

CABLE TESTING - GENERAL

DETECTING DEFECTIVE PAIRS - GENERAL

NOTES CONCERNING THIS ADDENDUM

This addendum supplements Section G50.220.1 and is being issued to provide additional instructions for testing new sections of cable before splicing them into existing working cables.

The cross-reference "See Addendum" should be written following Paragraph 3.03 to indicate additional instructions.

3. TESTS IN NEW INSTALLATIONS

3.04 When a new cable or recovered cable is to be spliced to an existing working cable, it should be tested for defective pairs after it is completely spliced and before it is joined to the working cable. Disposition of any defective pairs found should be in accordance with the practices covering the splicing of defective conductors.
