CABLE AND LOADING COIL DATA

NOTES CONCERNING THIS WR-SHEET

This WR-Sheet supplements Section and Addendum G10.330.5-S with the codes to be used for designating the various gauges of aluminum conductor cable.

The cross-reference, "See WR-Sheet", should be written in Addendum G10.330.5-S following Paragraph 1.02(w).

1. CABLE

1.02(x)

Aluminum Conductor Cable

- | | |
|--------------------|---|
| (1) ANC = 17 gauge | The cable codes; ANC, AND, ASF, and ASK; shown following their respective gauges indicate aluminum conductor cable. |
| (2) AND = 20 gauge | |
| (3) ASF = 22 gauge | |
| (4) ASK = 24 gauge | Example: 2-22 ASF |

Note: It is of the utmost importance that aluminum conductor cable be reported as such and clearly identified on all records since its transmission characteristics differ from cable with copper conductors of the same gauge.
