

TELEPHONE BOOTHS

KS-14611, LISTS 2 AND 3

PRECAST BASE DESCRIPTION

1. GENERAL

1.01 This section describes the DX-1016 base used in the foundation of the KS-14611, List 2 and List 3 booths. This information was previously contained in Appendix 1, Section C44.211, Issue A. The number is changed to agree with the general outline.

2. DESCRIPTION

2.01 The DX-1016 base is a precast, light-weight aggregate, reinforced concrete block 40" x 40" x 2" weighing slightly less than 200 pounds. The corners are rounded, and the top surface is trowelled smoothly. The bottom surface is rough screeded.

2.02 The base contains eight inserts in the top surface. The four indicated by arrows are for use with the KS-14611, and the other four are for use with the 9A booth, (see Figure 1).

2.03 The base alone does not constitute the foundation for the booth, it must be installed in a bed of grout according to specific instructions.
