1. GENERAL

1.01 This section covers the use and description of the S crossarm.

2. DESCRIPTION

2.01 The S crossarm is illustrated below:

2.02 The pin holes are bored for steel pins and the equipped arms have standard steel pins and two 30 inch crossarm braces.

3. USE

3.01 This crossarm has been used for carrier service where an 8-inch pin spacing was needed between wires of the pair and a wide separation was desired between adjacent pairs.

3.02 It is expected that the use of the S crossarm in the future will be limited to maintenance replacements.
