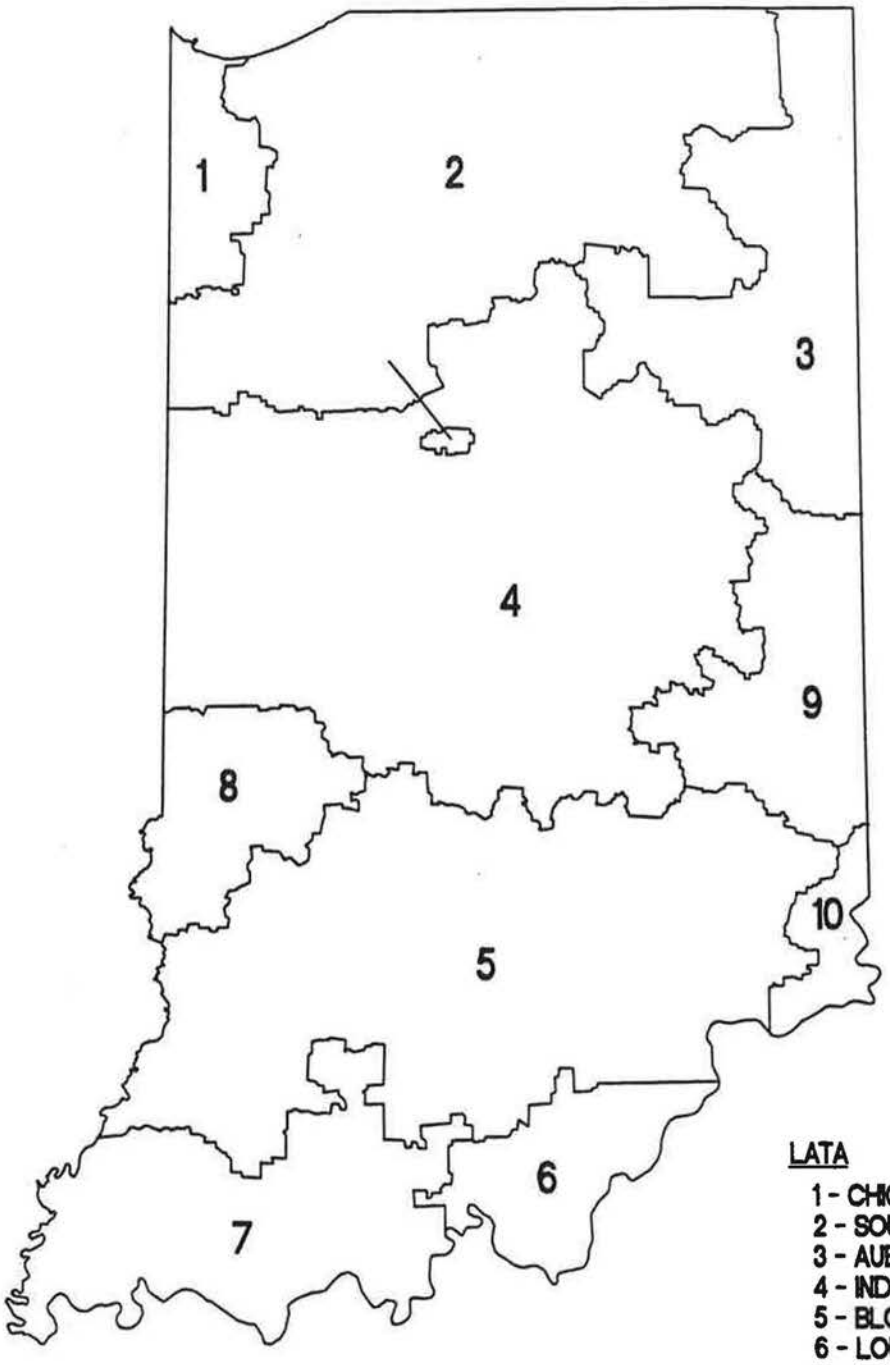

- Where a customer/vendor requests special removal procedures, i.e., to insure continuous service during a cutover, all extraordinary expense incurred that exceeds normal costs will be billable to either the customer or vendor.

  - The extraordinary costs are defined as costs greater than those required for a normal disconnect of the services involved. For example, if a customer desires 10 stations per day disconnected rather than all at once, that portion requiring extra visits and extra work would result in an extraordinary cost. Similarly, any overtime for removal work performed outside normal business hours or weekend work associated with the service request by the customer/vendor would be treated as an extraordinary cost and billable.

  - Such requests should be appropriately noted on the initial Service Request (MKT-31A Form).

SALE/REMOVAL OF PREMISES WIRING

A. GENERAL

When a customer replaces a Bell Operating Company (BOC) provided Key, PBX, or Multifunction system with a CPE system, BOC wiring furnished within a premises for a customer's telephone service remains the property of the BOC. It is the current policy of the BOC to offer to sell to the customer or authorized agent premises wire[1] associated with the removed system exclusive of:

1. entrance cable facilities and associated equipment or cables used to service more than one customer

2. wiring needed to extend BOC services to the Network Interface[2]

3. wiring needed to provide basic exchange, private line, data, etc., services not directly associated with the Key or PBX system

4. wiring determined by a BOC to be needed in the foreseeable future

NOTE 1: *Inplace house and riser (Black sheath) cables and any associated cables and/or wiring outside of the building will only be considered for sale following a premises inventory. (No fee for inventory)*

NOTE 2: *Premises wire offered for sale to the CPE customer/agent and not purchased will be removed or disabled. Any wiring not removed shall remain the property of the BOC and cannot be used by customers or vendors for their customer's telephone systems.*

Should a dispute arise regarding MBT's continuing need for all or part of the space or supporting structures originally provided for telephone company use, the building owner or customer will be contacted so that it can determine the occupancy of the space or structures in question. The customer or building owner is obligated to provide the telephone company:

- Suitable and adequate space for mounting premises wiring equipment and apparatus.

- A suitable means for building entrance cable to enter the building and to reach any location within the building that must be served by telephone company facilities.

---

1. Includes facilities in-support of wiring, e.g., cable, terminals, frames, blocks, poles, etc.
2. Point of connection with the telephone network per FCC Rules, Part 68.

The VSC is the responsible point-of-contact for customers or their authorized agents to request the purchase of the BOC owned premises wiring in association with the conversion from a BOC to customer provided systems installation.

The vendor's request for BOC services will terminate in a standard network interface jack as outlined in FCC Rules, Part 68.

If a customer/agent is interested in receiving a quote on BOC owned premises wiring, contact with the VSC will commence the process as described in Section B following.

B. SALE OF WIRING PROCEDURES

1. The VSC service representative will forward all service requests where there is an application for a sale of wire, to the Coordinator Sale/Purchase of Wire (CSPW) together with the customer's name, location, billing telephone number and the name of the customer's authorized representative (appropriate party to whom all correspondence pertaining to the purchase of premises wiring should be directed having the authority to consummate the sale). Proper agency status will be verified by VSC if the request is from a party other than the customer.

   NOTE: *The BOC will retain ownership of the BOC provided facilities that would not have been normally transferred in a premise wiring sale. See paragraph A above.*

2. **Key or PBX systems with Station/Wire/Cable Only**

   Where there existing are BOC stations being disconnected and where only station/wire/cable is offered for sale, the CSPW will determine the number of stations and associated equipment of the identified customer. The CSPW will then contact the customer/agent by telephone and provide a premises wiring price quote. This quote will only include station/wire/cable. No appraisal fee will be charged for this telephone price quote on station/wire/cable.

   If for any reason a premise inventory is necessary, the customer/vendor can request a detailed inventory. The inventoried price quote will supersede any telephone price quote. If the price quote is accepted, a Bill of Sale will be finalized by the CSPW. The CSPW will notify the VSC of the results of the customer contact.

3. Key or PBX Systems with Station/Wire/Cable and Black Sheath Cables

When a BOC system with station/wire/cable and Black Sheath cable is being disconnected, the customer/agent will be contacted by the CSPW via telephone to discuss the possibility of using BOC in place wire. A premises inventory is required in all cases.

The customer or authorized agent must completely identify all requested premises wiring in order for the CSPW to produce an accurate and complete inventory.

Should the decision be made to purchase the requested premises wiring the CSPW will finalize the Bill of Sale with the customer/agent. Payment in full must be received by the BOC to effect the transfer of title.

The CSPW will notify the VSC immediately of the results of the customer's contact for service order processing.

4. Pricing

The value of the premises wiring will be determined from the inventory and/or customer records to establish a sale price. Factors involved are:

a. Estimated cost to construct customer's premises wiring requirements at current rates for labor and material.

b. Present physical condition of the premises wiring.

c. Any downsizing requirements requested by the customer/agent.

In a very small proportion of cases where there are special circumstances, other factors (e.g., obsolescence) may also be considered for pricing.

C. TIME INTERVAL

The CSPW will attempt to contact the customer/agent within two (2) working days from the date the VSC receives a sale of wire request to provide a telephone price quote for station/wire/cable only.

The estimated time interval for processing a premise inventory request and developing the price quote is ten (10) working days. This interval covers the majority of cases up to 100 stations and commences when the completed agency letter has been received by the CSPW and signed by the customer or authorized representative.

Where possible, this interval will apply to larger installations with recognition that it is dependent upon individual circumstances and may not be achievable in specific instances.

A signed Agency Letter sent to the CSPW at the same time as the inventory request is sent to the VSC could shorten the number of anticipated working days described above.

D. REMOVAL OF WIRING PROCEDURE

1. Should the decision be made by the customer not to purchase the premises wiring or cable, and the customer requests removal, the VSC will initiate the required service orders to the BOC field forces to coordinate removal or disablements or wiring to coincide with removal of station equipment.

2. **Removal and/or Disablement**

   - All cabling, wiring, terminals and/or BOC equipment associated with the provision of the previously provided BOC service but not purchased will be either removed from the premises or disabled. Such items of equipment and cabling will be identified assuming a premises wiring price request is involved.

   - All wiring will be removed to the extent possible without damage to the customer's property. The BOC is not liable for any loss or damage resulting from the removal activities except negligent acts of its employees that result in loss or damage. The BOC is not required to paint or refinish walls or to repair or replace floor, ceiling or wall panels or surface because of damage resulting from the normal removal of instruments, premises wiring and associated equipment that was installed in accordance with the BOC's installation standards and practices.

   - Removal of the BOC provided cabling from existing conduits and/or ducts will be attempted. However, in certain instances cable removal may not be either feasible or possible.

   - In the event that the cable cannot be physically removed or can be removed only with substantial damage to the premises, the telephone company will advise the customer/vendor of the situation as early as possible.

   - Where the BOC has determined that cable removal is neither feasible nor possible, the cable will be disabled at the station end of the cable run. In disabling the cable, the telephone company will leave a 2-foot stub at the equipment end to allow the customer/vendor a means to attempt removal.

     Note: *Care should be taken to insure that remaining BOC service, if they exist, are not disconnected in error while removal of cables is being attempted. The customer/vendor may be billed if Telco working service is disturbed during customer/vendor removal attempts.*

3. **Removal Costs**

   - Where telephone company removals are completed in a normal manner, costs may be billed to either the customer or vendor.

   - Where a customer/vendor requests special removal procedures, i.e., to insure continuous service during a cutover, all extraordinary expense incurred that exceeds normal costs will be billable to either the customer or vendor, whomever agrees to be responsible for the expense.

     - The extraordinary costs are defined as costs greater than those required for a normal disconnect of the services involved. For example, if a customer desires 10 stations per day disconnected rather than all at once, that portion requiring extra visits and extra work would result in an extraordinary cost. Similarly, any overtime for out of hours or weekend work associated with the service request by the customer/vendor would be treated as an extraordinary cost and billable.

     - Such requests should be appropriately noted on the initial Service Request Form.

4. **Identifying Purchased Station/Wire/Cables or Black/Sheath/Cables**

   Any cables purchased by the customer/vendor should be tagged by the customer/vendor to eliminate the possibility of the BOC removing the purchased items.

   If a black sheathed cable is downsized, i.e., 100 pair to 50 pair, it is the customer/vendors responsibility to identify the pairs purchased or the BOC may disable the unappropriate 50 pair cable.
